de Sitter, Willem (1872–1934) Dutch astronomer and mathematician. De Sitter studied mathematics and physics at the University of Groningen, where his interest in astronomy was aroused by Jacobus Kapteyn. After serving at the Cape Town Observatory in South Africa from 1897 to 1899 and, back at Groningen, as assistant to Kapteyn from 1899 to 1908, he was appointed to the chair of astronomy at the University of Leiden. He also served as director of Leiden Observatory from 1919 to 1934. De Sitter is remembered for his proposal in 1917 of what came to be called the “de Sitter universe” in contrast to the “EINSTEIN universe.” The contrast was summarized in the statement that Einstein's universe contained matter but no motion while de Sitter's involved motion without matter. The Russian mathematician Alexander FRIEDMANN in 1922 and the Belgian George Lemaitre independently in 1927 introduced the idea of an **expanding universe** that contained moving matter. It was then shown in 1928 that the de Sitter universe could be transformed mathematically into an expanding universe, the

"Einstein-de Sitter universe." De Sitter also worked on celestial mechanics and stellar photometry. He spent much time trying to calculate the mass of Jupiter's satellites.

Desnos, Robert (1900–1945) French poet. Desnos was one of the most gifted poets to be drawn to SURREALISM. He first emerged as a major voice in French letters in the 1920s, when his youthful love lyrics were championed by André BRETON. Desnos's poems featured strikingly disjointed and bizarre imagery but nonetheless managed to convey a romantic and melancholy tone. He employed automatic writing techniques by which he sought to evade conscious control over his use of language while evoking the power of dreams and unconscious longings. Desnos's best-known volume of poems was *Liberty or Love* (1927). In the 1930s he devoted much of his energies to radio and film scripts. Following the fall of FRANCE in WORLD WAR II, Desnos, a Jew, was arrested by the Nazis and sent to the Theresienstadt CONCENTRATION CAMP, where he died in 1945.

De-Stalinization Name given to official policy that undermined STALIN's hitherto uncontested infallibility. In February 1956, at the Twentieth Congress of the Communist Party of the USSR, KHRUSHCHEV attacked the cult of Stalin's personality and drew attention to the injustices of Stalin's regime. After the Twenty-second Party Congress, the central committee of the party published a decree condemning the "cult of the individual" and stressing the need for collective leadership. In 1961 Stalin's body was removed from LENIN's side in the mausoleum on Red Square, and numerous busts and pictures of Stalin were destroyed. Places named after Stalin had their names changed, a number of prisoners were released, a freer intellectual atmosphere ensued and the excesses of forced assimilation were condemned. De-Stalinization also stimulated a process of change in Eastern European countries.

détente Attempts at relaxing or easing tension, particularly between the countries of Eastern and Western Europe. Intense hostility between the U.S. and the USSR ended in 1953 after STALIN's death. After 1963, and the CUBAN MIS-

SILE CRISIS, both superpowers became aware of the need to prevent nuclear warfare. Accordingly, in 1967 the Outer Space Treaty and in 1968 the Treaty on the Non-Proliferation of Nuclear Weapons worked toward this goal, as did the normalization of relations between East and West Germany, the Treaty of Non-Aggression between the USSR and West Germany in 1970, the Four Power Agreement on Berlin in 1971 and the Seabed Arms Control Treaty, also of 1971. In 1971–72 the U.S.'s decision to end its military intervention in VIETNAM enabled the Kremlin to feel more able to seek détente, although the Sino-American rapprochement made the Soviet leaders apprehensive that the U.S. would curry favor with MAO ZEDONG, thus providing Beijing with technological aid. In 1972, after his visit to Moscow, President NIXON proclaimed the end of the COLD WAR and the beginning of Soviet-American détente. Such events as the invasion of Afghanistan and the nuclear arms debate did not enhance détente. In the late 1980s, during GORBACHEV's reign, U.S.-Soviet relations improved markedly, beyond the expectations of those who had earlier sought détente. Following the collapse of the Soviet Union in December 1991, the U.S. continued to pursue friendly relations with the Russian successor state.

Deutsch, Helene Rosenbach (1884–1982) Austrian-born psychoanalyst. A follower of Sigmund FREUD, Deutsch was the first female psychoanalyst to be analyzed by him. She founded the Vienna Psychoanalytic Institute (1923), remaining its director until 1935, when she immigrated to the U.S. where she helped spread Freudian psychoanalysis. Her important work in personality disorders foreshadowed later research into narcissism. She was also known for her major book, *The Psychology of Women* (1944).

Deutscher Werkbund German association founded in 1907 to promote excellence in design and design-related craft and manufacturing. In its early years the Werkbund carried forward craft traditions somewhat in the manner of William Morris's Arts and Crafts movement. The orientation turned toward a more clearly modernist direction with the 1914 exhibition in

Cologne housed in buildings designed by Walter GROPIUS. Among the personalities associated with the organization were Peter BEHRENS, Ludwig MIES VAN DER ROHE, Hermann Muthesius, Richard Riemerschmidt and Henry Van de Velde. The organization grew to a membership of over 3,000 and had direct connections with its Austrian counterpart. A 1927 exhibition included the building of a model suburb, Die Weissenhof Siedlung at Stuttgart, that included buildings by many of the major European modernists of the time. The organization was dissolved in 1934 in response to the growing pressure against MODERNISM generated by the rise of the Nazi regime. A revival of the Werkbund began in 1947.

De Valera, Eamon (1882–1975) Irish revolutionary and political leader, prime minister of Ireland (1932–48, 1951–54, 1957–59) and president (1959–73). De Valera was the dominant force in Irish politics from the 1920s through the 1950s. Born in New York City, the son of a Spanish father and an Irish mother, he moved to Ireland at the age of two after the death of his father. Despite his poor background, he became a mathematician and a teacher. He became involved in the Irish-language movement, then joined the Irish Republican Brotherhood (forerunner of the IRISH REPUBLICAN ARMY) and the paramilitary Irish Volunteers. He participated in the 1916 EASTER RISING, commanding 125 men who seized Westland Row railway station and Boland's Bakery in DUBLIN. Captured by the British, he was sentenced to be executed along with the other 16 leaders of the uprising but was spared ultimately because he held American citizenship. Instead he received a life sentence, but served only one year in prison before being released (1917). He then became president of the revolutionary SINN FÉIN nationalist movement. Elected to the British parliament (1919), he refused to take his seat but instead joined other nationalists in forming the Irish assembly, the DÁIL ÉIREANN, whose leader he became. He opposed the compromise Anglo-Irish Treaty of 1921, rejecting the partition of Ireland into the 26-county Free State and the six-county NORTHERN IRELAND. Founder of the FI-ANNA FAIL Party (1926), De Valera be-

came prime minister in 1932. He followed a nationalist policy, instituting a new constitution (1937) that transformed the country from the Irish Free State to Eire; he later declared IRELAND a republic (1947) and formally withdrew the country from the British COMMONWEALTH (1949). He kept Ireland neutral during WORLD WAR II. He also forged strong ties between the state and the Catholic Church and generally followed conservative domestic and social policies.

Devereux, James P. S. (1903–1988) U.S. military hero. In the marines, Devereux won fame as the commander of a 522-man detachment that defended WAKE ISLAND, along with 1,200 U.S. construction workers, when the Japanese invaded three days after their attack on PEARL HARBOR. Defending the island against overwhelming odds for 15 days, he reportedly sent out the message “Send us more Japs.” Devereux was captured and interned in a Japanese prisoner of war camp for four years. A four-term Republican member of the House of Representatives, he favored public school desegregation.

Devil's Island (île du Diable) One of the Safety Islands off the Atlantic coast of French Guiana. A tiny island, it was organized in 1852 and used as a penal colony, particularly for French political prisoners; the most famous one was Alfred Dreyfus. The French started closing the prison in 1938 but were interrupted by WORLD WAR II. By 1948 all prisoners were returned to their countries of origin. However, the lore of Devil's Island as a place of no escape has continued to hold the imagination.

Devlin, Denis (1908–1959) Irish poet, diplomat and translator. Born in Scotland, Devlin returned with his family to Ireland when he was 10. After a year in a seminary, he turned to the study of languages at University College, Dublin, Munich University and the Sorbonne. His best poetry was marked by religious fervor. He joined the diplomatic corps in 1935, and his first book, *Intercessions*, appeared in 1937. From 1940 to 1947 he was posted to the U.S., where he met Robert Penn WARREN, who championed his work in *The Southern Review*.

Lough Derg, his masterpiece, was published in 1946. After 1950 he resided in Italy, publishing only sporadically. *Collected Poems* came out in Dublin in 1963; *Selected Poems* (1963) was edited for the U.S. by Warren and Allen TATE. He translated St. John PERSE, APOLLINAIRE, QUASIMODO and Goethe.

Dewar, Michael James Stewart (1918–1997) British-American chemist. Dewar was educated at Oxford University, where he earned his D.Phil. in 1942. After research at Oxford he worked in industry as a physical chemist until his appointment in 1951 as professor of chemistry at Queen Mary College, London. In 1959 Dewar moved to the U.S. and served successively as professor of chemistry at the University of Chicago and from 1963 at the University of Texas. Dewar is noted for his contributions to theoretical chemistry. In his *Electronic Theory of Organic Chemistry* (1949) he argued strongly for the molecular-orbital theory introduced by Robert MILLIKEN. He did much to improve molecular-orbital calculations and by the 1960s was able to claim that he and his colleagues could rapidly and accurately calculate a number of chemical and physical properties of molecules.

Dewey, John (1859–1952) U.S. philosopher and educator. After graduating from the University of Vermont and Johns Hopkins University he taught at several universities and in 1904 was permanently appointed at Columbia University. In philosophy Dewey was the most important heir to the school of American philosophical pragmatism founded by William JAMES. Like James, he challenged all absolute theories of reality and truth. In their place he espoused a theory of truth that stressed the use of human ideas and hypotheses as limited but necessary instruments for creation of workable truths. To this philosophy he gave the name *instrumentalism*. In education Dewey was a prominent proponent of experimentation, or “learning by doing.” His most important writings include *Psychology* (1886), *The School and Society* (1900) and *Problems of Man* (1946).

Dewey, Thomas Edmund (1902–1971) American attorney, politician, and Republican presidential candidate

Governor Thomas E. Dewey (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

(1944, 1948). Dewey graduated from the University of Michigan in 1923, took a law degree from Columbia in 1925 and began to practice law in New York City. He gained national fame as special prosecutor between 1935 and 1937 and was elected the district attorney of New York County in 1937. The following year he ran for governor of New York, losing by a narrow margin to Democrat incumbent Herbert Lehman. In 1940 he sought the Republican presidential nomination, losing to Wendell WILLKIE. Dewey was elected governor of New York in 1942 and reelected in 1946 and 1950. He took a moderate stance on most issues but was renowned for his opposition to the NEW DEAL of President Franklin D. ROOSEVELT. Dewey unsuccessfully challenged Roosevelt for the presidency in 1944. Nominated again in 1948, Dewey chose California governor (later Supreme Court chief justice) Earl WARREN as his running mate. Many polls predicted a Dewey victory over President Harry S. TRUMAN, but Truman's aggressive campaigning led to Dewey's surprise defeat. After retiring as governor in 1954, Dewey remained active in Republican national politics. He was the author of *The Case Against the New Deal* (1940) and *Journey to the Far Pacific* (1952).

DEW Line Radar terminals of the Distant Early Warning network, near

69 degrees North latitude and extending from northwestern ALASKA to north-eastern CANADA—their purpose to give an alert at the approach of unfriendly aircraft. The DEW Line, constructed and run by the UNITED STATES and Canada, began operations in 1957. It was expanded to the ALEUTIAN ISLANDS in 1959 and across GREENLAND in 1961.

de Wolfe, Elsie (Lady Mendl) (1865–1950) American interior decorator and designer, often viewed as the originator of modern professional interior design. After an early career as an actress, de Wolfe took on a total renovation (c. 1910) of her New York townhouse. Notables who visited the house spread word of the de Wolfe style and brought professional commissions. Stanford WHITE, the noted architect, asked her to deal with the interiors of the Colony Club (1905–07), a project that further advanced her vocabulary of light color tones and simple forms. She became a spokesperson for the “good design” direction of its day, giving lectures and writing a popular and influential book of 1913, *The House in Good Taste*. She continued to conduct a successful practice in New York, in Paris (where she became Lady Mendl with her 1926 marriage to Sir Charles Mendl) and finally in Beverly Hills. Although never an advocate of modernism as that term is now understood, de Wolfe moved the decorator’s profession toward the modern world with her emphasis on professionalism and with her advocacy of simplicity and common sense in design.

Dexter, John (1925–1990) British theater and opera director. Dexter began his career at the Royal Court Theatre in London in the late 1950s. Later asked by Laurence OLIVIER to become associate director of the National Theatre, he staged such major plays as Peter SHAFFER’s *Equus* (1974) and David Henry Hwang’s *M. Butterfly* (1988). He won Tony Awards in New York for best director for both plays. He also staged operas for the Paris Opera and the Metropolitan Opera in New York.

Deyneka, Alexander Alexandrovich (1899–1969) Russian painter and sculptor. When SOCIALIST REALISM was imposed by the Soviet au-

thorities, he managed to preserve some of his earlier style in his works, which included sports, industrial and military scenes. Many of his murals decorated Moscow Underground stations.

Diaghilev, Serge Pavlovich (1872–1929) Russian ballet impresario, born in Novgorod. In pursuit of his goal of introducing Russian art to western Europe, in 1908 Diaghilev presented the bass Feodor CHALIAPIN in a season of Russian opera in Paris. He followed this up with his famous BALLETS RUSSES, presented in Paris (1909) and London (1911), in the conviction that in ballet he could form a union of all the arts. To this end he secured the services of dancers of outstanding skill—PAVLOVA, NIJINSKY, KARSAVINA and LOPOKOVA—and choreographers such as FOKINE and MASSINE; he commissioned BENOIS, BAKST, MATISSE, PICASSO, BRAQUE and others to design the decor, and DEBUSSY, RAVEL, STRAVINSKY and PROKOFIEV to compose ballet scores. The revolution broke his links with Russia, but with Paris as its headquarters his company continued to enjoy the highest reputation.

Dial, The American periodical. *The Dial* was founded in Chicago in 1880 and later moved to New York. It began as a conservative literary magazine but in 1916 evolved into a journal of radical opinion. By 1920 it was an influential champion of modern art and literature. Contributors to the *The Dial* included Sherwood ANDERSON, George SANTAYANA, D. H. LAWRENCE, T. S. ELIOT and Gertrude STEIN. *The Dial* published portions of Oswald SPENGLER’s *The Decline of the West* in 1924–25 and Thomas MANN’s *DEATH IN VENICE* in 1924. Marianne MOORE served as its editor for the last four years of its existence, but it folded in 1929 from lack of finances.

Diamond, I.A.L. (Ițec Dominici) (1920–1988) Romanian-born HOLLYWOOD screenwriter. A longtime collaborator of director Billy WILDER, with whom Diamond made such films as *Love in the Afternoon* (1957), *Some Like It Hot* (1959), *Irma la Douce* (1963), *Kiss Me, Stupid* (1964) and *The Private Life of Sherlock Holmes*. Diamond won an ACADEMY AWARD for *The Apartment* (1960).

Diana, princess of Wales (1961–1997) Born the third of four children to Viscount Althorp (later Earl Spencer in 1975), Lady Diana Spencer received her primary education in Riddlesworth Hall in Norfolk and then attended West Heath Boarding (secondary) School in Kent from 1974 to 1977. After leaving West Heath, Diana spent a year at the Institut Alpin Videmanette, a finishing school in Rougemont, Switzerland. After that she moved to London, where she briefly served as a nanny as well as a kindergarten teacher at the Young England School.

In 1980 Diana began dating Prince CHARLES, the son of Queen ELIZABETH II of England and heir to the throne. On July 29, 1981, Diana married Charles in St. Paul’s Cathedral in London. Diana gave birth to the couple’s first son, Prince William, on June 21, 1982, followed two years later by his younger brother, Harry, on September 15, 1984. On the surface Diana appeared to enjoy a happy life, but rumors surfaced about affairs between Charles and Camilla Parker Bowles (whom Charles married in April 2005) and between Diana and Major James Hewitt of the British army. In December 1992, after tabloids had printed numerous allegations of infidelity on both sides, Diana and Charles separated.

After their separation Diana promptly became an international ambassador of goodwill for Britain, raising funds for neglected and abused children and for the British Red Cross and campaigning regularly for an international accord

Diana, princess of Wales, and Prince Charles at their wedding, 1981 (BETTMAN/CORBIS)

banning the use of land mines. She also began to discuss openly the more unseemly aspects of the British royal family. In 1996 Charles and Diana obtained a divorce. Just prior to their divorce, she publicly began to date again and was regularly seen in the company of Dodi al-Fayed, the son of a wealthy Egyptian family. Early on the morning of August 31, 1997, Diana, Dodi and their driver (who was later found to have been intoxicated) were killed when their speeding limousine crashed in a tunnel in Paris. Diana's death and her subsequent funeral sparked a worldwide wave of sympathy and adulation for the princess.

Díaz, Porfirio (1830–1915) Mexican general and dictator. Díaz's long career straddled the 19th and 20th centuries. Born into a poor mestizo family, he changed his studies from the priesthood to law, but in 1854 joined the revolutionary forces of Benito Juárez. He rose in the military, achieving the rank of general in 1861 and becoming a federal deputy that same year. Díaz fought against France and Maximilian from 1861 to 1867 and was promoted to army commander. In 1871 he unsuccessfully revolted against the Juárez government and lost a presidential bid, and in 1876 he again was defeated in the presidential elections. However, he rebelled again, this time against Juárez's successor, Sebastián Lerdo de Tejada, and succeeded in overthrowing the government. Díaz assumed the presidency in 1877 and, while he was not president from 1880 to 1884, he effectively ruled MEXICO for the next 35 years. He proved a stern dictator, suppressing opposition and almost eliminating the previously prevalent countrywide banditry. He opened Mexico to foreign development, notably by U.S. business interests, bringing enormous revenue into the country and ensuring economic growth. This policy enriched Díaz and his followers but left the peasantry in wretched conditions with diminished landholdings and the workers as poor as ever with a government-opposed labor movement. In 1909 Díaz proclaimed a reinstatement of democracy, but when he again engineered reelection (1910) and showed no evidence of fulfilling his pledge, his regime was overthrown by a 1911 revo-

lution led by Francisco Madero. He fled to Paris, where he died in exile.

Dibelius, Martin (1883–1947) German Protestant theologian. Dibelius became a professor of theology at the University of Heidelberg in 1915 and taught there for most of his adult life. He was known as an interdisciplinary thinker who drew from literature and folkloric oral traditions in his theological works. Dibelius was especially interested in the history of early Christianity. His major books include *Die Formgeschichte des Evangeliums* (1919) and *Geschichte der Unchristlichen Literatur* (1926).

Dick, George Francis (1881–1967) American physician. Dick and his wife, **Gladys Rowena Henry Dick (1881–1963)**, also a physician and medical researcher, were renowned for their work on the prevention and treatment of scarlet fever. Until their work, scarlet fever was an endemic and often fatal or crippling childhood disease.

A graduate of Rush Medical College (1905), Dick studied pathology at the Universities of Vienna and Munich. Returning to the U.S. in 1909, he joined the faculty of the University of Chicago, where he eventually became professor of pathology and head of the department of medicine. Gladys Henry obtained her M.D. from Johns Hopkins University School of Medicine (1907) and did postgraduate work in several fields at Johns Hopkins and the University of Berlin. Meeting in 1911 at the University of Chicago, where they were both research pathologists, they were married in 1914.

Collaborating in their research, in the early 1920s the Dicks discovered that hemolytic streptococci bacteria cause scarlet fever. They developed the first test for determining a person's susceptibility to scarlet fever—the Dick test. They also did important work on immunization. However, they became the subject of international controversy because they patented their techniques of toxin and antitoxin development used in the test. In 1935 the LEAGUE OF NATIONS declared that these patents restricted further research into scarlet fever immunization or treatment.

Dick, Philip Kindred (1928–1982) American novelists and short story

writer. Dick enjoyed a steadily increasing reputation as one of the most original and visionary American fiction writers of the second half of the 20th century. Within the science fiction field, in which he produced most of his best work, he is regarded by peers such as Ursula LE GUIN and Stanislaw LEM as the finest writer in that genre. Dick, who lived in California for nearly all his life, began his career as a prolific short-story writer in the 1950s, contributing to a wide range of science fiction pulp magazines. He first emerged as a major science fiction novelist with *Eye in the Sky* (1956), which was followed by numerous acclaimed works including *The Man in the High Castle* (1962), which won the Hugo Award for best novel, *The Three Stigmata of Palmer Eldrich* (1965) and *Ubik* (1969). *Valis* (1981) is a fictionalized account of Dick's mystical experiences in the final decade of his life. *The Transmigration of Timothy Archer* (1982) is considered Dick's best mainstream fiction novel.

Dickey, James Lafayette (1923–1997) American poet, novelist and critic. Born in Georgia, Dickey attended Vanderbilt University and began his career as an advertising copy writer. His first volume, *Into the Stone*, appeared in 1960; his fourth, *Buckdancer's Choice*, won the National Book Award in 1965. He is best known for his novel *Deliverance* (1970), an adventure story about four businessmen on a hunting trip in rural Georgia, which became a best seller and was made into a movie. *The Zodiac* (1976) is a long poem in 12 parts. The title work of *The Strength of Fields* was written for President CARTER's inauguration. *Puella* (1982) describes a girl's coming of age. Dickey is also known for his outspoken criticism of his contemporaries, collected in *The Suspect in Poetry* (1964), *Babel to Byzantium* (1968), *Self-Interviews* (1970) and *Sorties* (1971). Dickey's *The Whole Motion* (1992) is considered to be his most comprehensive volume. Other later works include *The Eagle's Mile* (1990) and *Falling, May Day Sermon, and Other Poems* (1982).

Dick Tracy The world's most popular detective comic strip, by Chester Gould (1900–85), *Dick Tracy* was first syndicated on October 12, 1931, and is still enjoyed by millions. Over the years the incorruptible Tracy has used his two-

way wrist radio and other high-tech gadgets to do battle with a host of underworld types, including Pruneface, the Mole, Flyface, Itchy and Ugly Christine. Gould retired on Christmas Day 1977, after which the strip was taken over by Max Allan Collins and Rick Fletcher; after Fletcher's death in 1983, Dick Locher was added. The feature-length motion picture *Dick Tracy*, directed by and starring Warren Beatty, was released in 1990.

Didion, Joan (1934–) American author. Born in Sacramento, California, which she evokes in much of her work, Didion was educated at the University of California at Berkeley. She went to New York and worked for *Vogue* magazine for eight years, during which time she published her first novel, *Run River* (1963). Returning to California, she wrote a series of essays for the *Saturday Evening Post*, which were collected in the acclaimed *Slouching Towards Bethlehem* (1968). The title essay, a portrait of HIPPIES in the Haight Ashbury district of SAN FRANCISCO, established her as a leading practitioner of the NEW JOURNALISM, with its subjective point of view and detailed impressions. In the best-selling novel *Play It as It Lays* (1970, filmed 1972), she established her unique fictional style, taut, precise and flat. Her writing evidences her fundamentally bleak and hopeless view of life. Other works include *The White Album* (1979), essays; *Salvador* (1983); *Democracy: A Novel* (1984); and *Miami* (1987). Didion was married to the writer **John Gregory Dunne**, with whom she collaborated in the writing of screenplays. One of their collaborative efforts was the film *Up Close and Personal* (1996), which starred Robert REDFORD and Michelle Pfeiffer. Her book *The Year of Magical Thinking* (2005), is about her husband's death, grief and mourning, was a 2005 National Book Awards winner.

Didrikson, Mildred "Babe" (1913–1956) American athlete. Didrikson became a professional athlete after the 1932 OLYMPIC GAMES in Los Angeles, in which she set two world records. She excelled in a variety of sports, including basketball, baseball, billiards and swimming. In 1947 she began her career as a professional golfer, winning every possible women's title at least once during the next decade and was named outstanding

American athlete and Olympian Babe Didrikson (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

woman athlete of the first half of the 20th century by an Associated Press poll. Her autobiography, *The Life I've Led*, was published in 1955, a year before her death from cancer.

Die Brücke (The Bridge) German artistic movement that was heavily influenced by EXPRESSIONISM. The young German painters who initially founded Die Brücke were all, at the time, studying architecture at the Dresden Technical School. These artists, who included Ernst-Ludwig KIRCHNER and Fritz Bleyl, were especially drawn to anti-classical forms from non-European cultures, such as African and Oceanic sculpture. Their pictorial style featured intense distortions intended to emphasize spiritual freedom and a shattering of accepted artistic definitions. Die Brücke never formulated a developed and consistent artistic manifesto, but it did create a sense of mission—declaring itself as the bridge to the art of the future. Emil NOLDE was among the painters who associated themselves for a time with the movement, which ultimately disbanded in 1913.

Diefenbaker, John George (1895–1979) Prime minister of Canada (1957–63). Diefenbaker was first elected to Canada's House of Commons in

1940 and served 13 terms as a representative for Saskatchewan. In 1958 he led his PROGRESSIVE CONSERVATIVE PARTY to the largest electoral victory in Canada's history. His administration was noted for its ambitious efforts to unlock the natural resources of the Canadian north and to increase independence from the U.S. A tireless critic of the opposition LIBERAL PARTY governments that succeeded him, Diefenbaker often demonstrated an acerbic humor and eloquent oratory in debate in the House of Commons.

Diels, Otto Paul Hermann (1876–1954) German organic chemist. The son of Hermann Diels, a famous classical scholar, Diels earned his doctorate under Emil FISCHER in Berlin (1899) and became professor there in 1906. From 1916 until his retirement in 1948 he was professor at Kiel. In 1906 he made an unexpected discovery, that of a new oxide of carbon, carbon suboxide. Diels's second major discovery was a method of removing hydrogen from steroids by means of selenium. He used this method in research on cholesterol and bile acids, obtaining aromatic hydrocarbons that enabled the structure of the steroids to be deduced. In 1928 Diels and his assistant Kurt ALDER discovered a synthetic reaction in which a

diene (compound containing two double bonds) is added to a compound containing one double bond flanked by carbonyl or carboxyl groups to give a ring structure. The reaction proceeds in the mildest conditions and is of general application and hence of great utility in synthesis. It has been used in the synthesis of natural products such as sterols, vitamin K, cantharides and synthetic polymers. For this discovery Diels and Alder were jointly awarded the NOBEL PRIZE in chemistry in 1950.

Diem, Ngo Dinh (1901–1963) South Vietnamese leader. Born in Annam, Diem was a member of an important Roman Catholic family, an ardent nationalist and a strong anti-communist. Repeatedly declining offers of political office, he finally became prime minister of South VIETNAM under BAO DAI in 1954 after the partition of his country. Victorious in the presidential elections of 1955, he declared South Vietnam a republic the following year. Strongly supported by the U.S., Diem consolidated his power but became increasingly unpopular due to his nepotism, his dictatorial control and his favoring of Catholics over Buddhists. Under Diem the South Vietnamese position in the VIETNAM WAR worsened and American support waned. He was assassinated during a 1963 military coup.

Dien Bien Phu (Dienbienphu) Site of the climactic battle that effectively ended the war between FRANCE and the VIET MINH (1946–54). It was a small village on the border between Laos and North Vietnam. About 180 miles from the nearest French post, it was fortified by some 16,000 French troops, including soldiers of the French Foreign Legion and Vietnamese, Laotians and Cambodians fighting on the French side. The French hoped to draw the Viet Minh into a set-piece battle in which French firepower would destroy them. But the French underestimated their enemy. Viet Minh general VO NGUYEN GIAP entrenched artillery in the surrounding mountains and massed five divisions totaling about 60,000 troops. The battle began with a massive Viet Minh artillery barrage on March 13, 1954, and was followed by an infantry assault. At the height of the battle the French requested military

support from the U.S., but diplomatic and domestic U.S. political considerations caused President EISENHOWER to deny the request. Fighting raged until May 7, 1954, when the French were overrun. The shock of the fall of Dien Bien Phu led France, already plagued by public opposition to the war, to agree to the independence of VIETNAM at the GENEVA CONFERENCE in 1954.

Dieppe Port city on the English Channel north of Rouen, in France's Seine-Maritime department. Dieppe was held by the Germans from 1940 to 1944. On August 19, 1942, during WORLD WAR II, the city was stormed by Allied commandos who were reconnoitering German defenses. The Germans retaliated and inflicted many fatalities on the Allies (who put the experience to good use during the NORMANDY invasion of 1944). Several structures damaged during the war have been reconstructed.

Diesel, Rudolph Christian Carl (1858–1913) German engineer and inventor, designer of the diesel engine. After graduating from the Munich Institute of Technology, Diesel worked as a mechanic for two years in Switzerland and then worked in Paris as a thermal engineer. He was a devout Lutheran and a dedicated pacifist, believing in international religious liberation. In 1893 he demonstrated his first engine, and although the first few attempts failed, within three years he had developed a pressure-ignited heat engine. The engine named for him is now used universally, for example, in powering boats and in running generators.

By 1898 Diesel was a millionaire, but his fortune soon disappeared. He toured the world giving lectures and visited the U.S. in 1912. His health was bad; he suffered from gout and was depressed by the buildup to WORLD WAR I. On the ferry returning to Paris from London in 1913, after dining with a friend, he disappeared and was assumed to have drowned in the English Channel.

Dietrich, Marlene (Maria Magdalena von Losch) (1901–1992) German-born film actress. Dietrich, whose primary film triumphs were in the 1930s, has become one of the enduring femme fatale figures of the cinema.

Born in Berlin, she studied as a youth for a career as a concert violinist before an injured wrist deflected her into an acting career. After studying at the Max Reinhardt Drama School, she was discovered by film director Josef VON STERNBERG, who made Dietrich an international star through her roll as the alluring dance-hall chanteuse Lola-Lola in *The Blue Angel* (1930), a film shot in Germany. Von Sternberg then directed Dietrich in a number of classic HOLLYWOOD films, including *Dishonored* (1931), *Shanghai Express* (1932), *Blonde Venus* (1932) and *The Scarlet Empress* (1934). Dietrich shed von Sternberg's heavy dramatic burden and had a comedy hit alongside James STEWART in *Destry Rides Again* (1939). She made relatively few films in the remaining decades of her life, but her supporting roles in *Witness for the Prosecution* (1958) and *Touch of Evil* (1958) were memorable. Maximilian Schell made a biographical documentary, *Marlene*, in 1984.

Diffrient, Niels (1928–) American industrial designer best known for his development of chairs based on ERGONOMICS. Diffrient studied at Cranbrook Academy in the 1940s and worked with the SAARINEN office from 1946 to 1951. From 1951 to 1952 he was with the office of Walter B. Ford and thereafter in New York in the office of Henry Dreyfuss, where he became a partner in 1956. His work there included aircraft interiors, road and farm machinery, and studies in ergonomics. After leaving the Dreyfuss office in 1981, Diffrient became an independent designer concentrating on furniture. His chairs and his office systems furniture are his best-known recent projects.

digital divide Term describing the gap between those individuals who possess access to modern means of electronic communication and those who lack such access. Within the U.S. the term has signified the gap between white Americans and minorities over access to the INTERNET. The term became popular during the administration of President Bill CLINTON, who himself regularly mentioned the dangers that such a racial division would cause in American society. In the technology intensive sectors of the U.S.

economy, the digital divide has also come to refer to the general paucity of ethnic minorities (African, Hispanic and Native Americans) within this sector's workforce.

Dillard, Annie (1945–) American essayist. Dillard was educated at Hollins College and was married to the poet and novelist Henry Dillard and later to the novelist Gary Clevidence. Her first book of poetry, *Tickets for a Prayer Wheel*, was published in 1974. That same year her prose reflections in *Pilgrim at Tinker Creek* were published to great acclaim. Compared to Thoreau's *Walden Pond*, the book won the PULITZER PRIZE in 1974. The book presents Dillard's lyrical reflections on nature, humanity and theology. Dillard has contributed to *Atlantic Monthly*, *Poetry*, *Harper's* and many other periodicals and has taught poetry and creative writing. Other works include *Holy the Firm* (1978) and the autobiographical *An American Childhood* (1987). Dillard continues to write, producing such works as *Teaching a Stone to Talk* (1988), *The Writing Life* (1989), *The Living* (1991), *Mornings Like This* (1996), *For the Time Being* (1999) and others. She is an adjunct professor of English at Wesleyan University.

Dillinger, John Herbert (1903–1934) American bank robber. A petty thief during his childhood in Indianapolis, Indiana, Dillinger graduated to serious crime in 1924, when he attempted to rob a grocery store. Apprehended, he served nine years in prison where he became a confirmed criminal. After he was released in 1933, his spectacular bank-robbing career lasted a mere 11 months. During that time he and his two successive gangs held up approximately 20 midwestern banks; he was captured and escaped jail twice; and he was responsible for 16 murders. While the robbery spree was in progress, Dillinger became something of a popular figure to many depression-era Americans who appreciated his courtesy to individuals and his hatred of banking institutions. Named public enemy number one by the FBI, Dillinger was the object of an intensive manhunt. Apparently betrayed by a female friend, he was killed by FBI agents as he left the Biograph Theater in Chicago on July 22, 1934.

Dillon, Clarence (1882–1979) American financier. In 1925 his firm, Dillon, Read & Co., won a hard-fought battle for control of DODGE BROTHERS Automobile Company. Shortly thereafter, Dillon arranged a merger of Dodge and CHRYSLER, which resulted in Chrysler Corp. becoming the nation's third-largest auto maker. Dillon's son, **C. Douglas Dillon**, held various posts in the EISENHOWER administration and served as secretary of the treasury (1961–65) under presidents KENNEDY and JOHNSON.

DiMaggio, Joe (Joseph Paul DiMaggio) (1914–1999) American baseball player. Immortalized in song and story, DiMaggio's reputation has reached legendary status. He joined the New York Yankees in 1936 and remained with the team through their "dynasty" years, which included nine world championships. Perhaps the game's all-time best natural hitter, his 1941 56-game hitting streak is one of his more memorable feats. He was an All-Star during each of his major league seasons and was named Most Valuable Player three times. His career was interrupted by World War II, but he was still a considerable factor in four postwar World Series championships and led the league in home runs in 1948. His legendary status was perhaps fueled by the fact that he was for a time married to another American legend, Marilyn MONROE. His two brothers, Dom and Vince, also played in the majors. DiMaggio retired in 1951 and was named to the Hall of Fame in 1955.

Dimitrov, Georgi (1882–1949) Bulgarian Communist leader. An early trade unionist, Dimitrov was organizing strikes by 1905. Elected to the Bulgarian National Assembly (1913), he was imprisoned in 1915 for his opposition to BULGARIA's entry into WORLD WAR I. From 1917 to 1923 he secretly led the nation's Communist Movement and, in 1923, a Communist uprising against Alexander Tsankov. When it failed, Dimitrov fled the country. In Berlin (1933) he was accused of complicity in the REICHSTAG FIRE but was acquitted. Settling in the USSR, Dimitrov served as secretary-general (1935–43) of the COMINTERN. In 1945 he returned to a newly liberated Bulgaria, where he headed the

Communist Party and became prime minister in 1946. During his tenure in office, he followed an unswerving Communist line but showed signs of growing independence from the USSR. He died in Moscow in 1949 while undergoing medical treatment.

Dinesen, Isak (Karen Blixen) (1885–1962) Danish author. Dinesen, who wrote primarily in English, is best known for the acclaimed memoir *Out of Africa* (1937, filmed 1985), which recounts her life on a coffee plantation in Kenya with her philandering husband and her lover. Dinesen was born to an upper-class family and, after studying art in Paris, married her cousin, Baron Bror Blixen-Finecke, in 1914. They immediately moved to Africa, but following their divorce and the eventual failure of the plantation, she returned to Denmark and began writing in earnest. Her first important work, *Seven Gothic Tales* (1934), was praised for its use of fantasy and evocative description; it aroused much curiosity about the unknown author. Dinesen continued to produce successful and esteemed stories and memoirs, though she suffered ill health as the result of syphilis contracted from her husband. Her works include *Out of Africa* (1937), *Winter's Tales* (1942), *Last Tales* (1957) and the essay collection *Shadows in the Grass* (1961).

Ding Ling (Jiang Bingzhi) (1904–1986) Chinese writer. She was a feminist whose writings were primarily concerned with the impact of CHINA's communist revolution on the lives of peasant women. After the Communist victory in 1949, she held a number of key literary and cultural posts. A political purge in 1957 led to her banishment from public life and the banning of her works. She was imprisoned for a number of years and was not officially rehabilitated until 1977.

DioGuardi, John (Johnny Dio) (1915–1979) American organized-crime leader. DioGuardi was believed to have specialized in labor racketeering and was allegedly associated with Teamster official Jimmy HOFFA in the 1950s. He was indicted for arranging the 1956 acid-throwing incident that blinded labor columnist Victor Riesel, but he never came to trial for that crime. DioGuardi served several prison

terms for tax evasion, extortion and fraud, and died in prison.

Dion, Céline (1968–) French-Canadian singer. In 1981 Dion released her first album, *La voix du Bon Dieu* (The voice of God), which did well in Canada. Two years later her second album, *Les chemins de ma maison* (The Roads of my house), became the first record produced by a Canadian singer to go gold in France.

By 1989 Dion had begun singing in English, which paved the way for *Unison* (1990), her first English-language album. While *Unison* produced several hit singles, most notably “Where Does My Heart Beat Now,” it was not until Dion recorded the title duet with Peabo Bryson for the Disney animated film *Beauty and the Beast* (1991) that she had a song in the top 10 pop charts in the U.S. Dion and Bryson received a 1992 Academy Award for best song as well as a Grammy.

Since her breakthrough year in 1992 Dion has recorded some dozen albums, among them *The Colour of My Love* (1993), *Falling into You* (1996), *Let's Talk About Love* (1997) and *A New Day Has Come* (2002). Her recording of “My Heart Will Go On” in the movie soundtrack *Titanic* (1997) won her a second Academy Award for best song.

Dior, Christian (1905–1957) French fashion designer best known for his 1947 line, with its long skirts and hint of a backward turn toward the austere style of the WORLD WAR I era. Dior studied in PARIS with the intention of becoming a career diplomat but in 1927 opened a small Paris art gallery showing the works of avant-garde artists such as Salvador DALÍ and Jean COCTEAU. The GREAT DEPRESSION closed the gallery, leading Dior to turn to fashion design in 1935. In 1947 his firm launched with overwhelming success the style that became known as the New Look. His annual lines thereafter, each with a central theme, were popular and widely copied in the production of ready-to-wear manufacturers. Practicality and a look that was both soft and architectural were typical themes of Dior's designs. His firm was taken over briefly by Yves SAINT LAURENT and then by Marc Bohan after Dior's death. Gianfranco Ferré, John Galliano and Hedi Slimane were successive design directors. As the House

of Dior, the organization has continued to grow with divisions devoted to hats, furs, shoes, perfumes and jewelry. The New York branch alone employed a staff of about 1,200 by 1948. Dior was the recipient of a 1947 Neiman Marcus Award and a Parsons Medal in 1956.

Diori, Hamani (1916–1989) First president of the independent nation of NIGER. He held several government posts during the years when Niger was an autonomous French territory and was chosen by the French to become president when the nation was granted independence in 1960. His regime was plagued by widespread corruption, and the government's problems were compounded by a severe drought that hit sub-Saharan Africa in the late 1960s and early 1970s. Diori was overthrown by a military coup in 1974. After spending 13 years in prison and under house arrest, he was freed in 1987. He then moved to Morocco.

Dirac, Paul Adrien Maurice (1902–1984) British mathematician and physicist. After graduating in 1921 in electrical engineering at Bristol University, Dirac went on to read mathematics at Cambridge, where he obtained his Ph.D. in 1926. He lectured for several years in America, then was appointed (1932) to the Lucasian Professorship of Mathematics at Cambridge, a post he held until his retirement in 1969. In 1971 he became professor of physics at Florida State University. Dirac is acknowledged as one of the most creative theoreticians of the early 20th century. In 1926, slightly later than Max BORN and Pascual Jordan in Germany, he developed a general formalism for QUANTUM MECHANICS. In 1928 he produced his relativistic theory to describe the properties of the electron. The wave equations developed by SCHRÖDINGER to describe the behavior of electrons were nonrelativistic; a significant deficiency was their failure to account for the electron spin discovered in 1925 by GOUDSMIT and George Uhlenbeck. Dirac's rewriting of the equations to incorporate relativity had considerable value, for it not only predicted the correct energy levels of the hydrogen atom but also revealed that some of those levels were no longer single but could be split into two. It is just such a splitting of spectral lines that is characteristic of a spinning electron.

Dirac also predicted from these equations that there must be states of negative energy for the electron. In 1930 he proposed a theory to account for this that added a new dimension of matter to the universe—antimatter. It was soon appreciated that Dirac's argument was sufficiently general to apply to all particles. Above all else a quantum theorist, in 1930 Dirac published the first edition of his classic work *The Principles of Quantum Mechanics*. In 1933 he shared the NOBEL PRIZE in physics with Schrödinger for his work on electron theory.

dirigible See ZEPPELIN.

Dirksen, Everett McKinley (1896–1969) American political leader. Born in Pekin, Illinois, Dirksen served in WORLD WAR I, returned to his hometown, practiced law and won election to the House of Representatives as a Republican in 1932. He served as a member of the House until 1948 and was elected to the Senate in 1950, remaining a senator until his death. A popular and colorful conservative, he became party whip in 1957 and minority leader two years later. Dirksen maintained a conservative stance regarding foreign and domestic affairs and supported Senator Joseph McCARTHY. Moderating his positions in the 1960s, he helped President KENNEDY secure the passage of a NUCLEAR TEST BAN TREATY in 1963. He was an enthusiastic supporter of President

Senator Everett Dirksen (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

Lyndon JOHNSON's civil rights program and aided in the passage of landmark civil rights legislation.

Disney, Walt (Walter Elias Disney) (1901–1966) American motion-picture producer and amusement-park entrepreneur whose work has become synonymous with family entertainment. Born in Chicago, Disney spent his boyhood on a farm in nearby Marceline, Missouri and his later school days in Kansas City, Missouri, where he first experimented with cartooning and animation. In 1923 he moved to Los Angeles, intending to market his first series of ANIMATED FILMS, *Alice in Cartoonland*, which blended live-action characters with animated backgrounds. The appearance of MICKEY MOUSE in a synchronized-sound cartoon called *Steamboat Willie* in 1928 saved his studio from certain ruin and set the course for future success. With his brother Roy and assistants like the brilliant Ub Iwerks, Disney dominated animation for the next 40 years. *Snow White and the Seven Dwarfs* (1938) demonstrated the viability of a feature-length format. Shorts like *The Old Mill* (1937) and features like *Pinocchio* (1940) pioneered the three-dimensional effects of the multiplane camera technology. For *FANTASIA* (1941) he developed a stereophonic sound system; he was also the first filmmaker to contract exclusively with the new Technicolor system. After World War II Disney turned his attention to other interests. *Treasure Island* (1950) inaugurated a successful series of live-action adaptations from children's classics. Several television series, beginning in 1954 with *Disneyland* for ABC, showcased not only the Disney movies, but the new theme parks as well. The DISNEYLAND park opened in Anaheim, California, in 1955. The Disney World project in Orlando, Florida, was well into the planning stages when Disney died in 1966 of an acute circulatory collapse. During his career he amassed 39 ACADEMY AWARDS and hundreds of other awards and honors.

Disneyland and Disney World These two American amusement parks were inspired by animator and film producer Walt DISNEY and are famous throughout the world. Disneyland, located in Anaheim, California, was launched by Disney himself in 1955.

The second park, Walt Disney World, was opened outside Orlando, Florida, in 1971, with a companion park, Epcot Center, opening in 1982. Disney's approach was to create specific themes within each park, such as Fantasyland and Tomorrowland. The first Disney theme park outside the U.S. opened in Tokyo, Japan, in 1983 (Tokyo Disneyland). In April 1992 EuroDisney (now Disneyland Paris) opened for business. Designed to appeal to adults as well as children, the parks are known for their friendly employees, cleanliness and lavish, innovative attractions that utilize the latest in technology. The Walt Disney Corporation also built Disneyland Hong Kong just outside the Chinese city. It opened in 2005.

Di Stefano, Giuseppe (1921–) Italian tenor. Born near Catania, Sicily, Di Stefano studied privately and made his debut at Reggio Emilia in 1946 as Des Grieux in *Manon Lescaut*. His La Scala debut occurred a year later, and this theater became his European home base. He first performed in the U.S. at the Metropolitan Opera in 1948, singing the Duke in *Rigoletto*. He remained at the Metropolitan for the next five years, singing there again from 1955 to 1956 and 1964 to 1965. Noted for the pure lyricism of his voice, Di Stefano appeared at most of the world's leading opera houses, singing the major tenor parts in the Italian and French repertoires. Di Stefano gave his last performance in 1992 at the Caracalla Theater in Rome.

Di Stéfano Laulhé, Alfredo (1926–) Argentine-born soccer player. Renowned for his achievements with Real Madrid of Spain in the 1950s and 1960s, Di Stéfano began his career in Argentina with the famous River Plate club. In 1949 he joined the exodus to Colombia, where higher salaries were luring the cream of South America soccer. In 1953 FIFA ruled the Colombian system illegal and forced the release of all non-Colombian players. Di Stéfano moved to Spain and embarked upon the golden period of his career and that of Spanish soccer. Real Madrid dominated Spanish domestic competition and helped forge the popularity of the newly created inter-European competitions. Led by Di Stéfano, Real won the first five European Cups (1956–60) and the first World Club

Championship held in 1960. The forward line of Francisco Gento, Ferenc Puskas and Di Stéfano became the most famed and feared in soccer history. Their master reached its peak at the 1960 European Cup Final when Real crushed Eintracht Frankfurt 7-3, Puskas and Di Stéfano scoring the goals created by Gento's brilliant wing play. Di Stéfano played seven times for Argentina and 31 times for Spain.

Dix, Dom Gregory (George Eglington Alston) (1901–1952) Anglican priest and theologian. Dix was one of the leading figures in the Anglican Church in the 20th century. He was noted both for his personal charm and leadership abilities and for his insightful writings on the history and meaning of the Anglican liturgy. Educated at Oxford, he was ordained as an Anglican priest in 1925 and took his final vows in 1940 after a period of monastic life at Nashdom Abbey. In 1946 Dix was named Select Preacher for the University of Cambridge. In 1948 he became the Prior of Nashdom Abbey. His major works include *A Detection of Aumbries* (1942) and *The Shape of the Liturgy* (1945).

Dix, Otto (1891–1969) German painter. Born in Gera, he studied at art schools in Dresden and Düsseldorf. A soldier in WORLD WAR I, he was horrified by the fighting and returned to Düsseldorf to create a series of harrowingly realistic paintings and the cycle of 50 powerful etchings entitled *War* (1925). He lived in Berlin (1925–27), moving to Dresden in 1927 to teach at that city's academy. Branded a decadent by the Nazis, he was removed from his post in 1933. Although he was arrested in 1939 for plotting against HITLER, he was drafted into the German army in 1945 and was later a French prisoner of war. Dix is known for his biting satirical German expressionist works. In these paintings the personalities of the WEIMAR REPUBLIC—often prostitutes, beggars and criminals—are forcefully portrayed in harsh colors and expressively distorted forms. His later paintings were largely religious in subject matter.

Dixieland jazz Synonymous with "traditional jazz," although the two terms continue to evoke significant

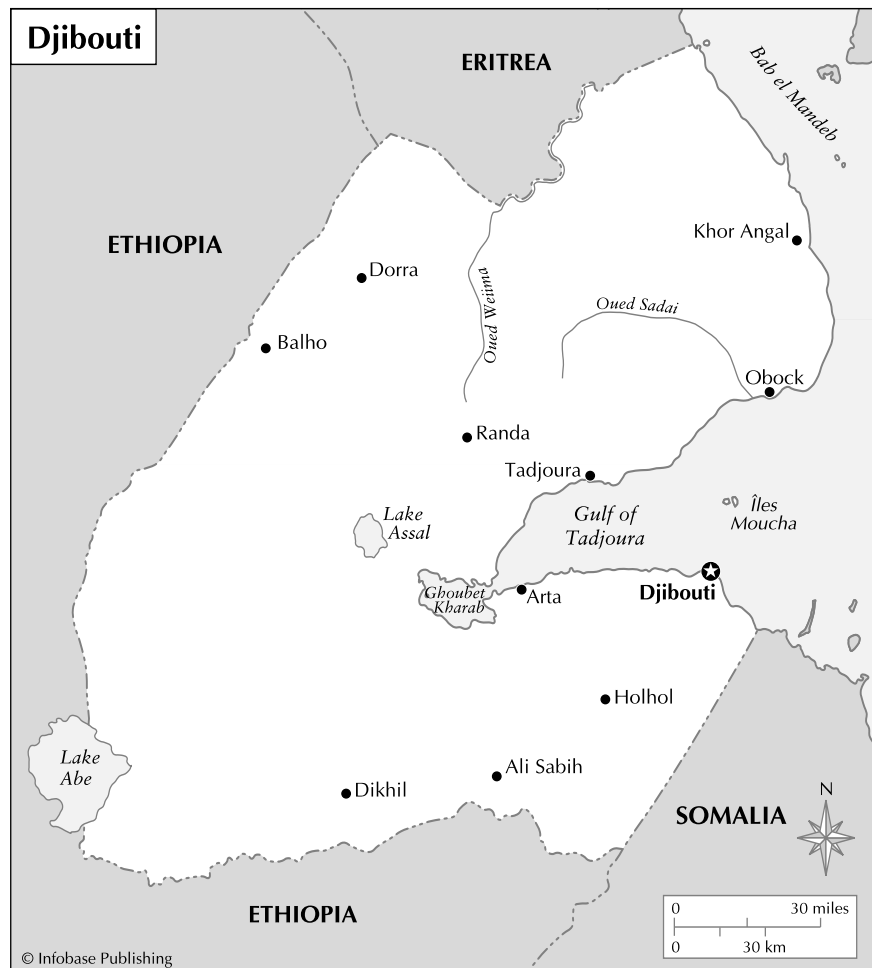

polemical resonances. *Dixieland* derived from the ORIGINAL DIXIELAND JAZZ BAND, the white New Orleans group that became an international sensation through its tours and recordings. Since such groups were regarded as essentially imitative of the style developed by black musicians in New Orleans, *Dixieland* became associated with white groups like the ODJB and New Orleans Rhythm Kings, with the terms *traditional* and *New Orleans* reserved for the music of the black originators and their followers. But the distinction has lost much of its original specificity, and the terms can now be considered interchangeable. Stylistically, Dixieland involves a collective approach to improvisation, with the trumpet generally assigned the melody and with counterpoint provided by a clarinet and trombone; the typical rhythm section consists of drums, banjo (or piano or guitar) and tuba (later, often replaced by the double bass). Today, Dixieland is typically rendered with celebratory gusto and, in groups like the Dukes of Dixieland, with great virtuosity and polish.

Dixon, Thomas F. (1916–1998) U.S. rocket design pioneer. Dixon got in on the ground floor of what would later become the Rocketdyne Division of North American Aviation, where he served as vice president of research and engineering from 1955 to 1961. After briefly interrupting his career in the rocket industry to serve as deputy associate administrator of NASA, he returned to the private sector in 1963. Dixon was awarded the Robert H. Goddard Memorial Award by the American Rocket Society in 1957.

Djermal, Ahmed (1872–1922) Turkish general and statesman. Djermal, as a staff officer in Salonika (now Thessaloniki, Greece), was the first officer to join the “Society [later Committee] of Union and Progress,” also known as YOUNG TURKS. This organization, with military support, overthrew the reactionary government led by Sultan ABDUL HAMID II in 1909 and dominated Ottoman politics until the empire’s defeat in WORLD WAR I (1918). Djermal served as military governor of Constantinople, minister of marine and Turkish governor of SYRIA during World War I. After TURKEY’S defeat, he became military adviser to AFGHANISTAN.

Djibouti Republic located on the northeastern coast of the Horn of Africa, fronting the Strait of Bab el Mandeb; the volcanic, mostly infertile country covers a total area of 8,938 square miles. The bulk of the population inhabits the comparatively fertile coastal strip bordering the Gulf of Tadjoura. The port of Djibouti was an important coal-bunkering station on the SUEZ CANAL route and became the capital of French Somaliland in 1892; a railway to ADDIS ABABA was completed in 1917. In response to the majority Somali community’s calls for independence, a referendum was held in March 1967. Although the territory voted to retain its association with France, the Somali community contested the validity of the result. After nearly a decade of Somali agitation and pressure from the ORGANIZATION OF AFRICAN UNITY, the territory acceded to independence in June 1977. A Somali, Hassan Gouled, was elected president, and an Afar, Ahmed Dini, appointed

prime minister. In December 1977 Ahmed Dini and four other Afar ministers resigned, alleging discrimination against Afars. As part of a policy of detribalization, the Rassemblement Populaire Pour le Progres (RPP) party was formed in 1979; in November 1981 Djibouti became a one-party state. President Gouled was reelected in 1982 and 1987 but stood as sole candidate on both occasions. Ethnic tensions between rival Somali-speaking groups led to serious violence in 1989, when security forces also moved to suppress unrest among the Afar majority. In 1999 Omer Gelleh was elected president. In 2000 the government reached an agreement with northern rebels of the FRUD (Front for Restoration of Unity and Democracy) and put an end to civil war. In response to the U.S.-led war on terror after SEPTEMBER 11, 2001, Djibouti has attempted to remain friendly with the U.S. while not alienating nearby Arab countries. For instance, it has refused to serve as a

DJIBOUTI

1946	French Somaliland becomes a French overseas territory.
1967	The territory, now renamed Territory of the Afars and the Issas, is granted a semiautonomous executive, headed by a president and a council of eight members.
1976	Ali Arif resigns the presidency.
1977	The Territory of the Afars and the Issas gains independence under the name of Djibouti. Ahmed Dini Ahmed resigns along with four cabinet members following Afar-Issa strife.
1979	Popular Rally for Progress (Rassemblement Populaire pour le Progrès, RPP) is formed.
1981	Legislation is enacted making RPP the country's only legal political party.
1987	Gouled is reelected unopposed.
1989	Somali refugees escaping their country's civil war flee to neighboring Djibouti.
1999	Ismael Omar Gelleh is elected president.
2000	The government and the radical faction of FRUD sign a peace agreement, putting an end to the civil war.
2002	Full multiparty democracy is implemented. Because of its location and ocean access in the Horn of Africa, Djibouti becomes a strategic place for American bases monitoring terrorist activities in the Middle East.
2003	The Union for Presidential Majority, the coalition supporting President Guelleh, wins all 65 seats in parliament. This is the first free multiparty election since the country acquired independence in 1977.
2005	Incumbent president Guelleh runs unopposed in April elections, which are boycotted by the opposition.

base for attacks upon another state but allowed 900 U.S. troops to establish a support base in Djibouti for their operations in AFGHANISTAN. In 2002 multiparty elections were made possible after the law allowing only four political parties expired. The party supporting President Gelleh won Djibouti's first free multiparty election in 2003, while in 2005 Gelleh ran unopposed and won another term as president.

Djilas, Milovan (1911–1995) One-time Yugoslav party and government official, Marxist intellectual, chief propagandist and closest friend of TITO.

Djilas was born of peasant origins in Montenegro. After studying at Belgrade University he joined the illegal Communist Party of YUGOSLAVIA in 1932, in 1938 was made a member of the central committee by Tito and in 1940 was made a member of the Politburo. During WORLD WAR II Djilas was a member of Tito's supreme headquarters and for a while led partisan forces in Montenegro. After Tito had fallen from Moscow's favor in 1948, Djilas was blamed by Moscow for being responsible for "revisionist heresies." Denouncing STALINISM, Djilas assisted Tito in creating Yugoslavia's "self-management socialism."

After publishing a series of articles in which he stressed the need for greater freedom, Djilas was brought to trial. He continued to write articles criticizing the regime, and although he was released from prison in 1966, he was forbidden to publish in Yugoslavia. As a critic of authoritarian rule, Djilas welcomed the end of the Communist Party's monopoly in Yugoslavia. However, before his death he repeatedly expressed concerns about and criticism of the Serbian and Croatian nationalism that had emerged in 1991. His publications include *The New Class* (1957), *Conversations with Stalin* (1962), *Memoirs of a Revolutionary* (1973) and *Of Prisons and Ideas* (1986).

Dniester Republic (1990–1994) An area that proclaimed its independence from the Soviet Socialist Republic of MOLDOVA, a state within the disintegrating USSR, in September 1990. Officially titled the Trans-Dniester Autonomous Soviet Socialist Republic, the political entity continued the anti-Moldovan actions that began in the ethnically Russian local administrative unit of Tighina in 1989. That year, in response to greater civil liberties permitted by USSR leader Mikhail GORBACHEV under his policy of GLASNOST, the Tighina soviet (government council) coordinated an effort by other likeminded soviets to reject Romanian as the official language of the Moldovan Soviet Socialist Republic (SSR) and began a campaign of civil disobedience against the ethnically Romanian province in an effort to ensure that Russians within Moldova would not come under the rule of ethnically Romanian Moldovans. In 1990 these soviets began to promote the creation of a new Soviet republic centered in Tighina that would be independent of Moldovan control, for which they received paramilitary and military assistance from their populations. When a referendum for the Dniester area resulted in a vote for independence, the Dniester region declared its independence as an Autonomous Soviet Socialist Republic. No foreign country recognized the Dniester Republic after the disappearance of the USSR and the independence of the Republic of MOLDOVA in December 1991. In 1994 the conflict between the Dniester Republic and the Republic of Moldova was terminated by a peace accord between the Dniester separatists and the Moldovan govern-

ment. The agreement ended the Dniester Republic but ensured that the region would retain autonomy within Moldova.

Döblin, Alfred (1878–1957) German novelist. Döblin was one of the most important German writers to participate in the modernist movement that dominated European literature in the two decades following World War I. His most famous novel is *Berlin Alexanderplatz*, (1929), which employs multiple viewpoints to create a complex, teeming narrative that mirrors the disjointed style of life in modern urban areas. Three different film versions of this novel have been produced. A Jew, Döblin fled Nazi Germany in 1933 and ultimately established himself in exile in the U.S. His other novels include the four-volume *Men Without Mercy* (1935) as well as *Citizens and Soldiers* (1939), *A People Betrayed* (1948), *Karl and Rosa* (1950) and *Tales of a Long Night* (1956).

Dobrovolsky, Georgi (1928–1971) Soviet cosmonaut. At age 43, Lieutenant Colonel Dobrovolsky was in command of the Soviet *SOYUZ 11* mission when he and fellow cosmonauts Viktor Patsayev and Vladislav Volkov became the first travelers to be killed in space. He and his crew had successfully completed more than three weeks aboard the world's first space station, *SALYUT 1*, and were returning home when tragedy struck. *Soyuz 11* had successfully disengaged from the space station and was preparing to separate from its instrument module when a malfunction in the charges used for the separation caused all the charges to fire at once, rather than sequentially. The explosive shock tore open a seal inside one of the craft's pressure-equalization valves, causing the spacecraft's oxygen-nitrogen atmosphere to be sucked out into space. Dobrovolsky and his crew, confident of success, had flown without space suits. The three men gasped for breath and indications were that they attempted to reach the valve and close it manually, but in less than a minute *Soyuz 11* was a vacuum chamber, silent and lifeless. Dobrovolsky, buried in the Kremlin wall, is the subject of a 1977 biography, *The Flight Continues*.

Doctorow, Edgar Laurence (1931–) American novelist. E. L. Doctorow was

educated at Kenyon College and at Columbia University and began his career reading scripts for Columbia Pictures. Doctorow's first novel, *Welcome to Hard Times* (1960, filmed 1967), is a western that addresses Doctorow's recurrent philosophical concern of the correlation between man and evil. Doctorow frequently places notable figures of recent history in fictional situations, to the chagrin of some critics. *The Book of Daniel* (1971), for example, examines the Rosenberg TRIAL of the 1950s. *Ragtime* (1971, filmed 1981), arguably Doctorow's most popular novel, includes appearances by J. P. Morgan, Harry HOUDINI, and Henry FORD, among others. Other works include *World's Fair* (1985), *Billy Bathgate* (1989) and the play *Drinks Before Dinner* (1978). After *Billy Bathgate*, Doctorow published *Waterworks* (1994), *City of God* (2000), *Reporting the Universe* (2004), and *The March*, winner of the 2006 PEN/Faulkner Award for fiction and the National Book Critics Circle Award.

“Doctor's Plot” Alleged plot by some Moscow doctors to kill well-known government officials. The “conspiracy” was fully reported in the press in January 1953. The doctors, many of whom were Jewish, were said to have murdered Andrei ZHDANOV (1896–1948), head of the Leningrad Party Organization. This was probably the pretext for starting another great purge and was part of STALIN's anti-Semitic policy, but the death of Stalin in March 1953 saved the country from this. All but two of the doctors survived their ordeals and were released, and later KHRUSHCHEV stated that there had been no plot whatsoever and that it all had been engineered by Stalin.

Doctor Who From 1963 to 1989, a television series produced by the BRITISH BROADCASTING CORPORATION. *Doctor Who* was a phenomenally popular science fiction program that was syndicated in over 100 countries. Sets and costumes were resoundingly low budget in look, but outrageous scripts and characters conveyed an appealing blend of arch comedy and blatant melodrama. The central character, Doctor Who, is a 750-year-old native of the planet Gallifrey who—for convenience's sake—assumes human form for adventures that take him through-

out the universe. Doctor Who was played by more than 10 actors during the show's long run. Novelizations of the teleplays have also been big sellers.

Doctor Zhivago Novel by Boris PASTERNAK, written during the 1940s and 1950s. The novel follows the life of Zhivago, a Moscow physician and poet, as he attempts to come to grips with the tumultuous changes brought by WORLD WAR I, the RUSSIAN REVOLUTION, the RUSSIAN CIVIL WAR and the policies of LENIN and STALIN. Although it does not directly criticize COMMUNISM or the revolution, the book's philosophical and spiritual outlook ran counter to the official doctrine of SOCIALIST REALISM, and Pasternak was refused permission to publish it in the Soviet Union. The manuscript was smuggled out and published in Italy in 1957 and in other Western countries soon thereafter. After Pasternak was awarded the 1958 NOBEL PRIZE in literature, he was denounced by Soviet authorities and forced to refuse the award. The book was not published in the USSR until 1987, under GORBACHEV's policy of GLASNOST. It was adapted as a motion picture by David LEAN (1965).

Dodd, Charles Harold (1884–1973) British theologian. Dodd was a highly influential figure in biblical studies in the 20th century, both as a general director of a major new translation of the New Testament (1966) and as a theological interpreter of the Gospels. Dodd was educated at Oxford and went on to teach there as well as at the universities of Manchester and Cambridge. In three major works—*The Parables of the Kingdom* (1935), *The Apostolic Preaching and Its Developments* (1936) and *History of the Gospel* (1938)—Dodd posed his theory of realized eschatology in which he argued that the coming of the Kingdom of God had already been fulfilled through the Incarnation of Christ and its historical impact upon human civilization. Other works by Dodd include *The Authority of the Bible* (1928), *The Epistle to the Romans* (1932), *The Bible and the Greeks* (1935) and *The Interpretation of the Fourth Gospel* (1953).

Dodd, Thomas (1907–1971) U.S. senator from Connecticut, censured for his misuse of campaign donations.

Before entering the Senate Dodd served in the federal government and was a prosecuting attorney at the NUREMBERG WAR CRIMES TRIALS following World War II. A Democrat, Dodd was elected to the House of Representatives in 1952, serving until his election to the U.S. Senate in 1958. Dodd generally supported liberal Democratic domestic programs and was known as a strong anticommunist. As senator, Dodd conducted hearings on the possible relation between crime and violence on television and its possible impact on juvenile delinquency; he charged that the television industry lacked imagination and responsibility. Dodd also favored strong gun-control legislation.

Between 1965 and 1967 columnists Drew PEARSON and Jack ANDERSON revealed that Dodd had used for personal purposes funds earmarked for his election campaign. A Senate investigation followed in 1966–67 and substantiated the allegations against Dodd. The Senate formally censured Dodd in 1967, but he was not expelled. He failed to win reelection to his Senate seat in 1970. His son **Chris Dodd** was later elected senator from Connecticut.

Dodecanese Islands Island chain in the Aegean Sea, southeast of the Greek mainland, between Crete and Asia Minor. It comprises most of an island area called the Southern Sporades, consisting of about 20 islands. The Turks forfeited the islands to ITALY in the Italo-Turkish War of 1911–12. The Germans gained control from their faltering Italian allies in 1943 during WORLD WAR II, but the Allies took over the islands in 1945; on March 31, 1947, by treaty, they were given to Greece.

Doderer, Heimito von (1896–1966) Austrian novelist. Doderer was educated as a historian in Vienna and served in the German air force in WORLD WAR II. Initially a Nazi sympathizer, he was stripped of his illusions about that ideology during the war, as his diaries of the time, published as *Tangenten* (1964, *Tangents*) indicate. Doderer is best known for his expansive novel *Die Dämonen* (1956; *The Demons*, 1961), which he began in 1931 and published on his 60th birthday. The novel, which depicts the nine months leading up to the burning of the Austrian supreme court in 1927, was praised as a masterpiece upon its

publication in German-speaking countries. It has never received the same acclaim in the U.S., although it was praised by Thornton WILDER. Doderer's other works include *Die Strudlhofstiege* (1951), *Grundlagen und Funktion des Romans* (1959) and *Die Merowinger* (*The Merovingians*, 1962).

Dodge, Raymond (1871–1942) American educator and experimental psychologist. Best known for his studies of the brain and the motor movements of the eye during the act of reading, Dodge began his academic career at Wesleyan University, where he taught from 1898 to 1924. He was also a member of the Institute of Psychology at Yale. His studies of eye movement were applied directly to gunners during WORLD WAR I. He also studied extensively the psychological effects of alcohol on humans. His written works include *Conditions and Consequences of Human Variability* (1931) and *The Craving for Superiority* (1931).

Dodge brothers American automobile manufacturers. **Horace E. Dodge** (1868–1920) and **John Dodge** (1864–1920) began their careers by making bicycles and stove parts. Soon they were manufacturing engines and auto parts for Ford Motor Company and Olds Motor Works. On November 14, 1914, the first Dodge automobile was produced, and the brothers started their own auto manufacturing business. They built one of the first all-steel American cars, and Horace Dodge invented many improvements for the industry. Both of the Dodge brothers died in 1920, and their company was taken over by the Chrysler Corporation in 1928.

Doe, Samuel (1951–1990) Military ruler of Liberia (1980–90). Born into the Krahn tribe, Doe began his military career in 1969 when he enlisted in the Liberian army, eventually rising to the rank of master sergeant. In April 1980 Doe led an attack by rebel soldiers on the Liberian capital of Monrovia. The rebels eventually seized the city and assassinated President William Tolbert Jr. and 13 key members of his administration. Following this coup Doe, who assumed the rank of general, formed the People's Redemption Council. The council elected him president of LIBERIA, a post he held for the next 10

years. In 1985 Doe ran for president in what he claimed were open and free elections. After Doe was elected, international observers labeled the election fraudulent. As leader of Liberia, Doe failed to bring about a peaceful resolution of the conflict between the indigenous African population of the Liberian state and the descendants of those 19th-century African-American émigrés from the U.S. who had founded the republic. He also failed to reverse the economic decline of Liberia that began under his rule. In efforts to quell resistance to his rule and to put a stop to the periodic assassination attempts against him, Doe repeatedly turned to the Krahn tribe for assistance in suppressing his domestic opposition.

In 1989 Doe's opponents launched a rebellion against his government. Headed by Charles TAYLOR and his National Patriotic Front of Liberia (NPFL), the insurgents managed to gain control of all parts of the country save the capital by July 1990. In September of that year, while evading attacks by the NPFL, Doe was assassinated by the Independent National Patriotic Front of Liberia, a faction that had split from the NPFL.

Doenitz, Karl (1891–1980) German admiral. Born in Prussia, Doenitz entered the Imperial German Navy and specialized in SUBMARINE warfare from 1916 onward. The architect and commander of GERMANY's submarine campaign against Allied shipping, he was appointed commander in chief of the navy in 1943. He succeeded Adolf HITLER as leader of Nazi Germany after the Führer's death in May 1945 and surrendered to the Allies six days later. Doenitz was among those tried and convicted of war crimes at the NUREMBERG TRIALS, and he served 10 years in Berlin's SPANDAU PRISON.

Doesburg, Theo van (C. E. M. Küpper) (1883–1931) Dutch architect and designer, a major figure in the de Stijl movement of the 1920s. Van Doesburg began his career as a painter but was drawn toward architecture through collaboration with J. J. P. Oud and Jan Wils beginning in 1916. In 1917 he founded the magazine *De Stijl*. He taught briefly at the BAUHAUS in 1922. His reputation rests on his paintings and in large measure on drawings and models for works never executed.

His only completed projects were an entertainment group at the Aubette in Strasbourg, France, of 1928 (since demolished) and a house at Meudon of 1931. A kit for a paper model of the "Maison d'Artiste," reproducing the model van Doesburg and Cornelis van Eesteren designed in 1923 for an exhibition in Paris, is currently available.

Dogger Bank Incident International incident on October 21, 1904, during the RUSSO-JAPANESE WAR. On its way to the Far East, a Russian fleet under the command of Admiral Zinovy Rozhdestvensky encountered vessels believed to be Japanese torpedo boats on the Dogger Bank, North Sea sandbanks located between Great Britain and Denmark. The Russians fired on the boats, killing two crew members and sinking one vessel. However, the boats were really English fishing trawlers, and fury in Great Britain over the attack was so great the incident almost led to war. Compensation claims for the attack were ultimately paid to Britain by Russia.

Dohnányi, Ernst von (1877–1960) Hungarian composer, pianist and conductor. Studying at Budapest's Royal Academy (1894–97), he was later its director. He made his piano debut in Berlin in 1897, touring Europe and America to considerable acclaim until 1908, when he began teaching at the Berlin Hochschule. He remained there until 1915 and became associate director of Hungary's Franz Liszt Academy in 1919. Dohnányi conducted the Budapest Philharmonic Orchestra from 1919 to 1944. He left Hungary after World War II and settled in the U.S. in 1949, teaching first at Ohio State University, then at Florida State University, where he remained until his death. Greatly influenced by Brahms, his compositions include *Variations on a Nursery Song* (1913) and *American Rhapsody* (1954) as well as many other orchestral works, songs, piano pieces, chamber music and three operas. He was the grandfather of conductor Christoph von Dohnányi.

Dole, Bob (Robert Joseph Dole) (1923–) American political leader. A native of Kansas, Dole was seriously wounded in Italy during World War II. After receiving a law degree from Washburn University in 1952, he

served as a county attorney until he was elected to the House of Representatives as a Republican in 1960. After serving four terms in the House, Dole was elected to the Senate in 1968. He was chairman of the Republican National Committee from 1971 to 1973, including the early part of the Watergate scandal that eventually led to the resignation of President Richard NIXON. He was President Gerald FORD's vice presidential running mate during his unsuccessful presidential campaign in 1976. Serving as Senate majority leader in 1985–87 and 1995–96, Dole became the legislative spokesman for the Republican Party. After unsuccessful campaigns to win his party's nomination for president in 1980 and 1988, Dole won the nomination in 1996 but lost the election to President Bill CLINTON. He married **Elizabeth Hanford Dole**, who was elected to the Senate in 2002.

Dolin, Sir Anton (Sydney Francis Patrick Chippendall Healey-Kay) (1904–1983) The first male British ballet dancer to gain an international reputation. Dolin's work with Serge DIAGHILEV'S BALLETS RUSSES in the 1920s helped launch his career. He then formed a highly acclaimed partnership with Alicia MARKOVA, which lasted more than two decades. During the 1940s Dolin worked as ballet master, choreographer and premier danseur with Ballet Theater, the forerunner of the AMERICAN BALLET THEATRE. In 1950 he helped organize the London Festival Ballet.

Dollfuss, Engelbert (1892–1934) Austrian political leader. A WORLD WAR I hero and devout Catholic, Dollfuss became a member of the Christian Social Party and a leader in the Farmers' League. He was an effective minister of agriculture and forestry (1931–32) during the GREAT DEPRESSION and was appointed chancellor in 1932. Dollfuss suspended parliamentary government in 1933 and subsequently quelled a socialist revolt in 1934. Allied with HORTHY in Hungary and MUSSOLINI in Italy, he promulgated a new fascist constitution in 1934 but opposed ANSCHLUSS with GERMANY in his support of an independent AUSTRIA. He was assassinated by Austrian Nazis during their attempt at a coup d'état.

Dolly (1997–2003) A sheep born in Scotland in 1997 as a result of an attempt at artificially producing an animal clone. Because of health complications brought on by prematurely aged organs and other physical ailments, Dolly was put to sleep on February 14, 2003. (See also CLONES AND CLONING.)

Domagk, Gerhard (1895–1964) German biochemist. Domagk graduated in medicine from the University of Kiel in 1921 and began teaching at the University of Greifswald and later at the University of Munster. At this time he carried out important research into phagocytes—special cells that attack bacteria in the body. He became interested in chemotherapy and in 1927 was appointed director of research in experimental pathology and pathological anatomy at the giant chemical factory I. G. Farben at Wuppertal-Elberfeld. Pursuing the ideas of Paul EHRLICH, Domagk tested new dyes—produced by the Elberfeld chemists—for their strength against various infections. In 1935 he reported the effectiveness of an orange-red dye called prontosil in combating streptococcal infections. For the first time a chemical had been found to be active in vivo against a common small bacterium. Earlier dyes used as drugs were active only against infections caused by the much larger protozoa. The work was followed up in research laboratories throughout the world. Alexander FLEMING even neglected his experiments with PENICILLIN to study prontosil in the early 1930s. The most significant ramifications of his work were discovered by Daniel BOVET and his coworkers. Prontosil and the sulfa drugs that followed were effective in saving many people from death, including Franklin D. ROOSEVELT, Winston CHURCHILL and Domagk's own daughter. In 1939 Domagk was offered the NOBEL PRIZE in physiology or medicine. The Nazis forced him to withdraw his acceptance because HITLER was annoyed with the Nobel Committee for awarding the 1935 Peace Prize to Carl von OSSIEZKY, a German whom Hitler had imprisoned. In 1947 Domagk was finally able to accept the prize. In his later years he undertook drug research into cancer and tuberculosis.

Domingo, Plácido (1941–) Spanish-born opera singer. Since the 1960s

Domingo has been regarded as one of the great dramatic and lyric tenors of his generation. He began his professional career as a baritone in his family's zarzuela (Spanish operetta) company and made his opera debut in 1961 with the Baltimore Civic Opera. That same year he changed his vocal range to tenor and sang the role of Alfredo in *La Traviata*. In 1962 he married soprano Marte Ornelas, and together they appeared with the Hebrew National Opera. He joined the New York City Opera in 1965 and achieved star status after singing the title role in the American premiere of *Don Rodrigo*. He made his Metropolitan Opera debut in 1968, subsequently becoming one of that company's principal tenors. Domingo has performed worldwide and sung a wide range of roles, including Hoffman in *The Tales of Hoffman* and the title roles in *Don Carlo* and *Otello* (also appearing in Franco ZEFFIRELLI's film version of the latter). He has also recorded popular music and has branched out into opera conducting. Throughout the 1990s Domingo performed and recorded several classical opera pieces on *Opera Classics* (1993) and *Opera Gala* (1996). In 1994 he began to exhibit his interest in Latin American songs and released *From My Latin Soul* (1994), which contained renditions of popular Latin tunes.

Dominica Small island nation in the Windward Islands of the West Indies, north of MARTINIQUE and south of GUADELOUPE. In 1833 Great Britain incorporated Dominica with the Leeward

DOMINICA

1940	The island is transferred to the British Windward Islands federation.
1958–62	Dominica becomes part of the West Indies Federation.
1967	Dominica is granted separate, semi-independent status.
1978	Dominica achieves full independence within the Commonwealth.
1980	Mary Eugenia Charles becomes the first female prime minister in the Caribbean
1989	Hurricane Hugo causes severe damage to the island and its banana industry.
1995	After 15 years in office, Prime Minister Charles resigns. Edison James becomes prime minister
2000	Pierre Charles is elected prime minister.
2004	Roosevelt Skerit becomes prime minister after the death of Charles.

Islands, and in 1940 administration was switched to the Windward Islands. The island was a member of the short-lived WEST INDIES FEDERATION from 1958 to 1962, was given internal self-government in 1967 and achieved independence in 1978. The 1995 election victory of the United Workers Party (UWP) resulted in Edison James's appointment as prime minister. Under James, Dominica began an effort to become a principal provider of offshore financial services for the global market. Dominica has remained committed to this objective despite the defeat of the UWP in the 2000 general elections, a deep recession that began in 2002 and several hurricane disasters.

Dominican Republic Island nation in the West Indies, inhabiting the eastern two-thirds of the island of Hispaniola, southeast of Cuba. Political upheavals, governmental changes and burgeoning financial difficulties abounded until the early 20th century. It went bankrupt in 1905 when European nations threatened force in col-

lecting money they were owed. U.S. president Theodore ROOSEVELT stepped in, and the U.S. assumed management

of customs receipts. The financial picture improved, but the U.S. dominated the country. Unrest persisted, and in

DOMINICAN REPUBLIC

1905	The United States takes over the near-bankrupt republic's debts.
1916–24	The Dominican Republic is temporarily occupied by U.S. forces.
1930	Rafael Leonidas Trujillo overthrows Horacio Vásquez and begins a three-decade-long dictatorship.
1937	Following Haiti's discovery of Dominican spies on its soil, Trujillo orders slaughter of 10,000 to 20,000 Haitian immigrants.
1961	Trujillo assassinated.
1962	Juan Bosch of leftist Dominican Revolutionary Party (PRD) elected president.
1963	Bosch overthrown in military coup.
1965	Uprising by Bosch supporters succeeds temporarily; civil war ensues with rightist military officers; United States intervenes decisively in support of rightists.
1966	Balaguer, leading right-wing Reformist Party, wins election.
1978	PRD wins power under Silvestre Antonio Guzmán Fernández.
1982	Guzmán commits suicide; PRD retains presidency as Salvador Jorge Blanco is elected.
1990	Balaguer reelected by slim margin over Bosch
1994	Balaguer wins sixth term as president
1996	Leonel Fernández Reyna elected president with barely 51% of vote in runoff.
2000	Hipólito Mejía of PRD elected president.

1916 the U.S. Marines began keeping the peace. They stayed until 1924, but customs management continued until 1941. In 1930 Rafael TRUJILLO MOLINA began a 31-year dictatorial reign, one of the most inhumane in history. In 1937 Dominican troops attempting to prevent Haitians from entering the country stormed Haiti and slaughtered thousands.

Trujillo was murdered in 1961, and the first free elections since 1924 were held in December 1962. Leftist Juan BOSCH was elected president but was overthrown by a right-wing military revolt. An effort was made in April 1965 to reinstate Bosch, sparking a civil war that was followed by the arrival of U.S. troops sent by U.S. president JOHNSON. The ORGANIZATION OF AMERICAN STATES organized a peacekeeping force that eventually supplanted the U.S. troops, and in September both groups accepted Héctor García Godoy as interim president. OAS forces were removed, but the Dominicans continued to be cursed by political upheaval and economic problems, despite the 1966 election of President Joaquín BALAGUER and his 15-year improvement plan. In May 1978 the army interrupted voting when it appeared that Balaguer would lose a re-election attempt. U.S. president CARTER intervened with a forcefully worded diplomatic note, and the army was obliged to allow the election of leftist President Antonio Guzmán, who committed suicide after his term in August 1982. His successor, Dr. Jorge Salvador Blanco, was later convicted of corruption and sentenced to 20 years' imprisonment (1988). For several years sugar has been the leading export, and in recent times its low price has caused hardship. Santo Domingo is the capital. In 1996 the leftist candidate Leonel Fernández Reyna of the Dominican Liberation Party (PLD) was elected president. Fernández oversaw some privatization of state-owned companies. In 2000 Hipólito Mejía of the Dominican Revolutionary Party (PRD) was elected president.

Domino, Antoine "Fats" (1928–) African-American ROCK and roll singer and pianist. Domino is one of the distinctive vocal stylists in rock-and-roll history. He has also enjoyed incredible popularity, selling over 65 million records—all featuring his warm,

bluesy singing voice—accompanied by his pounding, boogie-woogie piano. Domino was born in New Orleans into a musical family: His father was a well-known violinist, and his brother-in-law later became lead guitarist in Domino's band. Domino recorded his first successful single, "The Fat Man" (1950), when he was 21. Over the next two decades came classic hits including "Ain't It a Shame" (1955), "Blueberry Hill" (1956), "I'm Walkin'" (1957), "Whole Lotta Loving" (1958), "I'm Ready" (1959), "Walkin' to New Orleans" (1960) and "Let the Four Winds Blow" (1961).

domino theory Theory used by several U.S. presidents as a rationale for U.S. presence and military intervention in Southeast Asia. The domino theory argued that if the U.S. did not make a stand in South VIETNAM, then the rest of the nations of Southeast Asia and beyond—CAMBODIA, LAOS, THAILAND, MALAYSIA, BURMA, INDONESIA, the PHILIPPINES—would accommodate to communist power and eventually topple one after the other like a stack of dominoes. It is true that with American abandonment of South Vietnam in 1975, the Laotian and Cambodian "dominoes" fell in rapid succession. But the almost quarter century of U.S. involvement in Vietnam gave other nations an opportunity to resist communist expansion and build their own defenses. Indonesia fell toward the West in 1965, and Thailand successfully repelled communist attacks on its eastern borders in the 1980s.

Dong, Pham Van See PHAM VAN DONG.

Donleavy, James Patrick (1926–) Irish author. Born in New York of Irish parents, Donleavy was educated at Trinity College, Dublin, and became an Irish citizen in 1967. His first novel, *The Ginger Man* (1955), is a bawdy and scatological tale of a law student in Dublin. The book was refused by many publishers as obscene; Donleavy was finally able to have it published in Paris. The book, comic in tone, shows the influence of James JOYCE. Critics cited it as his most important work, despite the greater success of his later novels, which include *Schultz* (1979) and *Are You Listening*

Rabbi Loew (1987, a sequel to *Schultz*). Donleavy has also written the plays *Fairy Tales of New York* (1961, based on his book of the same title), *A Singular Man* (1964) and others based on his fiction.

Donnan, Frederick George (1879–1956) British chemist. He was educated at Queen's College, Belfast, and the Universities of Leipzig and Berlin, where he obtained his Ph.D. in 1896 and acquired some of the German expertise in physical chemistry. On his return to England he worked at University College, London, with William Ramsay from 1898 until 1904, when he accepted the post of professor of physical chemistry at the University of Liverpool. In 1913 Donnan returned to succeed Ramsay at University College and remained there until his retirement in 1937. Donnan is mainly remembered for the Donnan membrane equilibrium (1911)—a theory describing the equilibrium that occurs when ions pass through membranes.

Donoso, José (1924–1996) Chilean novelist and short story writer. Born in Santiago, Donoso received a B.A. from Princeton in 1951. His realist works, *Veraneo y otros cuentos* (1955, Summer-time and other stories) and *Coronación* (1957; translated in 1965 as *Coronation*), were published only after Donoso guaranteed sales of 100 copies by subscription. He also peddled his books on street corners. His reputation is based on *El obscuro pájaro de la noche* (1970; translated in 1973 as *The Obscene Bird of Night*), an experimental, hallucinatory novel full of freaks and monsters and narrated by a deaf-mute. His *Historia personal del "Boom"* (1972; translated in 1977 as *The Boom in Spanish American Literature*) traces the rise of the Latin novel during the 1960s, focusing on the emergence of such writers as BORGES, FUENTES, VARGAS LLOSA and Donoso himself.

Donovan, William "Wild Bill" (1883–1959) Director of the U.S. OFFICE OF STRATEGIC SERVICES, the WORLD WAR II forerunner of the CENTRAL INTELLIGENCE AGENCY. Born in Buffalo, New York, Donovan attended Columbia University and Columbia Law School. After serving in the army in WORLD WAR I, Donovan became active in New York State Republican politics

and served as U.S. district attorney in the state and as assistant U.S. attorney general; he also ran unsuccessfully for lieutenant governor of New York in 1922 and for governor in 1932. Donovan conducted several sensitive fact-finding missions in Europe for the U.S. government during the early years of WORLD WAR II. In mid-1941, he urged President Franklin D. ROOSEVELT to establish an American intelligence agency comparable to Britain's Secret Intelligence Service; in June 1942 the OFFICE OF STRATEGIC SERVICES (OSS) was formed. During the war the OSS proved extremely useful to the Allied cause, and in July 1947 the CIA was established as its peacetime successor. After acting as an aide during the NUREMBERG TRIALS, Donovan retired from the military as a major general. From 1953 to 1954 he served as U.S. ambassador to Thailand.

Doodson, Arthur Thomas (1890–1968) British mathematical physicist. Doodson was educated at the University of Liverpool. After working at University College, London, from 1916 to 1918 he joined the Tidal Institute, Liverpool, in 1919 as its secretary. Doodson remained through its reformation as the Liverpool Observatory and Tidal Institute as assistant director (1929–45) and as director until his retirement in 1960. Much of Doodson's early work was on the production of mathematical tables and the calculation of trajectories for artillery. Proving himself an ingenious, powerful and practical mathematician, he found an ideal subject for his talents in the complicated behavior of the tides. He made many innovations to achieve more accurate computations about them and, with H. Warburg in 1942, produced the *Admiralty Manual of Tides*.

Doolittle, Hilda (H.D.) (1886–1961) American poet. Born in Bethlehem, Pennsylvania, she moved to England in 1911 and married fellow poet Richard ALDINGTON in 1913. Heavily influenced by Ezra POUND, she became an important member of the imagist group. Her free-form verse is characterized by both vividness and precision. H.D.'s volumes of poetry include *Sea Garden* (1916), *Collected Poems* (1925 and 1940), *The Walls Do Not Fall* (1944) and *Bid Me to Live* (1960).

Doolittle, James Harold (1896–1993) American aviator. Born in Alameda, California, he served as a flyer in WORLD WAR I and, after the war, was an aeronautic specialist, civilian test pilot and airborne racer. In 1922 he became the first pilot to cross North America within 24 hours. Recalled to the U.S. Army Air Corps in 1940, Doolittle gained worldwide recognition as the commander of the bold bombing RAID ON TOKYO on April 18, 1942. Subsequently, he commanded the 12th Air Force during the landing in North Africa, headed the Anglo-American Strategic Air Force in the the Mediterranean (1944) and led the Eighth Air Force in Europe (1944) and the Pacific (1945). Awarded the Medal of Honor, he resigned from the army as a lieutenant general in 1945.

Doors, The American rock and roll band. The Doors, featuring lead singer Jim Morrison, remain one of the most popular rock bands to emerge from the psychedelic era of the 1960s. Hits such as "Light My Fire" (1967) and "Hello, I Love You" (1968) are still played regularly on radio stations. The band first formed in Los Angeles in the mid-1960s. Other band members included keyboard player Ray Manzarek, guitarist Robbie Krieger and drummer John Densmore. Morrison, a charismatic figure who abused both drugs

Lieutenant General James Doolittle, 1942 (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

and alcohol, died of a heart attack in 1971, at age 27.

Dorati, Antal (1906–1988) Hungarian-born conductor. During a career that spanned more than 60 years, Dorati served as principal conductor for more than a dozen organizations, including the Dallas Symphony, the Minneapolis Symphony, the Stockholm Philharmonic and the Royal Philharmonic. He led the National Symphony in the inaugural concert at the John F. Kennedy Center for the Performing Arts in Washington in 1971. Of the more than 500 recordings Dorati made during his lifetime, his interpretations of the Haydn symphonies were particularly praised.

Dorn, Friedrich Ernst (1848–1916) German physicist. Dorn studied at Königsberg and in 1873 was made professor of physics at Breslau. In 1886 he transferred to a professorship at Halle and started working with X-RAYS. He is noted for his discovery, in 1900, that the radioactive element radium gives off a radioactive gas, which Dorn called radium emanation. The gas was isolated in 1908 by William Ramsay, who named it niton. The name radon was adopted in 1923. Dorn's discovery is the first established demonstration of a transmutation of one element into another.

Dornberger, Walter (1895–1980) German-born rocket engineer. When Germany decided to develop experimental rockets in the 1920s, Dornberger, then an army officer, was named to head the project. His team produced Germany's first rocket engine (1932) and its first launches (1934). During WORLD WAR II, working with Werner von BRAUN, he headed the development of the German V-2 rocket bomb at PEENEMÜNDE. A lieutenant general, he directed the firing of more than 1,000 deadly rockets on London and its suburbs in the last years of the war. At the end of the war, he was working on a rocket bomb designed to reach New York from German territory. Along with Kurt DEBUS and von Braun, he surrendered to the U.S. Army rather than to Russians at the end of the war. Following his de-Nazification, he immigrated to the U.S. and became an American citizen. He served as an adviser to the U.S. Air Force and worked

for military industries in the U.S. (See also OPERATION PAPERCLIP.)

Dors, Diana (Diana Fluck) (1931–1984) British actress, once billed as Britain's answer to Marilyn MONROE. Dors was known as the “blond bomb-shell” of films from the early 1950s to the 1960s. When she was 25 years old she was Britain's highest-paid actress, with a contract valued at more than £500,000. Her films were less than memorable, but she held the public's interest with revelations about her colorful private life and three marriages. Before her death she appeared as a television advice columnist.

Dorsey brothers Tommy Dorsey (1905–56) and Jimmy Dorsey (1904–57) Dorsey were jazz instrumentalists and big band leaders whose Dorsey Brothers Orchestra, one of the premier jazz big bands of the 1930s, lasted only one year, from 1934 to 1935. But both brothers went on to even greater success with their separate big bands from the 1930s and into the 1950s—and became jazz legends. Jimmy, who played alto saxophone and clarinet, and Tommy, who played trombone, had been renowned sidemen in the 1920s and early 1930s, when they were featured with numerous bands and in the Broadway musical *Everybody's Welcome* (1931). With the founding of the Dorsey Brothers Orchestra, they and their theme song “Sandman” became nationally famous. After quarreling in 1935, the brothers went their separate ways for over a decade before working together on the Hollywood biographical film *The Fabulous Dorseys* (1947). From 1953 to 1956 the Dorsey brothers again performed together in a big band led by Tommy.

Dos Passos, John Roderigo (1896–1970) American novelist. After graduating from Harvard University, Dos Passos traveled to Spain intending to study architecture. WORLD WAR I intervened, and he volunteered for the French ambulance corps, later becoming a private in the U.S. Army medical corps. His first two books, *One Man's Initiation—1917* (1920) and *Three Soldiers* (1921), bitterly portray the effects of war on the three main characters. By 1925 in *Manhattan Transfer*, he had arrived at his unique

style combining naturalism and STREAM OF CONSCIOUSNESS. Perhaps his best-known work is the trilogy *U.S.A.*, which is an expression of his radical approach to life and consists of *The 42nd Parallel* (1930), *1919* (1932) and *The Big Money* (1936). These traced the first three decades of the 20th century, in which he found absurdity, moral deterioration and helplessness—all reflected in the lives of his characters. He incorporated fragments of the era's popular culture into the novels, juxtaposing his characters against prominent Americans of the time. His later work became more conservative, and he eventually expressed disillusion with liberal and radical movements. Later novels include *The Great Days* (1958) and *MidCentury* (1961). He also wrote biographies and works on travel and history.

dos Santos, José Eduardo (1942–) Angolan politician. Born in Luanda, dos Santos joined the Soviet-backed Popular Movement for the Liberation of Angola (MPLA) in 1961 and went into exile that same year. Sent to the USSR by the MPLA in 1963, he returned to Africa and graduated from college with an engineering degree in 1969. He fought for Angolan independence from 1970 to 1974, assuming various party offices during the 1970s. He served as planning minister from 1978 to 1979 and became head of the MPLA and president of ANGOLA after the death of Agostinho NETO in 1979. In 1992 dos Santos was elected Angolan president over UNITA candidate Jonas SAVIMBI.

Double Eagle II, flight of the First transatlantic crossing by balloon—August 17, 1978. Three Americans—Max Anderson, Ben Abaruzzo and Larry Newman—successfully completed the trip in the *Double Eagle II* when they landed in a wheat field 60 miles west of Paris. They had departed from Presque Isle, Maine, on August 11 and had set an endurance record of 137 hours, 18 minutes aloft, during which they had withstood icy conditions and extreme cold over the Atlantic. Abaruzzo and Anderson had attempted the journey in 1977 in the *Double Eagle I* but had been forced down five miles off the coast of Iceland.

Dobrovaska, Felia (Felizata Dluzhnevskaya) (1896–1981) Russian ballerina. Dobrovaska was trained at the Imperial Academy in St. Petersburg. After graduating (1913) she joined the Maryinsky Theater there and with that troupe remained through the RUSSIAN REVOLUTION. In 1920 she fled to Paris and joined Serge DIAGHILEV's BALLETS RUSSES, dancing in many principal roles choreographed by the legendary George BALANCHINE. After moving to the U.S., she became prima ballerina of the Metropolitan Opera Ballet (1938) but retired from the stage the following year. She subsequently joined the faculty at the School of American Ballet at Balanchine's invitation and in a long second career became one of the most highly regarded ballet teachers in the U.S. Dobrovaska was known as the archetypal Balanchine dancer.

Douglas, Aaron (1899–1979) American painter. A native of Kansas, Douglas studied in New York and Paris. He was a leading artist during the HARLEM RENAISSANCE of the late 1920s. He was the first African-American artist recognized for incorporating African iconography into American art. He was known for his murals and his illustrations of books by black American authors.

Douglas, Donald Wills, Sr. (1892–1981) American pioneer aircraft designer, engineer and manufacturer. Founder of the DOUGLAS AIRCRAFT CO., Douglas built airplanes that helped bring about the era of mass commercial air travel. While in his 20s he learned about aircraft design by working on the development of a heavy bomber for Glenn Martin's company. In 1920 he set up his own company with backing from a wealthy investor. He designed the first aircraft (*Cloudster*) that could carry a load heavier than its own weight. He also designed and developed the airplane that made the first flight around the world in the early 1920s. His company, which dominated the aviation industry during the period when airplanes were driven by propellers, was perhaps best known for the twin-engine DC-3, introduced in 1935. This classic and reliable craft became a familiar sight around the world, hauling passengers, cargo and military loads; DC-3s were still in service 50 years after the first one taxied

down a runway. Douglas also produced military aircraft used by the U.S. during WORLD WAR II (including the C-47 military transport and the A-20 attack bomber) and the KOREAN WAR. In 1958 the company introduced the DC-8 passenger jetliner, which (with the Boeing 707) helped revolutionize airline travel. Douglas's fortunes declined in the 1960s. In 1967 the company merged with the McDONNELL Aircraft Corp. to form McDonnell Douglas Corp. In 1997 it became part of Boeing.

Douglas, Helen Gahagan (Helen Gahagan) (1900–1980) American actress, concert singer and politician. A liberal Democrat from California, she served in the U.S. House of Representatives (1944–50). She won national recognition during a bitter election campaign for the U.S. Senate in 1950, in which she was defeated by Representative Richard M. NIXON. During the campaign, Nixon accused her of being a communist sympathizer. Gahagan was married to the actor Melvyn DOUGLAS.

Douglas, Kirk (Issur Danielovitch Demsky) (1916–) American actor; son of an illiterate Russian ragpicker and junkman, Douglas grew up to become one of Hollywood's legendary "tough guy" stars in the 1940s and 1950s. After graduating from the American Academy of Dramatic Arts, he starred on Broadway in shows such as *Spring Again* (1941), then enlisted in the navy. In 1946 he made his film debut in *The Strange Love of Martha Ivers*, but it wasn't until his eighth film—*Champion* (1949)—that he became a recognized star. His dynamic, powerhouse performances can be found in such films as *Ace in the Hole* (1951), *Detective Story* (1951), *The Bad and the Beautiful* (1952), *Lust for Life* (1956), *Paths of Glory* (1957), *Lonely Are the Brave* (1962) and many others. Douglas was also the producer of several films in which he acted, including *The Vikings* (1958) and *Spartacus* (1960), for which he courageously hired the blacklisted writer Dalton Trumbo. In 1988 Douglas earned praise for his autobiography, *The Ragman's Son*; he has also written fiction. Douglas's son **Michael Douglas** (by his first wife, Diana Douglas) is also a respected film actor and has won acclaim

for his roles in *Fatal Attraction* (1987) and *Black Rain* (1989). In 2003 Kirk Douglas starred with his son Michael and his grandson Cameron in the comedy *It Runs in the Family*.

Douglas, Melvyn (Melvin Edouard Hesselberg) (1901–1981) Melvyn Douglas began his career as a leading man in HOLLYWOOD romantic films of the 1930s and 1940s, playing opposite some of the leading female stars of the day; he later shifted to character roles on stage and screen. He appeared in 77 films and won two ACADEMY AWARDS for best supporting actor (1963, 1980).

Douglas, Thomas Clement (1904–1986) Scottish-born Canadian political leader. Douglas set up the first socialist government in North America after being elected premier of the province of Saskatchewan in 1944 on the Cooperative Commonwealth Federation slate. During the 16 years that he served as premier, he introduced a host of social and economic reforms and laid the groundwork for North America's first medicare plan. He resigned in 1961 to become the first national leader of the NEW DEMOCRATIC PARTY, a socialist coalition of farmers, intellectuals and trade unionists. He led the party through four general elections and represented it in Parliament from 1962 to 1968 and again from 1969 to 1979.

Douglas, William Orville (1898–1980) Associate justice of the U.S. Supreme Court. With a law degree from Columbia University in 1925, he taught at the university between 1925 and 1928. After serving in various federal posts, he was made chairman of the Securities and Exchange Commission in 1937 and was appointed to the Supreme Court in 1939. Generally considered a liberal, Douglas defended individual liberties throughout his career and was one of the most controversial figures in the recent history of the Court. He retired from the Court in 1975 but continued an active public life. An aggressive outdoorsman, Douglas wrote several books, including *Men and Mountains* (1950), *A Wilderness Bill of Rights* (1965), *The Bible and the Schools* (1966) and *Points of Rebellion* (1969).

Douglas Aircraft Co. Leading American airplane builder whose 1930s products are credited with having made air transportation practical as a form of mass transport. The firm was founded in 1920 by Donald Wills DOUGLAS and developed the pioneer low-wing, twin-engined monoplanes, the DC-1 and DC-2, predecessors of the famous DC-3, one of the most successful airplanes ever produced. Later Douglas products, beginning with the DC-4, introduced tricycle landing gear and moved to four engines. The DC-8 was a highly successful four-engined jet transport. The successor company, McDonnell Douglas, continued production of the modern DC-9 and DC-10 jet transport aircraft. In 1997 Boeing and McDonnell Douglas merged.

Douglas-Home, Sir Alec (Alexander Frederick Douglas-Home; Baron Home of the Hirsell) (1903–1995) British politician and prime minister (1963–64). Born into a titled family, he was educated at Eton and Oxford. A member of the CONSERVATIVE PARTY, he entered the House of Commons in 1931. Parliamentary private secretary to Prime Minister Neville CHAMBERLAIN from 1937 to 1939, he succeeded his father as 14th earl of Home in 1951 and resigned from his seat in the Commons, moving automatically to the House of Lords. He served as minister of state from 1951 to 1955, minister for commonwealth relations (1955–60), leader of the House of Lords (1957–60) and foreign secretary (1960–63). Following Harold MACMILLAN's resignation in October 1963, Douglas-Home disclaimed his peerage to become prime minister as Sir Alec Douglas-Home (winning a by-election to return to the House of Commons). Following his defeat by Harold WILSON in the October 1964 general election, he became leader of the opposition until 1965, when he stood down, being replaced by Edward HEATH. In 1970 he was appointed foreign secretary by Heath. Following the Conservative defeat in 1974, he was created a life peer. His brother, William Douglas-Home, was a noted playwright.

Douglass, Andrew Ellicott (1867–1962) American astronomer and dendrochronologist. Douglass came from a family of academics, and his father

and grandfather were college presidents. He graduated from Trinity College, Hartford, Connecticut, in 1889 and in the same year was appointed to an assistantship at Harvard College Observatory. In 1894 he went with Percival Lowell to the new Lowell Observatory in Flagstaff, Arizona, and became a professor of astronomy and physics at the University of Arizona in 1906.

Initially Douglass was interested in the 11-year sunspot cycle. While trying to trace its history he was led to the examination of tree rings in the hope that he would find some identifiable correlation between sunspot activity and terrestrial climate and vegetation. Soon tree rings became the center of his studies. Douglass found that he could identify local tree rings with confidence and use them in dating past climatic trends. He thus founded the field of dendrochronology. By the late 1920s he had a sequence of more than a thousand tree rings having six thin rings, presumably records of a severe drought that correlated with the end of the 13th century. In 1929 he found some timber that contained the six thin rings and plus a further 500. This took him to the eighth century and over the years he managed to get as far as the first century. This was extended still further and by careful analysis scholars have now established a sequence going back almost to 5000 B.C. The dated rings of Arizona and New Mexico, however, were found not to correlate with sequences from other parts of the world: The tree-ring clock was a purely local one. The search for a more universal clock continued, while the method of **radiocarbon dating** was developed by Willard LIBBY in 1949.

Dover British port on the English Channel, 71 miles southeast of London, in Kent. A key crossing point between Britain and France, it served as a naval base in WORLD WAR I and was heavily shelled by German guns in WORLD WAR II. The British end of the ENGLISH CHANNEL TUNNEL is near Dover.

doves Term originally used to describe Americans advocating negotiation or reduction of U.S. involvement in VIETNAM in the 1960s and 1970s. The term came to be applied to politicians taking moderate stances on foreign policy issues and opposed to the

use of military force in general. (See also HAWKS; VIETNAM WAR.)

Dovzhenko, Alexander Petrovich (1894–1956) Film director. Of a Cosack family, Dovzhenko was appointed People's Artist of the Russian Soviet Federated Socialist Republic in 1950. He started in films in 1926, having previously been a teacher and a painter. His *Arsenal* (1929) and *Earth* (1930), in which he used a variety of techniques, all infused with poetic lyricism, brought him fame but were denounced by official critics as counterrevolutionary. *Shchors*, made in 1939, is the story of a Ukrainian Red Army hero. Among his other films were *Battle of the Ukraine* (1943), an important war documentary made by giving personal instruction to 24 different cameramen distributed along a battle front; the color film *Michurin* (1949); and *Poem of the Sea*, completed in 1958 after his death.

Dow, Herbert H. (1866–1930) U.S. chemist and industrialist. His college thesis at the Case School of Applied Sciences (1888) was about extracting minerals from the brines underlying much of Ohio. Encouraged by his teachers, he studied the vast underground resources of brines also found in nearby states and presented his studies at a meeting of the American Association for the Advancement of Science in 1888. In 1889 he discovered and patented an inexpensive method of extracting bromine, chromium and lithium from brine by electrolysis. He founded Dow Chemical Company in 1897 at Midland, Michigan. Dow was the first U.S. company to manufacture indigo and phenol, a compound used in explosives. During WORLD WAR I, the company manufactured mustard gas for troops in Europe. A major industrial enterprise of the day, the company has continued as a producer of a wide variety of chemicals.

Dowell, Anthony (1943–) British dancer. One of the great classical male dancers of his generation, Dowell is famous for his elegance and flawless technique. He joined Britain's ROYAL BALLET in 1961 and quickly received acclaim dancing the leading classical roles. He created roles in Frederick ASHTON's *The Dream* (1964) and *A Month in*

the Country (1976) and in Anthony TUDOR's *Shadowplay* (1967), among others. From 1978 to 1980 he was a principal dancer with AMERICAN BALLET THEATRE. He served as the artistic director of the Royal Ballet from 1986 to 2001. Dowell was elevated to the rank of Knight Bachelor in 1995.

DO-X Giant flying-boat airplane built by the German firm of Dornier and first flown in 1929. The DO-X had been preceded with some success by the flying boats Dornier WAL and Super-WAL, the latter operating on a regular schedule between Europe and South America. Each carried eight to 10 passengers and mail. The huge DO-X, however, carried up to 150 passengers and was intended to provide a regular transatlantic passenger service. It had three decks and provided spacious passenger accommodation somewhat in the manner of a ship. Twelve engines mounted above the single wing, six facing forward and six facing aft, were required to power it. A flight to New York was made, but because the DO-X was underpowered and unable to gain safe altitude, its use was discontinued.

Doyle, Sir Arthur Conan (1859–1930) British writer and physician, best known for his stories about the greatest of all consulting detectives, SHERLOCK HOLMES. Born in Edinburgh and educated at Stonyhurst College and Edinburgh University, Doyle took up his medical practice as an eye specialist near Portsmouth in 1882. He began supplementing his income by writing, and in 1887 the first Sherlock Holmes novel appeared, *A Study in Scarlet*, followed by a spectacularly popular series of Holmes short stories in *The Strand Magazine* (1891–92). Although his fame would ultimately rest on his detective stories, Doyle preferred other literary pursuits. His most cherished projects were historical novels such as *Micah Clarke* (1889) and *The White Company* (1891). His patriotic fervor fueled works like *The War in South Africa: Its Cause and Conduct*, a defense of the British involvement in the BOER WAR (1902); his scientific background led to the creation of Professor George Edward Challenger in *The Lost World* (1912) and *The Poison Belt* (1913)—stories that blended sci-

entific fact with fantastic romance. His growing interest in spiritualism after World War I led to such books as *The Coming of the Fairies* (1922), in which he supported the existence of what he called the little people. Doyle devoted most of the decade of the 1920s and more than a million dollars to this cause. Holmes remained a skeptic to the last story *The Case-Book of Sherlock Holmes* (1927). While Doyle's output was prodigious and diverse, his contributions to the modern detective story and to the new field of science fiction remain his most important literary legacies.

Drabble, Margaret (1939–) British novelist. Born in Sheffield, Drabble was educated at Victoria University of Manchester. She achieved success with her first novel, *A Summer Bird-Cage* (1962), which, like her other early works, depicts intelligent young women facing career and marriage decisions. Leaving behind the almost breathless tone of her early work, Drabble's increasingly complicated novels reflect her earnest concern with contemporary social themes, although some critics have attacked her for her turgid prose and for taking a sociologist's rather than a novelist's view of life. *The Realms of Gold* (1975) depicts archaeologist Francis Wingate—a successful, divorced mother. *The Ice Age* (1977) describes the economic crises of England in the mid-1970s and the social damage wrought by unchecked real estate development. Later works, notably *The Radiant Way* (1987) and its sequel, *A Natural Curiosity* (1989), express her discontent with England under Margaret THATCHER. An outspoken feminist and socialist, Drabble has also written a biography of Arnold BENNETT and edited the *Oxford Companion to English Literature* (1985, fifth edition). She is married to the biographer Michael Holroyd. Her sister **A. S. Byatt** is also a noted novelist. More recent novels by Drabble are *The Gates of Ivory* (1992), *The Witch of Exmoor* (1997), *The Peppered Moth* (2001) and *The Seven Sisters* (2002).

Drake, Frank Donald (1930–) American astronomer. Drake graduated in 1952 from Cornell University and obtained his Ph.D. in 1958 from Harvard. He worked initially at the Na-

tional Radio Astronomy Observatory (NRAO), West Virginia (1958–63), and at the JET PROPULSION LABORATORY, California (1963–64), before returning to Cornell and being appointed professor of astronomy in 1966. Although Drake has made significant contributions to radio astronomy, including radio studies of the planets, he is perhaps best known for his pioneering search for extraterrestrial intelligence. In April 1959 he managed to gain approval from the director of NRAO, Otto Struve, to proceed with his search, which was called Project Ozma, from the Oz stories of L. Frank BAUM. Drake began in 1960, using the NRAO 26-meter radio telescope to listen for possible signals from planets of the sunlike stars Tau Ceti and Epsilon Eridani, both about 11 light-years away. No signals were received. In July 1960 the project was terminated to allow the telescope to be used for other purposes. Drake revived the project in 1975, in collaboration with Carl SAGAN, when they began using the Arecibo 100-foot radio telescope to listen to several nearby galaxies on frequencies of 1420, 1653 and 2380 megahertz. No contact was made; nor was it likely, for as they declared: "A search of hundreds of thousands of stars in the hope of detecting one message would require remarkable dedication and would probably take several decades."

Draper, Charles Stark (1901–1987) U.S. engineer and physicist. In 1939 Draper helped found the Massachusetts Institute of Technology Instrumentation Laboratory. His work there on gyroscopic systems broke new ground in such developments as gunights for WORLD WAR II battleships and guidance systems for intercontinental ballistic missiles. Known as the father of inertial navigation, he developed the navigation system that guided the APOLLO astronauts to the Moon and back.

Draper, Dorothy (1889–1969) American interior decorator known for her designs for hotels, restaurants, clubs and other public spaces. She founded her own firm in 1925 and produced early work in a version of the popular ART DECO idiom of the time. In the 1930s her work took on more eclectic, traditional elements, often in overscaled, exaggerated form. Her book of 1939,

Decorating Is Fun! sums up the Draper approach with its energetic, somewhat flamboyant, commercial emphasis. The redecoration of the Pompeiian restaurant of New York's Metropolitan Museum of Art is a highly visible (although now altered) example of the florid Draper style.

dreadnoughts Class of "all-big-gun" battleships; derived from HMS *Dreadnought*, a British battleship launched in 1906. The first such ship powered by steam turbines, it carried 10 12-inch guns and five torpedo tubes, giving it about twice the firepower of its predecessors. With heavy armor plate made of Krupp steel and able to reach a cruising speed of 21 knots, the ship outranged and outpaced every other such vessel and immediately became the most powerful ship in the world. Representing a revolution in naval design, the *Dreadnought* provided a model and a name for the battleship that were to render previous capital ships obsolete. Dreadnoughts had a prominent place in WORLD WAR I, but the only engagement in which opposing dreadnoughts faced each other occurred at the battle of JUTLAND in 1916. Limitations were placed on the dreadnoughts by the postwar WASHINGTON CONFERENCE, and their importance was lessened by the growth of air forces and underwater weaponry.

Drees, Willem (1886–1988) Dutch politician. Premier of the NETHERLANDS from 1948 to 1958 (the longest premiership in Dutch history), he was the architect of the nation's comprehensive welfare system. Under his stewardship the Netherlands reemerged into prosperity as it recovered from five years of German occupation during WORLD WAR II. Drees, who helped found the Dutch Labor Party after the war, quit the party in the early 1970s, as he felt it was moving too far to the left. His son, Willem Jr., founded the Dutch Democratic Socialist Party.

Dreiser, Theodore (1871–1945) American author who was a major force in the development of modern literary realism. He was born the 11th child to a poor German immigrant family in Terre Haute, Indiana. He came to New York an ambitious journalist in 1894, the same year that critic Hamlin

Garland proclaimed that city the “literary center of America.” Six years of struggle and privation before the publication of his first novel, *SISTER CARRIE* (1900), introduced him to many of the greatest young realists of the time—the painter Everett SHINN, photographer Alfred STIEGLITZ, and novelists William Dean Howells, Stephen Crane and Frank Norris. However, the poor reception accorded *Sister Carrie* caused Dreiser to withdraw into seven years of depression and hospitalization. Back on his feet and encouraged by the successful republication of the novel in 1907, he plunged into a series of 21 books in the next 21 years: *Jennie Gerhardt* (1911), *A Traveller at Forty* (1913), *The “Genius”* (1915), the three Frank Cowperwood novels (*The Financier*, 1912; *The Titan*, 1914; and *The Stoic*, published posthumously in 1946) and his most important novel, *AN AMERICAN TRAGEDY* (1925).

Despite frequent complaints from his contemporaries that his prose was clumsy, his method ponderous and his subjects sordid, Dreiser managed to secure a lasting reputation as a major novelist. His was a mind, according to colleague H. L. MENCKEN, that was “packed to suffocation with facts directly observed.” His greatest characters—Carrie Meeber, Hurtswood, Clyde Griffiths—are superbly realized and, as Dreiser himself put it, “pit their enormous urges” against the limitations “of their pathetic equipment.”

Dresden German city, on the Elbe River in Saxony. Renowned for its music and art collections, its singular architecture and its Dresden china, which has been crafted in nearby Meissen for the past two centuries. Dresden was devastated in WORLD WAR II by Allied fire-bombing in February 1945. In its ferocity and the destruction it caused, the bombing of Dresden, in which thousands of German civilians died, is considered third only to the atomic bombing of HIROSHIMA and NAGASAKI. Dresden was part of EAST GERMANY from 1949 to 1990. Most of the city has been reconstructed and revitalized.

Drexel, Mother Katharine (1858–1955) American nun. Drexel was born into a wealthy and socially prominent banking family of Philadelphia. She donated her share of the family's fortune to

the order she created in 1891, the Sisters of the Blessed Sacrament for Indians and Colored People. At its height, the order (now known as the Sisters of the Blessed Sacrament) maintained 66 schools in 23 states, including the predominantly black Xavier University in New Orleans. In 1988 Mother Drexel was beatified by Pope JOHN PAUL II, leaving her one step from sainthood. The pope praised Mother Drexel as someone who “would stand up for the rights of the oppressed.”

Drexel Burnham Lambert scandal

Financial scandal involving so-called junk bond king Michael R. Milken of Drexel Burnham Lambert, a large Wall Street brokerage firm. During the 1980s American business went through a period of merger mania characterized by “hostile takeovers.” At the center of the action was the once obscure investment banking house of Drexel Burnham Lambert, which garnered the limelight when one of its partners, Milken, pioneered the use of high-yielding junk bonds to finance corporate takeovers. Both Milken and his firm grew immensely wealthy from these transactions. However, the bubble burst in 1986 when Ivan BOESKY, a multimillionaire who had made his fortune through risk arbitrage, implicated both Milken and Drexel in illegal insider trading. The federal government prosecuted both Milken and the firm. Drexel, which only a year before had been the most successful firm on Wall Street, went bankrupt in the wake of the scandal.

Dreyer, Carl Theodor (1889–1968) Danish film director. Dreyer was one of the most critically acclaimed directors of the 20th century. Many of his films, which span the transition from silent films to the “talkies,” are widely regarded as classics. Dreyer, an orphan, was raised by a Lutheran family. He worked as a journalist and as an editor before turning to the cinema in 1919. During his peripatetic career, he made a total of 14 films in Scandinavia, France and Germany. Perhaps his best-known work is *The Passion of Joan of Arc* (1928), a highly dramatic black-and-white SILENT FILM that featured the French playwright Antonin ARTAUD as a monk. Other films by Dreyer include *Vampyr* (1932)

and *Day of Wrath* (1943), a story of religious persecution, which Dreyer courageously shot in Denmark during the Nazi occupation. *Ordet* (1955) deals with the themes of love and faith, and *Gertrude* (1964) concerns the quest of a woman for absolute love. His writings include *Dreyer in Double Reflection* (1973).

Dreyfuss, Henry (1904–1972) American industrial designer. Born in New York City, Dreyfuss began his career in stage design, working on Broadway productions from 1921 to 1929. In 1929 he opened his own studio, and from then on he produced a wide variety of industrial designs. Function and ease of use were prime considerations to Dreyfuss in his creation of designs for such products as Bell telephones (1930), Hoover vacuum cleaners (1934), passenger cars for the New York Central Railroad (1941), RCA television sets (1946), refrigerators, hearing aids, typewriters, farm machinery, airplanes, ships, printed materials and myriad other objects. A founder of the American Society of Industrial Design, he expressed his design philosophy in *The Measure of Man* (1959) and an autobiography, *Designing for People* (1955). He and his wife committed suicide in California.

Drickamer, Harry George (1908–2002) American physicist. Drickamer was educated at the University of Michigan, where he earned his Ph.D. in 1946. He then joined the staff of the University of Illinois, Urbana, serving first as professor of physical chemistry and, after 1953, as professor of chemical engineering. He specialized in the study of the structure of solids by means of high pressures, producing in the course of his research pressures on the order of some 500,000 atmospheres.

Dries Right-wing members of the British CONSERVATIVE PARTY during Margaret THATCHER's tenure in office. They supported monetarist policies and opposed increases in public expenditure to alleviate social problems. They also supported PRIVATIZATION, curtailment of trade union influence and a vigorous defense policy. (See also WETS.)

Driesch, Hans Adolf Eduard (1867–1941) German biologist. Driesch held professorships at Heidelberg, Cologne and Leipzig and was visiting professor to China and America. A student of zoology at Freiburg, Jena and Munich, he was for some years on the staff of the Naples Zoological Station. Driesch carried out pioneering work in experimental embryology. He separated the two cells formed by the first division of a sea-urchin embryo and observed that each developed into a complete larva, thus demonstrating the capacity of the cell to form identical copies on division. He was also the first to demonstrate the phenomenon of embryonic induction, whereby the position of and interaction between cells within the embryo determine their subsequent differentiation. Driesch is perhaps best known for his concept of entelechy—a vitalistic philosophy that postulates the origin of life to lie in some unknown vital force separate from biochemical and physiological influences. This also led him to investigate psychic research and parapsychology.

Drinkwater, John (1882–1937) British poet, playwright and actor. Drinkwater was a competent Georgia poet and a founding member of the Birmingham Repertory Theatre, where he was a longtime actor and manager. His early poetic dramas, the most successful of which was *X = O; a Night of the Trojan War* (1917), were followed by such acclaimed plays as *Abraham Lincoln* (1919) and the comedy *Bird in Hand* (1927) as well as several historical dramas. (See also the GEORGIANS.)

Drummond de Andrade, Carlos (1902–1987) Brazilian poet. He was a leader of Brazil's modernist movement in literature. Aside from Fernando PESSOA of Portugal, he was perhaps the foremost Portuguese-language poet of the 20th century. According to the *Times* of London, he was also "perhaps the most successful humorous poet of really major stature in this century."

Drury, Allen Stuart (1918–1998) American journalist and novelist. Drury worked as a journalist for 20 years—including a stint at United Press International as a Washington correspondent—before the publication of his first novel, *Advise and Consent*

(1959, filmed 1962). The book was an immediate success, largely because it was assumed it was a roman à clef depicting the political and sexual intrigues of prominent Washington figures of the time. It won a PULITZER PRIZE in 1960. Drury wrote several sequels following the careers of the characters of *Advise and Consent*, including *A Shade of Difference* (1962), *That Summer* (1965), *Capable of Honor* (1966) and *Preserve and Protect* (1968). Other works include *A Senate Journal 1942–1945* (1972), *Egypt the Eternal Smile: Reflections on a Journey* (1980) and *Pentagon* (1986).

Druze Rebellion of 1925–1927

The Druze, a small Islamic sect in French mandated Syria, protested their tyrannical treatment by the governor and rebelled under Sultan al-Atrash in July 1925. They soon controlled much of the countryside. Syrian nationalists joined them, forcing the French to withdraw from Damascus. The French unleashed artillery and bombing attacks, but the rebellion, which had spread to southern Lebanon, continued until June 1927. The Druze then accepted peace. (Lebanon had been declared a republic by the French on May 23, 1927.)

Dryden, Hugh L. (1898–1965) U.S. research scientist and administrator. Although he had never flown an airplane, Dryden was one of the world's great authorities in aeronautics. A graduate of Johns Hopkins University in 1917, he pioneered a series of high-speed flight phenomena projects for the National Bureau of Standards in the mid-1930s and by 1938 had become chief physicist of the agency. After leaving the Bureau of Standards in 1947, that same year he became director of aeronautical research for NACA (the National Advisory Committee on Aeronautics); when that agency became NASA in 1958, Dryden was named deputy administrator. Over a long career he published more than 100 papers on aeronautics research and was the recipient of many awards, including the Daniel Guggenheim Medal in 1950 and the Wright Brothers Memorial Trophy in 1955. The Dryden Flight Research Center (formerly known as the High Speed Flight Sta-

tion) at Edwards Air Force Base in California is named in his honor.

Duarte Fuentes, José Napoleón (1926–1990) Salvadoran politician, president of El Salvador (1980–82, 1984–89). A centrist, Duarte helped found El Salvador's Christian Democratic Party in 1961. He ran for the presidency in 1972 and was leading in votes when the military government stopped the count and declared its candidate the winner. Following an unsuccessful coup by military officers who supported him, Duarte was arrested and finally exiled. In 1979 he returned to the country as part of a military-civilian junta. Appointed president in 1980, he was looked on as a force for Central American democracy by the REAGAN administration. He served during most of the 1980s, but large amounts of U.S. aid did not help bring peace. Although himself a man of integrity, his government came to be viewed as inept and riddled with corruption. Ill with cancer, he was forced from office in a 1989 election.

Dubasov, F. V. (1845–1912) Dubasov was the general responsible for the suppression of the RUSSIAN REVOLUTION OF 1905 in Moscow. Initially unsuccessful because the loyalty of his troops was uncertain, he was given reinforcements in the form of the Semenovskiy Guards, who ruthlessly quelled the revolt in a few days.

Dubček, Alexander (1921–1992) Czechoslovak political leader and reformer. Dubček joined the Communist Party in 1939, fought with the Slovak RESISTANCE against the Germans (1944–45) and studied political science in Moscow (1955–58). He became principal secretary of the Slovak Communist Party in 1958 and first secretary—in effect, the leader of CZECHOSLOVAKIA—on January 5, 1968. In the following months he introduced economic and political reforms designed to create what he called "socialism with a human face" (see PRAGUE SPRING). Although he assured the USSR that he intended to keep Czechoslovakia in the WARSAW PACT, Soviet leader BREZHNEV ordered the SOVIET INVASION OF CZECHOSLOVAKIA (August 20–21, 1968) to crush the reform movement and restore a hard-line Communist

government; Dubček was briefly arrested. He remained first secretary until 1969 but was expelled from the party in 1970 and vanished from public life. When the democratic reform movement swept Czechoslovakia in late 1989, he reemerged to popular acclaim and was unanimously elected Speaker of the Czechoslovak parliament in December of that year. He lived to see the fall of communism in his country in 1989 but died in an automobile accident after the division of Czechoslovakia into the Czech Republic and Slovakia.

Dubinsky, David (1892–1982) American union leader. A major figure in the U.S. labor movement during the middle third of the 20th century, he was president of the International Ladies Garment Workers Union from 1932 to 1966. Under his leadership the union membership grew tenfold, from 45,000 to 450,000. He took the union from near bankruptcy and built up assets of \$500 million. Dubinsky largely eliminated sweatshops in the industry and drove communists out of leadership positions in the union. He pioneered the union role in granting health insurance, housing, severance pay, retirement benefits and a 35-hour workweek. He also helped found New York State's Liberal Party and served as its vice chairman. He advised many presidents—from Franklin ROOSEVELT to John F. KENNEDY.

DuBois, William Edward Burghardt (1868–1963) Pioneering black American civil rights leader. Born in Great Barrington, Massachusetts, DuBois attended Fisk University and in 1895 became the first African American to receive a Harvard Ph.D. He taught history and economics at Atlanta University from 1897 to 1910 and from 1932 to 1944. In the early part of the 20th century, DuBois was the leading black figure in the fight against racial discrimination. Demanding equal rights, he opposed Booker T. WASHINGTON's credo that hard work alone would improve the status of African Americans. In some 20 books and scores of articles he made great contributions to the historical and sociological understanding of black life in America. His liberationist ideology was eloquently ex-

Civil rights leader W. E. B. DuBois (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

pressed in the classic work *The Souls of Black Folk* (1903). In an attempt to fight racial discrimination he founded (1905) the NIAGARA MOVEMENT, a forerunner of the NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE (NAACP), which he cofounded four years later. In addition, he edited the organization's influential journal *The Crisis* from 1910 to 1934. Also concerned with colonialism and the international status of blacks, he participated in a number of Pan African Congresses, meeting Kwame NKRUMAH and Jomo KENYATTA at one of these (1945). Impatient with what he felt was the NAACP's timid approach to the civil rights struggle, he resigned from the organization in 1948. Increasingly radical, DuBois came to view COMMUNISM as the best way to achieve black liberation, and he joined the Communist Party in 1961. That same year he moved to Ghana, becoming a Ghanaian citizen just before his death.

Dubos, René Jules (1901–1982) French-born bacteriologist and author. Graduated from France's National Agronomy Institute (1921) with a degree in agricultural science, Dubos worked briefly at the International Institute of Agriculture in Rome and immigrated to the U.S. in 1924. After earning his Ph.D. for research on soil

microorganisms (Rutgers University, 1927), he joined the staff of Rockefeller University in New York. There he devoted his career to the study of bacteria and antibacterial substances. He was also a tireless crusader against environmental pollution. The author of more than 20 environmental and scientific works, he received many major scientific awards. He won the 1969 PULITZER PRIZE for nonfiction for his book *So Human an Animal*.

Dubuffet, Jean (1901–1985) French painter and sculptor. Dubuffet was regarded by many as the most important artist to emerge from FRANCE at the end of WORLD WAR II. Supporting himself as a wine merchant, he did not begin his artistic career in earnest until he was in his 40s. Opposed to respectability in art, he reveled in simplicity and created works in a primitive, childlike idiom with a caricatural quality. He was the recipient of a number of large-scale sculptural commissions in the U.S. He also wrote widely on art and other subjects and was considered a master of French prose.

Duchamp, Marcel (1887–1968) French painter and art theorist; in spite of his relatively slim production, one of the most important figures in 20th-century art—an avant-garde icon. The brother of Raymond DUCHAMP-VILLON and half brother of Jacques Villon, he was born in Blainville and painted his first pictures in an Impressionist style around 1908. Soon thereafter he produced works influenced by the formal brilliance of Paul Cézanne and the color of FAUVISM. Duchamp quickly developed a style of his own, a merging of CUBISM and FUTURISM that represented form and motion in a series of overlapping planes. This style was manifested in his famous work *Nude Descending a Staircase* (1912), which scandalized a conservative American public when it was shown in the 1913 ARMORY SHOW. Around this time he began to develop the ideas that crystallized in 1915 in the DADA movement. Duchamp also created the first “readymades,” everyday objects—such as bottle rack, bicycle wheel, urinal—exhibited out of context as works of art, which would strongly influence the adherents of POP ART.

He moved to New York City in 1915, became the center of a group of dada artists and writers and began work on his magnum opus, a symbol-laden composition of painted foil and wire held between two sheets of plate glass and entitled *The Bride Stripped Bare by Her Bachelors, Even* (1915–23). Duchamp is also well known for his mustache-decorated Mona Lisa called *L.H.O.O.Q.* (1919). Although he executed a number of sketches and created his last work, *Etant Donnes* (1949), in the 1940s, Duchamp, who vowed never to repeat himself, officially retired from painting in 1923 and largely devoted himself to the game of chess. Many of his works are in the collection of the Philadelphia Museum of Art.

Duchamp-Villon, Raymond (1876–1918) French sculptor. Duchamp-Villon, who was markedly influenced by CUBISM and was one of the first sculptors to apply its theories to his medium, was also a member of an important artistic family. His brother was the renowned painter and theorist Marcel DUCHAMP, while his half brother was painter Gaston Duchamp. Duchamp-Villon produced the bulk of his major sculptures in the years just prior to World War I, including *Seated Woman* and *Horse*. He was singled out for praise by French poet and art critic Guillaume APOLLINAIRE as a sculptor who went beyond mere modeling from nature to enlarge and glorify the human spirit.

Dudinskaya, Natalya Mikhailovna (1912–2003) Soviet ballerina. She joined the Leningrad Academic Theater Opera and ballet troupe and within a year was dancing the main roles. She participated in the creation of new Soviet ballets such as *The Flame of Paris*, *Laurensya* and *The Bronze Horseman*.

Dudintsev, Vladimir Dmitriyevich (1918–1998) Soviet author. Trained as a lawyer, during WORLD WAR II he served as defense counsel with a Siberian tribunal (1942–45). He began writing seriously in 1946 as a contributor to *Komsomolskaya Pravda*, the newspaper of the Communist Party's youth organization (see KOMSOMOL; PRAVDA). His most successful work, *Not by Bread Alone* (1957), was a frank description

of the Soviet social and political system; it was censored by the authorities.

Dufek, George J. (1903–1977) American naval officer. He commanded the U.S. Navy's **Operation Deep Freeze** Antarctic expeditions (1955–59) and was the first American to set foot on the SOUTH POLE (1956). He retired with the rank of rear admiral.

Dufy, Raoul (1877–1953) French painter. Dufy was strongly influenced by the Impressionists early in his career in Massachusetts but emerged in the 1900s as a practitioner of FAUVISM, a school of painting that emphasized the dynamic use of bright color to create emotional and spiritual impact. Dufy crafted woodcut illustrations for the *Bes-tiare* (1911) of French poet Guillaume APOLLINAIRE, who was a critical supporter of Dufy's art. Dufy later turned his attention to artistic mass production of woodblock print, textiles, pottery and tapestries. He also designed theatrical sets and public works displays.

Duggar, Benjamin Minge (1872–1956) American plant pathologist. Duggar devoted his career to studying plant diseases and while professor of plant physiology at Cornell University wrote *Fungus Diseases of Plants* (1909), the first publication to deal purely with plant pathology. He is known for his work on cotton diseases and mushroom culture, but he made his most important discovery after retiring from academic life. In 1945 he became consultant to the American Cyanamid Co. and soon isolated the fungus *Streptomyces aureofaciens*. Three years' work with this organism resulted in Duggar extracting and purifying the compound chlortetracycline, (marketed as Aureomycin), and first of the tetracycline antibiotics. This drug was on the market by December 1948 and has proved useful in combatting many infectious diseases. Duggar was one of the foremost coordinators of plant science research in America and was editor of many important publications.

Dukakis, Michael Stanley (1933–) American politician and Democratic presidential candidate (1988). Born in Brookline, Massachusetts, Dukakis attended Swarthmore College and received a law degree from Harvard

University. He served in the Massachusetts legislature (1963–70) and was elected governor of the state in 1974. Defeated in 1978, he taught at Harvard (1979–82) before regaining the statehouse in 1982; he was reelected in 1986. Due largely to the economic successes in Massachusetts, Dukakis emerged as the front-runner in the Democratic presidential primaries of 1988, besting such better-known challengers as Senator Al GORE, Representative Richard Gephardt and Jesse JACKSON. Capturing the nomination, Dukakis led his Republican rival, George H. W. BUSH, in many polls in the summer of 1988. Dukakis, however, was often perceived as a cold and cautious technocrat, and he generated little enthusiasm among the majority of voters. He was resoundingly defeated by Bush. Dukakis completed his term as Massachusetts governor but, burdened by a failing economy, family problems and growing unpopularity in his home state, he declined to run again in 1990. In 2001 Dukakis joined the political science faculty at Northeastern University.

Dukas, Paul (1865–1935) French composer best known for his orchestral scherzo *L'apprenti sorcier* (1897; *The Sorcerer's Apprentice*), which is considered a masterpiece of modern music. Initial recognition as a composer came with his overture to Corneille's drama *Polyeucte* (1892). Among Dukas's most important works are the opera *Ariane et Barbe-Bleue*, with libretto by Maurice Maeterlinck (1907), the ballet score *La Peri* (1912), and the piano Sonata in E Flat Minor (1901). He also was a music critic for several journals, most notably the *Gazette des beaux-arts*, and taught at the Paris Conservatory (from 1918) and the École Normale de Musique.

Duke, Charles (1935–) U.S. astronaut. *Apollo 16* was Duke's only spaceflight, but on that mission he became the 10th human to walk on the Moon. As lunar module pilot, Duke, along with Commander John YOUNG, spent almost three days exploring the Moon's surface by foot and on the specially built Lunar Rover vehicle.

Duke, James Buchanan (1856–1925) American entrepreneur and philanthropist. Duke was born in North

Carolina, the son of a tobacco processor. In 1890, after expanding his father's company into the largest tobacco corporation in America, Duke joined with four competitors to form the American Tobacco Company, which would dominate the industry for two decades, until dissolved by the U.S. Supreme Court in 1911. Duke University in Durham, North Carolina, is named after Duke, who contributed heavily to the institution.

Dukhonin, Nikolai Nikolayevich (1876–1917) Russian general. He was commander in chief of all Russian forces when the OCTOBER REVOLUTION broke out. Having helped several senior officers to escape, he refused to obey an order to open truce negotiations with the Germans. He was shot by mutinous troops in November 1917.

Dulbecco, Renato (1914–) Italian-American physician and molecular biologist. Dulbecco obtained his M.D. from the University of Turin in 1936 and taught there until 1947, when he moved to the U.S. He taught briefly at Indiana before moving to California in 1949. He served as professor of biology (1952–63) at the California Institute of Technology. Dulbecco then joined the staff of the Salk Institute, where—apart from a period (1971–74) at the Imperial Cancer Research Fund in London—he has remained.

Beginning in 1959 Dulbecco introduced the idea of **cell transformation** into biology. In this process special cells are mixed in vitro with such tumor-producing viruses as the polyoma and SV40 virus. With some cells a productive infection results, where the virus multiplies unchecked in the cell and finally kills its host. In other cells, however, this unlimited multiplication does not occur; instead, the virus induces changes similar to those in cancer cells: The virus alters the cell so that it reproduces without restraint and does not respond to the presence of neighboring cells. A normal cell is thus transformed into a cancer cell in vitro. The significance of this work was to provide an experimental set-up where the processes by which a normal cell becomes cancerous can be studied in a relatively simplified form. It was for this work that Dulbecco was awarded the NOBEL PRIZE in physiology or medicine in 1975, sharing it with Howard TEMIN and David BALTIMORE.

Dulles, Allen Welsh (1893–1969) U.S. foreign service officer; director of the CIA. Dulles was born in Watertown, New York, and graduated from Princeton University in 1914. In 1916, after earning a master's degree at Princeton, he joined the foreign service, with which he served first in Vienna then in Switzerland during WORLD WAR I; in 1919 he was on the American delegation to the peace conference in Paris. In 1926 Dulles received a law degree from George Washington University and resigned from the State Department to enter private practice. During WORLD WAR II he worked for the OFFICE OF STRATEGIC SERVICES (OSS), first as head of the New York City office and, from November 1942, as director of the office in Bern, Switzerland. Dulles's group made a significant contribution to the war effort, discovering, among other things, that the Nazis were working to develop the V-1 and V-2 rockets and that Germany had broken the American diplomatic code in use in Europe. In 1946, after the war, Dulles became president of the private Council on Foreign Relations. In 1951 he was appointed deputy director of the CIA, and in 1953 he became the agency's director, about the same time that his brother, John Foster DULLES, was appointed secretary of state. During Dulles's tenure, the CIA was involved in many covert operations, including coups in Iran and Guatemala, U-2 surveillance flights over the Soviet Union (see U-2 INCIDENT) and the BAY OF PIGS INVASION of Cuba. In 1961, after the failure of the latter, Dulles resigned his position at the CIA. In 1964 he was a member of the Warren Commission, which investigated the assassination of President John F. KENNEDY.

Dulles, John Foster (1888–1959) American statesman, secretary of state (1953–59). Born in Washington, D.C., Dulles was the grandson and nephew of previous secretaries of state. He attended Princeton, the University of Paris and George Washington University before becoming a prominent international lawyer. He was a representative to the PARIS PEACE CONFERENCE of 1919, where he was the chief American spokesman on the question of reparations. He subsequently attended a variety of international conferences held between the wars. An adviser to the

U.S. delegation at the 1945 conference that founded the UNITED NATIONS, he served as a U.S. delegate to the UN from 1945 to 1949. In 1951 he negotiated the final peace treaty with Japan. Dulles' long experience in international affairs caused President Dwight D. EISENHOWER to appoint him secretary of state in 1953. Serving in this office until 1959, he became the main architect of America's COLD WAR stance, expanding the anticommunist policies of Dean ACHESON, whom Dulles denounced as too soft on COMMUNISM. He was important in forming a number of anticommunist alliances, such as SEATO and CENTO (Central Treaty Organization), and played a central role in the strengthening of NATO. In his unyielding opposition to communism, which he viewed as an absolute moral evil, Dulles initiated a policy of BRINKSMANSHIP and encouraged the development of nuclear weapons that could be used in a "massive retaliation" against any Soviet aggression. Dulles was a strong backer of the Nationalist Chinese and of the DIEM regime in South Vietnam. However, he strongly opposed the French and British intervention against Egypt in the ARAB-ISRAELI WAR OF 1956 (see SUEZ CRISIS). In ill health, he resigned from his post only five weeks before his death. Dulles's political philosophy was enunciated in his books *War, Peace, and Change* (1939) and *War or Peace* (1950).

Dullin, Charles (1885–1949) French theatrical actor and producer. Dullin began his career as an actor working under Jacques COPEAU in the Vieux-Colombier theater company. In 1919 Dullin founded an experimental theater company, which he ultimately located at his Théâtre de l'Atelier Paris. It was one of the leading avant-garde troupes of the 1920s, producing plays by notables including Jean COCTEAU and Luigi PIRANDELLO. Dullin was named a director at the prestigious Comédie Française in 1936. While there, he provided tutelage to actor Jean-Louis BARRAULT.

duma The elected legislative assemblies that, with the State Council, made up the Russian legislature from 1906 to 1917, and which were established in response to the 1905 revolution. The czar could rule absolutely when the дума was not in session, and he could dissolve it at will. The first state дума, elected by universal male suffrage but

with limited power over financial and other matters, met for 73 days in 1906 and the second met in 1907 for 102 days. The first and second dumas were unsuccessful in that, although it was expected that the representatives would be conservative, they were mainly liberal and socialist, and their demands for reform were totally unacceptable to the government. The franchise was then restricted, and the third дума ran its full five-year term (1907–12) and gave support to the government's agrarian reforms and military reorganization. The fourth дума sat from 1912 to 1917, but it gradually became opposed to the government's war policy and increasingly critical of the imperial regime. On the abdication of Czar NICHOLAS II the provisional committee established by the дума asked Prince Lvov to form a provisional government.

After the dissolution of the Soviet Union in 1991, the parliament of the Russian Federation was called the Duma.

du Maurier, Dame Daphne (1907–1989) British novelist. Daughter of the noted actor-manager **Sir Gerald du Maurier** and granddaughter of novelist **George du Maurier**, Daphne was born in London and educated in Paris. A writer of popular romantic fiction, she published her first novel, *The Loving Spirit*, in 1913. Like much of her fiction, her best-known work, *Rebecca* (1938, filmed 1940), takes place in Cornwall—where she lived much of her life. Du Maurier also wrote lesser-known historical fiction. Other works include *Jamaica Inn* (1938), *Frenchman's Creek* (1941), *My Cousin Rachel* (1951), *The Breaking Point* (1959) and *The Flight of the Falcon* (1965). Du Maurier wrote plays as well as nonfiction books about the Brontës, Cornwall and her family's history.

Dumbarton Oaks conferences

From August 21 to October 7, 1944, representatives of China, the USSR, the U.S. and Great Britain met at Dumbarton Oaks, a mansion in Georgetown, Washington, D.C., to formulate proposals for an organization the eventually became the UNITED NATIONS. Paragraph four of the Moscow Declaration of 1943 had stressed the need for such a post-war organization to succeed the LEAGUE OF NATIONS. The Dumbarton Oaks proposals for the establishment of a general

international organization did not establish the voting procedures or qualifications for membership; these were settled at the YALTA CONFERENCE in February 1945, at which a trusteeship system was agreed upon to replace the league mandates. The final proposals formed the basis of negotiations at the San Francisco Conference in 1945, from which the Charter of the United Nations was published.

Dunand, Jean (1877–1942) Swiss designer. Born near Geneva, he trained as a sculptor and designer in his native city and in Paris, where he settled in 1897. He was particularly well known for his vases, which he began producing in 1903. His styles ranged from ART NOUVEAU, to ART DECO, CUBISM and naturalism. Beginning to work in hammered metal, he became well known for his elegant lacquer works, particularly for the panels he executed for the luxury OCEAN LINERS *Île de France* (1928), *L'Atlantique* (1931) and *NORMANDIE* (1935). He was also known for his furniture designs.

Dunayevskaya, Raya (1910–1987) Ukrainian-born Marxist philosopher. Raised in the U.S., she is considered the founder of a philosophy called Marxist humanism, on which she wrote four books. From 1937 to 1939, she was secretary to Russian Communist revolutionary Leon TROTSKY during his Mexican exile.

Dunayevsky, Isaak (1900–1955) Soviet composer. He worked as a conductor and composer in Moscow, Kharkov and Leningrad. In 1932 he began to compose for films. His works include the operettas *The Golden Valley* (1937), *The Road to Happiness* (1941) and *The Son of the Clown* (1950). He was one of the first composers in the USSR to use JAZZ forms.

Dunbar, Paul Laurence (1872–1906) U.S. poet, novelist and one of the country's first black poets to gain international fame. Although from a poor family and the only black in his Dayton, Ohio, class, by the time he reached high school he had been chosen president of the school literary society and editor of the school newspaper. His first poems were published in Dayton newspapers, and his first volume of verses, *Oak and Ivy* (1893), was also published in Day-

ton. He won wide recognition for his *Lyrics of a Lowly Life* (1896) and took a literary trip to London in 1897. Despite his fame and frail health, Dunbar supported himself and his mother by running a Dayton elevator and by writing in his meager spare time. For the last seven years of his short life, he took no time out to treat the tuberculosis that killed him at the age of 34. His writings include seven volumes of poetry, two volumes of short stories and two novels. The *Ohio State Guide* declared, "Dunbar became the idol of his race and an artist admired by many other Americans, establishing a tradition that undoubtedly encouraged . . . Countee CULLEN, Claude McKay and Langston HUGHES." A 10-cent U.S. stamp honoring him was issued in the American Poets series, and his house in Dayton has been preserved as a state museum (1938).

Duncan, Isadora (1877–1927) Legendary American dancer. A pioneer of modern dance, Duncan rebelled against the constraints and conventions of classical ballet, adopting a more natural, emotionally inspired dance movement. Her choreography was largely improvisational and based on her ideas of classic Greek drama and her emotional response to the music of such great composers as Beethoven, Chopin and Schubert. Her performances, in which she danced barefoot in a diaphanous tunic, often reflected the passions and tragedies of her unconventional lifestyle. Duncan's dancing shocked American sensibilities, so in 1899 she left for Europe where she remained for most of her life. Her first European performances in Vienna, Paris, Berlin and Budapest (1900–02) were triumphs. She even appeared at the BAYREUTH FESTIVAL in 1904. Her dancing style during her first Russian tour (1904) influenced the balletic reforms of Mikhail FOKINE and Serge DIAGHILEV. She danced in Egypt, Greece and South America and returned to the U.S. for performances in 1908 and 1914, then toured the new Soviet Union (1921, 1923). In addition, she founded several short-lived dance schools in Germany, France and the Soviet Union. Duncan gave her last recital in Paris in 1927, shortly before she was killed when her lengthy scarf caught in the wheels of a car. Her personal magnetism and role as representative of a new dance movement made her the dominant dance influence of her time.

A pioneer of modern dance, Isadora Duncan shocked American audiences by dancing barefoot in a flowing tunic. (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

Not only did she inspire innumerable later dancers and choreographers (including Frederick ASHTON and Kenneth MACMILLAN), she also influenced other arts—the drawings and designs of Gordon CRAIG, the photographs of Edward STEICHEN and the poetry of Sergei ESSENIN, to whom she was briefly married (1922–23).

Duncan, Robert Edward (1919–1988) American poet. A prolific lyric poet, Duncan was influenced by Charles OLSON and his work is included in the Black Mountain School of poetry as well as associated with the works of the BEAT GENERATION. His poetry reflects his homosexuality and often deals with the nature of poetry itself. His many works include *The Opening of the Field* (1960), *Roots and Branches* (1964), both poetry; *The*

Truth & Life of Myth: An Essay in Essential Autobiography (1968) and *Fictive Certainties: Essays* (1985). Some of his poetry was first published under the pseudonym Robert Edward Symmes. Early in his career, Duncan served as editor of *Experimental Review*, *Phoenix* and *Berkeley Miscellany*. Duncan was the first recipient of the National Poetry Award and is responsible for San Francisco's role as a center of poetry in the U.S.

Duncan-Sandys, Lord (Duncan Edwin Sandy) (1908–1987) British politician and a leading figure in British political affairs for nearly four decades. He was elected a Conservative member of Parliament in 1935 and that same year married Winston CHURCHILL's eldest daughter, Diana. He directed key military actions as a junior member of Churchill's cabinet during WORLD WAR II. He lost his seat in Parliament in 1945 but was reelected in 1950 and served uninterruptedly until 1974. During that time, he served successively as minister of supply, minister of housing and local government, minister of defense and minister of aviation. As secretary of state for Commonwealth relations from 1960 to 1964, he helped negotiate the independence of 11 British colonies. After resigning from the House of Commons in 1974, he was elevated to the House of Lords.

Dunham, Katherine (1909–2006) American dancer, choreographer, teacher and director. Dunham received an M.A. and a Ph.D. in anthropology from the University of Chicago. After extensive study of Negro dances in the West Indies, she worked with the Federal Theatre Project in Chicago (1938), then became director of the Labor Stage in New York City (1939). The first New York concert featuring her choreography was in 1940, and she danced in the Broadway musical *Cabin in the Sky* that same year. After performing in and/or choreographing several Hollywood films, most notably *Stormy Weather* (1943), she toured the U.S. and Europe with her own dance company. In 1945 she established a dance school, which became the focal point for Afro-American dance until 1955. Her works, such as *Choros* (1943), combine elements of classical ballet, modern and Afro-Cuban dance and are based on her ethnological studies. She became director of the Per-

forming Arts Training Center at Southern Illinois University, East St. Louis Campus. Dunham has received 10 honorary doctorates and the Presidential Medal of Arts, the Kennedy Center Honors, the French Legion of Honor, the Grand Cross of Haiti and other awards and honors.

Dunkirk, evacuation of After German armies overran Belgium at the start of WORLD WAR II, they focused on seizing the English Channel ports, bombarding them heavily. Hundreds of thousands of British, French, Belgian and other Allied troops were trapped between the sea and German lines. The British and French navies, merchant fleets and private yachts and trawlers came to rescue the troops off the beaches of Dunkirk. From May 26 to June 4, 1940, more than 1,200 ships sailed back and forth across the channel, despite German bombing and strafing, evacuating about 340,000 troops to the safety of England. Many Allied vessels, including six destroyers, were sunk and all equipment abandoned.

Dunkirk, Treaty of An Anglo-French agreement of March 4, 1947, to provide mutual assistance against any future German aggressive threats, together with consultation over economic relations, symbolizing French reemergence as a major European power.

Dunne, Irene Marie (1898–1990) U.S. actress. She was noted for her patrician appearance and an ability to play roles ranging from screwball comedy to sentimental drama. Although she never won an ACADEMY AWARD, she was nominated for her work in *Cimarron* (1931), *Theodora Goes Wild* (1936), *The Awful Truth* (1937), *Love Affair* (1939) and *I Remember Mama* (1948). She also starred in *Roberta* (1935), in which she introduced the song "Smoke Gets in Your Eyes," *Show Boat* (1936) and *Anna and the King of Siam* (1946).

Dunning, John Ray (1907–1975) American physicist. Dunning was educated at Wesleyan University, Nebraska and at Columbia University, New York, where he earned his Ph.D. in 1934. He took up an appointment at Columbia in 1933 and was made professor of physics in 1950. Dunning was one of the key figures in the MANHATTAN PROJECT to build the first atomic bomb.

Dunsany, Edward John Moreton Drax Plunkett, Lord (1878–1957)

Anglo-Irish author. Born in London of Irish parents, Lord Dunsany was the 18th baron of Dunsany Castle in County Meath, Ireland. A prolific writer, Dunsany is perhaps best remembered for his mythological tales, such as *The Gods of Pegana* (1905), *The Book of Wonder* (1912) and *The Blessing of Pan* (1927). Although politically aligned with the BRITISH EMPIRE in the question of HOME RULE and other Irish matters, Dunsany is associated with the IRISH LITERARY REVIVAL and was acquainted with Lady GREGORY and W. B. YEATS. Dunsany's first play, *The Glittering Gate*, was performed at the ABBEY THEATRE in 1909. Other plays include *The Gods of the Mountain* (1911) and *A Night at an Inn* (1916). Dunsany also wrote a popular series of story collections beginning with *The Travel Tales of Mr. Joseph Jorkens* (1931) and a series of autobiographies.

DuPont, Clifford W. (1905–1978)

First president of Rhodesia (1970–75). A British-born soldier and lawyer, DuPont was appointed head of state following RHODESIA'S Unilateral Declaration of Independence (UDI) from Britain in 1965. He held the post until his election as president in 1970. DuPont's roles were largely ceremonial, with Prime Minister Ian SMITH holding the effective decision-making power for the rebellious colony.

Du Pré, Jacqueline (1945–1987)

English cellist. Noted for her intense, romantic playing, Du Pré had come to be recognized as one of the world's leading cellists when her career was cut short in the early 1970s by the onset of multiple sclerosis. She and her husband, pianist and conductor Daniel BARENBOIM, had appeared frequently together on concert stages throughout the world and were regarded as the most prominent husband-and-wife musical team of their generation. By the mid-1970s Du Pré was virtually paralyzed, though she continued to teach and work for the cause of the victims of multiple sclerosis. Her story became the basis of a play, *Duet for One*. Du Pré left a number of fine recordings.

Durand, William Frederick (1859–1958) American engineer. Durand worked mainly on problems connected

with the propeller, both marine and, after 1914, aeronautical. He was general editor of an important standard work, *Aerodynamic Theory*, produced in six volumes (1929–36). He also served on the National Advisory Committee for Civil Aeronautics (NACA) from 1915 to 1933 and, in 1941, was recalled to advise the government on the construction of an American jet-propelled airplane.

Durant, Will and Ariel American historians and writers. William James Durant (1885–1981) was born in North Adams, Massachusetts. After graduating from St. Peter's College in Jersey City in 1907, he taught at Seton Hall and attended the seminary there for two years before moving to New York City and teaching at the Francisco Ferrer Modern School. There he met Ida Kaufman (1898–1981), a Ukrainian immigrant, who was 15 years old when they were married in 1913. "Ariel" was her husband's pet name for her, which she legally adopted after their marriage. Both Durants attended Columbia University, and Will received a doctorate from the school in 1917. In 1926 he published *The Story of Philosophy*, which sold over 2 million copies in three years. From 1935 to 1975, the Durants labored on their masterwork, *The Story of Civilization*, an 11-volume history of human achievement spanning 11,000 years; Ariel was credited as coauthor from volume seven on. Criticized by some academic historians but extremely popular among general audiences, the highly readable series has been a perennial best seller since its publication. Volume 10, *Rousseau and Revolution*, won the PULITZER PRIZE in 1968. While hospitalized, Will Durant died of a heart attack on November 8, 1981, apparently unaware that Ariel had died of natural causes two weeks before, on October 25.

Durante, Jimmy (James Francis Durante) (1893–1980)

American vaudeville, nightclub, television and film comedian. Durante gained national popularity in the 1920s in the song-and-dance vaudeville trio of Clayton-Jackson-Durante, performing in PROHIBITION-era speakeasies. In the 1930s he appeared in many Broadway stage shows and in numerous movies for METRO-GOLDWYN-MAYER, where he supplanted Buster KEATON as the studio's top comedian. The Schnozzola, as

he was known because of his bulbous nose, extended his fame in the mid-1940s on radio and later on television. He ended his programs with his celebrated sign-off, "Goodnight, Mrs. Calabash, wherever you are." In addition to his nose, his trademarks included a raspy voice, battered hat, butchered diction (with many malapropisms thrown in) and honky-tonk style of piano playing. His last film, *It's a Mad, Mad, Mad, Mad World* (1963), capped a career that spanned half a century.

Duras, Marguerite (1914–1996)

French novelist, playwright and screenwriter. Duras was born in Indochina, now Vietnam, and came to Paris in 1932. She published her first of many novels, *Les impudents*, in 1943. Her experimental fiction, which includes *Blue Eyes*, *Black Hair* (1977), *The Lover* (1984) and *Emily L.* (1987), is highly esteemed in France. Duras never enjoyed the same success in the U.S., though her later works gained more notice. In the States, she is better known for her screenplays, which include *Hiroshima mon amour* (1959). Her plays, which are generally associated with the THEATER OF THE ABSURD, include *L'Eden Cinéma* (1977) and *Savannah Bay* (1984).

Durkheim, Emile (1858–1917) French social theorist; a seminal influence on 20th-century sociology. Through his many writings, he established a scientific framework and methodology for the measurement of societal beliefs, dynamics and change. Durkheim, the son of an Alsatian rabbi, was educated at the École Normale Supérieure. In 1887 he taught the first ever university course on sociology in France. As a social theorist, Durkheim emphasized the need for stable political and religious institutions. In *Suicide* (1897), a classic study, Durkheim demonstrated that the per capita suicide rates of various countries were related to the strength of the ongoing social ties in those countries. In *The Elementary Forms of Religious Life* (1915) Durkheim proposed that the major function of religion was to enhance social bonds and that schismatic movements were symptomatic of societal unrest.

Durocher, Leo "the Lip" (1905–1991) American baseball player and manager. An average hitter, Durocher was an outstanding fielder who appeared in three All-Star games over a

17-year playing career. However, he is better known for his long and colorful managerial career, immortalized in his statement “Nice guys finish last.” He managed the Brooklyn Dodgers through most of the 1940s, often feuding with owner Branch RICEY but winning the pennant in 1941. His temper cost him frequent ejection, and he was indicted for assaulting a fan in 1945. Fired by the Dodgers in 1948, he was quickly signed by the rival Giants and led them to a pennant in 1951 and a World Series victory in 1954. He became a TV commentator in 1955 but returned to manage the Chicago Cubs from 1966 until 1972 and the Houston Astros in 1973. One of the most successful managers in baseball history, he retired with 2,010 wins.

Durrell, Lawrence George (1912–1990) British author. Born in India, Durrell was educated at the College of St. Joseph, Darjeeling and St. Edmund's School in Canterbury. He traveled widely, living with his family in Corfu and in Paris in the 1930s. He spent much of his life in the eastern Mediterranean region, which figures in his poetry and fiction as well as his travel writing. Although he had written an earlier collection of poetry and a novel,

Durrell first achieved recognition as a poet with collections including *A Private Country* (1943), *On Seeming to Presume* (1948) and *The Tree of Idleness* (1955). His sensuous writing explores the nature of love and knowledge. His first important novel, *The Black Book: On Agon* (1938), was an erotic pastiche that shows the influence of Henry MILLER and James JOYCE. Durrell is best known for the ALEXANDRIA QUARTET, which consists of the novels *Justine* (1957), *Balthazar* (1958), *Mountolive* (1958) and *Clea* (1960). The work shows Durrell's departure from realism; he goes farther in this direction in his later novels, including *Nunquan* (1970), *Monsieur* (1974) and *Constance* (1982). His travel writing includes *Prospero's Cell* (1945), *Reflections on a Marine Venus* (1953) and *Bitter Lemons* (1957). Durrell's brother, **Gerald Durrell** (1925–95), was a prominent zoologist and writer.

Durrenmatt, Friedrich (1921–1990) Swiss playwright, screenplay writer, novelist and story writer. Durrenmatt rose to prominence in the 1950s, when his absurdist drama *The Visit* (1956) was performed worldwide to critical and popular acclaim. *The Visit* debuted on Broadway in 1958, starring Alfred LUNT and Lynn

FONTANNE, and won the New York Drama Critics Award. Other plays by Durrenmatt, whose pessimistic social vision is thematically linked to the THEATER OF THE ABSURD, include *The Physicists* (1962) and *The Execution of Justice* (1989). He also wrote prose fiction, notably the novel *Justice* (1985), and co-scripted (with actor Maximilian Schell) the film *End of the Game* (1976).

Duse, Eleanora (1859–1924) Italian actress. Duse was considered by many (including George Bernard SHAW) to be the greatest actress of the late 19th and early 20th centuries. Unlike her rival Sarah BERNHARDT, who performed in the florid 19th-century style of acting, Duse was known for the subtlety and naturalness of her performances. This style of acting, developed at the same time in Russia by STANISLAVSKY, replaced the earlier “tragic” style and became the standard for the 20th century. Poet-playwright Gabriele D'ANNUNZIO wrote several plays, including *Francesca da Rimini* (1902), especially for her.

Dust Bowl The worst droughts in U.S. history. At their peak in the late 1930s, they devastated an overall area of 25,000 square miles in the Central

The American Central West was devastated by droughts and dust storms during the Great Depression. (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

West. As the rain practically ceased the soil dried to dust and unusually high winds created vast dust storms, turning much of the area into a “dust bowl.” The plight of the people of Oklahoma gained special attention in such works as John STEINBECK’s *The Grapes of Wrath* (1939). In South Dakota, from 1933 to 1936, high winds carried choking clouds of dust. In North Dakota one-third of the state’s lakes dried up and never refilled.

Great areas of the Central West had been plowed to grow grain for the WORLD WAR I food effort. Much of this land should have been left in its original condition. The dust storms carried off enormous amounts of topsoil—unprotected by roots of the original prairie grasses. The drought added to the hardships of the GREAT DEPRESSION, with banks foreclosing on thousands of farm mortgages.

Gradually the rains returned to the region. The drought taught many conservation lessons. A “shelter belt” of trees was planted from north to south across much of the area to restrain the “dust busting” winds. Vast reservoirs were created in the Dakotas, Oklahoma and elsewhere to provide more moisture. Subsequent periods of low rainfall have caused substantially less damage, because of the precaution taken. The drought of the summer of 1988 was one of the most severe since the great drought, as many farmers once again faced foreclosure because of the total failure of their crop.

Du Toit, Alexander Logie (1878–1949) South African geologist. Du Toit studied at the South Africa College, now the University of Cape Town; the Royal Technical College, Glasgow; and the Royal College of Science, London. After a short period of teaching at Glasgow University (1901–03) he returned to South Africa and worked with the Geological Commission of the Cape of Good Hope (1903–20), during which time he explored the geology of South Africa. For the next seven years he worked for the Irrigation Department and produced six detailed monographs on South African geology. He also served as a consulting geologist to De Beers Consolidated Mines (1927–41). Following a visit to South America in 1923, Du Toit became one of the earliest supporters of Alfred WEGENER’s the-

ory of continental drift, publishing his observations in *A Geological Comparison of South America with South Africa* (1927). He noted the similarity between the continents and developed his ideas in *Our Wandering Continents* (1937), in which he argued for the Wegener’s theory of the separation of Pangaea into the two supercontinents, Laurasia and Gondwanaland.

Dutschke, Rudi (1940–1979) German radical student leader and Marxist scholar. Known as “Red Rudi,” at the Free University of West Berlin, Dutschke was at the forefront of the student revolt in Western Europe in the late 1960s. A fiery orator, he called for the radicalizing of society and the solidarity of workers and students. He moved to Britain in December 1968 for medical treatment of head wounds he suffered from an assailant in Berlin. He attempted to remain for academic studies but was expelled from the country in 1971 when a British government tribunal ruled that his “meetings and associations have far exceeded normal social activities.” Thereafter, he took up a teaching post at Aarhus University in Denmark.

Duvalier, François (Papa Doc) (1907–1971) Haitian dictator (1957–71). Trained as a physician, and a specialist in tropical medicine, Duvalier was popularly known as “Papa Doc.” During the 1940s he was an important figure in medicine in the rural parts of HAITI and became involved in various nationalist cultural groups. He served as director of public health (1946–48) and secretary of labor (1949–50) in the regime of President Dumarsais Estimé, but was ousted and forced to flee upon Paul Magloire’s coup in 1950. After Magloire’s resignation, Duvalier was elected president in 1957, in an election believed to have been fraudulent. At first enormously popular, he became increasingly brutal and dictatorial and in 1964 had himself declared president for life. Duvalier’s long reign was marked by poverty, fear and terror, with all signs of opposition suppressed by the dread Tontons Macoutes, his private army of civilian enforcers. On his death in 1971, he was succeeded by his son, **Jean-Claude Duvalier** (known as “Baby Doc”), who was overthrown in a popular revolt in 1986.

Dwan, Allan (Joseph Aloysius Dwan) (1885–1981) Canadian-born pioneer motion picture director. Educated at Notre Dame as an electrical engineer, Dwan began providing new lamps for movie lighting to HOLLYWOOD studios in 1909. He was soon writing and editing scripts for silent movies, and in 1911 he directed his first film, a one-reel western. He learned about filmmaking from D. W. GRIFFITH, and created the “dolly shot” by mounting a camera on a moving car—an innovation that revolutionized moviemaking. He discovered Lon CHANEY and Ida Lupino and directed Douglas FAIRBANKS in many films. During the sound era he worked for 20TH CENTURY-FOX in the 1930s, Republic Pictures in the 1940s and RKO in the 1950s. According to his own account, he made about 1,850 films. Among the best known were *The Iron Mask* (1929), *Heidi* (1937), *Rebecca of Sunnybrook Farm* (1938), *Suez* (1938), *The Three Musketeers* (1939) and *The Sands of Iwo Jima* (1949).

Dylan, Bob (Robert Zimmerman) (1941–) American folk singer and composer. He adopted the given name of Dylan THOMAS, the Welsh poet. He taught himself guitar and other musical instruments at the age of 10 and ran away from home several times. After leaving home for good, he rode

Songwriter and musician Bob Dylan, 1967 (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

freight trains around the country and wrote songs, many inspired by Woody GUTHRIE. In 1961, after occasional coffeehouse appearances, his first record album was released. Dylan is considered the musical symbol of protest by Americans who began to develop their social conscience in the 1960s. His best-known works, like "Blowin' in the Wind" (1962), "The Times They Are A-Changin'" (1963) and "Like a Rolling Stone" (1965), are focused on social injustice. Dylan continued to record and tour throughout the 1990s, winning Grammy Awards in 1994 for best traditional folk album (*World Gone Wrong*) and in 1998 for album of the year (*Time out of Mind*). In 2001 Dylan's single "Things Have Changed" for the *Wonder Boys* (2000) soundtrack won the artist an Academy Award for best original song.

Dymaxion Word coined by Buckminster FULLER to describe a number of his projects. The word is made up of dynamic and maximum and is intended to define Fuller's aims toward "maximizing" performance through recognition of "dynamic" forces. The first Dymaxion House of 1927, developed in a model but never constructed, was a hexagonal living space suspended one story above the ground by tension cables radiating from a central vertical mast. His Dymaxion automobile of 1933, a radical, truly streamlined design, was built in three prototype examples but never accepted for production. The second Dymaxion House of 1946, a domed cylinder, was built as a prototype at Wichita, Kansas, and attracted wide notice, but once again, production was never undertaken because of technical and financial difficulties that made such a radical solution to housing problems seem to be too advanced for its day.

Dyson, Sir Frank Watson (1868–1939) British astronomer. After first working as chief assistant at the Royal Observatory at Greenwich from 1894

to 1905, he was Astronomer Royal for Scotland from 1905 to 1910 and then returned to Greenwich as Astronomer Royal, serving from 1910 to 1933. He was knighted in 1915. Dyson's early observational work was done in collaboration with William G. Thackeray: They measured the positions of more than 4,000 circumpolar stars that had first been observed by Stephen Groombridge at the beginning of the 19th century. They were thus able to determine the proper motions of the stars. Dyson observed the total solar eclipses of 1900, 1901 and 1905, obtaining spectra of the atmospheric layers of the Sun. He also organized the detailed observations of the total solar eclipse in 1919, sending expeditions to Principe in the Gulf of Guinea and Sobral in Brazil. The measured positions of stars near the Sun's rim during the eclipse provided evidence for the bending of light in a gravitational field, as predicted by EINSTEIN in his theory of general relativity; these measurements were the first experimental support for that theory.

Dyson, Freeman (1923–) English-American physicist. Graduating from Cambridge in 1945, Dyson became an American citizen in 1951 and taught at Cornell University before joining the Institute for Advanced Study at Princeton in 1953. A freewheeling, adventurous thinker, Dyson has done major work in quantum electrodynamics but is best known for his challenging speculations on space science and the possibility of super-intelligent extraterrestrials. Always thought-provoking and often controversial, Dyson's carefully reasoned ideas, although sometimes appearing to be "outlandish," command serious attention and debate.

Dzerzhinsky, Felix Edmundovich (1877–1926) Communist politician, of Polish noble descent. During the reign of Czar NICHOLAS II he was imprisoned for revolutionary activities several times. After the RUSSIAN REVOLUTION he was the first head (1917–

24) of the secret police (CHEKA) and of its successors, the OGPU and the GPU.

Dzhanibekov, Vladimir (1942–) Soviet cosmonaut and veterans of five different space missions from 1978 to 1985, Dzhanibekov is unquestionably one of the brightest and most experienced Soviet cosmonauts. His expert piloting of Soyuz spacecraft accounted for five out of five docking successes at a time when the Soviet space program was haunted with a one-in-four failure rate. Dzhanibekov's most spectacular success was docking the *SOYUZ T-13* craft with the dead *SALYUT 7* space station in 1985. The tricky and exacting mission required unusual expertise, and Dzhanibekov and flight engineer Viktor Savinykh got the job. After a June 6, 1985, launch and two days chasing the dead station, they were able to link up and succeeded within a few days in repairing the station's on-board systems. On August 2, in a 6.5-hour space walk, they installed new solar panels, and within a few weeks *Salyut 7* was operable again. Praised by French spationaut Jean-Loup CHRÉTIEN for his calm during a serious docking problem in an earlier flight aboard *Soyuz T-6* in 1982, Dzhanibekov also piloted *Soyuz 27* in 1978, *Soyuz 39* in 1981 and *Soyuz T-12* (attempting to repair the *Salyut 7* power system in a space walk with Svetlana Savitskaya) in 1984. He also served as a deputy in the Uzbek soviet before the breakup of the Soviet Union. He later became an amateur painter and balloonist.

Dzubas Friedel (1915–1994) German-American painter. Born in Berlin, Dzubas was a student of Paul KLEE (1933–36) in Düsseldorf before immigrating to the U.S. in 1939. His first one-man show was held in New York City in 1952, but his mature style did not develop until the 1960s. Dzubas was a leading figure in COLOR-FIELD PAINTING, using large areas of color in allover patterns on huge canvases.

E

Eagleton, Thomas Francis (1929–) American politician. Born in St. Louis, Missouri, Eagleton attended Amherst College and Harvard Law School; he was admitted to the bar in 1953. After serving as St. Louis's circuit attorney (1957–60), state attorney general (1961–65) and lieutenant governor (1965–68), he was elected to the U.S. Senate as a Democrat in 1968. His liberal views were important to Democratic presidential nominee George McGOVERN, who chose Eagleton as his 1972 vice presidential running mate. Shortly afterward, however, rumors surfaced that Eagleton had been hospitalized for depression three times in the 1960s and had undergone electric shock therapy. Eagleton acknowledged this and withdrew from the campaign. The Eagleton affair proved embarrassing to McGovern, whose judgment was called into question. McGovern subsequently selected Sargent SHRIVER as his running mate. Eagleton was reelected to the Senate in 1974 and 1980 but retired from political life in 1986.

Eaker, Ira Clarence (1896–1987) U.S. Air Force general. An aviation pioneer between the world wars, he made the first blind transcontinental flight (entirely with instruments). He commanded U.S. air forces in Europe during WORLD WAR II and then played a key role in the establishment of the U.S. Air Force as a separate military service. He retired from the air force in 1947 and until the late 1970s was a business executive and syndi-

cated newspaper columnist. In 1985 he was promoted to full general on the retired list.

Ealing Studios British film studio associated with some of the most successful movies in the post–World War II period. The “Ealing comedy” became the standard worldwide for the British style of tasteful yet irreverent entertainment. Established in 1929 under the name Associated Talking Pictures, the studio borrowed the name Ealing in the late 1930s from the London borough where it was located. Under the guidance of Sir Michael Balcon, it functioned during its peak period (1946–58) as a relatively small-scale business enterprise that encouraged the individual creativity of its members—notably actors Alec GUINNESS and Stanley HOLLOWAY, writers T. E. B. White and William Rose, and directors Alberto Cavalcanti, Michael Crichton, Alexander Mackendrick and Robert Hamer. Dry wit, picturesque locations and a sympathy for the “little man” infused the callous black comedy of *Kind Hearts and Coronets* (1949), the grandtheft hijinks of *The Lavender Hill Mob* (1951) and *The Lady Killers* (1955) and the stinging social satire of *Tight Little Island* (1949), to name only a few representative films. Perhaps the masterpiece from this studio was *The Man in the White Suit* (1951), a tragicomedy about a meek little chemist (Guinness) whose invention of an indestructible fabric nearly brings about, ironically, his own destruction. Ealing suffered

its own mortal blows when it dissolved in the late 1950s under a burden of debts.

Eames, Charles (1907–1978) American industrial designer and filmmaker best known for a molded plywood chair he designed in 1940 with Eero SAARINEN. The chair was later mass-produced in plastic. He and his wife designed a luxurious leather-and-rosewood lounge chair and ottoman in 1952. Charles Eames made over 50 educational movies, many using a multimedia projector approach.

Eames, Ray (Ray Kaiser) (1915–1988) U.S. designer. One of the most influential furniture and industrial designers of the post–World War II era, she was founder and partner in the Venice, California, design firm Office of Charles and Ray Eames. Eames and her husband, Charles, designed the Eames chair, two pieces of molded plywood connected by stainless steel tubing. Their work was known for infusing mass production with a high sense of style and comfort.

Earhart, Amelia (1898–1937?) Pioneer American aviator. Earhart was the first woman to fly across the Atlantic Ocean, from Trepassy Bay, Newfoundland, to Burryport, Wales. In 1928 she wrote about that epic journey in her book entitled *20 hrs., 40 min.* In 1931 she married publisher George Putnam. She flew alone across the Atlantic once again in 1932. In 1935 she was the first woman to fly to

the mainland of the U.S. from Honolulu, Hawaii, and was the first woman to fly successfully across the U.S. alone in both directions. On a planned around-the-world trip, Earhart vanished near Howland Island in the Pacific Ocean. After her last contact on March 17, 1937, no confirmed report of her fate has ever been made.

Earl, Harley J. (1893–1954) American design executive responsible for the styling of GENERAL MOTORS cars from 1927 until his retirement in 1959. Earl was born in California, the son of a builder of custom auto bodies. After joining General Motors, he exerted a constantly increasing influence in favor of design as a major ingredient in sales success. His 1927 LaSalle, dignified and elegant with its narrow hood and simple radiator grille, is viewed as his first major success. Over the years, particularly after World War II, the styling of General Motors cars became gradually more exaggerated, introducing excess CHROMIUM trim, oversized bodies, wraparound windshields, and, ultimately, tailfins. The concept of forced obsolescence is often associated with the constantly changing body designs developed under Earl's direction and imitated by other American automobile manufacturers.

Easter Rebellion (Easter Rising) (April 1916) Radical members of SINN FÉIN and the older Irish Republican Brotherhood (later known as the IRISH REPUBLICAN ARMY [IRA]) called for rebellion during WORLD WAR I, while vainly sending Sir Roger CASEMENT to Germany for help. Loosely organized, the planned uprising was confined to Dublin and included only 2,000 Irish volunteers and a 200-citizen army. Seizing the General Post Office as headquarters on Easter Monday, April 24, 1916, Patrick PEARSE and James CONNOLLY and their rebels proclaimed a republic. The British, losing about 460 men, put down the uprising in a week. Many Dubliners condemned the rebellion, but when 16 rebel leaders were executed, the rebels became martyrs and the Irish parliamentary party was ruined. Sinn Féin continued under Eamon DE VALERA, and the IRA became a guerrilla underground. (See also IRELAND; IRISH CIVIL WAR.)

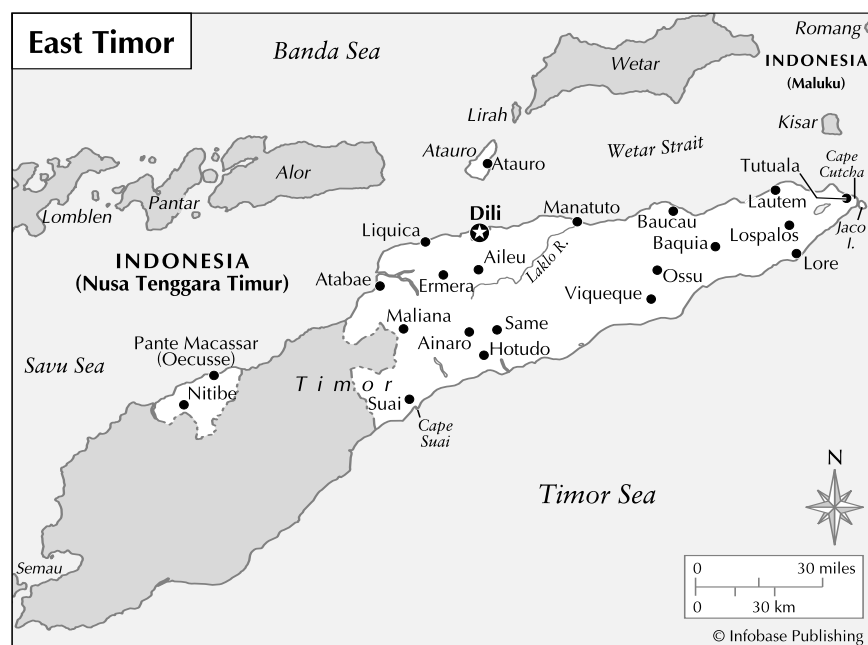

Eastland, James Oliver (1904–1986) U.S. politician. A Mississippi Democrat, Eastland served in the U.S. Senate for more than 36 years. A wealthy plantation owner, he was best known during his years in the Senate as a segregationist and militant anti-communist. He was often at odds with the national DEMOCRATIC PARTY and frequently criticized the U.S. Supreme Court. He left this party during the 1948 presidential election to support the Dixiecrat STATES' RIGHTS ticket. Often sharply critical of President Lyndon B. JOHNSON'S GREAT SOCIETY program, he was nonetheless respected and liked by Senate liberals. When he retired in 1979, Eastland had been chairman of the Senate Judiciary Committee for 22 years and president pro tem of the Senate for six.

Eastman, George (1854–1932) American inventor. Eastman began his career in banking and insurance but turned from this to photography. In 1880 he perfected dryplate photographic film and began manufacturing it. He produced a transparent roll-film in 1884 and in the same year founded the Eastman Dry Plate and Film Co. In 1888 he introduced the simple handheld box camera that made popular photography possible. The Kodak camera with a roll of transparent film was cheap enough for all pockets and could be

used by a child. It was followed by the Brownie camera, which cost just \$1. Eastman gave away a considerable part of his fortune to educational institutions, including the Massachusetts Institute of Technology. He committed suicide in 1932.

East Pakistan See BANGLADESH.

East Timor (Timor-Leste) Portuguese possession (until 1975), Indonesian territory (1975–2002) and independent state (2002–). From the 17th century until 1975, East Timor was a possession of the Portuguese empire, which introduced the Roman Catholic faith to the population of the territory. In 1975 the new democratic government of PORTUGAL announced its intention to withdraw from East Timor and began preparing the territory for independence. However, a few months after East Timor became an independent nation, a conflict erupted between the Catholic majority in the country and the Muslim minority, which demanded that East Timor join the predominantly Muslim state of INDONESIA. As this internal dispute intensified, evidence surfaced that the Indonesian government was funding those East Timorese groups advocating unification with Indonesia. On December 7, 1975, Indonesian forces invaded the country and instituted martial law.

Seven months later Indonesia annexed East Timor. Dissident groups in East Timor rejected Indonesian rule and rallied around leaders such as Bishop Carlos BELO and José RAMOS-HORTA, a government minister who had been abroad petitioning the UN Security Council at the time of the invasion. Between 1975 and 1999 Indonesian forces conducted what they termed the *pacification* of East Timor in order to eradicate secessionist elements within the territory. During this period an estimated 200,000 East Timorese died as a result of repression or famine throughout the province.

In November 1991, during a funeral service for several East Timorese nationalists at a Catholic cemetery in Dili, Indonesian paramilitary forces opened fire on the mourners, massacring several hundred men, women and children. The assault sparked outrage in the international community and helped Horta persuade the American and British governments to suspend the delivery of weapons and military advisers to Indonesia. However, the independence movement was dealt a setback when in November 1992 Indonesian troops captured Xanasa Gusmao, the leader of the most prominent guerrilla movement, and sentenced him to life in prison. In June 1998, a month after the overthrow of Indonesian dictator SUHARTO, the new Indonesian president, B. J. HABIBIE, announced his willingness to consider holding a referendum on East Timor's status. A year later Indonesia and Portugal brokered an agreement in which the UN would administer the referendum to ensure a free and fair process. Despite repeated interference from paramilitary forces allegedly sponsored by Indonesia, the referendum was conducted on August 30, 1999. It produced a massive 78.5% vote in favor of independence. Shortly after the UN announced the result, paramilitary forces opposing East Timorese independence launched a brief military campaign in the province that burned several villages to the ground, forced an estimated 200,000 refugees to flee their homes and led the UN to approve the dispatch of an Australian-led peace-keeping force to enter the province and restore order. A week after the vote, Indonesia released Gusmao from jail in an effort to placate rebel sentiments

within East Timor and announced that the Indonesian troops would completely leave the province by November 1. In late October 1999 the UN established a transitional administration in East Timor to prepare the province politically and economically for independence. In the inaugural presidential elections held in April 2002, Gusmao won a clear majority of the popular vote. He has since devoted himself to gaining international acceptance of the new parliamentary regime, in which the Revolutionary Front for an Independent East Timor (FRETILIN) has emerged as the ruling political party. The UN maintained its mission of support in East Timor until May 2004.

Eastwood, Clint (1930–) American film actor and director; a dominant box-office star since the mid-1960s. Eastwood began his acting career in the 1950s and first achieved success with his cowboy role on the television series *Rawhide* (1959–66). Real stardom came with his portrayal of the fearsome, gunslinging “man with no name” in a trio of Italian-made “spaghetti” westerns: *A Fistful of Dollars* (1964), *For a Few Dollars More* (1965) and *The Good, the Bad, and the Ugly* (1967). Eastwood's other continuing character (in five films) is ultimate enforcer-cop Harry Callahan, whose “Make my day!” in *Dirty Harry* (1971) became a national catchphrase. Other successful films include *Play Misty for Me* (1971, also his first directing effort), *Tightrope* (1984) and *Heartbreak Ridge* (1986).

In recent years, he has concentrated on producing and directing films, such as *Bird* (1988), based on the life of jazz great Charlie PARKER. Eastwood's direction of the film *Unforgiven* (1992) added a new dimension to his Hollywood career. The film proved popular with critics and moviegoers and earned Eastwood two Academy Awards, for best picture and best director. While Eastwood's success with *Unforgiven* inspired him to increase his time behind the camera with such films as *A Perfect World* (1993), *Absolute Power* (1997), *Midnight in the Garden of Good and Evil* (1997), *True Crime* (1999) and *Space Cowboys* (2000), he continued to star in such blockbuster pictures as *In the Line of Fire* (1993). He also directed and starred in *Million Dollar Baby*

(2004), for which he received another Academy Award for best director.

Eaton, Cyrus Stephen (1883–1979) American financier and industrialist. Born in Nova Scotia, Canada, Eaton was a “self-made man.” He invested in rubber, steel, coal and utilities. In 1930 he founded the Republic Steel Corporation (1930). Although a champion of U.S. capitalism, he was also an early advocate of trade with communist nations. He was a friend of Soviet premier Nikita KHRUSHCHEV and other high Soviet officials. In 1955 he established the first of the Pugwash Conferences, annual meeting attended by scientists and scholars from the Eastern and Western blocs designed to lessen international tension. In 1960 the Soviet Union awarded Eaton the Lenin Peace Prize.

Ebashi, Setsuro (1922–) Japanese biochemist. Ebashi received his M.D. (1944) and his Ph.D. (1954) from the University of Tokyo. He became professor of pharmacology in 1959 and, since 1963, has held the chair of biochemistry. Ebashi has for many years been one of the leading workers in the field of muscle contraction. His work has thrown considerable light on the identity and workings of the so-called relaxing factor. In 1999 Ebashi won the International Prize in biology for his research on naturally occurring muscle relaxants in animals.

Ebro River River that rises in the Catabrian Mountains and flows south-eastward for 565 miles to a delta on the Mediterranean Sea, between BARCELONA and Valencia, Spain. During the SPANISH CIVIL WAR the Loyalists suffered a major defeat here (August–November 1938). Hydroelectric power plants in the Ebro system now provide nearly 50% of Spain's hydroelectricity.

Eccles, Sir John Carew (1903–1997) Australian physiologist. Eccles was educated at the University of Melbourne and in England at Oxford University, working at Oxford with Charles Sherrington on muscular reflexes and nervous transmission across the synapses (nerve junctions). For a time he taught in Australia and New Zealand, and in 1966 he began working at the Institute for Biomedical Research in

Chicago. While professor of physiology at the Australian National University Canberra (1951–66), Eccles carried out work on the chemical changes that take place at synapses, pursuing the findings of Alan Hodgkin and Andrew HUXLEY, with whom he subsequently shared the 1963 NOBEL PRIZE in physiology or medicine. Eccles showed that excitation of different nerve cells causes the synapses to release a substance that promotes the passage of sodium and potassium ions and effects an alternation in the polarity of the electric charge. It is in this way that nervous impulses are communicated—or inhibited—by nerve cells.

Ecevit, Bülent (1925–) Turkish statesman and writer. After a career in government and journalism, Ecevit became a member of TURKEY's parliament in 1957. He was minister of labor (1961–65) and chairman of the Republican People's Party (1972). He was briefly prime minister of a coalition government in 1974, again holding that office in 1978–80. After the 1980 military coup, Ecevit was imprisoned and banned from public life in 1983. He voluntarily renounced political activities in 1987 but became chairman of the Democratic Left Party in 1989. Ecevit returned to the premiership in 1999 following the outbreak of a financial crisis and attempted to restore the Turkish economy while preserving its secular status. However, opposition from conservative nationalists within his coalition and a plummeting lira in 2001 led to his ouster in November 2002.

Eckstine, Billy (William Clarence Eckstine) (1914–1993) American bandleader, singer and trumpeter. Eckstine was born in Pittsburgh, Pennsylvania, and attended Washington University. He began his career as a jazz vocalist and from 1939 to 1943 was a vocalist and trumpeter with the Earl HINES band. In 1944 he formed his own band and was a pioneer in the development of BEBOP. Jazz greats such as Dizzy GILLESPIE, Charlie PARKER, Miles DAVIS and Sarah VAUGHAN gained valuable experience performing with the band. After the band broke up in 1974, Eckstine continued his career as a solo performer and recording artist. He continued to perform in cabarets until the 1970s.

eclecticism Term used in design and architecture to refer to the practice of borrowing from various historic styles, sometimes in combination. From about 1900 until World War II, most architecture and interior design was eclectic, using the styles of ancient Greece and Rome, the Middle Ages and the Renaissance as the taste of architects and clients might suggest. Such buildings as New York's old Pennsylvania Railroad terminal, built in imitation of Roman baths, the Woolworth Building, constructed in the style of a Gothic cathedral tower, and many lesser buildings are typical of the eclectic phase of American architecture. Interiors were similarly designed in imitative styles. Manufacturers of furniture, lighting devices and similar items produced designs to match the popular periods and styles. Although eclecticism was largely displaced by MODERNISM, it survives in the continuing

manufacture of antique reproductions and is currently being revived in a modified form as an aspect of POST-MODERNISM.

Eco, Umberto (1932–) Italian novelist and philosopher. Eco achieved best seller status in Europe and the U.S. with the publication of his medieval mystery novel, *The Name of the Rose* (1984). A professor of semiotics—the study of human signs and symbols—at the University of Bologna, Eco has written extensively in the fields of philosophy and literary criticism on subjects including Saint Thomas Aquinas and James JOYCE. But he emerged as an important novelist in the 1980s through his ability to combine erudite and esoteric themes, such as Christian scholasticism and Jewish kabbalah, with fast-paced plots set in a historical past that interweave crime and passion with the spiritual quest for

meaning in life. *The Name of the Rose*, which is set in a labyrinthine medieval monastery in which a series of murders have taken place, was adapted into a 1986 film starring Sean CONNERY. Eco's second novel was *Foucault's Pendulum* (1988).

Economic Community of West African States (ECOWAS) Regional economic organization consisting of 15 nations in West Africa, created in May 1975. ECOWAS sought to increase economic integration among its members with the ultimate goal of producing a West African version of the EUROPEAN COMMUNITY (EC). It also encouraged its members to adopt a more international outlook, rather than pursue purely nationalist policies. In 1976 the Nigerian and Togo governments proposed that all ECOWAS members establish a collective defense arrangement among themselves. While this did not lead to a West African version of the NORTH ATLANTIC TREATY ORGANIZATION (NATO), it did lead to a nonaggression pact among some ECOWAS members in 1978, a

mutual defensive arrangement among members in 1981 and the adoption of the nonaggression pact by all members in 1986. In 1978 ECOWAS members also agreed to refrain from intervention in the internal affairs of other members in order to prevent one ECOWAS state from capitalizing on the internal disorder of another by supporting a rebel faction.

Since 1991 the mutual defense principles established by ECOWAS have been applied in many cases throughout West Africa, although not with uniform success. In October 1991 ECOWAS brokered a deal with the rebel National Patriotic Front of Liberia (NPFL) that called for its disarmament and the creation of an interim government; however, the deal collapsed when the NPFL rearmed in the face of continued aggression by the Liberian government, and the Liberian civil war continued for another five years. The principles of ECOWAS were put to more effective use 12 years later when Liberian president Charles TAYLOR resigned and Nigerian peacekeeping forces entered

Liberia to restore order until an interim government took office.

Ecuador Nation on the Pacific coast of northwestern South America, with Colombia to the north and PERU to the south and east; the equator, from which the country takes its name, crosses Ecuador near its capital city of Quito. The anticlerical Flavio Eloy Alfaro ruled for nearly 15 years after 1895. From the 1920s to the 1940s there were continual changes of president, a dozen serving between 1931 and 1940. José María VELASCO IBARRA, a liberal, was elected president five times from 1934 to 1972 but served only one full term. Galo Plaza Lasso served as a liberal president from 1948 to 1952. Camilo Ponce Enríquez was elected in 1956 as the first conservative president in 60 years.

Ecuador's long border dispute with Peru began in 1860 and involved the Oriente, a section east of the Andes Mountains, at the headwaters of the Amazon. The two nations battled in 1941, and the following year Ecuador was compelled to relinquish a large

ECUADOR

1912	President Eloy Alfaro killed by proclerical faction.
1925	"July Revolution" introduces period of reform.
1931-48	Twenty-two governments hold temporary office.
1960	José María Velasco Ibarra elected president for the sixth time.
1972	General Guillermo Rodríguez Lara overthrows President Velasco; Rodríguez threatens oil contracts and investments of more than 30 foreign companies.
1980	Freedom House lists Ecuador as free country; death of Velasco Ibarra.
1989	Leftist guerrilla group lays down arms after nine-year struggle; two U.S. environmental groups absorb Ecuadoran debt in exchange for rain forest preservation.
1997	Some 2 million workers stage a general strike in February; more than 10,000 protesters surround the Congress, which dismisses President Abdalá Bucaram Ortiz for "mental incapacity."
1998	Leaders of Ecuador and Peru sign treaty confirming long-disputed border between the two countries.
2000	Ecuador adopts the U.S. dollar as its national currency; President Jamil Mahuad is forced out of office after massive demonstrations.
2003	Lucio Gutiérrez elected president.
2005	Gutiérrez's vice president, Alfredo Palacios, appointed president after congress removes Gutiérrez after a week of unrest.

section of Peru, only to have President Velasco Ibarra condemn the treaty in 1960. The 1960s and 1970s brought numerous revolts and different presidents; from 1961 to 1963, however, Carlos Julio Arosemena Monroy's practices enhanced the financial situation. Following several years of government by military junta, Jaime Roldós Aguilera was installed as president in 1979 in a quiet shift of command. When Aguilera died in a plane crash in May 1981, control was transferred quietly to Vice President Osvaldo Hurtado, who carried on Aguilera's reform program. In January 1981 war erupted again over the Peru-Ecuador border; in March, however, both sides started to negotiate. Ecuador's economy surged after the discovery of oil in 1971, but falling oil prices in the 1980s, combined with high inflation, ensured that the standard of living remained low for the average Ecuadoran. Ecuador's economic woes continued into the 1990s despite efforts to stimulate the economy by producing more oil in 1992 and by adopting the U.S. dollar as its national currency in 2000. Quito is the capital and Guayaquil the largest city.

Eddington, Sir Arthur Stanley (1882–1944) British astrophysicist and mathematician. Eddington graduated from Owens College (now the University of Manchester) in 1902 and from Cambridge University in 1905. From 1906 to 1913 he was chief assistant to the Astronomer Royal at Greenwich, after which he returned to Cambridge as Plumian Professor of Astronomy. He was knighted in 1930. Eddington was the major British astronomer of the interwar period. His early work on the motions of stars was followed, from 1916 onward, by studies of the interiors of stars—about which he published his first major book, *The Internal Constitution of the Stars* (1926). He showed that for equilibrium to be maintained in a star, the inwardly directed force of gravitation must be balanced by the outwardly directed forces of both gas pressure and radiation pressure. He also proposed that heat energy was transported from the center to the outer regions of a star not by convection, as thought hitherto, but by radiation. It was in this work that Eddington gave a full account of his discovery (1924) of the mass-to-

luminosity relationship, which shows that the more massive a star is the more luminous it will be. The value of the relation is that it allows the mass of a star to be determined if its intrinsic brightness is known. Eddington realized that there was a limit to the size of stars. Relatively few would have masses exceeding 10 times the mass of the Sun, and any exceeding 50 solar masses would be unstable because of excessive radiation pressure. Eddington wrote a number of books both for scientists and for a lay readership. His more popular books, including *The Expanding Universe* (1933), were widely read, went through many editions and opened new worlds to many inquiring minds of the interwar years. It was through Eddington that EINSTEIN'S **theory of general relativity** reached the English-speaking world. Eddington was greatly impressed by Einstein's theory and was able to provide experimental evidence for it. He observed the total solar eclipse of 1919 and submitted a report that captured the intellectual imagination of his generation. It stated that a very precise and unexpected prediction made by Einstein in his general theory had been successfully observed. He had seen the very slight bending of light by the gravitational field of a star—the Sun. Further support came in 1924 when Einstein's prediction of the reddening of starlight by the gravitational field of the star was tested. Eddington thus did much to establish Einstein's theory on a sound and rigorous foundation and gave a very fine presentation of the subject in his *Mathematical Theory of Relativity* (1923). Eddington also worked for many years on an obscure but challenging theory, which was only published in his posthumous work *Fundamental Theory* (1946). Basically, he claimed that the fundamental constants of science, such as the mass of the proton and mass and charge of the electron, were a “natural and complete specification for constructing a universe” and that their values were not accidental. He then set out to develop a theory from which such values would follow as a consequence, but he never completed it.

Eden, Anthony (first earl of Avon) (1897–1977) British Conservative party statesman, prime minister of the United Kingdom (1955–57). Eden entered the

British statesman Anthony Eden (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

House of Commons in 1923 and served three times as foreign secretary (1935–38, 1940–45 and 1951–55). He was a leading figure in Winston CHURCHILL'S coalition cabinet during WORLD WAR II. Heir-apparent to Churchill for many years, he was deputy prime minister in Churchill's second period in office (1951–55) and succeeded Churchill as prime minister in 1955. Eden's main interests were always in foreign affairs. His ministry was marked by increasing tensions in the Middle East. Eden's hostility toward NASSER'S Egypt tempted him to support Anglo-French military intervention and led to the SUEZ CRISIS (1956). This divided the country, lost Eden the support of most Commonwealth leaders and aroused the ire of U.S. secretary of state John Foster DULLES. The Suez Crisis contributed to a collapse of Eden's health and his resignation in January 1957. He was created earl of Avon in 1961.

Ederle, Gertrude “Trudy” (1906–2003) American swimmer, considered one of the greatest athletes of the 1920s. In the 1924 OLYMPIC GAMES, Ederle won a gold medal as a member of the U.S. women's 400-meter relay team. In 1926 she became the first woman to swim across the English Channel; she made the 35-mile swim in 14.5 hours, two hours faster than the previous record, held by a man. At

the peak of her amateur career, Ederle held 29 national or world swimming records.

Edgerton, Harold Eugene "Doc"

(1903–1990) American inventor. A professor at the Massachusetts Institute of Technology, Edgerton is credited with inventing the electronic flash for use in photography. His repeating strobe unit, developed in 1931, made high-speed photography possible by "freezing" action. He also devised a flash technique that was used to take nighttime reconnaissance photos prior to the Allied Invasion of NORMANDY on D day in 1944. An interest in deep-sea exploration led him to develop an underwater camera for explorer Jacques COUSTEAU. He developed a sonar device that in 1973 helped locate the sunken American Civil War ironclad *Monitor*. The device was less successful in 1976 in an attempt to find the Loch Ness monster.

Edinburgh Festival Held annually for a three-week period in August–September in Edinburgh, Scotland, the festival is an international celebration of the arts, with an emphasis on music and, more recently, theater, dance and film. Founded in 1947, the festival was first directed by Rudolph BING. Since 1992 Sir Brian McMaster has been director. A special feature of the festival is the Fringe, a subfestival composed of hundreds of events, often innovative and experimental, that are outside the official program but often command much attention. Such distinguished opera companies as La Scala have performed there as well as such famous musicians as opera singer Plácido DOMINGO and conductor Zubin Mehta.

Edison, Thomas Alva (1847–1931)

One of the most productive of American inventors of the late 19th and early 20th centuries. His invention of the phonograph ("talking machine") in 1877 and of the electric lightbulb in 1878 established his reputation as a key figure in the development of modern technology. As with many inventors, Edison combined invention with design through the necessity of giving form to his original prototypes. Although many Edison designs seem crude, others, such as the incandescent bulb, were so well conceived as to be-

DIVISION)

come the norm, surviving with little change to the present. Edison was a prolific inventor of many electrical devices and systems and played an important role in the development of modern, near-universally available electrical power distribution systems.

Edison Company America's first motion picture studio, named after Thomas Alva EDISON. A facility called the Black Maria was constructed in West Orange, N.J., in 1891. It was a large structure, covered inside and out with tar paper, with only a removable part of the roof allowing sunlight inside. Utilizing the Edison devices of the **kinetophone** (a device that synchronized film with a sound cylinder) and the **kinetograph** camera, Edison's assistant, W. K. L. Dickson, produced numerous short motion picture strips on the newly developed EASTMAN celluloid film. At first these movies were merely brief actualities of vaudeville acts, strongmen and prize fights; but after April 23, 1896, when the first public performance of Edison's films took place at Koster and Bial's Music Hall in New York's Herald Square, production grew more ambitious. A stock company of players was developed, including Viola Dana, Mary Fuller and Charles Ogle. At a new studio facility in New York, director Edwin S. Porter made many narrative films of one-reel duration (approximately eight to 12 minutes), including *The Great Train Robbery* (1903). An itinerant actor named D. W. GRIFFITH arrived in 1907 and appeared as a player in *Rescued from an Eagle's Nest*. Later at the rival studio, American Mutoscope and Biograph Company, Griffith would revolutionize filmmaking techniques and effects (see BIOGRAPH COMPANY). After a bitter battle over motion picture equipment patent rights between Edison and Biograph, the two cooperated in the formation (1909)

of the notorious Motion Picture Patents Company. The period from 1908 to 1912 saw Edison's peak of success. Several factors, however, caused his business to decline rapidly. There was a disastrous fire at the new Edison studio in the Bronx. Edison was slow to exploit the popular trend toward feature-length movies after 1914. The Patents Company, moreover, was dissolved by the Supreme Court in 1915 in an antitrust action. The Edison Company disbanded in 1918. Its last film was a feature called *The Unbeliever*, directed by Alan Crosland—who 10 years later would direct the seminal synchronized-sound film *The Jazz Singer* for WARNER BROS.

Edlen, Bengt (1906–1993) Swedish physicist. Edlen studied at the University of Uppsala, where he gained his Ph.D. in 1934 and also served on the faculty from 1928 until 1944. He was then appointed professor of physics at the University of Lund, a post he retained until his retirement in 1973. Edlen is recognized for his research on atomic spectra and their applications to astrophysics. In the early 1940s he carried out important work on the emission lines in the Sun's corona. Edlen succeeded in showing (1941) that the coronal lines were caused mainly by iron, nickel, calcium and argon atoms deprived of 10 to 15 of their electrons, that is, by highly charged positive ions. The implications of such extreme ionization were not lost on Edlen, who was quick to point out that it must indicate temperatures of more than a quarter of a million degrees in the solar corona.

Edrich, W. J. "Bill" (1916–1986)

English cricketer whose career stretched from 1934 to 1958. Edrich's greatest achievement came in 1947 when he scored 3,539 runs and, with

Dennis COMPTON, set an English Test record of 370 for the third wicket. The following year he and Compton had an unbroken stand of 424 against Somerset, a Middlesex and Lord's record.

Edsall, John Tileston (1902–2002) American biochemist. Edsall was educated at Harvard and at Cambridge University, England. He joined the Harvard faculty in 1928 and from 1951 to 1973 served there as professor of biochemistry. From 1956 to 1967 he edited the *Journal of Biological Chemistry*. Edsall's work focuses mainly on protein chemistry. He spent much time establishing basic data on the constitution and properties of numerous proteins—information that has since been reproduced in innumerable textbooks. With Edwin Cohn he was the author of the authoritative work *Proteins, Amino Acids and Peptides* (1943). In later years Edsall turned his attention to the history of biochemistry; his book in this field included *Blood and Hemoglobin* (1952).

Edsel Brand name of an automobile introduced by the Ford Motor Company in 1958. The Edsel has become a legend of the failure of a giant company in developing, designing and marketing a product so badly matched to consumer preferences that it faced almost total public rejection. The Edsel (named for Henry FORD's son) was developed with the aid of consumer preference studies of the time and was designed with heavily exaggerated styling elements of the kind that had become popular in the early 1950s. By the time the Edsel appeared, however, public taste had changed, turning away from such styling toward a slightly more conservative look. The Edsel therefore seemed a caricature of over-design, the subject of derision rather than admiration. The model was discontinued after a very brief production run. Ironically, surviving examples have become collectors' items.

Edward VII (1841–1910) King of Great Britain and Ireland (1901–10). The eldest surviving son of Queen Victoria and Prince Albert, he did not accede to the throne until he was 59. As Prince of Wales, he traveled widely, was the center of a fashionable social

King Edward VII, 1902 (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

circle and was a noted patron of the arts. He married ALEXANDRA of Denmark in 1863, and the couple had six children. After the death of Albert in 1861, Edward represented the Crown at most official functions. However, he was widely regarded as a playboy, and his libertine ways were roundly disapproved of by his mother, who gave him virtually no political responsibility. He became king after Victoria's death in 1901, and his urbane and genial demeanor made him a popular, if little-experienced, monarch. Edward advanced British foreign policy by his many trips abroad, and he supported the ANGLO-FRENCH ENTENTE of 1904. At home he favored the policies of the LIBERAL PARTY and was a reluctant participant in ASQUITH's attempt to limit the power of the House of Lords. He died in 1910 and was succeeded by his son GEORGE V. In Britain, the first decade of the 20th century is generally known as the **Edwardian** period.

Edward VIII, duke of Windsor (1894–1972) King of the United Kingdom of Great Britain and Ireland (1936) who gave up the British throne to, as he said, "marry the woman I love." The eldest son of GEORGE V and Queen Mary, he was proclaimed Prince of Wales in 1911. He served in the Royal Navy in WORLD WAR I. During the 1920s and early 1930s the handsome prince lived the life of a charming playboy and sophisticated trendsetter. He was also a goodwill ambassador for Britain around the world. Much admired by the British people, during the GREAT DEPRESSION he visited working-

class areas throughout Britain and expressed genuine concern for the unemployed. Groomed for kingship, he ascended to the throne upon the death of George V (January 20, 1936) but was never formally crowned. By this time, he was involved with Mrs. **Wallis Warfield Simpson**, an American who had been divorced from her first husband and was still married to her second. When Mrs. Simpson obtained her second divorce, the king's decision to marry her provoked the ABDICATION CRISIS (November 1936). Many people felt that as an American and a divorcée, she would be an unsuitable wife for the king. In a moving radio address to the nation (December 11, 1936), Edward announced and explained his decision to abdicate. He was succeeded by his younger brother, GEORGE VI. Taking the title duke of Windsor, Edward married Mrs. Simpson in France the following year. He was governor (1940–45) of the Bahamas during World War II. The couple then settled in France and rarely visited England.

Edwards, Douglas (1917–1990) U.S. broadcaster. He began his broadcast career in radio and in 1947 became the first major radio announcer to switch to television. The next year, he became the first American news anchorman, as CBS made him the host of its first nightly news program, *Douglas Edwards with the News*. He was one of the first television news anchors to do on-the-scene reporting, covering such events as the 1956 sinking of the *ANDREA DORIA*. He was replaced by Walter CRONKITE in 1962 but continued to work for the network until his retirement in 1988.

Egas Moniz, António Caetano de Abreu Freire (1874–1955) Portuguese neurologist and political activist. Egas Moniz was educated at the University of Coimbra, where he gained his M.D. in 1899. After post-graduate work in Paris and Bordeaux he returned to Coimbra, becoming a professor in the medical faculty (1902). He moved to Lisbon in 1911 to a newly created chair of neurology, a post he retained until his retirement in 1944. At the same time he pursued a successful political career, being elected to the National Assembly in

1900. He served as ambassador to Spain in 1917 and in the following year became foreign minister, leading his country's delegation to the PARIS PEACE CONFERENCE. Egas Moniz achieved his first major success in the 1920s in the field of angiography (the study of the cardiovascular system using dyes that are opaque to X-rays). In collaboration with Almeida Lima, he injected such radio-opaque dyes into the arteries enabling the blood vessels of the brain to be photographed. In 1927 he was able to show that displacements in the cerebral circulation could be used to infer the presence and location of brain tumors; he published a detailed account of his technique in 1931.

Egas Moniz is better known for his introduction in 1935 of the operation called **prefrontal lobotomy**. It was for this work, described by the Nobel authorities as "one of the most important discoveries ever made in psychiatric therapy," that they awarded him the 1949 NOBEL PRIZE for physiology or medicine. The operation consisted of inserting a sharp knife into the prefrontal lobe of the brain. It required the minimum of equipment and lasted less than five minutes. The technique was suggested to Egas Moniz on hearing an account of a chimpanzee that became less aggressive after its frontal lobes had been excised. Egas Moniz believed that a similar surgical operation would relieve severe emotional tension in psychiatric patients. He claimed that 14 of the first 20 patients operated upon were either cured or improved. The operation generated much controversy, since the extent of the improvement in the patients' symptoms was not easy to judge and the procedure often produced severe side effects.

Egk, Werner (1901–1990) German composer. Born in Bavaria, he became a respected conductor, often directing the Berlin State Opera. Egk was also a teacher of music and became director of the Berlin Hochschule in 1950. Strongly influenced by Igor STRAVINSKY in his use of harmony, instrumentation, rhythms and musical irony, he is principally known for his operas, particularly his first, *Die Zaubergeige* (1935), and his second, *Peer Gynt* (1938). Egk's output also included orchestral and chamber works and ballets.

Egypt (Arab Republic of Egypt) Nation on the Mediterranean coast of northeastern Africa, surrounding the fertile valley of the Nile River. Occupied by the British in 1882, it became a British protectorate in 1914 when the OTTOMAN EMPIRE allied itself with England's enemy, GERMANY, in WORLD WAR I. Made an independent kingdom in 1922, it was the site of fierce tank battles between British and German forces in its western deserts during WORLD WAR II. Egypt became a republic in 1953, after Gamal Abdel NASSER led a military coup against King FAROUK; Nasser became president in 1954. Hostility toward the new state of ISRAEL has been a key factor in modern Egypt's history, as it assumed the mantle of major champion of nonaligned Arab solidarity. Although it suffered a military defeat in the ARAB-ISRAELI WAR OF 1956, Egypt won wide respect in the Arab world (see SUEZ CRISIS).

In 1958 SYRIA, YEMEN and Egypt briefly united to create the UNITED ARAB REPUBLIC (UAR)—a venture that ended in 1961. During the SIX-DAY

WAR of 1967 Israel solidly defeated Egypt as it outpaced Egyptian, Syrian and Jordanian forces and captured the SINAI PENINSULA and GAZA STRIP; the SUEZ CANAL was closed. Nasser died in 1970 and was succeeded by Anwar al-SADAT. In 1973 war again broke out with Israel, and a section of the Sinai was recaptured by Egypt. Israel withdrew following negotiations, and in 1975 the canal was reopened. U.S. president Jimmy CARTER encouraged Sadat to form cordial relations with Israel, thus distancing Egypt from the rest of the Arab world. Sadat was murdered by a fundamentalist Arab faction in 1981, and Hosni MUBARAK became president. Egypt censured IRAQ's assault on KUWAIT in 1990 and actively participated in the UN's allied coalition against Iraq in the ensuing PERSIAN GULF WAR. In the 1990s Mubarak experienced increased opposition to his continued rule from Islamic fundamentalists, escaping an assassination attempt in June 1995 while at an ORGANIZATION OF AFRICAN UNITY summit in Addis Ababa, Ethiopia. To curb some of these fundamentalist criticisms,

EGYPT

1900	Nominally autonomous within the Ottoman Empire, Egypt is controlled by the British consul-general.
1902	First dam at Aswân to control flooding of the Nile; spread of irrigation to promote cotton as a cash crop.
1914	Declared a British protectorate.
1918	Nationalist movement under Saad Zaghlul.
1922	Britain grants independence but retains military control and possession of Suez Canal; discovery of Tutankhamen's tomb sparks new fashion styles in the West.
1942	British stop Rommel's drive toward the Suez Canal at El Alamein.
1948	Rioting in Cairo after Egypt's defeat in attack on new state of Israel; assassination of pro-Western leaders.
1952	Free Officers' movement forces abdication of King Farouk; proclaims republic.
1954	Colonel Gamal Nasser takes power; reorganizes nation, pursues pan-Arab socialism and closer ties with USSR.
1956	Nasser nationalizes Suez Canal, prevents British and French forces from reclaiming it before UN imposes cease-fire.
1958	Egypt joins Syria to form United Arab Republic.
1961	Syria withdraws from UAR.
1966	Ancient monuments at Abu Simbel are moved to protect them from waters of immense new flood control dam at Aswân.
1967	Egypt attacks Israel; Egyptian forces crushed in Six-Day War; Egypt loses Gaza Strip.
1970	Death of Nasser; Anwar Sadat begins rapprochement with the West.
1976	Free multiparty elections.
1978	Camp David Accord signed with Israel; Sadat wins Nobel Peace Prize.
1979	Peace treaty with Israel; other Arab states break off relations with Egypt.
1981	Sadat killed by Islamic fundamentalists; succeeded by Hosni Mubarak.
1984	Jordan becomes first Arab state to reestablish ties.
1987	Mubarak reelected president.
1989	Egypt reaccepted into Arab League at Casablanca summit.
1991	Egypt contributes troops to anti-Iraq coalition in Persian Gulf War.
1993	Mubarak reelected president.
1997	Assassination attempt against Mubarak at Organization of African Unity meeting in Addis Ababa, Ethiopia.
1999	Mubarak begins fourth term in office.
2005	Mubarak announces the country's first "free and fair" elections, is reelected.

Egypt downgraded its relations with Israel after Israeli prime minister Ariel SHARON placed Palestinian leader Yasir

ARAFAT under house arrest. In 2005 pressure from the administration of U.S. president George W. BUSH in-

duced Mubarak to promise "free and fair" elections in Egypt. Mubarak was reelected.

Ehrenburg, Ilya Grigorovich (1891–1967) Writer, of Jewish origin, who spent much of his life in Paris. A symbolist poet at the start of his career, Ehrenburg was a skillful master of all the genres. His works include *A Street in Moscow* (1932), *Out of Chaos* (1934) and *European Crossroad* (1934). A one-time member of the Supreme Soviet, he was a pioneer of the DE-STALINIZATION of literature and wrote the influential novel *The Thaw* (1954–56). While permitted to strive for the rehabilitation of victims of the Terror, such as Osip MANDELSTAM, at the same time he had to make considerable concession to the authorities.

Ehricke, Krafft A. (1917–1984) German rocket scientist. Ehricke studied rocket engineering at the Technical University of Berlin, but his studies were interrupted by WORLD WAR II, and he was drafted to work on the V-2 rocket project at PEENEMÜNDE. After the war he was brought to the U.S. along with Werner von BRAUN and other German rocket scientists. He subsequently worked on the Redstone, Atlas and Centaur rockets. While heading a committee of the American Rocket Society, Ehricke urged government officials to establish a civilian space agency, which evolved into NASA. He was also an adviser on the development of the APOLLO spacecraft and the SPACE SHUTTLE.

Ehrlich, Paul (1854–1915) German physician, bacteriologist and chemist. Ehrlich studied medicine at the Universities of Breslau, Strasbourg and Freiburg, gaining a physician's degree at Breslau in 1878. For the next nine years he worked at the Charité Hospital, Berlin, on many diseases, including typhoid fever, tuberculosis and pernicious anemia. As a result of his laboratory work he contracted tuberculosis and was not restored to health until 1890, when he set up his own small research laboratory at Steglitz on the outskirts of Berlin. When Robert Koch announced the discovery of tuberculin (1890) and suggested its use in preventing and curing tuberculosis, he asked Ehrlich to work on it with him at the Moabit Hospital in Berlin. Ehrlich accepted and for six years studied TB and cholera. In 1896 he accepted the post of director of the new Institute for Serum Research and Serum Investigation at Steglitz and in 1899 moved to the Institute of Exper-

imental Therapy in Frankfurt. Here he investigated African sleeping sickness and syphilis. In 1908 he was awarded the NOBEL PRIZE in physiology or medicine for his work on immunity and serum therapy. Two years later he announced his most famous discovery, **Salvarsan**, a synthetic chemical that was effective against syphilis. Until the end of his life he worked on the problems associated with the use of this compound of arsenic in treating patients. Ehrlich is considered to be the founder of modern chemotherapy because he developed systematic scientific techniques to search for new synthetic chemicals that could specifically attack disease-causing microorganisms.

Eichmann, Adolf (1906–1962) Nazi SS official who oversaw the deaths of millions of JEWS and others during WORLD WAR II. Eichmann rose with GERMANY'S Nazi Party to be head of the GESTAPO'S Jewish section. After the **Wannsee Conference** (January 1942), he was responsible for the deportation and incarceration of Jews in CONCENTRATION CAMPS throughout Europe. Millions of Jews were ultimately killed in the camps. When the war ended, Eichmann was able to escape to Argentina with the unwitting help of the VATICAN. Although furiously pursued, he eluded detection because he had destroyed all photos of himself. However, Israeli agents traced him to Argentina after his wife rejoined him in Buenos Aires. In 1961 Israeli agents apprehended him and secretly transported him to Israel, where he was tried for crimes against the Jews. He was convicted and hanged.

Eigen, Manfred (1927–) German physical chemist. Eigen was educated at the University of Göttingen, where he obtained his Ph.D. in 1951. He joined the staff of the Max Planck Institute for Physical Chemistry at Göttingen in 1953 and became its director in 1964. Eigen introduced (1954) the so-called relaxation techniques for the study of extremely fast chemical reactions (those taking less than a millisecond). Eigen's general technique was to examine a solution in equilibrium for a given temperature and pressure. If a short disturbance was applied to the solution the equilibrium would be very briefly destroyed and a new equilibrium quickly reached. Eigen studied exactly what happened in this very

short time by means of absorption spectroscopy. He applied disturbances to the equilibrium by a variety of methods, such as pulses of electric current, sudden changes in temperature or pressure, or changes in electric field. For this work Eigen shared the 1967 NOBEL PRIZE in chemistry with George Porter and Ronald NORRISH. Eigen later applied his relaxation techniques to complex biochemical reactions. He also became interested in the origin of nucleic acids and proteins.

Eight, the A popular reference to a group of eight young American painters working and exhibiting in the cause of realism during the first decade of the 20th century. More derisively, they were also branded the Black Gang, the Apostles of Ugliness and the Ashcan School. In contrast to the prevailing taste of establishments such as the National Academy of Design in New York, these artists—Robert HENRI, Everett SHINN, George Luks, John SLOAN, Arthur B. Davies, William GLACKENS, Ernest Lawson and Maurice PRENDERGAST—observed and painted the relatively squalid conditions of contemporary American urban sprawl. Since most of them were trained as newspaper illustrators—they had been employed by newspapers like the *Philadelphia Press* and the *New York World* to provide on-the-spot sketches of breaking news stories—they had developed a quick, incisive, unblinking attitude toward the world around them. They knew the police beat, the slums, the ragpickers. When some of them presumed to present their work for gallery viewing at the National Arts Club in 1904, they were roundly denounced. Three years later several of them were rejected for exhibition at the National Academy. Stung, they decided—under the unofficial leadership of Robert Henri—to exhibit their work collectively in the winter of 1908. The Macbeth Gallery show subsequently became not only the most famous exhibition of the Eight but also the first important event in modern American painting. The titles of some of the works on display tell the story: *Street Scene*, *The Shoppers* and *Sixth Avenue and Thirtieth Street*. Two years later some of the artists, headed by Sloan and Henri, exhibited in another important modern show: The Independent Artists Exhibition. The way had been prepared for the fa-

mous ARMORY SHOW of 1913, when work by the Eight rubbed easels, as it were, with modern works by Cézanne, PICASSO, MATISSE and other famous artists. Apart from their common vision of contemporary American life, there were no philosophical or political bonds among the Eight. They soon disbanded, and some even grew suspicious of the modernist trends they had helped to encourage.

Eijkman, Christiaan (1858–1930)

Dutch physician. Eijkman earned a medical degree from the University of Amsterdam in 1883. He served as an army medical officer in the Dutch East Indies from 1883 to 1885, when he was forced to return to Holland to recuperate from a severe attack of malaria. In 1886 he returned to the East Indies as a member of an official government committee to investigate beriberi. After the completion of the committee's work, Eijkman remained in Batavia (now Djakarta) as director of a newly established bacteriological laboratory. In 1896 he took up the post of professor of public health at the University of Utrecht.

Eijkman was responsible for the first real understanding of the nature of and possible cure of beriberi. For this work he shared the 1929 NOBEL PRIZE in physiology or medicine with Frederick Gowland Hopkins. He failed to conclude, however, that beriberi is a deficiency disease. Although Eijkman had clearly demonstrated how to cure and prevent beriberi, it was left to Hopkins to identify its cause as a vitamin deficiency. It was not until the early 1930s that Robert Williams identified the vitamin as B1 (thiamine).

Einstein, Albert (1879–1955) German-born physicist and humanist. Einstein is widely considered one of the greatest and most original thinkers of the 20th century. Although not easily understood by the layperson, Einstein's theories of time, space, matter and the nature of the universe radically changed our view of the world. The son of nonreligious German Jewish parents, Einstein taught himself mathematics and physics at an early age. He was far from being an outstanding student, but his intellectual independence and creativity soon brought him into conflict with the strict regimentation of

German physicist and 1921 Nobel Prize winner
Albert Einstein (LIBRARY OF CONGRESS, PRINTS AND
PHOTOGRAPHS DIVISION)

the German Catholic schools to which his parents sent him. While attending the Zurich Federal Institute of Technology from 1896 to 1900, he applied for and received Swiss citizenship. Upon graduation from the institute, Einstein took a job at the Swiss Patent Office, pursuing scientific studies in his spare time. In 1905 he published four important papers. One of these, *Über einen die Erzeugung und Verwandlung des Lichtes betreffenden heuristischen Gesichtspunkt* (On a heuristic point of view about the creation and conversion of light), introduced quantum theory into physics to explain the nature of electromagnetic radiation.

The most famous of the four papers of 1905—*Zur Elektrodynamik bewegter Körper* (On the electrodynamics of moving bodies)—introduced his revolutionary **special theory of relativity**, showing that space and time, once thought to be absolutes, are actually relative to the observer; the only constant is the speed of light. Einstein's special theory of relativity also states that matter behaves differently as it approaches the speed of light, and that classical Newtonian physics does not apply at these speeds.

In a third paper (only two pages long), *Ist die Trägheit eines Körpers von seinem Energieinhalt abhängig?* (Does the inertia of a body depend on its energy content?), Einstein concluded that matter is really concentrated energy, a most important consequence of relativity. This discovery led directly to

ATOMIC BOMB DEVELOPMENT nearly four decades later.

In 1907 Einstein further developed his ideas about gravity and inertia and predicted that light moving through a gravitational field would be curved. This theory, known as the **general theory of relativity**, was later confirmed when the astronomer Arthur EDDINGTON observed during an eclipse that starlight was indeed curved as it passed near the Sun.

As his work gained recognition in scientific circles, Einstein received his doctorate from the University of Zurich in 1909 and then taught in Zurich, Prague and Leyden. He became director of the Kaiser Wilhelm Institute of Sciences in Berlin in 1913. In 1916 he further refined his general theory of relativity in the paper *Die Grundlagen der allgemeinen der Relativitätstheorie* (The foundation of the general theory of relativity). This work proposed that space itself is curved. In 1921 Einstein received the NOBEL PRIZE for his work in atomic physics.

The suffering of European Jews after World War I led Einstein to become an active Zionist, traveling extensively during the 1920s to raise money for Jewish settlement in Palestine. (Years later, following the death of Chaim WEIZMANN in 1952, Einstein was asked to become president of Israel, but he declined.) In 1933 he fled Nazi Germany and accepted a professorship at Princeton's Institute for Advanced Study. Appalled by Nazi tyranny and the rearming of Germany, Einstein reversed his lifelong pacifist views in 1933, warning European countries to arm against HITLER's threat.

In 1939 scientists proved the possibility of releasing the atom's energy through a nuclear chain reaction. Acting on the belief that the Germans were close to developing an atomic bomb, Einstein addressed a letter to President Franklin D. ROOSEVELT, describing the destructive potential of the new weapon and urging an accelerated research program so that the U.S. would be the first nation with the bomb. This letter spurred Roosevelt's decision to institute an ultimately successful crash program for the manufacture of the weapon.

With the creation of the first bomb in 1945, Einstein, along with many of the scientists working on the project, began to fear that the U.S. would use

the bomb offensively against Japan, thus initiating an atomic arms race. Hoping to preclude the bomb's use, Einstein signed a letter to Roosevelt, warning that any momentary military advantage the bomb might give the U.S. would be offset by grave political and strategic disadvantages. FDR died before receiving the letter. The TRUMAN administration disregarded the warning and dropped atomic bombs on HIROSHIMA and NAGASAKI.

After the war Einstein became a passionate spokesman for the "control" school of thought—those scientists who felt that the only hope for peace was to place all control of nuclear power in a supranational government. In 1945 he organized the Emergency Committee of Atomic Scientists to educate the public about the possibilities and dangers of atomic power. In numerous speeches, broadcasts and letters, he warned against the physical danger and cultural repression that would result from an arms race. He deplored the U.S.'s post-war policy of nuclear rearmament, warning, "We must realize that we cannot simultaneously plan for war and peace." In 1948 he joined in a denunciation of universal military training and in 1950 signed a protest against the penetration of the civilian educational system by the military establishment. He opposed the production of the HYDROGEN BOMB, stating in 1950 that an arms race was the worst method of preventing conflict and advocated the Gandhian tactic of "nonparticipation in what you believe is evil." He also supported physicist J. Robert OPPENHEIMER against charges that he was a security risk.

In 1953 Einstein completed his last great piece of scientific work, the **unified field theory**, which related his work in quantum mechanics to the theory of relativity. In the year of his death, 1955, he and Bertrand RUSSELL made a world appeal against the dangers of thermonuclear war. This statement, signed by six other Nobel Prize winners, led to the Pugwash Conference, a movement to utilize the internationalism of science as a force for peace.

Although his theories challenged traditional views of the universe, Einstein perceived a rational rather than random force behind creation. "God does not play dice with the universe," he asserted. "He may be subtle, but he is not malicious."

Eire See IRELAND.

Eisenhower, Dwight David (1890–1969) American general and 34th president of the UNITED STATES (1953–61). Born in Denison, Texas Eisenhower grew up in Abilene, Kansas, where his family had moved in 1892. He graduated from West Point in 1915, then commanded an army tank corps training camp during World War I, becoming a leading exponent of mobile armored vehicles. He served in the Panama Canal Zone (1922–24), later attending the Command and General Staff School. After a tour on the Battle Monuments Commission, he attended the Army War College and served in the office of the assistant secretary of war (1929–33) and in the Philippines with General Douglas MACARTHUR (1935–40). After the outbreak of WORLD WAR II in Europe, he served in a number of posts before becoming chief of staff of the Third Army in 1941 and leading it successfully in large-scale war games. This performance led directly to his posting as chief of operations under General George C. MARSHALL in Washington, D.C.

Winning Marshall's confidence and friendship, Eisenhower was named U.S. commander in Europe in 1942. He quickly amassed a string of successes, commanding the invasion of North Africa (November 1942), con-

quering Sicily (July–August 1943) and invading Italy (September 1943). In December 1943 Eisenhower was named supreme commander of the Allied Expeditionary Force. A warm and plain-spoken man, he was particularly adept at winning cooperation among the Allies and at achieving a successful integration of the various branches of the armed forces into a fighting machine that could win the struggle for Europe. Under Eisenhower the Invasion of NORMANDY of June 6, 1944, was successfully planned and mounted, and the Allies pushed into France, driving out German forces. His slow advance allowed the Allied setback at the battle of the Ardennes, but Eisenhower pushed forward, reaching the Elbe in April 1945. Germany's surrender on May 8, 1945, left Eisenhower, a five-star general since December 1944, one of the great heroes of the war.

Afterwards he served as army chief of staff, wrote his war memoirs (*Crusade in Europe*, 1948) and was president of Columbia University. In 1951 he returned to Europe as military commander of NATO, further enhancing his international standing. Eisenhower resigned from the army in 1951 to seek the Republican presidential nomination in 1952; he won the nomination by a close margin over Senator Robert TAFT. That year much of the country adopted the slogan "I Like Ike," and he won a landslide victory over Governor Adlai STEVENSON; he was reelected by an even larger margin four years later.

Early in his first term Eisenhower fulfilled a campaign promise by securing an armistice ending the KOREAN WAR, in July 1953. Along with his secretary of state, John Foster DULLES, he continued the TRUMAN administration policy of containing COMMUNISM, while also working to ease some COLD WAR tensions. On the homefront, he maintained a business-oriented middle-of-the-road policy, initiating little legislation but overseeing an improved highway and seaway system and taking firm action on Civil Rights in the 1957 school desegregation of LITTLE ROCK, Arkansas, and in legislation (1957, 1960) (see CIVIL RIGHTS MOVEMENT).

Shortly before leaving office, Eisenhower warned the nation about the growing power of what he termed the *military-industrial complex*. He supported the unsuccessful presidential

American military leader and president Dwight D. Eisenhower, 1945 (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

candidacy of his vice president, Richard M. NIXON, in the 1960 election that was won by Democrat John F. KENNEDY. After retiring to his Gettysburg, Pennsylvania, farm in 1961, Eisenhower resumed writing. Among his books were *Mandate for Change* (1963) and *Waging Peace* (1965).

Eisenhower, Milton Stover (1899–1985) U.S. educator and public servant, brother of Dwight D. EISENHOWER. Milton Eisenhower was an adviser to every president from Franklin D. ROOSEVELT to Richard M. NIXON. He became perhaps the most important presidential adviser in the nation's history during the administration of his brother. He began his government career in 1926 with the Department of Agriculture. During WORLD WAR II he directed the resettlement of refugees in North Africa after the 1942 Allied invasion. He left government service in 1943 to become president of Kansas State College. In 1950 he was named president of Pennsylvania State University, a post he held for six years. From 1956 to 1967 and again from 1971 to 1972, he was president of Johns Hopkins University. During those years he held a number of major part-time government posts and served on 12 major government commissions.

Eisenhower Doctrine Policy promulgated by President Dwight D. EISENHOWER in 1957 during his second term in office. It provided for the use of American military force and economic aid in the protection of Middle Eastern states from internal or external communist aggression. The doctrine was applied in July 1958, when 10,000 U.S. Marines were sent to LEBANON to ensure stability after the pro-Western monarchy of Iraq was overthrown. The doctrine proved unpopular in the Middle East and lapsed after the death of Secretary of State John Foster DULLES in 1959.

Eisenstaedt, Alfred (1898–1995) American photographer, considered the father of PHOTOJOURNALISM. He introduced the techniques of the photo-essay and news reporting using candid-camera shots. His career began in his native Germany, where he produced candid documentaries (1929–35). Immigrating to the U.S. in 1935, he gained

fame for his picture story on the Italian invasion of ETHIOPIA. In 1936 he became one of the original staff photographers for *LIFE* magazine. He is known for his expressive candid portraits of such people as Albert EINSTEIN (1947) and Marilyn MONROE (1953) and for his evocative photo-essays, such as those from Japan (1945–46). Among his many books is *Witness to Our Time* (1966).

Eisenstein, Sergei Mikhailovich (1898–1948) Russian filmmaker and theoretician. With colleagues Lev KULESHOV, Vsevolod PUDOVKIN and Dziga VERTOV, Eisenstein stood at the center of the great decade of Soviet filmmaking in the 1920s. He was born in Riga, Latvia, and at an early age displayed interests and talents in subjects as diverse as architecture, Japanese culture and theater. As an assistant to the great stage entrepreneur and innovator Vsevolod MEYERHOLD in the early 1920s, he was vitally influenced by the tenets of **constructivism**, which held that theater and acting were essentially machinelike assemblies of stylized elements in gesture, design, language and light. Eisenstein carried such ideas forward into his great films of the rest of the decade. *Stachka* (*Strike*, 1924), *Bronenosets Potemkin* (*The Battleship Potemkin*, 1925), *Oktiabr* (*October*, 1927) and *Generalnaya Linya* (*The General Line*, 1929) helped vault the Soviet cinema into international prominence. Although nominally about such standard Soviet subjects as revolution and collective agriculture, they were more significant as demonstrations of Eisenstein's theories of montage of discrete attractions (his term for the editing together of pieces of film). As opposed to Pudovkin's theory that editing was essentially a linkage process, Eisenstein insisted that it was a dialectic, a collision and contrast of shots. Metaphors could be created with the collision of elements within the shot ("potential montage"), in the juxtaposition of shots ("metric" and "tonal" montage) and in the combinations of image and synchronized sound ("vertical" montage). This "series of explosions," as he cryptically called them, would "drive forward the total film" like an internal combustion engine. Such theories ran him afoul of the STALIN regime in the 1930s and 1940s. Eisenstein completed only two more projects before his death

from a heart attack in 1948—*Alexander Nevsky* (1938) and the two parts of *Ivan Grozny* (*Ivan the Terrible*, 1944). His theoretical writings have been collected into two volumes: *The Film Sense* (1942) and *The Film Form* (1948).

Eisner, Michael (1924–) American television and film executive. After working at the Columbia Broadcasting Service (CBS) to plan the layout of the commercials it showed during children's programs, Eisner became assistant to the national programming director at the American Broadcasting Corporation (ABC), in 1966. After being promoted to vice president of daytime programming in 1971, Eisner helped develop hit ABC primetime shows such as *Happy Days*, *Welcome Back Kotter*, *Barney Miller* and *Starsky and Hutch*. In 1976 Eisner joined Paramount Pictures as president and chief operating officer. After approving several successful feature films, Eisner left Paramount eight years later to become chairman and chief executive officer of the Walt Disney Company, where he helped develop the animated musical feature format that produced such blockbuster hits as *The Little Mermaid*, *Beauty and the Beast*, *Aladdin*, *The Lion King* and *Pocahontas*. In 2004 about 43% of Disney's shareholders voted to oppose his reelection to the corporation's board because of dissatisfaction with his policies and management style; the board subsequently stripped Eisner of his role as chairman while retaining him as chief executive officer. He retired in 2006.

Ekman, Vagn Walfrid (1874–1954) Swedish oceanographer. Ekman was educated at the University of Uppsala, graduating in 1902. He worked at the International Laboratory for Oceanographic Research in Oslo (1902–08) before he moved to Lund, Sweden, as a lecturer in mathematical physics, being made a professor in 1910. Ekman's fundamental paper, *On the Influence of the Earth's Rotation on Ocean Currents* (1905), originated from an observation made by the explorer Fridtjof NANSEN that in the Arctic, drift ice did not follow wind direction but deviated to the right. Ekman showed that the motion, now known as the Ekman spiral, is produced as a complex interaction between the force of the wind on the

water surface, the deflecting force due to the Earth's rotation (Coriolis force) and the frictional forces within the water layers. Ekman also studied the phenomenon of dead water—a thin layer of freshwater from melting ice spreading over the sea, which could halt slow-moving ships. This, he established, resulted from the waves formed between water layers of different densities. The **Ekman current meter**, which he invented, is still in use.

ELAS (Ellenikos Laikos Apeleutherotikos Stratos, Hellenic People's Army of Liberation) Organization founded by the communist resistance in GREECE during WORLD WAR II. ELAS wished to achieve a communist government in postwar Greece along the lines of TITO's PARTISANS. Opposing them, Britain and the U.S. had supported promonarchist groups since 1943, and Britain sent troops to Greece in 1944 to prevent civil war, which eventually broke out following the return of the king in 1946. The **Democratic Army**, successor to ELAS, was defeated in 1949 by the royalists, backed by the U.S. and Britain. (See also GREEK CIVIL WAR.)

Elat Israeli port city at the head of the Gulf of Aqaba, about 120 miles south of Beersheba. Following its occupation of the area at the conclusion of the ARAB-ISRAELI WAR OF 1948–49, ISRAEL established this modern city to secure its access to the Red Sea, the Far East and Africa. The port was temporarily put out of commission by Egyptian blockades of the Gulf of Aqaba in the 1956 and 1967 Arab-Israeli wars but was expanded after hostilities ceased. The population rose from 529 in 1959 to over 14,000 by the 1970s.

Elath, Eliahu (Eliahu Epstein) (1903–1990) Ukrainian-born journalist and diplomat. In 1934 he was named head of the political department of the Jewish Agency for PALESTINE, a precursor of the Israeli government. A force in the founding of ISRAEL, he was named that country's ambassador to the U.S. in 1948 and later its ambassador to Great Britain. He played a major role in negotiations surrounding the 1956 invasion of SUEZ by Britain, France and Israel.

Elbe River River that rises in northwestern Czechoslovakia and courses through Germany past DRESDEN, then northwest through Hamburg and into the North Sea at Cuxhaven. A prominent river of central Europe, it is about 725 miles long and is linked by canal with BERLIN, with the RUHR area, with the Oder and RHINE Rivers and with the Baltic Sea. Toward the end of WORLD WAR II, on April 25, 1945, U.S. and Soviet army units met at Torgau on the Elbe. From 1949 to 1990 a section of the river formed part of the border between East and West Germany.

Eldjarn, Kristjan (1916–1982) President of Iceland (1968–80). An archaeologist by profession, Eldjarn served as curator of the National Museum of Iceland (1947–68) before his election to the country's presidency.

Eldridge, (David) Roy (1911–1989) U.S. jazz trumpeter. A flamboyant and innovative performer, Eldridge was often regarded as the link between Louis ARMSTRONG's pioneering trumpet solos of the 1920s and the instrumental virtuosity of Dizzy GILLESPIE's BEBOP style of the 1950s. Although he performed with his own band in the 1930s, Eldridge did not gain national attention until he performed with white bandleader Gene KRUPA in 1941. He also played with Artie SHAW, Benny GOODMAN, and the Jazz at the Philharmonic series. Heart problems forced him to give up trumpet playing in 1980.

electronic mail (e-mail) Electronic means of communicating data, text and audio, visual and program files through an intranet (a network of computers within an organization) and, later, over the INTERNET. Mobile units such as personal digital assistants (PDAs) and advanced CELLULAR TELEPHONES also developed the capability of transmitting and receiving e-mail. As a method of communication, e-mail increased exponentially since the mid-1990s, when companies such as America Online (AOL) began to offer consumers the ability to connect to the Internet and possess an e-mail account. Governmental agencies, companies, colleges and universities, and nonprofit organizations also established e-mail accounts to ensure the rapid dissemination of information to their employees and public.

The destination of each piece of e-mail is determined by the specified e-mail address, which contains components designating the recipient's username within the network, the domain or company to whom the e-mail address is registered and, in some cases, the country in which the domain or company resides. After the message has been composed and text, program or audio and visual files have been attached to the e-mail, it is converted into binary language and transmitted from a computer modem to a network server, also referred to as a message transfer agent (MTA), which eventually routes the message to its intended recipient.

As more individuals obtained e-mail addresses through companies such as AOL, Juno, NetZero and Microsoft, the proliferation of e-mail to these recipients has created the phenomenon of Internet junk mail, often referred to as spam. In 2003 Utah and other states passed legislation making it illegal for companies to send unsolicited e-mails to e-mail addresses, in an effort to reduce the spam received by their residents and to protect them against fraudulent e-mail inquiries (called phishing) designed to elicit Social Security numbers, credit card numbers, bank account details or any other information that could be used to rob or otherwise defraud individuals. In 2003 Congress passed the Can-Spam Act to reduce the flow of junk e-mail, but the legislation proved largely ineffective.

electron microscope The electron microscope is one of the scientific miracles of the 20th century and represents a huge advance over the conventional light microscope. Using beams of electrons to magnify objects that are invisible to the naked eye, the electron microscope can magnify particles up to 1 million times. Especially valuable in medical research, it allows researchers to study bacteria and viruses; the most powerful electron microscopes can make individual atoms visible.

Elgar, Sir Edward (1857–1934) The first British composer of international stature since Henry Purcell, Elgar is generally regarded as the foremost British composer of the 20th century. He was born into a middle-class

British composer Edward Elgar (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

Catholic family in Worcestershire, where his father owned a music shop. Largely self-educated, Elgar held various minor posts (including that of bandmaster in the local insane asylum, 1879–84) before becoming organist at St. George's Church, Worcester (1895). During this time he composed steadily but received little recognition until his *Enigma Variations* (1899) and the oratorio *The Dream of Gerontius* (1900) established him as Britain's leading composer. He went on to compose two large-scale symphonies (1908, 1911), the introspective Violin Concerto (1910) and Cello Concerto (1919), several tone poems and the five popular *Pomp and Circumstance* marches, among other works. Although influenced by Brahms and by Richard STRAUSS, his compositions were unmistakably English in character. Distracted over the death of his wife, Alice, the horrors of WORLD WAR I and the advent of MODERNISM, Elgar composed little during his later years but continued to enjoy both popular and official acclaim as England's greatest living composer. When Elgar died in 1933, he left behind sketches for a third symphony. In 1997 an elaboration of these sketches by composer Anthony Payne was premiered to favorable reviews. It is frequently performed worldwide.

Eliade, Mircea (1907–1986) Romanian-born historian of religion and fiction writer. Eliade was one of the preeminent interpreters of world religion in the 20th century. A prolific writer, he drew upon the myths and beliefs of virtually all cultures. In his analyses

Eliade synthesized these myths into enduring themes of human spirituality, such as the golden age at the beginning of time, the cyclical functioning of nature and the hierarchical structure of being from divine emanation to earthly matter. As a young man, Eliade spent three years in study at the University of Calcutta in preparation for his first book, *Yoga: Essay on the Origins of Indian Mysticism* (1936). In the 1930s and 1940s he published several works of fiction with a supernatural tone. He joined the faculty of the University of Chicago in 1956 and remained there until his death. His other major works include *Patterns of Comparative Religion* (1949), *Myths, Dreams, and Mysteries* (1957), *Shamanism* (1968) and the three-volume *A History of Religious Ideas* (1976, 1978, 1983).

Elion, Gertrude Belle (1918–1999) American biochemist. Born in New York City, she attended Hunter College and Brooklyn Polytechnic Institute. At first a high school teacher, she became a researcher during World War II. She joined the laboratory staff of Burroughs Wellcome, Tuckahoe, New York, in 1944, beginning her long association with George H. HITCHINGS. Together the two worked on the comparative study of normal and cancer cells, bacteria and viruses. Working with the staff at New York's Sloan Kettering Institute, they developed the first effective chemotherapy to fight leukemia. She and Hitchings investigated the method by which nucleic acids are formed and analyzed their chemical composition, with a focus on purine and pyrimidine. Most important, they developed chemotherapies to inhibit nucleic acid formation in diseased cells without damaging normal cells. This discovery led to various advances in drug research, notably the development of AZT, which is used to fight AIDS. In 1988 she, Hitchings and Sir James Black were awarded the NOBEL PRIZE in physiology or medicine.

Eliot, Thomas Stearns (1888–1965) Anglo-American poet, critic and playwright. Born in St. Louis, Missouri, he studied literature and philosophy at Harvard, the Sorbonne and Oxford. In 1914 he settled in London, where he worked briefly as a teacher and then as an officer at Lloyd's Bank; during this

time he also wrote and published literary criticism. His first poetry collection, *Prufrock and Other Observations* (1917), attracted some attention, but it was *The Waste Land* (1922) that established his reputation as a leading modernist poet (see MODERNISM; Ezra POUND). In 1925 he joined the publishing firm of Faber & Gwyer (later FABER & FABER) as an editor, later becoming a director. From 1922 to 1939 he also edited *The Criterion*, an influential literary journal. In 1927 he became a British subject and a member of the Church of England; soon after, he declared himself "an Anglo-Catholic in religion, a classicist in literature, and a royalist in politics." These views are evident in *Ash Wednesday* (1930) and in *Four Quartets* (1943), his last and perhaps his greatest poetic work. In his later years, he attempted to revitalize verse drama in such works as *Murder in the Cathedral* (1935), *The Family Reunion* (1939) and *The Cocktail Party* (1949). In 1948 he received the NOBEL PRIZE in literature and the British Order of Merit. Eliot is widely regarded (along with W. B. YEATS) as one of the most significant poets in the English language in the 20th century. His critical theories have also had an enormous influence on other writers.

Elizabeth II (1926–) Queen of the United Kingdom of Great Britain and Northern Ireland (1952–). Born in London, Elizabeth became the heir presumptive upon the accession to the throne of her father, GEORGE VI, in 1936 after the abdication of his brother, EDWARD VIII. She married Philip Mountbatten, duke of Edinburgh, in 1947. The two have four children—Prince CHARLES, Princess Anne, Prince Andrew and Prince Edward. Elizabeth inherited the throne on the death of George VI (February 6, 1952), and her coronation took place in Westminster Abbey on June 2, 1953. An active constitutional monarch, Elizabeth celebrated her Golden Jubilee, the 50th anniversary of her accession to the throne, in 2002. Her eldest son, Prince Charles, the prince of Wales, is heir apparent.

Elkin, Stanley (1925–1986) U.S. writer. His mystery novels and short stories have been translated into many languages. In some countries, including France, he is regarded as a major

literary figure. Such directors as Claude CHABROL and Joseph LOSEY have made films based on his work. In 1981 the Mystery Writers of America honored him with their Grand Master Award for lifetime achievement.

Ellington, Edward Kennedy “Duke” (1899–1974) Composer-bandleader-pianist; one of jazzdom’s (and American music’s) transcendent figures. In 1923, after developing rudimentary musical skills in his native Washington, D.C., Ellington settled in New York City, where he became a respected bandleader-entertainer at such venues as the Hollywood and Kentucky clubs on Broadway, and then at the fabled Cotton Club in HARLEM (1927–31). Ellington’s tremendous productivity as a composer (he is credited with well over 2,000 separate titles) can be attributed to his ability to organize and sustain a relatively stable performing ensemble; indeed, Ellington’s orchestra was a veritable workshop in which its leader explored a wide variety of forms, exotic colors and textures, often exploiting the attributes of such individual soloists as baritone saxophonist Harry Carney, alto saxophonist Johnny Hodges and valve

trombonist Juan Tizol. Ellington’s work of the 1930s to early 1940s is regarded as his most significant. There were popular songs (“I Let a Song Go Out of My Heart,” 1938), atmospheric “jungle” pieces (“Jungle Nights in Harlem,” 1934), ballads (“In a Sentimental Mood,” 1935), swing tunes (including the SWING ERA anthem, “It Don’t Mean a Thing If It Ain’t Got That Swing,” 1932) and the first of Ellington’s extended concert pieces (“Black, Brown and Beige,” 1943). Ellington achieved international popularity during the postwar period with frequent tours of Europe and Asia; he also collected an array of honors, including the Presidential Medal of Honor in 1969.

Elliott, Thomas Renton (1877–1961) British physician. Elliott was educated at Cambridge University and University College Hospital, London, where he later served as professor of clinical medicine from the end of World War I until his retirement in 1939. It was as a research student under John Langley at Cambridge that Elliott made his greatest discovery. In 1901 Langley had injected animals with a crude extract from the adrenal gland and noted that the extract stimu-

lated the action of the sympathetic nerves. **Adrenaline** (epinephrine) had earlier (1898) been isolated by John ABEL at Johns Hopkins University. Elliott decided to inject adrenaline into animals to see if he got the same response as Langley had with the adrenal gland extract. He did indeed achieve increases in heartbeat, blood pressure and so on—characteristics of stimulation of the sympathetic nervous system. Elliott is remembered for his subsequent suggestion that adrenaline may be released from sympathetic nerve endings—the first hint of neurotransmitters.

Ellis, (Henry) Havelock (1859–1939) British psychologist. Ellis was a true pioneer in establishing a modern, scientific approach to the study of sex. While Ellis did earn a medical degree, he devoted most of his life to writing. His magnum opus was the seven-volume *Studies in the Psychology of Sex* (1897–1928), which explored sexual relations from a multicultural perspective and emphasized the importance of sexuality for mental and physical well-being. The *Studies* were initially declared obscene by a British judge; in the U.S. they were for many years made legally available only to physicians. Ellis was an iconoclast who advocated woman suffrage and birth control at a time when such views were far from respectable (see WOMEN’S MOVEMENTS). *My Life* (1940) is his autobiographical summation of his years of research and political involvement.

Ellis Island A small, nearly rectangular island of about 27 acres in upper New York Bay, just north of the Statue of Liberty, about a mile southwest of the Battery and some 1,300 feet east of Jersey City, New Jersey. Owned by the U.S. government since 1808, it was the site of an early fort and arsenal. It became famous when it served (1892–1954) as the principal immigration port for the U.S. During its peak years (1892–1924) some 16 million prospective Americans passed through Ellis Island, where they were given physical examinations and questioned about such matters as political beliefs, job prospects and final destinations in the U.S. Largely a port of entry for poor immigrants (the wealthier arrivals were inspected aboard their ships), Ellis Island was the first taste of the New

Jazz musician and orchestra leader Duke Ellington (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

Newly arrived immigrants have their eyes examined at Ellis Island. (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

World for the ancestors of about 100 million present-day Americans. After its buildings were vacated by the Coast Guard in 1955, they fell into disrepair and dilapidation. Administered by the National Park Service and a part of the Statue of Liberty National Monument since 1965, the island was restored during the late 1980s to its former imposing appearance. It became the site for a number of permanent exhibitions when it was formally opened as the Ellis Island Immigration Museum in 1990.

Ellison, Harlan Jay (1934–) American writer. Although Ellison has published essays as well as short stories about contemporary life, he is known primarily for his gut-wrenching science fiction stories dealing with urban angst, alienation and regimentation. Among his best-known short works are “I Have No Mouth, and I Must Scream,” “‘Repent, Harlequin,’ Said the Ticktockham” and “A Boy and His Dog.” Collections of his stories include *The Beast That Shouted Love at the Heart of the World* and *Deathbird Stories*. His novels include *Doomsman* and *The Man with Nine Lives*.

Ellison, Ralph (1914–1994) American writer. Born in Oklahoma City, he attended Tuskegee Institute (1933–36). Moving to New York City, he became part of the FEDERAL WRITERS’ PROJECT and contributed short stories and non-fiction to various periodicals. His literary reputation rests largely on his first novel, *INVISIBLE MAN* (1952), a wrenching tale of a nameless black protagonist who loses his sense of identity in a world of prejudice and hostility. The novel won the National Book Award in 1953. Ellison is also known for his collection of essays *Shadow and Act* (1964). He taught at Bard College, Rutgers, the

University of Chicago and New York University.

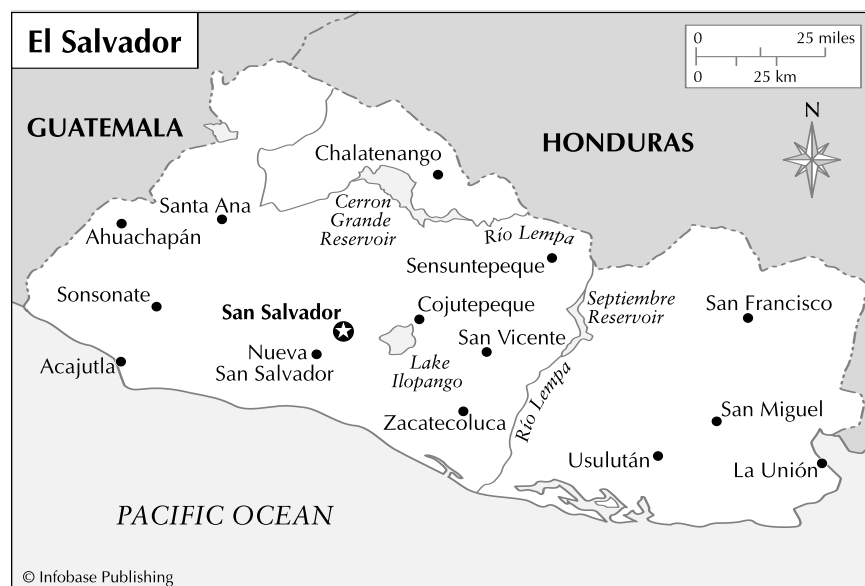

Ellmann, Richard (1918–1987) American literary scholar and biographer. One of the foremost authorities on 20th-century Irish literature, Ellmann was the author of a 1959 biography of James JOYCE that is considered the definitive work on the Irish novelist. He also wrote important books on W. B. YEATS and Oscar Wilde. Ellmann had taught at a number of U.S. universities before joining the faculty of Oxford University in 1970. He later became Goldsmiths’ professor emeritus of English literature at Oxford.

Ellsworth, Lincoln (1880–1951) American explorer. Born in Chicago, he was left a fortune by his father and became the financial backer and associate of Roald AMUNDSEN. Together, they undertook the Polar Flying Expedition in 1925. Joined by Umberto

NOBILE, they accomplished (1926) a transpolar mission in the dirigible *Norge*, flying from Spitzbergen over the NORTH POLE to Alaska. Ellsworth became the first man to fly over ANTARCTICA (1936); three years later he completed an aerial expedition that photographed vast sections of the Antarctic and claimed them for the U.S. His books include *Our Polar Flight* (1925) and *First Crossing of the Polar Sea* (1927), written with Amundsen, as well as *Search* (1932) and *Beyond Horizons* (1938).

Elman, Mischa (1891–1967) Russian-American violinist. Born near Kiev, Elman began studying the violin as a young child and at the age of 11 became a student of Leopold Auer at the St. Petersburg Conservatory. He debuted in that city in 1904 and, on a subsequent tour of Germany and England, became an enormous popular success. He made his U.S. debut in New York in 1908, thereafter touring the world as a soloist with major symphony orchestras and as a chamber player and a recital artist. Elman became an American citizen in 1923. He was known for his sensuous and opulent tone, his expressive playing and his technical mastery of the violin.

El Salvador (Republic of El Salvador) The smallest and most densely populated of the Central American countries, El Salvador stretches for 208 miles along the Pacific coast and covers

EL SALVADOR

1932	Army crushes popular insurrection led by Agustín Farabundo Martí, killing an estimated 30,000 civilians (mostly Indian peasants).
1969	Riots during a soccer game in San Salvador escalate into armed conflict between Honduras and El Salvador.
1972	Jose Napoleón Duarte, a member of the Nationalist Democratic Union, narrowly loses his presidential bid, accuses the government of massive election fraud and attempts a coup; is arrested and exiled.
1980	Duarte returns from exile and joins the Revolutionary Government Junta.
1981	Civil war breaks out when the Farabundo Martí National Liberation Front (FMLN) launches its first major military offensive.
1984	Duarte defeats the extreme right-wing major Roberto d'Aubuisson of the Nationalist Republican Alliance (ARENA).
1989	Alfredo Cristiani of ARENA wins 53.8% of the presidential vote; peace negotiations break down, the FMLN launches military offensive; government declares the capital, San Salvador, under a state of siege; seven Jesuit priests killed by the military.
1990	Death of Duarte.
1991	Rebels call cease-fire for national election; ruling ARENA party claims victory amid charges of fraud.
1992	A cease-fire brokered by the United Nations terminates the civil war; the FMLN became an opposition party.
1998	Hurricane Mitch devastates El Salvador.
1999	ARENA candidate Francisco Flores elected president.
2004	Antonio Saca of the ARENA party elected president.

an area of 8,259 square miles. Independent since 1821, El Salvador had its political stability shattered in 1932 when the army crushed a popular insurrection led by Agustín Farabundo Martí. The subsequent repressive regime of General Maximiliano Hernández Martínez lasted until 1944. The army retained power until 1972, when political and social unrest led to the formation of popular organizations and guerrilla groups. Civil war broke out in 1981. The moderate José Napoleón

DUARTE was elected president in 1984 and, with U.S. support, tried to negotiate a peace with the left-wing guerrilla group the FARABUNDO MARTÍ NATIONAL LIBERATION FRONT (FMLN). However, his successor Alfredo Cristiani (elected 1989) opposed negotiation. Increased guerrilla warfare led to declaration of a state of siege in the capital of San Salvador in 1989, and political violence continued. Leftists scored gains in the national election of March 1991. In 1991 the FMLN and the conservative

government signed a UN-sponsored peace accord that allowed the rebel organization to function as a political party. Since the accord, the FMLN has steadily improved its representation in El Salvador's parliament; however, the country continued to be governed by leaders of the conservative Nationalist Republic Alliance (ARENA): Dr. Armando Calderón Sol, elected in 1994, Francisco Flores, elected in 1999, and Antonia Saca, elected in 2004.

Elsasser, Walter Maurice (1904–1991) German-American geophysicist. Elsasser was educated at the University of Göttingen, where he obtained his doctorate in 1927. He worked at the University of Frankfurt before leaving Germany in 1933 following HITLER's rise to power. He taught at the Sorbonne, in Paris, before immigrating to the U.S. (1936), where he joined the staff of the California Institute of Technology. He became professor of physics at the University of Pennsylvania (1947–50) and at the University of Utah (1950–58). In 1962 he became professor of geophysics at Princeton; later he was appointed research professor at the University of Maryland from 1968 until his retirement in 1974. Elsasser made fundamental proposals about the origin of the Earth's magnetic field. He proposed that the molten liquid core contains eddies set up by the Earth's rotation. These eddies produce an electric current that causes the familiar terrestrial magnetic field. Elsasser also made predictions of electron diffraction (1925) and neutron diffraction (1936). His works include *The Physical Foundation of Biology* (1958) and *Atom and Organism* (1966).

Elton, Charles Sutherland (1900–1991) British ecologist. Elton graduated in zoology from Oxford University in 1922. He was assistant to Julian HUXLEY on the Oxford University expedition to Spitzbergen (1921), where Elton carried out ecological studies of the region's animal life. Further Arctic expeditions were made in 1923, 1924 and 1930. Such experience prompted his appointment as biological consultant to the Hudson's Bay Company. In 1932 Elton helped establish the Bureau of Animal Population at Oxford—an institution that subsequently became an international center for information

on and research into animal numbers and their ecology. In the same year he became editor of the new *Journal of Animal Ecology*, launched by the British Ecological Society, and in 1936 was appointed reader in animal ecology as well as a senior research fellow by Oxford University. Elton was one of the first biologists to study animals in relation to their environment and other animals and plants. At the outbreak of World War II Elton conducted intensive research into methods of controlling rats and mice, thus conserving food for the war effort.

Éluard, Paul (Eugène-Émile Paul Grindel) (1895–1952) French poet. Born in Saint-Denis and educated in PARIS, Éluard launched the surrealist movement in the 1920s with André BRETON and Louis ARAGON. He collaborated on experimental works with Breton as well as with Max ERNST and Pablo PICASSO. His most famous books are *Les Dessous d'une vie, ou la pyramide humaine* (The underside of life, or the human pyramid, 1926) and *Capitale de la douleur* (Capital of sorrow, 1926). His first wife, Gala, from whom he separated in 1930, became famous as the wife of Salvador DALÍ. Éluard supported the Republicans in the SPANISH CIVIL WAR, joined the RESISTANCE in 1942 and identified himself with the Communist Party. He is most important as an influence on an international younger generation of writers who were inspired by the avant-garde experiments of the surrealist group to break with traditional forms.

Elvehjem, Conrad Arnold (1901–1962) American biochemist. Elvehjem, the son of a farmer, graduated from and spent his whole career at the University of Wisconsin. He obtained his Ph.D. in 1927 and served as professor of biochemistry from 1936 until 1958, when he became president of the university—a position he held until his retirement in 1962. In 1937, following discoveries by Casimir Funk and Joseph Goldberger, Elvehjem succeeded in producing a new treatment for pellagra. He also worked on the role of trace elements in nutrition, showing the essential role played by such minerals as copper, zinc and cobalt. Elvehjem was a prolific author with more than 800 papers to his credit.

Ely, Paul (1897–1975) French commander in INDOCHINA after the fall of DIEN BIEN PHU. In 1954 General Ely announced in Saigon the partition agreement reached in Geneva ending France's eight-year war in Indochina. He was chief of the French general staff from 1953 to 1961, except for brief periods during that time.

Elytis, Odysseus (Odysseus Alepoudelis) (1911–1996) Greek poet. The son of a successful manufacturer in Crete, Elytis studied law at the University of Athens but did not complete a degree there. When he began writing, Elytis changed his name because of its commercial associations. Influenced by the poet Paul ÉLUARD and the surrealist movement, Elytis published his first poems in *Ta Nea Grammata* (New letters) in 1935. He rejected the despair he found in the work of the modernist poets; his early work is characterized by a bright and hopeful tone. After fighting in Albania during World War II, he served as a literary and art critic for the newspaper *Kathimerini* (Daily). In 1948 he went to PARIS, where he studied at the Sorbonne and became acquainted with Pablo PICASSO, Henri MATISSE and others of the Paris art world. Elytis's next major work, *To Axion Esti* (Worthy it is, 1959), was an autobiographical piece alternating between prose and verse in which he explored the use of conversational and literary Greek. Elytis moved to France in 1969 to protest the 1967 coup in GREECE. His works from this time include *O Ilios o iliatores* (*The Sovereign Sun*, 1971), *To fotodendro ke i dekati tetarti omorfia* (*The Light Tree and the Fourteenth Beauty*, 1971) and *Maria Nefeli* (1978), finished after he returned to Greece. Elytis was awarded the NOBEL PRIZE in literature in 1979. (See also MODERNISM; SURREALISM.)

Embden, Gustav George (1874–1933) German physiologist. Embden was educated at the Universities of Freiburg, Munich, Berlin and Strasbourg. From 1904 he was director of the chemical laboratory in the medical clinic of the Frankfurt hospital, becoming director (1907) of the Physiological Institute (which evolved from the medical clinic) and director (1914) of the Institute for Vegetative Physiology (which in its turn evolved from the Physiological Institute). In 1918 Otto

MEYERHOF threw considerable light on the process of cellular metabolism by showing that it involved the breakdown of glucose to lactic acid. Embden spent much time in working out the precise steps involved in such a breakdown, later known as the **Embden-Meyerhof pathway**. Embden's earlier work concentrated on the metabolic processes carried out by the liver.

Emeleus, Harry Julius (1903–1993) British inorganic chemist. Emeleus was educated at Imperial College, London, and at Karlsruhe and Princeton. He returned to Imperial College in 1931 and taught there until 1945, when he moved to Cambridge University—where he served as professor of inorganic chemistry until his retirement in 1970. In collaboration with John Anderson, he published (1938) the well-known work *Modern Aspects of Inorganic Chemistry*. He also worked on fluorine, publishing a monograph on the subject in 1969: *The Chemistry of Fluorine and its Compounds*.

Emerson, Peter Henry (1856–1936) British photographer; one of the world pioneers of nature photography. His works provide an invaluable pictorial record of the British countryside prior to the full-fledged industrial development of the 20th century. Major book collections by Emerson include *Life and Landscape of the Norfolk Broads* (1886) and *Pictures of East Anglia* (1888). Emerson was the first photographer to put forward a written theoretical justification of photography as an independent art.

Emiliani, Cesare (1922–1995) Italian-American geologist. Emiliani was educated at the University of Bologna. He moved to America in 1948, obtaining his Ph.D. from the University of Chicago in 1950. After teaching at Chicago (1950–56) he moved to the University of Miami, where he was appointed professor of geology in 1963 at the Institute of Marine Science. Emiliani specialized in using oxygen isotopic analysis of microfossils from ocean sediments. Eduard Bruckner had established (1909) the long-held orthodox view that four ice ages had occurred during the Pleistocene. In his fundamental paper *Pleistocene temperatures* (1955) Emiliani produced evidence that there had been more. Using the principle established by Harold UREY that the climate of past

ages can be estimated by the ratio of oxygen 16 to oxygen 18 present in water (that is the less oxygen 18 present the colder the climate must have been), he examined the oxygen 18 content of fossils brought up from the mud of the Caribbean. By choosing fossils that he knew had lived near the surface, he could reconstruct the climatic history, and consequently identified seven complete glacial cycles.

Eminem (Marshal Bruce Mathers III) (1973–) American rap musician. Born in Kansas City, Kansas, Mathers moved to Detroit in 1985. By 1988 he had dropped out of high school before finishing his freshman year and began to pursue a career as a rapper (see HIP HOP). In 1997 Mathers gave himself the onstage nickname Eminem for the first letter in his first and last names and released his first album, *Infinite*, through FBT records, an independent company. It was not until later in 1997, when he won the *Wake Up Show's* Freestyle Performer of the Year Award and was the runner-up in the Los Angeles rap Olympics, that he began to receive positive national attention within the rap community. In 1998 Eminem released *The Slim Shady EP*, an album containing several rap hits that inspired Aftermath Records founder Dr. Dre to sign Eminem to a contract. In 1999 Dre and Eminem released *The Slim Shady LP*, which included popular singles such as "Guilty Conscience," which featured Dre as the voice of conscience and Eminem as the diabolic conscience of three individuals.

Eminem followed this with the release of *The Marshal Mathers LP* in May 2000, which immediately shot to number one on the pop charts. However, his lyrics in his *Slim Shady* and *Marshal Mathers* albums drew protests from women's groups, which objected to his indifferent references to spousal abuse, and from several groups within the gay community objecting to his use of the word *faggot*. In 2002 Eminem released *The Eminem Show*, which contained the popular singles "Without Me," followed by his acting debut in the largely autobiographical film *8 Mile*; for the film, Eminem composed the single "Lose Yourself," which won an Academy Award for best new song (2003).

Empire State Building New York City skyscraper of ART DECO design, for

many years the tallest building in the world. This structure of 1929–31 was designed by the firm of Shreve, Lamb & Harmon as an 85-floor office tower, but a pylon was added to the top, supposedly as a mooring mast for dirigibles, increasing the height to 102 stories (1,239 feet) and establishing a height record that lasted until 1972. The building has the setback form typical of tall buildings constructed in the 1920–50 era of zoning regulations and regarded as the "skyscraper style." Details are in the Art Deco mode, as are the interiors of the public spaces. The design was generally regarded as banal and commercial, but recent boredom with the INTERNATIONAL STYLE buildings of the post–World War II era has created a cult of reaction that now admires the 1930s skyscrapers, of which this is the largest and most spectacular. Its status as a tourist attraction remains undiminished.

Empson, William (1906–1984) British poet and critic. Empson was educated at Winchester and Magdalene College, Oxford, where he studied physics and English with I. A. RICHARDS, under whose tutelage Empson wrote his dissertation. This work evolved into his first critical book, *Seven Types of Ambiguity* (1930), which made his reputation and became a seminal text in 20th-century literary criticism. Empson taught in China and Japan and then became a professor of English at Sheffield. His first volume of poems, *Poems* (1935), shows the influence of John Donne. In his second volume, *The Gathering Storm* (1940), which draws on his experiences in Asia, his voice is more his own. Empson's complex poetry incorporates ideas of modern physics and mathematics and strongly influenced the writers of THE MOVEMENT. His critical works, which include *The Structure of Complex Words* (1951) and *Milton's God* (1961), are considered to be a springboard of the NEW CRITICISM, which, ironically, he attacked in a posthumously published collection of essays, *Using Biography* (1984).

END (European Nuclear Disarmament) British-based movement formed in 1980, originally seeking removal of all nuclear weapons from Europe. It became a pressure group for a reunited Europe free of Soviet or American domination.

Enders, John Franklin (1897–1985) U.S. virologist. In 1954, during his long association with Harvard University, he shared the NOBEL PRIZE in medicine or physiology with two of his former students for their development of a method for culturing the polio virus in large quantities. This procedure made possible the mass production of a safe polio vaccine. Enders conducted other research that led not only to the development of vaccines against measles, German measles and mumps but also to advances in growing tumor viruses.

Enesco, Georges (1881–1955) Romanian composer. A musical prodigy and violin virtuoso, he began his studies at the Vienna Conservatory at the age of seven. He later studied at the Paris Conservatory under Gabriele FAURÉ and Jules Massenet. He became an influential teacher, numbering Yehudi MENUHIN among his many students. Enesco toured extensively as a violin soloist and conductor, traveling throughout Europe and the U.S. As a composer, he was influenced by the folk music of his native Romania and evolved a highly personal style. His works include *Romanian Rhapsodies* (1901–02) and other orchestral works, chamber music, three symphonies and the opera *Oedipus* (1932).

Engel v. Vitale (1962) U.S. Supreme Court decision barring state-sponsored school prayer. For many years it was customary for public school children to recite mandatory prayers at the start of the school day. Critics (primarily atheists and Jehovah's Witnesses) charged that requiring the recitation of a state-designated nondenominational school prayer amounted to the establishment of religion. The Supreme Court held that such recitation was not mandatory and that children could either remain silent or be excused during the prayer. Later cases held that daily Bible readings were also unconstitutional.

Engler, Heinrich Gustav Adolf (1844–1930) German botanist. Engler studied botany at Breslau University, gaining his Ph.D. in 1866. After teaching natural history he became custodian of the Munich botanical collection and then professor of botany at Kiel University; in 1884 he returned to Breslau to succeed his former teacher in the chair of botany. At Breslau, Engler

replanned the botanic garden, ordering the plants according to their geographical distribution. In 1887 he took up the important chair of botany at Berlin and successfully reestablished the garden in Dahlem. Between 1878 and his retirement from Berlin in 1921, Engler contributed greatly to the development of plant taxonomy with his classifications, presented in such books as *The Natural Plant Families* (1887–1911) and *The Plant Kingdom* (1900–37). Much of his work was drawn from first-hand observation gained during travels through Africa, Europe, India, China, Japan and America.

English Channel Tunnel (Chunnel) A 32.2-mile tunnel running 23.6 miles under the English Channel connecting Folkestone, England, and Calais, France. The long-debated Euro-tunnel was begun in 1986 when Prime Minister Margaret THATCHER and President François MITTERRAND signed the Channel Tunnel Treaty. Tunneling was begun from both ends; the two halves of the service tunnel met on December 1, 1990. The Chunnel actually consists of three tunnels. The outer two are for high-speed trains bearing automobiles and their passengers; in the center is a connected service tunnel, which can also be used for emergency evacuation. The trains carry freight in off-hours. The largest privately financed engineering project ever undertaken, the Chunnel became the world's longest undersea tunnel. The tunnel aroused controversy. Many Britons were reluctant to surrender their island status, and many worried about the environmental impact of the tunnel. The tunnel opened in 1994.

ENIAC Acronym for Electronic Numerical Integrator And Computer. Designed by J. Presper Eckert Jr. and John MAUCHLY and built at the University of Pennsylvania in 1946, the ENIAC was the first true electronic digital COMPUTER. ENIAC occupied an entire large room and used some 18,000 vacuum tubes. It could perform calculations with a rapidity previously unheard of, although by the standards of later computers it was slow and inefficient. Because of its size and complexity, it was never commercially available. In 1951 it was superseded by the more advanced UNIVAC.

Enigma German cipher machine used to code and decode secret messages during WORLD WAR II. (See also ULTRA.)

Eniwetok Unpopulated atoll at the northwest end of the Ralik chain in the northwestern MARSHALL ISLANDS of the western Pacific Ocean. Mandated to JAPAN by the LEAGUE OF NATIONS in 1920, it was captured by U.S. forces in February 1944 during WORLD WAR II and became a naval base. In the 1940s and 1950s it was used as a site for atomic weapons testing. (See also BIKINI.)

Enniskillen bombing (November 8, 1987) The explosion of a bomb planted by the outlawed Provisional IRISH REPUBLICAN ARMY killed 11 persons and injured more than 60 others in Enniskillen, County Fermanagh, NORTHERN IRELAND. The explosion came as hundreds of people were gathering for the traditional wreath-laying ceremonies on Britain's Remembrance Day. The death toll was the highest from a single incident in the ongoing strife in Northern Ireland since 17 people were killed in a pub bombing in 1982. All of the 11 killed in the Enniskillen bombing were civilians; seven of them were retired persons over the age of 60. The following day the IRA claimed that the bomb had been intended for soldiers and police who would have been marching in the Remembrance Day parade and said that the bomb had gone off prematurely. Both British prime minister Margaret THATCHER and Irish TAOISEACH Charles Haughey, among other political leaders, condemned the bombing.

Enosis (Greek: "to unite") Greek Cypriot movement for the political union of CYPRUS and GREECE. It dates from the 19th century, having been revived in 1954 by Archbishop MAKARIOS III and opposed both by the Turkish minority on the island and by the Turkish government. TURKEY invaded and partitioned the island in 1974. (See also CYPRIOT WAR OF 1963–1964, CYPRIOT WAR OF 1974.)

Entebbe, raid on (July 3, 1976) Half-hour battle in which Israeli commandos rescued 106 predominantly Jewish aircraft passengers at Entebbe Airport, UGANDA. The plane had been hijacked by guerrillas of the **Popular Front for the Liberation of Palestine** demanding the release of 53 Arab terrorists. Twenty Ugandan soldiers, seven hijackers, three passengers and one Israeli soldier were killed. (See also Idi AMIN.)

Entente Cordiale (Anglo-French Entente) A bilateral agreement reached between the UNITED KINGDOM and FRANCE on April 8, 1904. Overcoming their traditional antagonisms, the two countries ended their colonial rivalry. The pact resolved various international disputes, principally in Egypt, which the British were to develop, and in Morocco, where the French were given free rein. Earlier, an 1890s agreement had sealed the rapprochement between France and Russia. Later, the ANGLO-RUSSIAN ENTENTE of 1907 was to cement

A mushroom cloud rises over Eniwetok after a hydrogen bomb test. (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

relations between England and Russia. These international relationships formed the basis of the TRIPLE ENTENTE that opposed the TRIPLE ALLIANCE in WORLD WAR I.

Enver Bey (1881–1922) Turkish army general. As one of the leaders of the reformist YOUNG TURKS group, Enver Bey led the rebellion in 1908. Later known as Enver Pasha, he served as military attaché in Berlin (1909–10) and sought German military support. By 1911 he was de facto ruler of TURKEY. He commanded Turkish forces in the Italo-Turkish War (1911) and the BALKAN WARS (1912). As the war minister in 1913, he commanded Turkish forces against RUSSIA in the Caucasus. After the RUSSIAN REVOLUTION, Enver Bey became involved in a “Pan-Turanian” attempt to unite Turkish people, mostly in Russia. After the Turkish defeat in WORLD WAR I (1918), Enver fled to Turkestan, where he was killed leading an anti-BOLSHEVIK revolt.

Environmental Protection Act The National Environmental Protection Act (NEPA), signed into law by President NIXON in 1970, declared it a federal policy to consider the environmental impact of government activities. By 1970 Americans had tired of the abuse of the environment and demanded the federal government assume a leadership role. The act established the Council on Environmental Quality, which sets the federal government’s environmental policy, and also the better-known Environmental Protection Agency (EPA), which enforces federal environmental laws (its director was later elevated to cabinet rank). Yet even the EPA proved not to be immune from political manipulation and scandals (see EPA-SUPERFUND CONTROVERSY).

NEPA required the federal government to prepare environmental impact statements assessing the environmental effects of any major federal projects. The EPA was given enforcement power over the Clean Air Act and the Clean Water Act and other environmental legislation that also applied to private industry, and the EPA developed national clean air and water standards. Because of this legislation and increased awareness of environmental problems, the degradation of the environment was slowed in the final quarter of the 20th century. During the first presidential

term of George W. BUSH, environmental groups complained that the federal government was failing to enforce laws designed to protect the environment.

EOKA (Ethniki Organosis Kypriakou Agonos, National Organization of Cypriot Struggle) Anti-British Greek Cypriot guerrilla movement. EOKA members of the National Guard overthrew Archbishop MAKARIOS III, precipitating the Turkish invasion and the partition of CYPRUS. (See also CYPRIOT WAR OF 1974.)

EPA-Superfund controversy Controversy involving collusion between managers of the Environmental Protection Agency (EPA) and industry during the administration of President Ronald REAGAN. (The Superfund had been established by Congress to clean up the most polluted sites in the country.) When Reagan came into office he had a mandate to reduce government regulation, so lax enforcement of environmental regulations became the order of the day. During the 1980s Congress investigated allegations that Rita Lavelle, the EPA’s assistant administrator, had given special favors to her former employer and to others. On orders from the president, EPA head Ann Burford refused to turn over subpoenaed documents to Congress; she was held in contempt of Congress. After months of stalemate Burford resigned, and Reagan fired Lavelle after she refused to resign. Lavelle later served a few months in prison for committing perjury during House hearings. The EPA eventually turned over the requested documents to congressional investigators.

Ephemeris Time See Gerald Maurice CLEMENCE.

Epstein, Sir Jacob (1880–1959) American-born British sculptor. Epstein, who was born in New York City and studied art as a young man in Paris, lived for most of his life in Britain. There he became renowned as one of the foremost creators of public works of art on the grand scale and was ultimately knighted. But his early career was not without controversy. A massive stone sculptural facade that Epstein produced for the headquarters of the British Medical Association (1907–08) was decried as an aesthetic horror. His memorial

sculpture of Oscar Wilde (1911) was similarly received. But Epstein gained ground with the artistic establishment through his famous busts of Joseph CONRAD, Albert EINSTEIN and Jawaharlal NEHRU, among other notables of the day.

Epstein brothers Julius J. Epstein (1909–2000) and his twin brother, Philip G. Epstein (1909–52), formed one of the most renowned screenplay-writing teams in the history of HOLLYWOOD. They were born on the Lower East Side of New York City, where their Jewish father ran a livery stable. After writing some comedies that were performed on Broadway, they went to work for WARNER BROS. in 1938. It was in Hollywood that the Epstein brothers made their true mark, coauthoring 20 films, including such classics as *Yankee Doodle Dandy* (1942), starring James CAGNEY, *Casablanca* (1943), featuring Ingrid BERGMAN and Humphrey BOGART, and *Arsenic and Old Lace* (1944), with Cary GRANT. After Philip’s death in 1952, Julius went on to write numerous screenplays, notably *Pete ‘n Tillie* (1972) and *Reuben Reuben* (1983).

equal employment opportunity Legally mandated nondiscrimination in employment. During the first half of the 20th century, employers typically discriminated against females and members of minority groups in hiring. In the last half of the century, Congress attempted to enforce the policy of equal employment opportunity by enacting a number of federal laws, including the Equal Pay Act (1963), the CIVIL RIGHTS ACT OF 1964, the Age Discrimination in Employment Act (1967) and the Vocational Rehabilitation Act of 1973. These laws, applying to public and private employers alike, prohibited discrimination in hiring or promotion on the basis of race, religion, national origin, sex, age or physical handicap. The federal government also established the Equal Employment Opportunity Commission (EEOC) to enforce the law by addressing workers’ complaints.

Equal Rights Amendment (ERA) An amendment to the U.S. Constitution, first proposed in 1923, to guarantee the legal equality of men and women. The U.S. Congress passed the ERA in 1972, and it was passed on to the 50 state legislatures for their

approval or rejection. However, after an intense lobbying campaign by supporters and opponents of the measure, only 35 states had ratified the measure by the 1982 deadline. This number was three short of the three-quarters majority of

38 required under the Constitution, and the amendment was defeated. The Equal Rights Amendment read: "Equality of rights under the law shall not be denied or abridged by the United States or any state on account of sex."

Equatorial Guinea (República de Guinea Ecuatorial) Equatorial Guinea consists of a mainland area (Río Muni) of 10,042 square miles on the coast of west-central Africa; and the islands of Bioko (formerly Acias Nguema, for-

EQUATORIAL GUINEA

- | | |
|------|---|
| 1885 | The mainland territory of Mbini (formerly Río Muni) comes under Spanish rule; the whole colony is known as Spanish Guinea, with the capital at Malabu on Bioko Island. |
| 1959 | The region becomes a Spanish overseas province; the African population is finally granted full citizenship. |
| 1963 | The region achieves internal autonomy. |
| 1968 | Equatorial Guinea formally proclaims its independence, with Macias Nguema Biyogo as president and Atanasio Ndong as foreign minister. |
| 1969 | Foreign Minister Ndong is accused of fomenting unrest and is arrested and reportedly killed; mass purge of Macias Nguema Biyogo's political enemies follows. |
| 1970 | PUNT is formed and declared the sole legal political party in the country. |
| 1972 | Macias Nguema Biyogo is proclaimed president for life. |
| 1973 | Under a program of Africanizing geographical names, Fernando Po is renamed Macias Nguema Biyogo, Santa Isabel is renamed Malabo, Annabon is renamed Pagalu, and Río Benito is renamed Mbini. |
| 1974 | Government launches a campaign of terror, causing nearly 100,000 citizens to seek asylum in neighboring countries. In a parallel campaign against the Catholic Church, Spanish bishops and nuns are expelled, Catholic schools and churches are closed, African nuns and priests are arrested, and Equatorial Guineans are compelled by decree to drop their Christian names. |
| 1976 | United States suspends diplomatic relations with Equatorial Guinea. |
| 1979 | President Macias is overthrown in a coup led by his nephew Teodoros Obiang Mguema Mbasogo, who sets up the Supreme Military Council with himself as president; Macias is arrested, tried on a number of charges, including treason, embezzlement, genocide, and other atrocities, found guilty, and shot by a firing squad. King Juan Carlos of Spain visits the country and receives a warm welcome, signifying the pro-Spanish and pro-Western tilt of the new regime. Relations with the United States are restored. |
| 1982 | Obiang Nguema Mbasogo is appointed president for a second term of seven years. New constitution is approved by 95% of the voters. |
| 1983 | Equatorial Guinea joins the Customs and Economic Union of Central Africa and the Central African Economic Community. |
| 1989 | Obiang is elected president in a contest in which he is the only candidate. |
| 1990 | Amnesty International accuses Equato-Guinean authorities of torturing political prisoners. |
| 1992 | A 1991 law allowing for a multiparty democracy goes into effect. |
| 1996 | President Nguema Mbasogo is reelected with 99% of the votes cast. |
| 1999 | Legislative elections dominated by the ruling Democratic Party of Equatorial Guinea are widely condemned as fraudulent. |
| 2004 | A coup plot by foreign mercenaries is foiled. |

merly Fernando Poo), Annobon (Paulu), Corisco, Elobey Granoe and Elobey Chico in the Gulf of Guinea—for a total offshore area of 10,828 square miles. A Spanish colony since 1778, the area was systematically developed after 1939. Granted partial autonomy in 1963, Equatorial Guinea achieved full independence in 1968. Francisco Macias Nguema ruled the country until 1979, when he was overthrown by his nephew Teodoro Obiang Nguema Mbasogo. Multiparty elections scheduled for 1993 were supposed to alleviate the nation's several political and economic problems. However, the 1993, 1996, 1999 and 2002 national elections failed to end opposition unrest due to widespread reports of electoral fraud in favor of the ruling Democratic Party of Equatorial Africa. In 2004 a coup attempt by foreign mercenaries was foiled.

ER Television drama series created for NBC. Premiering in 1994, the series revolved around the professional and personal trials of the medical staff at County General Hospital in Chicago,

Illinois. Initially the show focused on the activities of Dr. Doug Ross (George Clooney), Dr. Mark Greene (Anthony Edwards), head nurse Carol Hathaway (Julianna Margulies), Dr. Benton (Eriq La Salle) and intern John Carter (Noah Wyle). However, with the exception of Wyle, the premier members of the ensemble cast had left by 2002, forcing *ER* executive producers Michael CRICHTON and John Wells to introduce several new characters, such as Dr. Elizabeth Corday (Alex Kingston), Dr. Luka Kovac (Goran Visnjic), Abby Lockhart (Maura Tierney) and Dr. Gregory Pratt (Mekhi Phifer). By the end of its ninth season (2002–03) *ER* had won 18 Emmy awards, including an award for outstanding drama series (1996) and a supporting actress award for Margulies.

ergonomics Systematic study of relationship between products and human users. The forms and layout of controls and instruments, the design of finger and hand grips, and the arrangement of seating surfaces and other furniture elements to promote efficiency, comfort and physiologically optimum

forms are special concerns of ergonomic study. The term has come into wide use in the promotion of chairs, such as the Herman Miller Ergon chair designed by Bill Stumpf, and other products that are claimed to be designed to maximize human convenience and comfort in use.

Erhard, Ludwig (1897–1977) Chancellor of West Germany (1963–66). Head of an economics research institute before World War II and professor of economics at Munich University from 1945 to 1949, Erhard was a Christian Democrat member of the Bundestag from 1949 to 1966. He became federal minister of economic affairs (1949–63) and presided over West Germany's "economic miracle," its transition from wartime devastation to prosperity. Deputy chancellor under Konrad ADENAUER (1957–63), he became chancellor on Adenauer's retirement in 1963. Erhard lacked Adenauer's skill in international affairs and, fearing an economic recession, proposed a series of tax increases that were defeated in the Bundestag (1966). He subsequently resigned from office.

Erikson, Erik Homburger (1902–1994) German-born American psychologist. As a young man, Erikson studied art before turning his attention primarily to psychology as a result of undergoing psychoanalytic therapy with Anna FREUD in Vienna in 1927. Erikson then proceeded to train in psychoanalysis, specializing in work with children. Exiling himself from Nazi Germany, he came to the U.S. in 1937. He taught at the University of California, Berkeley, but was forced to leave in 1950 due to his refusal to sign a McCARTHY-era loyalty oath. For the next three decades, Erikson taught primarily at Harvard University. His first major work, *Childhood and Society* (1950), posited eight major stages of formative personality development. Erikson applied these eight stages to biographical analysis in such renowned works as *Young Man Luther* (1958) and *Gandhi's Truth* (1969). *Insight and Responsibility* (1964) continued Erikson's theoretical researches into developmental issues.

Eritrea Italian colony (1898–1941), British trust territory (1941–52), province of ETHIOPIA (1952–93) and independent nation (1993–). In 1990

ERITREA

1889	The Italian colony of Eritrea is created out of areas formerly under Ottoman control and the coastal districts of Ethiopia.
1935–36	Eritrea is used as a base for Italy's conquest of Ethiopia and becomes part of Italian East Africa.
1941	Britain wrests Eritrea from Italy and rules over the country as an occupied enemy territory under a United Nations (UN) mandate.
1950	UN calls for Eritrean federation with Ethiopia.
1952	Eritrea federated with Ethiopia for a period of 10 years after which complete union or independence to be determined by Eritrean referendum.
1961	The Eritrean Liberation Front (ELF) launches armed resistance against Ethiopian subversion of the federal provisions.
1962	Emperor Haile Selassie of Ethiopia arbitrarily dissolves the Eritrean parliament and declares Eritrea an Ethiopian province.
1970	Eritrean nationals within the ELF split and form the EPLF.
1974	Emperor Haile Selassie overthrown in a military coup to be replaced by the Dergue military committee, whose hard stand on Eritrea escalates the war, precluding a mediated settlement.
1988	In the Battle of AfAbet, Ethiopian troops suffer a serious defeat in which EPLF fighters demolish a third of the Ethiopian army.
1991	EPLF liberates Eritrea on May 24.
1992	Eritrea conducts a national referendum for independence or union with Ethiopia. Outcome confirms overwhelming vote for independence.
1993	Eritrea declares its independence on April 24.
1998	War breaks out between Eritrea and Ethiopia.
2000	Eritrea and Ethiopia sign a peace agreement.
2001	Ethiopia and Eritrea complete their troop withdrawal from the border zone; the UN continues to monitor the peace process.

the Eritrean People's Liberation Front (EPLF), one of the factions rebelling against Ethiopian control, seized the provincial capital of Massawa. After brokering an agreement with the Ethiopian government that called for a provincial referendum on independence, the province's residents provided a near unanimous approval for making Eritrea an independent state in April 1993, and Eritrea entered the UN on May 28, 1993. In 1994 Eritrea ceased to have relations with SUDAN, which it claimed was harboring terrorists trying to overthrow Eritrea's government. A year later Eritrea invaded the Yemeni island of Hānīsh al Kabīr, but withdrew its troops when an arbitration committee ruled the island belonged to Yemen. In 1998 border

clashes resulted in a civil war between Ethiopia and Eritrea that killed more than 10,000 soldiers before a cease-fire was declared in June 2000 and a peace accord was signed in December 2000. In 2003 Eritrea joined the U.S.-led coalition of the willing that entered Iraq in March 2003 and removed the regime of Iraqi dictator Saddam HUSSEIN.

Erlanger, Tage (1901–1985) Premier of Sweden (1946–69). A Social Democrat, Erlander held office longer than any other premier in a modern Western democracy. In a period of industrial growth unprecedented in Sweden, he presided over the vast expansion of the nation's welfare system while maintaining Swe-

den's neutrality in foreign affairs. (See also WELFARE STATE.)

Erlanger, Joseph (1874–1965) American neurophysiologist. Erlanger was educated at the University of California and Johns Hopkins University in Baltimore, where in 1899 he obtained his M.D. After working on the staff for a few years, Erlanger moved to the University of Wisconsin (1906) to accept the chair of physiology. In 1910 he moved to Washington University, St. Louis, where he held the chair of physiology in the medical school until his retirement in 1944. Between 1921 and 1931 Erlanger carried out some fundamental research on the functions of nerve fibers with his former pupil and colleague Herbert

GASSER. They investigated the transmission of a nerve impulse along a frog nerve. Their innovation was to study the transmission with the cathode-ray oscillograph, which enabled them to picture the changes the impulse underwent as it traveled along the nerve. They found that when a nerve was stimulated, the resulting electrical activity indicating the passage of an impulse was composed of three waves, as observed on the oscillograph. They explained this by proposing that the one stimulus activated three different groups of nerve fibers, each of which had its own conduction rate. They went on to measure these rates. Erlanger and Gasser produced an account of their collaboration in *Electrical Signs of Nervous Activity* (1937), and they were awarded the 1944 NOBEL PRIZE in physiology or medicine for their work.

Ernst, Max (1891–1976) German painter and writer. Ernst, who began his artistic career as a follower of DADA, emerged in the 1920s as one of the leading painters of SURREALISM. He was a pioneer figure in the use of collage in surrealist art, gaining fame and notoriety from his exhibition (1920) of highly unusual collage assemblages such as *Phallustrade* and *The Wet Nurse of the Stars*. Ernst was also a major theoretician of the surrealist movement, who

was influenced by the credo of 19th-century French poet Arthur Rimbaud that the true artist should make a conscious effort to disorder all of his senses. Ernst wrote, "I have done everything to render my soul *monstrous*. Blind swimmer, I have made myself see. *I have seen*." During the Nazi era, Ernst immigrated to the U.S., where he exercised a considerable influence as teacher and exemplar over the postwar generation of American painters. In 2005 the Metropolitan Museum of Art in New York City mounted a major retrospective of his work.

Ershad, Hussain Mohammed (1930–) President of BANGLADESH (1986–90). Ershad was appointed to the 2nd East Bengal Regiment of the Pakistan army after finishing Officers' Training School in 1952. He was promoted to Bangladesh army chief of staff in 1978. General Ershad was instrumental in capturing the assassins of President ZIAUR RAHMAN in 1981. In 1982 he declared martial law and assumed full power. He was elected president in October 1986, in an election boycotted by the major opposition parties. Ershad was replaced by Shahabuddin Ahmed in 1990.

Erskine, John (1879–1951) American writer, musician and educator.

Erskine was one of the most versatile and influential figures in American academia in the first half of the 20th century. He served as a professor of English at Columbia University from 1909 to 1937, where he taught numerous future writers including Carl Van Doren and Mortimer ADLER. Erskine was also a gifted concert pianist and became the president (1928–37) of the renowned Juilliard School of Music. Remarkably, Erskine also wrote a number of humorous novels, most notably the best-selling *The Private Life of Helen of Troy* (1925), as well as volumes of poetry and literary criticism. His autobiography is in four volumes: *The Names of Certain Persons* (1947), *My Life as a Teacher* (1948), *My Life as a Musician* (1950) and *My Life as a Writer* (1951).

Erté (Romain de Tiroff) (1892–1990) Russian-born ART DECO designer. De Tiroff adopted the name Erté in 1913 and created hundreds of covers for *Harper's Bazaar* magazine between 1915 and 1937. As a theatrical designer, he created costumes for musicals, films, operas and ballets, as well as for the Folies-Bergère and the ZIEGFELD FOLLIES. His lithographs, most of which featured elegant women in Art Deco fashions, became extremely popular in the 1970s and 1980s.

Ertesezek, Olga (?–1989) Polish-born founder of the U.S. manufacturer Olga Co. She designed many of the firm's products and was credited with inventing the seamless brassiere and the nightgown with the built-in bra. She was featured in a widely published series of advertisements for the firm.

Ervin, Samuel James, Jr. (1896–1985) American politician; best known for his role as chairman of the Senate committee that investigated the WATERGATE affair. A North Carolina Democrat, in 1954 he was appointed to fill a vacant seat in the U.S. Senate, where he served for 20 years, winning election in his own right four times. A conservative known for his integrity and his respect for the Constitution, he cast his votes according to his strict constructionist principles. Ervin believed that an activist federal government interfered with STATES' RIGHTS and threatened individual liberties, and he opposed

many liberal federal domestic programs and most civil rights legislation. In early 1973 Ervin was named chairman of the Senate Select Committee on Presidential Campaign Activities, known as the Watergate Committee. The Watergate hearings were broadcast on national television, and Ervin became an American folk hero as he directed the probe that played a key role in the resignation of President Nixon in August 1974. He often quoted from the Bible and the works of Shakespeare, but at one point described himself as simply "an old country lawyer." At one point during the Watergate hearings he sadly remarked, "I think that Watergate is the greatest tragedy this country has ever suffered. I used to think the Civil War was the greatest tragedy, but I do remember some redeeming features in the Civil War in that there was some spirit of sacrifice and heroism displayed on both sides. I see no redeeming features in Watergate."

Ervine, St. John Greer (1883–1971) Irish playwright and author. Born in Belfast, he was acquainted with AE, George Bernard SHAW and others associated with the ABBEY THEATRE, where Ervine's first play, *Mixed Marriage* (1911), was performed and where he served as manager in 1915. His early plays, which also include *Jane Clegg* (1913) and *John Ferguson* (1915), were realistic social dramas that examined the strife in NORTHERN IRELAND. Ervine later moved to London, where he was drama critic for *The Observer* and the *Morning Post* and continued to write plays, novels and biographies. He achieved success in the London theater with *The First Mrs. Fraser* (1929), which was followed by many other popular comedies. His biographical works include the lives of C. S. Parnell and General Booth, and the notable *Bernard Shaw: His Life, Work and Friends* (1956).

Erving, Julius Winfield "Dr. J" (1950–) American basketball player. A standout player in college, Erving signed after his junior year with the Virginia Squires of the fledgling American Basketball Association. He gave the ABA credibility and drew crowds with his dazzling moves and hang time. After leading the New York Nets to three ABA titles, he was again traded,

this time to the Philadelphia 76ers of the NBA. With Erving the team was a four-time championship finalist, taking the title in 1983. A five-time first-team All-Star, at 6 feet 7 inches he was equally adept at both small and power forward. He became only the third player in league history to amass 30,000 points. In 1993 Erving was elected to the Naismith Memorial Basketball Hall of Fame.

Esaki, Leo (1925–) Japanese physicist. Esaki graduated in physics at the University of Tokyo in 1947, where he later gained his doctorate in 1959. His doctoral work was on the physics of SEMICONDUCTORS, and in 1958 he reported an effect known as tunneling. The phenomenon of tunneling is a quantum-mechanical effect in which an electron can penetrate a potential barrier through a narrow region of solid, where classical theory predicted it could not pass. Esaki was quick to see the possibility of applying the tunnel effect, and in 1960 reported the construction of a device with diode-like properties—the tunnel (or Esaki) diode. Important characteristics of the tunnel diode are its very fast speed of operation, its small physical size and its low power consumption. It has found applications in many fields of electronics—principally computers, microwave devices and where low electronic noise is required. Esaki shared the NOBEL PRIZE in physics in 1973 with Brian JOSEPHSON and Ivar GAEVER.

Eschenmoser, Albert (1925–) Swiss chemist. Eschenmoser was educated at the Federal Institute of Technology, Zurich, where he has taught since 1956 and where, in 1960, he was appointed professor of organic chemistry. He is best known for his work in synthesizing a number of complex organic compounds. His first success came with an alkaloid that has important applications in genetic research. He also collaborated with Robert Woodward on the synthesis of vitamin B-12, which had first been isolated and crystallized by Karl Folkers in 1948. Its empirical formula was soon established, and in 1956 Dorothy Hodgkin established its structure. It took many years, with samples passing between Zurich and Harvard, before Eschenmoser and Woodward were finally able

to announce its synthesis in 1965. In 2000, he was awarded the Oparin Award.

Escher, Maurits Cornelis (1898–1972) Dutch artist. Escher was one of the modern masters of graphic art, specializing in woodcut, wood engraving and lithography. His visually striking and paradoxical works—in which surreal details and trompe l'oeil techniques abound—achieved great popularity in the 1960s and 1970s. Escher was born in Leeuwarden in northern Holland. He began his college studies in Haarlem, Holland, intending to become an architect, but soon switched to the graphic arts, to which he devoted the rest of his life. Escher lived in Italy from 1923 to 1935, and Italian settings predominate in his work of this period. He returned to Holland in 1941. His works of the last three decades of his life—such as *Reptiles* (1943), *Three Spheres I* (1945), and *Relativity* (1953)—tend toward introspective, abstract themes.

Escobar, Pablo (1949–1993) Colombian drug lord. During the 1980s Escobar created the MEDELLÍN CARTEL, named after the city that served as its center of operations. As head of the cartel, Escobar amassed billions in profits and controlled a sizable portion of Colombia's arable land, which he used to grow, refine and airlift cocaine to the U.S. In 1986 he attempted to use his resources to enter politics and offered, if he was elected, to pay off Colombia's national debt of \$10 billion. When the Colombian government responded by barring him from public office, Escobar began a guerrilla campaign against the government, assassinating policemen, government officials and political candidates, including Luis Galán, the 1989 presidential nominee of the Liberal Party. In response the U.S. dispatched military advisers to train the Colombian Search Bloc, a military unit created to capture Escobar. In 1991 the Colombian government persuaded Escobar to turn himself in; however, he was allowed to build his own jail compound, which contained many of the trappings of a country estate. In 1992 Escobar escaped from his self-made compound but was cornered and killed by gov-

ernment troops in one of his Medellín hideouts on December 2, 1993.

Esenin, Sergei Alexandrovich (1895–1925) Russian poet. Founder of the Imagist school of Russian poets. Esenin presented himself as a “peasant poet” and recited in Moscow salons wearing a peasant smock. He welcomed the revolution, without really understanding it. He married Isadora DUNCAN, the American dancer, in 1922, but they separated after a year, and he returned to Russia with an international reputation as a drunken exhibitionist. He never succeeded in adapting either to the new, urban Soviet society or to the changed peasant world; he hanged himself in Leningrad in 1925. His *Confession of a Hooligan* was published in 1918.

Esnault-Pelterie, Robert (1881–1957) French aviation pioneer and aeronautical engineer. Esnault-Pelterie became interested in rocketry in middle age. In 1927 he and banker Andre Louis Hirsch established a 5,000-franc prize to be awarded annually for the best technical book on astronautics (the REP-Hirsch Award). The first award went to German rocket pioneer Hermann OBERTH in 1928. In 1930 Esnault-Pelterie published his own classic, *L'Astronautique*, still regarded as a major work in the history of astronautics. Elected to the French Academy of Sciences in 1936, he was working on the development of a gasoline- and liquid-oxygen-fueled rocket motor when the German occupation cut short his research and forced his retirement in 1940.

Espíritu Santo Island, also known as Marina, in an autonomous group of islands formerly known as the NEW HEBRIDES but now called VANUATU; in the southwestern Pacific Ocean. A large U.S. airbase was here during WORLD WAR II. Part of an Anglo-French condominium until 1980, independence saw separatist unrest that had to be put down in 1980.

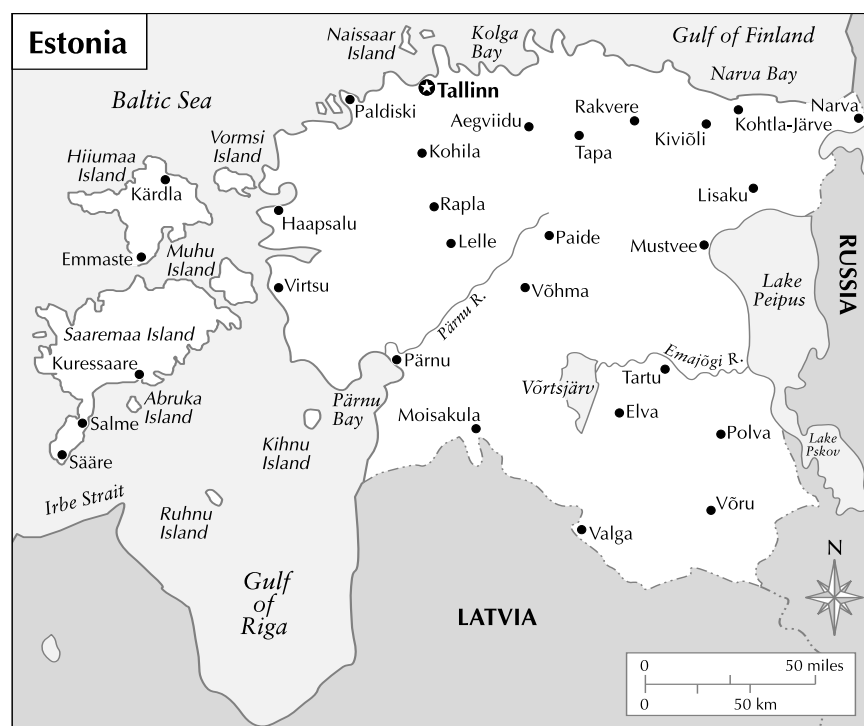

Esposito, Anthony James “Tony” (1943–) Canadian hockey player. Esposito began his career as backup goaltender for the Montreal Canadiens, then came into his own upon joining the Chicago Black Hawks. He won the

Calder Trophy as rookie of the year in 1970 and was an All-Star five times. That year, he faced his brother Phil in the Stanley Cup finals, but the Hawks lost in four straight games. Esposito was a Vezina Trophy winner three times for lowest goals-against average and finished his career with 76 shutouts and a 2.92 goals-against average. Active in the Players' Association throughout his career, he went on to a career in hockey administration.

Esposito, Philip Anthony (1942–) Canadian hockey player. Esposito began his career in Chicago, but the Black Hawks lost patience with the lumbering, slow-developing center and traded him to the Boston Bruins in 1967, thus losing one of the game's greatest players. Although he never became a fluid skater, Esposito's extraordinary balance and puck sense allowed him to score at a virtual goal-a-game rate during the 1971 season. A five-time scoring champion and perennial All-Star, he was a leader in Team Canada's last-minute triumph over the Soviet Union in 1972. In 1975 he was traded along with Carol Vadnais to the archrival New York Rangers for Jean Ratelle and Brad Park in what is regarded as the biggest trade in hockey history. At first refusing to report, Es-

posito learned to love New York and went on to become general manager and coach of the team in the late 1980s. He was named to the Hall of Fame in 1984.

Estonia Situated on the Gulf of Finland, directly south of Finland itself, Estonia is the northernmost Baltic republic and covers an area of 17,370 square miles. The territory of present-day Estonia was annexed to Russia by Peter the Great in 1709. At the end of WORLD WAR I Estonia became an independent republic, governed by dictator Konstantin Paets (1934–39). The Soviet Union annexed the country in 1940. In 1968 Estonians staged the first mass protests against Soviet occupation since World War II. By 1988 the bid for independence had reached its zenith with the mass demonstrations known as the Singing Revolution. Following the collapse of the Soviet Union in December 1991, the Russian Federation recognized the independence of Estonia. Three years later Estonia joined the EUROPEAN UNION and NATO's PARTNERSHIP FOR PEACE. In 1992 the Republic of Estonia officially came into being, and elections were held that same year. Estonia joined the Council of Europe in 1993, and the last of the Russian occupying forces left

ESTONIA	
1918	Estonia declares independence from Russia and engages in an armed struggle against both German and Russian forces.
1940	Soviets invade Estonia.
1968	First open, mass protests against Soviet occupation since the end of World War II.
1988	"The Singing Revolution": mass demonstrations by 300,000 Estonians in Tallinn, marked by singing.
1991	Estonia declares its independence and is recognized by Moscow.
1992	The Republic of Estonia is reestablished and elections are held.
1993	Estonia becomes a member of the Council of Europe.
1994	The last Russian troops leave Estonia.
2004	Estonia joins the European Union and NATO.

Estonia in 1994. Estonia joined the European Union and NATO in 2004.

Estonian War of Independence

(1917–1920) During WORLD WAR I Russian-controlled ESTONIA proclaimed independence on November 28, 1917, following the BOLSHEVIK REVOLUTION. Bolshevik troops advanced to retake the country, but the Germans occupied it. Estonia then declared independence again on February 24, 1918. Although the Treaty of BREST-LITOVSK granted independence to the Baltic states, Soviet forces invaded Estonia after Germany's defeat in renunciation of the treaty. The Estonians, with aid from a British flotilla, expelled the Soviets, and an anti-Bolshevik army from Estonia led by Nikolai Yudenich attempted to seize Petrograd (Leningrad) in October 1919. Leon TROTSKY hastily assembled a force and forced Yudenich's army to retreat to Estonia. Soviet recognition of Estonian independence came about in the Treaty of Dorpat (Tartu) on February 2, 1920. Soviet troops later occupied Estonia in 1940, when it became a Soviet republic.

Estrada, Joseph (Joseph Ejercito) (1935–) Filipino film actor and director (1957–89), mayor of San Juan

(1969–86), senator (1987–92), vice president (1992–98) and president (1998–2001). Born Joseph Ejercito in Manila, he changed his last name to Estrada when his family objected to his withdrawal from college to pursue an acting career. By 1961 he had established himself as a Filipino movie star with his role in *Asiong Salonga*, in which he played an underdog who overcame elitist opposition to triumph in the end. During a film career that included roles in 107 movies over 32 years, he generally played Robin Hood-esque characters who helped the poor at the expense of the rich.

In 1969 he used his status as a film star to win election as mayor of San Juan, a borough of the capital city of Manila. In 1987, after 17 years as mayor, Estrada was elected to the Philippine Senate. During his five years as a senator he became well known for his efforts to end the leases possessed by the U.S. for bases in the Philippines, such as Subic Bay. In 1992 Estrada was elected vice president because of his name recognition among the voters. Six years later he won election as Filipino president.

Despite some notable achievements as president, Estrada was impeached by the Filipino House of Representa-

tives in November 2000 on charges of corruption. Estrada's trial before the Senate was conducted amid massive street protests against him; the Supreme Court declared the office of president vacant on January 20, 2001, and swore in his vice president, Gloria ARROYO, as president.

ETA (Euzakadi Ta Askatasumar, "Basque Homeland of Liberty") A radical group split from the **Basque Nationalist Party** in 1959. It employs terrorist tactics. Between September 1998 and December 1999 a brief truce emerged between the ETA and the Spanish government. However, the truce ended when the Spanish government refused to negotiate with the ETA on its demand for Basque independence. In March 2006 the ETA declared a permanent cease-fire.

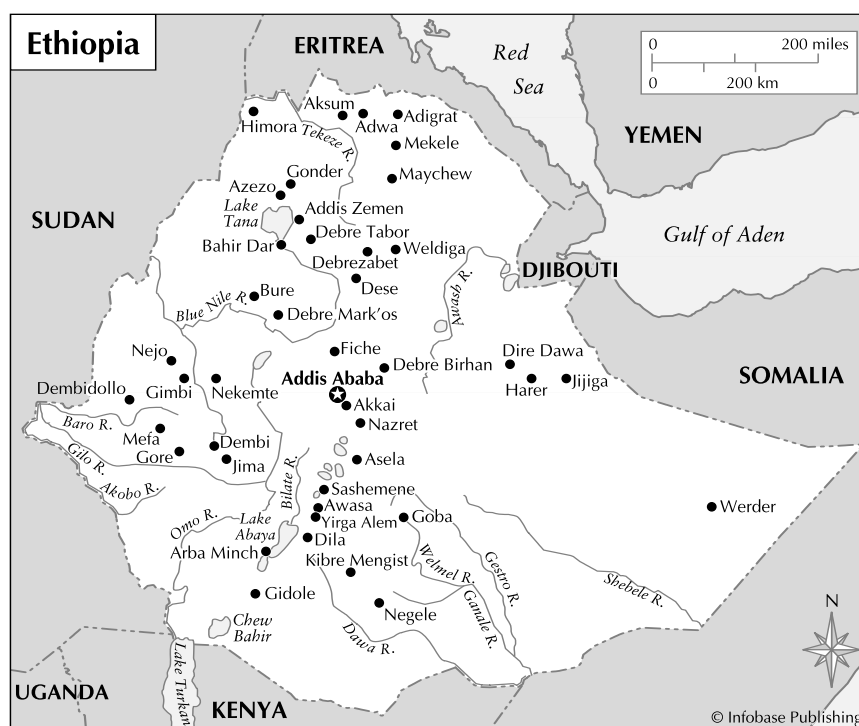

Ethiopia A country on the central plateau of East Africa; bordered by ERITREA and DJIBOUTI to the north, SUDAN to the west, KENYA to the south and SOMALIA to the east. Formerly known as Abyssinia, it is circled by mountains and has one navigable river, the Blue Nile. In 1882 ITALY, supported by Britain, took the Red Sea harbor of Aseb but was stopped from moving inland by the Ethiopian army, at Dogali in 1887. In 1889 Menelik II came to power and ended a treaty with Italy, which then claimed Abyssinia as a protectorate. Menelik II denounced the claim, and his army crushed an Italian invasion at Adwa (Adowa) in 1896. Global respect grew, but the new capital at Addis Ababa became a diplomatic hotbed in pitting the colonial powers against one another.

Italy never forgot its 1896 defeat and its interest in Ethiopia. In 1935 Benito MUSSOLINI's Fascist fist came down heavily on the medieval country, which nevertheless resisted the weapons of modern warfare for six months before succumbing. Emperor HAILE SELASSIE escaped to Britain but returned in 1941 after Allied forces defeated the Italians. Great Britain labored to upgrade the army and bureaucracy, and full sovereignty was regained after the war; in 1952 Ethiopia took control of the former Italian colony of Eritrea. Eritrea was to have been an autonomous province, but unrest grew as its status

ETHIOPIA

1928	Ras Tafari is crowned as Emperor Haile Selassie (Power of the Trinity) I.
1931–32	Haile Selassie gives Ethiopia its first written constitution and abolishes slavery.
1936	Ethiopia, never before colonized, is conquered and occupied by Italy under Mussolini.
1941	Italians are driven out by British troops during World War II.
1962	Ethiopia annexes Eritrea; secessionists intensify ongoing struggle for independence.
1974	Haile Selassie deposed; military Dergue (coordinating committee) led by Lieutenant Colonel Mengistu Haile Mariam declares Ethiopia a socialist state, institutes large-scale land reform and expands offensive against Eritrean People's Liberation Front (EPLF).
1977	Mengistu government trains peasant militia of 100,000 with Cuban assistance and airlifts them to Eritrea to fight EPLF secessionists and to Ogaden, where rebels seek union with Somalia.
1985	An estimated 1 million die of starvation; in the West Live Aid, an all-star rock telethon broadcast to 152 countries, raises \$70 million for famine relief.
1991	Rebels make key advances against Ethiopian government troops; Mengistu flees the country; talks begin on forming new, democratic government.
1993	Eritrea obtains independence from Ethiopia after referendum.
1995	New constitution adopted; Meles Zenaïe becomes prime minister.
1997	War breaks out between Ethiopia and Eritrea over disputed territory.
2002	A new border plan by an independent boundary commission is accepted by Ethiopia and Eritrea.
2005	Protests over possible fraud during the multiparty elections causes a re-vote for more than 30 seats. An international court in The Hague rules that Eritrea broke international law when it invaded Ethiopia in 1998.

was gradually eroded; Eritrean nationalist guerrillas battled the Ethiopian government throughout the 1960s and 1970s. After a cruel famine in September 1974, Haile Selassie was ousted by the military; in December 1974 Ethiopia was proclaimed a socialist state and began a closer relationship with the USSR under left-wing radical Colonel MENGISTU HAILE MARIAM. All-out war between Eritrean and Ethiopian factions started in 1975, while Somalia challenged Ethiopia's control of the Ogaden region. Intermittent famines persisted throughout the country. Rebel victories forced Mengistu to flee in 1991, ending the Marxist rule of Ethiopia. In 1993 an Eritrean referendum gave the province its independence. However, both Ethiopia and Eritrea remained embroiled in a dispute over the border town of Badme until signing a June 2000 cease-fire accord that arranged for a UN force to administer the withdrawal of Ethiopian

troops from Eritrea. In 2002 Ethiopia and Eritrea accepted a new common border provided by an independent commission. In 2005 multiparty elections were held, but protests over fraud led to re-runs for more than 30 seats. That same year an international court in The Hague ruled that Eritrea broke international law when it invaded Ethiopia in 1998.

Ethiopian-Eritrean Guerrilla War

(1961–1993) Under British control (1941–52), ERITREA became an autonomous province in a federal ETHIOPIA, giving the latter a frontier on the Red Sea. Ethiopian undermining of Eritrean autonomy led to armed resistance in 1961 by the Eritrean Liberation Front (ELF). Two additional guerrilla parties, the Eritrean Peoples Liberation Front, or EPLF (1970), and the ELF/PLF soon appeared. The rivals often fought among themselves, weakening the anti-Ethiopian effort; the war was characterized by small skirmishes. A massive military push by Ethiopia (1967) forced out thousands of Eritrean refugees. Martial law, established in 1971, famines in 1973 and 1975, the fall of Ethiopia's imperial government in 1974, reduction of Ethiopian control to Eritrean urban centers by 1977 and rebellions in Ethiopia itself—all complicated the war. Ethiopian-Soviet-Cuban fighters suffered a severe loss at Asmara in 1978. The guerrilla war ended in 1993 when an Eritrean referendum resulted in Eritrea's independence.

Ethiopian-Somali Border War

(1963–1988) SOMALIA, the union of Italian and British Somaliland in 1960, demanded additional territories on independence—in DJIBOUTI, KENYA and the Haud, partly in ETHIOPIA's OGADEN, where Somalis had grazed their herds. As early as 1963 Somalis and Ethiopians fought—Somalis rejecting Ethiopian control of the Ogaden. Discovery of oil (1973), the fall of Ethiopia's imperial government and a major revolt by Somalis in the Ogaden (1977) complicated the issue. In March 1978 Ethiopian troops, with Cuban and Soviet help, drove the Somalis from the Ogaden. The Somalis returned three months later as the Western Somali Liberation Front, and sporadic fighting along the Somali-Ethiopian border ensued. In 1988 the two countries signed

a peace treaty ending their border dispute.

ethnic cleansing An attempt by one or more ethnic groups to create ethnic homogeneity in a particular region by removing other ethnic groups from the region. Such exclusion could be the result of a peaceful transfer of peoples, as occurred between the Greeks and the Turks after the GRECO-TURKISH WAR OF 1920–1922, when GREECE agreed to accept the compulsory transfer of all Greeks living in TURKEY to Greece, while Turkey agreed to accept the Turks residing in Greece. However, the more common examples of ethnic cleansing in the 20th century were attempts to exterminate or expel by force certain ethnic minorities within states. Examples of the former include the HOLOCAUST, the genocide and forced evacuation conducted by the OTTOMAN EMPIRE against its Armenian minority during WORLD WAR I (see ARMENIA), and the attempts by CROATIA, SERBIA and the Bosnian Serbs to expel unwanted minorities from their respective areas of the former YUGOSLAVIA between 1991 and 1999.

E.T.: The Extra-Terrestrial (1982)

Movie directed by Steven SPIELBERG. It was, at the time, the most successful motion picture ever made, grossing more than \$700 million worldwide.

Euler-Chelpin, Hans Karl August

Simon von (1873–1964) German-Swedish biochemist. Euler-Chelpin was educated at the Universities of Berlin, Strasbourg and Göttingen as well as the Pasteur Institute. In 1898 he moved to Sweden, being appointed to the staff of the University of Stockholm, where in 1906 he became professor of general and inorganic chemistry. He also became director of the Institute of Biochemistry (1929), where he remained until his retirement in 1941. Although he became a Swedish citizen in 1902, he served Germany in both world wars. In 1904 important work by Arthur Harden had shown that enzymes contained an easily removable nonprotein part—a coenzyme. In 1923 Euler-Chelpin worked out the structure of the yeast coenzyme, showing that the molecule was made up of a nucleotide similar to that found in nucleic acid. Euler-Chelpin shared the

1929 NOBEL PRIZE in chemistry with Harden for this work. His son, **Ulf von Euler**, won the NOBEL PRIZE in physiology or medicine in 1970 for his work on neurotransmitters and the nervous system. Von Euler had earlier (1935) discovered the substance prostaglandin, which he named. From 1966 to 1975 von Euler was president of the Nobel Foundation.

Euratom See EUROPEAN ATOMIC ENERGY COMMUNITY.

euro Unit of currency for most of the members of the EUROPEAN UNION (EU, 1999–) designated by the symbol €. The critical economic provision of the 1991 Treaty of MAASTRICHT, the euro was the final component of the EU's roadmap for Economic and Monetary Union (EMU). This union called for the creation of a single currency issued by a newly created European Central Bank that would function throughout the EU, facilitating intra-union investment and trade by eliminating the transactional costs of currency conversion. The greatest challenge to the establishment of the euro was the problem of how to prevent the steep devaluation of some member states' old currencies as a result of their integration with the weaker currencies of other states. To guard against such a development, the EU established tight restrictions on a nation's inflation rate, national budget deficit and the ability of a nation's currency to maintain a stable value prior to incorporation into the euro. Three EU members—Britain, Sweden and Denmark—considered the merging of their currencies with the euro too great a loss of sovereignty and refused to adopt the common currency.

To regulate the inflation rate, monetary supply and convertibility of the euro, the EU established the European Central Bank (ECB) in June 1998. On January 1, 1999, the ECB and the euro officially went into operation as the official central bank and currency of the EU, respectively. However, the consequences of the reform were not immediately evident, as euro coins and banknotes did not enter into circulation until 2002. Until then, the euro only functioned as a currency in bank transfers and credit card payments. On January 1, 2002, euro coins and notes entered circulation, superceding

the national currencies of the participating states. After falling against the dollar during its first year in circulation, the euro rose sharply against the U.S. currency.

Although it became one of the most visible symbols of European integration, the euro also allows for a certain degree of national identity by the states that have adopted its use. The 1-, 2-, 5-, 10-, 20- and 50-cent euro coins (a full euro equals 100 cents) are decorated on one side by a design common to all coins and on the other side with a design specific to the country in which they were minted. (See also EUROPEAN MONETARY SYSTEM.)

Eurocorps A military organization of the EUROPEAN UNION numbering 35,000 troops. Created in 1992 under the auspices of the Western European Union, the fledgling security force of the EU, the Eurocorps represented an early concrete step toward European defense cooperation. Its original five members were Belgium, France, Germany, Luxembourg and Spain. Its headquarters are located in Strasbourg, France. It was initially thought by some observers that the Eurocorps might become a rival of the COLD WAR-era NATO alliance. However, to avoid complaints among European statesmen that the Eurocorps might undermine the American pledge to participate in the defense of the continent, the European members of the organization agreed to the creation of formal links between the Eurocorps and NATO's high command. In more recent years this fear has subsided; the Eurocorps has remained a very small military force, and became available as a Rapid Reaction Corps headquarters for both the EU and NATO.

European Atomic Energy Community (Euratom) Community formed in 1958, along with the EUROPEAN ECONOMIC COMMUNITY (EEC), under the terms of the 1957 Treaty of Rome. Its purpose is to achieve the common development and growth of the peaceful nuclear industries of its member states. Euratom is particularly active in the development of nuclear power. It accomplishes its aims by providing technical assistance, permitting the free movement of nuclear materials and equipment, concluding contracts,

setting standards for the protection of workers and the public, and establishing common procedures. Euratom became a part of the EUROPEAN COMMUNITY in 1967.

European Coal and Steel Community (ECSC) Proposed by French foreign minister Robert Schuman and formulated in the 1951 Treaty of Paris; officially founded in July 1952 by France, West Germany, Italy, Belgium, the Netherlands and Luxembourg, its goal was to unify the coal, iron and steel industries of the member countries. The organization established a single authority to encourage these industries, to eliminate tariffs and other bars to free trade and to favor a free labor market within member states. The community was extremely successful, and its achievements helped to foster other forms of European economic cooperation. The central institutions of the ECSC were merged with the EUROPEAN ECONOMIC COMMUNITY and the EUROPEAN ATOMIC ENERGY COMMUNITY in 1967, forming the EUROPEAN COMMUNITY. When Great Britain, Denmark and Ireland became members of the Common Market in 1973, they also became members of the ECSC.

European Community (EC) Collective term for three post-World War II organizations whose common aim is to create an economically integrated Europe. The EC emerged from the economic philosophy of Jean MONNET and was implemented by France's foreign minister, Robert Schuman. The member communities are the EUROPEAN ECONOMIC COMMUNITY (EEC), the EUROPEAN COAL AND STEEL COMMUNITY (ECSC) and the EUROPEAN ATOMIC ENERGY COMMUNITY (Euratom). Under the provisions of a 1965 treaty, the executive agencies of these organizations were merged in 1967, forming an integrated administrative system. The original member states were Belgium, France, Luxembourg, the Netherlands, Italy and West Germany. In 1973 Denmark, Ireland and Great Britain became members; Greece joined in 1981 and Portugal and Spain in 1986. The EC achieved, and continues to achieve as the refashioned EUROPEAN UNION (EU), its economic aims by creating a common customs tariff, attempting to

reduce economic differences between regions, abolishing restrictions on international trade, allowing the free flow of people and services among member states, aiding overseas development, promoting the movement of capital among members, establishing common agricultural goals and, through Euratom, working together to develop the nuclear power industry and other peaceful uses for nuclear energy. Indeed, there was no aspect of the economic life of Europe, including taxes, currency, transportation, antitrust regulations, health, food and much more, that was not governed to some degree by the EC. Implementing the concept of a truly economically unified Europe, the Single European Act, ratified by the community in 1987, set the close of 1992 as the deadline for the removal of all nontariff barriers among member states.

The community's main policymaking body is the Council of Ministers. With one representative from each member nation, it works closely with the Committee of Permanent Representatives. With a membership of 17 appointed by the council, the committee proposes legislation to the council and carries out the council's decisions in treaties. Both these administrative groups have their headquarters in Brussels; the European Parliament, headquartered in Strasbourg, is the community's advisory body, with a membership of over 500. Supervising its executive agencies, it has power over the budget and can dismiss the commission by the vote of a two-thirds majority. Located in Luxembourg, the European Court of Justice is the community's supreme court. With a judge from each member nation, it decides disputes among member countries that arise from community treaties or legislation. Made up of the heads of state of each member nation and formed in 1974, the European Council meets for general discussions three times a year.

In 1992 the signing of the MAASTRICHT TREATY by the EC's members led to the creation of the EU, a successor organization to the EC that increased political, economic and security cooperation among EC states. In 1999 the EU oversaw the implementation of the EURO as the sole currency among all EU nations except Britain, Sweden and Denmark.

European Defense Community (EDC) Proposed European army, international in character but with common institutions. It was originally suggested by French prime minister René Pleven in 1950. The proposal was formalized in the 1952 Treaty of Paris, signed by the six nations that formed the EUROPEAN COAL AND STEEL COMMUNITY. In spite of the willingness expressed in the treaty, signatory nations, particularly France and Italy, were reluctant to establish this kind of supranational army. The EDC was nipped in the institutional bud when the French National Assembly, largely due to its fears of a loss of sovereignty refused to ratify the Paris treaty in 1954.

European Economic Community (EEC) Also known as the Common Market, the EEC was created to integrate the economies of Western Europe through the formation of one economic market for their resources. It is the best known and most important of the three communities in the EUROPEAN UNION (EU). The EEC and the EUROPEAN ATOMIC ENERGY COMMUNITY (Euratom) were formed through the provisions of the 1957 Treaty of Rome, whose signatories were Belgium, France, Italy, Luxembourg, the Netherlands and West Germany. During the first decade of its operation, the EEC succeeded in abolishing trade restrictions, particularly tariffs, among member nations. It also formulated and put into operation a common tariff in dealing with other world nations. The EEC's success was reflected in the large increase its member states experienced in their production and in their domestic and international sales. The EEC was also responsible for developing a Common Agricultural Policy (CAP), established in 1962 to cover domestic prices paid to farmers and govern the import of all foreign foodstuffs. This community also adopted policies to permit the free flow of goods, people, services and capital among its members and to create uniform taxation. In addition, it worked to create standardized and improved social programs. Largely due to their early achievements, the EEC, Euratom and the EUROPEAN COAL AND STEEL COMMUNITY were formally merged under an umbrella administration in 1967, creating the EUROPEAN COMMU-

NITY. In 1973 the EEC admitted Great Britain (whose membership had previously been blocked by French president de GAULLE), Denmark and the Republic of Ireland as members. Norway, however, rejected a proposed membership by popular referendum in 1972. Greece joined the EEC in 1981, and Spain and Portugal became members in 1986. In addition, associate status has been granted to a number of nations. The Common Market set 1992 as the date for the abolition of trade and legal barriers among all nations of the EEC, and the deadline was met. The EEC's goal of full economic integration fell under the jurisdiction of the EU, the successor organization to the EC created by the MAASTRICHT TREATY.

European Free Trade Association (EFTA) An organization formed in 1959 to promote economic expansion and free trade; headquarters are in Geneva, Switzerland. EFTA's original seven members were Austria, Denmark, Great Britain, Norway, Portugal, Sweden and Switzerland; Finland joined as an associate member in 1961, and Iceland became a full member in 1970. All members were for a variety of political reasons originally opposed to membership in the EUROPEAN ECONOMIC COMMUNITY (EEC), which was formed two years earlier. EFTA removed all nonagricultural tariffs among member states, in a gradual reduction over a period of seven years. Unlike the EEC, member states maintained preexisting national tariffs on other imports. EFTA was less effective than the EEC in promoting European trade and providing sweeping economic reform. Denmark and Great Britain left EFTA in 1972 to join the EEC in 1973. Thereafter, the remaining six members negotiated a new agreement with the EEC, providing for mutual tariff removal and free industrial trade among all of Western Europe's major nations. In 1995 Austria, Finland and Sweden left the EFTA to join the EUROPEAN UNION.

European Monetary System (EMS) A system of financial exchange-rate controls among nations of the EUROPEAN ECONOMIC COMMUNITY; instituted in 1979. Members include Belgium, Denmark, France, Greece, Ireland, Italy,

Luxembourg, the Netherlands and Germany. After initial opposition, Britain joined, but it has been wary of full participation. The EMS sets international currency exchange rates among member states. By the late 1980s some European leaders had proposed a monetary union of all member states, in which individual national currencies would eventually be replaced by a common European currency, designated the ECU (for European Currency Unit). Supporters of this plan felt that it would improve trade among member nations; it would also be a step toward the political unification of Europe. British prime minister Margaret THATCHER strongly opposed this plan, feeling that Britain would lose its national sovereignty. Her open disagreement with leading members of her cabinet over endorsement of the plan led to her resignation in late 1990. In 1999 the EURO, the new EUROPEAN UNION (EU) currency, went into circulation as the sole currency in all EU member states except Britain, Sweden and Denmark.

European Union (EU) A supranational organization created within Europe as a result of the 1991 Treaty of MAASTRICHT (formerly known as the Treaty on European Union). The purpose of the EU was to apply the principles of economic integration developed in the 1950s and 1960s in the EUROPEAN ECONOMIC COMMUNITY (later renamed the EUROPEAN COMMUNITY [EC]) and apply them to political and social issues while deepening the economic links of the member states.

Politically, the EU partially relies on the incorporation of the 1967 EC, with the principles of intergovernmental cooperation established through the Common Foreign and Security Policy (CFSP) and the Justice and Home Affairs (JHA); collectively, these three entities are referred to as the "pillars" of the EU. While each of these pillars has the right to deal with matters within its purview, no European state has ceded its final authority to these bodies. As a result, decisions concerning the CFSP and JHA require unanimity, and both structures depend on EU members for the enforcement of their resolutions.

The principal organs of the EU are the European Commission, the Council of the European Union, the Euro-

pean Parliament, and the European Court of Justice. Of these, the European Commission is the EU's highest administrative body. It possesses the power to establish and enforce policies throughout the EU. It is also responsible for managing the EU's finances and making certain that EU policies are implemented. Unlike the European Commission, the Council of the European Union is not concerned with administrative issues. Instead, this body serves as the EU's main decision-making agency, as its 15 members directly represent each of the EU governments. Unlike the commission, which has a fairly permanent roster, the delegates to the council from each state change according to the topic of any convened meetings; for instance, if the topic is foreign relations, each nation normally sends its foreign minister. After reaching a decision, the council's instructions are transmitted to the European Commission. One limitation of the council is the voting system applied during its meetings. Though some issues can be resolved by a simple majority vote, others require qualified majority voting (QMV), in which each state is allotted a certain number of votes in proportion to its population, with a two-thirds vote required for the passage of a proposal.

While the council's members represent the governments of the EU states, the European Parliament (EP) directly represents the citizenry of the EU. Directly elected by popular vote since 1979, the members of this legislative body wield authority on a variety of issues concerning the EU. The EP has the power to reject a proposed EU budget, to force the removal of the entire European Commission with a vote of no confidence and to prevent the admission of new states to the EU. Apart from these limited powers, the parliament acts only as a consultative body and will only increase its power if the governments of the member states agree.

The last key branch of the EU is the European Court of Justice. With a court composed of 25 judges, one selected by each member state, it has the authority to issue rulings on matters of EU law; the court has established the precedent that EU law supplants the laws of its various nations, although it

has on occasion ruled in favor of national at the expense of EU law.

In economic matters the Maastricht treaty established an Economic and Monetary Union (EMU), which called for all participants to fully integrate their economies under the EU and adopt a single currency, the EURO; however, the United Kingdom, Sweden and Denmark, three signatories of the Maastricht treaty, declined to adopt the euro as their currency for fear that by doing so they would cede a vital component of their national sovereignty to the European Central Bank.

With these political and economic organs, the EU and its members have encountered difficulties on a number of issues. The requirement of unanimity, the minimal authority of the European Parliament and the restrictions placed on the Council of the European Union (on which the European Commission depends for its instructions) have all impeded the ability of the EU to act as a genuinely supranational body whose policies benefit the union as a whole. Also, the goal of greater economic integration, associated with the phenomenon of GLOBALIZATION, has provoked protests from European farmers, particularly those in France, who oppose all efforts by the EU to reform the Common Agricultural Policy (see José BOVÉ). Finally, foreign policy developments in the early 21st century revealed a sharp split within the EU. One faction, largely associated with France, Belgium, Luxembourg and, to a lesser extent, Germany, favors the adoption of policies increasingly designed to identify the EU and its members as a collection of states independent from the policies and actions of the U.S. However, other states, including the more recent inductees into the organization from eastern Europe such as Poland and the Czech Republic, as well as Britain and the Netherlands, have tended to align with American foreign and defense policies.

Since the creation of the EU, with the entry into force of the Maastricht treaty, the union has dramatically expanded its membership. Austria, Finland and Sweden joined in 1995. In 2004 the union admitted Cyprus, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia and Slovenia.

In 2005 a constitution for the EU was submitted to the 25 member states for ratification. After nine countries approved the constitution, the French and Dutch electorate decisively rejected the document, disrupting the EU's progress toward greater political integration.

Evans, Bill (1929–1980) Jazz pianist. Evans, along with BEBOP practitioner Bud Powell, helped redefine the course of postwar improvisation. After early engagements with guitarist Mundell Lowe, clarinetist Tony Scott and vanguard composer George Russell, Evans catapulted to jazz stardom in 1958 when hired by trumpeter Miles DAVIS; his collaboration with Davis for the seminal recording "Kind of Blue" (1959), which elevated MODAL JAZZ as a viable alternate to bebop, crystallized Evans's place as one of jazzdom's most significant innovators. While assimilating the bebop lexicon of Bud Powell, Evans evolved a highly lyrical and advanced harmonic approach. His greatest accomplishments were achieved in trio contexts with double bass and drums, where highly contrapuntal, interactive dialogues with bassists Scott La Faro, Chuck Israels, Eddie Gomez and Marc Johnson set new standards for the jazz piano format. Evans's rhythmic flair, consistent inventiveness and well-modulated touch also made him a superb accompanist, as his recordings with flutist Jeremy Steig, guitarist Jim Hall and singer Tony Bennett demonstrate. Evans's influence can be discerned in the work of such major contemporary pianists as Chick COREA, Herbie HANCOCK and Richard Beirach. Evans also left a body of provocative compositions, including such standards of the jazz repertory as "Waltz for Debbie," "Peace Piece," "Funkallero" and "Peri's Scope."

Evans, Robley Dunglison (1907–1995) American physicist. Evans was educated at the California Institute of Technology, where he obtained his Ph.D. in 1932. He went to the Massachusetts Institute of Technology in 1934 and was appointed professor of physics (1945). In 1940 Evans suggested that radioactive potassium 40 could be of use in geologic dating. It is widespread in the Earth's crust, has an exceptionally long half-life of more

than a billion years and allows estimates of the age of potassium-bearing rocks ranging from 100,000 to about 10 million years. This method proved to be particularly valuable as it permitted accurate dating beyond the limits of Willard LIBBY's carbon-14 technique.

Evans, Walker (1903–1975) American photographer. Born in St. Louis, Missouri, Evans began his career as a photographer in 1928. As a documentary photographer for the Farm Security Administration from 1935 to 1937, he created superbly precise photographs of the depression-era South, sharp-focused images that ranged from beautifully composed, sign-dotted facades of rural buildings to the deeply lined faces of poor sharecroppers. In 1936 he accompanied writer James AGEE on a tour of Alabama, and his strikingly dignified portraits of tenant farmers and other working families are an integral part of their highly acclaimed book *Let Us Now Praise Famous Men* (1941). Walker's other projects included a series of portraits of New York City subway riders (1938–41). Walker was an editor, photographer and writer at *Fortune* magazine (1945–65) and a professor at Yale (1965–75). His books include *American Photographs* (1938), *Many Are Called* (1966), *Walker Evans: Photographs* (1971) and the posthumous *First and Last* (1978).

Everest, Mount Mountain in the central Himalayas, on the edge of NEPAL and TIBET. At 29,028 feet, Everest is the tallest mountain in the world. After eight unsuccessful attempts, it was finally scaled on May 28, 1953, by New Zealand explorer and mountain climber Edmund HILLARY and Tenzing Norkay of Nepal. It has since been ascended by numerous expeditions. Everest was named after Sir George Everest, British surveyor of the Himalayas.

Everglades Swampy area of about 5,000 square miles in southern Florida (U.S.); it spreads from Lake Okeechobee in the north to Florida Bay and is only seven feet above sea level at its highest point. The region is surrounded by water, saw grass, islands of vegetation, coastal mangrove forests and black slime. In the 20th century southern Florida's private and com-

mercial real estate boom drastically upset the area. Drainage and construction enterprises upset the water flow into the Everglades, and plant and animal life are continually menaced. Hunting, fishing and backwoods life continue to flourish in many sections. At the southwestern end is Everglades National Park (1.4 million acres).

Evergood, Philip (1901–1973) American painter. Born in New York City, Evergood studied at Eton, Cambridge, London's Slade School, New York's Art Students League and Paris's Académie Julien. He is best known for a mixture of figurative realism in his oils and etchings. Evergood gained particular recognition for his 1930s murals, which often explored themes of social deprivation and war. These large works include the narrative Richmond Hill Public Library mural (1936–37), *Cotton from Field to Mill* (1938) for the Post Office in Jackson, Georgia, and a commission for Kalamazoo College. His later works included more symbolism and often portrayed specifically American subjects, as in *My Forebears Were Pioneers* (1940, Georgia Museum of Art, Athens), or religious imagery, for instance, *The New Lazarus* (1954, Whitney Museum, New York City).

Evers, Medgar W. (1926–1963) American worker in CIVIL RIGHTS MOVEMENT. Evers was born in Decatur, Mississippi. A graduate of Alcorn A&M University, he served in World War II and received two Bronze Stars. For the nine years preceding his death, Evers was Mississippi field secretary for the NAACP. In 1963 civil rights protests in the state were at their height, and early on the morning of June 12, Evers was ambushed and shot to death in the driveway of his Jackson, Mississippi, home, as he was returning from an integration rally at a nearby church. Blacks in Jackson held mass demonstrations on June 12 to protest the murder, resulting in 158 arrests. Ten days after the killing, Bryon De la Beckwith, of Greenwood, Mississippi, was charged with the crime, but two mistrials were declared and no conviction was ever obtained in the case. Beckwith was rearrested in 1991. In 1994, following a third trial, De la Beckwith was convicted for assassinating Evers; he died in prison.

Evert, Christine Marie (1954–) American tennis player. The daughter of a tennis instructor, she was the dominant woman player of the 1970s. She first reached the finals of the U.S. Open at the age of 16 in 1971 but lost to Billie Jean KING. She turned professional in 1972 and won more than \$4 million during the remainder of the decade. She was the U.S. Open singles champion from 1975 to 1978 and came back to win it again in 1980 and 1982. A three-time Wimbledon winner, in 1974 she shared the Wimbledon spotlight with her then-fiancé Jimmy CONNORS, winner of the men's singles title that year. While married to tennis player John Lloyd, she was known as **Chris Evert Lloyd**. Following her fifth round loss to Zina Garrison at the U.S. Open in 1989, Evert retired from professional tennis.

Evian Agreements (March 1962) Overwhelmingly ratified by referenda in FRANCE (April 1962) and ALGERIA (July 1962), the Evian Agreements ended the ALGERIAN WAR OF INDEPENDENCE fought against France since 1954 with an immediate cease-fire and a guarantee of French withdrawal by the end of the year. The talks leading up to the agreements were held in Evian-les-Bains, France; the main participants were French prime minister Georges POMPIDOU and the Algerian nationalist leader Mohammed Ahmed BEN BELLA.

Evren, Kenan (1917–) Turkish statesman and president. Evren rose through an orthodox military career and became chief of the general staff. Under his guidance, the Turkish armed forces' National Security Council (NSC) took over the government in a bloodless coup in 1980. Under the new constitution of 1982, Evren became president of TURKEY. His firm and straightforward personality has earned him respect and popularity. Known for his modesty, he denied a desire for permanent political power. Evren's term ended in 1989, and he was succeeded by TURGUT ÖZAL.

Ewing, Sir James Alfred (1855–1935) British physicist. Ewing was educated at the University of Edinburgh, where he studied engineering. In 1890 he was appointed professor of applied mechanics at Cambridge but in 1903

moved into higher levels of administration—first as director of naval education and from 1916 until his retirement in 1929 as principal and vice-chancellor of Edinburgh University. During WORLD WAR I Ewing was in charge of the cryptologists at the admiralty from 1914 to 1916. He described his work there in the posthumously published book *The Man in Room 40* (1939).

Ewing, William Maurice (1906–1974) American oceanographer. Ewing was educated at the Rice Institute, Houston, and earned his Ph.D. in 1931. He taught at Lehigh University, Pennsylvania, from 1934 until moving in 1944 to Columbia University, New York, where he organized the newly established Lamont Geological Observatory into one of the most important research institutions in the world. Ewing pioneered seismic techniques to obtain basic data on the ocean floors. He was able to establish that the Earth's crust below the oceans is only about 3–5 miles thick, while the corresponding continental crust averages 25 miles. In 1956 Ewing and his colleagues were able to show that the Mid-Atlantic Ridge constituted a mountain range extending throughout the oceans of the world and was some 40,000 miles long. In 1957, working with Marie Tharp and Bruce Heezen, he revealed that the ridge was divided by a central rift, which was in places twice as deep and wide as the Grand Canyon. Ewing also proposed, with William Donn, a mechanism to explain the periodic ice ages, but no hard evidence has yet been found to support that theory.

Ewins, Arthur James (1882–1957) British pharmaceutical chemist. Ewins went straight from school to join the brilliant team of researchers at the Welcome Physiological Research Laboratories at Beckenham. He worked on alkaloids with George Barger; in 1914, with Henry Dale, he isolated the important neurotransmitter acetylcholine from ergot. Following wartime experience in manufacturing arsenicals with the Medical Research Council, he became head of research with the pharmaceutical manufacturers May and Baker, where he remained until retirement in 1952. Under Ewins in 1939, the company produced sul-

fapyridine, one of the most important of the new sulfonamide drugs. An important later discovery was the antiprotozoal drug pentamidine (1948). He was elected a fellow of the Royal Society in 1943.

exclusionary rule A controversial rule of evidence that bars the introduction of evidence gathered in violation of a defendant's constitutional guarantees. Under the U.S. Constitution's Fourth Amendment, citizens are protected against unreasonable searches and seizures. In 1914 the U.S. Supreme Court, in the case *Weeks v. United States*, announced that citizens could bar the introduction of evidence gathered in violation of their Fourth Amendment rights. The rule was later termed the *exclusionary rule*.

Although the rule originally applied only to searches by federal officers, it was later applied to searches by state officers as well. The rule was attacked because it only indirectly deters unlawful searches; critics argue that the rule excludes potentially relevant evidence while failing to punish the police officers who unlawfully obtain the evidence. However, despite the criticism, the rule has withstood numerous proposals for its abolition.

executive privilege The discredited concept that a special legal privilege protects the U.S. president's confidential conversations. In 1973 Congress initiated an investigation of the circumstances surrounding a break-in at DEMOCRATIC PARTY headquarters during the 1972 presidential campaign. The ensuing scandal that rocked the administration of President Richard M. NIXON became known as the WATERGATE scandal, after the hotel in which the break-in occurred. When a special prosecutor subpoenaed taped transcripts of President Nixon's conversations, the president asserted that the tapes were protected by an executive privilege—similar to the attorney-client privilege—that covered the tapes' confidentiality.

In *UNITED STATES V. NIXON* (1974) the U.S. Supreme Court unanimously rejected the concept of executive privilege, ruling that the prosecutor had a legal right to the tapes. After the tapes were made public the House of Representatives voted to initiate impeachment proceedings, after which Nixon

became the first U.S. president to resign from office.

existentialism Twentieth-century school of philosophy, perhaps the most influential school of philosophical thought to have emerged in the century. Important 19th-century precursors to existentialism include German philosophers Arthur Schopenhauer and Friedrich Nietzsche and Russian novelist Fyodor Dostoyevsky, all of whom wrote of a world in which ultimate meaning was lacking and humans were called upon to confront the absurdity of existence. Another key precursive influence was PHENOMENOLOGY, a philosophical viewpoint developed largely by German philosopher Edmund HUSSERL, which stressed the epistemological necessity of viewing the world without preconceived value judgments. Existentialism holds that life has no meaning beyond that which each individual accords to it. Atheistic existentialists, such as Martin HEIDEGGER and Jean-Paul SARTRE, denied the existence of the divine. Religious existentialists, such as Martin BUBER and Gabriel MARCEL, asserted that the absurdity of life could be transcended through faith achieved by way of an existential encounter with the divine.

Exner, Virgil (1909–1973) American automobile designer usually credited with having a major role in the design on the 1947 Studebaker. Exner worked on automotive styling in the 1930s under Harley EARL at GENERAL MOTORS. In 1939 he went to work for Raymond LOEWY, eventually developing the Studebaker body that has come to be regarded as a classic of postwar American design. In 1949 he returned to Detroit to work for Chrysler.

Explorer 1 The first American satellite, launched from CAPE CANAVERAL on January 31, 1958. After the Soviet Union launched the first artificial satellite (*SPUTNIK 1*, October 4, 1957), the U.S. was eager to send its own satellite into orbit and recoup some of its scientific and national prestige—especially after the launchpad explosion of a VANGUARD rocket in December 1957. *Explorer 1* was a pointed cylinder 80 inches long and some six inches in diameter, weighing just over 18 pounds (including 11 pounds of

instruments). It achieved an elliptical orbit with an apogee (farthest point from the Earth) of 1,587 miles and a perigee (closest point) of 219 miles. *Explorer's* instruments included a Geiger counter for measuring cosmic radiation, thermometers for measuring temperatures in space and inside the satellite gauges to detect the number and effect of micrometeorites striking the satellite, and two radio transmitters to relay all this information to Earth. The instruments and experiments were designed by physicist James VAN ALLEN. Among the findings relayed to Earth by *Explorer 1* was the existence of a belt of radiation above the equator, subsequently named the Van Allen Belt. The information received from *Explorer 1* was made available to the world scientific community as part of the INTERNATIONAL GEOPHYSICAL YEAR OF 1957–1958. Over the following months, a series of *Explorer* satellites was sent into orbit. In August 1959 *Explorer 6* became the first satellite to send back television pictures of the Earth from space.

expressionism Movement in art, literature and theater that developed in GERMANY from about 1910 to 1925. Influenced by the paintings of Vincent Van Gogh and Eduard MUNCH, expressionist artists aimed at intense depictions of inner reality. Expressionism's distorted forms and often grotesquely unnatural colors led to increasingly abstract works. Wassily KANDINSKY, Paul KLEE and Oskar KOKOSCHKA were among the movement's artists. Inspired by such authors as Dostoyevsky and STRINDBERG, expressionist writers—among them playwrights Georg KAISER and Ernst TOLLER—stressed a protagonist's psychological state. Expressionism's theme of individual alienation was echoed in the fiction of Franz KAFKA and the plays of both Eugene O'NEILL and Bertolt BRECHT. Brecht's dramatic technique also included such expressionist devices as highly stylized action, dialogue and setting.

Exxon Valdez On March 24, 1989, shortly after leaving the Alaskan port of Valdez with a full cargo (1,260,000 barrels) of crude oil, the tanker *Exxon Valdez* ran aground on a reef in Prince William Sound. Over the following

days, some 11 million gallons of crude oil leaked into the sound, creating a slick more than 45 miles long—the worst oil spill in U.S. history. Much of the oil washed up on the numerous islands in the sound and on the mainland itself, causing extreme damage to local wildlife and threatening the region's fishing industry. Cleanup crews proved inadequate to cope with the magnitude of the spill, although hundreds of workers scoured the region during the next year. Meanwhile, a routine investigation had revealed that the *Exxon Valdez's* captain had been drinking shortly before the accident and that the ship was being piloted by the third mate, who was not certified to operate the ship in those waters. The state of Alaska, the federal government and environmental groups claimed that the ship's owner, Exxon, had been criminally negligent. Exxon insisted that the disaster had been a simple accident and that no safety regulations had been violated. However, in 1991, Exxon pleaded guilty to four criminal misdemeanor charges and agreed to pay a \$100 million fine—the largest fine ever assessed for an environmental crime. Moreover, the corporation agreed to pay \$900 million over the next decade (until 2000) to settle civil suits brought by the state of Alaska and the U.S. government. In 1994 a federal court returned a verdict against Exxon, ordering the company to pay \$5 billion in punitive damages. That verdict was overturned in 2001. The *Exxon Valdez* itself was towed to California, repaired and subsequently sailed under a new name.

Eyde, Samuel (1866–1940) Norwegian engineer and industrialist. Eyde was a civil engineer, trained in Berlin. Until 1900 he worked in Germany and on harbor and railroad station projects in Scandinavia. There he became interested in industrial electrochemical processes—a subject of some potential in Scandinavia because of the availability of cheap hydroelectric power. In 1901 Eyde met Kristian Birkeland, with whom he developed a process (1903) for the fixation of atmospheric nitrogen by reaction of oxygen in an electric arc. Because the **Birkeland-Eyde process** needed plentiful and cheap supplies of electricity, it

led to an explosive growth in the production of hydroelectric power. In 1900 Norway had an output of little more than 100,000 kilowatts; by 1905, production had jumped to 850,000 kilowatts. In the same year Eyde started the company Norsk Hydro-Elektrisk Kvaelfstof, with the help of French capital, to produce fertilizers by the Birkeland-Eyde process. As a result of this, Norway's export of chemicals was to treble before the start of World War I. Eyde retired from the firm in 1917. He was also a member of the Norwegian parliament.

Eyring, Henry (1901–1981) Mexican-American physical and theoretical chemist. Eyring was a grandson of American missionaries who had become Mexican citizens. He thus first came to America in 1912 as a Mexican citizen and did not take U.S. citizenship until 1935. He was educated at the University of Arizona and the University of California, where he obtained his Ph.D. in 1927. He then held a number of junior appointments before joining the Princeton faculty in 1931, becoming professor of chemistry there in 1938. Eyring moved to a similar chair at the University of Utah, holding the post until his retirement in 1966. He wrote nine books and over 600 papers and as a chemist was as creative as he was productive. His main work was in the field of chemical kinetics with his transition-state theory. Eyring also worked on the theory of the liquid state and made contributions in molecular biology.

Eyskens, Gaston (1905–1988) Belgian prime minister (1949–50, 1958–61, 1968–72). A professional economist and academic, he served in the Belgian parliament for the Christian Social Party from 1939 to 1973, leading five Belgian governments between 1949 and 1972. Eyskens's first term ended in the controversy surrounding the return to BELGIUM of King LEOPOLD III. During a later tenure in office, he oversaw the independence of the Belgian Congo (later known as ZAIRE, then as the Democratic Republic of the CONGO), but the onset of the Congolese Civil War (1960–68) forced his resignation. Eyskens also served as finance minister under several administrations.

F

Faber & Faber British publishing company. A leading publisher of modernist poetry and belles lettres in the 1920s and 1930s (see MODERNISM), Faber & Faber grew out of the Scientific Press, which had been inherited by Lady Gwyer. With the arrival of Geoffrey Faber in 1924, the company became Faber & Gwyer. In 1929 he bought out Lady Gwyer and established Faber & Faber, although Sir Geoffrey was the only Faber involved. Faber, a poet himself, encouraged his staff to foster innovative writers. T. S. ELIOT served as a director for many years, publishing such writers as W. H. AUDEN, Ezra POUND, and Stephen SPENDER. Faber died in 1961, but the company has maintained its reputation as a leading literary publisher. Other Faber & Faber authors have included James JOYCE, Edith SITWELL, Sylvia PLATH, Philip LARKIN, Samuel BECKETT, Ted HUGHES and Seamus HEANEY, to name but a few.

Fabian Society British socialist organization formed in 1884. The Fabian Society was begun by a group of middle-class intellectuals, including Beatrice and Sydney WEBB, who were committed to infusing the British system with socialistic principles of public welfare. They took their name from Quintus Fabius Maximus (d. 203 B.C.), a Roman general who avoided battles with the Carthaginians but drained them with a series of harassments instead. The Fabians rejected revolutionary tactics and felt that a long period of political evolution—

encouraged by their well-intentioned needling—was necessary for democratic socialism to take hold. The society was instrumental in the formation of the Labour Representation Committee, which evolved into the LABOUR PARTY. The Fabian Society now acts largely as the party's research and support organization. Other prominent members of the society during its history have included George Bernard SHAW (who wrote many of the tracts they distributed), Rupert BROOKE and Shirley WILLIAMS.

Face the Nation Long-running CBS television public affairs program; premiered on Sunday, November 7, 1954, with newsman Ted Koop as moderator. Over the years hosts have included Stuart Novins, Howard K. Smith, Paul Niven, Martin Agronsky, George Herman, Leslie Stahl, and Bob Schieffer. The format has always been the same: Leading politicians and other public figures answer questions from a panel of journalists. One of the most famous guests was Nikita KHRUSHCHEV, soon-to-be Soviet premier, who became something of a television celebrity in 1957 when he consented to be a guest on *Face the Nation*. Filmed in Moscow, the program aired on June 2 and was subsequently acclaimed by *Time* magazine as "the season's most extraordinary hour of broadcasting." The media experience may have served Premier Khrushchev well in 1959, in his "Kitchen Debate" in Moscow with Vice President Richard NIXON.

Faeroe Islands Island group in the North Atlantic, between the Shetland Islands and ICELAND. Colonized by Norsemen in the eighth century A.D., the Faeroes have belonged to DENMARK since 1380. Mounting patriotism in the 19th century nurtured a longing for independence, which grew during WORLD WAR II when Denmark fell to GERMANY in 1940 and Great Britain was forced to set up a protectorate. After the war, the islands were awarded self-government under the authority of Denmark.

Fagerholm, Karl-August (1901–1984) Three-time prime minister of Finland and one of its best known post-World War II political figures, Fagerholm was premier during a major crisis with the USSR in 1958; his coalition government fell within four months because of silent Soviet pressure and internal squabbling. A Social Democrat, Fagerholm was a conciliatory politician who advocated Finnish cooperation with Scandinavian nations. He served as premier three times, as speaker of the chamber five times and as a member of parliament for 36 years. He retired from politics in 1966.

Fahd bin Abdul Aziz (1923–2005) Saudi government official and king of Saudi Arabia (1982–2005). The 11th son of IBN SAUD, the man who established the kingdom of SAUDI ARABIA in 1932, Fahd effectively ruled the state from 1982 until a stroke in 1995 substantially reduced his authority and ability as a statesman.

Educated at the Saudi royal court and in Britain, Fahd was appointed minister of education in 1953. Nine years later he was named to minister of the interior, a post he held for five years until designated second deputy prime minister. He helped Saudi Arabia negotiate an agreement with the U.S. in 1974 and three years later conferred with U.S. president Jimmy CARTER about the conflict between Israel and the Palestinians.

Upon the death of King Khalid in 1982, Fahd ascended to the throne of Saudi Arabia. He continued his predecessor's efforts to make the kingdom's economy less dependent on the production and sale of oil. When Iraqi president Saddam HUSSEIN invaded KUWAIT on August 2, 1990, and appeared to be threatening Saudi Arabia as well, Fahd agreed to allow the deployment of U.S. troops along the Saudi border with IRAQ and Kuwait as part of Operation Desert Shield to deter Hussein from invading the kingdom. When Kuwait was liberated under Operation Desert Storm in the winter of 1991, Fahd led the call for reparations from Iraq to pay for the damage Hussein caused in Kuwait and for economic sanctions against Hussein's regime. When, in 1992, appeals came within and outside Saudi Arabia for the introduction of democratic reform in the kingdom, Fahd agreed to create a 60-member "Majlis al-Shura," or Consultative Council, to advise the monarch in affairs of state. Fahd also made an effort to curb Islamic extremists within Saudi Arabia who opposed the royal government. These radicals criticized the continued presence of "infidel" troops near the holiest sites of Islam and its effect on the purity of the Saudi people. In November 1995 Fahd suffered a stroke that required him to hand power over to his half brother Abdullah for one month. Although he again resumed the title of king in December, his continuing health problems relegated him to the position of a purely symbolic ruler with no actual authority. He died in 2005, and his half brother Abdullah became king.

Faid Pass Pass in the Atlas Mountains of northern Tunisia. On February 14 and 20, 1943, during the North African phase of WORLD WAR II, Ger-

man forces led by ROMMEL targeted the Tunisian mountains to their west via the Faid and KASSERINE Passes. After initial setbacks, the invading Americans counterattacked and recaptured the Faid Pass in April, concluding the last Axis offensive in North Africa.

Fairbank, William Martin (1917–1989) American physicist. Working at Stanford University in California, Fairbank specialized in experiments in low-temperature superconductivity. He also worked on research into the existence of gravity waves and the subatomic particles known as quarks. Some of his work formed the basis for an ongoing multimillion-dollar satellite project intended to test a final unproven prediction from Albert EINSTEIN's general theory of relativity.

Fairbanks, Douglas (Julius Ullman) (1883–1939) American motion picture actor and producer whose swashbuckling style and physical agility dominated 43 films from 1915 to 1934. Born in Denver, Colorado, Fairbanks began acting in the Frederic Warde Shakespeare Company. After a succession of juvenile roles on Broadway, he came to HOLLYWOOD in 1914 under contract with the newly established Triangle Film Company. For the next five years he exploited talents for comedy and physical action in dozens of peppy, contemporary comedies breezily satirizing the fads and social pretensions of the day (for example, *His Picture in the Papers*, *Wild and Woolly*,

When the Clouds Roll By). But with the unexpected success of a period drama about old California, *The Mark of Zorro* (1920), Fairbanks settled into a notable, expensively produced series of costume dramas for which he is best remembered today: *The Three Musketeers* (1921), *Robin Hood* (1922), *The Thief of Bagdad* (1924), *The Black Pirate* (1926), *The Gaucho* (1927) and others. He married Mary PICKFORD in 1920, and the couple established residence in BEVERLY HILLS in a home they named "Pickfair," the prototype of subsequent celebrity homes in the area. He retired in 1934 after his last film, *The Private Life of Don Juan*, and devoted the rest of his life to traveling and planning film projects with his son, actor and producer **Douglas Fairbanks Jr.** Apart from his inimitable pantomimic style—a blend of balletic grace and rough-and-tumble acrobatics—Fairbanks was a powerful force in the film industry. With Pickford, Charles CHAPLIN and D. W. GRIFFITH, he formed UNITED ARTISTS in 1919. *The Black Pirate* introduced Technicolor to the commercial arena. He also served as the first president of the Academy of Motion Picture Arts and Sciences. He died of a heart attack in 1939.

Fair Deal President Harry TRUMAN's domestic program. Following President Franklin ROOSEVELT's death, Vice President Truman assumed the presidency in 1945. After the end of WORLD WAR II, Truman sought to continue and extend the programs initiated by

Douglas Fairbanks and Mary Pickford at their California estate, *Pickfair* (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

FDR's NEW DEAL reforms. Although Truman put forward his domestic program shortly after assuming office, he first used the term *fair deal* in his 1949 State of the Union address. The Fair Deal proposals centered on a full-employment law, a higher minimum wage, fair employment practices and extension of the Social Security program. Truman also called for a national housing program to eliminate slums, better price supports for farmers and increased aid to education. Although much of the program was enacted, the results were less dramatic than the New Deal reforms. Shortly after Truman's reelection in 1948 the KOREAN WAR diverted attention from the Fair Deal program.

Fair Labor Standards Act The Fair Labor Standards Act (1938), more commonly known as the Wage-Hour Law, prohibits oppressive child labor, establishes maximum working hours and fixes a federal minimum wage for many workers. Although Congress had made earlier attempts at regulating wages and hours in private employment, the Supreme Court had struck down all prior laws as beyond congressional power.

The act outlaws oppressive child labor, which includes any labor for a child under 16 years of age and labor that is hazardous to the health of a child under age 18. It establishes 40 hours as the maximum workweek, unless overtime pay is paid at one and one-half times the normal wage. The act also sets a minimum wage, which has been gradually increased over the years. The wage and hour rules do not apply to administrative or professional workers, outside sales representative and certain service and retail workers.

Faisal (1906–1975) King of Saudi Arabia (1964–75). Faisal served as prime minister from 1953 to 1964, before succeeding his brother, Saud as king. He used SAUDI ARABIA's oil wealth to transform the country into a modern nation. In the early 1970s, following the ARAB-ISRAELI WAR OF 1973, he directed the OPEC oil embargo against the U.S. to show his displeasure with America's support for ISRAEL. Faisal was assassinated by his nephew, Prince Faisal ibn Musad Abdel Aziz. He was succeeded

by his half brother, Crown Prince Khalid Abdel Aziz Al Saud.

Faisal I (1885–1933) King of Iraq (1921–33). Third son of Husein Ibn Ali of Mecca, he was educated in Constantinople. After serving with the Turkish forces in Syria during WORLD WAR I, he left the Turkish army and joined T. E. LAWRENCE in the Arab revolt and entered Damascus with Lawrence in 1918. Becoming king of SYRIA in 1920, within months he was forced to abdicate by the French. Faisal was elected king of IRAQ in 1921 under the British mandate, and he maintained a pro-British policy while obtaining Iraq's independence in 1932. He died a year later and was succeeded by his son, Ghazi.

Faisal II (1935–1958) King of Iraq (1939–58). Grandson of FAISAL I, he assumed the throne upon the death of his father, King Ghazi. Educated at Harrow, he ruled under the regency of his uncle, Emir Abdul Ilah, until his 18th birthday. During his reign he and his cousin, King HUSSEIN of Jordan, attempted to form a federation of their two nations. Faisal was killed on July 14, 1958, in a revolution led by Abdul Karim KASSEM, who overthrew the monarchy and proclaimed IRAQ a republic.

Falange Spanish extremist political group that favored nationalism and a fascist-type political and economic structure. It was founded in 1933 by José Antonio Primo de Rivera, son of the former Spanish dictator Miguel PRIMO DE RIVERA. After José Antonio's execution by Spanish Republicans in 1936 at the start of the SPANISH CIVIL WAR, the party moved closer toward a FASCISM inspired by MUSSOLINI. General Francisco FRANCO organized the party into the only legal political movement in Nationalist SPAIN. The Falange under Franco's leadership ruled Spain for many years, but in later years Franco moved away from its ideology. The Falange's influence declined considerably, and it was formally abolished on April 1, 1977.

Falkland Islands (Spanish: Islas Malvinas) Cluster of 200 islands in the South Atlantic, 300 miles east of the Strait of Magellan; now a depend-

ent territory of the UNITED KINGDOM. Discovered and claimed by John Davis in 1592, it was colonized from 1765 to 1774, and the islands have been continuously occupied since 1833. ARGENTINA also claims the islands, although it failed at colonizing them between 1829 and 1833. The remote islands were the site of a strategic naval battle during WORLD WAR I when on December 8, 1914, a British naval force shattered the German Pacific squadron, which had approached from the Straits of Magellan. In early April 1982 Argentina, asserting its claim to the islands, seized them by force. Great Britain quickly sent a large task force to recover the Falklands and set up a "total exclusion zone" around the islands. In late April the British recovered South Georgia, a chain of islands some 800 miles east of the Falklands, then moved on to attack the main islands. The Argentine cruiser *General Belgrano* and the British destroyer *Sheffield* were sunk, with much loss of life. In May the British established a beachhead on East Falkland. Darwin and then Stanley were secured, and by June 22 the British had triumphed. Although diplomatic relations have since been reestablished between Great Britain and Argentina, there has been no discussion of Britain's continued sovereignty in the islands.

Falkland Islands War (Islas Malvinas War) (1982) The dispute over control of the FALKLAND ISLANDS dates back to the 17th century. In 1833 the British reinforced their claim by deporting Argentine inhabitants, but Latin American nations supported the Argentine claims. Negotiations ended unresolved on February 27, 1982; Argentine forces invaded the Falklands on April 2, 1982, securing all points. Diplomatic efforts to defuse the crisis failed, British prime minister Margaret THATCHER dispatched a large naval task force under Rear Admiral John Woodward. The Argentine air force inflicted extensive damage on the British fleet. On May 21, 1982, British infantry landed at Port San Carlos led by Major General Jeremy Moore; after establishing a bridgehead they moved inland, forcing the surrender of the Argentines under General Mario Menéndez at Stanley on June 14, 1982. The British

victory boosted Thatcher's government, while bringing down Argentine president Leopoldo Fortunato GALTIERI.

Fall, Albert (1861–1944) U.S. secretary of the interior involved in the TEAPOT DOME SCANDAL. A rancher, Fall was elected senator from New Mexico. When Warren Harding became president in 1921 he appointed his friend Fall to the Interior cabinet post. In 1922 Fall secretly leased the Navy oil reserve lands at Elk Hills, California, and Teapot Dome, Wyoming, to oil companies controlled by his crony Edward Doheny and Harry Sinclair. About the same time he received \$100,000 from Doheny and a \$260,000 "loan" from Sinclair. When the leases were revealed, Fall at first explained the \$100,000 payment as a loan from an eccentric millionaire named Edward McLean, who promptly denied making any such loan. Fall eventually admitted the source of the funds. The press had a field day when Doheny termed the \$100,000 payment "a mere bagatelle." Fall eventually went to prison for one year but emerged an invalid until his death in 1944.

Falla, Manuel de (1876–1946) Spanish composer. Born in Cádiz, he studied at the Royal Conservatory in Madrid and with composer Felipe Pedrell. Living in Paris from 1907 to 1914, he met DEBUSSY, DUKAS and RAVEL and was somewhat influenced by their impressionist style. He settled in Granada in 1921, living there until 1939 when he moved to Argentina, where he died. Falla's music is brilliantly Spanish in character. An expert on flamenco, he succeeded in capturing its driving rhythms while incorporating the brilliance and color of his homeland into the classic structure of his compositions. His most celebrated works include the opera *La vida breve* (1913); *Nights in the Gardens of Spain* (1911–15), which symphonically evokes Granada; and his most famous compositions, the ballets *El amor brujo* (1914–15) and *The Three-Cornered Hat* (1917). He also created many piano pieces, songs, orchestral works, the guitar solo *Homenajes* (1920–39) and *La atlántida*, a massive cantata unfinished at his death and completed by his ex-pupil Ernesto Halffter.

Fall Gelb (German: "yellow case" or "yellow plan") "Fall Gelb" was the code name for the German invasion of France, Luxembourg and the Low Countries (Belgium and the Netherlands) in May–June 1940. In broad terms, the plan of attack was similar to the German plan of World War I, the SCHLIEFFEN PLAN. However, it was much better executed. The Germans were well organized and were able to use their superiority in planes and tanks to overrun France in six weeks. However, they failed to destroy the British and French armies at DUNKIRK.

Fallingwater Famous house by Frank Lloyd WRIGHT at Bear Run, Pennsylvania, designed in 1936 for the Kaufmann family of Pittsburgh. Wright placed dramatic concrete cantilevers over a rocky waterfall in a wooded, rural site. The house is generally regarded as one of Wright's most striking masterpieces. Its dramatic form and the charm of its interiors are universally admired. It is again open to the public following a three-year restoration, begun in 2001, to strengthen the main cantilever.

Falun Gong A largely Chinese, but increasingly international, quasi-religious movement organized in the early 1990s by Hongzhi Li, a Chinese citizen. A union of traditional Chinese breathing exercises and physical regimens with Taoist and Buddhist philosophies, Falun Gong members describe their movement as nonhierarchical and consisting largely of informal groups of individuals who collectively seek to enhance and preserve their physical and psychological health through proper exercise and lifestyle habits. The movement continued to gain participants throughout the 1990s, and in April 1999 held a meeting of more than 10,000 of its members in Beijing, China. The increasing size of Falun Gong and the unregulated nature of the movement alarmed the Chinese government, which outlawed the movement in 1999 and arrested and imprisoned many of its practitioners.

Falwell, Jerry (1933–) American fundamentalist Christian preacher, televangelist and political activist. While a student at Lynchburg College, Virginia, Falwell became a "born-again" Christ-

ian; after graduating from a Baptist Bible college, he started his own church in Lynchburg. He took to the television airwaves with a weekly program, *The Old Time Gospel Hour*, which was eventually broadcast over some 350 stations throughout the U.S., and gained a large following. In 1979 Falwell founded the **Moral Majority**, a grass-roots conservative lobbying group that was influential throughout the 1980s. The Moral Majority was formed to counter what Falwell and his followers saw as a rising tide of permissiveness, both in politics and in everyday life. Falwell stressed traditional values and scorned contemporary liberal movements; he was a strong supporter of Ronald REAGAN and other conservative candidates in 1980. Falwell disbanded the Moral Majority in 1989, saying that the organization had achieved its goal of getting conservative Christians involved in politics. He subsequently devoted himself to his Lynchburg ministry. Falwell came under criticism for his statement following the SEPTEMBER 11, 2001, terrorist attacks that implied that the attacks were a punishment from God for the actions of groups such as the ACLU, homosexuals and secularists.

Fangio, Juan Manuel (1911–1995) Argentine race car driver who dominated Grand Prix auto racing during the 1950s. Five-time world Grand Prix champion, Fangio won 16 Grand Prix races during the decade. After his racing career ended he became president of the Argentine branch of Mercedes-Benz.

Fang Lizhi (1937–) Chinese astrophysicist. Fang's name became internationally known in early 1987 when he was accused by the Communist Party of instigating student demonstrations for general democratic reforms. Fang was expelled from the party for promoting "bourgeois liberalization," but he retained his academic posts and in January 1988 was promoted from fourth- to second-grade academician of the Chinese Academy of Sciences. Dubbed by some the Chinese SAKHAROV, Fang does not want to be considered a dissident and believes that China will eventually become democratic. He and his wife took refuge in the U.S. embassy in Beijing following the army crackdown in June

1989; they later moved to the U.S. (See also TIANANMEN SQUARE MASSACRE.)

Fanon, Frantz Omar (1925–1961) Martinique-born psychiatrist and social critic. Fanon, a black raised under French colonial rule, was seared as a youth by racism and the cultural prejudices of colonialism. He examined the psychological and political significance of these early experiences in his first major work, *Black Skin, White Masks* (1952), which argued that white colonialism imposed an existentially false and degrading existence upon its black victims to the extent that it demanded their conformity to its imperialistic social values. In 1953 Fanon began to practice in a psychiatric ward in Algeria and soon allied himself with the Algerian liberation movement that sought to throw off French rule. In his subsequent writings—*Studies in a Dying Colonialism* (1959), *The Wretched of the Earth* (1961) and *Toward the African Revolution* (1964)—Fanon argued for violent revolution as the only means of ending colonial repression and cultural trauma in the Third World.

Fantasia Classic Walt DISNEY motion picture. *Fantasia* combined the talents of conductor Leopold STOKOWSKI and Disney, excerpts from classical music and visual interpretations by the Disney animators. Although it lost money after its premiere on November 13, 1940, at the Broadway Theatre in New York (the location of the premiere of Disney's *Steamboat Willie* in 1928), it has since been frequently revived and was accorded cult status by audiences in the 1960s. Stokowski recorded the eight classical selections in the Disney Hyperion Studios and at the Philadelphia Academy of Music. The sequences and their visual interpretations were in the following order: 1) "Toccata and Fugue in D minor," by J. S. Bach—abstract shapes shift and change through a universe of freely mixing colors; 2) "The Nutcracker Suite," by Tchaikovsky—flowers and fairies twinkle in the muted twilight; 3) "The Sorcerer's Apprentice," by Paul DUKAS—MICKEY MOUSE brings to life a bunch of sinister brooms; 4) *Le Sacre du printemps* (*The RITE OF SPRING*), by Igor STRAVINSKY—dinosaurs galumph about a primeval landscape; 5) the Sixth Symphony ("Pastoral"), by Beethoven—

cupids, nymphs and satyrs cavort about Mount Olympus; 6) "Dance of the Hours," by Ponchielli—hippos and alligators whirl in a mad ballet; 7) "Night on Bald Mountain," by Mousorgsky—an amphibian creature presides over an unholy bacchanale; 8) "Ave Maria," by Schubert—a pilgrim's procession greets the dawning light. Not merely a tour de force of state-of-the-art animation, it was a technical innovation in sound. Stokowski used a nine-track sound system that in some theaters was reproduced by a number of sound horns placed behind the screen and around the walls. This "Fantasound" anticipated stereophonic sound. Disney's attempt to popularize classical music has been both praised and damned by critics. "Gee," Disney allegedly said after viewing the "Pastoral" sequence, "this'll make Beethoven!" Which perhaps accounts for the extra twinkle in Mickey's eye—provided by animators Fred Moore and Les Clark, who placed pupils in his eyes for the first time.

Farabundo Martí National Liberation Front (FMLN) Leftist guerrilla movement in EL SALVADOR in opposition to the government (1972–89) and subsequently a political party (1992–). Formed in opposition to the ruling party in El Salvadoran politics, the Party of National Conciliation (PCN), the FMLN waged a guerrilla war against the government and its military forces in response to the PCN's nullification of the 1972 presidential election, which was won by a coalition candidate supported by the Christian Democratic Party (PDC) and the National Revolutionary Movement (MNR). The FMLN continued to wage covert warfare against right-wing death squads, some of which were supported by some Salvadoran governmental officials. Alfredo Cristiani, the leader of the Nationalist Republican Alliance (ARENA), negotiated a truce with the FMLN in 1991 that led all sides to cease fighting on February 1, 1992. The FMLN was drawn into the COLD WAR in its last years, as it received arms shipments from CUBA and the Soviet Union; this caused American president Ronald REAGAN to label the movement communist and provide the Salvadoran government with military aid a means of suppressing it.

When the conflict ended the FMLN transformed itself into a political party and led a leftist coalition intent on gaining power in El Salvador. Its main competition came from ARENA, a rightist umbrella political party formed in 1982 that gained control of El Salvador seven years later. In the 2000 national legislative elections FMLN cut into ARENA's lead, winning more seats than its competitor for the first time (31 to 29), although ARENA managed to hold on to political control through forming a coalition with the third-place PCN.

Far Eastern Republic (1920–1922) The Far Eastern Republic served as a buffer state between Soviet Russia and Japan. One of the first "people's democracies," it was annexed by the USSR after the Japanese left Vladivostok.

Fargue, Léon-Paul (1876–1947) Fargue was an enduring force in the various French poetic movements of the first half of the 20th century. In his earliest verse of the 1890s, he allied himself with the symbolist circle. *Tan-crède* (1894) is his major work of this period. In the years prior to World War I, Fargue was influenced by cubist poetics, as is evident in *Poèmes* (1912) and *For Music* (1918) (see CUBISM). His later collections include *Espaces* and *Sous la lampe* (both 1929). A noted raconteur, Fargue was acquainted with most of the major French literary figures of the day. His memoirs, *Le Pignon de Paris* (1939), remain a key source work of the period.

Faris, Muhammed (1951–) Syrian cosmonaut-researcher. The first Syrian in space (July 22–30, 1987), Faris spent six days aboard the Soviet space station *MIR* after being launched and landed there by the SOYUZ TM-3 spacecraft. A pilot in the Syrian air force, Faris, with Munir Habib, was one of two Syrians to be trained for the mission in the Soviet Union's Star City complex.

Farkas, Bertalan (1949–) Hungarian cosmonaut-researcher. The first Hungarian citizen to make a space-flight, Farkas, a skilled air force pilot, was aboard Soyuz 36 (May 1980).

Farley, James A. (1888–1976) American politician. A life-long Democrat,

Farley rose through the party ranks in his native New York, becoming state DEMOCRATIC PARTY chairman. In this position he managed Franklin D. ROOSEVELT's electoral races for governor and finally for president in 1932. After managing Roosevelt's landslide reelection in 1936, Farley was able to quip "As goes Maine, so goes Vermont." Roosevelt appointed Farley postmaster general. Farley, who also became chairman of the national Democratic committee, was responsible for building grassroots enthusiasm for Roosevelt's NEW DEAL reform program. In 1940, however, Farley and Roosevelt had a falling out—perhaps over Roosevelt's plan to run for a third term—and Farley quit his twin national posts. He became an executive with the Coca-Cola Corporation but remained active in politics until his death.

Farnsworth House Famous project of Ludwig MIES VAN DER ROHE, weekend house beside the Fox River near Plano, Illinois, built from 1945 to 1951 for Dr. Edith Farnsworth. The house is an ultimate example of the architect's effort to reduce building to minimal and universal terms. It consists of floor and roof planes supported by eight steel columns placed along their outer edges, with an all-glass rectangular enclosure that extends about two-thirds of the building's length. The interior is totally open except for a small rectangular block enclosing baths, utilities, and storage. Generally regarded as one of Mies's finest works, the house was unfortunately the cause of a bitter and notorious conflict between architect and client. The design seems to have been the inspiration for the equally famous Glass House of Philip JOHNSON at New Canaan, Connecticut.

Farouk (1920–1965) King of Egypt (1938–52). Farouk attained his majority in 1938 and ousted the WAFD government of Nahas Pasha, who had ruled following the death of Farouk's father in 1936. He tried to launch schemes of land reform and economic advancement, but corruption was rife, and his popularity rapidly dwindled. Strains in relations with Britain during and after WORLD WAR II and failure of the army in PALESTINE (1948) focused criticism against him, and he was

forced to abdicate as a result of a military coup in 1952.

Farr, Tommy (1914–1986) Welsh boxer. After winning the British heavyweight crown, Farr nearly took the world heavyweight title from Joe LOUIS in an August 1937 match at Yankee Stadium. In that title defense by Louis, Farr became the first of only three challengers to go the 15-round distance. Farr fought professionally from 1926 to 1953, winning 80 of 125 fights.

Farrand, Clair Loring (1895–1981) American electronics engineer and inventor. A pioneer in the radio industry, Farrand invented the radio loudspeaker. He worked with WARNER BROS., developing sound, color and cinematography technologies. He also founded and headed several companies, which together eventually held more than 1,000 patents on devices ranging from B-52 bombsights to simulator windows used in the U.S. space program.

Farrar, Geraldine (1882–1967) American opera singer. A great soprano of the early 20th century, Farrar made her debut with the Berlin Royal Opera in 1901 as Marguerite in *Faust*. After successful performances throughout Europe, she made her debut with the Metropolitan Opera in 1906 as Juliet. In 1907 she sang the title role in the American premiere of PUCCINI's *Madama Butterfly*, the role with which she became most identified. Other roles for which she was famous were Carmen and Tosca. She was a star of the Met until her retirement in 1922 and appeared in many world premieres, such as Paul DUKAS's *Ariane et Barbe-bleue* (1911). In addition, she acted in more than a dozen films, including Cecil B. DEMILLE's *Maria Rosa* (1915). She went on several concert tours before finally giving up public life to pursue philanthropic works.

Farrell, James Thomas (1904–1979) American novelist. Farrell was born in Chicago and worked at a variety of jobs to finance his education at the University of Chicago and later New York University. A naturalist writer, he is best known for his trilogy consisting of the novels *Young Lonigan*

(1932), *The Young Manhood of Studs Lonigan* (1934) and *Judgement Day* (1935). The novels portray Studs Lonigan, a poor Irish Catholic, from his childhood through his various attempts, some illegal, to get ahead and ultimately, his death from a heart condition aggravated by poverty. Farrell somberly depicts Chicago during the GREAT DEPRESSION and the deadening effects of poverty, both physical and spiritual. His writing has been compared to that of Theodore DREISER, whose work Farrell edited in *A Dreiser Reader* (1962). Other works include *The Collected Poems of James T. Farrell* (1965), *The Dunne Family* (1976) and *The Death of Nora Ryan* (1978).

Farrell, Suzanne (1945–) American dancer. One of the outstanding ballerinas of the 1960s–80s, she is most closely identified with the works of George BALANCHINE. Farrell joined the NEW YORK CITY BALLET in 1961 and quickly became Balanchine's muse, creating roles in many of his ballets, such as *Don Quixote* (1965) and *Jewels* (1967). From 1970 to 1974 she was the star ballerina with the Ballet of the 20th Century and created roles in such ballets as *Sonata* (1971) and *Nijinsky, Clown of God* (1971) by Maurice BÉJART. Returning to NYCB in 1975, she continued to create roles in Balanchine ballets, such as *Vienna Waltzes* (1977). She retired from dancing in 1989.

fascism Political ideology and form of government that emphasizes a strong one-party dictatorship (often embodied in a charismatic leader), extreme militarism and the glorification of the state. Fascist governments seek to instill uniformity and obedience in the populace, which is often manipulated by means of PROPAGANDA and coerced by secret police and informers. Unlike COMMUNISM, which professes to serve the people and to be an international movement, fascism makes little pretense about its dictatorial character or its nationalist and often racist aims. Fascism also allows privately owned industries, although there is some state regulation of the economy. In other respects, however, fascism and communism have generally proved to be merely two sides of the same totalitarian coin. Most 20th-

century fascist governments have arisen during severe political and economic crises as people looked for simple, bold solutions to complex social problems. The two main manifestations of fascism in the 20th century occurred in ITALY under Benito MUS-SOLINI from 1922 to 1945 and in GER-MANY under Adolf HITLER from 1933 to 1945. (However, fascism and NAZISM are not technically equivalent.) Military regimes incorporating some aspects of fascism have also operated in SPAIN (under FRANCO and the FALANGE, 1939–75), HUNGARY (during WORLD WAR II), ROMANIA (again during WORLD WAR II, under ANTONESCU and the Iron Guard), CHILE (under General PINOCHET, 1973–89) and elsewhere. There have also been fascist-style political parties in FRANCE, the United Kingdom (led by Oswald MOSLEY) and other democratically governed countries, but these have had limited appeal. While fascism proved popular in certain places at certain times during the 20th century, it has not proved a durable ideology. At most times and in most places, *fascist* and *fascism* have been used as pejorative terms.

Fassbinder, Rainer Werner (1946–1982) German film director and actor. Fassbinder was one of the most prolific and controversial directors of the postwar era. He began his career in the theater, working with the avant-garde Anti-Theater in West Germany in the 1960s. Over a 13-year film career that began in 1969, Fassbinder completed an astonishing 41 films, for most of which he wrote the screenplays and appeared as an actor. Left-wing in his politics and a self-proclaimed homosexual, Fassbinder aroused strongly partisan or hostile feelings among cinema audiences. The political and social corruption of postwar Germany was a major theme in his films. Among Fassbinder's best-known films are *The Marriage of Maria Braun* (1979), *Lola* (1981) and *Veronika Voss* (1982). Fassbinder also directed a critically acclaimed 15.5-hour epic, *Berlin, Alexanderplatz* (1979).

Fast, Howard Melvin (1914–2003) American novelist, playwright and screenwriter. Fast is best known for his

popular historical novels, which include *Two Valleys* (1933), written when he was 18; *Spartacus* (1951), which he first published privately and for which he later coauthored the screenplay with Dalton Trumbo (1960); and a trilogy with more modern themes—*The Immigrants* (1977, televised 1979), *The Second Generation* (1978) and *The Establishment* (1979). Fast was a member of the Joint Anti-Fascist Refugee Committee and as a result he was called before the HOUSE UN-AMERICAN ACTIVITIES COMMITTEE. Following his refusal to cooperate with the committee, he was jailed for a period in 1950. Many of Fast's novels have been adapted for film and television. Other works include the plays *The Hammer* (1950) and *The Crossing* (1962); the screenplays *The Hill* (1965) and *The Hessian* (1971), which were both based on his novels of the same titles; and the novels *The Dinner Party* (1987), *The Pledge* (1988), *The Confession of Joe Cullen* (1989), *An Independent Woman* (1997), *Redemption* (1999) and *Greenwich* (2000).

Fatah Revolutionary Council Palestinian terrorist organization founded in 1974 by ABU NIDAL. It was a radical breakaway group from Yasir ARAFAT's al-Fatah and the PALESTINE LIBERATION ORGANIZATION (PLO). The council received financial, military and intelligence aid from East Germany, Poland, North Korea, Iraq, Syria and Libya. Its targets included Israel, Westerners, Arab moderates and members of rival Palestinian organizations. At its peak during the late 1970s and early 1980s, the council had some 400 members operating in tightly-knit secret cells in the Mideast, Europe and Asia, plus more than 1,000 Palestinian recruits in training. It claimed more than 900 victims in at least 20 countries, including 56 people killed in the hijacking of an Egyptian airliner in 1985, 21 in the bombing of an Istanbul synagogue in 1986 and several dozen Arab diplomats and PLO officials assassinated in various operations. In 1988 the U.S. State Department characterized the group as "the most dangerous terrorist organization in existence." Since the end of the 1980s the Fatah Revolutionary Council has not orchestrated any attacks on Western targets. In August

2002 the leader of the council, Abu Nidal, was found shot dead in his Baghdad home.

Faubus, Orval Eugene (1910–1980) American politician. As governor of Arkansas (1956–67), Faubus summoned the state National Guard (1957) to block federally directed integration at LITTLE ROCK Central High School. His stand, which forced the use of federal troops to carry out integration, gained Faubus the popularity that won him many terms as governor. (See also *BROWN v. BOARD OF EDUCATION*.)

Faulk, John Henry (1913–1990) American humorist and radio host. In 1956, while serving as host of the popular radio show *Johnny's Front Porch*, Faulk was accused by an anti-communist watchdog group, Aware Inc., of having communist ties. The accusations were based, in part, on his having attended a UNITED NATIONS dinner for Soviet foreign minister Andrei GROMYKO. The chief sponsor of his show pulled out, CBS radio fired him later that year. He sued Aware Inc. and two of its founders and was awarded \$3.5 million by a jury in 1962. His book about the case, *Fear on Trial*, was made into a television movie in 1975.

Faulkner, William (1897–1962) American novelist, widely considered one of the most original and important American literary figures of the 20th century. Born in Mississippi to a family with well-established roots there, Faulkner was an indifferent student and later held sundry menial positions before and after serving in the Royal Canadian Air Force in WORLD WAR I. Working as a journalist in New Orleans in 1924, he met Sherwood ANDERSON, who encouraged Faulkner to produce his first novel, *Soldier's Pay* (1926). Following a sojourn in Europe, Faulkner returned to Mississippi and began writing the notable series of novels that take place there—in the fictitiously renamed Jefferson in Yoknapatawpha County. *Sartoris* (1929) is the first of these, followed by *The Sound and the Fury* (1929), which depicts the degeneration of the South. As *I Lay Dying* (1930) is a darkly comic story of a poor family's attempt to fulfill a wish of

their dying mother; *Sanctuary* (1931) is considered by some to be a sensationalized attempt to increase sales; and *Light in August* (1932) and *Absalom, Absalom* (1936) both firmly established Faulkner as a distinguished modern novelist. The publication of *The Portable William Faulkner* (1946), edited by Malcolm COWLEY, led to Faulkner's receiving the NOBEL PRIZE in literature in 1949. Faulkner also worked as a screenwriter in HOLLYWOOD; among his film credits is the *The Big Sleep* (1946). Faulkner's later works, less celebrated than his earlier novels, include *The Hamlet* (1940) and *Intruder in the Dust* (1948).

Faure, Edgar (1908–1988) French politician. Faure twice served as premier of FRANCE, for 40 days in 1952 and again in 1955–56. Faure held 11 cabinet posts during his 30-year political career and became minister of education after the 1968 Paris student riots.

Fauré, Gabriel Urbain (1845–1924) French composer. A student of Camille Saint-Saëns, he was an outstanding organist and teacher. Fauré became a professor of composition at the Paris Conservatory and was its director from 1905 to 1920. His long list of students included Nadia BOULANGER, George ENESCO and Maurice RAVEL. Subtle and intimate, Fauré's compositions are remarkable for their melodic lyricism. He was extremely prolific, composing chamber music, orchestral works, nearly 100 songs, piano pieces and two operas. Among his best-known works are the *Pavane* and the *Requiem* (both 1887) and *Pelléas et Mélisande* (1898).

fauvism Name given to the work of a group of French painters who exhibited at the 1905 Parisian Salon d'Automne and who were called by outraged critics "fauves" (wild beasts), a name they happily embraced. Fauvism, perhaps the first truly modernist movement in 20th-century painting, is most strikingly marked by vivid, spontaneous and often violent color as well as by distorted forms, expressive brushwork and flat patterns—all characteristics that entered the canon of modern art. The movement lasted a brief time (1905–08), but its influence was felt

throughout the world and the century. Among the fauves, not all of whom exhibited in the 1905 show, were such masters as Henri MATISSE, often considered their leader; Maurice de Vlaminck, Georges Rouault, Albert Marquet, André Derain, Georges BRAQUE, Raoul DUFY and Kees van Dongen, as well as a number of lesser-known artists.

Fawzi, Mahmoud (1900–1981) Egyptian diplomat and statesman. During his 50-year career the polylingual Fawzi served as EGYPT's ambassador to many nations. During the reign of King FAROUK he was Egypt's first ambassador to the UNITED NATIONS (1946–52). He was a leading figure in the administration of President NASSER, serving as foreign minister (1952–64) during the SUEZ CRISIS and ARAB-ISRAELI WAR OF 1956. He was subsequently Nasser's deputy prime minister (1964–67) and vice president (1967–68) and President SADAT's prime minister (1972–74) and co-vice president (1972–74).

Fay brothers Frank J. Fay (190–1931) and William George Fay (1872–1947) were Irish theatrical actors and directors. They are best remembered for their active involvement in the Irish National Theater movement and in the creation, in 1904, of the Dublin-based ABBEY THEATRE company. As actors, they appeared in a number of Abbey Theatre productions. William played the lead role of Christy Mahon in the premiere of *THE PLAYBOY OF THE WESTERN WORLD* (1907), by John Millington SYNGE. In 1908 the brothers traveled to the U.S. to perform in a repertory of Irish plays. In the 1920s, after Frank had retired from the theater to work as a speech teacher, William remained active as an actor and director in England.

February Revolution (1917) Revolution during which the Russian monarchy fell and the provisional government and the Soviets of workers' and soldiers' deputies were established. Over 14 million peasants were engaged in military service, which in turn led to acute food shortages; this proved to be one of the factors that triggered the revolution. Having taken command of the army in 1915, Czar NICHOLAS II was at the front, and the czarina, with the help of RASPUTIN, was responsible for much

of the decision making on domestic matters. In February 1917 (old calendar, March new calendar) there were widespread bread riots, strikes and demonstrations in Petrograd; the troops, summoned to restore order, mutinied. This led to the abdication of the czar, and a provisional government, led by KERENSKY, assumed power. The provisional government and the Soviets vied with one another for power, and the government proved to be incapable of dealing with the rising power of the BOLSHEVIKS.

Fedayeen (Arabic: "those who risk their lives for a cause") Palestinian guerrillas who carried out raids in ISRAEL. They were eventually absorbed into the PALESTINE LIBERATION ORGANIZATION.

Federal Deposit Insurance Corporation (FDIC) The FDIC is a U.S. government corporation that insures customer deposits in U.S. banks. The 1929 STOCK MARKET CRASH was followed by a number of bank failures in which depositors lost their savings. In 1934 the federal government established the FDIC with the role of providing federal insurance for bank deposits. The current insured limit is \$100,000 per account in each bank; however, banks are not required to carry the federal insurance. The depositor insurance is funded by premiums paid by member banks. No depositor has ever lost any money in an FDIC-insured account. After the failure of a number of savings and loan associations in the 1980s, the FDIC absorbed another government corporation, the Federal Savings and Loan Insurance Corporation (FSLIC), which was near insolvency.

Federal Reserve System The U.S. government's central bank, which controls both the money supply and credit within the economy. Although its board is appointed by the president, the "Fed" enjoys considerable independence and the chairman of the Fed is influential in setting monetary and exchange policy.

Created in 1913, the Federal Reserve System is comprised of 12 Federal Reserve banks and the Federal Reserve Board, consisting of seven members appointed by the president.

The Fed issues U.S. currency—federal reserve notes—and controls monetary policy, lending and interest rates through its reserve requirements and the discount rate for member banks. The Fed also operates in the foreign exchange markets. Each of the 12 Federal Reserve banks regulates private banks in its geographic area and provides them with services such as check clearing and fund transfers.

Federal Writers' Project Part of the Federal Artists' Project of the WPA, the Federal Writers' Project existed from 1935 to 1939 and was directed by Henry G. Alsberg. The project aimed to hire writers to produce works on American themes, and it was responsible for many groundbreaking studies of black culture, folklore and regional histories. A major accomplishment was the American Guide Series, which profiled each of the 48 states. Many notable writers worked for the project, among them Nelson ALGREN, Conrad AIKEN, Ralph ELLISON, John CHEEVER and Kenneth FEARING.

Fefer, Itsik (Isaak Solomonovich) (1900–1952) Yiddish poet. Having joined the Communist Party in 1919, Fefer volunteered for the Red Army and took part in the Civil War of 1917–20 and in the war of 1941–45. His first work was published in 1919. In 1943 he toured the U.S. and Great Britain in the capacity of the first official representative of Soviet Jews. He held a number of important government offices but was arrested in 1948 during the purge of Jewish writers. He was executed in 1952. The author of lyrical poems, Fefer drew upon his experiences in the civil war for the subject matter of much of his writing. He also wrote several plays.

Feiffer, Jules (1929–) American cartoonist, playwright and screenwriter. Feiffer studied at the Art Students League in New York City, worked for various cartoon syndicates and served in a cartoon animation unit in the U.S. Army Signal Corps before the *Village Voice* began printing his political cartoons with their uniquely neurotic characters in 1956. His first venture as a playwright was the satirical review *The Explainers*, produced in 1961—the same year his animated film *Munro* won

an Oscar as the best short-subject cartoon. Feiffer wrote the screenplay for the film *Carnal Knowledge* (1971), which was banned in Georgia and subsequently at issue in the U.S. Supreme Court (1974). His other works include the cartoon collection *Jules Feiffer's America, from Eisenhower to Reagan* (1982) and the play *Eliot Loves* (1990). In 1997 Feiffer quit the *Village Voice* over a salary dispute. He went on to create the *New York Times's* first comic story, which ran until 2000.

Feld, Eliot (1942–) American dancer, choreographer and dance company director. Feld began his career as a dancer in the Broadway and film productions of *West Side Story*. In 1963 he joined the AMERICAN BALLET THEATRE, receiving acclaim for his roles in many ballets, including *Fancy Free* and *Billy the Kid*, and for his first choreographed works, *Harbinger* and *At Midnight* (1967). He founded and directed the American Ballet Company as the resident company at the Brooklyn Academy of Music (1969–71), then formed the Eliot Feld Ballet in 1974. His early choreography was characterized by its athleticism and combination of classical, jazz and modern dance elements. Major works included *Intermezzo* (1970), *Seraphic Songs* (1974) and *Santa Fe Saga* (1978). As choreographer and director of Feld Ballets of New York, he produced such highly acclaimed works as *The Grand Canyon* (1985), *Yo Shakespeare* (1997) and *Mending* (1999). In 2004 he resurrected his Ballet Tech dance company for a memorable engagement at the Joyce Theater for the Mandance Project, a combination of ballet and modern dance.

Fellini, Federico (1920–1993) Italian film director and writer. An internationally acclaimed filmmaker, Fellini is noted for his use of personal symbolism and the surrealistic quality of his films, which often deal with the relationship between illusion and reality. He began his career as a cartoonist, journalist and radio scriptwriter (1936–43). Collaboration with actor Aldo Fabrizzi and director Roberto ROSSELLINI on *Open City* (1945) brought him widespread critical acclaim. Among the many subsequent films he directed (and collaborated on as screenwriter) are *Variety Lights*

(1950), *La Strada* (1955), *La Dolce Vita* (1959), *8½* (1963), *Juliet of the Spirits* (1965) and *Fellini Satyricon* (1969). In 1993 he received an Academy Award for lifetime achievement.

fellow traveler Term coined by Leon TROTSKY in 1925. It described intellectuals, especially writers, who were not communists but had sympathy with COMMUNISM or a modified Soviet regime. During the COLD WAR, and especially during the period of MCCARTHYISM in the 1950s, the term was also used disparagingly by American conservatives to describe U.S. intellectuals with leftist political leanings.

Feltsman, Vladimir (1952–) Russian pianist. Feltsman studied at the Moscow Conservatory and won first prize in the prestigious Marguerite Long Competition in Paris (1971). Hailed by the Soviets as a major pianist, during the 1970s he performed with orchestras throughout the Soviet Union and toured Europe and Japan. In 1979 he and his wife applied to immigrate to Israel. Their application was refused, and thereafter Feltsman was forbidden to perform in the USSR. During the 1980s the Feltsman case became an international cause célèbre. Various foreign governments and individuals pressured the Soviets until the Feltsmans were granted exit visas in 1987 under GORBACHEV's policy of GLASNOST. Feltsman's arrival and initial concerts in the U.S. were greeted with rapturous acclaim. Feltsman has since established a successful concert and teaching career in the West.

feminism Political, social and personal growth movement dedicated to bettering the lives and raising the status of women. The suffragists campaign to gain the vote for women in the U.S. was a vital precursor of modern feminism. As the term is presently used, it refers to a broad movement that came of age internationally in the 1960s and is directed at all aspects of the status of women—sexual, personal, social, economic and political. Key issues include the right to equal pay and to self-determination with regard to reproductive rights. Major theorists and writers in the feminist movement include Simone de BEAUVOIR, Betty FRIEDAN, Germaine GREER

and Gloria STEINEM. Feminism has developed different emphases throughout its existence. In the 1980s “Second Wave” feminism emerged, which stressed women’s liberation from feminine norms such as fashion. In the 1990s “Third Wave” feminism surfaced, which united traditional feminist desires for full equality with the acceptance of feminine social norms.

Fender, Percy George Henry (1892–1985) English cricketer. A legendary captain of Surrey, Fender won 13 England caps as an all-rounder in the 1920s. In 1920, in a match against Northamptonshire, he scored a 35-minute century, the fastest in first-class cricket history. He retired as the world’s oldest Test cricketer.

Ferber, Edna (1885–1968) American author. Ferber began her career as a reporter in the Midwest. After the publication of her first novel, *Dawn O’Hara* (1911), she took up writing full time. She was a prolific writer of popular magazine stories, which were gathered together in several book collections. With the publication of *So Big* in 1924, she gained a place on the best seller lists and also won the PULITZER PRIZE. As a keen observer of American life and times, she was noted for her characterizations and choice of settings

Pulitzer Prizewinning author Edna Ferber, 1945
(LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS
DIVISION)

for her novels. The highly popular *SHOW BOAT* (1926) formed the basis of musicals and motion pictures. Ferber was the author of many other famous novels, including *Saratoga Trunk* (1941, filmed 1945) and *Giant* (1952, filmed 1956). With George S. KAUFMAN she co-authored several plays, including the perennial *Dinner at Eight* (1932, filmed 1933). Although she was dismissed as a light romantic by many critics, others have praised Ferber’s serious approach to her many themes. She wrote two autobiographical works, *A Peculiar Treasure* (1930) and *A Kind of Magic* (1963).

Ferdinand I (1861–1948) King of Bulgaria (1908–18); a prince of Saxe-Coburg, in 1887 he was elected prince of BULGARIA, then under Turkish sovereignty. The early part of his reign was made difficult by Russian opposition, but in 1896 he was finally recognized by the European powers. In 1908 Ferdinand declared Bulgaria independent and himself king. Forming an alliance with other Balkan countries, he was victorious in the first of the BALKAN WARS (1912–13) against the Turks but was overwhelmingly defeated in the second of these conflicts (1913). Hoping to win back territory he had lost, Ferdinand brought Bulgaria into WORLD WAR I on the CENTRAL POWERS’ side (1915); when his fortunes in war went sour again, he was forced to abdicate (1918). His son, BORIS III, assumed the throne, and Ferdinand went into exile in Germany.

Ferencsik, János (1907–1984) Considered Hungary’s foremost 20th-century orchestra and opera conductor, Ferencsik helped spread Hungarian music abroad. Educated at the conservatory in Budapest, he conducted at the Budapest State Opera in 1930. He later helped establish the Hungarian State Symphony Orchestra, which he directed from 1952 until his death. He was also music director of the Budapest State Opera (1957–74) and conducted frequently in Europe, the USSR, the U.S. and South America, as well as in Japan and Australia. Ferencsik was a leading interpreter of Hungary’s two greatest 20th-century composers, Béla BARTÓK and Zoltán KODÁLY, whom he knew personally. He twice received Hungary’s

highest award, the Kossuth Prize (1951, 1961).

Ferguson, James Edward (1871–1944) U.S. politician. A champion of the small farmer, Ferguson became governor of Texas in 1915. Accused of corruption, he was impeached during his second term in 1917 but resurfaced as “the man behind the governor” when his wife, Miriam A. Wallace FERGUSON, served as Texas governor in 1924 and again in 1932.

Ferguson, Maynard (1928–2006) Canadian-born jazz trumpet virtuoso; a child prodigy whose exceptional technique, range and brassy flair gained him initial prominence in the big bands of Boyd Raeburn and Charlie Barnet during the late 1940s. In 1950 Ferguson was hired by Stan KENTON, who showcased the trumpeter’s stratospheric wizardry and helped make Ferguson a star. In the mid-1950s, after achieving acclaim with recordings for Kenton and under his own name, Ferguson formed his first important unit, the Birdland Dream Band, which debuted in New York City to rave reviews and wildly enthusiastic crowds. From that point on, Ferguson has helmed a string of successful bands; in addition to acclaim for his variously sized jazz outfits, Ferguson achieved popularity in the 1970s with the jazz-rock hits “MacArthur Park” (1970) and “Gonna Fly Now” (1978), the theme from the motion picture *Rocky*. Ferguson has secured a place in jazz history by virtue of his exceptional control over the trumpet’s high register and BEBOP acrobatics. Like Kenton, Ferguson has been an active jazz educator through his many clinics and school concerts. He has also encouraged a host of players who went on to jazzdom’s front ranks; in 1990, when Ferguson returned to a solid, swinging jazz approach with his Big Bop Nouveau band, he featured the gifted 17-year-old bassist, Nathan Berg. Ferguson can also be regarded as the last of the active big band leaders whose careers were built and sustained by being constantly on the road, playing one-nighters, club engagements and festivals.

Ferguson, Miriam A. (1875–1961) U.S. governor Texas. Ferguson was the

wife of state governor James Edward FERGUSON. When he was not allowed to run for reelection in 1924, she ran in his place, winning the vote of small farmers. Although she held the office, it was generally known that her husband was the one who ran the state. She was reelected governor of Texas in 1932.

Ferlinghetti, Lawrence (1919–) American poet and publisher. Ferlinghetti was one of the key poetic figures to emerge from the BEAT GENERATION. Two volumes of his poems from the 1950s, *Pictures from the Gone World* (1955) and *A Coney Island of the Mind* (1958), sold in the hundreds of thousands—extraordinarily well for poetry—and established Ferlinghetti as a bridge between literary and popular culture. Ferlinghetti, who earned a doctoral degree in literature from the Sorbonne in Paris, has also been highly influential as the founder of City Lights Press in San Francisco, an avant-garde publishing house that has published key works by Allen GINSBERG, William S. BURROUGHS and others. In 2003 Ferlinghetti received several honors, including the Authors' Guild Lifetime Achievement Award and the Poetry Society of America's Robert Frost Medal. He was elected to the American Academy of Arts and Letters in the same year.

Fermi, Enrico (1901–1954) Italian-American physicist, without doubt the greatest Italian scientist since Galileo and in the period 1925–50 one of the most creative physicists in the world. In an age of ever-growing specialization he excelled as both an experimentalist and a theoretician. Fermi's intelligence and quickness of mind were apparent from an early age, and he gained admission in 1918 to the Scuola Normale in Pisa, a school for the intellectual elite of Italy. He completed his education at the University of Pisa, where he gained his Ph.D. in 1924. After spending time abroad, Fermi returned to Italy, where he was appointed to a professorship of physics at the University of Rome—a considerable achievement for one so young. This advancement was largely due to the reputation he had already established with the publication of some 30 substantial papers and the support of O. M. Corbino, the

Atomic research pioneer Enrico Fermi, 1942 (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

most distinguished Italian physicist at the time. Fermi published the first Italian text on modern physics, *Introduzione alla Fisica Atomica* (1928). His reputation attracted the brightest of the younger Italian physicists, but the growth of FASCISM in Italy led to the dispersal of its scientific talent. By 1938 Fermi, with a Jewish wife, was sufficiently alarmed by growing ANTI-SEMITISM to move to America.

However, his period in Rome turned out to be remarkably productive, with major advances in both the theoretical and the experimental field. His experimental work arose out of attempts to advance the efforts of Irène and Frédéric JOLIOT-CURIE, who had announced in 1934 the production of artificial radioactive isotopes. Fermi realized that the neutron, discovered by James CHADWICK in 1932, was perhaps an even better tool for creating new isotopes. Fermi stumbled on the phenomenon of slow neutrons, the production of which was later to have a profound impact in the field of nuclear energy. However, Fermi's immediate task was to use them to irradiate as many of the elements as possible and to produce and investigate the properties of a large number of newly created radioactive isotopes. It was for this work, for "the discovery of new radioactive substances . . . and for the discovery of the selective power of slow neutrons" that Fermi was awarded the 1938 NOBEL PRIZE in physics. In the course of their systematic irradiation of the elements, Fermi and his colleagues bombarded uranium with slow neutrons. Fermi thought that transuranic elements were being produced, but in

1938 Otto Frisch and Lise MEITNER first realized that nuclear fission was taking place in such reactions. On the theoretical level Fermi's major achievement while at Rome was his theory of beta decay—the process in unstable nuclei whereby a neutron is converted into a proton with the emission of an electron and an antineutrino. In 1933 Fermi gave a detailed analysis that introduced a new force into science, the so-called weak force.

In America Fermi soon became involved in the attempt to create a controlled nuclear chain reaction. In 1942 he built the first atomic pile in the stadium of the University of Chicago at Stagg Field. Using pure graphite as a moderator to slow the neutrons and enriched uranium as the fissile material, Fermi and his colleagues began the construction of the pile. It consisted of some 40,000 graphite blocks, in which some 22,000 holes were drilled to permit the insertion of several tons of uranium. At 2:20 P.M. on December 2, 1942, the atomic age began as Fermi's pile went critical, maintaining a self-supporting chain reaction for 28 minutes. In a historic telephone call afterward, Arthur COMPTON informed the managing committee that "the Italian navigator has just landed in the new world." Fermi continued to work on the project and was in fact present in July 1945 when the first atomic bomb was exploded in the New Mexico desert (see ATOMIC BOMB DEVELOPMENT). He is reported to have dropped scraps of paper as the blast reached him and, from their displacement, to have calculated the force as corresponding to 10,000 tons of TNT. After the war Fermi accepted an appointment as professor of physics at the University of Chicago, where he remained until his untimely death from cancer.

Fermi National Accelerator Laboratory (Fermilab) A U.S. Department of Energy physics research laboratory, near Batavia, Illinois. It is named in honor of Enrico FERMI, the physicist who produced the first nuclear chain reaction. Fermilab contains one of the world's largest particle accelerators, also known as an atom smasher. Within a circular underground tunnel, one and one-third miles in diameter, protons are accelerated almost to the speed of light. The protons are directed at a target

and the result of the collision is studied. Fermilab is managed by Universities Research Association, Inc., a consortium of 53 universities reporting to the U.S. Department of Energy.

Fernández, Emilio (1904–1986) Mexican actor, screenwriter and director. His socially aware films of the 1940s (*María Candelaria*, *Flor silvestre*, *The Pearl*) were the first to draw international attention to the Mexican cinema. Known as “El Indio” for his half-Indian ancestry, Fernández gained notoriety when he shot and wounded a film critic. He was imprisoned for several years in the 1970s for killing a farm laborer in a brawl. He acted in a number of Hollywood films, including *The Wild Bunch* and *Under the Volcano*.

Ferrari, Enzo (1898–1988) Italian entrepreneur; founder and chairman of the Italian car company that bears his name. Ferrari's factory near Modena produced about 1,000 cars a year, world renowned for their blood-red color, hair-raising power and acceleration, precise high-speed handling and exclusivity and expense. The Ferrari Formula 1 racing car, with its distinct prancing black stallion motif, became a symbol of national strength and weaknesses, winning nine world titles since 1952. A race car driver himself, he said that he “built racing cars with the same feverish pleasure with which drug addicts sniff cocaine.”

Ferraro, Geraldine (1935–) American politician. Ferraro earned her law degree at Fordham University's evening division while teaching during the day. In 1978 she was elected to the House of Representatives from Queens, New York, and served three terms (1979–85). A liberal Democrat, Ferraro became secretary of the Democratic Caucus in the House and a protégée of House Speaker Thomas P. O'Neill. In 1984 she became the first woman vice presidential candidate of a major party when presidential candidate Walter MONDALE named her as his running mate; they lost the election. Ferraro's career was later troubled by allegations of impropriety against her husband, John Zaccaro, in his real estate business, and by her son's arrest for selling cocaine. In 1992 and 1998 Ferraro was an unsuccessful Democratic candidate for a U.S. Senate seat from New York.

Geraldine Ferraro, the first woman chosen as a vice presidential candidate by a major political party (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

Ferraro was named U.S. ambassador to the UN Human Rights Commission in 1993.

Ferrier, Kathleen (1912–1953) British concert singer noted for her performances of the vocal music of Handel, Bach and MAHLER and the lieder of Schubert, Schumann and other masters. Ferrier's career was tragically brief; yet her vocal, musical and personal qualities made her one of the most beloved performers of her time. She possessed one of the purest and most distinctive contralto voices ever recorded. Born in Lancashire, she originally made her living as a piano accompanist and also worked as a telephone operator. After winning first prize in a voice competition she had casually entered in 1938, she devoted herself to the study of singing. She made her professional singing debut as a soloist in Bach's *Passion According to St. Matthew* in 1942 and quickly won the attention of other musicians, critics and the public. During WORLD WAR II she sang for soldiers and civilians throughout England—often in bomb shelters, hospitals or factories. At the GLYNDEBOURNE FESTIVAL in 1946 she sang the title role in the world premiere of Benjamin BRITTEN's opera *The Rape of Lucretia*. The next year at the festival she triumphed as Orfeo in Gluck's *Orfeo ed Euridice*, the only other operatic role she performed during her career. She first appeared at the EDINBURGH FESTIVAL in 1947 under the baton of Bruno WALTER, who became her friend and mentor. In 1948 she made her American debut in

Mahler's *Das Lied von der Erde* with the New York Philharmonic, again conducted by Walter. She toured the U.S. in concert (1948–49; 1950–51) and also appeared throughout Europe. Her career was cut short at its peak when she was stricken with cancer.

Fessenden, Reginald Aubrey (1866–1932) Canadian electrical engineer. After an education in Canada, Fessenden worked for the EDISON COMPANY as an engineer and later as head chemist (1886–90) and as an engineer (1890–91) for the Westinghouse Co., Edison's great rival. In 1900 he was appointed special agent for the U.S. Weather Bureau, adapting the technique of radio telegraphy, newly developed by Guglielmo MARCONI, to weather forecasting and storm warning. In 1902 he became general manager of the National Electric Signaling Co., which was formed by two financiers from Pittsburgh to exploit his ideas. From 1910 he was consultant engineer at the Submarine Signal Co. Fessenden's inventions were prolific and varied: At the time of his death he held over 500 patents. In 1900 he developed an electrolytic detector that was sufficiently sensitive to make radio telephony feasible. His most significant invention was the technique of amplitude modulation. This involved the use of carrier waves to transmit audio signals; he varied the amplitude of a steady high-frequency radio signal so that it corresponded to variations in the sound waves and thus carried the audio information. Using this principle he transmitted on Christmas Eve 1906 what was probably the first program of music and speech broadcast in America. The program was heard by ships' radio operators at distances of up to several hundred miles.

Festung Europa See FORTRESS EUROPE.

Fetchit, Stepin (Lincoln Theodore Monroe Andrew Perry) (1902–1985) African-American actor. Stepin Fetchit was the first black actor to be prominently cast in American movies not aimed specifically at black audiences. His career peaked in the early and mid-1930s, when he starred in the all-black *Hearts in Dixie* and was given featured billing with such stars as Will ROGERS and Shirley TEMPLE. He generally portrayed a languorously

lazy, simpleminded servant in roles that were later denounced as racist stereotypes. He countered this criticism by stating that he had paved the way for the success of such stars as Bill COSBY and Sidney POITIER. Once a millionaire, in the 1940s he declared bankruptcy and supported himself with nightclub appearances and occasional film roles.

Feuchtwanger, Lion (1884–1958) German novelist and essayist. Born into an Orthodox Jewish family in Munich, Feuchtwanger rose to prominence in German letters with the publication of his novel *The Ugly Duchess* (1923). *Jus Süss* (1925, translated as *Jew Seuss* in 1926), his most famous novel, probed the tensions of life as a Jew in German society; in a bitter turnabout, the Nazis adopted this novel into an anti-Semitic propaganda film in 1940. Feuchtwanger fled Germany in 1932, going first to France and then, in 1941, to the U.S. His novels emphasized the molding forces of history and religion over and above the personality traits of the individuals. Major works by Feuchtwanger include a trilogy on Jewish life in Germany—*Success* (1930), *The Oppermanns* (1933) and *Paris Gazette* (1939)—and a second trilogy set in the biblical era—*Josephus* (1932), *The Jew of Rome* (1935) and *Josephus and the Emperor* (1936). *Jephtha and His Daughter*, published in 1957, was Feuchtwanger's final novel.

Feydeau, Georges (1862–1921) French playwright, actor and director; one of the most popular figures in French theater in the 1900s. Feydeau was especially renowned for his farces, such as *Hotel Paradiso* (1894) and *A Flea in Her Ear* (1907), which featured witty and stylized dialogue, quick plot twists, frantic action and imaginative use of stage decor and props. He frequently appeared in his own productions; English translations include *Four Farces* (1970) and *Feydeau, First to Last* (1982).

Feynman, Richard Phillips (1918–1988) American physicist. Feynman received a B.S. in physics from the Massachusetts Institute of Technology (1939) and a Ph.D. from Princeton (1942) after publishing his dissertation on quantum mechanics. During WORLD WAR II, Feynman played a key role in

ATOMIC BOMB DEVELOPMENT at Los Alamos, New Mexico. On the MANHATTAN PROJECT he came into contact with many of the century's greatest physicists, including Hans BETHE, Niels BOHR, Aage BOHR, Enrico FERMI and J. Robert OPPENHEIMER. After the war he taught for several years at Cornell University (and later at the California Institute of Technology), where he carried out the work on quantum electrodynamics that led to the 1965 NOBEL PRIZE in physics, which he shared with Julian S. Schwinger and Sin-itiro Tomonaga. The Feynman diagrams that he developed gave physicists a way of explaining the behavior of light and matter in terms of fundamental particles. His 1985 autobiography, *Surely You're Joking, Mr. Feynman*, became a surprise best seller. A turning point in the presidential probe of the space shuttle CHALLENGER DISASTER came when Feynman demonstrated the loss of resiliency in the critical O-ring seals at low temperatures. As well as being an important physicist, Feynman was also a brilliant teacher in the classroom and influenced many younger physicists by his unique approach to problem solving.

Fianna Fáil (Irish Gaelic: “soldiers of destiny”) Political party formed by Eamon DE VALERA in 1926 from moderate members of SINN FEIN, reflecting a reversal of previous opposition to dominion status for IRELAND. One of the two major Irish political parties, it formed the government in 1951–54, 1957–73, 1977–81, 1982–83 and 1987–94 and 1997–. Fianna Fáil is considered the most nationalist of Ireland's political parties and generally follows conservative domestic policies. It seeks the reunification of Ireland through peaceful means. (See also FINE GAEL.)

Fiat Largest Italian automobile manufacturer, with original factories near Turin. Founded in 1899 by Giovanni Agnelli, Fiat has often supported design excellence. The 1935 500 Topolino, the 1978 Ritmo, and the 1979 Strada—each small, functional and unpretentious—are good examples of Fiat's dedication to producing basic cars for a mass market. The 124 Spider sports car is an example of quality design, in the tradition of Italian coach building, aimed at a special luxury market.

Fibber McGee and Molly American radio network show. This classic NBC

radio show ran from 1935 to 1957 and starred Jim Jordan and his real-life wife, Marjorie. The McGees' home at Wistful Vista became a familiar place on the U.S. cultural landscape. As one critic commented in 1940, the characters “get their humor from simple things, like fixing the brakes or playing checkers.” Molly's rejoinder to her husband, “Tain't funny, McGee,” became a national catchphrase.

fiberglass Generic version of the trade name Fiberglas used by the Owens-Corning Glass Company for the hybrid material made from polyester PLASTIC reinforced with glass fibers. Fiberglass makes it possible to give high strength to glass parts that may be molded, or “hand laid-up,” that is, built up on a mold with layers of glass cloth soaked in plastic resin. Fiberglass is increasingly used for automobile body parts and the hulls of small boats. It is also used for various household products and is the material of the first successful plastic chairs designed by Charles EAMES and Eero SAARINEN.

fiber optics A branch of optics dealing with the passage of light along optical fibers, usually slender strands of glass or plastic. Bundles of fiber optic cables are much thinner and lighter than wire cables, can carry much more information and are immune to electromagnetic interference. Fiber optical cables are widely used in communications equipment, where they can link computers, transmit television signals, carry thousands of telephone conversations or perform a number of other functions. They have also found wide application in medicine, where fiber optic tubes such as the endoscope are often employed to examine the interior of the body without the use of X-ray or exploratory surgery.

Fiedler, Leslie Aaron (1917–2003) American literary critic and author. Educated at New York University, the University of Wisconsin and Harvard University, Fiedler served in a variety of academic posts in the U.S. and abroad. He is perhaps best known for the critical work *Love and Death in the American Novel* (1960), in which he compares American and European novels and contends that Americans are obsessed with death and unable to write about sex, portraying women as

either sinners or saints. His many provocative works of criticism include *The Jew in the American Novel* (1959, second edition 1966), *The Inadvertent Epic: From Uncle Tom's Cabin to Roots* (1980) and *Olaf Stapledon; A Man Divided* (1983). In *Being Busted* (1969) Fiedler describes his own false arrest and incarceration for marijuana use while he was a faculty adviser to a student group fighting for the legalization of marijuana. His fiction includes *The Messengers Will Come No More* (1974) and the short stories *Nude Croquet and Other Stories* (1969). In 1988 Fiedler was elected to the American Academy of Arts and Letters.

Field, Marshall, III (1893–1956) American businessman, publisher and philanthropist. The grandson of the wealthy department store owner Marshall Field I (1834–1906), Field was born in Chicago. After his father's apparent suicide in 1906, he was taken to England, where he attended Eton and Cambridge. He returned to the U.S. in 1914, and in 1936 he abandoned his many business activities to devote himself to liberal political and social causes. He was a cofounder (1940) of the liberal New York City newspaper *PM* and established the Field Foundation to aid in child welfare and race relations. The following year he founded the *Chicago Sun*, which through merger became the *Sun Times* in 1948. Consolidating his ventures into Field Enterprises Inc. in 1944, he also published *The World Book Encyclopedia* and the Sunday supplement *Parade*. He owned four radio stations and other communications enterprises. His social and political philosophy was expressed in his book *Freedom Is More Than a Word* (1945).

Fields, Dorothy (1904–1974) American lyricist and librettist. Fields first gained success with songwriter Jimmy McHugh by writing lyrics for songs in the Cotton Club revues in HARLEM. An early hit was "I Can't Give You Anything but Love, Baby" (1928). Other hits with McHugh included "On the Sunny Side of the Street" and "I'm in the Mood for Love." She also wrote lyrics for Broadway musicals—*Annie Get Your Gun* (1946), *A Tree Grows in Brooklyn* (1951), *Redhead* (1959) and *Sweet Charity* (1964). Fields collaborated on movie musicals with both Harold ARLEN and Jerome KERN. Several songs written with

KERN have become standards—"A Fine Romance," "The Way You Look Tonight" and "Lovely to Look At."

Fields, Gracie (Grace Stansfield) (1898–1979) British music-hall singer and comedian. Born in Rochdale, Lancashire, she first appeared in the town's Hippodrome in 1910. During the 1920s, 1930s and 1940s she performed frequently in London and toured throughout Great Britain. In her heyday she was believed to be the world's highest-paid star and is thought to have sold more records than any other British performer in the mid-1920s. Known for her sassy ditties, warm ballads and stouthearted warbling, she was especially popular during WORLD WAR II, entertaining the troops and civilians alike during Britain's darkest hours. Even after her popularity waned she remained a national institution.

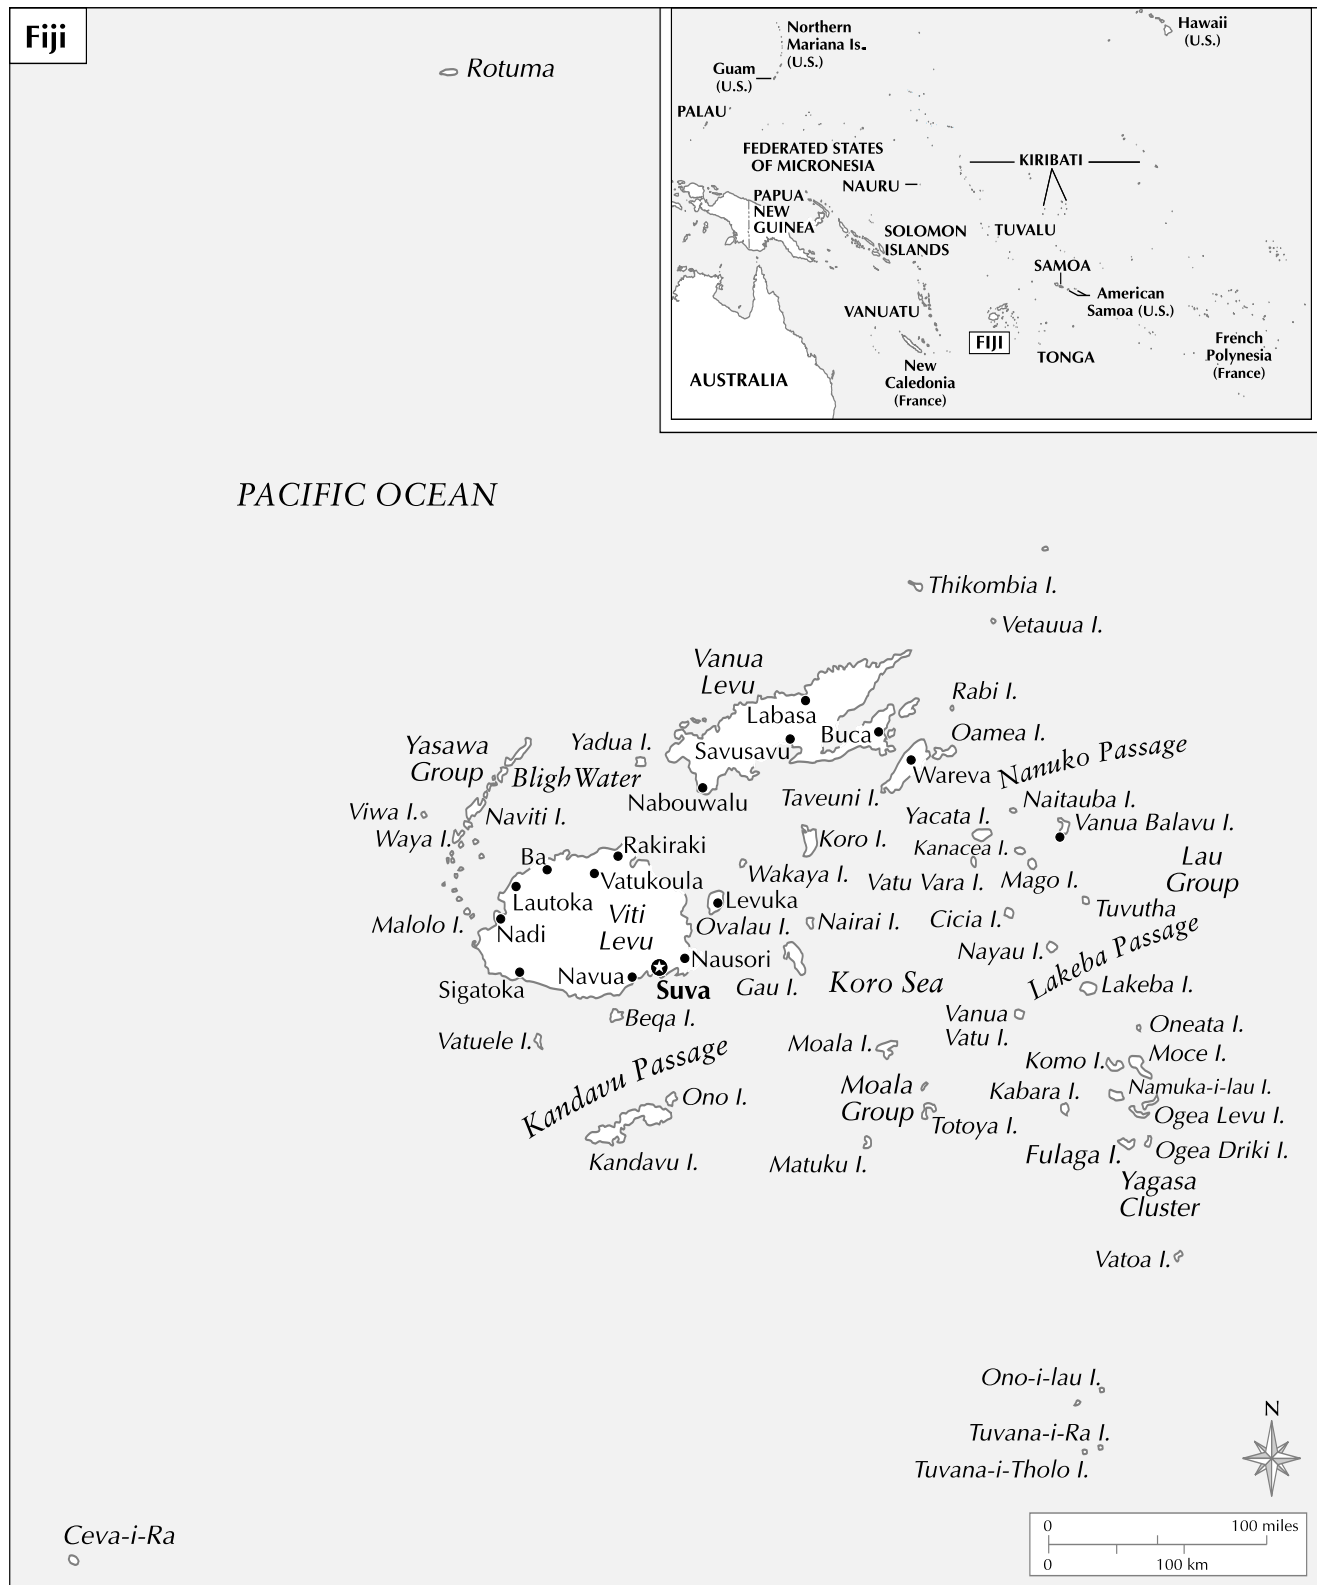

Fields, William Claude (William Claude Dukenfield) (1879–1946) American comedic stage and film actor. Fields remains one of the best-loved comic figures in the history of the cinema. He began his career as a teenage juggler on the vaudeville circuit. By his early 20s, he was a top-billed star, and in the 1900s and 1910s he was featured with the renowned ZIEGFELD FOLLIES in New York. Fields's first film was a silent short, *Pool Sharks* (1915). In the 1920s Fields enjoyed success on Broadway with *Poppy* (1923) and also appeared in the D. W. GRIFFITH silent film *Sally of the Sawdust* (1925), which established Fields in HOLLYWOOD at the late age of 46. In the 1930s, with the arrival of the talkies, Fields became a star in his persona as the crafty con artist with a heart of gold. Between 1931 and 1941 Fields made his best films; these include *It's a Gift* (1934), *The Man on the Flying Trapeze* (1935), *You Can't Cheat an Honest Man* (1939), *My Little Chickadee* (1940, with Mae WEST) and *The Bank Dick* (1940).

fifth column Term used just prior to and during WORLD WAR II to denote Nazi sympathizers in Allied and neutral countries who collaborated with the Germans, disseminated pro-German propaganda or committed other treasonous acts. The term was coined during the SPANISH CIVIL WAR by the nationalist general Emilio Mola (1887–1937). Although the attack on Madrid was made by four columns of troops, Mola asserted that he also had a "fifth

column," a cadre of pro-FRANCO agents in the city. Fifth-column activities in WORLD WAR II were encouraged and financed by Germany, partially by the creation of German minority organizations under the Nazi Party's foreign relations section. Playing upon the themes of anticommunism and ANTI-SEMITISM, fifth-column propaganda was somewhat effective among European civilians. Countries in which fifth-column activities were particularly strong included Norway, Belgium, France and Yugoslavia. The term is also more generally used to denote enemy agents or sympathizers who attempt to undermine any nation's structure or institutions from within.

Figueres Ferrer, José (1906–1990) Costa Rican politician. Affectionately known as "Don Pepe," he helped establish democracy in COSTA RICA after years of political turmoil. In 1948 he led a brief civil war against a leftist government that had sought to annul the results of an election. He emerged from the struggle as president. In 1949 he dissolved the country's army, leaving only a civil defense force. He also undertook major social and economic reforms, including the adoption of a constitution and the nationalization of the country's banks. Elected to two more terms (1953–58 and 1970–74), Figueres was one of the first Costa Rican leaders to play a major international role in Latin America.

Fiji (Fiji Islands) Island nation in the southwest Pacific, 1,300 miles north of New Zealand. The archipelago of islands, strategically placed and agriculturally fertile, was seized by Great Britain in 1858. A prime Allied supply site in WORLD WAR II, Fiji was named an independent dominion of the COMMONWEALTH in 1970. Tensions between the Fijian majority (of Melanesian-Polynesian origin) and the Indian minority came to a head in April 1987, when an Indian-dominated coalition won the general election. Two coups were followed by the declaration of a Fijian republic (October 1987) and Fiji's decision to withdraw from the Commonwealth. The country returned to civilian rule of the beginning of 1990, but ethnic tensions lingered. To the outside world, however, Fiji remains an island paradise, and it is a popular stopover for travelers between the U.S. and Australia or New Zealand.

Following its adoption of a constitution that did not discriminate in favor of indigenous Fijians, Fiji was readmitted into the Commonwealth in 1997. However, Fiji was suspended from the Commonwealth in 2000 after Prime

Minister Mahendra Chaudhry was taken hostage during a coup attempt in May of that year. The country was readmitted in December 2001 following the restoration of democratic rule that August.

Filene, Edward Albert (1860–1937) U.S. merchant. The president of William Filene's Sons in Boston, he was noted for his innovations in retail distribution, particularly his "bargain basement." He helped organize both

Fiji

1943	Fiji is occupied by Allied forces waging the Solomon Islands campaign.
1970	Fiji becomes a sovereign and independent state
1987	Colonel Sitiveni Rabuka leads a military coup that overthrows the government; Rabuka revokes the constitution and declares Fiji a republic.
1990	Rabuka resigns from the cabinet; the new constitution is promulgated by decree of the president.
1997	Fiji rejoins the Commonwealth.
2000	Fijian ethnic nationalists take hostage the prime minister and 26 others in an attempt to roll back Fiji's efforts at creating a multiethnic society; the military storms the rebel stronghold and releases the hostages.

the Boston Chamber of Commerce and the U.S. Chamber of Commerce and was active in civic reform.

Filling Station, The Landmark modern American ballet. It was the joint collaboration in 1938 of composer Virgil THOMSON, choreographer Lew Christensen and impresario Lincoln KIRSTEIN for the newly formed Ballet Caravan of New York. With another Caravan production that same year, *BILLY THE KID*, it was one of the first ballets to draw primarily upon American national idioms and characters. The filling station itself was the intersection of a diverse group of travelers. Mack, the attendant, is visited by several characters—a golfer and his family, two truck drivers, a tipsy society couple and a gangster. After a holdup, a state trooper arrives to arrest the thief. “Using American music this way was quite avant-garde at the time,” recalled Todd Bolender, who danced in the original production in 1938. “Audiences were startled to find anything so intrinsically American could be danced. And they loved the parodies of classical ballet, like the pas de deux danced by the drunken socialites and the use of a more modern jazz style. [Kirstein] wanted Americans to be aware that dance could be an integral part of our own culture and not so dependent upon the Europeans.” The ballet is frequently revived, most recently by the State Ballet of Missouri and the San Francisco Ballet.

film noir A term applied by French film critics to certain American motion pictures from the WORLD WAR II and postwar era. It was not a specific genre; rather, the term denotes a particular mood and worldview found in a wide range of movies. From roughly the early 1940s to the late 1950s a sense of fatality, despair and nightmare appeared, born out of disillusionment with the recent war. Influential were the psychopathology of themes and characters and the dramatic lighting schemes of the German émigré filmmakers Fritz LANG, Robert Siodmak, and John Alton; the weakening censorship restrictions in HOLLYWOOD; and influences from the Italian neorealist films of the time. In short, after two decades of bright musicals and fairytale romances, suddenly the American screen was ripe for the ruthless hard-boiled detectives Sam Spade and Philip Marlow in, respectively, John HUSTON's *The Maltese Falcon* (1940) and Edward Dmytryk's *Murder, My Sweet* (1943). There were documentary-like police procedure thrillers, like Jules Dassin's *The Naked City* (1949) and Alfred Werker's *Dragnet* prototype, *He Walks by Night* (1949). *Double Indemnity* (1944) and *The Postman Always Rings Twice* made adultery, murder and sultry passion the cornerstones of romance and inspired a latter-day film noir, *Body Heat* (1981). Alfred HITCHCOCK attacked the smugness of American values in *Shadow of a Doubt*

(1943), and Nicholas Ray questioned the future of a new generation of teenagers in *They Live by Night* (1947). Robert Aldrich envisioned in *Kiss Me Deadly* (1957) nothing less than global holocaust. Not even the western and musical genres were left untouched: Raoul WALSH brought psychoanalysis to *Pursued* (1947) and Vincente MINNELLI inserted a Mike Hammer-like character into a sleazy ballet number in *The Band Wagon* (1953). Miraculously, in the face of such unremitting pessimism these movies displayed a dramatic, pictorial flair. Low-key lighting, the violent contrasts of rich chiaroscuro and crazy camera angles brought a breathtaking look even to conventional thrillers like *T-Men* (1947) and *The Big Combo* (1955). Through the 1990s film noir remained an important genre within the American film industry, with such critically and financially successful films as *The Last Seduction* (1994), *The Usual Suspects* (1995) and *L.A. Confidential* (1997).

final solution (German: Endlösung) Nazi euphemism for the secret German plan to exterminate systematically all European JEWS during WORLD WAR II, otherwise known as the HOLOCAUST. Adolf HITLER expressed his extreme ANTI-SEMITISM as early as 1923 in *MEIN KAMPF*, and anti-Semitism was fundamental in the rise of NAZISM and the Nazi Party during the 1930s. From the mid-1930s until the end of 1941, hundreds of thousands of Jews (at first in GERMANY, and later in the German-occupied countries) were deprived of their property and livelihood and confined to ghettos or sent to CONCENTRATION CAMPS. Hitler did not actually proclaim his deliberate extermination policy, however, until late 1941. The plan to destroy the European Jews—the so-called final solution to the Jewish problem—was formalized at the Wannsee Conference chaired by Reinhard HEYDRICH on January 20, 1942. Responsibility for implementing the final solution was given to Heinrich HIMMLER, who was assisted by Adolf EICHMANN and hundreds of lesser Nazi functionaries. The extermination policy was carried out at selected concentration camps, of which AUSCHWITZ was the most notorious.

Finch, George Ingle (1888–1970) Australian physical chemist. Finch was

educated at Wolaroi College in Australia and the École de Médecine in Paris. Finding the study of medicine unappealing, he moved to Switzerland and studied physics and chemistry, first at the Federal Institute of Technology in Zurich and later at the University of Geneva. On moving to Britain in 1912 he worked briefly as a research chemist at the Royal Arsenal, Woolwich, joining the staff of Imperial College, London, in 1913. Finch remained there until his retirement in 1952, having been appointed professor of applied physical chemistry in 1936. After his retirement Finch traveled to India, where he was the director of the National Chemical Laboratory (1952–57).

Finch worked mainly on the properties of solid surfaces. In the 1930s he developed the technique of low-energy electron diffraction, using the wavelike properties of electrons, demonstrated by George Thomson and Clinton J. DAVISSON in 1927, to investigate the structure of surfaces. Finch was also widely known as a mountaineer. As one of the leading climbers of his generation he was a member of the 1922 Everest expedition, climbing to the then-unequaled height of 27,300 feet.

Fine Gael (*Irish Gaelic*: “Irish tribe”) Moderate national party and one of two major Irish political parties. It won elections in 1973, 1982 and 1983. It generally avoids the nationalist rhetoric of the rival FIANNA FÁIL party and has shown willingness to compromise on the complex NORTHERN IRELAND issue. In 1994 the party formed a coalition with the Labour and Democratic Left Parties known as the “Rainbow Coalition,” which governed Ireland until 1997.

Fini, Gianfranco (1952–) Political leader of the far right-wing Italian political party, the National Alliance. Fini is largely credited for the transformation of the Italian Social Movement, a quasi-fascist party, into the National Alliance. He succeeded in convincing its core members to cease performing stiff-armed salutes and expressing admiration and sympathy for the views of Jean-Marie LE PEN, a far-right French political leader.

In 1994, the year Fini and four other Alliance politicians entered the first government of Prime Minister Silvio BERLUSCONI, he provoked great controversy in ITALY and abroad. In an

interview with the Turin daily newspaper *La Stampa* he was quoted as praising fascist dictator Benito MUSSOLINI as “the greatest statesman of the century.” In 2002 Fini was designated by Berlusconi as the Italian representative to a European convention called to offer amendments to the 16 draft articles of the European constitution. During the proceedings Fini sided with British delegates who wished to avoid the adoption of a federal model, as called for in the original articles. He also opposed the admission of Turkey to the union and proposed an amendment specifying that all power possessed by the European Union and its organs be recognized as complementing rather than superseding its various members’ national legislatures.

Fini, Leonor (1908–1996) Italian-Argentine painter. Raised in Buenos Aires, Fini received no formal artistic training as a youth, but after immigrating to Italy, she was influenced by painter Carlo CARRA while living in Milan and became one of his protégées. In 1933 Fini moved to Paris, where she became involved in the surrealist movement (see SURREALISM). Her fantastical paintings of the 1930s remain her best-known works. In the 1940s Fini won renown as a portraitist of famous personages of her era. She also did ballet stage designs and set designs for films.

Finland, Republic of (Finnish: **Suomi**) Nation of northeastern Europe; located between the Gulf of Bothnia and the Gulf of Finland and

FINLAND

1900	Finland enjoys limited autonomy within the Russian Empire, with its own legislature (the Diet) and a tradition of personal freedoms.
1905	Russian campaign to restrict freedoms and the power of the Diet is resisted in the “National Strike.”
1906	Its power restored, the Diet guarantees freedom of press and assembly and universal suffrage; first film made.
1910	Russians reassert authority; freedoms erode.
1917	Diet declares independence during Russian Revolution.
1918	Brief civil war; “Whites” backed by Germany defeat and massacre “Reds” backed by Moscow.
1919	Republic declared; Staahlberg is first president.
1920	Treaty of Tartu with Soviet Union.
1925	Cultural renaissance in Helsinki, with composer Sibelius, architect Saarinen and others.
1930	Unsuccessful revolt by “Lapua,” right-wing peasant movement.
1939	Soviet invasion meets tough resistance in Winter War.
1940	Finland cedes territory in Treaty of Moscow but retains independence.
1941	Embittered Finland joins Hitler’s invasion of Soviet Union.
1944	Finland defeated by Soviet army.
1947	Treaty of Paris grants more territory and enormous reparation to Soviets.
1948	President Paasikivi seeks to placate Soviet neighbor through close cooperation, signs limited defense pact.
1952	Olympics held in Helsinki.
1955	Joins Nordic Council; this and other economic ties to the West, coupled with final stabilization of Soviet question, allows for long period of economic growth under center-left coalition governments.
1969	First Finnish auto factory opens as industry booms.
1975	Helsinki Conference and Accords—attempt by 35 nations to achieve East-West cooperation; accords set out basic human rights standards worldwide.
1987	Harri Holkeri becomes Finland’s first post-World War II conservative prime minister.
1992	Finland nullifies 1948 defense pact with defunct USSR.
1995	Finland admitted to European Union.
2000	Social Democratic Party member Tarja Halonen becomes Finland’s first female president.
2002	The euro replaces the local markka.

flanked by NORWAY and SWEDEN on the north and west and RUSSIA on the east and south. The north of Finland stretches above the Arctic Circle, in Lapland, and the south is flecked with lakes and waterways. Independent

since 1917, Finland has been connected with either Russia or Sweden for much of its history; in fact, Swedish continues as one of the country’s two official languages. The capital, Helsinki, is on the southern coast. After

the RUSSIAN REVOLUTION in 1917, the Finns proclaimed their independence from the new USSR. Right-wing factions emerged triumphant after a five-month civil war in 1918; in 1920 the Soviet Union acknowledged the new

republic in the Treaty of Tartu (see FINNISH WAR OF INDEPENDENCE). Finnish politics were unstable during the 1920s and 1930s, as reminders of the civil war were slow to fade. At the beginning of WORLD WAR II, in the winter of 1939–40, Finland was attacked by the USSR, in violation of a nonaggression pact. The Finns fought bravely but were defeated; quickly recuperating, they themselves attacked Russia when GERMANY invaded the USSR in 1941. The Finns were victorious at first but were routed in 1944, losing the Isthmus of Karelia, Vyborg, the Finnish shores of Lake Ladoga and the Pechenga region to the Soviet Union. After 1945 relations with the USSR were relatively harmonious. Finland's industries have grown considerably. In 1992 Finland nullified its friendship treaty with the Soviet Union, following the December 1991 disintegration of the latter country. Later that year Finland and Russia negotiated a new treaty that included no military accords. In 1995 Finland was admitted to the European Union, and in 2002 Finland adopted the euro as its currency.

Finley, David (1890–1977) Planner and first director (1938–56) of the National Gallery of Art in Washington, D.C. He was chairman of the U.S. Commission of Fine Arts (1950–63) and headed the National Trust for Historic Preservation during the same period.

Finney, Albert (1936–) British stage and film actor and stage director. Finney remains most familiar to audiences worldwide for his tour de force performance in the title role of the film *Tom Jones* (1963), based on the picaresque 18th-century novel by Henry Fielding. Other films starring Finney include *Two for the Road* (1967) and *Shoot the Moon* (1982). But the bulk of his acting work took place on the London stage, where he earned critical acclaim for his lead roles in plays as diverse as *Billy Liar* (1960), *Luther* (1961), *Hamlet* (1975) and *Tamburlaine the Great* (1976). In 1983 he both directed and starred in *Armstrong's Last Goodnight*, by British playwright John Arden, in a production by the Old Vic Company. Finney has since appeared in several notable films, including *Erin Brockovich* (2000), in

which he portrayed lawyer Ed Masry opposite Julia Roberts in the title role; *Traffic* (2000), in which he depicted the U.S. chief of staff, and *The Gathering Storm* (2002), a Home Box Office film in which he played Winston CHURCHILL and for which he received an Emmy nomination.

Finnish War of Independence (1918–1920) In 1917 the new Russian provisional government granted Finland a democratic government. After the BOLSHEVIK REVOLUTION, the Finns declared independence on December 6, 1917. The new Soviet government recognized it, but Finland's coalition government was ousted by Soviet-backed Finnish radicals (Reds) on January 28, 1918. This started a civil war between WHITES in the north, led by Baron Carl Gustaf MANNERHEIM, and Reds controlling the south. Mannerheim attacked the Reds but was halted until aid arrived from German troops under Count Rudiger von der Goltz, who seized Helsinki and drove the Reds from the country. At the **Battle of Vyborg**, April 29, 1918, the Whites forced the Reds to surrender and then launched a terror campaign, killing thousands of suspected communists. A republic was established on June 17, 1919, but desultory fighting continued with Russia over conflicting claims to western Karelia until the Treaty of Dorpat (Tartu), October 14, 1920, ended hostilities, reaffirming Finland's independence.

Finsen, Niels Ryberg (1860–1904) Danish physician and medical researcher. He was educated in Reykjavik, Iceland, and at the University of Copenhagen, where he earned his M.D. In the 1890s Finsen began to investigate previous suggestions that light could be used to kill bacteria. He experimented and found that ultraviolet rays had the greatest power to kill bacteria. In 1896 he founded the Institute of Phototherapy, directing it until his death. Here he used ultraviolet light to treat lupus vulgaris, a skin infection caused by the tubercle bacillus. Half of his 800 lupus vulgaris patients were completely cured, and nearly all the rest showed significant improvement. For this work he received the 1903 NOBEL PRIZE in physiology or medicine. Finsen was not only among

the first to use light to treat medical conditions, but he was also among the first to note the effects of sunlight, and its absence, on mood.

fireside chats Informal radio talks begun by U.S. president Franklin Delano ROOSEVELT. The first fireside chat was broadcast on March 12, 1933; the format proved popular and was continued by Roosevelt's successors.

Firth of Clyde See CLYDE RIVER AND FIRTH OF CLYDE.

Fischer, Emil Hermann (1852–1919) German organic chemist, widely regarded as the father of biochemistry. During the 1870s he worked closely with Adolf von Bayer. Before the end of the 19th century he did important work in three fields: purines, sugars and peptides. This work helped lay the foundation for 20th-century biochemistry, and Fischer received the 1902 NOBEL PRIZE in chemistry. Later he was the first scientist to produce a polypeptide containing 18 amino acids (1907) and the first to synthesize a nucleotide (1914). He also studied enzymes and recognized the importance of proteins as building blocks of life.

Fischer, Ernst Otto (1918–) German inorganic chemist. Fischer was educated at the Munich Institute of Technology, where he obtained his Ph.D. in 1952. He taught at the University of Munich, serving as professor of inorganic chemistry from 1957 to 1964, when he became the director of the Institute for Inorganic Chemistry at the Institute of Technology. Fischer is noted for his work on inorganic complexes. He shared the NOBEL PRIZE in chemistry with Geoffrey Wilkinson in 1973. Fischer went on to do further work on transition-metal complexes with organic compounds and is one of the leading workers in the field of organometallic chemistry.

Fischer, Hans (1881–1945) German organic chemist. Fischer gained his doctorate in chemistry at the University of Marburg in 1904. He also studied medicine at the University of Munich, earning his M.D. in 1908. He was assistant to Emil FISCHER before occupying chairs of medical chemistry at Innsbruck (1916) and Vienna (1918). In 1921 he

succeeded Heinrich Wieland as professor at the Technical Institute in Munich. Fischer's life work was the study of the immensely important biological molecules hemoglobin, chlorophyll and the bile pigments, especially bilirubin. He synthesized hemin in 1929 and extensively investigated similar molecules—the porphyrins. He was awarded the NOBEL PRIZE in chemistry for this work in 1930. He then turned to the chlorophylls. Fischer took his own life at the end of WORLD WAR II, after his laboratories had been destroyed in the bombing of Munich.

Fischer, Joseph Martin "Joschka" (1948–) German Green Party politician, foreign minister of Germany (1998–). Born to ethnic Germans expelled from Hungary at the end of WORLD WAR II, Fischer spent the late 1960s and early 1970s demonstrating against the VIETNAM WAR and mingled with such activists as Daniel "Danny the Red" Cohn-Bendit (the French student leader who organized the 1968 Paris uprising against de GAULLE) and Hans-Joachim Klein (later charged with participating in a 1975 attack on OPEC oil ministers that killed three people). In 1976 he left the radical movement when it was revealed that two of its members had conspired with terrorists who later hijacked a plane in order to find and murder Israeli passengers.

In 1983 Fischer was elected to the Bundestag, the West German parliament, as a member of the pro-environment Green Party, and two years later joined the government of Helmut KOHL as minister of the environment. In 1998 he was selected as the political leader of the Green Party, which entered into a coalition government with Gerhard SCHRÖDER's Social Democratic Party, and Fischer became foreign minister.

Fischer differentiated himself from the majority of the Greens' constituents when in 1999 he supported the participation of German military forces in the NATO-led KOSOVO war, agreeing that the dangers of continued genocide and ETHNIC CLEANSING by Serbian forces in Kosovo justified the action. Fischer also promoted a German foreign policy that called for greater integration under the EUROPEAN UNION (EU). Also, although he supported the Schröder government's opposition to

the 2003 Anglo-American military operation against IRAQ, Fischer called for better relations with the U.S. after the conflict ended.

Fischer, Robert James "Bobby" (1943–) American chess champion. Considered among the greatest chess players of all time, Fischer was known for his aggressive style of play as well as for his demanding personality. He became a grandmaster in 1958, then went on to win the U.S. championship. In 1972 he beat the Soviet Union's Boris SPASSKY for the world championship, becoming the first American to hold that title; he then abruptly quit all competitive play. During his brilliant career Fischer helped to popularize chess throughout the world and helped to break the Soviet domination of the sport. In 1992 Fischer emerged from seclusion for a rematch against Spassky. Although Fischer won the rematch, held in Sarajevo, Yugoslavia, he quickly returned to anonymity. Following the terrorist attacks of SEPTEMBER 11, 2001, Fischer, living in Japan, gave a series of radio interviews in which he denounced the U.S. and made virulently anti-Semitic statements. Authorities in the U.S. later sought his extradition, claiming that by playing in Sarajevo in 1992 he had violated international sanctions then in force against the former Yugoslavia.

Fischer-Dieskau, Dietrich (1925–) German lieder (art song) and operatic baritone singer. His interpretations of the great German lieder cycles of Schubert, Schumann and Wolf are incomparable. He was born in Berlin and studied voice with G. A. Walter and Hermann Weissenborn. While serving in the German army during WORLD WAR II, he was captured by American forces near Pisa, Italy, and spent the remainder of the war singing lieder to his fellow prisoners. His subsequent concert and recording career with accompanists Joerg Demus, Gerald MOORE and Hartmut Hoell has encompassed an incredibly diverse roster of composers, from Purcell and Handel to Meyerbeer and Strauss to Pfitzner, Charles IVES, Hans-Werner HENZE and Benjamin BRITTEN (for whom he inspired the baritone part in the *War Requiem*, 1962). On the opera stage Fischer-Dieskau has

particularly excelled in the roles of Falstaff, Don Giovanni and Macbeth. In recent years he has established a conducting career, written several books (*Wagner and Nietzsche*, 1974; *Robert Schumann*, 1981; and a biographical study of Schubert's songs, 1976) and presented distinguished master classes. Arguably, his finest achievement was a 25-record project in the late 1960s for the Deutsche-Grammophone label of the approximately 600 Schubert songs. Many of these songs had never before been publicly performed and/or recorded. Although there are some detractors who criticize his tendency to "push" what is a rather lightweight vocal instrument, there is no denying his unparalleled dramatic insight and his complete command of any concert stage. Fischer-Dieskau made his final concert appearance in December 1992 at the Bavarian State Opera House in Munich, Germany, in the title role of Verdi's *Falstaff*.

Fisher, Dorothy Canfield (1879–1958) American author and humanitarian. Using the name Dorothy Canfield, she contributed many stories to magazines. After graduating from Ohio State University in 1899, she went to the Sorbonne in Paris and took a Ph.D. in 1904 from Columbia University. After marrying John R. Fisher, she lived on her ancestral farm near Arlington, Vermont, for the rest of her life. During WORLD WAR I she and her husband undertook relief work in France, resulting in her collection of short stories *Home Fires in France* (1918). She was selected as the only woman on the board of the Book-of-the-Month Club, continuing for 24 years. She introduced and popularized the Montessori method of early childhood education in *A Montessori Manual* (1913). Her work includes *The Bent Twig* (1915); *Understood Betsy* (1916), considered a children's classic; *Day of Glory* (1919) and *American Portraits* (1946).

Fisher, Geoffrey Francis (Lord Fisher of Lambeth) (1887–1972) English clergyman, archbishop of Canterbury. Fisher, who also served as primate of the Church of England, was one of the leading supporters of ecumenical unity in the modern Anglican Church. In 1960 he paid a visit to Pope

JOHN XXIII in the Vatican. That occasion marked the first formal meeting between the heads of the Anglican and the Roman Catholic Churches since the initial split between the two churches in 1534. In a 1961 speech, Fisher declared that the terms *Catholic* and *Protestant* were out of date and no longer held real meaning. Fisher's ultimate goal was what he termed a *commonwealth of churches*—with all denominations spiritually unified while each maintained organizational independence. Fisher served as Bishop of Chester (1932) and of London (1939) before becoming archbishop of Canterbury (1945–61).

Fisher, Sir John (1892–1983) British naval officer and government official. Fisher was one of those responsible for the “little ships” evacuation of Allied troops from DUNKIRK early in WORLD WAR II. Fisher was serving director of the coastal division of Britain's Ministry of War when he planned **Operation Dynamo**, in which an armada of small boats, most of them privately owned and sailed by civilians, ferried 338,226 Allied troops to England in May and June 1940.

Fisher, John Arbuthnot (first baron Fisher of Kilverstone, 1909) (1841–1920) British admiral. He joined the navy in 1854 and, while trained in sailing ships, became an advocate of technical advances and aided in the development of the torpedo. He developed ordnance (1886–90) and served as third sea lord (1892–97), commander in chief in the Mediterranean (1899–1902), second sea lord (1902–03) and first sea lord (1903–10). Largely responsible for revamping Britain's navy to face the emerging threat from Germany, the fiery admiral helped to build the *Dreadnought* and encouraged the construction of an expanded fleet and the development of the SUBMARINE. He retired in 1910 but returned as first sea lord at the outbreak of WORLD WAR I (1914). Opposed to CHURCHILL's Dardanelles expedition, he resigned in 1915.

Fisher, Mary Frances Kennedy (1908–1992) American author. After attending the University of California, Fisher spent three years in France studying at the University of Dijon. The author of numerous essays and

books on food and cookery, Fisher is known for the clarity and elegance of her writing as well as her ability to intersperse personal reflection and reminiscence throughout her culinary books. Her prose has been praised by W. H. AUDEN, among others. Her works include *Serve It Forth* (1937), which she published as Mary Frances Parrish, using her second husband's name; *Here Let Us Feast: A Book of Banquets* (1946); *An Alphabet for Gourmets* (1949); *Not Now but Now: a Novel* (1982) and *Dubious Honors* (1988). Fisher also translated into English *The Physiology of Taste*, by Jean Anthelme Brillat-Savarin (1946).

Fisk, James B. (1910–1981) American physicist. Fisk headed a group that pioneered the development of RADAR during WORLD WAR II. He was appointed the first director of the U.S. Atomic Energy Commission (AEC) in 1947. In 1958 President EISENHOWER sent him to Geneva to head a team of scientists preparing the groundwork for negotiations on the NUCLEAR TEST BAN TREATY. From 1959 to 1973 Fisk was president of Bell Laboratories.

Fitch, Val Logsdon (1923–) American physicist. Fitch was educated at McGill and Columbia Universities and obtained his Ph.D. from Columbia in 1954. He then joined the staff of Princeton University, where he became professor of physics in 1960. Working with Leo James Rainwater, Fitch was the first to observe radiation from muonic atoms, that is, from species in which a muon is orbiting a nucleus rather than an electron. This work indicated that the sizes of atomic nuclei were smaller than had been supposed. He went on to study kaons and in 1964 collaborated with James CRONIN, James Christenson and Rene Turley in an experiment that disproved CP conservation. In 1980 Fitch and Cronin shared the 1980 NOBEL PRIZE in physics for this fundamental work.

Fitzgerald, Barry (William Joseph Shields) (1888–1961) Irish actor. Born in Dublin, Fitzgerald acted part-time at the ABBEY THEATRE from 1918 until 1929, after which he became a permanent member of the company. Fitzgerald established his reputation in the role of Captain Boyle, in Sean O'-

CASEY's *Juno and the Paycock* (1924). He appeared first in London in O'Casey's *The Silver Tassie* (1929). Following 1937, Fitzgerald appeared primarily in films, such as *Going My Way* (1944) and *The Quiet Man* (1952).

Fitzgerald, Ella (1918–1996) American jazz and popular singer known for her elegant song stylings. Born in Newport News, Virginia, Fitzgerald was raised by her aunt in New York. After winning the Harlem Amateur Hour contest, she became a vocalist with the Chick WEBB band in 1934. She first gained wide attention with her recording (with Webb) of “A-Tisket, A-Tasket”; although the song itself is mediocre, Fitzgerald's vocalization made it an instant hit. She displayed her characteristic traits—swing rhythm, improvisatory spirit, vocal range, control and clarity. After Webb's death (1939) she became the leader of the band. Fitzgerald's career was remarkable for its longevity and its sustained excellence. She worked with many of the notable jazz musicians of her time, toured extensively in the U.S. and Europe and made numerous concert, festival, nightclub and television appearances. Her repertoire, well represented in recordings, ranged from the lyrics of George and Ira GERSHWIN to BLUES and scat songs.

Fitzgerald, Francis Scott (1896–1940) American novelist and short story writer. F. Scott Fitzgerald captured in his writings the perceived moral emptiness of the wealthy American society of the “Roaring Twenties.” Although not a member of the wealthy set, his elite education in private schools provided insight into the life of the privileged. Born in St. Paul, Minnesota, he attended Princeton University but resigned to join the army (1917) and served in France during WORLD WAR I. While in the army, he published his first book, *This Side of Paradise*, in 1920. In *Tales of the Jazz Age* (1922) he coined the term *Jazz Age* to describe his era. In 1924 Fitzgerald went to Europe, where he lived for six years. He published his best-known work, *The GREAT GATSBY* (1925), while living abroad. *Gatsby* is now widely acclaimed both for its formal perfection and for its insights into the American experience, but its initial reception was disappointing. The mental illness of his wife, Zelda Sayre Fitzgerald, and his bouts with al-

F. Scott and Zelda Fitzgerald (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

cohol hampered his literary progress and left Fitzgerald in a difficult financial position. *Tender Is the Night* (1934), perhaps his most ambitious book, was a financial failure. Fitzgerald turned to scriptwriting for HOLLYWOOD in 1936 and died of a heart attack before his novel *The Last Tycoon* was finished.

Fitzgerald, Robert Stuart (1910–1985) American scholar, critic and poet. Fitzgerald was a Harvard professor best known for his translation of the Greek classics. In 1961 his version of Homer's *Odyssey* won the first Bollingen award for translation of poetry. He also translated some major modern French literature.

Fitzmaurice, George (1877–1963) Irish playwright. Fitzmaurice's first play, *The Country Dressmaker* (1907), was performed at the ABBEY THEATRE and was an enormously popular realistic comedy. His later works, which include *The Pie-Dish* (1908), *The Dandy Dolls* (1908) and *The Magic Glasses* (1913), were more difficult, involving elements of the fantastic and grotesque; they were not popular during his lifetime. He remained a civil servant in Dublin. Following his death there was a revival of interest in his work, which has been compared to that of James STEPHENS.

Fitzsimmons, Frank Edward (1908–1981) American labor leader and head of the International Brotherhood of Teamsters (1971–81). Beginning as a truck driver, Fitzsimmons rose through the union ranks. He took

temporary charge of the largest U.S. union when Jimmy HOFFA, his predecessor, was sent to prison (1967). After his election as head of the Teamsters, he expanded the union as a political force, improved relations with the AFL-CIO and maintained close ties with the White House. Nonetheless, charges of misuse of funds and other abuses continued to plague Fitzsimmons and the Teamsters.

five-year plan In communist and socialist countries, a plan during which the economic growth of the country is structured for the following five years. The first five-year plan was ordered in the UNION OF SOVIET SOCIALIST REPUBLICS by Joseph STALIN and lasted from 1928 to 1932. In 1958 Nikita KHRUSHCHEV hit on the idea of a seven-year plan. Although the USSR made immense industrial strides through its five-year plans during the Stalinist period, the cost in human suffering was also immense. Invariably, five-year plans have failed to meet their ambitious goals; they are often seen more as PROPAGANDA exercises than as realistic programs.

Flagstad, Kirsten (1895–1962) Norwegian opera singer, considered the greatest Wagnerian soprano of the 1930s and 1940s. Flagstad made her debut in *Tiefland* in Oslo (1913) and continued to sing in operettas until she joined the Storm Theater in Göteborg, Sweden (1930) and devoted herself to opera. Her performance as Sieglinde in *Die Walküre* in Bayreuth (1934) estab-

lished her international reputation. Her 1935 debut in the same role at the Metropolitan Opera in New York was a triumph, and her subsequent soldout appearances over the next five years helped save the Met from financial ruin during the GREAT DEPRESSION. Her greatest roles were as Sieglinde, Isolde (*Tristan and Isolde*), Kundry (*Parsifal*) and the three Brünnhildes of Wagner's Ring Cycle. After retiring from live performance in 1954, she founded the Norwegian State Opera in 1959 and became its director.

Flaherty, Robert (1884–1951) American documentary filmmaker. Flaherty came to know the Canadian and Alaskan wildernesses as a child when he accompanied his father in travels throughout the Northwest Territory. These experiences came to fruition when Flaherty shot a silent documentary, *Nanook of the North* (1922), that documented Eskimo (Inuit) life and became a box-office success. He followed with *Moana* (1926), a documentary on the South Sea islands. *Man of Aran* (1934) is the work most acclaimed by film critics—a beautifully photographed study in black and white of the harsh conditions of village life on the Aran Islands of Ireland. *Elephant Boy* (1936) was a film on India. Flaherty's final documentary, sponsored by Standard Oil, was *Louisiana Story* (1948).

Flanagan, (Father) Edward Joseph (1886–1948) American priest and founder of BOYS TOWN. A parish priest in Nebraska, Father Flanagan became interested in the treatment of homeless or lawbreaking boys and founded Boys Town near Omaha in 1917. The work began with five boys in a rented house. The next year he bought a small tract of land where he and the boys began to build the institution. Boys Town was incorporated as a municipality in 1922. His belief that “there is no such thing as a bad boy” was confirmed by his spectacular success in training young men, many of whom went on to successful careers. Father Flanagan's work was featured in the popular 1938 movie *Boys Town*. Following World War II, he became a special consultant on youth to the U.S. government and traveled to Asia and Europe to inspect youth work and facilities.

Flanders Ancient, strategically located area on the English Channel–North Sea coast of Europe, running from what is now the north of France through Belgium and into the Netherlands. Parts of it are in the French departments of Pas-de-Calais and Nord, the Belgian provinces of East and West Flanders and the Zeeland province of the Netherlands. It has had a turbulent history and was a perpetual battlefield during WORLD WAR I and a critical area during WORLD WAR II. The continuous battles in both French and West Flanders during World War I were depicted in John McCrae's poem "In Flanders' Fields." During World War II the battle of Flanders commenced with the Nazi attack on Belgium in 1940 and finished with the capitulation of the Belgian army and the British evacuation at DUNKIRK, from May 26 to June 4, 1940.

Flanner, Janet (1892–1978) American writer. Flanner was a correspondent for *The NEW YORKER* magazine for almost 50 years. Her regular "Letter from Paris" feature in the magazine gave insight into the French mind and way of life. She also wrote profiles of such diverse figures as Adolf HITLER, Henri MATISSE and Queen Mary.

Fleetwood Mac Anglo-American ROCK band. While the band Fleetwood Mac has experienced numerous changes in musical personnel since its founding in 1967, its most prominent members have been guitarist Lindsay Buckingham, drummer Mick Fleetwood, pianist and vocalist Christine McVie, bass player John McVie and vocalist Stevie Nicks. Fleetwood and John McVie, the two key founders of the band, met in the 1960s while playing together in a British group, John Mayall's Bluesbreakers. In 1969 Fleetwood Mac enjoyed a number-one hit in Britain with an instrumental single, "Albatross." In 1974 Americans Buckingham and Nicks joined the band and still greater commercial success ensued. A 1977 album, *Rumours*, became the first album by a rock-and-roll band to produce four singles that each reached the *Billboard* Top Ten pop chart—"Go Your Own Way," "Dreams," "Don't Stop" and "You Make Loving Fun." Fleetwood Mac disbanded for a time in the mid-1980s, but the group

later reunited and resumed actively performing and recording. Nicks also pursued a successful solo career.

Fleischer, Max (1883–1972) American cartoonist. Fleischer created the *Popeye* and *Out of the Inkwell* cartoon series (1917). He also invented more than 20 devices used in animation and motion picture production.

Fleming, Sir Alexander (1881–1955) British bacteriologist. After his early education at Kilmarnock Academy and the London Polytechnic Institute, Fleming began his career at the age of 16 as a shipping clerk in a London office. With encouragement from his brother, who was a doctor, he became a medical student at St. Mary's Hospital Medical School in 1902 and graduated from the University of London in 1908. He worked at St. Mary's all his life apart from his service in the Royal Army Medical Corps (1914–18). During his time with the medical corps he became interested in the control of wound infections and was a vigorous supporter of the physiological treatment of wounds rather than treatment using harsh chemicals, such as carbolic acid.

In 1928 Fleming was appointed professor of bacteriology, and in the same year he made his most important discovery. After accidentally leaving a dish of staphylococcus bacteria uncovered, Fleming noticed certain clear areas in the culture. He found these areas were due to contamination by a mold he identified as *Penicillium notatum*, which produced a substance that killed the bacteria. Fleming named this substance PENICILLIN and tested the bactericidal effect of the mold on various bacteria, observing that it killed some but not others. He appreciated the potentialities of his discovery but was unable to isolate and identify the compound. It was not until WORLD WAR II, with the urgent need for new antibacterial drugs, that penicillin—the first antibiotic—was finally isolated by Howard Florey and Ernst CHAIN. Fleming was awarded the 1945 NOBEL PRIZE in physiology or medicine jointly with Florey and Chain for his discovery, which initiated a whole new range of life-saving antibiotics. He received a knighthood in 1944 and many other honors.

Fleming, Lady Amalia (Amalia Koutsouris) (1909–1986) Greek political activist. She was the wife of Sir Alexander FLEMING, the discoverer of PENICILLIN. She became internationally known for her resistance to the military junta that ruled GREECE from 1967 to 1974. Expelled from Greece in 1971, she returned there after democracy was restored. In 1977 she was elected to Parliament as a Socialist Party member and later reelected in 1981 and 1985.

Fleming, Ian Lancaster (1908–1964) British novelist and journalist. The son of a Conservative M.P., Fleming was educated at Eton, Sandhurst and the Universities of Munich and Geneva. He served as Moscow correspondent for Reuters from 1929 to 1933 and later as a reporter for the *Times* of London. Fleming wrote the enormously popular series of espionage novels featuring JAMES BOND, agent 007, the embodiment of many a male adolescent fantasy. The Bond books, nearly all of which have been filmed, include *Casino Royale* (1953, filmed 1967), *Goldfinger* (1959, filmed 1964) and *The Spy Who Loved Me* (1962, filmed 1977). The series was given an additional boost in the U.S. by the praise of President John F. KENNEDY. Fleming also wrote the children's book *Chitty-Chitty-Bang-Bang* (1964, adapted as a musical film, 1968) and contributed to many periodicals under the pseudonym Atticus. The popular James Bond image of the spy as a glamorous superhero has been largely refuted by John LE CARRÉ.

Fleming, Peggy Gale (1948–) U.S. figure skater. One of the great balletic stylists, she won the first of her five straight U.S. women's championships at the age of 15. The world champion from 1966 through 1968, she was an Olympic gold medal winner in 1968. After the Olympics, she turned professional and performed with a number of ice shows and in professional competitions. Fleming has continued to receive awards and honors since her retirement, including the 1997 U.S. Olympic Committee Spirit Award and the 2003 Vince Lombardi Award of Excellence.

Fleming, Williamina Paton Stevens (1857–1911) U.S. astronomer.

She was a housekeeper in Boston when her employer, E. C. Pickering, hired her onto his Harvard College Observatory staff in 1881. Here she helped develop the "Pickering-Fleming" stellar classification system of photographic spectroscopy. She published her *Draper Catalogue of Stellar Spectra* of over 10,000 stars in 1890. She also established the first photographic system of measuring stellar magnitude, discovered half of the then known novae and over 200 variable-magnitude stars. In 1898 Harvard appointed her curator of astronomical photographs, and between 1892 and 1910 she cataloged over 200,000 plates. During her lifetime, Fleming was America's most famous woman astronomer.

Flerov, Georgi (1913–1990) Soviet nuclear physicist. Educated at the Leningrad Industrial Institute of Science, Flerov started his career at the Leningrad Institute of Physics and Technology in 1938. He later became chief of the laboratory of multicharged ions at the Kurchatov Institute of Atomic Energy, Moscow. Throughout his life Flerov was involved in the search for new elements and isotopes through synthesis and discovery. In many ways his work paralleled that of Glenn SEABORG in America. In 1960 Flerov became director of the nuclear radiation laboratories of the Joint Institute for Nuclear Research, Dubna, near Moscow.

Fletcher, Harvey (1884–1981) American physicist and expert on electronic acoustics. Fletcher joined Bell Telephone Laboratories in 1916. His acoustical research resulted in the development in 1934 of stereophonic sound. As head of physical research at Bell from 1933 to 1949, he helped develop the first electronic hearing aids and directed pioneering work on sound in motion pictures, television and transistors.

Fletcher, John Gould (1886–1950) American poet and critic. Born in Arkansas, Fletcher later lived for many years in England. His early poetry, such as *Irradiations: Sand and Spray* (1915) and *Goblins and Pagodas* (1916), was experimental and associated with that of the imagist poets. Fletcher later became concerned with issues of philoso-

phy and spirituality, during which period he published *The Black Rock* (1928). This poetry, although mystical in nature, is more traditional in form. Late in life Fletcher returned to rural Arkansas, retreating from what he deemed the dehumanization of modern life. For *Selected Poems* (1938) he was awarded the PULITZER PRIZE in poetry. Other works include *The Epic of Arkansas* (1936) and *South Star* (1941). (See also IMAGISM.)

Flexner, Simon (1863–1946) American pathologist and authority on infectious diseases. In 1900, as professor of pathology at Johns Hopkins, Flexner discovered the bacillus that was causing a virulent form of dysentery among American troops in the Philippines; the organism was later named *Shingella flexneri*. In 1907, in response to an outbreak of meningitis in New York City, Flexner, then director of the laboratories at the Rockefeller Institute for Medical Research, developed a serum that remained a standard treatment of the disease for three decades. He headed the Rockefeller Institute from 1920 until 1935.

Florensky, Paul Alexandrovich (1882–1943) Russian Orthodox priest, philosopher and physicist. One of the founders of the Union of Christian Struggle as a student, he then lectured at the Moscow Theological Academy. Banished to Central Asia before the 1917 Bolshevik seizure of power, he returned afterward and studied advanced physics at the Academy of Sciences. He was deported to a CONCENTRATION CAMP in the 1920s, and nothing more is known about him. His *The Pillar and Foundation of Truth* (1914) has influenced philosophical and theological thought in the USSR.

Florida ballot controversy (2000) Crisis in the U.S.'s Electoral College brought about by the recounting of the popular vote in the state of Florida during the 2000 presidential election, amid allegations of ballot tampering. On November 7, 2000, in a tightly contested presidential race between Republican candidate George W. BUSH and Democrat Al GORE, original polling projections from the state of Florida made it appear that Bush had won the state's popular vote and therefore would receive all of

Florida's 25 electoral votes, giving him a total of 271, enough to ensure his election. This prompted most news networks to call the presidential race in favor of Bush; Gore phoned the Bush camp to congratulate his opponent on the election's outcome. However, it was soon revealed that Bush's margin of victory only stood at a few thousand. Florida law required a recounting of all ballots to make certain that machine error did not result in illegitimate election results. Gore decided not to concede until the final tally was certified.

During the recount, and with the arrival of absentee and overseas voting forms, numerous reports surfaced of voting irregularities in several Florida counties. Democrats also claimed that defective voting machines had resulted in computer cards (used to tabulate individuals' votes) in which holes indicating how the person had voted were not completely punched out, which disqualified the ballot. This prompted calls from Democratic leaders for a hand recount in certain counties. While the controversy continued and the absentee ballot tally reduced Bush's lead to 950 votes, the Florida supreme court agreed to extend the recount deadline by 12 days.

On November 26, Katherine Harris, Florida's Republican secretary of state and the chairwoman of Bush's campaign in Florida, certified the recount as indicating that Bush won the popular vote by 537 votes. However, after the U.S. Supreme Court refused to permit a hand count of the ballots, Gore appealed his case to Florida's supreme court, which on December 6 agreed to order the counting of an estimated 40,000 ballots that computers had rejected for not including a vote on the presidential race. In response Bush filed a countersuit before the U.S. Supreme Court, which on December 12 voted 5-4 to overturn the decision reached by the Florida court, thus confirming Harris's original certification of Bush as the winner of the Florida vote and the recipient of all 25 electoral votes. The following day Gore conceded the election to Bush, who won 271 electoral votes to Gore's 266.

Floyd, Charles Arthur "Pretty Boy" (1901–1934) American gangster. Raised in Oklahoma's Cherokee Indian Territory, bank robber Floyd

became a folk hero to depression-era sharecroppers in his home state. Unable to find work, he turned to robbery in the mid-1920s. He served (1925–26) one short term in jail, escaped (1930) a second, longer sentence, and was soon robbing banks throughout the Midwest with a succession of partners. Along the way, he made a considerable reputation as a Robin Hood, distributing money to the poor and ripping up bank mortgages. At the same time he became a confirmed killer, murdering an estimated 10 men. Labeled “public enemy number one” in the early 1930s, he was killed in an Ohio cornfield on October 22, 1934, by FBI agents under Melvin PURVIS.

Flying Tigers Popular term for the American Volunteer Group (AVG), an organization formed in 1941 by Colonel Claire Chennault and directed by him. Recruited from the U.S. Armed Forces, the men of the Flying tigers fought for CHIANG KAI-SHEK's China against the Japanese from 1941 to 1942. Based in Burma, the three squadrons that comprised the AVG flew American P-40 fighter planes, their wings marked with the Chinese Nationalist sun, their noses emblazoned with menacing red, white and blue shark's teeth. The Flying Tigers proved invaluable in protecting the BURMA ROAD supply line from Japanese incursions and were an important factor in delaying the Japanese capture of Rangoon until March 1942. Four months later, the AVG was transferred to American auspices and ceased to exist as a separate military entity.

Flynn, Errol (1909–1959) Australian-born film actor; achieved enduring success during the 1930s and 1940s as the archetypal HOLLYWOOD swashbuckler. Born on the island of Tasmania off the Australian coast, Flynn began his acting career with roles on the British stage before coming to Hollywood in 1934. After playing a few bit parts, he shot to stardom playing the romantic lead in the pirate film *Captain Blood* (1935), directed by Michael Curtiz and featuring Olivia de Havilland as Flynn's leading lady. Flynn then enjoyed a string of hits including *The Charge of the Light Brigade* (1936), *The Adventures of Robin Hood* (1938), *Dodge City* (1939) and *They Died with Their Boots On* (1941). In 1942 he was charged with statutory rape but ac-

quitted, prompting the popular saying “In like Flynn.” In his last years Flynn returned to character roles in films including *The Sun Also Rises* (1957) and *The Roots of Heaven* (1958). *My Wicked, Wicked Ways* (1959) is his revelatory autobiography.

FNLA (National Front for the Liberation of Angola) An independence movement that fought alongside UNITA against the ultimately victorious MPLA in the ANGOLAN CIVIL WAR begun in 1975. It was funded by CHINA, and initially by the U.S. and ZAIRE. In the 1990s the FNLA emerged as a political party and participated in the political process organized by the 1991 BICESSE ACCORD and the 1994 LUSAKA ACCORDS.

Fo, Dario (1926–) Italian playwright, actor and theatrical producer. Fo has been a highly political figure in the postwar Italian theater and has avoided the twin extremes of COMMUNISM and FASCISM. He first attained success as a cabaret mime artist in the 1950s, performing satiric reviews with his wife, Franca Rama. Fo subsequently began to write plays that parodied the prevailing COLD WAR politics of the time. His work includes *Archangels Don't Play the Pin-Tables* (1959) and *Seventh: Thou Shalt Steal a Little Less* (1964). Fo achieved success throughout Europe with his play *Accidental Death of an Anarchist* (1970). His more recent plays include *We Won't Pay! We Won't Pay!* (1974) and *Trumpets and Raspberries* (1984). In 1997 Fo received the NOBEL PRIZE in literature in recognition of his contribution to the stage.

Foch, Ferdinand (1851–1929) French general. A veteran of the Franco-Prussian War of 1870–71 and commandant of the École de Guerre (1907–11), Foch was an official observer at Germany's army maneuvers in 1913. At the outbreak of WORLD WAR I he led the French Ninth Army at the MARNE. He also served in FLANDERS and commanded a French army group on the SOMME in 1916. After a brief retirement, he became General PÉTAINE's chief of staff in May 1917. His impressive performance led to his appointment as supreme commander of Allied forces on the Western Front in the spring of 1918 (see WORLD WAR I ON THE WEST-

ERN FRONT). He commanded the successful Marne counteroffensive (July 1918) and the subsequent offensive that led the Germans to sue for an armistice in November 1918. At the PARIS PEACE CONFERENCE (1919) he urged CLEMENCEAU to impose strong conditions on Germany. Foch was created a marshal of France in 1918; he was also made an honorary field marshal in the British army, the only Frenchman so honored.

Focke, Heinrich (1890–1979) German aircraft designer. Focke was an aviation pioneer whose FW-61 helicopter made the first free flight of a rotary-wing aircraft (1936). His VA-61 was the world's first helicopter to receive a certificate of airworthiness. One of his airplanes held the altitude record until 1954.

Fogel, Robert (1926–) American economist. Born in New York to Russian immigrants, Fogel attended Cornell University (B.A. 1948) and obtained an M.A. in economics from Columbia University (1960) and a Ph.D. in economics from Johns Hopkins University (1963). He was a professor at the University of Rochester (1960–75), the University of Chicago (1968–75) and Harvard University (1975–81). Fogel investigated the effects of technological innovations, government policy and changes in American structural institutions and environmental awareness on the development of American economic growth in the 19th and 20th centuries. He also helped develop cliometrics, a subdivision of the field of history that uses numerical data to quantify the importance of causal factors in producing a set of historical events. In 1993 Fogel was awarded the NOBEL PRIZE in economics on account of his research and efforts to refine the methods and formulae by which economists determine the reasons for fluctuations in a nation's monetary supply, economic health and foreign and domestic trade.

Fokine, Michel (1880–1942) Russian dancer and choreographer. He was one of the founders of modern ballet. Isadora DUNCAN inspired Fokine to free himself from the rigid classical discipline of the Imperial Ballet to create ballets in which dancing, music and scenery are

combined in a related whole. *Le Cygne* (*The Dying Swan*, 1905), created as a solo for Anna PAVLOVA, and *Chopiniana* (later known as *Les Sylphides*, 1906) were early works. His great period was with DIAGHILEV in Paris (from 1909), when he created *Petrushka*, *Scheherazade*, *The Firebird* and *Le Spectre de la rose*. He left Russia for France at the outbreak of the revolution and moved to the U.S. during World War II.

Fokker, Anton Hermann Gerard (1890–1939) German-American aircraft designer and manufacturer. Born in Java of Dutch parents, Fokker moved to Germany, where he established a number of airplane factories. During WORLD WAR I he manufactured more than 40 kinds of airplanes for the German military, including the famous Fokker biplanes and triplanes. In addition, he developed a system for gear synchronization that allowed pilots to fire machine guns through spinning propellers. In 1922 he settled in the U.S., where he became a citizen and concentrated on the development of commercial aviation. His autobiography, *The Flying Dutchman*, was published in 1931.

Folsom, James Elisha “Big Jim” (1908–1987) American politician. Folsom served two terms as governor of Alabama (1947–51; 1955–59). Known as “the little man’s big friend,” he stood six feet eight inches tall. In an era when his state was regarded as a bastion of racism, he was regarded as a moderate or liberal on most issues.

Fonda, Henry (1905–1983) American actor. Widely acclaimed as one of America’s greatest actors, Fonda starred in 80 films, 15 plays and numerous television dramas during a career that spanned nearly 50 years. Born in Nebraska, he joined the University Players in New England (1928), where he met Joshua LOGAN as well as James STEWART, who became a lifelong friend and later a frequent costar. In the early 1930s he appeared on Broadway, then moved to HOLLYWOOD to appear in films. In 1939 he began a long and successful collaboration with director John FORD, starring (as Abraham Lincoln) in *Young Mr. Lincoln* and in *Drums Along the Mohawk*. His role in Ford’s adaptation of John STEINBECK’s *The Grapes of Wrath* (1940) established his

quintessential screen persona as a soft-spoken but determined idealist. Among his notable later films are *The Ox-Bow Incident* (1943), *My Darling Clementine* (1946), *Mr. Roberts* (1955), *Twelve Angry Men* (1956), *Fail-Safe* (1964) and *On Golden Pond* (1981), his last movie. Fonda was equally adept in comedies, westerns and social dramas. He returned to the stage periodically and gave acclaimed performances in such plays as *Mr. Roberts* and *Clarence Darrow*. Many of his roles reflected his commitment to liberal social and political causes. His daughter, Jane FONDA, is also a noted actress and controversial social activist; his son **Peter Fonda** has been somewhat less successful as an actor, director and producer.

Fonda, Jane (1937–) American film actor; from a renowned HOLLYWOOD family that includes her father Henry FONDA, and her brother, Peter. At age 16, Fonda acted alongside her father in an Omaha stage production of *The Country Girl*. She made her film debut in *Tall Story* (1960). In 1965 Fonda married French film director Roger Vadim and starred in a number of his films, notably the futuristic sex fantasy *Barbarella* (1968), before their divorce. In the late 1960s she became a leading anti-VIETNAM WAR activist, visiting HANOI and making documentaries such as *Introduction to the Enemy* (1974); her widely publicized and highly controversial visit stirred charges that she was at best naive, at worst a traitor. During this period Fonda married political activist Tom Hayden. She enjoyed a major Hollywood success with the thriller *Klute* (1971), for which she won an ACADEMY AWARD as best actress. She has been a major star ever since, with films including *Julia* (1977), *Coming Home* (1978), for which she won a second best actress Oscar, *Nine to Five* (1981), *On Golden Pond* (1981), in which she costarred with her father, and *The Old Gringo* (1989). Fonda also became well known for her physical fitness books and videotapes. In 1991 Fonda married cable television entrepreneur Ted TURNER. The couple divorced in 2001. Fonda published a well-received autobiography, *My Life So Far*, in 2005.

Fontanne, Lynn See LUNT AND FONTANNE.

Fonteyn, Dame Margot (Margaret Hookham) (1919–1991) Legendary British ballerina considered one of the greatest dancers of the 20th century. Born in England to an English father and a Brazilian-Irish mother, Fonteyn spent much of her childhood with her parents in North America and China. She entered the Sadler’s Wells Ballet School (now the Royal Ballet School) in 1934, making her dancing debut in a child’s role in *The Nutcracker*. She soon came to the attention of Dame Ninette de VALOIS, who selected her (1935) to follow Alicia MARKOVA as the company’s prima ballerina. At 17, Fonteyn danced the title role in *Giselle*, and for more than four decades thereafter she held center stage in British ballet. At the Royal Ballet she was known for her brilliant characterizations and flawless technique in such classics as *Swan Lake* and *The Sleeping Beauty*, as well as for the dances created for her by the choreographer Sir Frederick ASHTON, including *Ondine* (1958) and *La Fille mal gardée* (1960). In 1962 Fonteyn began a legendary partnership with Rudolf NUREYEV. Created a Dame of the British Empire in 1956, she retired from dancing at 60 and was awarded the rarely bestowed title *prima ballerina assoluta*. Her husband was the Panamanian politician Roberto Emilio ARIAS. Fonteyn devoted her later years to caring for her husband, who had been paralyzed by a would-be assassin.

Foot, Michael (1913–) British politician and journalist. After leaving Oxford, Foot became a journalist noted for his disputationist left-wing columns. He entered Parliament in 1945, served as editor of the LABOUR PARTY journal *Tribune* from 1948 to 1952 and from 1955 to 1960 and was secretary of state for employment from 1975 to 1979. In 1976 Foot became deputy prime minister and leader of the House of Commons. Following James CALLAGHAN’s resignation in 1980, Foot served as leader of the Labour Party until 1983, attempting to maintain the party’s traditional lines against resistance by the more conservative Social Democrats. A gifted orator, Foot is also the author of a two-volume biography of Aneurin BEVAN published in 1962 and 1973. In 1992 Foot retired from the House of

Commons. (See also SOCIAL DEMOCRATIC PARTY.)

Forbes, Esther (1891–1967) U.S. novelist and biographer. After studying writing at the University of Wisconsin (1916–18), she worked for publisher Houghton Mifflin in Boston (1919–26). She was awarded the O. Henry Prize for her story “Breakneck Hill” in 1920. She published a steady stream of successful novels blending sexual passion and social repression in Puritan New England. Among the most famous are: *O, Genteel Lady* (1926), *A Mirror for Witches* (1928) and *Miss Marvel* (1935). She also wrote the PULITZER PRIZE–winning biography *Paul Revere and the World He Lived In* (1942) and the Newberry Prize–winning *Johnny Tremain* (1943).

Forbes, Malcolm Stevenson (1919–1990) American businessman. Forbes was chairman of Forbes Inc. and publisher of *Forbes* business magazine, which had been founded by his father in 1917. He was a flamboyant millionaire who was known for his love of yachting, motorcycling and hot-air ballooning. In his later years a frequent escort of actress Elizabeth TAYLOR, Forbes generated widespread publicity in 1989 with a \$2 million 70th-birthday party he threw for himself in Morocco shortly before his death. His son **Steve Forbes** was a candidate for the Republican presidential nomination in 1996 and 2000.

Forbush, Scott E. (1904–1984) American geophysicist who pioneered research into cosmic rays. Forbush gave his name to the **Forbush effect**, a sharp lessening of the incidence of cosmic rays on Earth as the planet passes through a cloud of gas ejected by a solar flare.

Ford, Edsel Bryant (1893–1943) U.S. automotive executive and son of Henry FORD. In 1919 he succeeded his father as president and treasurer of the Ford Motor Company. However, industry opinion held that Ford authority was almost entirely nominal and that he merely carried out his father's wishes. Together the Fords established the FORD FOUNDATION. Henry Ford resumed the presidency when Edsel died in 1943. Edsel's name is perhaps best remembered for the ill-fated Edsel car of the 1950s, which proved to be well

ahead of its time and now is in great demand as a classic car.

Ford, Ford Madox (**Ford Hermann Hueffer**) (1873–1939) British novelist. Ford changed his name in 1917 because of its German connotations. (His maternal grandfather was the noted pre-Raphaelite painter Ford Madox Brown.) Ford was the son of a music critic, and his childhood environment was an intellectual one. He was educated at University College School in London and converted to Catholicism at the age of 18. Ford published some fairy tales in the early 1890s and became acquainted with Joseph CONRAD, with whom he collaborated on the novels *The Inheritors* (1901) and *Romance* (1903). The two parted due to disagreements, the details of which Ford later obfuscated in his memoirs. On his own, Ford published *The Fifth Queen* (1906), the first of a trilogy about Catherine Howard, wife of Henry VIII; and in 1908 founded and edited the *English Review*. It was with the publication of *The Good Soldier* (1915), still considered Ford's most important novel, that he received some critical attention; however, he was never to realize great success in his lifetime. Also in 1915 he enlisted in the army, later to be invalided home in 1917, after having been gassed. His next major work, *Parade's End*, was published originally in four separate parts: *Some Do Not* (1924), *No More Parades* (1925), *A Man Could Stand Up* (1926) and *The Last Post* (1928). The books characterize the era prior to WORLD WAR I. In 1922 Ford moved to Paris, where he founded the seminal *Transatlantic Review*, which published work by James JOYCE and Ezra POUND, among others. Ford's interesting and idiosyncratic memoirs include *Return to Yesterday* (1931) and *It Was the Nightingale* (1933). His last publication was an original work of literary criticism, *The March of Literature* (1938). Although his work has never garnered popular acclaim, Ford's writing has received important critical recognition. As an editor, Ford had an enormous influence on subsequent 20th-century literature.

Ford, Gerald (1913–) American statesman and president of the UNITED STATES (1974–77). Ford served in the navy during WORLD WAR II, then practiced law until he was elected to the

Gerald Ford, 38th president of the United States
(LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

U.S. House of Representatives from Michigan in 1948. A conservative Republican, Ford served as minority leader from 1965 to 1973, when President Richard M. NIXON named him to replace Spiro T. AGNEW as vice president. In 1974, after Nixon resigned, Ford became the 38th president. His pardon of Nixon and his program of limited amnesty for Vietnam-era deserters and draft dodgers stirred controversy. In foreign affairs Ford pursued a policy of DETENTE with the Soviet Union, signing the Vladivostok Arms Limitation Agreement in 1974. On the domestic scene he was plagued by an inflation-recession economy, incurring huge budget deficits. He survived two separate assassination attempts in 1975. Although he lost the 1976 presidential election to Jimmy CARTER, Ford remained politically active. In 1999 Ford received the Presidential Medal of Freedom from U.S. president Bill CLINTON.

Ford, Henry (1863–1947) American automobile manufacturer. Starting as a mechanic in Detroit, Ford began experimenting with engines about 1890 and completed his first gasoline engine in 1893. The first Ford automobile was completed in 1896. Encouraged by

A row of completed Model Ts comes off the Ford assembly line.
(HULTON ARCHIVE)

Thomas EDISON, Ford organized the Ford Motor Company in 1903. He started the development of the Model T car in 1908 and managed to reduce the price to within the reach of almost everyone. The car brought fame and fortune to the company, which in turn shared its profits with employees. To avoid stockholders' complaints about profit sharing, Ford bought them all out. From 1919 to 1956 the Ford family had sole control of the company. In 1932 Ford developed the V-8 engine.

Ford paid expenses for 150 people for a "peace trip" to Europe in 1915, but the trip ended in failure. While opposed to the entry of the U.S. into WORLD WAR I and WORLD WAR II, Ford quickly made his plants available for the manufacture of war materials. The Willow Run, Michigan, plant was the largest aircraft assembly plant in the world; during World War II it manufactured B-24 bombers until hostilities ceased.

Ford established Greenfield Village and the Ford Museum in Dearborn, Michigan. With his son Edsel FORD he established the FORD FOUNDATION. He passed on the presidency of the company to Edsel in 1919 and then resumed the office when Edsel died in 1943. In 1945 he once again relinquished the company presidency, to Edsel's son Henry FORD II.

Ford, Henry, II (1917–1987) Grandson of Henry FORD, the younger Ford was named president of Ford Motor Company in 1945 at the age of 28. Unlike his grandfather, who was an autocratic manager and foe of unionism,

Ford developed a flexible policy toward unions. He also initiated a sweeping reform of the administrative structure of the company to modernize the firm's inefficient managerial system and production techniques. In 1960 he became chairman and chief executive officer of the corporation. He resigned as chairman in 1979.

Ford, John (Sean Aloysius O'Fee-ney) (1895–1973) American film director best known for his westerns and Americana films. Ford was one of the screen's greatest lyric poets and a master of the offhand gesture and the fugitive moment. He was born in Cape Elizabeth, Maine. In 1913 he joined his older brother in HOLLYWOOD and was soon making films of his own. His first major project was a western, *Straight Shooting* (1917), whose central character and specific imagery anticipate his later, fully mature works, especially *The Searchers* (1956). During WORLD WAR II Ford headed a film unit for the OSS and made such classic documentaries as *The Battle of Midway* (1942). In 1947 he formed his own production company, Argosy Productions, for which he made some of his best-known westerns between 1947 and 1950.

Over the course of 60 years and 112 films, Ford remained remarkably consistent. Whether chronicling America's Manifest Destiny (*The Iron Horse* [1924], *Wagonmaster* [1950]) or his own Irish heritage (*The Informer* [1935] and *The Quiet Man* [1952]), Ford's big subject is the institution of the family. His wagon trains, coal miners, cavalry, "Okies," West Point cadets,

air mail pilots and homesteaders are all different kinds of family under threat of dissolution and change. Ford celebrates their tradition and laments their passing. Despite his brusque manner and frequent fights with studio heads and film crews, Ford earned several ACADEMY AWARDS (*The Informer*; *The Grapes of Wrath* [1939]; *How Green Was My Valley* [1941]; and *The Quiet Man*) along with the loyalty of friends like John WAYNE and Maureen O'Hara. In 1939–41 alone, he directed seven masterpieces: *Drums Along the Mohawk*, *Stagecoach*, *The Grapes of Wrath*, *Young Mr. Lincoln*, *The Long Voyage Home*, *Tobacco Road* and *How Green Was My Valley*—a feat unequaled by any other American filmmaker. Describing Ford's essential genius, Orson WELLES remarked "He knows what the earth is made of."

Ford Foundation World's wealthiest philanthropic organization, established by Henry FORD and his son Edsel FORD. The organization seeks to promote human welfare through grants for educational purposes. In its early years the foundation served only the state of Michigan, but in 1950 it became national. The foundation has awarded or pledged nearly \$4.8 billion since its establishment in 1936. The money has gone to 95 countries outside the U.S. and to 7,100 organizations within the U.S. Foundation money supports programs in the fields of education and research, the arts, national and international affairs, communications, resources and environment. Foundation money helped establish the Public Broadcasting Service.

Ford Peace Ship Vessel used by Henry FORD on his peace mission to Europe. On December 4, 1915, Ford and 150 men and women left New York City on a ship privately chartered by the auto pioneer. Ford's object was to organize a conference of peace advocates who would then attempt to influence WORLD WAR I's warring governments to come to terms early. Ford returned home after reaching Christiania (Oslo), Norway, but the rest of the mission continued on through Sweden, Denmark, Germany and the Netherlands. This peace mission was not sponsored by the U.S. government, and despite the best intentions, no peace was achieved.

Ford Trimotor Airplane developed under the auspices of Henry FORD. Generally remembered for his role in the development of the automobile, Ford also did a great deal to promote the aircraft industry. With W. B. Stout he developed the famous Trimotor plane based on Stout's all-metal airplane, which Ford bought in 1925. He developed the single-engine plane into a plane of three engines, still all-metal. The Trimotor had a great influence on the development of the commercial air travel industry.

Foreman, Carl (1914–1984) American film producer and screenwriter. In 1951 Foreman appeared before the HOUSE UN-AMERICAN ACTIVITIES COMMITTEE (HUAC) investigating alleged communist influence in HOLLYWOOD. He was labeled an “uncooperative witness” and later blacklisted. Unable to find work, Foreman moved to London, where he continued to write film scripts under a pseudonym. His script for *High Noon* (1952) was nominated for an ACADEMY AWARD, as were his scripts for *Champion* (1949), *The Men* (1950), *The Guns of Navarone* (1961) and *Young Winston* (1972). Foreman also coauthored the Academy Award-winning screenplay for David LEAN's *The Bridge on the River Kwai* (1958), but as a blacklisted writer working under a pseudonym he was unable to claim the award.

Foreman, George (1949–) American boxer. Foreman came to world attention as the flag-waving Olympic heavyweight champion during the politically fraught 1968 OLYMPIC GAMES. His professional career included 40 consecutive victories, culminating in an upset victory over Joe FRAZIER for the heavyweight crown in 1973. Foreman lost the title the following year to Muhammad ALI in the “rumble in the jungle” at Kinshasha, Zaire. Foreman retired in 1977 with a 46-2 record and became a preacher but, amazingly, hit the comeback trail in 1990. Initially, he fought unknowns before small crowds, but he earned his way back to the top and fought Evander Holyfield for the heavyweight championship 18 years after he first won the crown. Foreman's late-blooming wit and self-deprecating humor, unusual in the world of boxing, made him a popular favorite, but he was defeated by Holyfield in a unanimous

decision. Many considered the 42-year-old Foreman's going the distance with Holyfield a victory in itself. In 1994 Foreman regained the IBF and WBA heavyweight titles when he knocked out Michael Moorer in the 10th round. Foreman retired from the ring in 1997 after a controversial loss. After his retirement from boxing, Foreman reinvented himself by marketing a line of barbecue grills that earned him much more money than he had ever made in boxing.

Foreman, Percy (1902–1988) American trial attorney who compiled a remarkable record in defending accused murderers. Foreman was known for his ability to save convicted murderers from the gallows. He is perhaps best remembered for his unsuccessful defense of James Earl Ray, the man who allegedly shot CIVIL RIGHTS MOVEMENT leader Martin Luther KING Jr. Following Foreman's advice, Ray pleaded guilty but later appealed, arguing unsuccessfully that he had been misled about the plea.

Forester, Cecil Scott (1899–1966) American novelist and screenwriter. Forester was born in Cairo, Egypt, and studied medicine. He began his literary career writing the biographies *Napoleon and His Court* (1924) and *Josephine, Napoleon's Empress* (1925). He brought his knowledge to bear on his popular series of historical novels about Horatio Hornblower, a fictional British sailor in the Napoleonic Wars. These books include *Beat to Quarters* (1937), *Lieutenant Hornblower* (1952) and *Hornblower and the Atropos* (1953). Forester worked intermittently as a screenwriter, often adapting his own fiction for the screen, notably in *The African Queen* (1935, filmed 1951) and *Captain Horatio Hornblower*, an adaptation of the first three Hornblower novels filmed in 1951.

Formalists Name given to Soviet literary critics belonging to the Opoyaz group (Society for the Study of Poetic Language). Leading Formalist critics include V. Shklovskiy, B. Eykhenbaum and R. Jakobson. The Formalists issued their manifesto, a collection of essays entitled *Poetika*, in 1919. For the Formalists, art was mainly a collection of devices and techniques; attention was paid to style rather than to ideas

expressed or the “message” conveyed. A typical work of Formalist criticism is Shklovskiy's essay “The Plot as a Phenomenon of Style.” The extremists amongst the Formalists identified the study of literature with that of linguistics and were interested primarily in the phonetic qualities of poetry; Osip Brik, for instance, produced a study of the phonetic structure of Pushkin's verse. The more moderate Formalists, the “Petersburg Group,” shared a keen interest in the way in which historical processes have affected literature. The school as a whole was suppressed in 1930.

Forman, Miloš (1932–) Czech-born film director. Forman, who was left an orphan by the Nazis during WORLD WAR II, went on to become the most prominent Czech director of his generation. He studied at the Prague film school. His first feature, *Talent Show* (1963), was a fictional story constructed out of various documentary film clips. *Loves of a Blonde* (1965) and *The Fireman's Ball* (1967), which were widely shown in the West during the loosened political atmosphere of the PRAGUE SPRING, established Forman's international reputation. Following increased Soviet artistic repression, Forman immigrated to America in the 1970s. His highly successful Hollywood-based films include *One Flew Over the Cuckoo's Nest* (1975), *Hair* (1979), *Ragtime* (1980) and *Amadeus* (1985), which won the ACADEMY AWARD for best picture. Forman continued to direct dramatic films throughout the 1990s, such as *The People vs. Larry Flint* (1996) and *Man on the Moon* (1999).

Forrestal, James Vincent (1892–1949) American government official. Born in Beacon, New York, he attended Princeton, was an aviator in WORLD WAR I and became an investment banker during the 1920s. A supporter of President Franklin D. ROOSEVELT's program to regulate the stock market, he helped to draft the Securities and Exchange Act (1933) and entered government service as an administrative assistant to the president. He served as undersecretary of the navy (1940–44) and secretary of the navy (1944–47). With the merger of the War and Navy Departments into the Department of Defense in 1947, he was

named the nation's first secretary of defense by President Harry S. TRUMAN. Adamantly opposed to COMMUNISM, Forrestal was highly suspicious of post-World War II expansionism by the USSR and repeatedly warned both Roosevelt and Truman. He later attempted to end interservice squabbling by members of the military and to raise Defense Department appropriations in order to resist any possible Soviet aggression. Forrestal resigned in 1949 after policy disputes with Truman and the deterioration of his own health. Suffering from paranoia and severe depression, he was hospitalized and committed suicide two months later.

Forrester, Maureen (1930–) Canadian contralto. Born in Montreal, Forrester studied voice and made her debut there in 1953. Debuts in Europe (1955) and the U.S. (1956) followed. the *New York Times* called her voice “darkly resonant . . . a superb voice of generous compass and volume.” Her international career has included recitals at the EDINBURGH FESTIVAL and the Casals Festival in Puerto Rico, solo engagements with symphony orchestras, such as the New York Philharmonic, and opera roles with major companies. She is especially known for her interpretations of the works of MAHLER and Handel and has performed extensively in her native Canada. In 2000 Forrester received the Ruby Mercer Opera Award, the highest honor in Canadian opera.

Forssmann, Werner Theodor Otto (1904–1979) German surgeon and urologist. Forssmann was educated at the University of Berlin, where he qualified as a physician in 1929. He then worked in the 1930s as a surgeon in various German hospitals. After the war he practiced as a urologist at Bad Kreuznach from 1950 until 1958, when he moved to Düsseldorf as head of surgery at the Evangelical Hospital. In 1929 Forssmann introduced the procedure of cardiac catheterization into medicine. He was struck by the danger inherent in the direct injection of drugs into the heart (frequently demanded in an emergency). He proposed introducing a catheter through the venous system from a vein in the elbow directly into the right atrium of the heart. Drugs could then be introduced through this.

After practice on cadavers and an unsuccessful attempt on himself made with the aid of a nervous colleague, Forssmann decided to do the whole thing himself. He consequently introduced a 26.5-inch catheter for its entire length, walked up several flights of stairs to the X-ray department and calmly confirmed that the tip of the catheter had in fact reached his heart. There had been no pain or discomfort. Further development was inhibited by criticism from the medical profession, which assumed that the method must be dangerous. Consequently it was left to André CURNAND and Dickinson Richards to develop the technique into a routine clinical tool in the 1940s; for this work they shared the NOBEL PRIZE in physiology or medicine with Forssmann in 1956.

Forster, Edward Morgan (1879–1970) British novelist and critic. Born in London, E. M. Forster was named for his father, an architect, who died a year after Forster's birth. Forster was educated at Tonbridge school, which he detested, and at King's College, Cambridge, where he thrived under the influence of G. E. MOORE and Goldsworthy Lowes Dickinson, whose biography Forster wrote in 1934. In 1901 Forster was elected to the Apostles, the Cambridge intellectual society, and through his associations there later came in contact with the BLOOMSBURY GROUP. After Cambridge, he traveled in Italy and Greece and drew on these experiences in his early short stories and novels. In 1903 he began writing for the *Independent Review*, where he published his first short story in 1904. His first novel, *Where Angels Fear to Tread* (1905), satirized English tourists and established one of Forster's major themes—the inhibition of the English as contrasted with the sensuality and openness of other cultures. *The Longest Journey* (1907), *A Room with a View* (1908, filmed 1986) and *Howards End* (1910, filmed 1992) followed, establishing him as an important modern novelist (see MODERNISM).

In 1912 and 1913 Forster traveled in India, and in 1913 he visited E. Carpenter in England. Carpenter's influence was brought to bear in *Maurice*—a novel portraying homosexuality—which Forster circulated pri-

vately at the time. It was published posthumously in 1971 and later filmed (1987). Forster spent WORLD WAR I working for the Red Cross in Alexandria, Egypt. His last and most important novel, *A Passage to India* (1924, filmed 1984), begun during the war, was highly critical of British colonialism; it also examined the ambiguous relationship between perception and reality. Some critics consider *A Passage to India* to be the most perfectly constructed English novel of the 20th century. Throughout his life, Forster, an outspoken liberal and humanist, fought censorship. He opposed the suppression of *The Well of Loneliness*, a novel about lesbianism by Marguerite Radclyffe Hall, and testified at the trial of the publishers of D. H. LAWRENCE's *Lady Chatterley's Lover*. He also gained some notoriety for saying that if he had to choose between his friends and his country, he would choose his friends.

Forsythe Saga, The Three novels and two “interludes” by John GALSWORTHY published in 1922. The novels are *A Man of Property* (1906), *In Chancery* (1920) and *To Let* (1921). The interludes consist of the two short stories “The Indian Summer of a Forsythe,” which was originally published in the collection *Five Tales* (1918), and “The Awakening” (1920). The *Saga* follows five generations of the Forsytes, a quintessential upper-middle-class Edwardian family. The *Saga* satirizes the rigid conventionality of the Forsytes' class and remains immensely popular as a portrait of Edwardian England. It has also been deemed by some as middle-brow soap opera. Two more Forsythe trilogies followed; in 1967 BBC television dramatized the first six novels. Another television adaptation was produced in the early 2000s.

Fortas, Abe (1910–1982) Associate justice, U.S. Supreme Court (1965–69). Fortas is best remembered as President Lyndon B. JOHNSON's unsuccessful choice for chief justice and also for his later forced resignation from the Court. Fortas, a graduate of Southwestern College and Yale Law School, was a brilliant lawyer who, after a brief stint as a law professor at Yale, rose in federal posts at an early age. In 1946 Fortas started a Washington, D.C., law firm, later known as Arnold & Porter, and became wealthy

representing large corporations. During this time he became a close associate of Senator Lyndon Johnson, who as president later appointed Fortas to the Supreme Court. In 1968, as Johnson was about to leave office, Earl WARREN, the presiding chief justice, retired. Johnson nominated Fortas as chief justice, but the nomination was attacked in the Senate because of Fortas's close ties to Johnson. Subsequently Fortas was forced to resign from the Court after it was disclosed that he had a financial relationship with a former client who was under federal investigation. He returned to private law practice.

Fortress Europe (German: Festung Europa) Term used by the Germans in WORLD WAR II to describe the alleged invulnerable status of Europe provided by a defensive "wall." After 1942, as German defeats on all fronts escalated, the Nazi PROPAGANDA machine maintained that Allied attempts could never shatter the impenetrable walls of Fortress Europe provided by German defensive fortifications. The walls proved to be largely a fantasy. Only a few strategic sites had truly effective defenses. Most important, Fortress Europe had no roof, allowing Allied air forces to batter key German targets from the air.

47 Workshop See George Pierce BAKER.

Fosse, Bob (Robert Louis Fosse) (1927–1987) American dancer, choreographer and director. Fosse became a major figure in Broadway musicals in the 1950s. He won a Tony award for the first Broadway show he choreographed, *Pajama Game* (1954). He won additional Tonys for, among other shows, *Damn Yankees* (1955), *Sweet Charity* (1966) and *Big Deal* (1986). In 1973 he won two Tony awards for *Pippin*, as well as an Oscar for *Cabaret* and an Emmy for a TV special with Liza Minnelli. In 1975 he had a massive heart attack, an experience on which he based the film *All That Jazz* (1979). He was working on a revival of *Sweet Charity* when he died of another heart attack.

Fossey, Dian (1932–1985) American naturalist. Fossey went to Africa in the 1960s to study the rare mountain gorilla in its central African habitat. She

established a research institute in Rwanda and campaigned to prevent the gorillas' extinction. Fossey was murdered in her cabin on December 26, 1985, possibly by poachers. Her life was dramatized in the film *Gorillas in the Mist* (1989), starring Sigourney Weaver.

Foster, Norman (1935–) British architect. Born in Manchester, England, Foster developed an early interest in architecture when he began to study the works of the American architect Frank Lloyd WRIGHT and the French design theoretician LE CORBUSIER. Although greatly interested in the forms of Wright and the spatial theories of Le Corbusier, Foster left school in 1951 to work at the Manchester City Treasury. After military service in the Royal Air Force, he returned to his study of architecture by enrolling in the Manchester University School of Architecture and City Planning.

Graduating in 1961, Foster won a fellowship that allowed him to receive his master's degree in architecture at Yale University. While studying in the U.S. he encountered fellow Briton Richard Rogers, who shared Foster's passion for Wright's architectural style. They often traveled together to see first-hand many of Wright's buildings. When Fosters and Rogers returned to the United Kingdom in 1965 they formed Team 4, a design firm. The first building they designed, the Reliance Controls electronics factory in Swindon, England, demonstrated their willingness to develop a more modern style and use of space. Two years after his return to Britain Foster left Team 4 and created his own architectural firm, Foster and Partners. Building on his earlier work, Foster cultivated a style that maximized the entry of natural light through glass supported along a steel skeleton and minimized the use of concrete. In 1974 Foster incorporated these elements into his design of the Willis Faber and Dumas Building in Ipswich, England. Its ubiquitous use of glass, employment of escalators (rather than the more cloistered elevators) and roof-level gardens won him much acclaim. These achievements resulted in the offer of multiple commissions to construct the Sainsbury Centre for the Visual Arts in Norwich, the Hong Kong and Shanghai Bank in Hong Kong, the Stansted Airport in

Essex and the new Reichstag headquarters in Berlin. The last of these buildings also expressed Foster's appreciation for the environment, as its electrical needs were completely provided through the use of vegetable oil. For his innovative designs Foster received the Pritzker Prize in Architecture in 1999, the highest honor available in the architectural world. His commercial office tower for the Swiss Re Company, known as "The Gherkin," won the 2004 RIBA Stirling Prize for the best new building.

Foucault, Michel (1926–1984) French philosopher, psychologist and social critic. He was one of the most learned and versatile French thinkers of the postwar era. He studied at the Sorbonne, earning degrees in philosophy and psychology, and went on to further graduate work in psychopathology at the University of Paris. During his subsequent teaching career, Foucault lectured at universities throughout Europe. Strongly influenced both by Marxism and by STRUCTURALISM (the theory that comparative cultural analyses should focus on the overall structures of information and belief), Foucault devoted many of his works to probing the psychological and economic assumptions that prevailed in France and other nations throughout history. His major works include *Madness and Civilization* (1961), *The Order of Things: An Archaeology of the Human Sciences* (1966) and the three-volume *The History of Sex* (1976–84).

Fouche, Jacobus Johannes "Jim" (1898–1980) President of South Africa (1968–75). Fouche was first elected to the South African Parliament in 1941 as a member of the National Party. He served as defense minister from 1959 to 1966, during which time the country cut its ties to Britain and became an independent republic (1961). He was the republic's second president.

Fournier, Pierre (1906–1986) French cellist. Fournier's elegant and subdued manner of playing typified French musical style. His repertoire ranged from the unaccompanied sonatas of Bach to music written for him by such 20th-century composers as Bohuslav MARTINU and Francis POULENC. As much concerned with chamber music as with solo performance, he succeeded

Pablo CASALS in the famous trio whose other members were violinists Jacques THIBAUD and pianist Alfred CORTOT.

Four Quartets Four interrelated poems by T. S. ELIOT, published as a complete book in 1944. The four poems are "Burnt Norton" (1941), "East Coker" (1940), "The Dry Salvages" (1941) and "Little Gidding" (1942). Regarded by many critics as the crowning masterpiece of Eliot's poetic career, these symmetrical meditations on philosophical and religious subjects reflect Eliot's view of history, time and the nature of human experience. Originally conceived as a long poem loosely based on a scheme of the four seasons and four elements, it also contains autobiographical elements. It combines lyric, dramatic and narrative styles, successfully weaving its themes into an intricate formal pattern akin to that of the musical string quartet. *Four Quartets* is at once public, abstract, elegiac and optimistic.

Fourteen Points Peace program formulated by U.S. president Woodrow WILSON and presented by him to a joint session of Congress on January 8, 1918. Through this idealistic yet practical plan, Wilson established himself as moral leader of the WORLD WAR I Allies and hoped to appeal to a wide variety of those involved. These included the more liberal forces in the Central Powers, the Allies, the people of the U.S. and the newly emerged Bolshevik government in Russia. The first five points were general and included the following: (1) rejection of secret diplomacy (the famous "open covenants openly arrived at"), (2) freedom of the seas, (3) removal of economic barriers to international trade to the greatest degree possible, (4) arms reduction as low as demands for domestic safety would permit and (5) fair adjustment of colonial claims taking into consideration self-determination and other factors. The next eight points concerned specific territorial issues. Point 14 called for the formation of an association of nations to provide for the political independence of each. Although many of these points were abrogated or compromised at the PARIS PEACE CONFERENCE (1919–20), the spirit of the Fourteen Points was, to some degree, maintained in the final settlement.

Moreover, point 14 formed the basis for the establishment of the LEAGUE OF NATIONS.

Fowler, Alfred (1868–1940) British astrophysicist. Born in Bradford, Fowler attended the Normal School of Science (later the Royal College of Science). He joined the Solar Physics Observatory, London, becoming a professor of astrophysics in 1915. A cofounder of the International Astronomical Union (1919), he was its general secretary until 1925. Fowler was a research professor at the Royal Society from 1923 to 1934. His particular field of study was solar and stellar spectroscopy, and he was especially interested in spectrographic analysis, duplicating the light emissions of the Sun and other stars in the laboratory. Among his discoveries were the presence of magnesium hydride in sunspots and carbon monoxide in comets' tails. Fowler was also active in the spectrographic analysis of atomic structure.

Fowler, William Alfred (1911–1995) American astrophysicist. Born in Pittsburgh, Pennsylvania, Fowler attended Ohio State University and the California Institute of Technology, where he served as a professor of physics since 1946. Fowler's work mainly involved nuclear spectroscopy and nuclear physics, concentrating on the nature of energy-producing nuclear reactions in the immensely hot core of stars and the chemical elements synthesized thereby. His investigations in this area are outlined in a work cowritten by Fowler and Fred HOYLE entitled *Nucleosynthesis in Massive Stars and Supernovae* (1965). After the mid-1960s, Fowler's inquiries centered on fundamental questions that bear on the age and future of the universe, such as the amount of the elements of helium and deuterium present in the universe.

Fowles, John Robert (1926–2005) British novelist. Fowles was educated at Bedford School and New College, Oxford. He achieved recognition with his first novel, *The Collector* (1963, filmed 1965), a psychological thriller about a man who begins to collect human "specimens." Fowles experimented in his writing with varied styles and themes. *The Magus* (1966, revised 1977) bears traces of MAGIC REALISM; *Daniel Martin* (1977), of an ex-

perimental naturalism. His other works include *The French Lieutenant's Woman* (1969, filmed 1981 with screenplay by Harold PINTER), *Mantissa* (1982), the nonfiction books *The Tree* (1979) and *The Enigma of Stonehenge* (1980), and *Wormholes*, a book of essays and reviews (1998).

Fox, Harold Munro (1889–1967) British zoologist. Born in London, Fox was educated at Cambridge University, where he was a fellow from 1920 to 1928. He served as professor of zoology at Birmingham University from 1928 to 1941 and at Bedford College from 1941 until his retirement in 1954. Fox's earlier experiments concerned siphon growth in the sea squirt (*Ciona intestinalis*). His best-known work involved investigations of invertebrate blood pigments, with emphasis on research into the relationship of water-borne oxygen and the synthesis of hemoglobin in the water flea (*Daphnia*) as it bears on the relative red or clear coloration of that tiny crustacean.

Fox, John (1907–1984) American newspaper publisher. Fox was best known as a leading crusader against COMMUNISM during the 1950s. With a fortune he amassed as a securities broker, he purchased the *Boston Post* (1952), which became a forum for his views. The paper failed in 1956. In 1958, testifying before a congressional committee, Fox accused President EISENHOWER's chief aide Sherman ADAMS of financial misconduct. Fox's testimony was not substantiated, but other testimony eventually led to Adams's resignation. In the 1960s, after losing his fortune, Fox became a JAZZ pianist in Boston's waterfront bars.

Fox, Sidney Walter (1912–1998) American biochemist. Born in Los Angeles, Fox attended the University of California and the California Institute of Technology. He held brief teaching posts at Berkeley and the University of Michigan but spent most of his early career as professor of biochemistry at Iowa State University (1947–54) and professor of chemistry at Florida State University (1954–64). In 1964 he became director of the Institute of Molecular and Cellular Evolution at the University of Miami. Fox's researches led him to posit answers to questions

involving the origin of life. From experiments (1958) that produced proteinlike amino acid polymers from the application of heat and the production of tiny spheres resembling bacteria from the cooling of these so-called protenoids, he concluded that proteins were the first elements of life on Earth.

Fox, Terry (1958–1981) Canadian popular hero. In 1977 Fox lost a leg to cancer. In 1980, fitted with an artificial limb, he attempted to run across Canada from coast to coast to raise money for cancer research and to show that people with cancer could still live active lives. His well-publicized run gained him the admiration of millions of people throughout Canada and the U.S. and raised more than \$20 million. Fox's marathon was cut short at the halfway point when he was struck with lung cancer, and he died soon thereafter at the age of 22. His run was the subject of a TV movie.

Fox, Uffa (1898–1972) British designer of sailing yachts, better known (at least in England) as a sailor and frequent member of the crew of Prince Philip when he sailed in races. Fox was the designer of exceptionally fast racing dinghies and keelboats such as *Avenger* of 1928 and the racing class known as Flying Fifteen. It was *Coweslip* of this class, owned by Prince Philip, that brought special fame to Fox, leading to his reputation as a writer, lecturer and broadcaster and making him something of a celebrity.

Fox Quesada, Vicente (1942–) President of Mexico (2000–06). Born in Mexico City into a family with Mexican (his father), Spanish (his mother) and Irish-American roots (his paternal grandfather), Fox obtained a position in the Coca-Cola Company after graduating from college and began working on improving the soft-drink company's performance in Mexico. His success in this endeavor led to a series of promotions until he became president of Coca-Cola's Mexican and Latin American division. In the 1980s Fox left Coca-Cola and formed his own company, Grupo Fox, which produced shoes and agricultural products.

In 1988 Fox joined the National Action Party (PAN) and was elected to the

Mexican president Vicente Fox (EMBASSY OF MEXICO)

Chamber of Deputies, Mexico's lower legislative house. In 1995 Fox was elected governor of the state of Guanajuato by a sizable margin. As governor he encouraged foreign investment in his state, particularly American firms eager to set up shop in MEXICO with its low labor costs under the newly instituted NORTH AMERICAN FREE TRADE AGREEMENT (NAFTA). In 1999 Fox resigned as governor of Guanajuato and began to mount a presidential campaign under the PAN banner. Partly as a result of allegations that former president Carlos SALINAS DE GORTARI of the ruling Institutional Revolutionary Party (PRI) and his family had embezzled millions from the government and partly because of Fox's impressive record as governor, he defeated the PRI candidate, Francisco Labastida Ochoa, to become the first non-PRI president of Mexico since the 1920s.

The Fox presidency was marked by several problems, including deteriorating relations with the U.S. caused by disagreements over immigration and the U.S.-led military intervention in Iraq in 2003. However, President Fox won a significant victory in January 2004 when President Bush proposed a major overhaul of the U.S. immigration system to grant legal status to millions of undocumented workers in the U.S., most of whom are Mexican citizens.

Foxx, Jimmie (James Emory Foxx) (1907–1967) American baseball player. Foxx was one of baseball's greatest hit-

ters, driving in over 100 runs for 13 seasons. Known for his power at the plate, he led major league batters in all three categories—average, home runs and runs batted in—in his best year, 1932. As a fielder, he was known for his skill at first base, although he also played both sides of the battery as pitcher and catcher. Foxx began his career with Connie MACK's Athletics and later played for the Red Sox and the Cubs. He made a comeback during the war years and pitched nine games in 1945. His lifetime batting average was .325, and at the end of his career was only second to Babe Ruth on the all-time home run list with 534. Known for his affability and generosity, Foxx was named to the Baseball Hall of Fame in 1951.

Foyt, A. J. (1935–) American race car driver. Foyt is considered one of the outstanding race car drivers of the 20th century; he is the only driver to win all three crown jewels of motorsports: the Indianapolis 500, the Daytona 500 and the 24 Hours of Le Mans. In his career he has driven in more Indianapolis 500 races than any other driver (35 consecutive years, beginning in 1959) and shares the record of four Indianapolis 500 victories (1961, 1964, 1967 and 1977) with Rick Mears and Al Unser Sr. In 2000 Foyt formed his own full-time NASCAR Winston Cup team in Mooresville, North Carolina.

Fracci, Carla (1936–) Italian ballerina. Especially noted for such roles as Giselle and Juliet in the romantic ballets, Fracci is the first Italian ballerina of the 20th century to garner an international reputation. She joined the La Scala Ballet Company in Milan in 1954, becoming prima ballerina in 1958, and appeared as a guest artist with numerous other companies, most notably AMERICAN BALLET THEATRE. In 1969 she danced opposite Erik BRUHN in the film version of *Giselle*, and her television film, *Serata Con C.F.*, won the Golden Rose of Montreux Award in 1973. In addition, she appeared in several ballets, such as *The Seagull* (1968) and *The Stone Flower* (1973), produced by her husband—theater director Beppe Menegatti—and choreographed by Loris Gai. Fracci has overseen the ballet theaters of Naples (1990–91) and Verona (1995–97) and the Balletto dell'Opera in Rome (1997–).

Fraenkel-Conrat, Heinz L. (1910–1999) German-American biochemist. Trained as a physician at the University of Breslau, he left Germany in 1934 to study at the University of Edinburgh, where he obtained a Ph.D. in 1936. He immigrated to the U.S., became a citizen in 1941 and joined the University of California, Berkeley in 1951 as professor of virology and of molecular biology. His extensive work on the tobacco mosaic virus (TMV) proved that viral RNA, like DNA, can be the transmitter of genetic information. Working with Wendell Stanley, he also outlined the complete 158 amino acid-long chain of the TMV protein. He also did significant research on snake neurotoxins and wrote several virology texts.

Frame, Janet (Janet Paterson Frame Clutha) (1924–2004) New Zealand novelist and poet. Frame was born in Dunedin, New Zealand. Her first novel was *Owls Do Cry* (1957), followed by the more acclaimed *Faces in the Water* (1961), which, with its pessimistic and morbid tone, is characteristic of Frame's work. She draws on her own experiences with mental illness and hospitalization in that and subsequent works, such as *A State of Siege* (1966), *Intensive Care* (1970) and *The Carpathians* (1988). Frame's work is also noted for its intelligent portrayal of New Zealand geography. Her poetic works include *The Pocket Mirror* (1967), and she also wrote the autobiographies *An Angel at My Table* (1984, filmed in 1991) and *The Envoy from Mirror City* (1985).

France Western European country, officially called the French Republic, bordered by the English Channel to the north; GERMANY, SWITZERLAND and ITALY to the east; the Mediterranean Sea and SPAIN to the south, and the Atlantic Ocean to the west. At the turn of the century, France was strong and prosperous, with many colonies in Africa and Asia, although engaged in territorial disputes with Germany. At the outbreak of WORLD WAR I Germany invaded France, which suffered huge losses of life and wealth during the war. In 1919 France and Germany signed the Treaty of VERSAILLES, restoring to France the provinces of Alsace and Lorraine, which had been seized by Germany in 1871. Following the

war, the Third Republic government was beset by economic strife and instability, and it directed its foreign policy toward weakening Germany and exacting postwar reparations from it. Adolf HITLER's Nazi Party rose to power, however, and France declared war on Germany after the Nazis invaded POLAND in 1939. In 1940 Germany, later joined by Italy, invaded and defeated France. The country was subsequently divided temporarily, with the northern part occupied by Germany and the south governed by Marshal Henri Philippe PÉTAIN, a French war hero, in VICHY. General Charles de GAULLE formed the FREE FRENCH RESISTANCE movement to continue to fight the Germans. In 1944 Allied forces launched the Invasion of NORMANDY on June 6, arriving in Paris

on August 25 and effectively liberating France from German rule. A provisional government was established in Paris led by de Gaulle. In 1946 the constitution was revised to create the Fourth Republic, which changed the French colonial empire to the French Union and strengthened the National Assembly. De Gaulle resigned because it did not provide enough executive power. In a 1947 election—the first in which French women voted—Vincent AURIOL was elected president.

In 1946 revolution had begun in French INDOCHINA, which was later divided into CAMBODIA, LAOS and North and South VIETNAM. After much loss of life, the French withdrew from Indochina in 1954. That same year the colony of ALGERIA began struggling for

FRANCE

- 1914–18 France suffers nearly 1.4 million dead and 4.25 million wounded in World War I.
- 1919 Alsace-Lorraine returned to France under Treaty of Versailles.
- 1939 France declares war on Germany after German invasion of Poland; start of World War II.
- 1940 Marshal Henri Philippe Pétain signs armistice with Germany; Germans occupy 60% of France; collaborationist Vichy government established in unoccupied France; General Charles de Gaulle forms alternative “Free French” government in London.
- 1942 Germany occupies the rest of France.
- 1944 Allies liberate Paris on August 25.
- 1946 (Oct. 13) Constitution of France’s Fourth Republic approved, allowing French colonies varying degrees of autonomy; de Gaulle serves as provisional president.
- 1949 France becomes founding member of NATO.
- 1951 France leads in formation of European Coal and Steel Community, forerunner of European Economic Community (EEC).
- 1954 France suffers defeat at Dien Bien Phu and is forced to withdraw from Indochina.
- 1957 France signs Treaty of Rome establishing the European Economic Community.
- 1958 Fifth Republic established, with de Gaulle as first president.
- 1960 France tests its first atomic bomb.
- 1962 Algerian independence granted despite terrorist campaign by right-wing French soldiers.
- 1963 De Gaulle vetoes Britain’s request to enter the Common Market.
- 1965 France signs the Treaty of Brussels, setting up the European Community (later the European Union).
- 1966 France withdraws from NATO; its headquarters are moved to Brussels.
- 1969 Georges Pompidou, a Gaullist, is elected president.
- 1974 Pompidou dies and Finance Minister Valéry Giscard d’Estaing is elected president.
- 1979 Giscard’s administration is rocked by scandal when it is discovered that as finance minister in 1973 he received \$250,000 in diamonds from Emperor Bokassa of the Central African Republic.
- 1981 François Mitterrand is elected the first socialist president of the Fifth Republic; later introduces economic austerity program.
- 1985 Greenpeace ship *Rainbow Warrior* sunk by French Frogmen on orders of the defense ministry; defense minister resigns and head of secret service is sacked.
- 1988 Mitterrand is reelected.
- 1989 Bicentennial celebration of the French Revolution commences on January 1 with balloonists taking to the air and actors reading the Declaration of the Rights of Man in major towns.
- 1991 French forces participate in Operation Desert Storm to oust Iraq from Kuwait during Persian Gulf War.
- 1995 Jacques Chirac succeeds Mitterrand as president.
- 2002 The euro replaces the franc as the national currency. Chirac is reelected president in a landslide victory against right-wing National Front leader Jean-Marie Le Pen.
- 2004 French voters reject the constitution for a European Union in a nationwide referendum.
- 2005 Immigrants riot in the northwest suburbs of Paris sparking violent protests nationwide.
- 2006 A new labor law leads to protest and mass demonstrations, forcing lawmakers to scrap the legislation.

independence. Hoping to retain Algeria and prevent revolutions in the colonies of MOROCCO and TUNISIA, France granted the latter two independence. The continuing war in Algeria, however, was a divisive issue that led many French military personnel and Algerian settlers to threaten rebellion if the war ceased and independence was granted. In 1958 de Gaulle returned as prime minister, and his government drafted the new constitution of the Fifth Republic, of which he became first president. This constitution granted extensive executive power. In spite of opposition from rebellious French soldiers, France granted Algeria its independence in 1962 (see O.A.S.).

Although allied with the Western nations during the COLD WAR, de Gaulle strove to maintain a policy independent from the U.S. and NATO. Many people, however, were becoming disillusioned by de Gaulle's government. In 1968 Parisian students began a violent protest (see PARIS STUDENT DEMONSTRATIONS), which was joined by workers across the country and threatened to turn into civil war. De Gaulle managed to avert a crisis but was compelled to resign in 1969. His nationalist policies were largely maintained by his successors: George POMPIDOU and Valéry GISCARD D'ESTAING.

In 1981 Socialist François MITTERRAND won a landslide victory over Giscard. Mitterrand's government nationalized some major industries and private banks. Mitterrand was re-elected in 1986 and 1988. In 1985 *Rainbow Warrior*, a vessel of the Greenpeace environmental organization that was monitoring nuclear tests, was mined in Auckland Harbor, New Zealand, by the French secret service. Mitterrand later accepted responsibility for the event. France was a member of the UNITED NATIONS coalition and took part in the fighting against IRAQ during the PERSIAN GULF WAR (1990–91). In 1995 Jacques CHIRAC succeeded Mitterrand. He proved able to work with Socialists after appointing PSF leader Lionel Jospin prime minister in 1997. Chirac defeated Jospin and far-right politician Jean-Marie LE PEN in the 2002 presidential election. In the winter of 2002–03 Chirac antagonized the administration of U.S. president George W. BUSH by openly opposing the president's

plan to overthrow the Iraqi government of Saddam HUSSEIN without the approval of the UN Security Council. In 2004 French voters dealt the cause of European political unity a major setback by rejecting the proposed constitution of the EUROPEAN UNION in a referendum. In 2005 the suburbs of Paris were rocked by riots led by alienated North African and other immigrants that spread across France. In 2006 new demonstrations occurred over a new youth employment law, which was subsequently abandoned.

France, Anatole (Jacques Anatole François Thibault) (1844–1922) French novelist and critic. The son of a book dealer, France was educated at the College Stanislas in Paris. France began his literary career writing a column, "La Vie Littéraire" (The literary life), for the newspaper *Le Temps*. His first work of fiction—two short novels, *Jocaste* (Jocasta) and *Le Chat maigre* (The famished cat)—was published in 1879. But it was *Le Crime de Sylvestre Bonnard* (1881) that brought him success, which he maintained with *La Rotisserie de la Reine* (1893) and *Les opinions de M. Jerome Coignard* (1893). These social satires introduce variations on a prototypical France character (the bemused, scholarly professor), and they captured the mood of the country at the time. France's reputation gained him entrée into the literary and social salon of Leontine Arman de Caillavet, for whom he later left his wife. France's work evidences his erudition and keen observation of French politics and society. Other important works include *Histoire contemporaine* (1897–1900), which consists of four novels, *L'Île de pingouine* (1908) and *Les Dieux ont soif* (1912). France was awarded the NOBEL PRIZE in literature in 1921.

France, Battle of (1940) France's heavily fortified MAGINOT LINE afforded little security from GERMANY when, in June 1940, Nazi armies broke through north of the line as well as from Belgium into Brittany. A third force broke through at Champagne and attacked the line from the rear. Italy, having declared war on France (June 10, 1940), advanced from the south. The Allies had to retreat from eastern and central France, and on June 14 Paris fell without a fight, the French government

fleeing to Tours, then Bordeaux. On June 22, 1940, France accepted German terms for armistice; aged general Henri Philippe PÉTAINE became premier, assisted by Pierre LAVAL—a Nazi collaborator—and set up a French government at VICHY, while Germans occupied northern and eastern France. Thousands of French troops escaped to continue fighting, while others joined the RESISTANCE to continue the covert struggle within France.

Francis, David Rowland (1850–1927) U.S. statesman. Starting as a grain merchant, Francis was mayor of St. Louis, Missouri (1885–89), before becoming Democratic governor of the state (1889–93). Secretary of the interior (1896–97) under President Grover Cleveland, he gained a presidential proclamation that set aside millions of acres of forest reserves. In 1916 he was appointed ambassador to RUSSIA and remained at his post throughout the RUSSIAN REVOLUTION, trying to keep Russia in the war against Germany.

Francis, Thomas, Jr. (1900–1969) American virologist. Born in Gas City, Indiana, he attended Allegheny College and Yale University, receiving an M.D. in 1925. He was a researcher at the Rockefeller Institute (1925–38) and professor of bacteriology at the New York University College of Medicine (1938–41) before becoming professor of epidemiology at the University of Michigan (1941–69). From the mid-1930s to the mid-1950s Francis worked on the epidemiology of the influenza virus, detecting a strain of the first-discovered type (1934) and an entirely new type (1940). He was also active in developing flu vaccines. Francis gained wide public attention in 1954, when he evaluated the newly developed SALK polio vaccine trial.

Franck, James (1882–1964) German-American physicist. Born in Hamburg, he studied at Heidelberg and Berlin, receiving his doctorate in 1906. In 1913 he began a collaboration with **Gustav Hertz**, examining the interaction of electrons and atoms. Their discovery of quantized energy transfer in these interactions led to their being awarded the 1925 NOBEL PRIZE in physics. After distinguished service in WORLD WAR I, Franck accepted the chair in experi-

mental physics at Göttingen but fled Germany after the rise of HITLER. After a year in Copenhagen, he immigrated to the U.S. (1935), where he became a professor of physics at Johns Hopkins University (1935–38) and professor of physical chemistry at the University of Chicago (1938–49). In the U.S. Franck primarily investigated the physical chemistry of photosynthesis. He worked on the MANHATTAN PROJECT during WORLD WAR II and was responsible for the *Franck Report*, in which he and several other outstanding scientists argued against the use of the newly developed atomic bomb without first demonstrating its devastating effect on an unpopulated island.

Franco (L'Okanga La Ndju Pene Luambo Makiadi) (1939–1989) Zairean jazz guitarist and band leader. During his lifetime he was one of Africa's most popular and influential musicians. He was noted for creating the soukous style, a fusion of Afro-Cuban rumba music with JAZZ, gospel and African rhythms, and for lyrics that sometimes ridiculed Africa's ruling classes and offended the Zairean government. Following his death, however, Zairean president MOBUTU SESE SEKO declared an official four-day mourning period.

Franco, Francisco (1892–1975) Spanish general and head of the gov-

Spanish general and premier Francisco Franco, 1954
(LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

ernment of Spain. Born in El Ferrol in Galicia, Franco was a career army officer who became a brigadier general in 1926 at age 33. In 1934 he successfully suppressed a communist-led miner's revolt. The same year he was appointed chief of the Spanish army. In 1936, as governor of the Canary Islands, he led the antisocialist revolt that started the SPANISH CIVIL WAR. The Nationalists proclaimed him head of state, and by 1939 his regime, having won the civil war, received British and French diplomatic recognition. During World War II he led Spain on a fascist Italian model, under a single political party—the FALANGE. However, he maintained Spain's neutrality. After the war his regime received U.S. patronage but was opposed bitterly by intellectuals. In 1969 he nominated Prince JUAN CARLOS, grandson of ex-king ALFONSO XIII, to succeed him after his death. Franco resigned from the position of premier in 1973 but retained his functions as head of state until his death.

Frank, Anne (1929–1945) Jewish diarist of the HOLOCAUST. Her book, *The Diary of Anne Frank* (1947), which poignantly recounts the thoughts and experiences of a young Jewish girl living in hiding from the Nazis during WORLD WAR II, has been widely acknowledged as one of the spiritual classics of the 20th century. A best seller that has been published around the world, the *Diary* has also been successfully adapted to the Broadway stage (1956) and as a Hollywood film (1959). Frank, who fled with her family from Germany to Holland, went into hiding—along with her family and a few others—in a Dutch warehouse office from 1942 to 1944. In 1944 they were discovered by the Nazis. Frank died in the BERGEN-BELSEN CONCENTRATION CAMP. Her diary, which is most noteworthy for Frank's remarkably enduring faith in human nature, was discovered by her father after the war.

Frank, Leo See LYNCHING OF LEO FRANK.

Frankenheimer, John (1930–2002) American motion picture and television director. Frankenheimer was born in New York, served in the air force in the early 1950s and after his discharge joined other young men like Sidney

LUMET at CBS to pursue a career in television. Quick, versatile and technically adept in the new medium, he directed a religious series, *Lamp unto My Feet*; an interview series with Edward R. MURROW, *PERSON TO PERSON*; and a variety show, *The Garry Moore Show*. His subsequent movies carry on this eclecticism and virtuoso technique. His best-known works include *The Manchurian Candidate* (1962), a surreal tale of brainwashing and assassination; *Seven Days in May* (1963), a political thriller; and *Grand Prix* (1966), a Cinerama racing epic. Less familiar, but no less full of quirky surprises, are *The Train* (1965), a WORLD WAR II thriller about protecting art masterpieces from invading Nazis; *French Connection II* (1975), a sequel to the original; and *The Fourth War* (1990), an offbeat war movie that reflected the thaw in the COLD WAR tensions between East and West. *Seconds* (1966), arguably his finest, if most neglected film, nicely sums up his restless camera technique and nightmarish sense of mood and image. A man's search for lost youth and a new identity becomes an exercise in Kafkaesque horror—quite one of the scariest movies of the 1960s. Frankenheimer continued to direct films until his death, receiving an Emmy award for his direction of the television film *George Wallace* (1997). He also directed the motion picture *Reindeer Games* (2000).

Frankenstein (1931) Prototype of the American horror film. Mary Shelley's 1818 novel had been filmed as early as 1910 by Edison, in a silent version that ran a scant 10 minutes. In 1931 UNIVERSAL Studios, cashing in on its recent success with *Dracula*, brought in writer/director Robert Florey and its new star, Bela LUGOSI, to make the first TALKING PICTURE version. Unhappy with the project, the studio transferred them to another film (*Murders in the Rue Morgue* [1932]) and brought in another team: director James WHALE and newcomer Boris KARLOFF. The results were superior to the rather static *Dracula*, as for the first time we see the archetypal horror formula assuming shape: the "creation" sequence ("It's alive!"); the Old World atmosphere (via sets borrowed from Universal's *ALL QUIET ON THE WESTERN FRONT*); and the restless, torch-carrying locals storming the castle. Set designer

Charles Hall twisted his interiors into the distorted shapes of German EXPRESSIONISM, Kenneth Strickfaden stitched the air with dazzling electrical effects and makeup ace Jack Pierce devised the effective Monster makeup (reportedly after consulting with surgeons and pathologists). Above all, director James Whale infused the proceedings with a certain diabolical humor that has worn well over the years. Not even the numerous sequels, including *Abbott and Costello Meet Frankenstein* (1948) and Mel BROOKS's satiric *Young Frankenstein* (1974), can take the dark bloom off this eldritch rose.

Frankenthaler, Helen (1928–) American painter. Born in New York City, she studied with a number of artists, notably Hans Hofmann and Jackson POLLOCK. Influenced by art critic Clement GREENBERG and such painters as Pollock, Willem DE Kooning and Arshile Gorky, Frankenthaler developed a lyrical color-field technique that involves staining and saturating the canvas with color. Lyrical in mood, her works include *Mountains and Sea* (1952, Metropolitan Museum of Art, New York City) and *Arden* (1961, Whitney Museum of American Art, New York City).

Frankfurter, Felix (1882–1965) Associate justice, U.S. Supreme Court (1939–62). Born in Austria, Frankfurter was raised in poverty in New York City's Lower East Side. He attended City University and Harvard Law School. After brief stints in pri-

Supreme Court associate justice Felix Frankfurter
(LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

vate practice, the U.S. Attorney's Office and the War Department, he returned to Harvard Law School as a professor for 25 years, interrupted by three years in various posts in Washington. Frankfurter was an active Zionist and also became involved in many controversial legal battles of the era, including the defense of SACCO AND VANZETTI. He was a founder of the AMERICAN CIVIL LIBERTIES UNION. He was also a close adviser of President Franklin D. ROOSEVELT, who appointed him to the Supreme Court in 1939 to replace Justice CARDOZO. Frankfurter generally supported NEW DEAL legislation. In later years he generally favored the doctrine of judicial restraint, which holds that the courts should not substitute their views for those of the elected legislatures.

Franklin, John Hope (1915–) U.S. educator and historian. With a Ph.D. from Harvard (1941), he taught on several college faculties before joining the Howard University staff in 1947. He was a Fulbright Scholar (1954) and a William Pitt Scholar (1962), both at Cambridge University. He became chairman of the history department at the University of Chicago in 1969. He was a trustee of the Chicago Symphony from 1976 to 1980. Considered one of the foremost historians of his time, he emphasized social, political and cultural history and biography in his writings and teachings. His writings include *From Slavery to Freedom: A History of Negro Americans* (1947), *The Militant South* (1956) and *The Emancipation Proclamation* (1963). He was named to the Oklahoma Hall of Fame in 1978. Franklin received a series of awards throughout the 1990s, including the Charles Frankel Prize for Contributions to the Humanities (1993), the Presidential Medal of Freedom (1995) and the NAACP's Spingarn Medal (1995). In 1995 the John Hope Franklin Research Center for African and African-American Documentation was established at Duke University (1995). In 1997 Franklin served as chairman of President Bill CLINTON's Initiative on Race, a presidential council established to examine race relations in the U.S.

Franklin, (Stella Maria Sarah) Miles (1879–1954) Australian nov-

elist. Franklin first realized success with *My Brilliant Career* (1901). Written when she was 16, the novel depicts pioneer life in the Australian bush through the eyes of the young heroine who longs to escape it. In her lifetime, she was best known for *All That Swaggers* (1936), also about the desolation of life in the bush. *Some Everyday Folk and Dawn* (1909) deals with women's suffrage (see WOMEN'S MOVEMENT.) The filming of *My Brilliant Career* in 1980 led to a renewed interest in Franklin's work.

Franklin, Rosalind (1920–1958) British crystallographer and biophysicist. A graduate of Cambridge, Franklin worked for the British Coal Utilisation Research Associates from 1942 to 1947 and the Paris Laboratoire Centrale des Services Chimique from 1947 to 1950, when she returned to England. There she was a researcher at King's College (1951–53) and Birbeck College (1954–58). Franklin had an important part in the epoch-making discovery of the structure of DNA by James WATSON and Francis CRICK. Using X-ray diffraction photography, she showed that the DNA molecule's phosphates lay on its outside and provided information that indicated that DNA had a helical chain structure. Franklin's work and her alleged lack of cooperation with fellow-researcher Maurice Wilkins were described in Watson's book *The Double Helix* (1968). She also did important research on the structure of carbon and the tobacco mosaic virus.

Franz Ferdinand (1863–1914) Austrian archduke, after 1889 heir apparent to his uncle, Emperor Franz Joseph II. He was married to Sophie Chotek, a Czech countess. Because of her relatively low rank, their two sons were not granted the right of succession. On a trip to Sarajevo in 1914, he and his wife were assassinated by the Serbian nationalist Gavrilo Princip—provoking Austria's declaration of war against SERBIA. This event was the spark that erupted into the conflagration of WORLD WAR I.

Franz Joseph II (1906–1989) Prince of Liechtenstein. Becoming head of state of the small European principality in 1938, he oversaw LIECHTENSTEIN's development from a poor, rural country to a

wealthy tax and banking haven with one of the world's highest per capita incomes. A keen sportsman, he served on the International Olympic Committee for more than 35 years. In 1984 he handed his executive powers over to his son, Crown Prince Hans Adam.

Franz Joseph Land (Russian: Zemlya Frantsa Josifa) Archipelago north of Novaya Zemlya in Russia, constituting the northern boundary of the Barents Sea. Found and named in 1873 by an Austrian expedition, Franz Joseph Land was scouted by several other polar expeditions including NANSEN's and has also been known as Fridtjof Nansen Land. Claimed by Russia in 1914, the archipelago was formally annexed in 1926 by the Soviet Union. The world's northernmost weather station is located here.

Fraser, James Earle (1876–1953) American sculptor. After studying art at the Art Institute of Chicago in 1894, Fraser moved to Paris to study at the École des Beaux-Arts. His most famous work, *The End of the Trail*, depicting an exhausted Indian on horseback, was completed in 1896. In 1898 he became the student-assistant of famed sculptor Augustus St. Gaudens. As an artist Fraser was the recipient of hundreds of awards from national and international organizations. Principal works of Fraser include a bust of Theodore ROOSEVELT on display in the U.S. Senate chamber; two heroic figures, *Justice* and *Law*, in front of the Supreme Court building; statues of Albert Gallatin and Alexander Hamilton for the Treasury Building (all in Washington, D.C.); the Buffalo nickel; and monuments to Thomas Edison for the Edison Institute in Dearborn, Michigan.

Fraser, Malcolm (1930–) Prime minister of Australia (1975–83). A member of the Australian LIBERAL PARTY, Fraser was educated at Oxford University. Returning to Australia, he entered politics and was elected to the Australian House of Representatives in 1955. He held various cabinet posts from 1966 to 1971. Fraser succeeded Gough WHITLAM as prime minister in 1975, following a budget crisis that brought down Whitlam's LABOUR PARTY government, and formed a ruling coalition with the National Party. He gener-

ally followed conservative economic and foreign policies. He was defeated by the Labour Party, led by Robert HAWKE, in 1983. Throughout the 1990s Fraser served as an Australian goodwill ambassador, observing the Pakistan national elections of 1997 and obtaining the release of Australian humanitarian workers held in the former Yugoslavia in 1999.

Frasier American comedy television series (1993–2004). Originally conceived as a spin-off series from NBC's popular comedy, *CHEERS*, *Frasier* became a comic force in its own right. Starring *Cheers* alumnus Kelsey Grammer, the series focused on the arrival of Dr. Frasier Crane as he relocated from Boston to Seattle to escape his ex-wife, Lillith, and begin a new life. Frasier finds work as a radio psychiatrist and interacts with his brother and fellow psychiatrist Niles (David Hyde Pierce), their father, retired police detective Martin Crane (John Mahoney), his father's caretaker, Daphne Moon (Jane Leeves) and Roz Doyle (Peri Gilpin), a coworker of Frasier's at the radio station. The series won numerous Emmys.

Frazier, Joe (1944–) American boxer, known as "Smokin' Joe." The world heavyweight champion from 1971 to 1973, Frazier was one of the most devastating fighters of his or any other time. He was discovered in Philadelphia by trainer Yank Durham, then worked his way up through the boxing ranks, taking on such opponents as Buster Mathis and Jerry Quarry, before defeating the champion Muhammad ALI in a 15-round unanimous decision at Madison Square Garden, New York, in 1971. Frazier lost his title to George FOREMAN two years later. In 1975 he again met Ali in one of the most vaunted fights of all time, the "thriller in Manila." Despite Frazier's superior power, Ali rallied to defeat him with a 15th-round TKO.

Frederick, Pauline (1918–1990) American radio and television news commentator. Frederick had her own news programs on three networks—ABC, NBC and National Public Radio—and served as NBC's UNITED NATIONS correspondent for 21 years. In 1976 she became the first woman to

moderate a presidential debate—the one between Gerald R. FORD and Jimmy CARTER.

Frederika (1917–1981) Queen of Greece (1947–64). Born in Germany, she was a member of an ancient German princely family. The strong-willed wife of King Paul, she intervened in Greek politics after her son King CONSTANTINE came to the throne in 1964; her activities helped pave the way for the overthrow of the monarchy in 1967. After GREECE was officially proclaimed a republic in 1973, she went into self-imposed exile.

Freedom of Information Act During the administration of President Richard NIXON, it was revealed that the federal government had systematically maintained files on American citizens suspected of being disloyal. Both the FBI and the CIA were involved in domestic surveillance of citizens. After the WATERGATE scandal and the end of the VIETNAM WAR, public opinion demanded access to these files. The 1976 Freedom of Information Act allows citizens and businesses to request copies of government records. Certain records are exempted, including those that touch on trade secrets of businesses and national security. Citizens can not only learn if federal agencies maintain any files pertaining to them but also receive copies of such files. This law has also been used successfully by scholars and researchers. The U.S. government and a number of states have "sunshine" or "open meeting" laws that require all governmental meetings to be announced in advance and open to the public. A "sunset law" is a provision—in any act that empowers a government body—requiring a government body to automatically go out of existence unless the legislature specifically votes to reinstate it. The act is intended to promote more efficient government by eliminating nonessential bodies and agencies. In 1996 President William Jefferson CLINTON signed an updated Freedom of Information Act to account for the recording of government information on computers, CDs and diskettes.

Freedom Party Conservative political party in Austria, headed by Jörg HAIDER, the governor of the Austrian state of Kärnten. The Freedom Party

rose to international and national attention during Austria's 1999 elections for the legislature, the Nationalrat, when Haider and his party capitalized on concerns and anger among the Austrian working class by arguing that Austria's continued high immigration rate (primarily from Turkey) and its obligations to the EUROPEAN UNION (EU) would siphon off jobs from natural-born Austrian citizens. Haider also made public preelection comments praising aspects of the Nazi regime of Adolf HITLER but later retracted these statements and apologized for them. In October 1999 the Freedom Party tied the People's Party, a moderate-conservative political organization, with 52 seats in the Nationalrat. The two parties formed a coalition government in February 2000, in which Freedom Party members obtained ministerial posts. Haider, however, was not included in this coalition government. International pressure on Austria from several foreign governments and the EU prompted demands in Vienna for a change in the Freedom Party's leadership, forcing Haider's resignation as head of the party.

Free French Movement headed by General Charles de GAULLE during WORLD WAR II as an alternative to the collaborationist VICHY regime. After the fall of France in 1940 to the Nazis, de Gaulle headed RESISTANCE activities from exile in London, calling on his countrymen to resist the German occupation and organizing an army of French and colonial volunteers. By 1942 Free French troops numbered about 70,000 men, who participated in battles in Africa and in various naval engagements. After the Allied invasion of North Africa in 1942, a provisional Free French government was established in Algiers in 1943 (see NORTH AFRICAN CAMPAIGN). When Paris was liberated by Free French and other Allied forces in August 1944, the French government was moved to the capital. De Gaulle headed a provisional French government until the establishment of the Fourth Republic in 1946.

free jazz A term initially applied to the relatively open-ended improvisations of alto saxophonist Ornette COLEMAN and pianist Cecil Taylor. The term derived

from Coleman's seminal recording, *Free Jazz* (1960), a sprawling, open-ended improvisation for two pianoless quartets that set the tone for the free jazz movement of the 1960s. Free jazz generally involves collective improvisation; also, although soloists often step forward, as in mainstream jazz, there is much more initiative and interaction among the others in the group. The abandonment of traditional song forms and harmonic structures associated with the mainstream is significant; in place of traditional sound ideals generally thought of as "beautiful" or "sonorous," avant-garde players, especially in the early years, incorporated wails, honks, shrieks and other "voice-like" sounds connoting anger and frustration. These emotive qualities were especially important to black American musicians who saw free jazz as a part of the larger CIVIL RIGHTS MOVEMENT and BLACK POWER movements of the 1960s. In Europe, free jazz provoked controversy among both musicians and critics, who attacked its "free" aspect as license for an essentially undisciplined, musically illiterate, "anything goes" approach. Nonetheless, free jazz remains, especially in Europe, an important alternative to more mainstream styles; it has also provided a significant repertoire of gestures and even attitudes that have been incorporated into the music of such contemporary jazz artists as guitarists John SCOFIELD, Pat Metheny and John Abercrombie.

Free Officers Army officers in EGYPT who overthrew King FAROUK in 1952.

free speech movement (1964–1965) The free speech movement refers to a series of student-led demonstrations conducted on the campus of the University of California at Berkeley (1964–65). The central issue giving rise to the demonstrations was the ban placed by the university administration, headed by President Clark Kerr, on speech related to off-campus political issues being conducted on-campus at Bancroft Strip. The free speech movement, which was led by student Mario Savio, became a cause celebre that received support from such luminaries as Norman MAILER and Bertrand RUSSELL. The free speech movement ultimately prevailed by virtue of an overwhelming majority vote by the

Academic Senate. More important, it became a paradigm of student protest in the 1960s.

Frei Montalva, Eduardo (1911–1982) President of Chile (1964–70). A self-proclaimed radical reformer, Frei was the first Christian Democrat ever to lead a nation of the Western Hemisphere. During his presidency he began an ambitious land distribution program but failed in his stated goal to give land to 100,000 poor farmers. He also started the nationalization of CHILE's copper industry that was completed under his successor, Salvador ALLENDE GOSSENS. The hero of the democratic moderates, Frei was a leading opposition figure during the military government of General Augusto PINOCHET.

FRELIMO (Frente de Libertação de Moçambique) Marxist liberation movement that waged a guerrilla war against the Portuguese in MOZAMBIQUE from 1964 to 1974. The dominant political force in the country after independence.

Frenay, Henri (1905–1988) French politician. Frenay was one of the top leaders of the French RESISTANCE during WORLD WAR II. For a time he sought to challenge Charles de GAULLE. Frenay created a national liberation movement, Combat, which he intended to be independent of the Anglo-Saxon powers and the communists as well as de Gaulle. After the war he supported European federation.

French, Sir John Denton (first earl of Ypres) (1852–1925) British field marshal. A longtime army officer, French served in the Sudan (1884–85) and the SOUTH AFRICAN WAR (1899–1902) before becoming chief of the imperial general staff (1912–14). He was promoted to the rank of field marshal in 1913. During the first year of WORLD WAR I French commanded the British Expeditionary Force in France and Belgium (1914–15) but was unable to coordinate with French forces and incurred heavy casualties in both the first and second battles of YPRES and the battle of Loos. Replaced by General Douglas HAIG in December, 1915, he returned to England, where he organized civil defenses. Later he was appointed lord lieutenant of Ire-

land (1918–21) and was made an earl upon his retirement in 1922.

French Community (Communauté française) Established in 1958 to succeed the FRENCH UNION, the French Community included FRANCE, its overseas departments and territories, and 12 African colonies given autonomy at the time (in 1958 GUINEA had voted for instant independence). In 1960 these countries were given independence and the option of leaving the community; SENEGAL, GABON, CHAD, CONGO, the CENTRAL AFRICAN REPUBLIC and MADAGASCAR stayed; MALI, MAURITANIA, Upper Volta (now BURKINA FASO), Dahomey (now BENIN), NIGER and the Ivory Coast (CÔTE D'IVOIRE) relinquished formal membership but continued a connection through special accords. The community's management was aimed at drafting common foreign, economic and military policies for its members, but the operation dwindled during the 1960s, eventually to be succeeded by bilateral agreements, fostered by powerful economic and cultural bonds, between France and the other community participants.

French Equatorial Africa (French Congo) A former confederation of French colonies in West Africa that now make up the states of GABON, CONGO, CHAD and the CENTRAL AFRICAN REPUBLIC. The grouping was formed in 1910 and was a consolidated colony between 1934 and 1946. The capital, Brazzaville, became the nucleus of African operations for the FREE FRENCH in WORLD WAR II. In 1958 French Equatorial Africa disappeared when its constituent regions became autonomous members of the FRENCH COMMUNITY.

French Guiana (French: Guyane française) On the Atlantic coast of northeastern South America, it is an overseas region of FRANCE. During WORLD WAR II French Guiana supported the VICHY government after the Nazi defeat of France, but in 1943 the FREE FRENCH assumed control. In 1958 French Guiana approved the constitution of France's Fifth Republic and chose to remain an overseas department, with its own representatives in the French parliament. It became a region in 1974. Beginning in

the 1990s French Guiana served as the base for the rocket launches of the European Space Agency (ESA) and its ARIANE 5 rockets. (See also GUYANA.)

French Indochina War of 1946–1954 After the Japanese invaders withdrew from French INDOCHINA at the end of WORLD WAR II, the French were not in a strong position to reassert immediately their authority. In the north the VIET MINH, a political party led by HO CHI MINH, proclaimed the independent Democratic Republic of VIETNAM. France agreed to recognize Vietnam as a free state within the French Union, but negotiations dragged on. In 1946 French forces attacked Viet Minh forces and Vietnamese civilians. During the ensuing years guerrilla activity increased in the countryside. In 1949 a Vietnamese provisional government headed by Emperor BAO DAI was established and recognized by France, and in 1950 by the U.S. The communist-dominated Viet Minh rejected any remnant of French authority and consequently attacked French outposts along Vietnam's border with China, from whom they received substantial military aid.

In 1951 the Viet Minh created a common front with communist groups in Laos and Cambodia (Kampuchea) and became more and more aggressive. They were led by General VO NGUYEN GIAP, who launched an attack on March 18, 1954, against the strategic French stronghold at DIEN BIEN PHU in northwestern Vietnam. Giap's siege lasted 56 days; his Viet Minh troops continually attacked with artillery and mortar fire until the French defenders, short of ammunition, surrendered on May 7, 1954. Meanwhile, an international conference in Geneva was working out an agreement whereby the fighting would cease and the French would withdraw. The Viet Minh set up a government north of the 17th parallel, while Vietnamese non-communists set up a government south of the demarcation line. The war was unpopular in France, most of whose citizens were relieved when it was over, in spite of their defeat and loss of influence in Southeast Asia. In July 1954 Vietnam was divided into the Democratic Republic of Vietnam (North Vietnam) and the Republic of Vietnam (South Vietnam). (See also VIETNAMESE CIVIL WAR OF 1955–1965; VIETNAM WAR.)

French Polynesia Overseas area of France, formerly known as French Oceania, consisting of nearly 105 islands in the South Pacific Ocean. The five main groups are the Gambier Islands and the Marquesas, Society, Tuamotu and Tubuai, or Austral, Islands. Unpopulated Clipperton Island, 670 miles southwest of Mexico, is managerially a part of the region. Tahiti is the primary island, and the capital of the territory is Papeete on Tahiti. Some islands are volcanic; others are coral atolls; the citizens are mainly Polynesian. France claimed and annexed the island groups from 1842 to 1881. In 1903 the groups were united under a single administration as French Oceania (or Etablissements françaises de l'Océanie); in 1946 they were reconsolidated as an overseas territory and renamed French Polynesia. The inhabitants voted in 1957 to remain connected to the FRENCH COMMUNITY, with representation in the French parliament. From time to time France conducted nuclear tests in the islands. In 1995 France resumed nuclear testing on the Mururoa atoll of French Polynesia.

French Southern and Antarctic Territories These islands lie in the southern Indian Ocean and cover a total area of 3,003 square miles. They include the extinct volcanoes Île Amsterdam and Île Saint-Paul, and Îles Kerguelen and Crozet. France also claims an area known as Terra Adelie in Antarctica as part of its territories, a claim not recognized by the U.S. Administered as dependencies of the former French colony of Madagascar from 1924 to 1955, the islands became a separate overseas territory in 1955. Scientific stations form the only permanent settlements.

French Union Formed by the French Constitution of 1946, this was a federation of FRANCE, its overseas departments and territories, and the associated states of INDOCHINA, MOROCCO and TUNISIA. With the French Union allowing more autonomy to territories and protectorates, a number of them became ready for independence. The union paved the way for a transition of France's colonial empire into the FRENCH COMMUNITY, which succeeded the union in 1958.

French West Africa A former federation of French colonies in West Africa that are now the states of BENIN, BURKINA FASO, GUINEA, CÔTE D'IVOIRE, MALI, MAURITANIA, NIGER and SENEGAL. Organized in 1895, the federation ended in 1958 when Guinea voted for immediate independence. The remaining constituent regions of French West Africa became autonomous constituents of the FRENCH COMMUNITY, achieving independence in 1960. (See also FRANCE.)

Freud, Anna (1895–1982) Austrian psychologist. Freud was the daughter of Sigmund FREUD, the founder of psychoanalysis, and she devoted much of her career to applying and defending the theoretical principles first articulated by her father. As a result of Nazi threats, Freud left Austria for Britain with her dying father in 1938. Over the next four decades, Freud became a major force in British psychology. Her highest achievement was the founding, in 1947, of the Hampstead Child Therapy Clinic in London. Freud specialized in the application of psychoanalysis to children. She also argued for the value of psychoanalytical insights in the interpretation of normal, as opposed to neurotic, behavior patterns. *The Ego and the Mechanisms of Defense* (1936) was her major work.

Freud, Sigmund (1856–1939) Austrian psychiatrist and founder of psychoanalysis. Freud is, beyond question, the most influential psychological theorist of the 20th century, although his insights have been frequently misstated and oversimplified. Born of Jewish parentage in Moravia, Freud studied medicine in Vienna and Paris. In 1884 he studied under Josef Breuer, a Viennese physician who introduced Freud to the cathartic method of treating hysteria. This method, which focused on allowing patients to confront the root element of their abiding fears, became the essential starting point of psychoanalysis. In 1895 Freud and Breuer coauthored *Studies in Hysteria*. In 1900 Freud published a landmark work, *The INTERPRETATION OF DREAMS*, which established the importance of the psychoanalytic movement. In *Three Essays on the Theory of Sexuality* (1905) Freud spelled out his insistence on the primal importance for personality development of unconscious sexual drives that emerge during infancy. In his later works Freud analyzed cul-

tural and religious issues and concluded that both artistic creation and religious belief were the result of sublimated sexual energy held in check by societal taboos. In 1938 Freud, who had been condemned by the Nazis, fled to London, where he died of throat cancer weeks after the outbreak of WORLD WAR II. Freud's ideas have had an enormous influence on 20th-century art, literature and social thought.

Freyssinet, Eugène (1879–1962) French structural engineer best known for his extraordinary constructions of reinforced concrete. Freyssinet designed vast twin airship hangars, built in 1916–21 at Orly Airport near Paris, using a continuous parabolic concrete arch with a span of 195 feet. The hangars were destroyed in 1944. Freyssinet was also the designer of various concrete bridges, including an arch bridge with a span of 430 feet over the Seine at Pierre du Vauvray, built in 1922 and reconstructed in 1946, and of some buildings of the Gare d'Austerlitz in Paris of 1929.

Frick, Ford C. (1894–1978) Commissioner of baseball from 1951 to 1965. Frick was originally a newspaperman and then a radio announcer. He also served as president of baseball's

National League for 17 years. He was elected to the Baseball Hall of Fame in 1970.

Fried, Alfred (1864–1921) Austrian journalist and pacifist. Fried ran a publishing company in Berlin and created the German Peace Society in 1892. Inspired by the first Hague peace conference in 1899, he devoted himself to promoting it and the cause of internationalism. He began publishing the *Annuaire de la vie internationale* (Annual of international life) in 1905 and authored several books, notably, *Handbuch der Friedensbewegung* (Handbook of the peace movement, 1911). Fried was a joint recipient of the 1911 NOBEL PRIZE for peace along with Tobias ASSER.

Friedan, Betty (1921–2006) American feminist leader and author; one of the most prominent figures in the feminist movement since the publication of her landmark work, *The Feminine Mystique* (1963). In that work Friedan captured wide public attention for her central thesis that women are culturally stereotyped in America as suited only to economically dependent and intellectually vacant lives as housewives and mothers. Friedan, who had for a time given up her own professional aspirations to live as a housewife in the sub-

Feminist activist and author Betty Friedan, 1967 (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

urbs, drew on her own surveys of a wide range of American women to support her then-controversial findings. In 1966 she founded the National Organization of Women (NOW) to serve as a lobbying and public opinion force on behalf of feminist political issues. In 1970 Friedan headed a nationwide Women's Strike for Equality. Her other books include *It Changed My Life* (1977) and *The Second Stage* (1981). In 1993 Friedan published *The Fountain of Age*, a work that examined the changing perceptions of old age in American society. Seven years later she published her memoir, *Life So Far*.

Friedman, Elizabeth S. (1894–1980) American pioneer cryptographer. Friedman helped decipher codes used by enemies of the U.S. during WORLD WAR I and WORLD WAR II. She also aided in the solving of international drug and liquor smuggling cases. Working with her husband, Colonel **William Friedman**, she broke the top-secret Japanese **purple code**, which was used by Japanese diplomats before and during World War II.

Friedman, Herbert (1916–2001) U.S. rocket astronomy pioneer. After studying physics at Brooklyn College, Friedman did his graduate work at Johns Hopkins University in 1940. Joining the U.S. Naval Research Laboratory, he became involved in rocket astronomy during World War II and after the war was primarily concerned with RADAR detection devices and solar physics. In 1949 he directed a team that sent a V-2 rocket carrying scientific instruments into space, proving that X-rays emanated from the Sun. During this same period Friedman did pioneering work in ultraviolet mapping. Beginning in 1956 he began working with the Vanguard satellite development program, in an effort to continue his studies of X-rays and ultraviolet radiation from the Sun. In 1960 he made the first X-ray photographs of the Sun and made observations proving that neutral hydrogen is present throughout the solar system. Friedman was elected to the National Academy of Sciences in 1960 and was awarded more than 40 patents in the field of rocket and satellite astronomy. He was recipient of the 1987 Wolf Prize in Physics.

Friedman, Milton (1912–) American economist; leader of the monetarist, or “Chicago” school of economics. Friedman was born in New York City, the son of immigrants from eastern Europe. He graduated from Rutgers University in 1932 and received his doctorate from Columbia University in 1946. After World War II he taught for two years at the University of Minnesota before joining the economics department of the University of Chicago, where he labored for the next three decades. In his 1957 book *A Theory of the Consumption Function*, Friedman introduced the extremely influential “permanent income hypothesis,” which suggested, in contradiction to John Maynard KEYNES, that individuals base spending decisions on expected long-term income rather than on current income.

In 1963 Friedman, with his collaborator David Meiselman, continued his attack on Keynesian economics by arguing that money supply rather than government spending is the chief determinant of economic health. An economic adviser to Presidents NIXON and REAGAN, Friedman argued for a laissez-faire policy toward business and trade and played an important role in the creation of an all-volunteer army and on other questions of public policy. He won the 1976 NOBEL PRIZE in economics. In 1977 Friedman retired from the University of Chicago and became a senior research associate at the Hoover Institution. In 1980 he published his best-selling book *Free to Choose*, which also became the basis of a television series. He was awarded the Medal of Freedom in 1988. (See also MONETARISM.)

Friedmann, Alexander Alexandrovich (1888–1925) Soviet astronomer. The son of a composer, Friedmann was educated at the University of St. Petersburg. He began his scientific career in 1913 at the Pavlovsk Observatory in St. Petersburg and, after war service, was appointed professor of theoretical mechanics at Perm University in 1918. In 1920 he returned to the St. Petersburg Observatory, where he became director shortly before his early death from typhoid at the age of 37. Friedmann established an early reputation for his work on atmospheric and meteorological physics. However, he is better known for his 1922 paper on the

expanding universe. This arose from work of EINSTEIN in 1917 in which he attempted to apply his equations of general relativity to cosmology. Friedmann developed a theoretical model of the universe using Einstein's theory, in which the average mass density is constant and space has a constant curvature. Different cosmological models are possible depending on whether the curvature is zero, negative or positive. Such models are called Friedmann universes. (See also BIG BANG THEORY.)

Friel, Brian (1929–) Northern Irish playwright. Friel has become an influential playwright in the British Isles by virtue of plays that probe the deep and persistent social, political and religious divisions between England and Ireland. In particular, Friel's plays have explored the violence and unrest that have persisted in his native NORTHERN IRELAND under British rule. His first play was *This Doubtful Paradise* (1959). Subsequent theatrical successes included *Philadelphia, Here I Come!* (1964), *Lovers* (1967), *The Freedom of the City* (1973), *Faith Healer* (1979), *Translations* (1980) and *Aristocrats* (1988). Friel also translated (1981) the classic play *Three Sisters* by Anton CHEKHOV.

Friend, Charlotte (1921–1987) American medical microbiologist. She was known for her important cancer research. In 1956 she discovered a virus that caused leukemia in mice; the **Friend virus**, as it came to be known, emerged as a major tool for study of the links between viruses and cancer.

Friends Service Council (FSC) Organization established by the Quakers in London in 1927. It was formed by merging the Friends Foreign Mission Association, which had been founded in 1868 to organize and operate schools, hospitals and Quaker societies abroad, and the Council for International Service, which was formed in 1919 to establish peace centers throughout the world. Headed from 1932 by Carl Heath, the FSC initially sponsored conferences that discussed problems brought on by the Treaty of VERSAILLES, and interceded with governments to relieve persecuted minorities. After World War II the FSC took over various relief activities that had been conducted by

another Quaker organization during the war. Along with its U.S. counterpart, the AMERICAN FRIENDS SERVICE COMMITTEE, the FSC received the 1947 NOBEL PRIZE for peace. The FSC has continued its humanitarian work throughout the world, operating relief camps for Palestinian refugees, aiding riot victims in INDIA, helping civilian victims of war in KOREA and VIETNAM, feeding people in famine-stricken Africa and conducting other relief and peace-related programs.

fringe theater A general term for British experimental theater groups; first became a prominent usage in British theatrical circles in the 1950s, when the annual Edinburgh Drama Festival—which featured the best in accepted professional stage productions—became a stimulus for a number of alternative theatrical groups to perform their own experimental plays at the same time as the official festival productions. This informal competition between the “fringe” and the mainstream has continued to serve as an effective stimulus to British theater. A major playwright who emerged from the early “fringe” movement is Tom STOPPARD; subsequent “fringe” playwrights have included Howard Brenton and David HARE.

Frisch, Max (1911–1991) Swiss novelist and playwright. Frisch, who began his career as an architect, achieved his first literary success with his play *When the War Was Over* (1949), which showed the strong influence of Frisch's close friend, the German playwright Bertolt BRECHT. In the 1950s Frisch turned his attention to fiction; his novel *I'm Not Stiller* (1954) earned international acclaim and enabled Frisch to devote himself full time to writing. Frisch's most prominent themes are the pervasive nature of Nazi postwar guilt and the necessarily continuous struggle for political and personal freedom. His other novels include *Homo Faber* (1957), *Montauk* (1975) and *Man in the Holocene* (1979). Other plays by Frisch include *Andorra* (1961) and *Biography: A Game* (1967). Frisch also produced several volumes of memoirs, most notably *Sketchbook 1946–49* (1977) and *Sketchbook 1966–71* (1974).

Friuli (German: Friaul) In the ancient world, Forum Julii, a region on the

Adriatic Sea south of Austria; now split between SLOVENIA and the Friuli-Venezia Giulia area of northeastern ITALY. During WORLD WAR I the area was a battlefield; afterward, the victorious Italy took all of old Friuli but had to cede the eastern section to YUGOSLAVIA after WORLD WAR II. The balance was united with Venezia Giulia as a region in 1947. Trieste was made its capital in 1954.

Fromm, Erich (1900–1980) German-born psychoanalyst, social philosopher and humanist. Fromm obtained his Ph.D. from the University of Munich (1922) and also studied at Berlin's Psychoanalytic Institute. He started his own practice in 1925, and four years later began his lifelong teaching career. He emigrated from Nazi Germany to the U.S. in 1934 and subsequently lectured at Columbia, Yale and other universities. Schooled in traditional Freudian analysis, he developed his own eclectic theories to explain human behavior. These theories stressed social and economic factors as well as unconscious drives. Fromm wrote some 20 books, including influential works on the theories of Karl Marx and Sigmund FREUD, the religious precepts of Judaism and Christianity, and the COLD WAR and the alienation of the individual.

Front National (National Front) Far-right political party in France headed by Jean-Marie LE PEN. Formed in the early 1980s by Le Pen, a former French paratrooper in the Algerian War, the Front National (FN) derived its support largely from its stance against continued immigration into France. Until the 2002 presidential election, the party remained on the fringe of French politics, as it never gained more than 12% of the popular vote in parliamentary or presidential contests. However, its continued appeal among some constituencies forced governments under President François MITTERRAND and the government of his successor, Jacques CHIRAC, to compromise on issues such as social programs and immigration policy.

The front blamed immigrants to France, primarily those coming from North Africa, for the high French unemployment rate and the increase in urban crime. In the first round of the 2002 French presidential elections Le Pen's party rose even further to national

prominence. Riding a wave of popular discontent, Le Pen edged out the Socialist candidate for president, Prime Minister Lionel Jospin, to receive the second-highest number of votes in the election behind Chirac. In the second round Chirac handily defeated Le Pen with support from leftist voters. Yet Le Pen's strong showing demonstrated the willingness of French voters, particularly native-born working-class citizens, to support his party's anti-immigration positions.

Frost, Robert Lee (1874–1963) American poet. Frost dropped out of Dartmouth in 1892 to work as a mill laborer and teacher in Lawrence, Massachusetts. He attended Harvard, 1897–99; then moved to New Hampshire to farm and teach English. He lived in England briefly (1912–15) before returning to farm near Franconia, New Hampshire. Though his first poem appeared in 1894, his first success was in England with the publication of *A Boy's Will* (1913) and *North of Boston* (1914), written under the influence of his friend Edward THOMAS. Frost received the PULITZER PRIZE four times (1924, 1931, 1937, 1943) and was poetry consultant to the Library of Congress in 1958. Additional accolades included the Congressional Gold Medal awarded on his 88th birthday and more than 40 honorary degrees; he won a new, wide audience when he read at the inaugura-

Poet Robert Frost (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

tion of President John F. KENNEDY in 1961. Throughout his lifetime Frost cultivated the persona of a gentle, folksy, white-haired country farmer who wrote popular poems such as "Stopping by Woods on a Snowy Evening," "The Death of the Hired Man" and "Mending Wall," staples in every high school English class in the middle of the 20th century. However, his work and thought have more complex undercurrents than are at first apparent. While scholars and biographers have revealed a dark side to Frost's life and personality, he is universally acknowledged as a master craftsman and a major poet.

Fry, Christopher (1907–2005) British playwright; achieved his greatest theatrical successes in the 1930s and 1940s. Fry was noted for his highly poetic and elevated style that dealt with romantic and mystical themes. His first play to gain attention was *The Boy with a Cart* (1937). In 1940 he was appointed director of the Oxford Playhouse, where his work was performed regularly throughout the decade. A number of leading British actors appeared in Fry's plays, including John GIELGUD in *The Lady's Not for Burning* (1948), Lawrence OLIVIER in *Venus Observed* (1950) and Edith EVANS in *The Dark Is Light Enough* (1954). Other plays by Fry include *A Phoenix Too Frequent* (1946), *The First-born* (1948) and *A Yard of Sun* (1970).

Fry, (Edwin) Maxwell (1899–1987) British architect. As a pioneer of modern architecture in Great Britain, his work included a housing project at Kensal Green in London that set new standards for its time. He was also involved in major architectural projects in British colonial West Africa, notably the design of the University of Ibadan in Nigeria. From 1951 to 1954 he was a member of the team of architects that worked with LE CORBUSIER on the design and initial construction of Chandigar, the new capital of the Punjab region of India.

Fry, Roger Eliot (1866–1934) British art critic, painter and author. Fry was educated at King's College, Cambridge, where as a member of the Apostles he became acquainted with members of the BLOOMSBURY GROUP, with which he would later be associated. Fry was a friend of and strong influence on Clive

BELL. Fry wrote art criticism for the *Athenaeum* beginning in 1901 and helped found the *Burlington Magazine*. He worked at the Metropolitan Museum of Art in New York City from 1905 to 1910. Fry coined the term POST-IMPRESSIONISM and presented a landmark exhibition of the style to a doubtful British public in 1910. Fry was named Slade Professor of Fine Art at Cambridge in 1933. His books include *Vision and Design* (1920), *Transformations: Critical and Speculative Essays on Art* (1926) and *The Arts of Painting and Sculpture* (1932). Virginia WOOLF wrote a biography of Fry which was published in 1940.

Frye, (Herman) Northrop (1912–1991) Canadian literary critic. Frye, who was educated at Oxford and taught for several decades at the University of Toronto, was one of the most influential literary critics of the post-World War II era. He is best known for his insistence on the underlying importance of myth and symbol as influences upon both creativity and formal literary structure. His major works include *Fearful Symmetry* (1947), a study of the British mystical poet William Blake, *Anatomy of Criticism* (1957), *Fables of Identity* (1963) and *The Well-Tempered Critic* (1967). In *The Great Code: The Bible and Literature* (1981), Frye argued for a pervasive shared symbolism between the Bible and the great works of Western literature.

Fuad I (1868–1936) First king of modern Egypt (1922–36). The second son of Ismail Pasha, he was educated in Europe and succeeded his brother Hussein Kamil as sultan in 1917. He was proclaimed king in 1922, a year before Britain's recognition of his country's independence. In conflict with the WAFD party, he abrogated the existing constitution and introduced a new constitution in 1928 but was forced to restore the earlier document in 1935. Fuad was succeeded by his son FAROUK.

Fuchs, (Emil) Klaus Julius (1911–1988) German physicist and Soviet agent. Fuchs was active in the anti-Nazi underground movement before fleeing to France and later to England. He worked on ATOMIC BOMB DEVELOPMENT in Britain and in the U.S. during WORLD WAR II. After the war he helped

direct nuclear research in Britain but also passed crucial nuclear secrets to the Soviet Union and was arrested for espionage in February 1950. Fuchs's case led to the exposure of a nuclear espionage ring that included Julius and Ethel ROSENBERG. Upon his release from prison in 1953 he flew to East GERMANY, where he became deputy director of the national nuclear research institute and a member of the central committee of the East German Communist Party.

Fuchs, Sir Vivien Ernest (1908–1999) British explorer and geologist. The son of a farmer of German origin, Fuchs was educated at Cambridge University, where he obtained his M.A. in geology in 1929 and his Ph.D. (1935). From 1929 he traveled on a series of expeditions as geologist, the first being the Cambridge East Greenland Expedition (1929). In 1947 he became a member of the Falkland Islands Dependencies Survey and in 1950 its director. As a result of his involvement with the survey, Fuchs led an expedition to Graham Land in ANTARCTICA (1948) to reassert the British claim to the territory, which was being challenged by Argentina. He was stranded on Storing Ton Island by bad weather until 1950. Fuchs is best known for the Commonwealth Trans-Antarctic Expedition he jointly led with Edmund HILLARY in the Weddell INTERNATIONAL GEOPHYSICAL YEAR (1957–58). Leaving Shackleton Base on the Weddell Sea on November 24, 1957, he reached the South Pole and met Hillary on January 19, 1958, then continued on to reach Scott Base, Victoria Land, on March 2. Fuchs was knighted in 1958.

Fuentes, Carlos (1928–) Mexican writer and diplomat. A liberal lawyer and political activist, Fuentes is one of Mexico's leading novelists and short story writers. His experimental novels are usually set in postrevolutionary Mexico and explore the mythology of his country's past and the social conditions of its present. His first work was a collection of surrealist stories, published in 1954. His first novel, *Where the Air Is Clear* (1958, translated in 1960), examined the lives of various inhabitants of Mexico City since the revolution of 1910. Fuentes achieved international acclaim with his novel

The Death of Artemio Cruz (1962, translated in 1964). Fuentes's other fiction includes the novels *A Change of Skin* (1967, translated in 1968), *Terra Nostra* (1975, translated in 1976), *Distant Relations* (1980), *The Old Gringo* (1985) and *Instinto de Inez* (2001). He is also a playwright and essayist.

Fuerzas Armadas Revolucionarias de Colombia (FARC)

A guerrilla band in COLOMBIA formed in 1966 by Manuel "Sureshot" Marulanda; the name in English is Revolutionary Armed Forces of Colombia. Originally an obscure leftist force fighting the conservative government and parties of Colombia in the hopes of establishing a communist state, FARC remained one of many such organizations with an appeal and influence confined mainly to peasants who had turned isolated jungles in Colombia into agriculturally productive land. In the 1980s the power of FARC increased dramatically when it began to encourage the cultivation of coca and opium poppies on the territory it controlled, which it refined into cocaine and heroin and exported throughout the world, mainly to the U.S. Its increasing cultivation of narcotics led the group to adopt the trappings of a government. It taxes all aspects of drug production, including the processing of chemicals and the air transportation of processed drugs. It also has regularly engaged in kidnapping and extortion of government and business officials in Colombia.

In the 1980s FARC attempted to establish a political party to provide a platform for the expression of its views in Colombian elections, the Patriotic Union (UP). But severe government repression of the UP convinced FARC to abandon the political route and to concentrate on its continued guerrilla operations. These efforts intensified between 1996 and 1999, when its bands captured more than 500 members of the security forces in Colombia, prompting the government to initiate negotiations with FARC in an effort to end the constant raids, assassinations and kidnappings. In 1998 FARC obtained a "safe haven" of 42,000 square kilometers as a result of a negotiated settlement with the government of President Andrés Pastrana. However, in 2002 the Pastrana administration

ended the ongoing negotiations after FARC forces hijacked and kidnapped a Colombian senator. In response FARC launched a mortar attack on the presidential palace in Bogotá during the inauguration of Pastrana's successor, Álvaro Uribe, resulting in the death of 21 nearby residents. But the ability of FARC's estimated 12,000 military personnel to intimidate the Colombian government declined in the first few years of the 21st century, in part because of intensive training by U.S. military advisers of Colombian security forces as part of the ongoing U.S. war on drugs.

Fugard, Athol (1932–) South African playwright, actor and director; achieved worldwide fame for his searing plays depicting the physical and psychological horrors of APARTHEID. Fugard began his career as an actor in Cape Town in the 1950s. His first play was *No Good Friday* (1959), in which he also acted. His first major theatrical success was *The Blood Knot* (1961). In 1963 he founded his own theatrical troupe, the Serpent Players, which became a dominant force in South African theater. *Sizwe Bansi Is Dead* (1972) represented a shift for Fugard into a more experimental, improvisational mode of playwriting. More recent works include *Statements after an Arrest under the Immorality Act* (1972), *Dimetos* (1975), *A Lesson from Aloes* (1978) and the acclaimed *Master Harold and the Boys* (1982), which featured American actor James Earl JONES.

Fugitives and Agrarians (1920s–1930s) Literary movement by American writers of the South. The Fugitive literary movement—which was renamed the Agrarian movement in the 1930s—began in the years following World War I. John Crowe RANSOM, an eminent poet and literary critic, was teaching at Vanderbilt University. Among the students drawn to his classes were poet, critic and biographer Allen TATE and poet Robert Penn WARREN. Ransom inspired these writers and others to view the agrarian heritage of the South, along with its Confederate STATES' RIGHTS political background, as a vital cultural base for literary works. The Fugitives and Agrarians opposed industrialism and the policies of the NEW DEAL while promoting a new clas-

sicism for literature. *The Fugitive*, edited by Tate, was a major literary journal of the 1920s. Ransom went on to edit the influential *Kenyon Review* from 1938 to 1959.

Fujimori, Alberto (1938–) President of Peru (1990–2001). Born in Lima, PERU, to Japanese immigrants, Fujimori studied agriculture at the Agricultural National University in La Molina, Peru, and the University of Wisconsin. He later served as an agricultural engineer, a dean of the science faculty at La Molina and the host of a TV show. After defeating the novelist Mario VARGAS LLOSA in the presidential election of 1990, Fujimori tackled the twin problems facing Peru: continued terrorist attacks from leftist rebel organizations such as the SHINING PATH and an economy on the verge of complete collapse. In an effort to stimulate economic growth Fujimori privatized state-owned enterprises, ended government subsidies to domestic companies and industries and removed many of the regulatory controls on the private sector. In April 1992, with the support of the Peruvian military, he dissolved Peru's national legislature and court system on the grounds that these bodies hindered the campaign against the rebels. Fujimori's authoritarian crackdown seemed vindicated five months later when Peruvian forces captured Abimael Guzmán, the head of the Shining Path. Fujimori was reelected in 1995 based on his successes in curbing hyperinflation and suppressing left-wing insurgents. Critics of Fujimori argued that his victories stemmed largely from his use of the Peruvian intelligence service to bully his opponents and from his control of governmental organizations and manipulation of the media. In 1999 Fujimori provoked an additional outcry from his opponents when he announced he again would run for reelection, seemingly in violation of the 1993 constitution, which restricted presidents to two terms. When Peru's constitutional court challenged his right to run, Fujimori removed several of those judges from their positions. His election victory over Alejandro Toledo in May 2000 provoked a series of demonstrations that prompted him to announce he would resign by July 2001. The surfacing of a videotape indicating that his intelligence chief, Vladimiro Mon-

tesinos, had bribed a congressman caused Fujimori to flee the country in November 2000 and seek asylum in Japan, which refused to extradite him to Peru. After announcing his intention to run in Peru's 2006 presidential election, he traveled to Chile and was detained by Chilean authorities.

Fukada, Takeo (1905–1995) Japanese politician, a member of the Liberal Democratic Party (LDP, a conservative party), representative in the Japanese House of Representatives and prime minister of Japan (1976–78). In the years after WORLD WAR II he served as deputy finance minister, director of the National Banking Bureau and director of the Budget Bureau.

In 1952, after 21 years in the Ministry of Finance, Fukada was elected to the House of Representatives as a candidate for the LDP (then the dominant party in Japanese politics). In 1965 he was appointed minister of finance. In 1966 he was elected president of the LDP and for two years helped shape the party's campaign strategy and national policy. After stepping down from the party post in 1968, Fukada served as minister of finance, minister of foreign affairs, director general of the Administrative Management Agency and deputy prime minister. On December 24, 1976, Fukada was elected prime minister. He promptly enunciated the Fukada Doctrine in 1977, which pledged that Japan would use its business investments and foreign aid in Asia to allay concerns that an economically resurgent Japan would threaten the other nations of Asia. Fukada's government lasted only 714 days, and he was forced to leave office on December 7, 1978, although he remained in the House of Representatives until his death on July 5, 1995.

Fulbright, James William (1905–1995) U.S. senator. Raised in Fayetteville, Arkansas, Fulbright graduated from the University of Arkansas in 1925, then studied at Oxford as a Rhodes scholar before earning a law degree at George Washington University. After serving as president of the University of Arkansas from 1939 to 1941, he was elected in 1942 to the U.S. House of Representatives and in 1944 to the U.S. Senate. In 1946 Fulbright sponsored the legislation establishing the

foreign exchange program that bears his name. In 1959 he became chairman of the Senate Foreign Relations Committee. During the 1960s Fulbright urged the U.S. to reduce its expenditures supporting the COLD WAR with the Soviet Union and to concentrate its resources instead on domestic problems. In the early days of the VIETNAM WAR he was a supporter of President Lyndon JOHNSON's policies, and it was Fulbright who introduced the TONKIN GULF RESOLUTION in the Senate on August 6, 1964, supporting the administration's use of force. However, beginning in 1966, he publicly questioned the wisdom of U.S. involvement in VIETNAM, and in 1967 his book *The Arrogance of Power* became a best seller. In 1968 Fulbright denounced the Gulf of Tonkin Resolution. By 1970, when the resolution was repealed by Congress, Fulbright had emerged as a leading critic of the war. In 1974, after five full terms in the Senate, he was defeated by Arkansas governor Dale Bumpers in the Democratic Senate primary. In 1993 Fulbright received the Presidential Medal of Freedom from President Bill CLINTON.

Fuller, Loie (Mary Louise Fuller) (1862–1928) American dancer and choreographer. A self-taught dancer, Fuller created her first dance, *Serpentine Dance*, in 1891 after working as an actress, playwright and producer in the American theater for several years. Her 1892 solo dance debut at the Folies-Bergère in Paris was acclaimed. Hailed by the Impressionists and the ART NOUVEAU movement as an innovator for her experimentation with light, color and stage devices, Fuller's choreographic style was characterized by improvised movement for the body clothed in masses of silk, which created a sculpted effect. She created 130 dances, including *Fire* (1895) and *Ballet of Light* (1908); founded a school in 1908; invented and patented costume designs, stage devices and lighting machines; was honored by French scientists for her contributions to lighting theories and inspired such artists as Toulouse-Lautrec and Auguste Rodin and the poet W. B. YEATS.

Fuller, R(ichard) Buckminster (1895–1983) Self-described "engineer, inventor, mathematician, architect, cartographer, philosopher, poet, cosmogonist,

comprehensive designer and choreographer." He was best known for his 1947 invention of the **geodesic dome**, a sphere composed of triangles that provided maximum strength with great economy of materials. He designed many other innovative structures, including a futuristic three-wheeled automobile (1932) that was never built and the DYMATION House, a prefabricated glass-walled building that had rooms suspended from a pole. (Conceived in 1927, the first Dymaxion House was constructed in 1944.) Fuller, who attended Harvard but never graduated, wrote 25 books, held scores of patents and received 39 honorary doctorates in fields ranging from the fine arts to engineering. In his later years he dedicated himself to encouraging efficient use of resources; in the 1960s he had a cultlike following among those who saw his "alternative lifestyle" as a solution to modern ecological problems. He received the Presidential Medal of Freedom from President Ronald Reagan in 1983.

Fuller, Roy Broadbent (1912–1991) British poet and novelist. Fuller was a solicitor who in the 1930s began contributing poetry to *New Verse* and other left-wing literary journals. His first volume of poetry, *Poems*, was published in 1939. His early work shows the influence of W. H. AUDEN and Stephen SPENDER. His experiences in the Royal Navy during WORLD WAR II provided inspiration for the collections *The Middle of a War* (1942) and *A Lost Season* (1944). His later poetry, including *From the Joke Shop* (1975) and *The Reign of Sparrows* (1980), is more sarcastic and bitter in tone. Of his novels, which range from thrillers to children's books, perhaps most notable is *Image of a Society* (1956). Fuller was a professor of poetry at Oxford from 1968 until 1973. He published the memoirs *Souvenirs* (1980), *Vamp Til Ready* (1982) and *Home and Dry* (1984). Fuller's son **John Fuller** (1937–) is also a noted poet and novelist. His works include the poetry collections *Cannibals and Missionaries* (1972) and *Lies and Secrets* (1979) and the novel *Flying to Nowhere* (1983).

Funston, Frederick (1865–1917) U.S. Army officer. Educated at the University of Kansas, he received a Medal of Honor for his leadership of U.S.

troops in the Philippines in 1899. Returning to the U.S., Funston commanded the army departments of the Colorado, the Columbia, the Lake and California. His handling of the disaster of the 1906 SAN FRANCISCO EARTHQUAKE and fire further enhanced his national reputation. He served as the commander of U.S. forces along the Mexican border in 1916.

Furmanov, Dimitri Andreyevich (1891–1926) Russian writer. Originally a journalist, he wrote several “Sketches from the Front” after joining the Russian army in 1914 (see WORLD WAR I ON THE EASTERN FRONT). They were published in *Russkoye Slovo* in 1916. He joined the Communist Party in 1918 and served as a political commissar in CHAPAYEV’s guerrilla forces. In 1923 he wrote the novel *Chapayev* about his experiences (filmed 1934). Other works include *Red Sortie* (1922), *Riot* (1923–25) and an unfinished novel, *Writers*.

Furman v. Georgia (1972) U.S. Supreme Court decision that temporarily overruled all state death penalties. By the 1970s some states had outlawed the death penalty as too cruel and unusual a punishment. However, other state courts sentenced prisoners to death for a variety of offenses. Petitioners challenged the Georgia death penalty statute by showing that the death penalty was inconsistently applied and fell most heavily on members of minority groups.

The Court did not hold that the death penalty was per se unconstitutional for being cruel and unusual but reasoned that the states must have a formal procedure to ensure that the death sentence would be applied consistently, with ample opportunity for appeal. (See also CAPITAL PUNISHMENT.)

Furtwängler, Wilhelm (1886–1954) German conductor, widely revered (with Arturo TOSCANINI) as one of the two greatest conductors of the 20th century. Furtwängler, the son of a distinguished archaeologist, was born in Berlin. After studying with Josef von Rheinberger, he was music director in Lubeck, Mannheim and Frankfurt before succeeding Richard STRAUSS as music director of the Berlin State Opera in 1920. Two years later he became

music director of the Berlin Philharmonic. During the 1920s through the 1940s his mastery of the standard Austro-German repertoire—Beethoven, Brahms, Bruckner and Wagner—became increasingly evident. He toured widely and conducted in the U.S., including a year as director of the New York Philharmonic (1937–38). He remained in Germany during WORLD WAR II; however, unlike his chief musical rival in Germany, Herbert von KARAJAN, Furtwängler was never a Nazi. Rather, he believed that he could serve the values of civilization by remaining in Germany and making the best of a bad situation. He defended Jewish musicians in the Berlin Philharmonic and also championed Paul HINDEMITH, whom the Nazis denounced. However, he was forbidden to conduct until 1948, when the Allies cleared him of Nazi sympathies. In later years, despite increasing deafness, he continued to conduct in Germany, Austria and Switzerland. Initially indifferent and occasionally hostile to recording technology, Furtwängler nonetheless left a rich legacy of records, including an incomparable *Tristan und Isolde* (1953) and a legendary radio recording of the *Ring* cycle (1953).

fusion jazz Also known as jazz-rock, fusion jazz encompasses such amalgams as jazz-and-rock, jazz-and-blues and jazz-and-pop. First introduced in the 1960s, fusion was adopted by younger musicians (and audiences) who had grown up with both ROCK and roll and jazz. It also reflected evolving technologies in the manufacture of musical instruments and recordings. For example, in fusion the electric bass guitar replaces the acoustic upright bass, various electronic keyboards substitute for the acoustic piano and acoustic instruments such as the saxophone and trumpet are electronically amplified and modulated. Rhythmically, the fluid swing feel of jazz is discarded; instead of constant alterations between oscillating pulses of tension and release, the beat becomes metronomic, indeed, mechanistic, especially in groups of the 1980s using drum machines. Instead of supple walking bass lines, fusion tends to employ repeated ostinato figures. Harmonically, the traditionally sophisticated chordal changes associated with

Tin Pan Alley and Broadway give way to simpler harmonic schemes, often borrowed from the MODAL JAZZ approach of saxophonist John COLTRANE.

The most important of the early fusion artists arose from the groups of trumpeter Miles DAVIS in the late 1960s and early 1970s. Keyboardists Herbie HANCOCK and Chick COREA, guitarist John McLaughlin and drummer Tony Williams all went on to establish notable solo careers as fusion group leaders. While much of fusion can be dismissed as commercially motivated, formulaic pap, the jazz-rock of such contemporary guitarists as John SCOTFIELD, John Abercrombie and Pat Metheny embodies a genuine artistic quest for new sounds and new forms.

Futurama Name of the GENERAL MOTORS exhibit at the NEW YORK WORLD’S FAIR of 1939–40. Norman BEL GEDDES conceived and designed this famous exhibition pavilion to house a conveyer belt ride above an imagined world of the future (1960) created in model form, in which dramatic superhighways connected futuristic cities. The most popular exhibit at the fair, Futurama has often been credited as the key influence in the development of the superhighway network constructed after World War II.

futurism Futurism was a theoretical movement that influenced literature, painting, theater and the arts in general in the early decades of the 20th century. The term *futurism* was coined by the Italian poet F. T. MARINETTI in a 1909 manifesto. Marinetti urged that artists should turn their backs on past eras of artistic creation and instead embrace the “dynamism” of the industrial era with its hectic urban pace of life and its machine-influenced aesthetics. While Marinetti concentrated on the applications of futurism to poetic language, Italian painters such as Umberto Boccioni, Carlo CARRA and Luigi Russolo produced canvases filled with mechanical forms and the pulsing energy of the city. Russia was another country in which the influence of futurism showed itself strong, particularly in the work of poet Vladimir MAYAKOVSKY. In the 1920s Marinetti continued to write on futurism and allied the movement with Italian FASCISM.

G

Gable, Clark (William Gable) (1901–1960) Legendary American film actor. Born in Cadiz, Ohio, Gable began his show business career as a backstage handyman for a number of touring companies. He entered the HOLLYWOOD arena with bit performances in silent films during the 1920s, and by the early 1930s was a star. Cast mainly in he-man roles, he nonetheless won an ACADEMY AWARD for his sparkling comic performance in Frank CAPRA'S *It Happened One Night* (1934). His best-known performance is undoubtedly that of Rhett Butler in the Civil War epic *GONE WITH THE WIND* (1939). Dubbed "the King of Hollywood," he appeared in some 65 films including *Red Dust* (1932), *Mutiny on the Bounty* (1935), *San Francisco* (1936), *The Hucksters* (1947), *The Tall Men* (1955) and *Run Silent, Run Deep* (1958). His rugged, straightforward style was last seen in *The Misfits* (1960), completed shortly before his death. Gable was married to the acclaimed comic actress Carole LOMBARD.

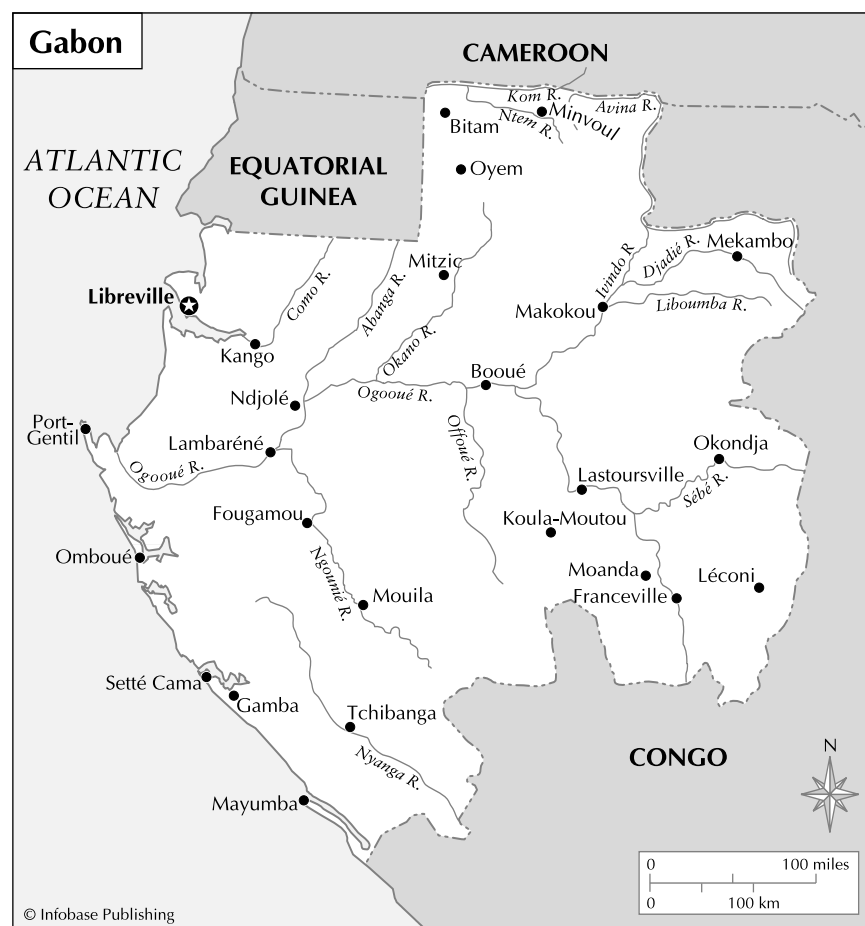

Gabo, Naum (1890–1977) Russian sculptor, painter and architect. Brother of Anton PEVSNER, he was born in Bryansk, Russia, lived in Germany and Norway during the RUSSIAN REVOLUTION and returned to his native country in 1917. While abroad, he studied medicine in Munich, but abandoned that career to study with the great art historian Heinrich Wölfflin. During this period he also met Wassily KANDINSKY and other modern artists and decided to devote himself

to painting and sculpture. With his brother, he wrote the *Realist Manifesto* (1920), which stressed a new dynamism and proposed the inclusion of time and space into works of art. In Russia, Gabo was one of the founders of CONSTRUCTIVISM. His Constructivist sculptures are elegantly delicate abstract compositions, often employing plastic, nylon or metal in complicated geometric configurations. Gabo's non-political aesthetics clashed with Soviet art dogma, and he left Moscow in

1922. Gabo taught at the BAUHAUS in Berlin, until forced to flee by the Nazis in 1932. He moved first to England, then to the U.S., where he settled in 1946. Examples of his work can be found in many leading contemporary art museums, and he is known for a number of major architectural commissions, such as the U.S. Rubber Company Building in New York City.

Gabon (Republic of Gabon) Nation located on the west coast of Africa

GABON	
1960	Gabon is formally proclaimed an independent nation, with Leon M'Ba as prime minister.
1961	M'Ba is elected president
1964	The military leads a successful coup; French troops intervene and restore M'ba to office
1967	M'Ba is reelected president but dies within months; Vice President Albert-Bernard (later, Omar) Bongo succeeds to the presidency.
1973	Bongo is reelected president.
1979	As sole candidate in national presidential election, Bongo is reelected for a second seven-year term.
1990	After much social unrest and increasing pressure from disgruntled workers, President Bongo legalizes opposition.
1993	Omar Bongo is reelected president, a post held since 1967.
1998	Bongo is reelected, gaining two-thirds of the vote.
2005	Bongo is reelected to another seven-year term.

in the equatorial zone. Gabon covers an area of 103,062 square miles. A French colony, Gabon achieved full independence in 1960. Leon M'ba was elected president in 1961, deposed by the military in 1964 and reinstated as president after French intervention. His successor, Albert-Bernard (later, Omar) Bongo, established a single-party government and maintained political and economic stability until the 1980s, when opposition groups formed a government in exile. In 1990 strikes, protests and continued opposition pressure pushed the government toward constitutional reform. Although a 1991 constitution legalized opposition parties, the governing Gabonese Democratic Party continued to control the national legislature. Bongo managed to retain power through reelection in 1993, 1998, and 2005, despite allegations by his opponents of voter fraud.

Gabor, Dennis (1900–1979) Hungarian-born British physicist. Gabor was educated in Budapest and Berlin,

where he obtained his engineering doctorate (1927). After Adolf HITLER rose to power, he immigrated to Britain and became a British subject. In 1948 he joined the faculty at the Imperial College of Science and Technology in London. He was later a staff scientist for the CBS. Gabor invented holography, a photographic method of reproducing three-dimensional images. He developed the system in 1948 by improving the resolution of the ELECTRON MICROSCOPE. (In 1960, other scientists achieved the same effect using laser beams.) For this invention, Gabor was awarded the 1971 NOBEL PRIZE for physics. He patented more than 100 other inventions.

Gagarin, Yuri (1934–1968) Soviet cosmonaut and the first human being in space. Gagarin stunned the world on April 12, 1961, when he successfully orbited the Earth. Remaining in orbit for 89.1 minutes and traveling at a velocity that reached 17,400 miles an hour, Gagarin opened the door to space travel for humans. Although in a few

short years his historic achievements would be eclipsed by a series of epic space voyages, he was truly the world's first space traveler. The son of a carpenter born on a collective farm, Gagarin had lived with his family under German occupation for several years during World War II. While attending industrial technical school and studying to become a factory worker, he became interested in flying and joined an amateur pilot's club. Recommended for air force duty by one of the club's instructors, he joined the Orenburg air force school in 1955. For two years Gagarin served as a pilot with the Northern Fleet, based north of the Arctic Circle, then joined the cosmonaut corps and began training in October 1959.

After his historic spaceflight Gagarin found himself a popular and inspiring speaker. As a spokesman for the Soviet space program and its many successes, he charmed listeners around the world with his simple style and humility. Appointed commander of the cosmonaut team in 1961, he became deputy director of the cosmonaut training center in 1964. Yearning to get back into space, he managed to get himself assigned as a backup pilot for *SOYUZ 3* and had just finished when he was tragically killed in an aircraft accident on March 27, 1968. Today, a bronze statue of Gagarin welcomes visitors to Star City near Moscow, a symbol of the man, his accomplishment and his hold on the hearts of the Soviet people.

Soviet cosmonaut Yuri Gagarin, the first person to orbit Earth (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

Gaitskell, Hugh Todd Naylor (1906–1963) British Labour politician. Gaitskell was educated at Winchester and at New College, Oxford, where he became a socialist, influenced by the events surrounding the GENERAL STRIKE OF 1926. A lecturer in political economy at University College in London, Gaitskell was elected Labour M. P. in 1945. He served in the ATTLEE government as minister of fuel and power (1947–50), minister of economic affairs (1950) and chancellor of the exchequer (1950–51). In 1955, Gaitskell defeated Aneurin BEVAN and Herbert MORRISON for the leadership of the LABOUR PARTY, succeeding Clement Attlee. Gaitskell was a skilled parliamentarian and representative of the tradition of the Labour Party, although his alterations of the NATIONAL HEALTH SERVICE alienated some of the party's left. He also opposed the party's position in favor of unilateral nuclear disarmament, and in 1961 persuaded the party to reverse its decision. Gaitskell died suddenly in 1963, but his enthusiasm had revitalized the Labour Party and it prevailed in the 1964 elections.

Galbraith, John Kenneth (1908–2006) Noted economist and author. Born and educated in Canada, Galbraith was a Harvard professor when he was brought to Washington, D.C., to serve in various government posts during World War II. An active liberal Democrat, he was an adviser to both Adlai STEVENSON and President John F. KENNEDY, who appointed him ambassador to INDIA during a critical period of Chinese-Indian border conflict. Galbraith was a prolific author throughout his career and is best known for three books: *American Capitalism* (1952), *The Affluent Society* (1958) and *The New Industrial State* (1967). Galbraith, trained as a Keynesian (see KEYNES, John Maynard), argued that the free-enterprise system had its limits. Unlike many traditional economists Galbraith also emphasized the importance of political decisions in shaping the economic system. He said that the American government should assume responsibility for health, housing and other segments of the economy that were not effectively providing basic services for many Americans.

Gale, General Sir Richard (1896–1982) British military officer. As commander of the Sixth Airborne Division,

Economist and ambassador John Kenneth Galbraith
(LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

he was one of the leaders of the Allied parachute troops at the INVASION OF NORMANDY during WORLD WAR II. For his role in the invasion, he was awarded the British Distinguished Service Order (DSO) and the American Legion of Merit. He also played an important role in the Allied counter-attack during the BATTLE OF THE BULGE (December, 1944). After the war he commanded British forces in PALESTINE and in Egypt. He was aide-de-camp to Queen ELIZABETH II in the 1950s and was deputy supreme Allied commander in Europe for NATO (1958–60).

Galili, Israel (1911–1986) Israeli politician. Galili was a leader in establishing ISRAEL's arms industry, and was long active as a behind-the-scenes policy maker and conciliator in the Labor Party. He was said to have been especially influential in the government headed by Golda MEIR. In 1980, he was the principal architect of a compromise peace plan with JORDAN.

Gallant, Mavis (1922–) Canadian author. Born in Montreal, Gallant later lived in Paris. Her short story collections include *The Other Paris* (1956), *Overhead in a Balloon: Twelve Stories of Paris* (1987) and *In Transit: Twenty Stories* (1989). Novels include *Green Water, Green Sky* (1959) and *A Fairly Good Time* (1970). Gallant has been a frequent contributor to *THE NEW YORKER*, where many of her short stories first appeared.

Gallant Fox (1927–1954) Thoroughbred racehorse. The 1930 Triple Crown winner, Gallant Fox won 10 of 11 races

during that campaign. The race he lost was responsible for one of the biggest payoffs in racing history, as he was upset as heavy favorite on a muddy track by 100–1 shot Jim Dandy in the Travers, who returned \$20,000 on a \$2 bet. Gallant Fox's stud career was perhaps even more outstanding, as his progeny included the 1935 Triple Crown winner Omaha and 1936 Horse of the Year, Granville.

Gallegos, Rómulo (1884–1969) Venezuelan novelist and statesman. In self-imposed exile from the Venezuelan dictatorship (1931–35), he returned home and became minister of education. He was elected president of the nation in 1947, but was ousted in a coup less than a year later. He fled to Mexico, returning to VENEZUELA in 1958. As a novelist, Gallegos used modernist methods to portray the landscape of his homeland. An extremely prolific author, he began writing novels with *El último solar* (1920, *The Last Manor*). His best known work is the novel *Doña Bárbara* (1929, tr. 1931), a work about the Venezuelan plains. His other works include *Can-taclaro* (1931) and *Canaima* (1935).

Gallipoli Peninsula In European TURKEY, a long and narrow point of land, aimed southwestward and lying athwart the DARDANELLES; perennially important because of its strategic position commanding the maritime commerce between the Mediterranean Sea and the Black Sea. In WORLD WAR I Allied British, Australian, French and New Zealand land and sea forces unsuccessfully stormed the Turkish forts in this area in 1915–16. Contemporaries, and later historians, blame First Lord of the Admiralty Winston CHURCHILL for the military disaster.

Galloway, William "Bill" (1877–1952) U.S. industrialist and catalog marketer. He put himself through college by selling pencils. This sales experience enabled him to become one of the first marketers through catalog solicitation. With his brother James he started Galloway Company at Waterloo, Iowa, to produce a complete line of farm machinery. Bill Galloway pioneered in marketing through catalog display and selective direct mailing. The company's manufacturing operations expanded quickly and encompassed a

line of buildings almost a mile long, but internal disputes eventually brought the business down. The brothers started another business of manufacturing and distributing automatic humidifiers for furnaces. Gal-
loway Park in Waterloo pays tribute to the pioneer Iowa industrialists.

Gallup, George H. (1901–1984)

The American father of modern public opinion polling techniques. Gallup gained fame by predicting that Franklin D. ROOSEVELT would beat Alf LONDON in the 1936 presidential election, even though other pollsters predicted otherwise. Gallup survived a notable lapse when he incorrectly forecast that Thomas DEWEY would beat Harry S. TRUMAN in the 1948 election. Gallup's American Institute of Public Opinion, and later the Gallup Organization, came to set the standards for the polling industry around the world. He made polling a key tool of politics and business.

Gallup Poll Public opinion poll originated by statistician and market research expert George GALLUP (1901–84). In 1935 Gallup, who was an advertising agency market researcher (1932–47), founded the American Institute of Public Opinion, and in 1939 he set up the Audience Research Institute, both with headquarters in Princeton, New Jersey. Based on sound scientific sampling methods developed by American business in the 1920s and refined by later pollsters, the Gallup Poll interviews a representative group of 1,500 people regarding their views on a given issue and, from their responses, extrapolates American public opinion on the question. The poll is supported by approximately 140 newspapers and some 20 surveys a year are conducted. The best known are the preelection surveys carried out by the American Institute, which have been conducted yearly since 1936.

Galsworthy, John (1867–1933) British novelist, playwright and poet. Galsworthy was born in Surrey and educated at Harrow and New College, Oxford. Though called to the bar, he never practiced law. With a private income, Galsworthy was free to travel; during the course of one of his trips he became acquainted with Joseph CONRAD, who became a life long friend, and of whose work Galsworthy was an early cham-

pion. Galsworthy's first collection of short stories, *From the Four Winds*, was published in 1897; his first novel, *Jocelyn*, appeared in 1898. Both were published under the pseudonym John Sinjohn. These were followed by the short stories, *Villa Rubein*, in 1900, at which time Galsworthy became acquainted with the publisher Edward Garnett, who greatly encouraged Galsworthy in his work. Another source of encouragement was his future wife, Ada. Married unhappily when they met, she and Galsworthy lived together covertly until she was able to obtain her divorce. Her story and their relationship was the inspiration for Galsworthy's first major success, *The Man of Property* (1906), which was to become the first novel of *THE FORSYTE SAGA*, Galsworthy's best known work. The book not only tells the story of Irene and Soames Forsyte's unhappy marriage, but satirizes upper-middle-class life in Victorian England with its portrayal of the entire Forsyte family and their strict adherence to convention. It established Galsworthy's reputation. The other novels included in *The Forsyte Saga* (1922) are *In Chancery* (1920) and *To Let* (1921); and the short stories, "The Indian Summer of a Forsyte" (1918) and "The Awakening" (1920). However, Galsworthy published many other works of fiction between 1906 and 1920, including *Fraternity* (1909) and *The Dark Flower* (1913). Galsworthy's first play, *The Silver Box* (1906), established him also as a playwright of note. His realistic plays revolve around themes of social injustice. *Strife* (1909) examined the suffering of striking

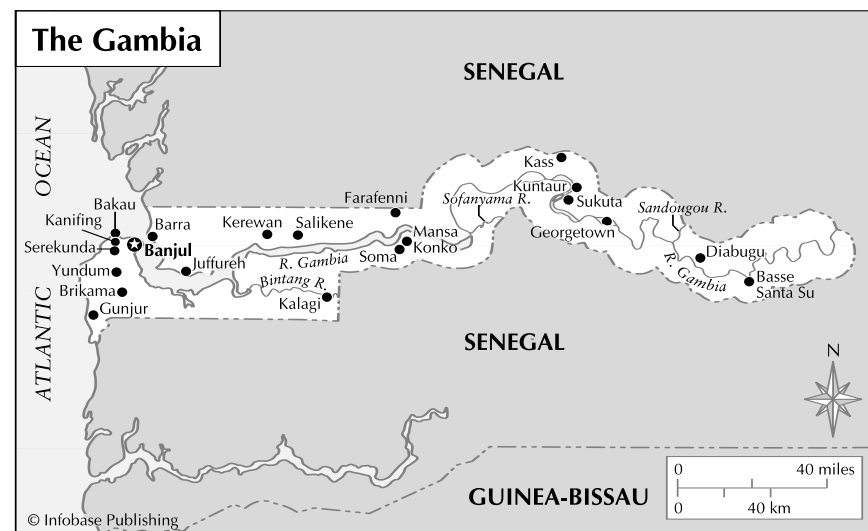

Welsh workers, while *Justice* (1910) reflected Galsworthy's crusade against solitary confinement of prisoners, and influenced Winston CHURCHILL's policy on prison reform. Galsworthy was offered a knighthood in 1917 which he refused. He was the founder of PEN in 1921. He was the recipient of the NOBEL PRIZE in literature in 1932. Galsworthy's work, though continually popular, has often been criticized as middlebrow, and he has been accused of inwardly admiring the very values his works purport to satirize. Other of his many works include the novels *The White Monkey* (1924), *The Silver Spoon* (1926) and *Swan Song* (1928), which further chronicle the Forsytes; and the plays *The Skin Game* (1920), *Loyalties* (1922) and *Old English* (1924).

Galtieri, Leopoldo Fortunato

(1926–2003) Argentinean military officer, president of ARGENTINA. General Galtieri was leader of the controlling military junta in Argentina from 1979 to 1982, and was responsible for Argentina's seizure of the FALKLAND ISLANDS in 1982. Britain responded militarily, decisively defeating Argentina in the FALKLANDS WAR. Galtieri and other junta members were deposed by Argentinean democrats, accused of human rights violations and court-martialled. Galtieri was sentenced to 12 years in prison in 1986. In July 2002 he was arrested for human-rights abuses during the junta and died months later.

Gambia, The (Republic of Gambia)

Nation located on the west coast of

GAMBIA

1965	Gambia attains full independence within the Commonwealth.
1970	Gambia becomes a republic, with Sir Dawda Jawara as first president.
1982	The Confederation of Senegambia comes into being, with Jawara as vice president of the new federation.
1987	Jawara is reelected president.
1989	The Senegambian Confederation is officially dissolved.
1994	A military junta seizes power under Lieutenant Yahya Jammeh.
1996	Jammeh is elected president of the country over three other candidates.
2001	Jammeh is reelected president.

Africa. Gambia is a separate enclave within the country of SENEGAL and occupies an area of 4,359 square miles. A British colony since 1888, the country achieved independence in 1965 and became a republic in 1970. Its president, Sir Dawda Kairaba Jawara (1965–94), formed a Senegambian Confederation with Senegal in 1982, primarily for economic reasons, but it was dissolved in 1989. Although Gambia experienced greater democratization after the 1994 overthrow of Jawara, culminating in a 1996 multiparty constitution, its democratic system has been impeded by the government's refusal to recognize three major opposition parties and by its strained relationship with some humanitarian nongovernmental organizations. The elections that put current president Yahya Jammeh—who helped to overthrow Jawara—into power in 1996 and again in 2001 have been widely criticized for possible fraud.

Gamow, George (1904–1968) Soviet-American physicist. Gamow, the son of a teacher, was educated at the University of Leningrad, where he obtained his doctorate in 1928 and later served as professor of physics (1931–34). Before his move to the U.S. in 1934 he spent long periods at Göttingen, Copenhagen and Cambridge, England, the major centers of the revolution then taking place in physics. In America he spent his career as professor of physics at George Washington University (1934–68) and then at the University of Colorado (1956–68).

Gamow made many contributions to nuclear and atomic physics, but is mainly noted for his work on interesting problems in cosmology and molecular biology. In cosmology he revised and extended the BIG BANG THEORY of the creation of the universe and first announced it in his famous “alpha beta gamma” paper in 1948, which he wrote in collaboration with Ralph ALPHER and Hans BETHE. A fuller account was later published by Gamow in his *Creation of the Universe* (1952). Gamow later moved from showing how the universe began to the no less interesting question of how life began. He was quick to see the significance of the DNA model proposed by James WATSON and Francis CRICK in 1953. The problem was to show how the sequences of the four nucleic acid bases that constitute the DNA chain could control the construction of proteins, which may be made from 20 or more amino acids. Gamow had the insight to see that the bases must contain a code for the construction of amino acids. Gamow also produced convincing arguments to show that the code was not overlapping. Gamow was widely known as one of the most successful popular science writers of his day. He wrote many books that conveyed to the general public much of the excitement of the revolution in physics that he lived through.

Gance, Abel (1889–1981) French film director and writer, one of the most important figures in the early de-

velopment of the cinema. Gance was born in Paris to a physician father who wanted him to pursue a career in law. After abandoning early studies, however, Gance turned to acting and writing for the stage and for the medium still in its infancy, the motion picture. In 1911 he formed his own movie production company and made his first film, *La Digue*. Between 1915 and 1918 he made many films for the prestigious Film d'Art company, including the experimental *La Folie du Docteur Tube* (which distorted images through the use of mirrors and lenses). His first masterpiece, *J'accuse* (1919), was a pacifist statement made during WORLD WAR I with real soldiers under fire. (He remade it as a sound film in 1938 on the eve of World War II.) The two films upon which his reputation rests followed in the 1920s: *La Roue* (*The Wheel*) in 1923 and *Napoléon* in 1927. The first was a melodrama set against a railyard background. Technically astounding, it liberated the camera from the tripod and created a vast mosaic of thousands of shots intercut at times with dizzying rapidity. *Napoleon* may be regarded as the culmination of the era of SILENT FILM. An unabashed glorification of French spirit and art, it refined Gance's camera technique and presented an innovation, the Polyvision system, a triptych employing triple screen projection that anticipated Cinerama by 25 years. Excepting a few projects in the 1930s like *Beethoven* (1938), in which he experimented with montages of sound, Gance was tied to commercial projects and did little wholly creative work until his last original project, *Cyrano et d'Artagnan* (1963). Gance was a visionary whose finished work sometimes fell short of his grandiose ambitions. A member of the French movement known as The Seventh Art, he saw cinema as the marriage of feelings and machine.

Gandhi, Indira (1917–1984) Prime minister of INDIA (1966–77, 1980–84). The daughter of Jawaharlal NEHRU (and unrelated to Mohandas K. GANDHI), she joined the CONGRESS PARTY in 1939. Minister for broadcasting and information from 1964 to 1966, on the death of Prime Minister Lal SHASTRI (1966) she was elected leader of Congress and became prime minister. Her premiership was marked by significant social

Indira Gandhi, prime minister of India. (1966–77, 1980–84) (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

and economic progress, but also by tension with PAKISTAN (see INDO-PAKISTANI WAR OF 1971) and increasing internal discontent over her assumption of almost dictatorial powers on the declaration of an emergency in 1975. In 1977 Congress was defeated for the first time by the Janata coalition, united only in their opposition to Mrs. Gandhi (see Mararji DESAI). Within a few months she was on the road back to power, winning the election of 1980 with a promise of firm government, and demonstrating her popular appeal with ordinary people. She was assassinated in 1984 by Sikh extremists.

Gandhi, Mohandas K(aramchand) (Mahatma, or “great soul”) (1869–1948) Indian national leader who helped INDIA achieve independence through a campaign based on nonviolence and civil disobedience. Born at Porbandar on the western coast of India, Gandhi studied law in London in the late 1880s and returned home to practice as a barrister in Bombay. In 1907 he went to South Africa, where he conducted passive resistance campaigns in protest of the Transvaal government's discrimination against Indian settlers, who formed a minority in the region. He returned to India in 1915

and eventually emerged as leader of the CONGRESS PARTY, which called for India's independence from the UNITED KINGDOM. Shedding his Anglicized demeanor (both figuratively and literally) Gandhi adopted a simple, ascetic way of life. He organized a boycott of British goods (both as a symbolic protest of India's colonial status and in order to stimulate India's local industries). His nonviolent campaigns of civil disobedience to British rule provoked the British to imprison him on four different occasions (1922, 1930, 1933, 1942); he also went on hunger strikes to focus attention on, and gather sympathy for, his cause.

Gandhi worked with Britain's last two viceroys of India (WAVELL and MOUNTBATTEN) to plan his country's independence, which was granted in 1947. Acknowledging the demands of JINNAH and the Muslim minority, Gandhi accepted the partition of the colony into two separate nations, India and PAKISTAN. The following year Gandhi was assassinated by a Hindu fanatic who viewed Gandhi's acceptance of partition as a betrayal of the Hindu population. Many of Gandhi's followers regarded him as a saint; his doctrine of nonviolence had a direct and profound influence on Martin LUTHER KING Jr., leader of the CIVIL RIGHTS MOVEMENT in the U.S.

Gandhi, Rajiv (1945–1991) Indian politician, prime minister of INDIA (1984–90). The grandson of Jawaharlal NEHRU and son of Indira GANDHI, Rajiv Gandhi was educated at Cambridge University and was subsequently a pilot in India. Following the death of his elder brother Sanjay in 1980, Indira Gandhi persuaded Rajiv to enter politics, hoping to groom him as her successor. Following her death in 1984, he won a record majority in the elections that year. Rajiv Gandhi identified domestic strife as his major problem and attempted to reduce tensions in Punjab, Assam and Gujarat, but was minimally successful, particularly in the Punjab, where Sikh militants revived their campaign for greater autonomy in 1986. Defeated in the 1990 elections, he was assassinated while campaigning in 1991.

Gang of Four Four radical Chinese leaders—Wang Hongwen, Zhang

Chungqiao, Yao Wenyuan, and CHIANG CH'ING, Mao's widow—who were publicly denounced following the triumph of moderates in 1976. A show trial was held following a PROPAGANDA campaign and the arrest of the four on a charge of trying to take control of the army. Jiang Qing was given a suspended death sentence in 1981. In Britain, the name “Gang of Four” was popularly given to four ex-LABOUR PARTY members—Roy JENKINS, Shirley WILLIAMS, William RODGERS, and David OWEN—whose decision to leave the party coincided with attacks on the Chinese Gang of Four. They formed the SOCIAL DEMOCRATIC PARTY in 1981.

Gao Xingjiang (Kao Hsing-chien) (1940–) Author, director and artist, winner of the NOBEL PRIZE in literature (2000). Born in Ganzhou, in the Jiangxi province of China, Gao obtained a B.A. in French literature and language from the Department of Foreign Languages at Beijing University in 1962 and began working as a translator and art critic. During the CULTURAL REVOLUTION (1966–76) Gao was one of many Chinese artists forced by the government to relocate to “reeducation” camps. During this period Gao burned an entire suitcase of his essays, plays and other writings for fear of its discovery by government officials.

In 1981, five years after the end of the Cultural Revolution, Gao published *A Preliminary Discussion on the Art of Modern Fiction* in Chinese, English and French, followed in succession by the novel *A Pigeon Called Red Beak* (1985), *Collected Plays* (1985) and the essay *In Search of a Modern Form of Dramatic Representation* (1987). During the 1980s he wrote several Chinese plays that were performed throughout Beijing, such as *Alarm Signal* (1982) and *The Bus Stop* (1983), although the government quickly labeled the latter performance an example of “intellectual pollution” and ended its run after a few weeks. Three years later it banned his play *The Other Shore*. In an effort to escape government harassment, Gao began a 10-month journey from the head of the Yangtze River to its mouth on the coast of China. Gao's experiences on this trek formed the basis for his 1990 novel *South Mountain*. In 1987, after he completed his journey, he emigrated from China to

France, where he has continued to live in self-imposed exile. In response to the 1989 TIANANMEN SQUARE MASSACRE, Gao resigned from the Chinese Communist Party (CCP) and began work on the play *Fugitives* (1992), which was based on events in China immediately following the Tiananmen massacre. In response, the Chinese government banned publication and performance of all Gao's writings. Since then he has composed two plays—*Between Life and Death* (1993) and *Weekend Quartet* (1996)—and one autobiographical work, *One Man's Bible* (1999), discussing his experiences in China after the Cultural Revolution. In 2000 Gao received the Nobel Prize in literature.

Gapon, Father Georgi Apollonovich (1870–1906) Russian priest. He believed in police socialism and founded the Assembly of Russian Factory and Mill Workers in St. Petersburg in 1903, which was financed by police funds. A strike at the Putilov works in St. Petersburg began because of alleged victimization of assembly members and soon spread. Gapon decided to make an appeal to the czar. He promoted a petition that was revolutionary in its demands, and organized an illegal march of 200,000 to the Winter Palace. The police fired on the demonstrators, killing 130 people, and January 9, 1905, became known as BLOODY SUNDAY and saw the start of a year of revolutionary unrest. Evidence suggests that Gapon was an agent provocateur. He was murdered by his fellow revolutionaries.

Garang, John (1945–2005) Officer in the Sudanese army and leader of the largely Christian southern Sudanese rebel group the Sudanese People's Liberation Army (SPLA). By the mid-1990s Garang's SPLA had taken control of the southern half of SUDAN. Garang refused to follow the lead of smaller rebel groups by signing peace accords with the northern, Muslim-dominated government and declared that he would continue to fight until southern Sudan became an independent state. By 1998 Garang had changed his position and agreed to participate in negotiations with the government for the creation of a new national government through an international supervised election. However, the negotiations

never established a timetable for the elections; both sides refused to enter into peace negotiations, and the guerrilla war between the SPLA and the Sudanese government continued. When a peace agreement was finally signed in January 2005, Garang was appointed vice president in the Sudanese government. After only three weeks in office he was killed in a helicopter crash.

Garbo, Greta (Greta Louisa Gustafsson Garbo) (1905–1990) Legendary Swedish-born movie star of the SILENT FILM era and the early years of TALKING PICTURES. Throughout her 19-year, 27-film career she specialized in playing glamorous seductresses who often became involved in tragic love affairs. Her movies included the silent *Flesh and the Devil* (1927) with leading man John Gilbert, with whom she was romantically involved; and the sound films *Anna Christie* (1930), *Mata Hari* (1931), *Grand Hotel* (1932), *Queen Christina* (1933), *Camille* (1936) and *Ninotchka* (1939). Garbo was one of the highest-paid and most highly regarded stars of the 1930s; her performances generated acres of purple prose from writer-admirers attempting to explain her sphinx-like appeal. In the early 1940s, when WORLD WAR II cut off her European box-office (where much of her films' profits came from), Garbo took what was planned as a temporary sabbatical from films. The sabbatical eventually became permanent, and Garbo, who had always valued her privacy, became a famous recluse until her death.

Garcia, Jerry (Jerome John) (1942–1995) American ROCK and roll songwriter, vocalist and guitarist. García, who is best known as the lead guitarist and primary public spokesman for the GRATEFUL DEAD, has been one of the most admired and influential rock guitarists of the past two decades. In the early 1960s, García played guitar in folk, bluegrass and jug band styles before forging the blend of blues and psychedelic chord questing for which he became known in the late 1960s as the San Francisco-based Grateful Dead achieved national popularity. García and lyricist Robert Hunter formed the primary songwriting team for the band. García has combined his involvement with the Grateful Dead with outside

solo projects and collaborative work with, among others, the bluegrass band Old and In the Way and with jazz saxophonist Ornette COLEMAN. In the early 1980s, García successfully battled heroin addiction to return to top form in the Grateful Dead album *In the Dark* (1987), which featured the García-Hunter hit *Touch of Grey*.

García Lorca, Federico (1898–1936) Spanish poet and playwright. García Lorca is widely considered to be the most significant figure in Spanish literature of the 20th century. Born in Granada, Spain, to a wealthy family, García Lorca showed himself early on to be gifted not only as a writer but as a painter and a musician as well. His first published book of verse, *Book of Poems* (1921), established him as an astonishingly evocative lyric poet with a gift for plain and moving utterance. García Lorca also became a leading figure in the Spanish theater with plays such as *The Butterfly's Curse* (1920), *Mariana Pineda* (1927), *The Shoemaker's Amazing Wife* (1930), *Blood Wedding* (1933), *Yerma* (1934) and the posthumously published *House of Bernarda Alba* (1945). García Lorca's plays frequently dealt with the village-rooted lives of Andalusian peasants and the conflict between passion and honor. García Lorca traveled abroad to New York and Argentina, among other locales, before returning to Spain in the early 1930s. He was murdered in 1936, during the SPANISH CIVIL WAR, by Nationalist partisans.

García Márquez, Gabriel (1928–) Colombian author. García Márquez was born in Aracataca and was raised in early childhood by his grandparents, the source of much of the Latin American myth and folklore which would later find its way into his writing. He was educated at the University of Bogotá and worked as a journalist beginning at the age of 18, moving to Bogotá in 1954 to write full time for *El Espectador*. Eventually, he settled in Mexico City. García Márquez's first important work of fiction, *La hojarasca*, (published in English as "The Leaf Storm," and included in *Leaf Storm and Other Stories*, 1972) was published in 1955, but it was not until *Cien años de soledad*, (1967; *One Hundred Years of Solitude*) that he received international

acclaim. The novel describes the decaying village of Macondo as a metaphor for Latin America, and follows the descendants of the Buendía family over seven generations. The novel, with its flights into the supernatural and straightforward descriptions of magical events, is a hallmark of MAGIC REALISM. It also evidences the influence of William FAULKNER and reflects García Márquez's left-leaning political beliefs and his disgust at the manipulation of and corruption in Latin American politics. A personal friend of Fidel CASTRO, García Márquez has nonetheless expressed reservations about the government in Cuba. Following the publication of *El otoño del patriarca* (*The Autumn of the Patriarch*, 1975), a depiction through varying points of view of the decline of a despotic Latin American dictator, and *Crónica de una muerte anunciada* (*Chronicle of a Death Foretold*, 1981), the story of a murder, again portrayed through various viewpoints, García Márquez was awarded the NOBEL PRIZE in literature in 1982. Other works include *In Evil Hour* (1979) *Love in the Time of Cholera* (1988), *The General in His Labyrinth* (1991), *Strange Pilgrims* (1992), *Love and Other Demons* (1995), *News of a Kidnapping* (1996) and the first volume of his memoir, *Living to Tell the Tale* (2003).

Garden, Mary (Mary Davidson) (1874–1967) Scottish opera singer. Born in Scotland, Mary Garden grew up in Chicago and made her operatic debut in the title role of *Louise* in Paris in 1900. A member of the Opéra-Comique from 1900 to 1907, she created the role of Mélisande in the world premiere of Claude DEBUSSY's *Pelléas et Mélisande* in 1902, a role which became her signature piece. She was principal soprano for the Manhattan Opera House (1907–10), then became prima donna with the Chicago Opera (1910–30), serving briefly as the company's artistic director (1921–23). After a return to the Opéra-Comique (1930–35), she gave recitals, served as vocal adviser to METRO-GOLDWYN-MAYER in HOLLYWOOD, and gave master classes in voice at the Chicago Musical College. She was renowned for her command of the French repertory, and achieved particular acclaim in the title roles in *Manon*, *Thaïs*, and *Salome*.

Gardiner, Muriel (1901–1985) Psychoanalyst who specialized in the treatment of children. While studying medicine in Vienna in the 1930s, she joined the antifascist underground and helped hundreds of Austrians escape from the Nazis. The publisher of her 1983 memoirs suggested that she had been the model for the title character in the movie *Julia*, based on a key figure in Lillian HELLMAN's memoir *Pentimento*. Hellman denied the connection.

Gardner, Ava (Lavinia) (1922–1990) American actress. A farmer's daughter from North Carolina, Gardner was one of HOLLYWOOD's best-known stars from the 1940s through the 1960s. Early roles relied purely on her auburn-haired, green-eyed beauty, but she later won critical acclaim in such films as *Show Boat* (1951), *Mogambo* (1953), *The Barefoot Contessa* (1954), *On the Beach* (1959) and *The Night of the Iguana* (1964). Her marriages to actor Mickey ROONEY, band leader Artie SHAW and singer Frank SINATRA garnered widespread media attention. Such attention led her to move to Europe, where she continued to act in movies and television films.

Gardner, Erle Stanley (1889–1970) American mystery writer. The most published American author of his time, Gardner had worked for two decades as a lawyer in California before beginning to publish short stories and novels. No prose stylist, Gardner's principal contribution to his craft was to redirect the mystery genre away from amateur sleuths and toward professionals. His most enduring character was lawyer Perry Mason. Gardner also published under various pen names, including A. A. Fair.

Gardner, John (1933–1982) American novelist, critic and teacher. Among Gardner's novels were *Grendel* (1971), *The Sunlight Dialogues* (1973) and *October Light* (1976; National Book Critic's Circle Award, 1976). In his controversial nonfiction book *On Moral Fiction* (1978) Gardner argued that "almost all modern work is tinny, commercial and immoral." He founded and headed the creative writing department at the State University of New York at Binghamton. He also wrote poetry, children's books, fairy tales and criticism. He was killed in a motorcycle accident.

Gargallo, Pablo (1881–1934) Spanish sculptor. Studying art in Barcelona, he visited Paris in 1906 and 1911–14, meeting PICASSO and falling under the influence of CUBISM. Gargallo began sculpting in stone, but soon turned to working in iron, becoming one of the first modern artists to use this medium for sculpture. From 1917 to 1924, he taught at the Escuela Superior de Artes Oficios in Barcelona, returning to Paris in 1924.

Garland, Hamlin (1860–1940) U.S. novelist who wrote about the difficult lives of farmers of the Midwest region. His early stories were published in 1891 as *Main-Travelled Roads*, followed by his first novel in 1893, *Prairie Folks*. His other novels include *Wayside Courtship* (1897) and his first autobiography *A Son of the Middle Border* (1917). He won the PULITZER PRIZE in 1922 for his second autobiographical novel *A Daughter of the Middle Border*. He also published a number of politically oriented works, collections of essays and verse, and occult fiction.

Garland, Judy (Frances Gumm) (1922–1969) U.S. actress and singer. She started singing as a preschooler, and later became a stage actress. In 1935 she went under contract to METRO-GOLDWYN-MAYER and remained at MGM until 1950. She appeared in many films between 1936 and 1962, but perhaps is best remembered for her role in *The Wizard of Oz* (1939), for which she received a special ACADEMY AWARD. The tensions, demands and pressures of her acting career led to the cancellation of her MGM contract. She returned to the screen in 1954 with one of her greatest successes *A Star Is Born*. She was also involved in singing and concert tours, and is considered by many as one of the truly great personalities of the entertainment world.

Garland, William "Red" (1923–1984) American JAZZ pianist; was an influential figure during the 1950s. Garland accompanied such renowned musicians as Charlie PARKER, Miles DAVIS and Coleman HAWKINS.

Garner, John Nance (1868–1967) American politician, vice president of the UNITED STATES (1933–41). Born in Red River County, Texas, Garner

served in the Texas legislature (1898–1902) and House of Representatives (1903–33) and won election as speaker of the House in 1931. Garner served as vice president during Franklin D. ROOSEVELT's first two terms, helping push through much of the early NEW DEAL legislation. He opposed Roosevelt's third-term candidacy and ran unsuccessfully against Roosevelt for the 1940 Democratic presidential nomination. He retired from politics in 1941.

Garvey, Marcus (1887–1940) The Jamaican-born Garvey was a flamboyant and controversial figure in black American politics from the end of WORLD WAR I through the mid-1920s. In 1914 he founded the Universal Negro Improvement Association, a black nationalist organization, in Jamaica. Moving to the U.S. a few years later, he established the association's new headquarters in the HARLEM district of NEW YORK CITY. Unlike W. E. B. DUBOIS (who believed in radical political action to solve racial and economic problems facing blacks) or Booker T. WASHINGTON (who believed in black self-improvement through education), Garvey saw little hope for blacks to achieve social and economic justice in the U.S. Rather, he advocated a “back-to-Africa” movement; at a 1920 convention he was elected president of the “Republic of Africa”—his name for the proposed African nation for black American settlers. By the early 1920s, he had gained several million followers, many of whom sent him money to help fund the movement. However, in 1925 Garvey was convicted of mail fraud. After two years in prison he was deported to Jamaica. His influence quickly declined, and he spent his final years in Britain.

Gascon, Jean (1920–1988) Canadian actor-director, a leading figure in both French and English theater in Canada. A native of Montreal, Gascon founded that city's influential Théâtre du Nouveau Monde in 1951 and National Theater School in 1960. In 1969, he became the first native-born Canadian to be named artistic director of the Stratford (Ontario) festival, a post he held until 1974. From 1977 until his death, he was head of the theater program at Ottawa's National Arts Center.

Gass, William H(oward) (1924–) American author. Gass, a professor of philosophy, established himself with his acclaimed first novel, *Omensetter's Luck* (1966), which takes place along the Ohio River. Gass's work explores the nature of good and evil. Other works include the short stories *In the Heart of the Heart of the Country* (1968), and the essay collections *The World within the Word* (1978) and *Habitations of the Word* (1985). Gass's later works include *The Tunnel* (1995) and *Cartesian Sonata and Other Novellas* (1998). In 1990 he was named director of the International Writer's Center.

Gasser, Herbert Spencer (1888–1963) American physiologist. Gasser, the son of a country doctor, was educated at the University of Wisconsin and at Johns Hopkins University, qualifying as a physician in 1915. He then moved to Washington University, St. Louis, to take up an appointment as professor of pharmacology. Here he joined his old teacher Joseph ERLANGER in a famous collaboration that resulted in their sharing the 1944 NOBEL PRIZE in physiology or medicine for work on the differentiated function of nerve fibers. In 1931 Gasser was appointed to the chair of physiology at Cornell Medical School. Finally, in 1935, he was made director of the Rockefeller Institute in New York, a post he retained until his retirement in 1953.

Gastev, Alexei Kapitonovich (1882–1939) Russian poet and labor theorist. Gastev's poetry deals with industrialization, the necessity of building an “iron state,” for which sacrifices are called. In his prose writings, Gastev expounded his theory of “mechanized collectivism,” in which the workers synchronize their movements with the movements of machines, thus making individual thinking and a “normalized psychology” impossible. His reputation as a poet rests on his *Shockwork Poetry* (1918) and *A Stack of Orders* (1921). Gastev directed the Central Institute of Labor, but disappeared during the GREAT PURGE.

Gates, Bill (William Henry Gates III) (1955–) American businessman, cofounder of Microsoft Corporation. Born in Seattle, Gates learned BASIC, Fortran and LISP, all computer

programming languages in high school. In 1972 Gates and his friend Paul Allen formed a company named Traf-O-Data, which built computers that counted automobiles for private and public organizations interested in analyzing traffic flow.

After enrolling in Harvard University in 1973, Gates again worked with Allen to develop a version of the BASIC language for the world's first personal computer (PC), the Altair 8800. Rather than selling the copyright to Micro Instrumentation and Telemetry Systems (MITS), the developer of the Altair series, they licensed the software to the company, keeping all copyrights as the property a company called Microsoft that they founded that year. The success of this endeavour convinced Gates that his time would be better spent working on Microsoft projects rather than continuing his studies at Harvard, so he dropped out in his junior year.

In 1980 Microsoft agreed to produce and provide IBM computers with an operating system called Disk Operating System (DOS). As with MITS, Microsoft retained the copyright to the software. When DOS proved a successful system for IBM PCs, other companies began to produce PCs for consumer and business demand. Because it owned the license to DOS, Microsoft was able to create similar business deals with these producers of PC “clones” throughout the 1980s and 1990s. In 1986 Microsoft became a publicly traded company. A year later the spectacular increase in the stock's price, largely due to the high demand for PCs and DOS, led to Gates's becoming the world's youngest self-made billionaire. Microsoft also developed Windows, an operating system for the personal computer that replaced DOS as the tool of choice for PCs.

Although Gates's career with Microsoft was full of commercial successes, he became the target of an antitrust lawsuit filed by the U.S. government alleging that Microsoft deliberately made its software incompatible with web browsers such as Netscape in order to force customers to employ Microsoft's own web browser, Internet Explorer. In 2000 a federal court ruled that Microsoft was guilty of violations of the Sherman Antitrust Act and decreed that Microsoft be divided into two new companies. Although a fed-

eral appeals court reversed the second half of the initial ruling, Gates later removed himself from the presidency and CEO position of Microsoft, taking on the title of chief software architect.

Along with his business successes, Gates established a philanthropic foundation, the Bill and Melinda Gates Foundation, which (among other things) funds Gates Millennium Scholarships that enable students to study the natural sciences and prepare teachers for primary and secondary education. Gates has also written two books, *The Road Ahead* and *Business @ the Speed of Thought*, both of which discuss his vision of the present and future role of technology in private and public life.

Gate Theatre Dublin theater company founded in 1928 by Hilton EDWARDS and Micheal MACLIAMMOIR that first performed in the Peacock Theatre, an adjunct of the ABBEY THEATRE, before establishing itself in the Rotunda Buildings in 1930. The aim of the Gate company was to create a world class theater, and it differed from the Abbey in that it presented international works as well as Irish drama. Following World War II, Lord Longford, and later his widow Christine, countess of Longford, ran the theater, overseeing several renovations. The theater continues to present the works of various small companies from Ireland and elsewhere.

GATT (General Agreement on Tariffs and Trade) An international body, established in 1948, aimed at reducing tariffs and other restrictions and fostering free trade. In 1993 GATT was superseded by the WORLD TRADE ORGANIZATION (WTO), an international body that promulgated rules of international trade and was empowered to impose sanctions on countries found to be in violation of those rules.

Gaudí i Cornet, Antonio (1852–1926) Spanish architect. Gaudí was trained at Barcelona University, and his best-known works are found in that city; they include his Casa Batlló (1906), Casa Milà (1910) and Park Güell (1914), all of which have fantastical and highly complex elements. His monumental Church of La Sagrada Família, begun in 1883 and continued throughout his career, remains incom-

plete. After World War II Gaudí's work received renewed attention, and in 1957 the MUSEUM OF MODERN ART mounted an exhibit of his designs.

Gaudier-Brzeska, Henri (1891–1915) French sculptor and artist. Gaudier-Brzeska, who added to his own the name of his beloved wife Sophie Brzeska, was a brilliant sculptor whose career was cut tragically short by his death in WORLD WAR I. His work was ardently championed by the American poet Ezra POUND, of whom Gaudier-Brzeska made a number of drawings and a famous bust. Gaudier-Brzeska emphasized that the beauty of a sculptural work is intimately related to the materials from which it is made. His sculptures, which did not adhere to the fixed credos of any artistic school, combined a number of contrasting geometric forms to produce a jarringly energetic whole that Pound termed a "form-fugue."

Gaulle, Charles de (1890–1970) French general and statesman, first president of the Fifth Republic (1959–69). The man who was to become the symbol for French RESISTANCE to the Nazis during WORLD WAR II was born in Lille and attended the St. Cyr military academy. In WORLD WAR I he served with distinction under PÉTAINE, was wounded at VERDUN and taken prisoner by the Germans in 1916. After the war, de Gaulle served in the French military mission to Poland, in the forces occupying Germany and the Middle East. He also taught at the École Supérieure de Guerre, becoming expert in the use of tanks and aircraft. As the commander of an armored division, he engaged in one of the few successful sorties against invading German forces in May 1940. He was appointed a member of Paul REYNAUD's government before he was forced to flee to London. There in June 1940 he broadcast to his countrymen, calling for resistance, and there he organized the FREE FRENCH forces. Winning the support of CHURCHILL, ROOSEVELT, STALIN, in 1943 he established a provisional government in Algeria, and a year later he returned to FRANCE. De Gaulle was formally elected president of the Fourth Republic in November 1945 but resigned soon after because of the failure of the constituent assembly to give him

sufficient executive power. In 1947 he became head of a new anticommunist party, the Rassemblement du Peuple Français.

In 1958, the crisis in ALGERIA caused the French government to call the general from retirement and to make him premier. He assumed temporary emergency control, oversaw the drafting of a new constitution that provided for broad presidential power, and in December 1958 was elected president of the Fifth Republic. In this position, he first dealt with the Algerian question, calling for self-determination against the strong opposition of ex-Gaullists who opposed Algerian independence. After an independent Algeria was established in 1962, de Gaulle set out to reestablish France as a great world power. At home, he stabilized the currency by devaluing the franc, established a more favorable balance of trade, asserted his right to the development of a specifically French nuclear deterrent and worked toward full employment and economic well-being. In foreign policy, he called for a dynamic and independent France. Re-elected in 1965, he came into conflict with America regarding France's stature in NATO. In 1966 he withdrew French forces from the organization and a year later closed NATO installations in France. A vigorous member of the Common Market, he vetoed Britain's entry into the alliance in 1967. He also strengthened France's ties with West Germany, the USSR, China and the Third World. In the wake of the 1968 student protest demonstrations in France, he resigned as president. An austere, aloof and even Olympian figure, de Gaulle was undoubtedly France's greatest 20th-century leader.

Gaullists Political followers of General Charles de GAULLE, although there is no precise definition of **Gaullism**. A mass movement under the Fourth French Republic centered on the **Rassemblement du Peuple Français** (RPF), an authoritarian anticommunist party, this movement enjoyed its greatest success in the late 1940s and early 1950s. The **Union de la Nouvelle République** (UNR) was formed from various Gaullist groups after the establishment of the Fifth French Republic in 1958. Gaullism survived the general's retirement in 1970, and provided

a basis for support for his presidential successor, Georges POMPIDOU, and later Jacques CHIRAC.

Gavaskar, Sunil Manohar (1949–) Indian cricketer. Gavaskar holds the all-time Test cricket records for most runs scored and most games played. He scored 10,122 runs for India from 214 innings in 125 Test matches from 1971 to 1987. Gavaskar also holds the record for most centuries (100 runs scored) in Test cricket, with 34. From 1976 to 1985, Gavaskar captained India 47 times, and in 1983 he led the team to its first World Cup victory.

Gavin, James Maurice (1907–1990) U.S. army officer. Gavin was one of the U.S.'s top combat leaders in WORLD WAR II. During the war he served in and eventually led the famous 82nd Airborne Division. Following the war, he rose to become the army's chief of research and development. He was, however, a critic of several key army policies, including its failure to pursue long-range missile technology and an overreliance on advanced hardware at the expense of conventional forces. He retired in 1958 with the rank of Lt. General and became a consultant with the Cambridge, Mass.-based industrial research firm of Arthur D. Little, Inc. In the early 1960s, he served a brief term as ambassador to FRANCE under President John F. KENNEDY. He was also the author of several books, including *War and Peace in the Space Age* (1958) and *Crisis Now* (1968).

Gaye, Marvin (1939–1984) African-American soul singer, popular from the early 1960s until his death. His string of hit records included "Can I Get a Witness" (1963), "Heard It Through the Grapevine" (1968), "What's Going On?" and "Sexual Healing" (1983 Grammy Award). Many of his songs featured social themes. Gaye was shot and killed by his father in a domestic dispute.

Gayoom, Maumoon Abdul (1937–) President of MALDIVES (1978–). Gayoom is considered an Islamic scholar and was educated at Cairo's al-Azhar University before serving as a research assistant in Islamic history at the American University of Cairo (1967–69). After his return to

Maldives he served as minister of transportation and permanent representative of Maldives to the United Nations in the administration of Amin Ibrahim Nasir. As president, Gayoom has worked to diversify and modernize the economy, and has given high priority to improving the standard of living outside the capital. His extensive travels and active participation in numerous international forums have increased the nation's profile on the international scene. Gayoom was reelected to a sixth five-year term in 2003, with more than 90% of the vote.

gay rights movement Political and social movement that seeks to win legal equality and economic opportunities for homosexuals. Since the 1960s the gay rights movement has campaigned to win societal acceptance of homosexuality as an "alternative lifestyle." The movement uses many of the same techniques, and was largely inspired by, the CIVIL RIGHTS MOVEMENT and WOMEN'S MOVEMENTS of the 1960s and '70s. The gay rights movement is sometimes dated from a police raid on a gay bar, the Stonewall Inn, in New York City in 1969, which led to increased political activism by gays. The advent of AIDS, which struck many gays in the 1980s, radicalized much of the gay community. Gay organizations such as Act-Up have held marches and demonstrations to demand government action. An annual "Gay Pride" march is held in San Francisco, and openly declared homosexuals and lesbians have been elected to political office. In 1989, Denmark became the first nation to allow civil marriage between homosexuals. In the U.S., the issue of gay rights became prominent as a result of the state of Vermont's decision in 2000 to recognize state-administered civil unions between homosexual couples, the Supreme Court's 2003 decision to declare unconstitutional all anti-sodomy laws, the 2003 ruling by the Massachusetts Supreme Court that denying gay couples a marriage license is unconstitutional and the 2004 decision by the mayor of San Francisco to issue marriage licenses to gay couples despite California law prohibiting such actions.

Gaza Strip A strip of land (146 sq. miles) extending northeast from EGYPT

and bordered by ISRAEL and the Mediterranean Sea. Temporarily occupied by Israel in the 1956 SUEZ CRISIS, and occupied again during the 1967 SIX-DAY WAR, it remained an Israeli possession until 2005, when Israel removed Jewish settlers from the territory and turned over control to the PALESTINIAN AUTHORITY.

Gdańsk (German: Danzig) Polish seaport on the Baltic Sea, just west of the mouth of the Vistula River; capital of Gdańsk province. After WORLD WAR I the TREATY OF VERSAILLES restored its ancient status as a free city with its own legislature. But to provide a seaport for the newly re-created nation of POLAND, Danzig was made part of a Polish customs union under the jurisdiction of a high commissioner designated by the LEAGUE OF NATIONS—part of a strip of land barely 50 miles wide (the so-called **Danzig corridor**), with GERMANY proper to the west and the German province of East Prussia to the east. With the erosion of league authority after 1935, Danzig came under the influence, if not the control, of Nazi Germany. HITLER's call for the return of Danzig to Germany was a principal excuse for the German attack on Poland and a cause of the outbreak of WORLD WAR II. Danzig was annexed to Germany as the Hanseatic City of Danzig on September 1, 1939 (a small Polish garrison resisted until September 7). Retaken by the Soviets early in 1945, Danzig was soon returned by the Allies to Poland and its original name restored. Gdańsk, largely destroyed during the war, has since been rebuilt; with nearby Gdynia, barely 20 miles away, it is one of the world's principal shipbuilding centers. In late 1970 rioting by workers here led to the fall of Polish premier GOMUŁKA. By 1980 serious food shortages and labor discontent brought a strike at Gdańsk's Lenin shipyards that led to the formation of the SOLIDARITY Labor Union, headed by Lech WALESIA, movements to reform the Polish economy and political system—and, after a Gdańsk Solidarity Congress (December 1981) called for a national vote of no-confidence in the government, the breakup of the union and the imposition of martial law.

Gehrig, Lou (Ludwig Heinrich Gehrig; The Iron Horse) (1903–1941)

Baseball legend Lou Gehrig (PHOTOFEST)

American baseball player. There is little dispute that Lou Gehrig was the greatest first baseman in history. He began his Yankee career at the age of 20, but his career began in earnest three seasons later when he filled in for an ailing Wally Pipp. Gehrig soon had a lock on the position that lasted 16 years and 2,130 consecutive games, a record that was broken by Cal Pepkin Jr. of the Baltimore Orioles in 1995. He posted a lifetime batting average of .340 with 493 home runs and 1,990 runs batted in. He led the league in home runs and runs batted in several seasons and was a six-time All Star. He retired in 1939 after being diagnosed with amyotrophic lateral sclerosis, which came to be known as **Lou Gehrig's Disease**. His farewell address to fans at Yankee Stadium was one of the most moving and memorable events in baseball. Because of Gehrig's ill health, the entry requirements to the Hall of Fame were waived, and he was admitted that year. His life was recounted in the 1942 motion picture, *Pride of the Yankees*, starring Gary COOPER.

Gehry, Frank O. (1929–) American architect, known for his postmodernist buildings and use of common building material in structures and sculptures. Born Ephraim Goldberg in Toronto, Gehry and his family moved to Los Angeles where he studied architecture at the University of Southern California, and worked at Victor Gruen Associates, an architectural firm. At age 27 Gehry enrolled in the Harvard

School of Design to study urban planning. After graduating from Harvard he returned to Victor Gruen, where he worked until 1960. Leaving Los Angeles again, Gehry traveled to Paris, where he worked for a year under the French architect André Remondet. In 1962 he returned to Los Angeles to open his own firm.

During the following decade Gehry's work began to resemble less and less his original inspiration, the Swiss-French architect LE CORBUSIER, and more and more his own preference for the adoption of nontraditional building designs crafted out of common construction materials (such as corrugated metal). Gehry exhibited these pillars of his design both in his work for others, such as the Ron Davis house he remodeled in California between 1970 and 1972, and the remodeling of his own house and corrugated metal and angular roofs.

In addition to his work on private houses, Gehry sketched and supervised work on a variety of public buildings. The Loyola Law School's new campus (1981–84), the California Space Museum (1982–84), the University of Toledo (Ohio) Art Museum (1990–92), the Vitra Design Museum in Weil and Rhein, Germany (1997) and the Guggenheim Museum in Bilbao, Spain (1997), are some of the examples of his public *oeuvres*. All of the above designs reveal the same preference for angular, nontraditional geometric layouts that characterized his housing commissions. In recognition of his unique designs and design aesthetic, Gehry was awarded the Pritzker Architecture Prize for excellence in architecture.

Geiger, Hans Wilhelm (1882–1945) German physicist; studied physics at the universities of Munich and Erlangen, obtaining his doctorate (1906) for work on electrical discharges in gases. Geiger then took up a position at the University of Manchester, where he worked with Ernest RUTHERFORD from 1907 to 1912. In that year he returned to Germany, and from then until his death held a series of important university positions, including director of the Physikalisch Technische Reichsanstalt in Berlin (1912) and professor of physics at Kiel University (1925). A pioneer in nuclear physics, Geiger devel-

oped a variety of instruments and techniques for detecting and counting individual charged particles. In 1908 Rutherford and Geiger, investigating the charge and nature of alpha particles, devised an instrument to detect and count these particles. The instrument consisted of a tube containing gas with a wire at high voltage along the axis. A particle passing through the gas caused ionization and initiated a brief discharge in the gas, resulting in a pulse of current that could be detected on a meter. This prototype was subsequently improved and made more sensitive; in 1928 Geiger produced, with W. Muller, a design for what is now known as the *Geiger-Muller counter*.

Gell-Mann, Murray (1929–)

American theoretical physicist; graduated from Yale University in 1948 and gained his Ph.D. from the Massachusetts Institute of Technology in 1951. Gell-Mann spent a year at the Institute of Advanced Study in Princeton before joining the Institute for Nuclear Studies at the University of Chicago, where he worked with Enrico FERMI. In 1955 he went to the California Institute of Technology, where he became a full professor in theoretical physics in 1956. Gell-Mann's chosen subject was the theoretical study of elementary particles. His first major contribution in 1953 (at the age of only 24) was to introduce the idea of "strangeness." The concept came from the fact that certain mesons were "strange particles" in the sense that they had unexpectedly long lifetimes. Strangeness, as defined by Gell-Mann, is a quantum property conserved in any "strong" interaction of elementary particles. The search for order among the known elementary particles led Gell-Mann and Israeli physicist Yuval Ne'eman to advance, independently, a mathematical representation for the classification of hadrons (particles that undergo strong interactions). Gell-Mann felt that it should be possible to explain many of the properties of the known elementary particles by postulating even more basic particles (later to be called QUARKS, the name taken from *Finnegan's Wake* by James JOYCE). Quarks, together with their antiparticles, would normally be in combination as constituents of the more familiar nucleons and mesons. This idea challenged es-

established thinking and has greatly influenced the direction of high-energy theory and experiment. Gell-Mann received the 1969 NOBEL PRIZE in physics, being cited for his “contributions and discoveries concerning the elementary particles and their interactions.”

Gemini program American space program that launched 10 piloted flights in 1965–66, after two unmanned tests in 1964 and 1965. Called Gemini because of the two-man crew, this program followed the MERCURY PROGRAM and preceded the APOLLO PROJECT. It was designed to test the endurance of men in space (in preparation for lunar flights), to test the maneuvering ability of orbital spacecraft and to develop docking and rendezvous techniques needed for the later Moon missions. The Gemini spacecraft consisted of two modules, a reentry or command module and a service module. The bell-shaped command module measured 11 ft. high, had a base diameter of 7.7 ft. and weighed just under 6,000 lbs. It was launched by a two-stage Titan 2 rocket with four retro-rockets, each with a thrust of 11,100 newtons (2,500 lbs.).

Highlights of the Gemini program include *Gemini 3*, the first piloted mission, flown by Virgil I. (Gus) GRISSOM and John W. YOUNG and launched on March 23, 1965. During almost five hours of flight, it circled the Earth for three orbits. *Gemini 4*, launched on

June 3, 1965, was flown by Edward H. WHITE II and James McDIVITT. During the two-day flight, White made the first U.S. space walk. *Gemini 6*, launched on December 15, 1965, with Walter M. SCHIRRA and Thomas P. STAFFORD aboard, made the first U.S. space rendezvous, with *Gemini 7*, launched on December 4 with Frank BORMAN and James A. LOVELL aboard. The two capsules rendezvoused on December 15, coming within one foot of each other. *Gemini 8*, with Neil ARMSTRONG and David Scott, launched on March 16, 1966, was the first to dock with another craft in space (an Agena target rocket). Later Gemini missions lengthened the time spent in space and the duration of space walks and vehicle dockings, and accomplished increasingly automated reentries.

Genda, Minoru (1904–1989) Japanese military and political leader. Genda was the general who planned JAPAN's December 7, 1941, attack on U.S. naval forces at PEARL HARBOR, Hawaii, that brought the U.S. into WORLD WAR II. He was widely credited with originating attacks by low-flying torpedo bombers, which caused extensive damage to the U.S. fleet during the battle. Following the end of the war, he was made a general in the Japanese air force and served as chief of staff (1959–62), after which he was elected to the upper house of Japan's parliament. In 1962, U.S. president John F. KENNEDY presented him with the Legion of Merit, the nation's

highest foreign honor, for his role in rebuilding the Japanese air force and cooperating with the U.S. Genda made a controversial lecture tour of the U.S. in 1969; during the tour, he said that if Japan had possessed the ATOMIC BOMB during WORLD WAR II, it might have used it against the U.S. The remark sparked an uproar in Japan that forced him to resign as chief of the ruling Liberal Party's defense policy board, although he remained a member of parliament until 1986.

General Agreement on Tariffs and Trade See GATT.

General Motors American and international corporation (the largest manufacturing company in operation), primarily a builder of automobiles and related transport products. General Motors (GM) was founded in 1908 and gradually acquired various smaller automobile makers, including Chevrolet, Pontiac, Oldsmobile, Buick, and Cadillac. The diverse approaches to design by these firms were gradually brought together in an overall design program that was headed after 1925 by Harley EARL. Earl organized an intricate plan for sharing body components among the different brand names, with varied trim and detail giving each brand individuality. Changes in styling on an annual basis encouraged “planned obsolescence,” leading consumers to buy new cars in greater numbers and at shorter intervals than might be required by actual wear. From 1959 to 1978, Bill Mitchell took over Earl's role and directed GM styling. Although overwhelmingly successful commercially, the GM approach to design has been criticized for what is seen by some as its neglect of functional and economic values in favor of size and glitter as sales features. The competition of European and Japanese imports has forced some adjustment in GM styling practice. Some GM products are now joint Japanese-American efforts. General Motors is also a major manufacturer of household appliances under the Frigidaire brand name, of trucks and buses, and of diesel railroad locomotives through its electromotive division. In 2000 General Motors began purchasing shares in the Italian automobile company Fiat and eventually signed an agreement to buy the

NASA's GEMINI VII spacecraft, 1965 (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

Italian company. But in early 2005 GM backed out of the deal. In November 2005 General Motors announced a 25% reduction in its workforce over a three-year period and closure of nine plants, in a restructuring effort aimed at avoiding bankruptcy.

General Strike of 1926 British labor strike of May 1926. The general strike was a culmination of several years of labor unrest, during which the miners' unions had garnered support from other industrial unions. It was triggered by the Samuel Report, a study of the mining industry by a royal commission released in March of 1926 which rejected nationalization and recommended a cut in wages. At the same time, mine owners supported longer hours for the workers. On May first, at a special meeting of the TRADES UNION CONGRESS (TUC), it was agreed to call out transport workers, printers, builders, heavy industrial workers and later engineers in support of the miners. Prime Minister BALDWIN's government responded by organizing volunteers to fill essential posts, recruiting special constables and using troops to maintain food supplies. Nine days later the TUC called off the strike. The miners unions stayed out until the following August. In July of 1927, the Trade Disputes Act was passed, which made general strikes illegal. It was repealed in 1946.

general theory of relativity See ALBERT EINSTEIN.

Generation of 1927 Group of Spanish poets who were active between 1923 and the beginning of the SPANISH CIVIL WAR in 1936. United mainly by friendship, a tendency toward SURREALISM, an attitude of anguish over the contemporary world and an emphasis on aesthetic purity, they were a diverse group of individuals with distinct poetic styles. Among the members of the Generation of 1927 were Federico GARCÍA LORCA, Rafael ALBERTI, Vicente ALEIXANDRE, Luis CERNUDA and Jorge GUILLÉN. Many of their works were collected in the 1932 anthology *Poesía española contemporánea*.

Genet, Jean (1910–1986) French novelist and playwright; one of the major French authors of this century.

Genet is also an unusual figure in the history of French literature due to his background as a convicted felon and a homosexual. He wrote his first novel, *Our Lady of the Flowers* (1944), while serving a jail sentence. This novel, which explores the complex psychological nature of homosexual relations within prison confines, won the attention of French intellectuals such as Jean-Paul SARTRE, who clamored successfully for Genet's parole. Other novels by Genet include *Miracle of the Rose* (1946) and *Thief's Journal* (1949). Genet also became a major figure in the THEATER OF THE ABSURD movement by virtue of his plays *The Maids* (1948), *The Balcony* (1956) and *The Blacks* (1958). He was also the subject of a full-length literary study by Sartre, *Saint Genet* (1952), which argued that Genet was the archetypal existential hero due to his having lived by his own value system.

genetically modified foods Artificially produced strains of produce (vegetables and fruits) and grains (wheat, etc.) designed to result in greater agricultural yields than those of naturally occurring strains. Examples of companies producing such genetically modified foods are Cargill Incorporated, which focuses on fruits and vegetables, and Holden's Foundation Seeds, which specializes in the production of altered corn and wheat seeds. Genetically modified foods have both proponents and detractors. Advocates of such products note that the increased bounties they make possible can lead to reduced famines in the developing world if its farmers are given access to the modified seeds. Critics are concerned that, over time, the germination of such modified grains, fruits and vegetables will adversely affect the cultivation of naturally bred produce, and argue that it is too soon to tell if the consumption of such products is harmless to humans.

genetic engineering Popular term for various techniques that manipulate DNA, the nucleic acid (contained in the nucleus of cells) that transmits the inheritance of characteristics. Recombinant DNA is produced through gene-splicing, a technique in which molecules of DNA are removed from one organism and introduced into the genetic material of another organism.

When inside a host cell, this recombinant DNA molecule replicates itself when the host divides, producing cloned cells with identical DNA structure. Gene-splicing is usually practiced on *Escherichia coli*, a common intestinal bacterium. A foreign gene is spliced into the plasmid, a circular piece of DNA that is the bacterial equivalent of a chromosome, and the *E. coli* goes on to produce cloned cells with the new genetic information. This technique has been used not only to study gene structure, but also to produce larger quantities of substances that are normally available only in extremely limited amounts. Substances produced by gene-splicing techniques include INSULIN, human growth hormone and INTERFERON. Other techniques of genetic engineering include nuclear transplants and cell fusion. It is hoped that one or more of the various genetic engineering techniques may ultimately be applied to the cure of human genetic diseases, and genetic engineering is one of the fastest-growing research fields in contemporary medicine.

Geneva Conventions A series of international agreements reached to provide for the humane treatment of individuals in wartime. Those protected include the wounded, the sick, prisoners of war and civilians. The first of these treaties was signed by representatives of 16 countries convened in Geneva, Switzerland, in 1864, and was recognized by all European nations, the U.S. and a number of countries in Asia and South America. Other such conventions were added in 1899, 1906, 1929, 1949 and 1977. The earliest agreements dealt mostly with combatants and with the international recognition of the role of the RED CROSS. Prompted by the phenomenon of total world war, later conventions extended the general laws of war and attempted to further protect civilians. They also forbade many kinds of racial and religious discrimination as well as such practices as the taking of hostages and the use of torture.

Gennadios, bishop of Paphos (1910–1986) Cypriot Orthodox church leader. His support for the Greek Cypriot guerrilla movement and opposition to Cypriot president Archbishop MAKARIOS III helped pave the way for the Turkish invasion of CYPRUS in 1974.

Gennadios (also referred to as Yennadios) and two other bishops were defrocked in 1973 after they had proclaimed the defrocking of Makarios.

Gennep, Arnold van (1873–1957)

French ethnographer and folklorist; a pioneer in the development of structured, analytical methods for the collection and preservation of folk material in France. Van Gennep devoted himself to field work and produced a large number of collections in his lifetime while influencing an entire subsequent generation of university-trained folklorists. Works by Van Gennep include *Rites of Passage* (1909), *Folklore of the Dauphine* (1933), *Folklore of Bourgogne* (1936) and the multivolume *Manual of Categories of French Folklore* (1943–58). The methods of van Gennep exercised an influence on STRUCTURALISM.

Genovese, Vito (1897–1969)

American gangster. Genovese began his career in crime early, working in the shadow of “Lucky” LUCIANO as a relatively minor MAFIA functionary in the 1920s. Charged with murder, Genovese fled to Italy in 1937, worked for the U.S. Army in 1944 and returned to New York in 1945. For the next decade he consolidated his position, engineering assassinations and emerging as a full-fledged Mafia don. Extremely important in the organized crime’s narcotics operations, Genovese was implicated in a minor drug deal, arrested, tried and in 1959 sentenced to prison for 15 years. He allegedly continued to direct mob activities from his jail cell. He died while still in prison.

Gentile, Giovanni (1875–1944)

Italian philosopher. Gentile is best remembered as the principal intellectual supporter of Italian FASCISM and the government of Benito MUSSOLINI. Gentile began his philosophical career as a neo-Hegelian theorist who emphasized the ideal nature of truth in *The Theory of Mind as Pure Act* (1916). He also worked closely with fellow Italian philosopher Benedetto CROCE and contributed to Croce’s journal, *Critica*. In the 1920s, after Mussolini had assumed power, Gentile became politically active as a senator and as a minister of public instruction entrusted with major responsibility for

the development of a revised Italian educational system. Gentile outlined his ideas in this sphere in *The Reform of Education* (1922). He met his death at the hands of anti-fascist partisans.

geodesic dome See R. Buckminster FULLER.

George V (1865–1936)

King of Great Britain (1910–36). George V was the second son of EDWARD VII and Queen ALEXANDRA, and became heir to the throne when his elder brother, Albert Victor, died in 1892. In 1893, George V married his brother’s fiancée, Mary of Teck, later Queen Mary. Their eldest son, later EDWARD VIII and Duke of Windsor, was born in 1894. Although torn by WORLD WAR I, and unsettled by the deposition of many European monarchs, the reign of George V was marked by an increasing affection between the British people and their sovereign, due in part to such gestures as his broadcasts in later years, but also because of his respect for the constitutional monarchy. George V dealt with restraint with the Parliament Act of 1911, the Irish Crisis of 1913–14, BALDWIN’s succession to the prime ministry in 1923 and the formation of the NATIONAL GOVERNMENT in 1931. He was also the only British emperor of INDIA to visit there while sovereign. His Silver Jubilee in 1935 was the occasion of a moving display of popular loyalty to him. He died eight months later at Sandringham.

George VI (Albert Frederick Arthur George) (1895–1952)

King of the UNITED KINGDOM of Great Britain and Northern Ireland (1936–52). The second son of King GEORGE V and Queen Mary, he trained as a naval cadet. During WORLD WAR I he saw action at the Battle of Jutland as a Royal Navy officer. His service was interrupted by illness; however, before the war’s end he joined the RAF and became a pilot. In 1920 he assumed the title of Duke of York. He married Lady Elizabeth Bowes-Lyon (later Queen Elizabeth the Queen Mother) of Scotland in 1923. Second-in-line to his brother David, the Prince of Wales (later EDWARD VII), he was seldom in the public eye during the first 41 years of his life. Shy and awkward, he was affected by a stammer which he eventually over-

came. In 1936, when his brother (then king) abdicated the British throne to marry Mrs. Simpson, the Duke of York suddenly became king. Thrust into a role for which he had been thought unprepared, he quickly adapted to his new responsibilities and won the affection of the British people. Upon his coronation (1937) he assumed the name George. In 1939, on the eve of WORLD WAR II, he and his wife made an important state visit to Canada and the U.S. to win support for Britain; he thus became the first reigning monarch to visit the U.S. During the war he, the queen and their two daughters, Elizabeth and Margaret Rose, remained in London and shared the hazards of the Blitz with their subjects. (Buckingham Palace was hit several times by German bombs.) In the course of the war, he periodically visited British forces in North Africa, Italy, Malta, and Normandy. From the late 1940s he suffered from various illnesses, including lung cancer, and was forced to curtail his activities. Upon his death his elder daughter inherited the crown as ELIZABETH II.

George, Stefan (1868–1933)

German poet and literary critic; exercised a considerable influence on the German poets who emerged in the first decades of this century. George championed the classical poets of ancient Greece as a lasting standard for poetic excellence. He also applied the philosophical ideals of his countryman Friedrich Nietzsche in calling for a revived German humanism that would look to the poet as a central figure of societal guidance and inspiration. In his own verse, George dealt frequently with esoteric intellectual themes, as well as with his homosexual love affairs. His major volumes of poems include *Year of the Soul* (1897), *The Seventh Ring* (1907–11), and *The New Reich* (1928). While George was an ardent German nationalist, he was also a fierce opponent of NAZISM. In 1933, he chose exile in Switzerland after the rise of HITLER.

George-Brown, Alfred, Baron (George Alfred Brown) (1914–1985)

British politician. The son of a truck driver, Brown worked as a union organizer before being elected to the House of Commons in 1945. In the 1950s, he was a member of the LABOUR

PARTY's shadow cabinet, rising to deputy leader of the party under Hugh GAITSKELL. After Gaitskell's death in 1963, Brown was narrowly defeated by Harold WILSON in the contest for Labour leadership. Brown then served for two years as secretary for economic affairs before being named foreign secretary in 1966. He resigned in 1968 over a lack of consultation during a gold crisis. In 1970, he lost his seat in Parliament. In 1976, angered

by legislation proposing closed shops, Brown resigned from the Labour Party. In 1981, he became a member of the centrist SOCIAL DEMOCRATIC PARTY.

Georgia, Republic of Territory of the Russian Empire (1878–1918), independent state (1918–21, 1991–), and Soviet Republic (1921–91). Fully annexed by Russia in 1878, Georgia remained a territory of the Russian czar

until the Russian Civil War began between the Bolshevik “Reds” and the anti-Bolshevik “Whites.” In May 1918 moderate socialist politicians in Georgia called Mensheviks used the opportunity to establish an independent state of Georgia. However, by the end of the civil war, Bolshevik troops had captured Georgia and returned it to Russian rule. In 1921 Georgia was united with ARMENIA and AZERBAIJAN in the Transcaucasian Soviet Federated

GEORGIA

1918	Independence is established after the Russian Revolution.
1921	The region is invaded by the Red Army; a Soviet republic is established.
1922–36	Georgia is linked with Armenia and Azerbaijan as the Transcaucasian Federation.
1930s	Industry develops rapidly, but resistance to agricultural collectivization and violent political purges are instituted by the Georgian Soviet dictator Joseph Stalin.
1936	Georgia becomes a separate republic within the USSR.
1953	Stalin dies; Nikita Khrushchev becomes first secretary of the Communist Party of the Soviet Union and begins a process of de-Stalinization throughout the Soviet Union.
1985	Mikhail Gorbachev becomes leader of the Soviet Union and initiates policies of glasnost (openness) and perestroika (restructuring), which inadvertently fuel the nationalistic sentiment of Georgia.
1991	On April 9 the Georgia Supreme Soviet formally declares Georgia's independence from the Soviet Union; in May Gamsakhurdia is elected Georgia's first president.
1992	With military and Russian backing, Gamsakhurdia is ousted in January; the presidency is abolished and Shevardnadze is named acting chairman of the State Council, the new national legislature; elections confirm Shevardnadze as chairman of the State Council.
1993	Georgia joins CIS.
1994	The United Nations brokers a cease-fire between the government of Georgia and Abkhazi separatists.
1995	Georgia adopts a new constitution reinstating the office of president, and Shevardnadze is named president
2000	Shevardnadze is reelected president, receiving nearly 80% of the vote.
2001	Clashes in Abkhaz with Georgian paramilitaries backed by fighters from the North Caucasus. Public outcry follows a raid by government forces on an anti-Shevardnadze TV station. Shevardnadze responds by dismissing the government.
2004	Mikhail Saakashvili wins the presidential election. The autonomous region of Ajaria does not recognize his authority and proceeds to blow up all the bridges connecting the region to the rest of Georgia. The Ajarians comply with Saakashvili's orders to stand down.
2005	Fighting continues between Georgian forces and South Ossetian separatists.

Socialist Republic (TSFSR), one of four political entities that in December 1922 formed the UNION OF SOVIET SOCIALIST REPUBLICS (USSR). In 1936 this political entity was dissolved and Georgia, Armenia and Azerbaijan each became Soviet Socialist Republics. When nationalist movements emerged in Georgia, Soviet leaders such as Vladimir LENIN and Joseph STALIN brutally suppressed them.

Although Stalin's death reduced the repression of Georgians, little changed in the Soviet republic until Soviet leader Mikhail GORBACHEV implemented his political philosophy of GLASNOST, or "openness." Using the increased civil liberties allowed under glasnost, Georgian nationalists pressed for independence from the Soviet Union. In April 1991 the nationalist head of the Georgian Supreme Soviet, Zviad Gamsakhurdia, declared Georgia independent. A month later Gamsakhurdia was elected Georgia's first president. But as the Soviet Union was collapsing in December 1991, opponents of Gamsakhurdia's increasingly dictatorial rule besieged his headquarters and forced him into exile in January 1992. Later that year Eduard SHEVARDNADZE, the former Soviet foreign minister was elected the country's chief of state.

Shevardnadze promptly obtained Russian assistance in combating separatist movements in South Ossetia and Abkhazia, which were demand-

ing independence from Georgia. These secessionist threats prompted Shevardnadze to bring Georgia into the COMMONWEALTH OF INDEPENDENT STATES (CIS) in 1993. In February 1994 he arranged for Russian troops to be based near Abkhazia and to train the young Georgian military. By February 1995 diplomacy and military force resulted in an agreement between Abkhazia and Georgia for the creation of a confederation. Later that year Shevardnadze won election as president under a new constitution, and was reelected in 2000. However, his failure to establish a lasting settlement between Georgia and separatist groups in Abkhazia and Ossetia, together with popular dissatisfaction with his autocratic methods, resulted in nationwide protests in late 2003 that forced Shevardnadze to resign. In a new election Mikhail Saakashvili was chosen as his successor in 2004.

The autonomous region of Ajaria does not recognize his authority and proceeds to blow up all the bridges connecting the region to the rest of Georgia. The Ajarians complied with Saakashvili's orders to stand down, and Russia plans to start withdrawing troops from the area. Soon after, the South Ossetia region held elections that were not recognized by the Georgian government. Fighting continues between Georgian forces and South Ossetian separatist forces.

Georgians A term generally applied to authors who wrote during the reign of GEORGE V, 1910–36, and specifically referring to the poets included in the five volume anthology *Georgian Poetry* (1912–22). The name was coined by Edward Marsh, editor, who along with Rupert BROOKE, a contributor, conceived the series. Georgian poetry is traditional in form, and often celebrated nature and pastoral England. Critics—among them, the BLOOMSBURY GROUP—assailed its naivete and its irrelevance to the mood of post-World War I Britain, and the term took on a pejorative sense. Characteristic Georgian poets include Lascelles ABERCROMBIE, Walter DE LA MARE, John DRINKWATER, and Gordon Bottomley.

German colonial wars in Africa (1903–1908) Promoting white settlement to gain self-sufficiency for their African colonies, the Germans often dislodged native tribes by force. In 1903 the Hottentots revolted in German South West Africa (NAMIBIA), and the Herero tribe in 1904. Troops from Germany suppressed the rebels with much difficulty and bloodshed by 1908, killing 80 percent of the Herero and 50 percent of the Hottentots. Africans also revolted in German East Africa (now TANZANIA) and in CAMEROON in West Africa; all were brutally repressed and reduced to virtual slavery.

German Democratic Republic
See EAST GERMANY.

German-Soviet Nonaggression Pact Also known as the Nazi-Soviet Pact and the Hitler-Stalin Pact, an agreement between Germany and the USSR signed in Moscow on August 23, 1939, by Joachim von RIBBENTROP and Vyacheslav MOLOTOV. Its public provisions included pledges of neutrality if either country were to go to war, and a trade agreement. A secret clause defined spheres of interest for both countries in eastern Europe and the Baltics. A surprising agreement for the committed anticommunists of Germany and the equally committed anti-fascists of the Soviet Union, the pact was used by Germany to isolate Poland in preparation for its invasion of the country on September 1, 1939.

many rebuilt its military machine, then began to demand and gain territorial concessions from neighboring countries, notably CZECHOSLOVAKIA. German-speaking AUSTRIA was also annexed in the ANSCHLUSS (1938). Hitler's invasion of POLAND in 1939 started WORLD WAR II. Germany initially won quick victories and overran and occupied much of Europe, with dire consequences for the civilian populations. However, Hitler's fatal invasion of the Soviet Union and the entry of the U.S. into the war brought overwhelming forces to bear against Germany. The nation suffered devastating Allied bombing raids, while Hitler's war policy drained the country both economically and spiritually. Even while suffering military defeat, however, the Nazi regime was carrying out a horrific policy of genocide toward the JEWS of occupied Europe (see FINAL SOLUTION, HOLOCAUST). Germany's unconditional surrender (May 7, 1945) resulted in a four-power (USSR, U.S., UK, France) oc-

The pact was honored by Hitler until June 1941, when German forces attacked the USSR.

Germany Germany is located in north-central Europe and since 1990 covers an area of 138,003 square miles. The country entered the 20th century in a dangerous economic and political rivalry with Britain and France that culminated in WORLD WAR I, when the German empire fought against those countries and their allies. After Germany's defeat, Kaiser WILHELM II abdicated and a new government, the WEIMAR REPUBLIC, was formed with Friedrich Ebert (1919–25), then Field Marshal von HINDENBURG (1925–34), as president. The harsh terms of the VERSAILLES peace treaty (1919), coupled with the political weakness of the Weimar government and the effects of the world recession after 1929, led to the emergence of Adolf HITLER and his National Socialist German Workers' Party (Nazis), which embraced extreme nationalism and ANTI-SEMITISM (see also NAZISM). Hitler became leader of the new Third Reich, which replaced the Weimar government in 1933. During the next few years Ger-

GERMANY

1911	Agadir Crisis exacerbates tensions between Germany and Britain.
1914–18	Germany loses 1.7 million dead and 4.2 million wounded in World War I.
1918	Allied breakthrough on the Western Front leads to collapse of German forces; (Nov. 9) Kaiser Wilhelm II abdicates, German republic is declared; (Nov. 11) armistice ends World War I.
1919	(January) Left-wing uprising of "Spartacists" led by Rosa Luxemburg and Karl Liebknecht is put down; (June) Treaty of Versailles imposes harsh terms on Germany, including loss of territory, demilitarization and reparations; (July) Weimar constitution adopted.
1923	"Beer Hall Putsch" in Munich: Adolf Hitler leads unsuccessful attempt to seize power.
1925	Dawes Plan eases German reparations payments; Paul von Hindenburg becomes president.
1926	Germany joins the League of Nations.
1932	Nazis win 37% of the vote in national elections.

1933	(Jan. 30) President Hindenburg appoints Hitler chancellor of Germany; (March) Hitler assumes emergency powers following Reichstag fire, suspends Weimar constitution; Germany withdraws from League of Nations.
1934	(June) Hitler purges Nazi rivals in "Night of the Long Knives"; (August) death of Hindenburg; Hitler takes title of "Fuehrer."
1935	Nuremberg Laws deprive German Jews of civil rights.
1936	German forces occupy Rhineland; Germany forms "Axis" alliance with Italy, signs Anti-Comintern Pact with Italy and Japan.
1938	Germany demands and gains control of Sudetenland region of Czechoslovakia in Munich Pact (September); (Nov. 9–10) Nazis launch violent anti-Jewish pogrom on "Kristallnacht."
1939	(August) German foreign minister von Ribbentrop signs German-Soviet Non-aggression Pact with Soviet foreign minister Molotov; (Sept. 1) German blitzkrieg invasion of Poland begins World War II.
1941	(June) Hitler launches surprise invasion of Soviet Union.
1942	(January) Wannsee Conference: systematic killing of Jews in concentration camps becomes official policy, unleashing the Holocaust; (October–November) German forces in North Africa decisively defeated by British.
1945	(May 7) Germany signs unconditional surrender; Germany partitioned into four zones of Allied occupation; (Nov. 20) war crimes trials open in Nuremberg.
1948–49	Soviets blockade Berlin; Western Allies supply city in Berlin Airlift.
1949	(May 23) British, French and U.S. occupation zones become Federal Republic of Germany. (Oct. 7) Soviet occupation zone proclaimed German Democratic Republic.
1990	(Oct. 3) East and West Germany reunited under the banner of the Federal Republic of Germany.
1998	Social Democratic Party forms governing coalition with Green Party.
2000	Kohl is forced to resign as his party's honorary chairman because of a campaign finance scandal.
2002	Germany adopts the euro as its national currency.
2005	Christian Democrat Angela Merkel becomes the first female chancellor in a coalition with the social Democrats.

cupation government and in the NUREMBERG WAR CRIMES TRIALS that eradicated the Nazi leadership. The Soviet Union's opposition to Western plans for eventual self-government led to the division of Germany into two states (1948–49): the Federal Republic of Germany, aligned with the West, and the German Democratic Republic, aligned with the Soviet Union. Germany was reunited as one country in October 1990 under the name Federal Republic of Germany. In 1991, the Bundestag narrowly voted to restore Berlin as the nation's capital. Chancellor Kohl warned Germans against a resurgence of rampant nationalism. Kohl and the Christian Democrats remained in control of Germany until 1998 when they lost to Gerhard SCHROEDER and the Social Democrats, who formed a governing coalition with the Green Party and replaced Kohl as chancellor. Germany continued to cultivate close relations with France and became an ardent champion of greater political integration in the EUROPEAN UNION (EU). In 2005 the Social Democrats performed poorly in nationwide elections and Christian Democrat Angela MERKEL formed a coalition government to become the country's first female chancellor. (For a history from 1949 to 1990, see GERMANY, EAST and GERMANY, WEST.

Germany, East (Deutsche Demokratische Republik—DDR, or German Democratic Republic—GDR) East Germany was located in north-central Europe and covered an area of 41,817 square miles, excluding West Berlin. At the end of WORLD WAR II, Soviet armies occupied the eastern part of GERMANY. Determined to prevent the reemergence of a large and possibly hostile German nation, the Soviets turned their treaty-ratified zone of occupation (intended, as were the American, British and French zones, to be only temporary), into the German Democratic Republic (GDR) in 1949, with Walter ULBRICHT as leader (until 1971). France, Britain, the U.S. and the new Federal Republic of Germany (WEST GERMANY) refused to recognize the GDR. Ulbricht embraced COMMUNISM and suppressed antigovernment uprisings in 1953. The GDR became a

founding member of the WARSAW PACT in 1955. Tensions between the GDR and the Western powers, as well as increased escapes by East Germans into West Berlin, led to the construction of the BERLIN WALL (1961). A similar barrier was eventually extended along the entire border between East and West Germany. During ERICH HONECKER's leadership (1971–89), the country joined the UNITED NATIONS (1973) and solidified its borders through treaties. However, Honecker's resistance to reform led to mass protests in 1989. Tens of thousands of East Germans fled to the West via Hungary, which had reopened its border with Austria. After Honecker's resignation, interim leader Egon KRENZ opened the Berlin Wall in November 1989, allowing East Germans free passage into the West. The wall was torn down during the next year and East Germans voted for German reunification in March 1990. The GDR ceased to exist as a separate country after the reunification of Germany on October 3, 1990.

Germany, West (Bundesrepublik Deutschland—BRD, or Federal Republic of Germany—FRG) Located in north-central Europe, West Germany had an area of 96,001 square miles, with West Berlin as a separate entity within the territory of EAST GERMANY. The Federal Republic of Germany (FRG) was established in

WEST GERMANY

1949	Federal Republic of Germany created from three Western occupation zones.
1961	(August) Construction of Berlin Wall.
1963	(January) FRG signs friendship treaty with France.
1968	Baader-Meinhof terrorist group formed.
1972	(September) "Black September" massacre of Israeli athletes at Munich Olympics.
1989	Mass exodus of East Germans into FRG; Berlin Wall opened; Chancellor Kohl proposes reunification of Germany.
1990	Reunification of Germany (Oct. 3); Kohl elected chancellor in first nationwide election since 1933 (Dec. 2).

WEST GERMANY: CHANCELLORS

1949–1963	Konrad Adenauer (Christian Democrat)
1963–1966	Ludwig Erhard (Christian Democrat)
1966–1969	Kurt Kiesinger (Christian Democrat)
1969–1974	Willy Brandt (Social Democrat)
1974–1982	Helmut Schmidt (Social Democrat)
1982–1990	Helmut Kohl (Christian Democrat)

May 1949 and granted partial sovereignty by Western occupation forces. Konrad ADENAUER became the first federal chancellor (1949–63), guiding the country to full sovereignty on May 5, 1955. During the 1950s and 1960s rapid economic recovery from postwar devastation occurred, and West Germany became a member of the EUROPEAN ECONOMIC COMMUNITY and NATO. An influx of East Germans, coupled with Adenauer's refusal to recognize the East German government and its desire to absorb all of BERLIN, led to the erection of the BERLIN WALL (1961) by East Germany. From 1966 to the late 1970s the country experienced social unrest, with protests and terrorism sponsored by the leftist BAADER-MEINHOF GROUP; its offshoot, the Red Army Faction; and the German Socialist

Students' Union (SDS). In 1972 Arab BLACK SEPTEMBER guerrillas attacked Israeli quarters at the Munich Olympics, resulting in tragedy (see

MUNICH OLYMPICS MASSACRE). The chancellorship of Willy BRANDT (1969–74) and his OSTPOLITIK policy brought treaties with the Soviet Union and East Germany and membership in the UN (1973). Controversy erupted during the chancellorship of Helmut SCHMIDT (1974–82) over the deployment of U.S. nuclear (INF) missiles in the country, leading to huge peace marches in 1982–83. Christian Democrat Helmut KOHL, who became chancellor in 1982, orchestrated the unification of East and West Germany in October 1990. The new nation kept the official name Federal Republic of Germany.

Gershwin, George (1898–1937) American composer who combined classical and jazz idioms to create enduring musical works. Gershwin was one of the great composers of popular and concert music in the 20th century. Gershwin published his first song in 1916 and achieved national recognition for his song "Swanee" (1919), as performed by Al JOLSON. He quickly rose above the run-of-the-mill, tin pan alley compositions of the day. Gershwin wrote the songs for five editions of *George White's Scandals* (1920–24), then composed the scores for several Broadway musicals, in collaboration with lyricist Ira GERSHWIN, his brother. Their musical plays included *Oh Kay!* (1926), *Funny Face* (1927) and *Of Thee I Sing* (1931). After the arrival of TALKING PICTURES, the Gershwin brothers also wrote songs for the movies, such as the Fred ASTAIRE films *Shall We Dance* (1937) and *A Damsel in Distress* (1937). Gershwin established his reputation as

Composer George Gershwin (left) and his brother, lyricist Ira Gershwin (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

a composer of serious music with such works as *Rhapsody in Blue* (1924), the symphonic poem *An American in Paris* (1928) and the folk opera *Porgy and Bess* (1935), all of which have become musical classics. Among his enduringly popular songs are such standards as "Love Walked In," "But not for Me," "They All Laughed," "Embraceable You" and "The Man I Love."

Gershwin, Ira (1896–1983) American song lyricist, noted for his distinguished collaboration with his brother George GERSHWIN during the 1920s and 1930s. Ira Gershwin put words to the music composed by his brother, creating such classic songs as *I Got Rhythm*, *Summertime*, *The Man I Love*, *S'Wonderful* and *Embraceable You*, among many others. The brothers' musical *Of Thee I Sing* (1932) was the first musical to win a PULITZER PRIZE for drama, and Ira Gershwin was the first lyricist to receive that honor. Their other musical collaborations included the Broadway show *Lady Be Good* (1924) and the operatic *Porgy and Bess* (1935). Gershwin also worked with his brother on a number of HOLLYWOOD films, and with other notable composers such as Harold ARLEN and Kurt WEILL, writing lyrics for *A Star Is Born*, *Cover Girl*, and *Lady in the Dark*. He is a member of the Songwriters Hall of Fame.

Gerstenmaier, Eugen Karl Albrecht (1906–1986) German diplomat. Gerstenmaier was postwar leader of WEST GERMANY's Christian Democrats and the architect of that country's reconciliation with ISRAEL. He was jailed under the Third Reich for his involvement in the 1944 army plot to kill Adolf HITLER. From 1954 to 1969, he was president of the lower house of West Germany's parliament.

Gesell, Arnold L(ucius) (1880–1961) American psychologist. In the 1930s and 1940s, Gesell was a dominant figure in American psychology by virtue of his systematic studies of the nature and timing of intellectual and emotional development in children. In 1911, Gesell founded the highly influential Yale University Clinic of Child Development, which he served as director until 1948. Two of his major works, coauthored with F. L. Ilg, were *Infant and Child in the Cul-*

ture of Today (1943) and *The Child from Five to Ten* (1946). Subsequent generations of psychologists have criticized Gesell's findings due to his exclusive reliance on white, middle-class children as experimental subjects and his rigid insistence on developmental patterns that took little account of individual variations.

gestalt psychology Originating in Germany in the early 1920s, gestalt psychology is a "school" that emphasizes "wholes"—that is, the organization, shape and unity of one's perception, behavior and experience. The German term *gestalt* means "pattern" or "form." Published studies on the organization of perception and the "phi phenomenon" by German psychologist Max WERTHEIMER (from 1912) established the gestalt school. Other leading gestaltists are Wolfgang KOHLER, Kurt KOFFKA, and Fritz and Laura PERLS. Gestalt psychology has had a profound impact on theories of learning because of its emphasis on perception as a dynamic system involving the interaction of all elements and human beings as active problem-solvers, not just passive responders to stimuli.

Gestapo Secret state police in Nazi GERMANY, officially known as the Geheime Staatspolizei. It was organized in 1933 by Hermann GÖRING as a Prussian political police force. Over the next few years the Gestapo came under the influence of Heinrich HIMMLER, who expanded it and took official control in 1936, the year it was absorbed into Himmler's ss (Schutzstaffel), which had been created as HITLER's personal guard. Three years later the Gestapo was combined with the SS's intelligence branch, the SD (Sicherheitsdienst), supervised by Reinhard Heydrich and, after Heydrich's assassination in 1943, by Ernst Kaltenbrunner. The Gestapo's daily operation was headed by Heinrich Mueller. Together, the SS, the SD and the Gestapo had enormous powers. The Gestapo's basic task was to eliminate all opposition to NAZISM in Germany and, after the start of WORLD WAR II, in occupied countries, a task it handled with ruthless and brutal efficiency. With virtually absolute power to arrest, torture, im-

prison in CONCENTRATION CAMPS or execute any person, its six sections handled all areas of possible opposition, from the religious to the political. Among its duties was the extermination of the JEWS, a subsection headed by the infamous Adolf EICHMANN. Gestapo membership from 1943 to 1945, the years of its greatest activity, has been estimated as between 30,000 and 50,000.

Getz, Stan (1927–1991) American jazz musician, considered jazzdom's foremost tenor saxophone lyricist. Influenced by the following melodicism of Lester YOUNG, who had achieved fame with Count BASIE's band in the early 1940s, Getz fashioned an imitable style marked by a light, vibratoless sound and a sophisticated, indeed, elegant, diatonically based harmonic sensibility. A child prodigy, Getz made his first recording at the age of 16 as a sideman with trombonist Jack TEAGARDEN; important big band stints included Stan KETON (1944–45), Benny GOODMAN (1945–46) and Woody HERMAN (1947–49). Getz's translucent and virtuosic ballad solo on Ralph Burns's "Early Autumn" (with Herman) established the young tenorist as a major figure and led to his dominance of the important jazz polls during the 1950s and 1960s; historically, by sustaining his lyrical approach in the face of the comparatively extroverted BEBOP revolution, Getz became a "leader" of the so-called cool approach that became centered in Los Angeles. In 1961, Getz achieved notable success with "Focus" (1961), a "third stream" amalgam of jazz improvisation and classically oriented scoring. A year later, he scored another hit with his adroit adaptation of the insinuating bossa nova rhythm from Brazil with composer/pianist Antonio Carlos Jobim, guitarist João Gilberto and singer Astrid Gilberto; their version of Jobim's "Girl from Ipanema" even made the pop music charts. Getz continued as one of jazzdom's most distinctive and satisfying soloists working primarily in small-group, acoustic settings. He also gained notoriety because of his widely publicized drug addiction and a landmark divorce case that went to the U.S. Supreme Court in 1990.

Ghana (Republic of Ghana) The nation of Ghana is located on the West

African coast and covers an area of 92,133 square miles. Originally governed by Great Britain as the Gold Coast Colony, the country became independent in 1957, merging with British Togoland to form present-day Ghana. Under its first president, Dr. Kwame NKRUMAH, Ghana became a republic in 1960 and a socialist state in 1964. A military coup in 1966 brought successive military and civilian governments, none of which could maintain political or economic stability. Flight-Lieutenant Jerry Rawlings led a successful coup in 1981 and established a Provisional National Defense

Council to bring about a democratization of the country. Though challenged by several coup attempts, a planned attack by American mercenaries and Ghanaian exiles in 1986, and student and labor protests, Rawlings had held on to power and continued to move toward economic and political reform. Despite attempts at reconciling the government and opposition parties through a multiparty constitution in 1992, violence continued to erupt sporadically until the end of Rawlings's eight years as president in 2000. Term limits precluded his running for a third time, and John Kufuor

of the New Patriotic Party was elected president. Kufuor was reelected in 2004.

Ghelderode, Michel de (1898–1962) Belgian playwright. Ghelderode's plays were among the first works to point toward the dramatic movement that ultimately became known as the THEATER OF THE ABSURD. Ghelderode was especially well known for his adept black humor. He wrote over 50 plays, most of which were in a comic vein. Most notable among them were *Les Viellards* (1919), *Escorial* (1927), *Barabbas* (1928), *Fastes d'enfer* (1929), *Pantagléize* (1929), *Hop! Signor* (1935) and *Mademoiselle Jaire* (1934).

Gheorghiu-Dej, Gheorghe (Gheorghe Gheorghiu) (1901–1965) Romanian communist leader, prime minister (1954–61) and president (1961–65) of ROMANIA. Gheorghiu began his career as a railway worker and became active in the outlawed Romanian Communist Party (1929). He was arrested and imprisoned in 1933 at Dej in northern Transylvania. Escaping in 1944, he added the suffix "Dej" to his name. He quickly became involved in national politics. He was made secretary general of the Communist Party, and in March 1945 became economic minister in the new coalition government. After the communists proclaimed Romania a "People's Republic" (Dec. 30, 1947), Gheorghiu-Dej jockeyed for position within the party and ultimately eliminated his chief rivals in a 1952 purge. He was an early communist supporter of Soviet premier KHRUSHCHEV's call for PEACEFUL COEXISTENCE between the East and West. While favoring close relations with the Soviet Union, he managed to steer an independent course for Romania. On his death the mantle of leadership passed to his protegee, Nicolae CEAUȘESCU.

Ghia, Giacinto (1887–1944) Italian designer and builder of automobile bodies. Ghia learned his skills in a Turin body shop and became known for his custom designs for luxury and sports cars. Since Ghia's death, his firm has carried on under the direction of Mario Boana. Ghia bodies have been developed for exotic Italian cars including the Maserati, but the best-known

GHANA

- 1901 Britain absorbs northern remnants of Ashanti empire into its Gold Coast Colony.
- 1903 First railroad completed.
- 1920 Gold Coast exports one-half of world's cocoa; spread of cocoa farming encourages breakup of tribes' communal land holdings into private plots.
- 1928 First deepwater port built at Takoradi.
- 1947 Moderate nationalists found Gold Coast Convention.
- 1949 Kwame Nkrumah founds radical Convention People's Party; campaigns for independence.
- 1957 Independence and merger with former British Togoland creates Ghana; Nkrumah first president.
- 1960 Ghana sends troops to Congo to assist Patrice Lumumba.
- 1961 Black American scholar W. E. B. DuBois assumes chair at university after renouncing American citizenship.
- 1964 Nkrumah declares "socialist single party state."
- 1965 Falling price of cocoa cripples economy.
- 1966 While on visit to China, Nkrumah ousted by military; completion of huge Akosombo hydroelectric project.
- 1969 Kofi Busia elected prime minister.
- 1972 Military coup.
- 1975 Economy worsens; migration to Nigeria increases; food imported as cocoa production continues.
- 1977 Doctors and lawyers go on strike; military agrees to elections.
- 1981 Second coup by Flight Lt. Jerry Rawlings results in revolutionary government.
- 1982 Rawlings seeks ties with Cuba and Libya.
- 1983 Almost one million people forced back to Ghana from Nigeria.
- 1986 Exiles plot to overthrow Rawlings with American mercenaries.
- 1990 Ghana joins first modern inter-African peacekeeping force to end Liberian civil war.
- 1992 New constitution goes into effect.
- 2000 End of Rawlings's term as president; John Kufuor is elected president.
- 2004 Kufuor is reelected president.

and most widely visible Ghia design is the special sport body developed for the VOLKSWAGEN Beetle chassis and engine, known as the Karmann Ghia. The firm was absorbed by Ford in 1972.

Giacometti, Alberto (1901–1966)
Swiss sculptor and painter. Son of the impressionist painter Giovanni Giacometti (1868–1933), he studied at the École des Art-et-Metiers in Geneva

(1919). Traveling with his father to Italy in 1920, he spent two years there studying various historical art styles. Settling in Paris in 1922, he studied with the sculptor Antoine Bourdelle. Becoming associated first with CUBISM, then with SURREALISM, he produced his first important sculptures, such as the surrealist-tinged *Palace at 4 A.M.* (1933, Museum of Modern Art, N.Y.C.). In the 1930s, Giacometti began to create the ghostly, elongated human figures

with scarred and pitted surfaces, usually cast in bronze, for which he became famous. These strange and haunting sculptures project a kind of existential aloneness and, as such, have been hailed as emblems of 20th-century alienation. Monumental in feeling, whatever their size, these works have had a great influence on modern sculpture. Among them are *Walking Man II* (1960, Rijksmuseum Kroller Muller, Otterloo) and *Head of a Man* (1961,

Hirshhorn Museum and Sculpture Garden, Washington, D.C.).

Giacometti, Diego (1902–1985) Swiss-born furniture designer and sculptor. For some 40 years, in a collaboration unique in 20th-century art history, Diego Giacometti harnessed his own creative energies to those of his older brother, world-renowned sculptor Alberto GIACOMETTI, who died in 1966. Diego sat constantly for his brother, and his head became almost a signature of Alberto's art. After his brother's death, Diego won fame in his own right as a creator of rough-hewn bronze furniture ornamented with bird and animal heads and foliage.

Giaever, Ivar (1929–) Norwegian-American physicist. Giaever studied electrical engineering at the Norwegian Institute of Technology. He did service with the Norwegian army (1952–53) and worked as a patent examiner in the Norwegian Patent Office (1953–54). In 1954 he immigrated to Canada to take up the post of mechanical engineer with the Canadian General Electric Company, transferring to General Electric's Research and Development Center in Schenectady, New York, in 1956. He gained his doctorate in 1964 from Rensselaer Polytechnical Institute.

At General Electric, Giaever worked on tunneling effects in SUPERCONDUCTORS, a phenomenon explored by Leo ESAKI. In 1960 he performed experiments with metals separated by a thin insulating film through which electrons tunneled, and found that if one of the metals was in the superconducting state, the current-voltage characteristics of such junctions revealed much about the superconducting state. This laid the foundation for Brian JOSEPHSON's important discovery of the **Josephson effect**. Giaever, Josephson and Esaki shared the 1973 NOBEL PRIZE in physics for their various contributions to knowledge of the phenomenon of tunneling and superconductivity. Their work has had important application in microelectronics and in the precise measurement of electromotive force. Subsequently, Giaever has also published work in the field of visual observation of the antibody-antigen reaction.

Giamatti, A(ngelo) Bart(lett) (1938–1989) American scholar who

served as president of Yale University and as commissioner of Major League Baseball. Originally a noted literature professor, Giamatti became the youngest man in 200 years to be named president of Yale when he was selected to succeed Kingman Brewster in 1978 at the age of 40. He confronted a series of challenges ranging from a \$10 million debt (which he eventually overcame) to a rancorous strike by members of a newly formed union of clerical and technical workers. A longtime baseball fan, he readily accepted an offer to serve as president of the National League upon his retirement from Yale in 1986. In September 1988, baseball owners voted to select him as commissioner of baseball, a post he took up on April 1, 1989. His five months as commissioner were dominated by the controversy surrounding Cincinnati Reds manager (and former superstar player) Pete ROSE, who was accused of betting on baseball. Eight days before his death Giamatti suspended Rose from baseball for life. Giamatti was widely admired for his commitment to honesty, fairness and excellence.

Giancana, Sam "Momo" (1908–1975) American gangster. He began his criminal career early, first attracting notice as a gun runner for Al CAPONE in the mid-1920s. An active but not particularly slippery mobster, Giancana was arrested over 70 times and served a number of terms in jail. He rose to become an infamous MAFIA boss in Chicago, and was alleged to be involved in CIA plots to assassinate Fidel CASTRO during the 1960s.

Giannini, A(madeo) P(eter) (1870–1949) American banker who revolutionized the banking industry and instituted practices that became standard in the 20th century. Of Italian heritage, Giannini was a resident of San Francisco, California. In 1904 he founded a new bank, designed to serve ordinary citizens—Italian immigrants as well as others—in San Francisco. Loans from the Bank of Italy helped citizens rebuild after the 1906 SAN FRANCISCO EARTHQUAKE. Giannini was the first banker to open branch offices of his bank, and the first to advertise his services. By offering farm mortgages at reasonable interest rates, Giannini helped spur California agriculture;

his loans to movie studios also helped the film industry. In 1930, the Bank of Italy was renamed the Bank of American National Trust and Savings Association. Giannini handed control of the bank to his son Lawrence Mario Giannini in 1936. Shortly after World War II, the Bank of America became the world's largest bank, with 538 branches and over \$8 billion in assets by 1954. As Bank America Corp., it was still ranked number one in 1979, with \$92 billion in assets, but it fell on hard times as THIRD WORLD nations defaulted on loans.

Giap, Vo Nguyen (1912–) North Vietnamese general and minister of defense. Giap was born in 1912 in the French protectorate of Annam, which later became part of North Vietnam. Active in the communist underground, he was recruited into the VIET MINH movement in the early 1940s. During the FRENCH INDOCHINA WAR OF 1946–54, Giap was the Viet Minh's leading military commander, and he directed the stunning victory over the French at DIEN BIEN PHU. With independence, he became North Vietnam's minister of defense. During the war with South Vietnam, Giap advocated direct clashes with American forces, a strategy that cost North Vietnam more than half a million soldiers from 1964 to 1969 (see VIETNAM WAR). In 1972, Giap convinced the government that, with the heavy withdrawals of U.S. forces, the time had finally come to launch a massive invasion of the South, which again proved disastrous. Thereafter, Giap was replaced as commander by Van Tien Dung, who planned and executed the final offensive that brought North Vietnam ultimate victory in 1975. In 1980, Van Tien Dung also replaced Giap as minister of defense. In 2003 Giap greeted Cuban president Fidel Castro on his visit to Vietnam.

Gibbs, Sir Humphrey Vicary (1902–1990) British diplomat. The last British governor of Rhodesia (now ZIMBABWE), he was appointed to the post by Queen ELIZABETH II in 1959 and served until 1969. He spent the last four years of his tenure as a recluse in the governor's residence, following a unilateral declaration of independence by the white minority government of Prime Minister Ian D. SMITH in 1965.

He was unable to leave the residence until 1969, when Smith declared Rhodesia a republic. He then retired to his 6,500-acre farm there.

Gibbs, William Francis (1886–1967) American naval architect, the primary designer in the firm of Gibbs and Cox. Gibbs was responsible for a large number of naval and merchant ships including the OCEAN LINERS *America* and, his last great achievement, the *United States*. Gibbs was known for his obsessive concern with excellence and with matters of safety in passenger ships. His concern for fire safety led to many innovations in ship interiors aimed at the elimination of inflammable wood and textiles. The *United States* was the largest and most successful American passenger ship ever built. It established speed records for trans-Atlantic crossings that have never been exceeded. It was withdrawn from service and eventually scrapped when ship transportation declined as a result of the success of postwar airplanes, particularly jets, which made even the fastest ships seem unreasonably slow.

Gibraltar The British colony of Gibraltar, which covers only 2 1/3 square miles, is a peninsula connected to SPAIN and jutting southward between Algeciras Bay on the west and the Mediterranean Sea on the east. Because it guards the narrow strait (Strait of Gibraltar) that links the Mediterranean and the Atlantic Ocean, Gibraltar has had tremendous strategic importance throughout history. Its harbor became a key naval base for the Allies during World Wars I and II. Friction over Spanish claims to the colony intensified during the 1960s, culminating in Spain's closing of the international land frontier between Spain and Gibraltar in 1969. Improved relations between Britain and Spain resulted in the 1985 reopening of the border and the scheduling of talks concerning the issue of sovereignty over Gibraltar. The talks, which continued sporadically ever since, did not result in a resolution of the long-standing dispute. In 2002 Gibraltar's residents voiced their displeasure at British-Spanish bilateral negotiations for the cession of the colony to Spain by rejecting the territory's joint rule from London and Madrid.

Gibraltar dispute The British territory in southern SPAIN commanding the entrance to the Mediterranean, captured by Britain in 1704 and formerly a strategically important naval base, was claimed by Spain in 1939. The UN recognized the claim in 1963, with Britain asserting the wish of the population expressed overwhelmingly in a referendum was to remain British. The Spanish government closed the frontier in 1969, but, following discussions (1977–80), ended the blockade. Gibraltar continued to represent a minor obstacle to greater British cooperation with Spain, a fellow member of the EUROPEAN UNION (EU). The Gibraltar constitution of 1969 required that any transfer of the territory's control reflect the inhabitants' wishes. In 2002 Gibraltar's residents, who opinion polls showed preferred by a large majority to remain under British authority, voiced their displeasure at the ongoing negotiations between London and Madrid.

Gibran, Kahlil (Jubran Kahlil Jubran) (1883–1931) Lebanese poet, novelist, essayist, and painter. Gibran won an enduring worldwide fame for *The Prophet* (1923), a volume of inspirational poetry and prose in a highly spiritual vein. *The Prophet* has remained steadily in print over the decades and has been translated into over 20 languages. Gibran studied art with Auguste Rodin in Paris before immigrating to the U.S. in 1912. He wrote in both Arabic and English. Gibran's works were especially influential in the American popular culture of the 1960s. Other books include *The Earth Gods* (1931), *The Garden of the Prophet* (1933), *The Death of the Prophet* (1933), *Tears and Laughter* (1947) and *Nymphs of the Valley* (1948).

Gibson, Bob (1935–) American baseball player. One of the most dominant pitchers of the modern era, Gibson was named the National League's Most Valuable Player in 1968, a year in which he turned in 13 shutouts and 15 consecutive wins for the St. Louis Cardinals. His postseason play was consistently stellar, and he won the deciding game in two World Series. He is second only to Whitey Ford in World Series wins and strikeouts. An excellent all-around athlete and fierce competitor, he won nine Gold Gloves for his

fielding, and was also a rarity in that he was a good-hitting pitcher, with 24 home runs to his credit. He was named to the Hall of Fame in 1981.

Gide, André (1869–1951) French novelist and essayist. Gide, who won the NOBEL PRIZE in literature in 1947, remains one of the most widely read French authors of the 20th century. He was raised as a Catholic, and his work is filled with the tension that stemmed from his own rejection of traditional religious belief and his simultaneous discomfort with the absence of absolute values that was the hallmark of secular society. In his first major novel, *The Immoralist* (1902), Gide described, in a North African setting, the decadent embrace of sensuality by a protagonist who had left behind the psychological anchors of religion and marriage. *Strait Is the Gate* (1909) further explores the conflict between Catholic belief and sensual temptation. In *Corydon* (1924), Gide defended his own homosexuality with reference to Greek societal ideals. *The Counterfeiters* (1926), his most famous novel, explores the nature of artistic creation and societal ethics. In *Return from the USSR* (1936), Gide rejected the communist beliefs that had tempted him during the depression era. *If It Die* (1936) is his autobiography.

Gideon v. Wainwright (right to counsel on arrest) (1963) The 1963 landmark criminal case that established a constitutional right to counsel for all persons tried for a crime in the U.S., in both state and federal courts. Gideon was accused and convicted of breaking into and stealing money from a poolhall in Florida. He could not afford a private attorney and had none at trial; at the time, only persons accused of capital crimes received free court-appointed counsel. On appeal the U.S. Supreme Court held that in any criminal case, in either state or federal court, indigent parties must be provided with free counsel. Gideon's appeal was funded by the ACLU and was handled by Abe FORTAS, who was himself appointed to the Supreme Court a few years later. Because of the favorable appeal Gideon was retired and this time—with the help of an attorney—he was acquitted of all charges.

Giedion, Sigfried (1894–1968) Swiss-American architectural and design historian who played a significant role in the development and recognition of modern concepts in all aspects of design. Giedion studied art history in Zurich and Berlin and earned his doctorate under Heinrich Wölfflin at Munich. His 1938 lectures at Harvard formed the basis for his 1941 book, *Space, Time and Architecture*, one of the first works to place modern architecture in an historical context. It also created a new understanding and appreciation of the role of Baroque design in relation to MODERNISM. His *Mechanization Takes Command* of 1948 takes a similarly serious historical view of the development of utilitarian objects and is recognized as a basic work of design history. A number of other Giedion books deal with various aspects of art and architectural history. Giedion was among the founding members of the CIAM (International Congress of Modern Architecture).

Gielgud, (Sir) (Arthur) John (1904–2001) English stage and film actor and stage director. Gielgud was one of the most acclaimed stage actors of the 20th century. He is especially well-known for his Shakespearean portrayals, in which he utilized his elegant profile and mellifluous voice to great effect. A great nephew of the famous English actress Ellen Terry, he was trained at the Royal Academy of Dramatic Art. He first won international fame for his portrayals of Hamlet and other Shakespearean leads while performing with the London-based Old Vic Company in the 1920s and 1930s. Gielgud also proved himself a deft comedic actor in the role of John Worthing in a 1930 performance of the Oscar Wilde classic, *The Importance of Being Earnest*. Gielgud remained active in the theater as both an actor and director in the decades that followed. From 1956 to 1964, he appeared worldwide in his one-man performance of Shakespearean soliloquies, *The Ages of Man*. In later life Gielgud appeared frequently as a film character actor. He won a best supporting actor ACADEMY AWARD for his comedic role in *Arthur* (1981).

Gierek, Edward (1913–2001) Polish Communist Party leader (1970–80).

Following food riots in 1970, Gierek replaced Władysław GOMULKA as party leader. He attempted to raise living standards through production of more consumer goods. However, he encountered increasing opposition from dissident students and from the Catholic Church, which was encouraged by the election of Cardinal Wojtyła of Kraków as pope in 1978 (see JOHN PAUL II). The emergence of the independent trade union SOLIDARITY in 1980 and further strikes raised doubts about his leadership, and he retired following a heart attack.

Giesecking, Walter (1895–1956) German pianist. Born in Lyon, France, of German parentage, Giesecking studied at the Hanover Conservatory, graduating in 1916. He made his debut in London seven years later, toured widely in Europe, and made his American debut in 1926. Thereafter, he made many successful tours, concertizing throughout the world. Noted for his rigorous precision, his brilliant technique and his wide repertoire, he was particularly skilled at performing French Impressionist works and was a great interpreter of the music of Claude DEBUSSY.

Gigli, Beniamino (1890–1957) Italian opera singer. Considered one of the great Italian tenors of the 1920s through the 1940s, Gigli first gained international attention when he won a vocal competition in Parma in 1914. Successful appearances throughout Europe followed, and eventually led to his American debut at the Metropolitan Opera as Faust in *Mefistofele* in 1920. After Enrico CARUSO's death in 1921, Gigli was principal tenor of the Met until 1932. Thereafter, he sang mostly in Europe, primarily as La Scala in Milan. Noted for the natural beauty of his voice and his technical mastery, he was best known for the title role in *Andrea Chenier*, Cavaradossi in PUCCINI's *Tosca* and Des Grieux in *Manon Lescaut*, and Nemorino in *L'Elisir d'Amour*.

Gilbert, Cass (1859–1934) American architect of major importance in the era of eclecticism. His best-known work in the Woolworth building (1911–13) in New York, for many years the tallest building in the world (760 feet). It is a modern office building of steel-frame construction, but its

exterior design is based on medieval Gothic forms typical of the great cathedrals. Its lobby, rich with pseudo-Byzantine mosaics, is ornamented with “gargoyle” portraits of Woolworth and Gilbert. It was designated “the cathedral of commerce” and represented an outstanding effort to make the Gothic style applicable to tall, modern buildings. In contrast, one of his last works, the Supreme Court building in Washington, D.C. (1935), is modeled on a Roman Corinthian temple.

Gilels, Emil Grigoryevich (1916–1985) Soviet concert pianist, widely regarded as one of the giants of the keyboard in the decades after World War II. Gilels was one of the first outstanding Soviet musicians to be allowed to perform in the West. His 1955 U.S. debut was preceded by several European engagements. After that, he appeared regularly in both the U.S. and Europe, performing in solo recitals and with leading Western orchestras and conductors. Gilels combined a powerful technique with refined musical intelligence and sensitivity. He was especially noted for his performances of the masterworks of Beethoven and Brahms, and made numerous recordings.

Giles, Warren (1896–1979) American baseball executive. As general manager of the Cincinnati Reds (1936–48), Giles led the team from last place in the National League to the pennant in 1939 and World Series championship in 1940. He was later president of the Reds (1948–51) and president of the National League (1951–69).

Gilford, Jack (Jacob Gellman) (1907–1990) American actor. A comic actor in theater, films and television, he was blacklisted in the years following World War II. In an appearance before the HOUSE UN-AMERICAN ACTIVITIES COMMITTEE in 1956, he refused to answer questions as to whether he was a communist. He later said that it was 10 years before he was offered another film or television job. One of his best known roles was that of Hysterium in the theater and film versions of *A Funny Thing Happened on the Way to the Forum*. His other films included *Enter Laughing* (1967), *Catch-22* (1970) and *Cocoon* (1985). He was nominated for

an ACADEMY AWARD for his performance in *Save the Tiger* (1973).

Gill, Arthur Eric Rowton (1882–1940) English artist, sculptor and type designer best known for his design of several modern typefaces. Gill studied at the Central School of Arts and Crafts in London and became known as an illustrator and book designer, working in a restrained and craftsmanly vocabulary within the developing idiom of MODERNISM. He was also a craftsman carver of architectural lettering on stone and so came to the design of typefaces for the Monotype Corporation. His Gill Sans, a modern sans serif face of 1928, has become a widely used modern typeface. Gill was also a religious and sociological thinker who combined concern for art and design with interest in social theory.

Gillespie, John Birks “Dizzy” (1917–1993) American jazz musician, bandleader and composer. Born in Cheraw, S.C., the son of a part-time musician, Gillespie played in the early part of his career with Teddy Hill, Edgar Hayes, Benny Carter and Cab CALLOWAY. At Minton’s Playhouse in Harlem, Gillespie jammed with Charlie PARKER, Thelonius MONK and others, helping to invent the jazz style called BEBOP, a term that Gillespie is credited with coining. In the 1940s he composed many bebop and other modern standards, and he guest-starred with the bands of Lionel HAMP-TON, Duke ELLINGTON and others. He formed and headed Billy ECKSTINE’s orchestra in 1944, led his own big band from 1946 to 1950 and continued to perform in a variety of venues for the next four decades. Lauded as a virtuoso performer, a musical innovator and a great entertainer, Gillespie is recognized as the father of the modern jazz trumpet and one of the all-time jazz greats.

Gilliatt, Penelope (1932–1993) British novelist, story writer, film critic and screenplay writer. Gilliatt, an accomplished and versatile writer, remains best known in the U.S. for her long stint (1967–79) as film critic for *THE NEW YORKER*, a position she shared with Pauline Kael. She has also published a number of critically acclaimed novels

including *One by One* (1965), *A State of Change* (1967), *The Cutting Edge* (1978), and *Moral Matters* (1983). Her most noteworthy screenplay was for *Sunday Bloody Sunday*, a British film directed by John Schlesinger, which starred Peter Finch and Glenda JACKSON.

Gilmore, Mary Jean Cameron (1865–1962) Australian poet. One of the premier poets of Australia, Gilmore also taught and helped found an experimental socialist community in Paraguay in 1893. Her poetry collections include *Marri’d and Other Verses* (1910), *The Disinherited* (1941), *Pro Patria Australia and Other Poems* (1945) and *Verses for Children* (1955), one of many collections of juvenile poetry. Gilmore also wrote two volumes of autobiography, *Old Days, Old Ways: A Book of Recollections* (1934) and *More Recollections* (1935). She was named Dame Commander of Order of the British Empire in 1936.

Gil-Robles, José María (1899–1980) Spanish politician. A Christian Democrat, Gil-Robles led a conservative political coalition in the years before the SPANISH CIVIL WAR. At age 33 he was elected head of the Spanish Confederation of the Right. In 1935 he became minister of war. He was abroad when General Francisco FRANCO led the uprising against the Spanish republic. Gil-Robles remained in self-imposed exile for 17 years before returning the establish himself as a prominent critic of the Franco government.

Gilroy, (Sir) Norman T(homas) (1896–1977) Australian, Roman Catholic cardinal. Gilroy was elected to the college of cardinals in 1946, thereby becoming the first Australian-born cardinal in the history of the Catholic Church. He served in the Australian armed forces during World War II, then pursued theological studies in Rome and was ordained a Roman Catholic priest in 1923. From 1940 through 1971, Gilroy was the archbishop of Sydney, Australia. In 1969, he was knighted by Britain’s Queen ELIZABETH II.

Gilruth, Robert Rowe (1913–2000) U.S. engineer and space scientist. Director of NASA’s Project MERCURY from 1958 to 1961 and director of the Manned Spacecraft Center (now

Johnson Space Center) at Houston from 1961 to 1972, Gilruth played a key role in shaping the early U.S. program for human spaceflight. An aerospace engineer with five doctoral degrees and numerous awards in his field, Gilruth continued to serve as a consultant to NASA after his retirement from the Manned Spacecraft Center in 1973. He was named to the National Space Hall of Fame in 1969 and the International Space Hall of Fame in 1976.

Ginastera, Alberto (1916–1983) Argentinian composer, known for his modern eclectic style. Ginastera’s early nationalistic work in the late 1930s and 1940s combined folksong and dance with characteristic cultural rhythms. His later work was described as “neo-expressionist” (see EXPRESSIONISM). His operas, particularly *Bommarzo* and *Beatriz Cenci*, received wide attention for segments that were considered violent and sexually explicit. Ginastera also composed concertos, vocal and chamber music, and film scores. He received Argentina’s national prize in 1940.

Ginsberg, Allen (1926–1997) American poet and diarist. Ginsberg is one of the most famous poets of modern times. He remains best known for his highly visible position of leadership—along with friends and fellow writers William BURROUGHS and Jack KEROUAC—in the BEAT GENERATION literary movement that burst into prominence in the 1950s. Ginsberg produced his best poems in that era, most notably *Howl and Other Poems* (1956), the title poem of which was unsuccessfully prosecuted as obscene. *Howl*, with its long, free-verse lines reminiscent of Walt Whitman, exemplifies Ginsberg’s poetics of spontaneous composition with attention paid to the natural wanderings of the mind and the rhythms of breathing. Ginsberg was a key figure in the political protest and psychedelic exploration of the 1960s. His other major books of verse include *Kaddish and Other Poems* (1961), *Reality Sandwiches* (1963), *Airplane Dreams* (1969), *The Fall of America, Poems of These States* (1973), *Collected Poems* (1984) and *White Shroud* (1986). With Burroughs he wrote *The Yage Letters* (1963).

Beat poet Allen Ginsberg (left) with LSD guru Timothy Leary (center) and Ralph Metzner (right) at the Village Theater, New York, c. 1965 (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

Ginzburg, Alexander (1936–2002) Writer and dissident. An employee of the State Literary Museum, Ginzburg edited the journal *Syntaxis*, which expressed discontent with the Soviet way of life. In 1960 Ginzburg was prosecuted by the KGB in connection with this, and was convicted and given a sentence of two years in corrective labor camps. In 1964 the KGB charged Ginzburg with possessing “anti-Soviet” literature, but the case was dismissed. In 1967 Ginzburg and Yuri Galanskov were arrested on the grounds of anti-Soviet agitation and propaganda, and tried in 1968. Despite massive support at home and abroad, Ginzburg was sentenced to five years and Galanskov seven years hard labor.

Ginzburg, Natalia (1916–1991) Italian novelist and dramatist. Ginzburg published her early work under the pseudonym Alessandra Tournimparte. Her first book, *La strada che va in città* (The road of the city, 1942), consisted of two novellas—the title work and “The

Dry Heart.” It was with her third work, the novel *Tutti i nostri ieri* (1952, translated as *A Light for Fools*, 1956), noted for its ruefully comic treatment of tragic themes, that she began to receive international attention. Her dispassionate, contained style drew comparisons to that of Chekhov. Of her plays, perhaps best known is *The Advertisement*, first produced at the Old Vic in London in 1968 and winner of the Marzotto Prize for European Drama. Other works include the novels *Caro Michele* (1973, translated as *No Way* in 1974, and as *Dear Michael* in 1975) and *All Our Yesdays* (1985).

Giolitti, Giovanni (1842–1928) Italian statesman, five-time premier (1892–93, 1903–05, 1906–09, 1911–14, 1920–21). Born in Mondovì in the Piedmont region, Giolitti was educated in Turin and began his career as a civil servant. He entered parliament as a Liberal in 1882, serving there until his death. As prime minister for a total of 11 years, longer than any other Italian ex-

cept MUSSOLINI, he favored progressive reforms, introducing universal male suffrage (1912), social security and a variety of liberal agrarian, labor and social policies. In foreign policy, he led his nation into the Italo-Turkish war to conquer LIBYA (1911) and opposed Italy's entry into WORLD WAR I. By allowing Fascist candidates to stand for election in 1921, he opened the door to the rise of Mussolini, whom he at first supported but publicly condemned in 1924.

Giovanni, Nikki (Yolande Cornelia Giovanni) (1943–) American poet. Giovanni became an activist in the CIVIL RIGHTS MOVEMENT while attending Fisk University in the 1960s. Her early poetry, such as *Black Feeling*, *Black Talk* (1968) and *Re: Creation* (1970), reflects her political views and her anger at society's rejection of them, as well as the more universal themes of love and self-discovery. Her later works, while less embittered, continue to explore the search for one's identity. These include *Cotton Candy on a Rainy Day* (1978), which, as she has done with much of her poetry. Giovanni recorded; *Those Who Ride the Night Winds* (1983) and *Sacred Cows and Other Edibles* (1988). Giovanni has also written *Gemini: An Extended Autobiographical Statement on My First Twenty-five Years of Being a Black Poet* (1971), and published dialogues with James BALDWIN and Margaret Walker.

Gippius (Hippius), Zinaida Nikolayevna (1867–1945) Russian symbolist poet. Gippius was a member of the Religious and Philosophical Society and wrote in a metaphysical vein. Leaving Russia in 1919 after the Russian Revolution, she continued writing poetry, plays, novels and short stories, many of which displayed bitter opposition to Bolshevism. Her most important novel is *The Devil's Puppet* (1911).

Giraud, Henri-Honoré (1879–1949) French general. A career military man, Giraud served in WORLD WAR I and was later (1922–25, 1930–36) a commander in MOROCCO. Early in WORLD WAR II he was captured by the Germans during the invasion of FRANCE in 1940. He made a bold escape in 1942, fleeing to unoccupied France, Gibraltar and finally North Africa, where he

French general
Henri-Honoré Giraud.
(1940) (LIBRARY OF
CONGRESS, PRINTS AND
PHOTOGRAPHS DIVISION)

participated in the Allied landing and became commander in chief of French forces. After the assassination of Admiral DARLAN in December, 1942, he was also made French high commissioner in Africa. He and de GAULLE cofounded the French Committee of National Liberation in June, 1943, but his deeply rooted conservatism earned Giraud the distrust of most of the FREE FRENCH. Pressured by de Gaulle, he retired as commander in chief in April 1944. After the war, he served in the Constituent Assembly.

Giraudoux, Jean (1882–1944) French playwright and novelist. Giraudoux, who also enjoyed a long and distinguished career as a diplomat, was one of the leading figure in French theater of this century. He began his writing career as a novelist, producing works including *Suzanne and the Pacific* (1921). But it was as a playwright that he made his real mark. Giraudoux combined an optimistic view of human nature with a subtle poetical style to produce works of warmth and humor that are still widely performed. His major plays include *Amphitryon 38* (1929), *Tiger at the Gates* (1937) and *The Madwoman of Chaillot* (1945).

Giri, V(arahagiri) V(enkata) (1894–1980) President of INDIA (1969–74). A militant trade unionist and pacifist, Giri organized and headed the Bengal-Nagpur railwaymen's union, which grew

into a large national working-class movement. As president, between 1969 and 1974 he worked closely with Prime Minister Indira GANDHI. He endorsed several of her government's measures, including nationalizing the country's banks and ending the practice of paying stipends to the country's princes. However, his own radical proposals for ending poverty and unemployment in India went largely unheeded.

Giroux, André (1916–1977) French-Canadian novelist and story writer. One of the major French-language writers to emerge from Canada, Giroux was educated in the Quebec Academy and served in the provincial civil service before being named to the Quebec mission in Paris in 1963. Key themes in the fiction of Giroux include the hypocrisy of societal values and the psychological isolation of the individual. His major works include the novels *Au delà des visages* (1948, winner of the Prix David) and *La gouffre à toujours soif* (1953), and the story collection *Malgré tout, la joie* (1959, winner of the Governor General's Award).

Giscard d'Estaing, Valéry (1926–) President of FRANCE (1974–81). A member of the National Assembly from 1956 to 1974, Giscard was leader of the Independent Republican Party, which supported the GAULLISTS after 1959 but retained its independence. Minister of finance under three succes-

sive prime ministers from 1962 to 1974, on the death of POMPIDOU (1974) Giscard was elected president, beating Gaullist and left-wing opponents. Though supported by Gaullists in the National Assembly, growing friction within the majority and alleged scandals, notably over gifts from Emperor BOKASSA of the Central African Empire, weakened his campaign for reelection in 1981 and led to his defeat by François MITTERRAND. Since 1989, Giscard has remained actively involved in the politics of the EUROPEAN COMMUNITY (EC) and EUROPEAN UNION (EU), serving as a deputy to the European Parliament (1989–93), and president of the Council of European Municipalities and Regions (1997–). In 2002 he was named the head of a commission that drafted a constitution for the EU. French voters rejected the constitution in 2005.

Gish, Lillian (Lillian de Guiche) (1896?–1993) American actress. Known as “the first lady of the silent screen,” Gish had a long and illustrious career in films, spanning more than eight decades. Her film debut was in D. W. GRIFFITH's two-reeler *An Unseen Enemy* (1912), and her association with the great director continued for more than 20 films, including the landmark *The Birth of a Nation* (1915), *Broken Blossoms* (1919) and *Orphans of the Storm* (1922). Gish struggled to find film roles in the 1920s and 1930s, due in part to salary disputes, the advent of sound films and a lack of interest on the part of the moviegoing public, which seemed to prefer the aggressively “modern woman” characterizations of Greta GARBO, Bette DAVIS and Joan CRAWFORD. But Gish found roles on Broadway and managed to win back her acclaim in films such as *Duel in the Sun* (1946) and *The Night of the Hunter* (1955). In the 1970s and '80s she continued to appear on screen, in *A Wedding* (1978) and *The Whales of August* (1987), among other films. In 1970 Gish was awarded a special ACADEMY AWARD “for her superlative and distinguished service in the making of motion pictures.” Her sister and sometime costar Dorothy (who died in 1968) was also a respected film actress, although she never met with Lillian's phenomenal success.

Giuliani, Rudolph "Rudy" (1944–) Mayor of New York City (1993–2001). Born in Brooklyn and trained as a lawyer, Giuliani was chosen to head a federal investigation into charges of police corruption in New York City in 1973. His work in this endeavor led to his appointment as the third-ranking official in the Department of Justice during the first three years of the Reagan administration. At the end of 1983 Giuliani was named U.S. district attorney for the Southern District of New York. He promptly established a reputation as an active prosecutor of MAFIA figures, corrupt politicians and stock traders who violated the rules of the Securities and Exchange Commission.

After an unsuccessful campaign for the mayoralty of New York City in 1989, Giuliani defeated the incumbent, David Dinkins, in large part because of the widespread perception that New York City was suffering from a failing municipal bureaucracy, a soaring crime rate and a faltering local economy. As mayor, Giuliani worked to restructure police patrols and postings to those areas experiencing the highest crime rates. Within two years crime had dropped by a third, and murders in New York were cut in half. While the NYPD's tactics such as random strip searches and alleged racial profiling did not prevent Giuliani from easily winning reelection in 1997, the department's alleged mistreatment of members of the African-American community regularly caused controversy.

In early 2000, prohibited constitutionally from running for a third term as mayor, Giuliani prepared to announce his candidacy for the U.S. Senate seat soon to be left vacant by the retiring senator Daniel Patrick MOYNIHAN. While gearing up to combat Democratic nominee and then first lady Hilary Rodham CLINTON, he pulled out of the race after he was diagnosed with prostate cancer.

After the terrorist attacks on the WORLD TRADE CENTER on SEPTEMBER 11, 2001, Giuliani exuded calm, poise and dignity, and, for many people throughout the country, became an emblem of national resolve in the aftermath of the tragedy. For his efforts at restoring calm and confidence to the people of New York, *Time* magazine chose Giuliani as its "Man of the Year" in 2001. He campaigned on behalf of President

George W. BUSH and other Republicans in 2004, further raising his profile throughout the U.S.

Giulini, Carlo Maria (1914–2005) Italian-born opera and symphonic conductor known primarily for interpretations of the standard repertory. Giulini was born in Barletta in southern Italy. He studied the violin and played in many opera orchestras in the 1930s under such conductors as Richard STRAUSS, Wilhelm FURTWÄNGLER, and Bruno WALTER. In the early years of WORLD WAR II his anti-fascist sympathies drove him into hiding with the arrival of the Nazis in Italy. In 1950 he became conductor of the Milan Radio Orchestra and performed operas throughout Italy and abroad, making his first appearances in Britain and the U.S. in 1955. A number of appointments followed: permanent guest conductor of the Chicago Symphony Orchestra in 1969, principal conductor of the Vienna Symphony Orchestra in 1973–76, and conductor of the Los Angeles Philharmonic Orchestra from 1978 to 1984. In later years he maintained a relatively limited repertoire and showed little interest in new composers. Giulini brings an almost mystical attitude to his interpretations, which critics have sometimes described as wayward and self-indulgent. He has been particularly praised for his performances of Mozart and Verdi operas and choral works and the symphonies of Bruckner and MAHLER.

Givenchy, Hubert Taffin de (1927–) French fashion designer known for quality design in a classic tradition stemming from Cristóbal BALenciAGA and emphasizing elegance over innovation. Hubert de Givenchy studied at the École des Beaux-Arts and worked for designers Jacques Fath, Lucien Lelong, Robert Piguet, and Elsa Schiaparelli before opening his own house in 1952. His design was invariably refined and understated but perfectly cut, relying in part on a staff taken over from Balenciaga when his house closed in 1968. The ready-to-wear line designated Nouvelle Boutique has been added to Givenchy's couture production and is distributed throughout the world. The Givenchy name is now also attached to lines of eyeglasses, furs, home furnishings,

men's shirts, perfumes, and sportswear under extensive licensing arrangements. Givenchy retired from the fashion industry in 1995.

Gjellerup, Karl (1857–1919) Danish novelist and playwright. Gjellerup was a student of theology and philosophy, and his works evolved from naturalistic novels to contemporary dramas reflecting the influence of Ibsen. He is best known for the verse drama, *Brunhild* (1884), which was inspired by Richard Wagner's *Ring* cycle. In what is considered to be a politically motivated move to strengthen allegiance between Denmark and Sweden and to emphasize the latter's neutral stance, Gjellerup was awarded the NOBEL PRIZE in literature along with Henrik PONTOPPIDAN in 1917. Gjellerup's other works include the play, *Die Opferfeuer* (The Sacrificial Fires, 1903), and the novels *Der Pilger Kamanita* (The Pilgrim Kamanita, 1906), and *Die Weltwandler* (The World Travelers, 1910).

Glackens, William James (1870–1938) American painter. Born in Philadelphia, he studied at the Pennsylvania Academy of the Fine Arts and subsequently became a successful illustrator for newspapers and magazines in his native city and New York City. He gained recognition as a member of the EIGHT or ASHCAN SCHOOL, painting extremely realistic genre scenes and landscapes in a rather dark palette. Glackens traveled to Paris in the 1890s; taken with the work of the French Impressionists, particularly Renoir, he adopted a lighter, brighter color range after his return to the U.S. Characteristic of his later work is *Chez Mouquin* (1905, Art Institute of Chicago) and *Parade Washington Square* (1912, Whitney Museum, N.Y.C.).

Glaser, Milton (1929–) Highly successful American graphic designer. Glaser studied at Cooper Union in New York and, on a Fulbright scholarship, with the Italian artist Giorgio Morandi in Bologna. His professional career began with the founding of Push Pin Studios (with Seymour Chwast and Edward Sorel) in New York in 1954. He established a reputation for the graphic redesign of magazine and newspaper formats, setting the standards for layout and typography at *New York* magazine, *Paris-Match*, *The Village Voice*, *New West*

and *Esquire*. In addition, he has developed a wide variety of corporate identity programs (for Grand Union supermarkets, among others), packaging, and graphic materials. He is particularly known and highly visible through his design of posters for varied products, organizations and events.

glasnost Russian word that has been variously defined as “openness” or “speaking out.” Glasnost, a policy initiated in the USSR during the 1980s by Soviet leader Mikhail GORBACHEV, brought with it many new political, social and artistic freedoms. Under glasnost, censorship and repression of personal liberties were relaxed, bringing a new sense of openness to Soviet society. Contrary to Gorbachev’s original intentions, glasnost helped to promote the formation of nationalist groups throughout the Soviet Union, such as in LITHUANIA and UKRAINE, whose demands for independence for their peoples contributed to the Soviet Union’s disintegration in December 1991.

Glass, Philip (1937–) American composer; highly influential and eclectic, best known for his role in establishing MINIMALISM as an important modern school of composition. But Glass has also shown the marked influence of JAZZ and ROCK AND ROLL themes in his more recent compositions. He graduated from the Juilliard School of Music in 1962 and studied with Nadia BOULANGER in Paris from 1964 to 1966. His pioneering involvement with minimalist compositions—which featured highly intricate and repetitive rhythms and frequently employed electronic synthesizers—won Glass international acclaim in the 1970s. He also achieved popular acclaim on the Broadway and London stage for his innovative musicals—*Einstein on the Beach* (1975), written in collaboration with Robert Wilson, and *Satyagraha* (1980), a portrayal of the difficult years spent by Mohandas K. GANDHI in South Africa.

Gleason, Jackie (Herbert John Gleason) (1916–1987) American actor, comedian, musician, entertainer and television producer. Gleason was one of the leading show business figures of the 1950s and 1960s and a seminal figure in the new medium of television. Born

into a poor Irish-American family in Brooklyn, New York, he began to pursue a career in small-time variety shows and nightclubs during the 1930s. In 1952, he inaugurated the weekly *Jackie Gleason Show*, which ran on television until 1959 and then again from 1962 to 1970. On the show, Gleason excelled at creating comic characters, from the pompous Reginald van Gleason to the pathetic mute known as the Poor Soul. His classic television comedy series *The Honeymooners* (1955–56) began as a sketch on the show and is still viewed by millions in reruns. In it, Gleason portrayed Ralph Kramden, a blustery, self-important but ultimately lovable New York City bus driver who was always looking to rise above his humble origins through some wildly improbable get-rich-quick scheme. Kramden shared his spartan tenement apartment (the main setting for most of the episodes) with his complaining, long-suffering, but devoted wife Alice (Audrey Meadows). Ralph’s sidekick, sewer worker Ed Norton (Art Carney), often got the best of him through sheer good nature and luck. The show was notable for its memorable dialogue, inventive comic situations, improvisatory spirit and rich sense of humanity. It set a standard that few subsequent television “situation comedies” (among them, *I LOVE LUCY*, *ALL IN THE FAMILY* and *M*A*S*H*) have been able to match. Gleason later won a best-actor award for his performance in the Broadway play *Take Me Along* (1959) and an ACADEMY AWARD nomination for his portrayal of pool shark Minnesota Fats in the film *The Hustler* (1961). The versatile Gleason, who epitomized the term *bon vivant*, was also a band leader and trumpeter. Although unable to read music, he composed a number of popular tunes, including his theme song, “Melancholy Serenade.”

Gleiwitz incident Attack on a German radio broadcasting station in the German (now Polish) border city of Gleiwitz (Gliwice) on August 31, 1939, by 12 men in Polish military uniforms. All 12 attackers were killed in the ensuing firefight. This incident, occurring some six miles from the Polish border, served as a pretext for HITLER’s invasion of POLAND the following day. It was later revealed that the attackers had been prisoners from a

German CONCENTRATION CAMP ordered to perform the suicidal assault by the Nazi SS.

Glenn, John Herschel, Jr. (1921–) U.S. astronaut, the first American to orbit the Earth. Glenn flew 59 Marine missions in the WORLD WAR II Pacific Theater during 1944 and 1945, and won several distinguished awards for his services in World War II and the KOREAN WAR. He completed test-pilot training in 1954 and made the first transcontinental supersonic flight in 1957 as a test pilot. After three years of rigorous training as part of Project MERCURY, Glenn circled the Earth three times in 4 hours and 36 minutes on February 20, 1962. Greeted by President Kennedy on his arrival at CAPE CANAVERAL and given one of New York’s largest ticker-tape celebrations, Glenn became a national hero and was elected to the Senate in 1974 from his native state, Ohio. He was reelected in 1980 and 1986. In 1998 Glenn returned to space on a NASA mission to determine the effects of spaceflight on aging individuals. Glenn retired from the Senate in January 1999.

Glennan, T. Keith (1905–1995) U.S. space administrator. Glennan became the first administrator of the National Aeronautics and Space Administration (NASA) when it was established October 1, 1958, and served in that position until January 20, 1961, when he was replaced by James E. Webb. He came to NASA from Case Institute of Technology, Cleveland, which he had headed since 1947; under his direction, Case had become one of the top engineering schools in the country. After leaving NASA, Glennan returned to Case and stayed there until 1969. From 1970 to 1973, he served as U.S. ambassador to the International Atomic Energy Agency in Vienna. Early in his career, after receiving a degree in electrical engineering from Yale in 1927, he was studio manager of Paramount Pictures, Inc., and Samuel Goldwyn Studios.

Glière, Reinhold Moritzovich (1875–1956) Russian composer. He studied in Kiev and Moscow and became professor of composition (1913) and director (1914) at the Kiev Conservatory, and professor of composi-

tion at the Moscow Conservatory (1920). He taught PROKOFIEV, KHACHATURIAN, Knipper and MYASKOVSKY. A prolific composer, his works include several symphonies, of which the best known is his number three, *Ilya Mouromets* (1909–11), the ballet *The Red Poppy* (1926–27) and a cello concerto. In his later works he used folk music from the USSR.

globalization A late 20th-century international phenomenon in the fields of communication, culture, economics, politics and transportation. Globalization is the post-COLD WAR process that vastly expanded the interaction of most nations with each other. It is characterized by an increase in the ability of goods, capital and individuals to travel more freely and rapidly from one nation to another, an increase in the means of communication (via such innovations as the CELLULAR TELEPHONE, COMPUTERS and the Internet) among individuals and societies, and an increasing influx of foreign cultural influences into countries. Some political scientists have argued that globalization has been conducive to the spread of democratic institutions throughout the world. According to this argument, the global proliferation of ideas and values and the increasing worldwide adoption of Western economic practices (such as free trade and market capitalism) through the WORLD TRADE ORGANIZATION (WTO) will eventually persuade nondemocratic governments of the need to adopt the Western political system of representative democracy in order to compete economically in the world. Critics have noted that countries such as CHINA have modernized their economies and introduced Western economic principles without introducing similar levels of democratic reform into their more authoritarian governments.

In the post-cold war era, efforts at increased globalization have depended largely on the willingness of nations to abide by rulings of international organizations. In world trade, organizations like the WTO have proven largely successful in reducing tariffs and regulating patents among its participants. However, the WTO has encountered opposition from European, Japanese and American governments, which have prevented the organization from curb-

ing government subsidies to their farmers and ending quotas imposed on the importation of certain agricultural products. In matters of communication, no organization has emerged capable of ensuring access to communication between individuals of different nations. As a result, authoritarian governments such as China's continue to restrict citizens' access to such media as the Internet and television. International travel is similarly regulated by nations, although many of them have followed the travel restrictions suggested by the WORLD HEALTH ORGANIZATION, as occurred during the 2003 outbreak of sudden acute respiratory syndrome in China.

global warming In the 1980s a series of unusually hot summers gave rise to fears that the Earth's climate was gradually becoming warmer. Some attributed this trend to carbon dioxide emissions from industrial plants and AUTOMOBILES and from the burning of RAIN FORESTS. If true, the global warming trend could lead to droughts, the melting of polar ice caps and a rise in sea levels. Although there were sustained efforts to formulate an international response to global warming at the Rio Summit in 1992 and the Kyoto Summit in 1997, neither meeting of industrialized nations produced an accord that was implemented by the major nations of the world.

Glubb, Sir John Bagot (1897–1986) British army officer. Glubb built JORDAN'S Arab Legion into one of the most effective fighting forces in the Middle East during WORLD WAR II. He joined the Arab Legion as second in command in 1930 and took formal command of it in 1939. He became known as Glubb Pasha, a title conferred upon him by Jordan's King ABDULLAH IBN HUSSEIN. He served as a close confidant to Abdullah until the king's assassination in Jerusalem in 1951, and remained commander of the legion until 1956. Growing militant Arab nationalism led to Glubb's dismissal by Abdullah's successor, King HUSSEIN, who expelled him from the country. After returning to England, he wrote many books about the Arab world.

Glushko, Valentin Petrovich (1906–1989) Soviet rocket pioneer.

He became interested in the use of rockets for space travel while he was barely in his teens, and wrote to the Russian rocket pioneer Konstantin TSIOLKOVSKY about the subject in 1923. In 1929 he urged the Soviet government to develop a rocket propelled by liquid fuel. During the 1930s he worked on various rocket designs. After World War II he helped design a series of rocket engines that represented a major lead forward for Soviet missile technology. Among his achievements were the engine for the R-7, the world's first intercontinental ballistic missile, and engines for early Soviet manned and unmanned spaceflights.

Glyndebourne Festival Held annually from May to early August at the Glyndebourne estate in Lewes, Sussex, England, the festival is devoted exclusively to opera, and is especially noted for performances of operas by Mozart and Richard Strauss. The estate owner, John Christie, built an opera house amid the celebrated gardens at a suggestion from his wife, soprano Audrey Mildmay; in 1934 the festival was inaugurated with a performance of Mozart's *The Marriage of Figaro*. A succession of distinguished conductors have guided the performances: Fritz Busch (1934–51), Vittorio Gui (1951–60), John Pritchard (1960–77) and Bernard Haitink (current). Since 1984 Sir Peter HALL has been the producer. Many of the world's great opera singers, such as Luciano PAVAROTTI, have performed there. The festival is also known for exciting productions of such recent operas as Oliver Knussen's *Where the Wild Things Are*.

Gmeiner, Herman (1919–1986) Austrian humanitarian. Gmeiner's SOS Children's Village became a haven for thousands of orphaned and abandoned children throughout the world. The movement grew from one village, which he founded in 1949 in the Tyrolean region of Austria, to more than 225 "children's villages" in 85 countries on five continents.

Gnessin, Michael Febianovich (1883–1957) Composer. Gnessin studied at St. Petersburg Conservatory and helped to found the Don Conservatory, becoming director in 1920.

Later he was a professor at the Moscow and Leningrad conservatories. His compositions include an opera-poem *The Youth of Abraham* (1921–23), works for chorus and orchestra, including *Symphonic Monument*, 1905–17 (1925), incidental music and folk song arrangements. After the revolution he set a poem by Sergie ESENIN to music for chorus and orchestra to commemorate the revolutions of 1905 and 1917.

Gobat, Albert (1843–1914) Swiss lawyer, politician, educator and peace advocate. He was active in the Inter-parliamentary Union in the 1890s. At the turn of the 20th century he worked for arbitration as a means of solving international disputes. For this work he shared the second NOBEL PEACE PRIZE with Elie DUCOMMUN in 1902. In 1906 he urged U.S. president Theodore ROOSEVELT to attend a peace conference at The HAGUE, which Roosevelt did in 1907. Gobat directed the International Peace Bureau from 1906 to 1909 and unsuccessfully advocated French and German disarmament.

Gobbi, Tito (1913–1984) Italian opera singer. A baritone, Gobbi possessed great expressive range in both dramatic and comic roles and was considered one of the finest operatic actors of his generation. He made his debut in Rome in 1938 but did not achieve full recognition until the 1950s. He appeared regularly at New York's Metropolitan Opera from 1956 to 1976 and was also featured at Milan's La Scala and other leading European opera

houses. Among his roles were Iago (in Verdi's *Otello*), Figaro (in Rossini's *Barber of Seville*) and the title characters in Mozart's *Don Giovanni*, Verdi's *Falstaff*, PUCCINI's *Gianni Schicci* and BERG's *Wozzeck*. His portrayal of Scarpia in Puccini's *Tosca* was considered definitive; he often played the role opposite Maria CALLAS and sang with her in a legendary 1953 recording of the work. After retiring from the stage he directed operas and was an influential singing teacher.

Godard, Jean-Luc (1930–) French filmmaker and critic, a leader (with François TRUFFAUT, Claude CHABROL and Jacques Rivette) of the NOUVELLE VAGUE in the late 1950s. Although he was educated in Switzerland and later at the Sorbonne, it was time spent watching films at Paris's Cinemathèque Française that decided his future. After working as a critic, actor and writer in the circle of young enthusiasts grouped around André Bazin and the *CAHIERS DU CINÉMA*, Godard created a sensation with his first feature, *À Bout de Souffle* (*Breathless*, 1959). With a script by Truffaut, this homage to the gangster film was an iconoclastic experiment in loose-limbed film form and nervous, jump-cut continuity. Godard's mixture of leftist ideological polemic and comic-book slapstick made him the Bad Boy of the New Wave and the overnight darling of the cinema avant-garde. While critics John Simon and Susan SONTAG disagreed over his films ("infantile self-indulgence" and "nearly perfect work"), audiences were assaulted by the explicit atrocities of the

Algerian war in *Le Petit Soldat* (1960), moved by the intensely personal feminist statement of *Vivre sa Vie* (*My Life to Live*, 1962), amused by the satiric comments on rebellious youth in *Bande à Part* (*Band of Outsiders*, 1964), scandalized by the explicit lyric sensuality of *Une Femme mariée* (*The Married Woman*, 1964) and puzzled by the Marxist image/word games of *La Chinoise* (1967). Sometimes he abandoned the "bourgeois" conventions of subject and story altogether, photographing words or punctuating his shots with gunshot sounds. Many critics feel that his later work abandoned the humor of his early films.

Goddard, Paulette (Marion Levy) (1911–1990) American actress. A HOLLYWOOD film star of the 1930s and 1940s, Goddard was noted for her beauty and vivaciousness. Her two most memorable films were *Modern Times* (1936) and *The Great Dictator* (1940), made with her second husband, Charlie CHAPLIN. She eventually made more than 40 films, but her movie career began to fade in the early 1950s. In 1958, she married Erich Maria REMARQUE, author of *ALL QUIET ON THE WESTERN FRONT*, and retired to Switzerland, thereafter making only occasional film and television appearances.

Goddard, Robert H. (1882–1945) The "Father of American Rocketry," Goddard graduated from Worcester Polytechnic Institute in 1908. He took his Ph.D. at Clark University three years later. An instructor in physics at

Robert Goddard, inventor of the rocket, 1935 (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

Princeton (1912–13), he joined the Clark faculty in 1914 and was associated with the university until 1943. Fascinated with rockets all his life, he began testing them as early as 1908 and by 1914 had experimented with a two-stage rocket and various fuels. Highly individualistic and something of a loner, Goddard was a favorite target of the press, which saw his rocket experiments as fodder for sensational stories. After receiving a grant in 1916 from the Smithsonian Institution on the basis of a monograph outlining his ideas and research, he went on to publish his best-known work, “A Method of Reaching Extreme Altitudes,” in 1919. A “hands-on” experimenter, he continued his work with the use of liquid fuels for rocket propulsion throughout the 1920s, settling on a combination of gasoline and liquid oxygen. After firing his first liquid-fueled rocket in March 1926, he continued to work on improvements in their design. However, complaints from his New England neighbors and hurried visits by the local fire department every time he made a test were getting on Goddard's nerves.

In 1929, with the help of Charles LINDBERGH, he received a grant from the Guggenheim Foundation and moved his equipment to a testing range in New Mexico. Continuing to build his rockets and work on everything from combustion chambers to steering systems, Goddard launched a series of rockets from 1930 to 1935 that reached speeds of up to 550 miles an hour and heights of over a mile and a half. In a 1936 publication, *Liquid-Propellant Rocket Development*, he summarized his work up to that point. Still the U.S. government showed little interest other than to seek his assistance briefly during World War II to help in developing systems for jet-assisted takeoffs (JATO) of airplanes from aircraft carriers.

Largely unrecognized at the time of his death, he received a knowing tribute from German rocket scientist Wernher von BRAUN when, surprised at questions put to him about rocketry upon his arrival in America, von Braun wondered why the questioners had not asked Goddard. “Don't you know about your own rocket pioneer?” the German asked. “Dr. Goddard was ahead of us all.” In 1960, government

neglect came to an ironic end when the U.S. paid \$1 million to Goddard's estate and the Guggenheim Foundation for infringements on many of the 200 patents dealing with rockets that Goddard had received during his lifetime. And, on July 17, 1969, as the *APOLLO II* astronauts prepared for their historic moon landing, *The New York Times* printed a formal retraction of its 1920 editorial ridiculing Goddard's claim that rockets would fly someday to the moon. Today, the Goddard spaceflight Center in Maryland bears his name.

Godden, Rumer (1907–1998) British novelist and poet. Born in Sussex, Godden spent much of her childhood in India, which was to figure prominently in her writing, along with the influence of her Roman Catholic upbringing. Godden is perhaps best known for the novel *The River* (1946), which she later adapted for film with the director Jean RENOIR for release in 1951. Of her many enormously popular works of fiction, several were adapted for film, notably, *Black Narcissus* (1939, filmed 1947). Other novels include *The Greengate Summer* (1958, filmed as *Loss of Innocence*, 1961), *The Battle of Villa Fiorita* (1961, filmed 1965), also *Five for Sorrow, Ten for Joy* (1979), and her 21st, *Cromartie vs. the God Shiva*. Godden wrote several children's books and her autobiography, *A Time to Dance, No Time to Weep* (1987).

Godel, Kurt (1906–1978) Austrian-American mathematician. Godel initially studied physics at the University of Vienna but soon turned to mathematics and mathematical logic. He obtained his Ph.D. in 1930 and the same year joined the faculty at Vienna. He became a member of the Institute of Advanced Study, Princeton, in 1938 and in 1940 immigrated to the U.S. Godel was a professor at the institute from 1953 to 1976 and received many scientific honors and awards, including the National Medal of Science in 1975. In 1930 Godel published his doctoral dissertation, the proof that first-order logic is complete—that is, that every sentence of the language of first-order logic is provable or its negation is provable. The completeness of logical systems was then a concept of central importance owing to the various attempts that had been made to reveal a

logical axiomatic basis for mathematics. Completeness can be thought of as ensuring that all logically valid statements, which a formal (logical) system can produce, can be proved from the axioms of the system, and that every invalid statement is disprovable.

In 1931 Godel presented his famous incompleteness proof for arithmetic. He showed that in any consistent formal system complicated enough to describe simple arithmetic there are propositions or statements that can be neither proved nor disproved on the basis of the axioms of the system—intuitively speaking, there are logical truths that cannot be proved within the system. Moreover, he showed (in his second incompleteness theorem) that the “consistency” of any formal system including arithmetic cannot be proved by methods formalizable within that system, consistency can be proved only by using a stronger system—whose own consistency has to be assumed. This latter result showed the impossibility of carrying out David HILBERT's program, at least in its original form.

Godel's second great result concerned two important postulates of set theory, whose consistency mathematicians had been trying to prove since the turn of the 20th century. Between 1938 and 1940 he showed that if the axioms of (restricted) set theory are consistent, then they remain so upon the addition of the axiom of choice and the continuum hypothesis, and that these postulates cannot, therefore, be disproved by restricted set theory. (In 1963 Paul Cohen showed that they were independent of set theory.) Godel also worked on the construction of alternative universes that are models of the general theory of relativity, and produced a rotating-universe model.

Godfather trilogy Acclaimed saga of a criminal MAFIA dynasty (although the term *Mafia* is avoided), directed by Francis Ford COPPOLA from stories by Mario Puzo. The narrative thread running through all three films (1972, 1974 and 1990) is the violent assumption of power by three generations of the Corleone family. Ambitions to “legitimize” the family's gangland activities preoccupy the aging Don Vito (Marlon BRANDO, in an Oscar-winning role) and then his son Michael (Al Pacino); but outside powers and in-

ternecine conflict displace family loyalties with greed and violence. The action ranges broadly over space and time, from Sicily and the poor immigrant neighborhoods of New York in the 1900s, to postwar America's posh estates and Nevada casinos, and finally to Vatican City. The tone is a counterpoint between the bright festivity of family ceremonies and a bitter *chiaroscuro* of treachery and deceit. But what had been fresh and fast in the first installment becomes brooding and complex in the second, and, in the opinion of many, terminally elegiac in the third. To date the trilogy has won 10 ACADEMY AWARDS and a place in the national vocabulary. Aside from Coppola's guiding hand, credit must also go to Ennio Morricone's music score, the performances by Pacino, Brando, James Caan and Robert Duvall (to name only a few), and the stunning cinematography by Gordon Willis.

Goebbels, Paul Joseph (1897–1945) German NAZI. Born at Rheydt in Westphalia, Goebbels attended the University of Heidelberg, receiving a Ph.D. in literature and history. Rejected from service in World War I because of a congenital foot defect, he began to write articles for periodicals as well as several unsuccessful novels. Meanwhile, in 1922 he joined the National Socialist (Nazi) Party, and in 1926 HITLER appointed him Berlin's party leader. He was elected to the Reichstag in 1928, and when Hitler seized power five years later, Goebbels was named PROPAGANDA minister. This enormously powerful position gave him complete control over German media and arts, and with a singularly vicious shrewdness he dictated the content of the press, radio, literature, film, theater and the visual arts with the purpose of glorifying the Third Reich, pursuing the war effort and stressing Nazi ideology. A mesmerizing orator and a master of mass psychology, he staged huge rallies and candlelight marches where the Aryan myth was extolled and JEWS and intellectuals were excoriated. Goebbels remained completely loyal to Hitler until the fuhrer's suicide. Shortly thereafter as Russian troops entered Berlin, he and his wife poisoned their six children and the two then shot themselves. (See also NAZISM.)

Goeritz, Mathias (1915–1990) German-born architect and sculptor. Goeritz was educated as both a sculptor and an architect in his native Germany before leaving the country prior to World War II out of disapproval of the Nazi regime. He finally settled in 1949 in Mexico, where many of his greatest architectural works—which are frequently accompanied by his own large-scale abstract sculptures—now reside. These include the massive and sharp-edged *Towers of Satellite City* (1957, in collaboration with fellow architect Luis Barragan) and the cone-shaped *Automex Towers* (1967).

Goethals, George Washington (1858–1928) American civil engineer. Goethals graduated from the U.S. Military Academy at West Point in 1880. He served at various posts in the Army Engineer Corps (1882–05) and Army General Staff (1903–07) before being appointed chief engineer of the PANAMA CANAL in 1907. Despite numerous difficulties involving engineering problems, labor troubles, climate and yellow fever, he completed the project ahead of schedule. Goethals was the first governor of the Canal Zone (1914–16). Although retired from active duty in 1916, he was recalled in 1917. He served briefly as general manager of the Emergency Fleet Corporation (1917) and as acting quartermaster general and director of purchase, storage and traffic.

Goffman, Erving (1922–1982) Canadian-American sociologist. Goffman studied the hidden meanings of ordinary activities and transactions. In his books he argued that even an individual's most casual actions were actually performances calculated to establish a certain positive impression. Goffman held a Ph.D. from the University of Chicago (1953) and later taught at the University of California (1958–68) and the University of Pennsylvania (1968–82). Among his books are *Behavior in Public Places: Notes on the Social Organization of Gatherings* (1966), *Encounters* (1961) and *The Presentation of Self in Everyday Life* (1959).

Gogarten, Friedrich (1887–1967) German Protestant theologian; much influenced in his theological works

by the writings of Karl BARTH and Martin BUBER. Gogarten began his career in 1917 by serving as a pastor at Stelzendorf. In 1931 he became a professor of theology at the University of Breslau, then moved on in 1935 to a similar position at the University of Göttingen, where he taught for nearly two decades. Gogarten held that true historical events were created only when an individual, in an attitude of unconditional faith, confronted the divine "Thou." His works include *Fichte als Religiöser Denke* (1914) and *Von Glauben und Offenbarung* (1923).

Golan Heights Strategically important high ground in southern SYRIA overlooking Israeli territory, captured by ISRAEL in the Arab-Israeli War of 1967 (SIX-DAY WAR) and occupied since.

Gold, Herbert (1924–) American author. Gold's novels chronicle contemporary American life, often highlighting the difficulties in relations between men and women, and he is noted for his ability to reproduce idiom and spoken language. His early novels, such as *Birth of a Hero* (1951), are set in his native Midwest. Later novels shrewdly capture the mood of the West Coast. These include *He/She* (1980), *A Girl of Forty* (1986) and *Dreaming* (1988). Gold has also written the autobiographical novels *Fathers: A Novel in the Form of a Memoir* (1967) and *My Last Two Thousand Years* (1972).

Goldberg, Arthur J. (1908–1990) Associate justice, U.S. Supreme Court (1962–65). A graduate of Northwestern University and its law school, Goldberg became a well-known labor lawyer who represented the United Steelworkers and the Congress of Industrial Organizations (CIO) as well as other unions. In 1955 the CIO merged with the older American Federation of Labor to become the AFL-CIO; Goldberg was a leading participant in the negotiations leading up to this historic merger. He subsequently served as special counsel to the AFL-CIO. He became President John F. KENNEDY's secretary of labor in 1961. In 1962 Kennedy nominated Goldberg to replace Felix FRANKFURTER on the Supreme Court, continuing the prac-

tice of appointing one Jewish member of the Court. Goldberg occupied the seat briefly. President Lyndon B. JOHNSON persuaded him to resign in 1965 to become U.S. ambassador to the UNITED NATIONS after the death of Adlai STEVENSON II. Goldberg later admitted that his resignation from the Court had been a mistake. After serving for three years he resigned as UN ambassador. After an unsuccessful run for governor of New York state he returned to private law practice until his death.

Goldberg, Rube (1883–1970) American cartoonist. Goldberg was born in San Francisco and worked for the *Chronicle* and *Bulletin* in that city before moving to New York in 1907 to draw for the *Evening Mail*. His whimsical, convoluted slapstick cartoons won him tremendous popularity, and his name entered the language as a term for a wacky, overly complex contraption for performing a simple task. Some of the many cartoon features and strips originated by Goldberg include *The Look-A-Like Boys*, *Foolish Questions*, *I'm the Guy* and *Boob McNutt*. Throughout the 1940s, Goldberg also drew political cartoons for the *New York Sun*; he won the PULITZER PRIZE in 1948 for his cartoon "Peace Today," which dealt with the issue of atomic weapons.

Golden Temple Massacre On June 6, 1984, in an effort to suppress uprisings by extremist Sikh separatist groups, the Indian army invaded the Golden Temple, the holiest Sikh shrine, in Amritsar, Punjab. Between 800 and 1,000 were estimated killed, among them Jarnail Singh Bhindranwale, the fundamentalist leader of the Sikh extremists, and 48 Indian troops. The militant Sikhs, who had been using the temple as a bastion and refuge, had vowed in May to blockade all grain, water and power supplied from Punjab to the rest of INDIA. On June 1, 11 people had been killed in battle at the temple, and on June 2 the Indian government declared the state of Punjab a restricted area and brought in some 50,000 troops. Sikh uprisings, which had intensified that April, had since become increasingly violent, and Indian authorities applauded the attack. But it triggered a violent backlash by militant Sikhs in India and protests from Sikhs worldwide. The Indian

government reopened the temple on June 25, and later announced a plan to overhaul the Punjab state administration to maintain peace. The assassination of Prime Minister Indira GANDHI by Sikh extremists on October 31 was regarded as an act of revenge for the Golden Temple Massacre.

Goldie, Grace Wyndham (1905?–1986) BRITISH BROADCASTING CORPORATION producer. Goldie was a BBC television producer from 1944 to 1965 and played a key role in the development of political and public affairs broadcasting in Britain. She set the pattern for general election nights on BBC-TV in the general election of 1950 and was responsible for the development of such programs as *Press Conference*, *Monitor* and *Panorama*.

Goldin, Daniel S. (1940–) National Aeronautics and Space Administration (NASA) administrator (1993–2001). Born in the South Bronx neighborhood of New York City, Goldin graduated with a B.S. in 1962 from the City College of New York, where he had expressed a strong interest in the scientific aspects of space exploration, and began working for NASA at its Lewis Research Center in Cleveland, Ohio, on designing and improving propulsion systems for the rocket-launched missions that NASA utilized in its APOLLO program. In 1969 he left NASA to work at the TRW Space and Technology Group located near Redondo Beach, California, where his supervisory work improving communication devices on Earth and in outer space led to his promotion to vice president and general manager of the company. President Bill CLINTON appointed Goldin NASA administrator in 1993. Goldin overhauled the NASA budget and trimmed \$40 billion from its expenditures by decreasing the use of the more expensive manned missions by 10% and by cutting the NASA's payrolls by a third while improving productivity by 40 percent. He also increased the U.S. commitment to unmanned scientific expeditions to the moon and Mars, intensified the use and transfer of NASA funds toward the International Space Station and improved the images gathered by the HUBBLE SPACE TELESCOPE by having a shuttle mission install a more focused lens on the device. After leaving

NASA in 2001 Goldin joined the research and development division of the Neurosciences Institute in La Jolla, California. In 2003 he was chosen by the Boston University Board of Trustees as the institution's new president, but the offer was revoked shortly before he was to take office because of concerns about his management style and his stated plans for the university.

Golding, William Gerald (1911–1993) British novelist. Born in Cornwall, Golding was educated at Marlborough Grammar School and Brasenose College, Oxford, and published *Poems* (1934) while still a student. He worked for a time as a social worker, meanwhile writing plays and acting in a small London theater. In 1939 he began teaching English and philosophy at Bishop Wordsworth's School in Salisbury, where he remained, except for the years of World War II until 1961. Golding served in the Royal Navy during the war, and his experiences shaped his pessimistic view of human nature which is apparent in his writing. Golding's best-known work, *THE LORD OF THE FLIES* (1954, filmed 1963), a mythic tale of a group of boys abandoned on an island where they revert to savagery, was an immediate success and is still a part of most English curricula. Golding continued to explore the theme of man's inherent cruelty in the novels *The Inheritors* (1955), *Pincher Martin* (1956), *Free Fall* (1959) and *The Spire* (1964). Golding was awarded the NOBEL PRIZE in literature in 1983. Other works include the novels *Rites of Passage* (1980), which won the Booker Prize; *The Paper Men* (1984) and the essays *A Moving Target* (1982).

Goldman, Emma (1869–1940) Anarchist and social reform. She left Russia for the U.S. in 1885 and was politically active from about 1890 to 1917. She was imprisoned in 1893 for inciting a riot. After meeting Alexander Berkman in 1906, she became an active anarchist, was imprisoned in 1916 and in 1917; after two years in prison she was deported to Russia. She later lived in England and Canada and was involved in the SPANISH CIVIL WAR. Her writings include *Anarchism and Other Essays* (1911), *My Disillusionment in Russia* (1923) and an autobiography, *Living My Life* (1931). (See also ANARCHISM.)

Author and anarchist Emma Goldman, with Alexander Berkman, 1917 (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

Goldman, Nahum (1894–1982) Zionist leader who helped create the state of ISRAEL. Born in Lithuania, during his lifetime Goldman lived in several nations but never in Israel. He represented the Jewish Agency at the LEAGUE OF NATIONS in the 1930s. In the 1950s he was instrumental in negotiating the agreement under which WEST GERMANY paid Israel \$827 million in postwar reparations. He headed the World Jewish Congress (1949–77) and the World Zionist Organization (1956–68). He was often outspoken in his opposition to Israeli government policies, and called on Israel to negotiate with the PALESTINE LIBERATION ORGANIZATION (PLO).

Goldmark, Carl Peter (1906–1977) Hungarian-American engineer and inventor. Although RCA Victor had demonstrated and released several 33.3 RPM, long-playing records in 1931, Goldmark conceived and invented the first commercially successful long-playing phonograph records (1948), utilizing the superior vinyl plastic instead of shellac; he was also instrumental in the development of color television. Born in Budapest, he immigrated to the U.S. in 1933 and joined the Columbia Broadcasting System (CBS) in 1936 as a technical engineer. Working in the CBS laboratory, he was credited with developing the first practical color television system, which was demonstrated in 1940. Goldmark's work in developing the modern long-playing record stemmed from his own interest in listening to recordings. The existing 78 RPM records could accommodate only four or five minutes of music per side. An entire symphony recording required

several records, and the listener had to change the sides every few minutes. By contrast, a 33.3 LP could accommodate up to a half-hour of music on each side. Goldmark conceived a new stylus capable of cutting finer grooves on the long-playing 33.3 RPM disk, as well as the necessary turntable, tone arm and pick-up cartridge. All of these innovations became standard features and remained in use even after the advent of compact discs in the 1980s. Retiring from CBS in 1971 at the company's mandatory retirement age of 65, Goldmark formed Goldmark Communications Corp. in Stamford, Connecticut. Less than three weeks before his death in a car accident, Goldmark was awarded the National Medal of Science for developing communications sciences for education, entertainment and culture.

Goldwater, Barry Morris (1909–1998) American politician, 1964 U.S. presidential candidate and spokesman for the conservative wing of the REPUBLICAN PARTY. The heir to his family's Phoenix, Ariz. department store, Goldwater entered politics after service in World War II and was elected to the U.S. Senate from Arizona in 1952. Building a reputation as a vigorous anticommunist and an opponent of big domestic social programs, he became a key spokesman for conservatives in the American South and West. By the fall of 1963 he was the leading contender for the Republican Party's 1964 presidential nomination, although he was reluctant to run. He officially announced his candidacy in January 1964. Opposing what he regarded as the liberal tendencies of most Democratic and Republican leaders, Goldwater insisted that he

offered "a choice, not an echo." A bitter fight for the nomination against Nelson ROCKEFELLER split the Republican Party between its liberal and conservative wings. Answering his critics, Goldwater declared "extremism in the defense of liberty is no vice, and moderation in the pursuit of justice is no virtue." During the campaign, however, President Lyndon B. JOHNSON's forces successfully painted Goldwater as a dangerous extremist who would abolish Social Security and threaten world peace. Goldwater lost the election to Johnson in a landslide, with only 38.4% of the popular votes and six states. Although largely disavowed by the Republican Party and the country at large, Goldwater remained active in national politics and reentered the Senate in 1968. He was a HAWK on the VIETNAM WAR, but called for an end to the draft in favor of a volunteer army. During the WATERGATE scandal, he at first supported president Richard M. NIXON. However, after the release of the White House tapes showing Nixon's involvement, Goldwater was instrumental in persuading the president to resign. The election of conservative Republican Ronald REAGAN as president in 1980 seemed to vindicate the views that Goldwater had espoused 16 years earlier. Ironically, Goldwater criticized Reagan on a number of issues. From being viewed as an extremist in many circles in the 1950s and

Senator Barry Goldwater, 1964 (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

1960s, Goldwater grew into an elder statesman of the Republican Party in the 1970s and 1980s, earning the respect of his allies and opponents alike for his integrity and independence. He retired from the Senate in 1986. His biography is *Goldwater* (1988).

Goldwyn, Samuel (Samuel Goldfish) (1882–1974) American motion picture producer, one of the best known of the HOLLYWOOD moguls. Born in Warsaw, Poland, he immigrated to the U.S. as a teenager. By age 30 he was in Hollywood, where he co-produced the first full-length feature, *The Squaw Man* (1913). He teamed with the two Selwyn brothers to form Goldwyn Pictures (a name formed by combining the first syllable of his last name, Goldfish, and the last syllable of Selwyn); Goldfish subsequently adopted the name as his own. The name Goldwyn is best known as part of METRO-GOLDWYN-MAYER studios, but Goldwyn himself left MGM the year after it was founded to run his own production company. Among the films he produced are *Wuthering Heights* (1939), *The Best Years of Our Lives* (1946) and *Gyps and Dolls* (1955).

Golkar Official political party in INDONESIA during the SUKARNO era.

Gollan, Dr. Frank (1909–1988) American medical scientist. A polio victim, he was determined to find a cure for the disease. Gollan's isolation of the polio virus in 1948 aided other researchers in developing a vaccine. In the early 1950s, he invented the heart-lung machine for use in open-heart surgery.

Gollancz, Victor (1893–1967) British publisher, author, philanthropist. Although he founded a successful publishing house, Victor Gollancz, Ltd., in 1928, Gollancz is best known for his many campaigns to aid victims of injustice worldwide and for his political activities. In 1936 he founded the Left Book Club, which had a major impact on the development of the Labor political party. Establishing a committee to aid victims of the Nazis was just one of his humanitarian endeavors. He also wrote many books on religion, politics and music, and spearheaded campaigns for the abolition of capital pun-

ishment and for nuclear disarmament; he was knighted in 1965.

Gómez, Juan Vicente (1857–1935) Venezuelan dictator (1908–35). A meztizo from a cattle ranch in the Andes, Gómez became a guerrilla leader in support of the revolutionary Cipriano Castro. He was Castro's vice president, seizing control of the government for himself in 1908 while the erstwhile strongman was abroad. Sometimes assuming the title of president (1910–14, 1922–29, 1931–35), sometimes relinquishing it to others Gómez nonetheless retained the reins of powers for the next 27 years. His cunning and tyrannical rule was marked by absolute suppression of dissent by a ruthless secret police totally controlled by Gómez. However, the rule of “El Benemérito” (“The Meritorious One”) was also characterized by political and economic stability. Gómez was able to pay VENEZUELA's huge debts and was instrumental in developing his nation's petroleum resources. He was also successful in setting up an array of public works projects that included a network of roads and railways. While amassing enormous wealth for himself and his large family, many of whom were made public officials, he was also responsible for bringing Venezuela into the modern world.

Gompers, Samuel (1850–1924) American labor leader. Born in London, he immigrated to the U.S. with his parents in 1863, becoming a cigarmaker that year and joining the local union a year later. He served as president of the Cigarmakers' Union (1874–81), before helping to found the Federation of Organized Trades and Labor Unions. Reorganized in 1886, the group was renamed the American Federation of Labor, and Gompers served as its first president (with the exception of the year 1895) until his death. Essentially conservative in his philosophy, Gompers built the AFL into the country's largest labor organization, encouraging improvements in wages, working conditions and hours, but avoiding political involvements and pronouncements. During World War I, he headed the War Committee on Labor and was a member of the Advisor Commission to the Council of National Defense, stressing the need for labor's loyalty to the war effort. His vigor and integrity made

him the most influential and widely respected labor leader of his day.

Gomułka, Władysław (1905–1982) Leader of POLAND's Communist Party from 1956 to 1970, Gomułka spearheaded the resistance to Soviet dominance of the Polish communist government. Active in the Communist Party from 1926, he organized the People's Guard RESISTANCE group during the WORLD WAR II German occupation. He was first secretary of the Communist Party from 1945 to 1949 but was imprisoned (1951–55) as the result of one of Joseph STALIN's purges. He returned to power in 1956 and initiated several reforms. However, widespread rioting over food prices coupled with increased leaning toward more orthodox Marxism led to Gomułka's downfall in 1970.

Goncourt Prize French literary award. The Académie Goncourt was established in the will of Edmond Goncourt (1822–96), a 19th-century literary figure, to award the annual Prix Goncourt for prose. The Académie consists of 10 individuals whose purpose is to recognize innovative, independent fiction. The first award was made in 1903 to John-Antoine Nau for *Force Ennemie* (1903).

Gone with the Wind Novel and popular motion picture, set during and after the American Civil War. Margaret MITCHELL's novel was published in May of 1936; by September it had made publishing history as the fastest-selling book of all time, with 370,000 copies in print. A mammoth work, it spanned the South of Civil War and Reconstruction, presenting vivid characters like the dashing Rhett Butler and the (ultimately) indomitable Scarlett O'Hara. On January 13, 1939, HOLLYWOOD producer David O. SELZNICK ended months of suspense when he selected the virtually unknown British actress Vivien LEIGH to play Scarlett in his film version of the book opposite Clark GABLE's Rhett. Thirteen days later director George CUKOR yelled “Action.” At year's end, on December 15, at a cost of \$4.25 million, the finished film went into release through MGM and premiered at Loew's Grand Theater in Atlanta. It grossed an unprecedented \$945,000 in a single week. It garnered 10 ACADEMY

AWARDS, including best actress to Leigh, best supporting actress to Hattie McDaniel, best screenplay to Sidney Howard (with an uncredited assist from Ben HECHT) and best director to Victor Fleming (who had replaced George Cukor and who in turn was temporarily replaced by Sam Wood). The movie was a triumph of the studio system and stands today as a monument to Hollywood's Golden Age. In particular, the luxurious Technicolor photography (much of it shot by Lee Garmes) and the extensive use of stunning matte paintings and optical effects enabled a handful of incomplete sets to bloom into the improbable sumptuousness of everybody's dream of the Old South.

González, Julio (1876–1942) Spanish sculptor. Born in Barcelona, González was trained in metalworking by his goldsmith father. The family moved to Paris in 1900, and González soon met Pablo PICASSO, who introduced him to CUBISM and who was, in turn, tutored in ironworking techniques by the young Spaniard. He was a cubist painter throughout the 1920s, turning to sculpture in the early 1930s. From the period on, he created the cubist and constructivist-influenced iron sculptures for which he is famous (see CONSTRUCTIVISM). Conceived as drawings in space, these semi-abstract works often suggest human figures. Considered one of the most innovative sculptors of the 20th century, he was important in the development of such contemporary artists as David Smith and Anthony Caro. Among his best known works are *Woman Doing Her Hair* (1936, Museum of Modern Art, N.Y.C.) and *Montserrat* (1936–37, Stedelijk Museum, Amsterdam).

Gonzalez, Richard Alonzo “Pancho” (1928–1995) U.S. tennis player. Gonzalez dominated men's professional tennis throughout the 1950s. He won two U.S. singles titles and led the U.S. to a Davis Cup victory before turning professional in 1949. Speedy of both foot and serve, he won the U.S. professional title a record eight times, and was still able to defeat much younger opponents until he retired at the age of 41 in 1969.

González Márquez, Felipe (1942–) Premier of SPAIN (1982–96). In 1964, while still at university, González joined

the then-illegal Spanish Socialist Workers Party (PSOE). In 1966, he graduated from Seville University Law School, and in 1970 he became a member of the executive committee of the PSOE, succeeding to the leadership of the party four years later. In 1977 the PSOE was legalized and became the largest party in the country. Following its landslide victory in the 1982 elections, González became premier. Known as a moderate, he decentralized the government, improved social programs and brought Spain into the EUROPEAN ECONOMIC COMMUNITY. He was elected to a second term in 1986 and a third term in 1989. Gonzalez's government fell in 1996 after it was plagued by several scandals, and he was replaced by the conservative government of José María AZNAR.

Goodall, Jane (1934–) British zoologist known for her ground-breaking studies of the behavior of chimpanzees. Since the 1960s, Goodall has spent much time in Africa living in close contact with chimpanzees and observing their behavior. Her discoveries have greatly increased human knowledge of primates. Goodall's work became widely known through *National Geographic* magazine (see NATIONAL GEOGRAPHIC SOCIETY), and she is widely considered the world's foremost authority on these animals. In April 2002 Goodall accepted appointment as a UN messenger of peace to work with nongovernment agencies to call attention to environmental and humanitarian issues. (See also DIAN FOSSEY.)

Goodhue, Bertram Grosvenor (1869–1924) America architect whose work developed from eclecticism toward a creative proto-MODERNISM, who is also known as a graphic and type designer of some importance. Trained as a draftsman in the offices of James Renwick (1818–95) in New York and in the Boston office of Ralph Adams CRAM (1863–1942), Goodhue became a specialist in Gothic-style eclecticism. Promoted to a partner in Cram, Goodhue & Ferguson, he remained with that firm until 1913. His major work during that period was St. Thomas Church in New York (1914), a large, handsome neo-Gothic work. He was chief architect for the 1915 Panama-Pacific exhibition in San Diego, California, working there in an eclectic Spanish

style. His St. Bartholomew's Church (1919) in New York is an outstanding work in eclectic Byzantine style. As a graphic designer, Goodhue was influenced by the Arts and Crafts movement and the ideas of William Morris. Goodhue's last major work in architecture was the Nebraska State Capitol building (1922) in Lincoln, Nebraska.

Goodman, Benny (1909–1986) The “King of Swing”; one of jazzdom's transcendent figures. Acknowledged as the single most important force in popularizing the uncompromising big band jazz style that coalesced as the SWING ERA in 1935, Goodman's flawless clarinet solos and his highly disciplined big bands set still-peerless standards. Goodman was also the first prominent white band leader to feature black artists such as pianist Teddy WILSON, vibraphonist Lionel HAMPTON and guitarist Charlie Christian. Goodman received his first important training in his hometown of Chicago, from classical clarinetist Franz Schoepp, and is significant as the first jazz musician to attain unqualified success as a classical performer. In 1938, he recorded Mozart's Clarinet Quintet with the Budapest String Quartet. Goodman commissioned “Contrasts” by Béla BARTÓK, which he premiered at CARNEGIE HALL in 1939; other clarinet concerto commissions were filled by Aaron COPLAND (1947) and Paul HINDEMITH (1947). Goodman's greatest recognition, however, was a jazz artist whose small

Clarinetist and big band leader Benny Goodman
(LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

groups (the trios and quartets) and big bands were models of precision and virtuosic interplay. In spite of the swing era's demise in the mid-1940s, Goodman remained a highly successful performer whose ad hoc combos and bands reached audiences throughout the world during the postwar decades. *The Benny Goodman Story* (1956), starring Steve ALLEN, is a better than average HOLLYWOOD movie, with Goodman's clarinet swinging throughout the soundtrack. Goodman's papers and recordings are housed at Yale University.

Goodman, Paul (1911–1972) American author and social critic. Goodman's espousal of New Left causes won him a large following among American college students in the late 1960s. He was an early opponent of American involvement in the VIETNAM WAR (see ANTIWAR MOVEMENT). He published hundreds of articles and books in a wide range of intellectual disciplines.

Goon Show, The A comic British radio show that aired on the BBC from 1949 to 1960, the program was the brainchild of comedians Peter SELLERS, Spike MILLIGAN, Harry Secombe and Michael Bentine. The show was the most influential comedy program in British radio history, paving the way for such later comedy hits as the stage revue *BEYOND THE FRINGE* and the television program *MONTY PYTHON'S FLYING CIRCUS*. With its zany, off-the-wall humor, the show became a phenomenal success, achieving cult status.

Goossens, Leon Jean (1897–1988) English oboist. Goossens's career, spanning seven decades, helped redefine the potential of the oboe. Among the composers who dedicated works to Goossens were Benjamin BRITTEN, Francis POULENC and Sir Edward ELGAR. In the 1960s a serious car accident injured his teeth and lips, but within two years he returned to the concert stage after developing a new technique of lip control. His family included noted conductor Sir Eugene Goossens and the harpists Marie and Sidone Goossens.

Gorbachev, Mikhail Sergeyeovich (1931–) Soviet political leader. Born near Stavropol, he studied law in Moscow, joined the Communist Party

at the age of 20 and became a party leader in his native province. Coming to the attention of national party leaders, he was named to the party's Central Committee in 1971 and was put in charge of Soviet agriculture in 1978. A protégé of Yuri ANDROPOV, he became the USSR's economic planner after his mentor was named Communist Party general secretary in 1982. After the death of Andropov (1984) and of his successor, Konstantin CHERNENKO (1985), Gorbachev became secretary general of the party—and, as such, leader of the Soviet Union. In 1988, he became chairman of the Presidium, functioning as president of the USSR. Later that year, the powers of the presidency were greatly expanded as a result of constitutional amendments proposed by Gorbachev himself, and in 1989 he was elected president (officially, chairman of the Supreme Soviet).

Nothing in his background could have prepared the people of the USSR for the sweeping changes Gorbachev would bring to the nation. Faced with a moribund economy, he instituted revolutionary changes in the communist system, announcing a restructuring (PERESTROIKA) and moving toward decentralization and privatization. At the same time, he called for an openness in government operation, a policy known worldwide as GLASNOST, and moved toward a more open and less repressive system of handling domestic affairs and matters of dissidence. This policy was extended to individuals and to the USSR's restive constituent republics, who were given widely increased autonomy (but some of whose calls for independence were met with violence in the early 1990s).

In international affairs, Gorbachev moved to improved relations with Western nations. Reducing defense spending and trying to bolster the failing economy, he called for increased trade and financial interaction, and in a series of meetings with U.S. president Ronald REAGAN (1985, 1986, 1988) successfully sought closer ties with the U.S. In 1987 Gorbachev and Reagan signed a treaty calling for the elimination of intermediate-range missiles, and in the following two years he withdrew Soviet troops from AFGHANISTAN. For these efforts, Gorbachev was awarded the 1990 NOBEL PEACE PRIZE.

His domestic and foreign policy initiatives provoked criticism from both hard-liners, who opposed any deviations from classic communist ideology and any rapprochement with the West, and reformers, such as Boris YELTSIN, who called for more rapid and revolutionary change and for greater freedom in the constituent republics. As he entered the 1990s, Gorbachev was faced with ever-increasing economic problems and with independence movements in the Baltic and other republics that threatened to split the nation. His use of force in LITHUANIA and LATVIA early in 1990 brought wide condemnation, and his leadership fell under increased criticism as the USSR tottered on the brink of economic and political collapse.

With progressives like Foreign Minister Eduard SHEVARDNADZE quitting Gorbachev's government in protest of his shifting policies, it was uncertain whether or not the Russian leader might be drifting toward the old style of repressive dictatorship. On the international front, he continued to maintain close relations with the West, joining in the UN resolution (1990) that condemned his former ally, IRAQ, and calling for the use of force in the Persian Gulf. In August 1991 Gorbachev was briefly overthrown in a coup, but he returned to power following popular opposition to the rebellious cabal. However, the fact that some of his closest political associates had been involved in the plot severely damaged his reputation. Moreover, his government was beset by nationalist agitation in several of the republics of the USSR. Bowing to the inevitable, he resigned as president and witnessed the dissolution of the USSR in December 1991.

Gordimer, Nadine (1923–) South African author. Gordimer's novels and short stories reflect her concern with South African politics and their effect on the human spirit. She was an active opponent of APARTHEID. Her works include the short stories in *The Soft Voice of the Serpent* (1953), and the novels, *A Guest of Honor* (1970), *The Conservationist* (1974), which was awarded the Booker Prize jointly; and *Sport of Nature* (1987). In 1991 Gordimer received the NOBEL PRIZE in literature.

Gordon, Dexter (1922–1990) An American JAZZ tenor saxophonist, Gordon was one of the pioneers of the BE BOP style. Throughout the 1940s, he played with the bands of Lionel HAMP-TON, Louis ARMSTRONG and Billy ECK-STINE. In the 1950s, he became addicted to drugs and served a brief prison sentence before moving to Europe and becoming part of the American jazz community there. In 1986, he played the semi-autobiographical role of an aging jazz musician in the film *'Round Midnight*. The performance won him an ACADEMY AWARD nomination.

Gordon, Max (1903–1989) Founder of the Village Vanguard in New York City, one of the most influential JAZZ clubs in the U.S. After establishing the club in 1935, he helped promote the careers of many jazz greats and other performers, including the young Judy Holliday, Barbra STREISAND, Lenny BRUCE, and Woody GUTHRIE.

Gordon, Ruth (Ruth Gordon James) (1896–1985) A respected actress later in life, Gordon was in fact a highly successful playwright and screenwriter in the 1940s and 1950s. Between minor acting stints on Broadway and in film, she wrote—frequently in collaboration with husband Garson KANIN—*A Double Life* (1948), *Adam's Rib* (1949), *Pat and Mike* (1952) and several others. But it wasn't until she was 72 years old that she won public acclaim, winning the ACADEMY AWARD for best supporting actress for the occult-suspense film *Rosemary's Baby* (1968). This was followed in the 1970s and '80s by a string of "eccentric old lady" roles in films such as *Harold and Maude* (1971), *Where's Poppa?* (1978) and *My Bodyguard* (1980).

Gore, Albert, Jr. (1948–) American politician, member of the House of Representatives, (1977–85), U.S. senator (1985–93), vice president of the United States (1993–2001) and presidential nominee (2000). The son of former U.S. senator Albert Gore Sr., Gore graduated from Harvard University in 1969 and spent five months in South Vietnam serving as an army journalist. Gore was elected to his father's old House seat in 1976 on a conservative platform that included criticism of homosexuality, public

Former Vice President Al Gore (OFFICE OF THE VICE PRESIDENT)

funding of abortion clinics and restrictive gun-control measures.

Gore was elected to the U.S. Senate in 1984 and promptly developed an interest in the nation's evolving computer network. In 1986 he introduced a bill designed to encourage investment in more rapid information transfer between computers. This improved the development of fiber optic cables—thin, flexible glass pipes that use light pulses on specific light frequencies to transmit information rapidly, which paved the way for the development and extension of the INTERNET.

After launching an unsuccessful presidential campaign in 1987, Gore became the vice presidential running mate of Arkansas governor Bill CLINTON, in 1992. In November 1992, the Clinton-Gore ticket triumphed over Bush and Vice President Dan QUAYLE. At the beginning of the Clinton administration, Vice President Gore appeared to receive the de facto powers of "coexecutive" that Clinton had promised during the campaign. He attempted (unsuccessfully) to implement a new national energy policy, and worked to push the NORTH AMERICAN FREE TRADE AGREEMENT through the Senate.

The impeachment of President Clinton in December 1998 seriously hampered Gore's presidential aspirations.

But, in 1999 Gore made his second bid for the White House. After defeating his principal opponent in the Democratic primaries, former New Jersey

senator Bill Bradley, Gore chose Connecticut senator Joseph LIEBERMAN as his vice presidential running mate, making Lieberman the first Jewish-American vice presidential candidate of a major party. During the campaign against the Republican ticket of George W. BUSH and Dick CHENEY, Gore denounced Bush's proposed budget and tax plan as a threat to the Social Security system and the nation's economic growth. In the closest presidential election in U.S. history, Gore won the popular vote but lost the electoral vote (see FLORIDA BALLOT CONTROVERSY). When the U.S. Supreme Court finally ruled in favor of Bush, Gore conceded the election to his opponent. In 2002 Gore announced he would not seek the Democratic nomination in 2004.

Gore, Sir (William) David Ormsby
See HARLECH, Lord.

Goremykin, Ivan Longinovich (1839–1917) Russian minister of the interior under Czar NICHOLAS II from 1895 to 1899 and chairman of the council of ministers in 1906 and again from 1914 to 1916. He was considered to have taken little action against RASPUTIN and was forced to resign.

Gorgas, William Crawford (1854–1920) American physician. Gorgas was born in Toulminville, Ala., and received his medical degree from Bellevue Medical College in New York (1879). He was appointed to the U.S. Army Medical Corps the following year. In 1898, following the U.S. occupation of Havana in the Spanish-American War, he became the city's chief sanitary officer. Once Walter REED established the cause of yellow fever, Gorgas permanently rid the city of the disease by destroying mosquito breeding grounds and segregating patients. Gorgas became chief sanitary officer of the PANAMA CANAL Commission in 1904 and, despite administrative difficulties, successfully controlled malaria and yellow fever in the area, thus ensuring completion of the canal. He was appointed surgeon general of the army in 1914 and, after 1916, was attached to the International Health Board.

Göring, Hermann Wilhelm (1893–1946) German Nazi leader. Born of a distinguished family in Rosenheim,

Bavaria, Göring was a much-decorated WORLD WAR I hero and served as the last commander of Manfred von RICHTHOFEN's legendary air squadron. He studied briefly at Munich University (1920–21) and was an early convert to the National Socialist (NAZI) Party, joining in 1922. A year later he was wounded in the Munich BEER HALL PUTSCH. Escaping to Sweden for four years, he returned to Germany and was elected to the Reichstag in 1928, becoming the legislature's president in 1932. After HITLER's accession to power in 1933, Göring became second only to his leader in the hierarchy of the Third Reich. His posts included German air minister, Prussian prime and interior minister and founder-head of the dreaded secret police, the GESTAPO. In 1936 he took over the direction of the four-year economic plan, becoming virtual dictator of all aspects of the nation's economy. In 1939 he was officially designated Hitler's successor and a year later he was awarded the specially-created rank of Reichmarshal. A vainglorious figure, enamored of smart uniforms and endless pageantry, he ultimately succumbed to morphine addiction and became increasingly reclusive. Responsible for Germany's total air war, he lost popularity as Allied bombings took their toll, and by 1943 he had lost much of his authority. In May 1945 Göring surrendered to U.S. forces. Found guilty of war crimes at the NUREMBERG TRIALS, he was sentenced to death but managed to cheat the hangman by poisoning himself hours before his scheduled execution.

Gorkin, Jess (1913–1985) American magazine editor. As editor of *Parade* magazine from 1949 to 1978, he guided it from a small Sunday magazine to the most widely circulated Sunday supplement in the U.S. Gorkin is credited with having originated the idea of a telephone **Hot Line** between Moscow and Washington; he proposed the idea in a *Parade* editorial in March 1960.

Gorky, Maxim (Aleksey Maximovich Pyeskov) (1868–1936) Russian novelist, autobiographer and essayist. Gorky, who first emerged as a major literary talent in the Imperial Russia of the 1900s, ended his career as the preeminent spokesman for culture

Russian author and theorist Maxim Gorky (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

under the Soviet regime of Joseph STALIN. Gorky left his family home at age 12 and devoted long years to wandering, odd jobs and diverse human encounters. These years were recounted in his three-volume autobiographical series, *My Childhood* (1913), *My Apprenticeship* (1916) and *My Universities* (1922). Gorky, who as a young man was a protege of Anton CHEKHOV, scored his first major success with the play *The Lower Depths* (1902), which recounted the hardships of peasant life in realistic colloquial language and thus broke new ground in Russian theater. Gorky was a friend of Vladimir LENIN and enjoyed protected status after the RUSSIAN REVOLUTION of 1917. But his dissatisfaction with the new communist regime led to his voluntary exile from his homeland during the 1920s. In 1931 he returned to Russia, rendered praise to Stalin and articulated the theory of SOCIALIST REALISM that was to set the standard for publishable Soviet literature through the 1980s. In 1932, Gorky became the first president of the Union of Soviet Writers. The circumstances of Gorky's death remain unclear; there is a suspicion that he may have been a victim of Stalin.

Gorodetsky, Sergei Mitrofanovich (1884–1967) Russian poet. His first book, *Yar* (1907), demonstrated his considerable promise as a symbolist poet. His later work was disappointing. In 1912 Gorodetsky repudiated Symbolism, and together with Nicholas GUMILEV founded the Acmeist school (see

ACMEISTS). After Gorodetsky had joined the Communist Party, he denounced any connection with the Acmeists, largely as a result of Gumilev's execution. His later collections of verse, *The Sickie* (1921) and *Mirodom* (1923), idealize the life of the Soviet workers.

Gorshkov, Sergei G(eorgievich) (1910–1988) Soviet admiral. As commander in chief of the Soviet Navy from 1956 to 1985, he transformed the USSR from a nation with only a small coastal defense force into a nuclear-era sea power rivaled only by the United States. Many Western military experts regarded Gorshikov as a major contributor to modern naval strategy. His views were given seminal expression in his 1976 book *The Sea Power of the State*.

Görz-Gradisca (Italian: Gorizia) Former county and crownland of Austria, now Italy's Gorizia province, in the Friuli-Venezia Giulia region. The scene of severe fighting during the Isonzo River campaign of WORLD WAR I, it was taken by the Italians in 1916, recaptured during the Austro-German Karst Drive of 1917, was taken again by Italy in 1918—and ceded to Italy by the 1919 Treaty of St. Germain. Following World War II, eastern Friuli was ceded to Yugoslavia (in 1947) but Gorizia remained Italian.

Gosplan Acronym for State Planning Commission, founded in 1921, a group of government departments that planned and coordinated economic activities in the USSR. The Gosplan consisted of three types of departments, according to regional differences and branches of the economy. The party leadership disapproved of Gosplan's first FIVE-YEAR PLAN, which provoked a wave of terror against some of those in charge. Since then, Gosplan was directed by people from the party leadership. In 1960 responsibility for long-term economic planning was transferred to the *Gosplan*, or state scientific economic council.

Gottwald, Klement (1896–1953) Czechoslovak communist leader, president of CZECHOSLOVAKIA (1948–53). Born into a peasant family in Moravia, Gottwald served in the Austrian army in WORLD WAR I. He joined the Czech Communist Party in 1921, becoming

its secretary-general in 1928. The following year he was elected to the Czech parliament. Gottwald spent WORLD WAR II in Moscow, where he edited a newspaper for Czechs in the Soviet army. He became vice premier of Czechoslovakia after the war. When the Communist Party won 38% of the vote in the Czech elections of May 1946, Gottwald became premier, heading a coalition government. Two years later, with Soviet backing, he effected a coup d'état and forced President Edvard BENEŠ to accept a government composed entirely of Communists and their collaborators. In 1952 Gottwald purged his communist rival, party chief Rudolf Slansky, after charging him with treason and holding a show trial (see SLANSKY TRIAL). Gottwald was a strict Stalinist; ironically, he died after contracting pneumonia at Josef STALIN's funeral in Moscow (see STALINISM). Gottwald's rise to power has acquired notoriety in Czechoslovakia as a betrayal of democracy.

Goubau, Georg (1906–1980) German-born electronics engineer. A pioneer in microwave circuits, in the late 1940s Goubau developed an important message-transmission system for television and radio calls. This system enabled a single stand of wire to carry large volumes of messages to isolated areas otherwise reached only by a coaxial cable. The invention was a milestone in the communications technology and foreshadowed the later development of FIBER OPTICS transmissions systems. Goubau wrote more than 60 scientific articles and received several awards for his scientific work.

Goudsmit, Samuel A(braham) (1902–1978) Dutch-born physicist. Goudsmit received his Ph.D. from the University of Leiden (1927), then immigrated to the U.S. He taught at the University of Michigan (1932–46) and Northwestern University (1946–48) before moving to Brookhaven National Laboratory (1948–70). In 1925 Goudsmit and George Uhlenbeck discovered that electrons in the nucleus of the atom rotate, thus becoming charged and creating a magnetic field. This discovery was important in understanding the structure of the atom. During WORLD WAR II Goudsmit worked on

RADAR. In 1944 he became head of Project **Alsos**, a top-secret mission to find out if the Germans were making an ATOMIC BOMB. Goudsmit went to Europe with U.S. forces and inspected newly-captured areas for any evidence that the Germans were working on a bomb. He determined that they would not have an atomic bomb before the end of the war. Goudsmit was awarded the Medal of Freedom, and also received the National Medal of Science for his work.

Goudy, Frederic W. (1865–1947) American printer, typographer and type designer known for a number of traditional roman typefaces. In 1903 Goudy set up the Village Press in a barn in Park Ridge, Illinois, where, with Will Ransom as a partner, he began to produce hand-printed books with bindings by his wife. His Goudy Old Style typeface of 1916 designed for American Type Founders is probably his best-known achievement, a classically elegant Roman face still frequently used. Garamont, Kennerly and Goudy Trajan are other successful Goudy faces, the last based on the carved inscriptions on the Column of Trajan in Rome. Goudy was the author of a number of books on type and lettering and founded the magazine *Ars Typographica*. He won the Gold Medal of the American Institute of Graphic Arts (AIGA) in 1920.

Gould, Chester (1900–1985) American cartoonist. In 1931, while living in Chicago, Gould created DICK TRACY, the best-known of all comic strip detectives. The character was born out of Gould's hatred of such PROHIBITION-era gangsters as Al CAPONE. The strip was the first to present graphic violence. In the late 1950s, it was carried by close to 1,000 newspapers worldwide and read by 65 million people. Gould retired from drawing the strip in 1977.

Gould, Glenn (1932–1982) Canadian pianist and musical theorist, noted for his devotion to the music of J.S. Bach and for his musical and personal eccentricities. Some listeners believe Gould to have been one of the greatest musicians of the 20th century; others dismiss him as a crackpot. Born in Toronto, Gould was educated at the Toronto Royal Conservatory of Music, from which he graduated (the institu-

tion's youngest graduate ever) with high honors. He made his concert debut in 1947 playing Beethoven's Piano Concert No. 4 with the Toronto Symphony Orchestra; his first American performance was in Washington, D.C., in 1955. In 1956 he became the first North American pianist ever to play in the Soviet Union. Over the following decade, Gould built a substantial reputation through his concert appearances and recordings. However, increasingly ill at ease in the concert hall and convinced that a "perfect" performance could not be achieved in a "live" performance, after 1964 Gould refused to play in public. Thereafter, he made only recordings. The reclusive Gould also produced a documentary for Canadian television, "The Idea of North."

Gould's playing was marked by distorted tempi and idiosyncratic phrasing. He reportedly remarked that sound only interfered with music; his interpretations were attempts to get at the truth that he perceived behind the notes. At one early concert, conductor Leonard BERNSTEIN told the audience that he disagreed with Gould's interpretation of the piece they were about to play but thought that it deserved to be heard. Conductor George SZELL's remark about Gould was perhaps most telling of all: "That nut's a genius!" Gould's last recording was of Bach's *Goldberg Variations*—the first work he had ever recorded (1955).

Gould, Stephen Jay (1941–2002) American biologist and paleontologist. Born in New York City, Gould was educated at Antioch College and Columbia University. A working scientist with a clear and graceful prose style, he has been one of the country's most successful science popularizers. He has taught biology, geology and the history of science at Harvard since 1967, and is also the author of columns and essays that have appeared in many large-circulation magazines. In 1972 Gould and fellow-scientist Niles Eldredge posited a theory of evolution that suggested for numerous species a rapid evolution followed by a long period of relative genetic stagnation. This development, termed punctuated equilibrium, remains a subject of intense scientific interest. Gould was the author of a number of books, some of them collections of his popular essays.

Among his works are *Ontogeny and Phylogeny*, *The Panda's Thumb*, *The Flamingo's Smile* (1985) and *Wonderful Life* (1989). Gould continued to publish until his death, producing the monumental *Structure of Evolutionary Theory* (2002) in addition to other important works.

Gowon, Yakubu (1934–) Head of the federal military government in NIGERIA (1966–75). An army officer involved in the successful coup against Tafawa BALEWA in 1966, Gowon succeeded the coup's initial leader, Major General Ironsi, who was killed a few months later. Between 1967 and 1970 Gowon's rule was dominated by civil war with the predominantly Ibo Eastern Region, which had proclaimed itself as independent BIAFRA. Economic difficulties led to another military coup in 1975, led by Brigadier Murtala Mohammed while Gowon was out of the country. Gowon retired to exile in the U.K.

GPU (Gosudarstvennoye Politicheskoe Upravleniye) Abbreviation for "State Political Administration Soviet Security Service," which was founded in 1922, replacing the CHEKA. Its work was directed against the church, private entrepreneurs, KULAKS, the old intellectuals and former members of opposition parties. The GPU was also concerned with conflict within the party. In 1924 its name was changed to OGPU and in 1934 to NKVD before becoming the KGB in 1953. (See also SECRET POLICE.)

Grable, Betty (Elizabeth Grable) (1916–1973) One of HOLLYWOOD's great glamour queens in the 1940s, Grable began performing at an early age. She studied ballet and tap dancing and—having lied about her age (she was only 13)—found work as a chorus girl in films and on Broadway. After being fired from four movie studios and a failed marriage with actor Jackie COOGAN, Grable suddenly became a national sensation as American servicemen's favorite pin-up girl during WORLD WAR II; she was also perhaps the prime beneficiary of the perfected Technicolor process in a string of successful musicals for 20th CENTURY-FOX. Among her box-office smashes were films such as *Down Argentine Way*

(1940), *Coney Island* (1943), *Pin-Up Girl* (1944), *The Dolly Sisters* (1945) and *How to Marry a Millionaire* (1953). In 1943 Grable married band-leader Harry JAMES.

Grace, Princess of Monaco (Grace Kelly) (1928–1982) American-born film and stage actress. Grace Kelly began her career as a model, then acted on Broadway before turning to the movies and becoming one of the premier leading ladies of the American cinema in the 1950s. She projected a cool blonde elegance while bringing subtle emotionality to her roles. She remains especially well known for her roles in the Alfred HITCHCOCK films *Dial M for Murder* (1954), *Rear Window* (1954) and *To Catch a Thief* (1955) and won an ACADEMY AWARD as best actress for her role as the embittered wife of an alcoholic (played by Bing CROSBY) in *The Country Girl* (1954). Other films include *Fourteen Hours* (1951), *High Noon* (1952), *Mogambo* (1953), *The Bridges at Toko-Ri* (1955), *The Swan* (1956) and *High Society* (1956). In 1956 she left the cinema to marry Prince Rainier III of MONACO and became Princess Grace. She died in an auto accident in 1982.

Grade Lew, Baron Grade of Elstree (Lewis Winogradsky, Baron Grade of Elstree) (1906–1998) British impresario. The founder and chairman of Associated Television in Britain, Baron Grade created a show-business dynasty with his brothers Bernard and Leslie. After emigrating from Russia, he entered show business as a dancer, winning a World Charleston Competition (1926). A period as a talent agent led to his becoming a producer and establishing his own production company, now called the Grade Company (from 1985). He has produced such acclaimed films as *The Boys from Brazil* (1978) and *On Golden Pond* (1981), and such award-winning television specials as "Jesus of Nazareth" and "The Julie Andrews Show."

Graebe, Herman (1901–1986) German engineer. As a civilian contractor for the Third Reich's Railroad Administration, he hired and protected hundreds of Jewish workers from the Nazis (see NAZISM) in WORLD WAR II. He subsequently became the only German to

volunteer to testify for the prosecution at the NUREMBERG TRIALS. His testimony made his family's life in GERMANY untenable, and they moved to the U.S. in 1948. The Israeli government bestowed its highest honors on him in 1965.

Graf, Steffi (1969–) German tennis player. Graf became the first woman to permanently break the Evert-Navratilova domination of women's tennis. In 1982 she became the second-youngest player ever to reach the computer ranking system established in 1975. In 1986 she won her first singles championship and went on to win seven more that year, including victories over EVERT and NAVRATILOVA. In 1987 she won the French Open, her first grand-slam title. In 1988 she became only the third woman to complete a grand slam in a single season. She also won the 1988 Olympic championship. In 1991 and 1992 Graf won the Wimbledon tournament, and in 1993 she dominated the 1993 French, U.S. and British Open championships. Graf retired from professional tennis in 1999. She married U.S. tennis player Andre Agassi in 2001.

Graf Spee See Battle of the River PLATE.

Graham, Billy (William Franklin Graham) (1918–) American Baptist clergyman and evangelist. Graham's personal charisma, religious fervor and skill at preaching have made him one of the most admired men in America and the best-known evangelist worldwide. Ordained a Baptist minister in 1939, he gained national recognition during his 1949 crusade in Los Angeles. In 1950 he organized the Billy Graham Evangelistic Association and has conducted successful crusades around the world since then. Graham's message has also reached millions through radio, television and film programs, as well as through the print media. His many books include *Peace with God* (1953) and *How to Be Born Again* (1977). Graham received an honorary knighthood from Britain in December 2001.

Graham, Katharine (1917–2001) American newspaper publisher. Born Katharine Mayer to Agnes and Eugene Mayer, Graham's association with the

Washington Post began while she was still in high school, when at age 17 she began working as a copy girl for the Washington, D.C., area newspaper that her father had purchased in 1933. After graduating from the Madeira School in Washington she enrolled at Vassar College, but transferred to the University of Chicago after her second year, graduating in 1938. She was hired as a reporter by the *San Francisco News*, where she worked for a year before transferring to Washington and joining the *Post's* journalism bureau. In 1940, after her return to her father's newspaper, she married Phillip Graham, then a clerk for the U.S. Supreme Court, with whom she had four children. Six years after their marriage Katharine Graham's husband succeeded her father as publisher of the *Post*. In 1963, 11 years after the birth of their fourth child, Stephen, Philip Graham committed suicide. Katharine then assumed the duties of president of the *Post*.

Along with mastering the challenging administrative tasks of president and later publisher, Graham became famous for her strong support for the publication of damning information about the VIETNAM WAR and Richard M. NIXON's reelection campaign. In 1971 she permitted the *Post* to print the stolen Pentagon documents on the Vietnam War that later became referred to as the "Pentagon Papers." The following year, Graham supported the investigative journalism of Carl Bernstein and Bob Woodward (see WOODWARD and BERNSTEIN) in the WATERGATE crisis that eventually led to the resignation of President Nixon. In 1973 the *Post* won the Pulitzer Prize for its coverage of the Watergate affair, and Mrs. Graham, named chief executive officer of the newspaper that year, received the Zenger Award for Freedom of the Press. Graham ran the *Post* for 20 years before retiring in 1993 in favor of her son, Donald. While continuing to serve on the *Post's* executive committee, Graham wrote *Personal History* (1997), an autobiographical account of her experiences in news journalism. The book was awarded the Pulitzer Prize the following year. On July 14, 2001, while attending a media conference in Sun Valley, Idaho, Graham suffered head injuries in a fall. She died of complications stemming from those injuries three days later.

Graham, Martha (1894–1991) American dancer, choreographer, teacher and company director. Graham has been a major force in the founding and development of modern dance in America. She studied and danced with the Denishawn Dancers (1916–23), appeared in musical revues in New York City and taught at the Eastman School of Music before giving her first solo performance in 1926. She founded her School of Contemporary Dance in 1927, then formed her company and began regular performances in 1929. She developed a specific dance technique to express her "dance plays" which revolved around American and European myths. Often in collaboration with designer/sculptor Isamu NOGUCHI, composer Aaron COPLAND and musician Louis Horst, she has created over 160 works (dancing the lead role in many), including *Primitive Mysteries* (1931), *Letter to the World* (1940), *Appalachian Spring* (1944), *Seraphic Dialogue* (1955), *Clytemnestra* (1958), and *Lucifer* (1975). In 1973 she retired from dancing and thereafter focused on running her school and company. Such well-known dancers as Erick Hawkins and Merce CUNNINGHAM were trained by her. In 1976 Graham was awarded America's highest civilian honor, the Medal of Freedom.

Graham, Sheila (Lily Shiel) (1908?–1988) American writer. Born into poverty in a London slum, she immigrated to the U.S. in 1933 and became a newspaper columnist. Together with Louella Parsons and Hedda Hopper, Graham was one of a trio of Hollywood's most powerful gossip writers. Her affair with F. Scott FITZGERALD, who died in her arms in 1941, was the inspiration for her first book *Beloved Infidel*, published in 1958. She was the model for Kathleen, the heroine of Fitzgerald's novel *The Last Tycoon*.

Grainger, Percy Aldridge (1892–1961) Australian-American pianist and composer. Born in Melbourne, he was educated in Frankfurt. Greatly influenced by his friend Edvard Grieg, he took an interest in folk music, which was to become the abiding passion of his musical life. Grainger began his concert career in England in 1901, touring South Africa and Australia before settling in the U.S. (1914) and becoming a

citizen. Grainger's light and spontaneous music is almost always based on folk themes, and he is best known for his settings of folk tunes from the British Isles. Among his works are *Irish Tunes from County Derry* (1909), *Song of Democracy* (1917) and *Suite on Danish Folksongs* (1937).

Gramsci, Antonio (1891–1937) Italian Marxist and political theorist. Educated at the University of Turin (1911–14), Gramsci was an associate of Palmiro Togliatti and became involved with the socialist politics of the 1920s. He was a cofounder of the newspaper *L'Ordine Nuovo* (1919) and of the Italian Communist Party (1921), which he headed from 1924. He served in the Italian Chamber of Deputies from 1924 to 1926, when he and other communists were arrested and jailed by the fascists. Remaining in prison until months before his death, Gramsci wrote the influential *Letters from Prison* (1947, tr. 1973) and *Prison Notebooks* (1948–57, tr. 1971).

Grand Coalition (German: *grosse Koalition*) Term used in Central European politics to denote a coalition of two major parties, as opposed to a small coalition (*kleine Koalition*) of one major party and a minor party. Such a coalition, between the conservative Christian Democratic Union/Christian Social Union (CDU/CSU) and the Social Democratic Party (SPD) governed WEST GERMANY (1966–69) following the failure of the small coalition of CDU/CSU with the center-right Free Democratic Party (FDP). In 1969, the SPD and the FDP formed a small coalition and the Bundestag elected Willy BRANDT as chancellor. A grand coalition of the conservative OVP and the social democratic SPO governed AUSTRIA from 1945 to 1966.

Grandi, Dino (1895–1988) Italian fascist politician. He served as ambassador to Great Britain, justice minister and foreign minister under Benito MUSSOLINI. In 1943, he helped orchestrate Mussolini's downfall.

Grandma Moses (Anna Mary Robertson Moses) (1860–1961) American "primitive" landscape painter whose greatest measure of fame came during the last two decades of her long

life. Actually, Moses despised the label, "primitive." "People come by the farm to look at the 'savage,'" she would laugh. "But my children are not amused." To put her longevity in perspective, she was five years old when President Lincoln was assassinated and 101 when astronaut Alan SHEPARD made his first manned spaceflight in 1961. She was a living link with a rapidly vanishing rural tradition. The titles of her more than 1,200 paintings told the details of her idyllic childhood in Greenwich, N.Y., her years as farmwife and mother in the Shenandoah Valley, Va., and her last years in the tiny village of Eagle Bridge, N.Y.—*Bringing in the Maple Sugar*, *The Mailman Has Gone*, *Joy Ride*, *The Black Horses*. "This whole paintin' business commenced when my arthritis flared up," she said in an article, "How I paint" (1947). "I switched from yarn to paint for one reason only—you see, a needle is hard to hold. But you can get a good grip on a brush." Independent art agent Louis Calder one day found three of her tiny paintings in a local drugstore near Eagle Bridge, showed them to New York dealer Otto Kallir, and in 1940 Grandma had her first one-woman show in New York. The critics argued, the viewers were delighted, she appeared on the covers of *Time* and *Life* magazines, Edward R. MURROW interviewed her on television in 1956, she met President TRUMAN, and she generally was astonished and delighted at all the fuss. When asked how she painted, she said simply, "From the top—down." However, there was no denying the masterful sense of form and organization and color.

Grange, Harold "Red" (1903–1991) Legendary American football player for the University of Illinois in the 1920s. Grange was popularly known as the "Gallop Ghost." In one of his most notable exploits, he scored four touchdowns and ran for 265 yards in the first 12 minutes of a game (against the University of Michigan in 1924). Grange joined the National Football League's Chicago Bears in 1925, giving the NFL a credibility it had lacked in its first few seasons. After a stint as a coach, he retired from the game in 1938 because of injuries. Grange tried a number of other pursuits (and even acted in a movie serial called *The Galloping Ghost* [1932])

and later became a radio and television commentator. He was a charter member of the Professional Football Hall of Fame in 1963.

Grant, Cary (Archibald Leach) (1904–1986) British-born actor, one of the most popular film stars of the 20th century. In a HOLLYWOOD career that spanned more than three decades, Cary Grant was known as the personification of charm, wit and style. Born in Bristol, England, during the 1920s he alternated between British and American theater, mostly in musical comedy and vaudeville. He made his screen debut in 1932, and in 1933 was chosen by Mae WEST to play opposite her in *She Done Him Wrong*. The last of his 72 films was *Walk, Don't Run* (1966). Grant was equally adept as a leading man in screwball comedies as he was in suspense thrillers. He worked with most of the leading actresses of his time (he was especially effective opposite Katharine HEPBURN) and gave memorable performances directed by George CUKOR, Frank CAPRA, Howard HAWKS and Alfred HITCHCOCK. His most popular films included *The Awful Truth* (1937), *Bringing Up Baby* (1938), *His Girl Friday* (1940), *The Philadelphia Story* (1940), *Suspicion* (1941), *Arsenic and Old Lace* (1944), *Notorious* (1946) and *North by Northwest* (1959). Grant retired at the height of his popularity and remained a legend. In 1970 he was given an ACADEMY AWARD for his "unique mastery of the art of screen acting."

Grant, Duncan (1885–1978) British artist and designer known for highly decorated work much at odds with the mainstream trend toward MODERNISM in the 1930s. Grant's work turned to textile and ceramic designs around 1912. In the 1920s and 1930s, he designed interiors, furniture and such graphic materials as book jackets—always in an elaborately florid decorative vocabulary. Grant was associated with the BLOOMSBURY GROUP.

Grant, Maxwell See Walter GIBSON.

Grant, William T. (1876–1972) American businessman and retailer, founder of Grant's department store chain. Grant opened his first department store in 1906 with fast-selling merchandise priced at 25 cents. In 1966, when he retired as chairman of

the board at age 90, Grant's stores operated in 44 states and grossed \$839.7 million. However, in the 1970s, new competition and financial losses forced W.T. Grant's to go out of business.

Granville-Barker, Harley (1877–1946) British theatrical actor, playwright, director and Shakespearean scholar. Granville-Barker was one of the leading forces in the British theater in the first decades of the 20th century. He first gained wide attention as an actor through his portrayal of Marchbanks in the premiere of *Candida* (1900) by George Bernard SHAW. From 1904 to 1907, Granville-Barker directed a number of premieres of Shaw's plays at the Royal Court Theatre in London. He also scored successes with his own plays, most notably *The Voysey Inheritance* (1905) and *The Madras House* (1910). Granville-Barker was also well-known for his productions of the works of Shakespeare, in which he insisted on a close adherence to the original text.

Grass, Günter (1927–) German novelist, poet, playwright and essayist. Grass is one of the most prominent German authors of the latter half of the 20th century. He achieved international fame with his first novel, *The Tin Drum* (1959), which depicted the chaos and shame that dominated GERMANY during WORLD WAR II. That work drew from Grass's own difficult experiences as an adolescent boy attempting to survive in wartorn Germany. Other novels by Grass include *Cat and Mouse* (1961), *Dog Years* (1963), *Local Anaesthetic* (1969), *The Flounder* (1977) and *The Meeting at Telgte* (1979). Grass also achieved success as a playwright with *The Plebeians Rehearse the Uprising* (1966). *In the Egg and Other Poems* (1977) contains a representative selection of his verse. In 1999 Grass received the NOBEL PRIZE in literature. Grass has been active in postwar German politics as a supporter of the Social Democratic Party.

Grasso, Ella T. (1919–1981) American politician who was the first woman ever to be elected governor of a U.S. state without succeeding her husband in office. A Connecticut Democrat, Grasso held various state offices (1952–70) and served in the U.S. House of Representa-

tives (1971–75). As governor of Connecticut (1975–80), she was in the mainstream of the Democratic political establishment, advocating liberal social programs while holding down state spending. She resigned from office halfway through her second term when she fell ill with cancer.

Grateful Dead, The American rock and roll band. Since its formation in the mid-1960s in San Francisco during the rise of the psychedelic music era, the Grateful Dead has remained a powerful force in American ROCK. Indeed, the Dead—as the band is known by its fans—is one of the most popular live acts in rock history, and draws fans both young and old to its perpetually sold-out shows. While certain Dead personnel have changed over the years, the principal band members have remained guitarist and vocalist Jerry GARCIA, drummers Mickey Hart and Bill Kreutzmann, bassist Phil Lesh, and guitarist Bob Weir. Lyricist Robert Hunter has collaborated frequently with Garcia on Dead songs, while lyricist John Barlow has done the same with Weir. While live performance—and not recordings—remain the strength of the Dead, the band has produced a large number of albums. Notable among them are *Anthem of the Sun* (1968), *Live/Dead* (1970), *Workingman's Dead* (1970), *American Beauty* (1970), *In the Dark* (1987) and *Dylan and the Dead* (1988), a collaboration with Bob DYLAN.

Graves, Michael (1934–) American architect and designer known for his leading role in the development of the design direction generally called POSTMODERNISM. Graves was trained as an architect at the University of Cincinnati and at Harvard, graduating in 1959. He worked for a time in the office of George Nelson in New York and then, in 1960, went to Rome for two years at the American Academy on a Prix de Rome fellowship. In 1962 he returned to Princeton, N.J., to take a teaching post at Princeton University and to establish a practice. In the 1970s he became known as one of the New York Five (also informally called “The Whites”), a group recognized for their abstract and puristic work in a Late Modern vocabulary. Toward the end of the 1970s, raves pulled away from this group. Graves has completed

a number of residential projects, shops, and showrooms and has been at work on designs for the expansion of the Whitney Museum in New York, which involves a major addition to the existing structure by Marcel BREUER. He has received many honors and awards, including seven Honor Awards from the American Institute of Architects and the Brunner Memorial prize from the American Academy and Institute of Arts and Letters. Two volumes titled *Michael Graves: Buildings and Projects* published in 1983 and 1988 document his work.

Graves, Morris (1910–2001) American painter. Born in Fox Valley, Oregon, he studied with Mark Tobey, who introduced him to the delicate calligraphic “white writing” he later employed in his ethereal paintings. Interested in the philosophies of the Orient, with an emphasis on Zen Buddhism, Graves traveled widely in the East and in Europe before settling in the wilds of Washington state. His first one-man show was held in Seattle in 1936. Graves's most memorable paintings contain the beautifully drawn, ghostly birds that have become emblematic of his enigmatic work. Among his characteristic works are *Bird Singing in the Moonlight* (1938–40), *Blind Bird* (1940), both in the collection of New York's Museum of Modern Art, and *Spirit Bird* (1954).

Graves, Robert von Ranke (1895–1985) British poet. Graves spent most of his life on the Spanish island of Majorca, taking up residence there in 1929. He was considered by many to be second only to William Butler YEATS among 20th-century authors of love poetry in English. Although he considered himself primarily a poet, Graves was also a distinguished prose stylist and a noted classical scholar, translator and historical novelist. He wrote well over 100 individual volumes. Some 40 years after their first publication, his two novels about the Roman emperor Claudius, *I, Claudius* (1934) and *Claudius the God* (1934), became the basis for an extremely successful BBC miniseries in the 1970s. Among the best known of his other books were his 1929 autobiography *Goodbye to All That* and his highly speculative and controversial 1948 study of poetic myth, *The White Goddess*.

Gray, Eileen (1878–1976) Irish-born interior, furniture, and architectural designer whose Paris-based career spanned a stylistic range from ART DECO to the MODERNISM of the INTERNATIONAL STYLE. Gray studied at the Slade School of Art in London before moving to Paris in 1902. After World War I, her work was extended to include the design of carpets in abstract patterns and interior design and decoration. She opened her own Paris gallery in 1922 to show her furniture, lamps, carpets and lacquer work. Her work was admired by such leading modernists as JJP. Oud and LE CORBUSIER. Her furniture design used glass, mirror, ALUMINUM and CHROMIUM-plated metal in geometric forms typical of the modernism of the 1930s. In spite of her outstanding work, Gray was largely forgotten after World War II; her name scarcely figures in most histories of the period. She was rediscovered in the 1960s and is now viewed as a significant figure in the development of modern design. Her designs are still manufactured. Gray was a lively figure, known as a great beauty as well as an adventurous personality—an aviation enthusiast who made an English Channel crossing in a balloon in 1909 with the Hon. C. S. Rolls of Rolls-Royce fame.

Gray, Francine du Plessix (1930–) Franco-American journalist and author. Gray started her journalistic career working for United Press International, and later became a columnist for *THE NEW YORKER*. Grey's first books were nonfiction and include *Divine Disobedience: Profiles in Catholic Radicalism* (1970) and *Hawaii: The Sugar-Coated Fortress* (1972). Her first novel, *Lovers and Tyrants* (1976), is a highly autobiographical collection of chronological pieces following the life of the heroine, Stephanie. The novel's theme, that women are held back by those who profess to love them, struck a feminist chord of the time, and was praised for its intelligent writing (see FEMINISM). Later works include the novel *World without End* (1981) and the nonfiction *Soviet Women: Walking the Tightrope* (1990). In 1999 she published a highly acclaimed study of the marquis de Sade's relations with the women in his life, *At Home with the Marquis de Sade*. Six years later she brought out an affectionate memoir of

her Russian émigré mother and stepfather titled *Them* (2005).

Graziano, Rocky (Thomas Rocco Barbella) (1921–1990) American boxer. For much of the 1940s and 1950s Graziano reigned as middle-weight boxing champion, compiling a record of 67 wins, 10 losses and six draws from 1942 to 1952. Although he was not noted for his boxing skills or finesse, his brawling style made him a fan favorite. Three of his bouts, with Tony Zale in 1946, 1947 and 1948, were considered classics. In 1956, his autobiography *Somebody Up There Likes Me* was made into a film starring Paul NEWMAN. Graziano went onto a successful career as an entertainer and commercial spokesman. He was elected to the Boxing Hall of Fame in 1971.

Great Books Program A foundation organized in Chicago in 1947 with Dr. Robert Maynard HUTCHINS, former president of the University of Chicago, as its chairman to promote the reading of a list of classics compiled by Mortimer J. ADLER. Groups formed across the country to read and discuss the works. The foundation, in conjunction with the *Encyclopaedia Britannica* Educational Corp. and the University of Chicago published a series, *Great Books of the Western World*, which was sold with a two-volume Syntopicon index. The series was edited by Hutchins and Adler.

Great Depression A worldwide economic crisis during the 1930s. In its magnitude and effects, the Great Depression is considered the 20th century's most severe peacetime crisis. Millions of people lost their jobs, their homes and their savings, and large segments of the economy came to a virtual standstill. The STOCK MARKET CRASH OF 1929 is generally considered to mark the beginning of the Great Depression, while the onset of WORLD WAR II is regarded as its end point. The causes of the Great Depression are not easily understood. Unsound business practices (notably, a widespread reliance on easy credit without the backing of actual wealth), high tariffs and agricultural dislocation as early as the boom period of the 1920s helped set the groundwork for economic depression. At the onset of the depression, U.S. president Herbert

Unemployed workers sell fruit in New York City during the Great Depression of the 1930s. (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

HOOVER believed that the American economy would recover on its own without government intervention. As the depression deepened, he created the Reconstruction Finance Corporation to provide loans to distressed banks and businesses. In 1932, Franklin D. ROOSEVELT was elected president of the U.S. on his promise to take decisive action to end the depression. In his first HUNDRED DAYS in office he prompted Congress to enact far-reaching legislation—known collectively as the NEW DEAL—to provide public relief, create new jobs and stimulate business. Although the New Deal policies did help many Americans, the depression continued through the 1930s, affecting virtually every country in the world. In many areas economic weakness bred political turmoil. In GERMANY, the chaos of the Great Depression created conditions that brought Adolf HITLER to power, while in JAPAN the military gained strength. Thus, the anxieties of the Great Depression helped sow the seeds of World War II.

Great Gatsby, The Novel of 1925 by F. Scott FITZGERALD, considered a classic of 20th-century American literature. The novel is narrated by Nick Carroway, who tells the story of Jay Gatsby, who has mysteriously amassed a fortune and bought a Long Island estate, and is intent upon pursuing Daisy Buchanan, a distant cousin of Carroway. The novel depicts the extravagance and self-destruction of the wealthy during the JAZZ AGE in the U.S., and culminates in a murder. Many critics considered *Gatsby* to be Fitzgerald's best and most fully realized book.

Great Leap Forward Chinese slogan for a series of radical changes in social and economic policy between 1958 and 1961 under MAO ZEDONG. Private consumption was cut and material incentives withdrawn. Massive agricultural communes were set up and services by light industrial and construction projects. The program failed following bad harvests and the withdrawal of Soviet technical aid. It is estimated that at least 10 million people died of starvation or diseases related to malnutrition as a result of this spectacular policy failure.

Great Purge A repressive wave of terror (1934–38) by which Joseph STALIN aimed at eliminating the opposition. It was followed by a number of show trials that resulted in the arrest, exile or death of about 8–10 million people. In 1934, following the death of Sergei KIROV, which was used as the pretext for the purge, only former political opponents were arrested; but the number and range increased and the arrests became almost indiscriminate. Guilt was established by extracting confessions through torture. The charges made against “the enemies of the people” ranged from treason to sabotage and espionage. NKVD tribunals sentenced the prisoners to death or to long terms of imprisonment in corrective labor camps. Stalin justified the purge by stating that, as progress toward full socialism is realized, the class struggle must be intensified. The result of the purge was to give Stalin supreme power.

Great Society Term for the 1960s U.S. domestic programs of the JOHN-

SON administration. The phrase comes from a speech delivered by President Johnson on May 23, 1964. Some Great Society legislation included: in 1964—the CIVIL RIGHTS ACT; the Revenue Act, which reduced taxes; the Food Stamp Act; the Economic Opportunity Act (also called “the War on Poverty”). In 1965—MEDICARE and MEDICAID; the sweeping Elementary and Secondary Education Act; the Higher Education Act, which provided student aid; the creation of the Department of Housing and Urban Development; and the VOTING RIGHTS ACT OF 1965. In 1968—the Housing and Urban Development Act.

Great Train Robbery Popular name for the robbery of a Glasgow-to-London mail train on August 8, 1963. The robbery was executed by a gang of 20 to 30 masked robbers some 35 miles northwest of London and netted more than \$7 million, making it the largest armed robbery to date. Detectives investigating the crime discovered the robbers’ hideout, an isolated rural English cottage, on August 13. In 1964, 12 Britons were found guilty of involvement in the robbery and sentenced to prison terms ranging up to 30 years. However, only about \$1 million of the stolen money was ever recovered.

Grechaninov, Alexander Tikhonovich (1864–1956) Russian composer. He studied at the St. Petersburg Conservatory under Rimsky-Korsakov and at the Moscow Conservatory with Vassily Ilich Safonov. In 1922 he made his first European tour. He lived in Paris from 1925 and finally settled in the U.S. His works comprise operas, including *Dobrynya Nikitich* (1902) and *Sister Beatrice* (1912), five symphonies, chamber music, Catholic church music, piano pieces, songs and folk songs. He intended his *Missa Oecumenica*, which was performed in Boston in 1944, to unite all creeds, both Eastern and Western.

Greco, José (1919–2000) Spanish dancer. Greco studied Spanish dance with “La Argentinita” (Encarnación López Julvez) and partnered her from 1943 to 1945. He subsequently partnered her sister Pilar López from 1946 to 1948, before forming his own Spanish dance company in 1949. His company has toured the world, and he has appeared in many films and television productions. Greco has become one of

the most influential and popular Spanish dancers in America as well as worldwide. He retired in 1974 and established the Foundation for Hispanic Dance.

Greco-Turkish War of 1921–22 Turkish resistance to Allied dismemberment of the OTTOMAN EMPIRE, led by Mustapha Kemal ATATÜRK, included expelling the Greek army from western Anatolia. Granted the Smyrna (Izmir) region by the Treaty of SÈVRES (1920), the Greeks attempted to gain Thrace and much of Anatolia. Despite inadequate supplies, Greek forces advanced on Eskisehir, were repulsed (January and March, 1921), but moved toward Ankara. Seriously defeated at Sakarya River (August 24–September 16,

1921), they began a year-long retreat to Smyrna, which Atatürk’s forces besieged and captured September 11, 1922, killing thousands of Greeks. The Treaty of LAUSANNE (July 24, 1923) ended the war, forcing Greece to remove all occupation forces, return eastern Thrace and Turkish islands, and exchange Greece’s Turkish minority people for Greek inhabitants of the Ottoman Empire.

Greece (Hellenic Republic) Greece is located on the southern end of the Balkan Peninsula in southeast Europe and covers a total area of 509,930 square miles, including over 1,400 Aegean and Ionian islands. During the BALKAN WARS (1912–13) the country

GREECE

1913	Greece acquires additional territory in Macedonia and Thrace following the Balkan Wars.
1917	Abdication of King Constantine I; Greece enters World War I on side of Allies.
1935	Restoration of monarchy under King George II.
1936	General Metaxas, named prime minister by George II, establishes fascist-style dictatorship.
1940	Greece repels attempted Italian invasion in World War II.
1941	Germany invades and occupies Greece.
1944–49	Civil War between communists and royalists; communists defeated.
1952	Greece joins NATO.
1964	Ascension of King Constantine II.
1967	Military coup brings right-wing colonels to power; constitutional rule suspended; Constantine II goes into exile after his failed attempt to depose the colonels.
1973	Monarchy formally abolished.
1974	War with Turkey over Cyprus leads to fall of military government; democratic government restored under Prime Minister Constantine Karamanlis.
1975	New constitution establishes a democratic republic.
1981	Greece joins European Community; socialist George Papandreou becomes prime minister.
1989	Papandreou steps down amid personal and political controversy.
2000	President Stephanopoulos is reelected; Turkey and Greece sign agreements pledging more cordial relations.
2001	Greece adopts the euro.
2004	Greece hosts Olympic Games in Athens.

acquired Crete to the south and the eastern Aegean islands. After fighting with the Allies during World War I, Greece entered a period of political turmoil, swinging from a monarchy under George II (1922–24) to a republic (1924–35) to restoration of the king (1935–40). German occupation of Greece during WORLD WAR II gave way to the GREEK CIVIL WAR between communists and pro-democracy forces, which ended with the restoration of the monarchy in 1946. Subsequent

elections brought power struggles, military coups and the eventual exile of King CONSTANTINE II (1967). TURKEY's invasion of CYPRUS in 1974 brought the end of military rule in Greece and in 1975 the adoption of a new constitution declaring a democratic republic. In 1981 Greece elected its first socialist government and joined the European Communities. Controversy over U.S. bases in Greece, a financial scandal involving government officials and another scandal surrounding powerful

political leader George PAPANDREOU in 1988, plus a worsening economy, dominated the political scene in the last two decades of the 20th century. In January 2001 Greece replaced its currency, the drachma, with the new currency of the EUROPEAN UNION, the EURO. In the summer of 2004 it hosted the Olympics in Athens.

Greek Civil War War of 1944–49 between communists and pro-Western royalists in GREECE. In December 1944–January 1945, toward the end of WORLD WAR II, Greek communist guerrilla forces attempted to take over Greece, but were defeated. A British-arranged truce between leftists and moderates ultimately resulted in the restoration of the monarchy. In late 1946, communists reopened the war with support from ALBANIA, BULGARIA and YUGOSLAVIA. The Greek government, with British and American aid (the latter under the TRUMAN DOCTRINE), drove out the communist rebels with UNITED NATIONS support. The Greek communists announced the end of the war on October 16, 1949. About 50,000 combatants died in this conflict. The Greek Civil War was viewed as the first U.S. effort to halt the spread of COMMUNISM in the post-World War II era; it marked the opening phase of the COLD WAR.

Green, William (1873–1952) American labor leader. Born in Coshocton, Ohio, Green was a coal miner and a local miners' union leader while still a teenager, rising to become secretary-treasurer of the United Mine Workers of America (1912–24). In 1924 Green was elected to succeed the recently deceased Samuel GOMPERS as president of the AMERICAN FEDERATION OF LABOR (AFL), a post he held until his death. During Green's period of leadership a rift between craft and industrial unions deepened, provoking a 1935 schism that resulted in the formation of the CONGRESS OF INDUSTRIAL ORGANIZATIONS (CIO). Green's labor movement philosophy is expressed in his book *Labor and Democracy* (1939).

green belt Term, used in town planning, that describes a large tract of land around a city, on which building is not permitted. The green belt concept originated in the UNITED KINGDOM and was first put into practice after the end of

World War II. British planners realized that cities ought not to spread out into the surrounding countryside through unlimited building, and that rural areas ought to be preserved. Relatively small NEW TOWNS were built in and around green belt areas to help relieve overcrowding in large existing cities, notably LONDON.

Greenberg, Hank (Henry Benjamin Greenberg) (1911–1986) American baseball player. Greenberg led the American League in home runs five times while playing first base and outfield for the Detroit Tigers in the 1930s and 1940s. He was voted the American League's most valuable player in 1935 and 1940. In 1938 he hit 58 home runs, two shy of the 1927 record set by Babe RUTH. His career was plagued by injuries and interrupted by World War II, but his lifetime home run total was 331, with a lifetime batting average of .313. After his retirement in 1947, he held front-office jobs with the Cleveland Indians and Chicago White Sox. In 1956 Greenberg became the first Jewish player elected to the Baseball Hall of Fame.

Greene, Graham (1904–1991) British novelist and man of letters. Greene is perhaps the preeminent British writer of the second half of this century. He is, beyond question, one of the most prolific and versatile writers of modern times, having created both serious novels and what Greene calls "entertainments," as well as screenplays, film criticism, political analyses, travel books, literary biographies, critical essays and an autobiography. Educated at Oxford, Greene converted to Roman Catholicism in 1926. The travails of political conscience and religious doubt are two recurring themes in his works. Major works of fiction by Greene include *Orient Express* (1933), *England Made Me* (1935), *The Power and the Glory* (1940), *The Quiet American* (1955), *Our Man in Havana* (1958), *The Honorary Consul* (1973), *The Human Factor* (1978), and *Monsieur Quixote* (1982). Greene has written two volumes of autobiography, *A Sort of Life* (1971) and *Ways of Escape* (1980). Greene was reportedly a candidate for the NOBEL PRIZE in literature on numerous occasions but never received the award.

greenhouse effect Term used to explain the theory of GLOBAL WARMING. According to many scientists, the greenhouse effect is caused by the buildup in the atmosphere of carbon dioxide from industry, agriculture and the burning of fossil fuels. The carbon dioxide causes heat from the sun to be trapped near the Earth's surface, much in the way that glass traps heat in a greenhouse. Scientific opinion as to whether there actually is a greenhouse effect is mixed. A UN report in 1990 concluded that the Earth's surface and lower atmosphere had warmed by 0.3 to 1.1 degrees Fahrenheit in the last century and could be expected to warm by another 2.7 to 8 degrees Fahrenheit in the next century. However, according to a study published in *Science* (March 30, 1990), microwave temperature data collected by U.S. weather satellites from 1979 through 1988 showed no evidence of a global warming from the greenhouse effect. If the "effect" proves valid, it may have dire consequences for the Earth and its inhabitants in the next century.

Greenland Bounded on the north by the Arctic Ocean and on the west, south and east by various arms of the North Atlantic, including Baffin Bay and the Greenland Sea, the island of Greenland covers 839,782 square miles—only 131,896 square miles of it free of ice. Ancient claims to the island by Denmark and Norway were resolved by the International Court of Justice in 1933, granting Denmark sovereignty. Greenland became an integral part of Denmark in 1953 and joined the various European Communities (EC), though its populace was opposed to this. Internal autonomy was achieved in 1979, resulting in the island's withdrawal from the EC in 1985. Recently, Greenland has been divided over the status of U.S. bases, established on the island during World War II.

Greenpeace International organization known for its active efforts to protect the ocean environment and aquatic wildlife. Founded in Canada in 1969, Greenpeace has been at the forefront of the "save the whales" movement and worked for a worldwide ban on whale hunting. The group also attracted international attention in its efforts to stop the annual "cull" of baby

seals off the coast of Newfoundland in the 1980s. Greenpeace does not rely solely on publicity to achieve its aims, but confronts hunters directly with its own fleet of boats. For example, in its "save the whales" campaign, Greenpeace boats mingle with boats of the hunting fleet and try to disrupt the hunt. Greenpeace became involved in an international incident in 1985 when one of its ships, the *Rainbow Warrior*, was sunk in Auckland harbor, New Zealand. The ship was about to sail into a nuclear test area in an effort to disrupt French atomic weapons testing in the South Pacific. It was subsequently revealed that French frogmen had sunk the ship on the orders of the French government, and the French defense minister was forced to resign.

Greens Originally and principally, the German (originally West German) Ecology Party, which first emerged as a political force in Bremen in 1979, when environmentalists and antinuclear groups won 5.9 percent of the seats in the Land (federal state) parliament. Greens were subsequently elected to other Land parliaments and to the BUNDESTAG, and similar parties had success in other West European countries. In 1998 the German Green Party entered in a coalition government with the Social Democrats, and one of its leaders, Joschka FISCHER, became Germany's foreign minister. The **British Ecology Party** changed its name to the Greens in 1985.

Greenspan, Alan (1926–) American economist, chairman of the Council of Economic Advisors (1974–77) and of the Federal Reserve Board (1987–). Born in New York City, Greenspan studied economics at Columbia University under future Federal Reserve chairman Arthur BURNS and taught economics classes at that institution (1953–55). After leaving Columbia, Greenspan formed a consulting firm that he ran until his departure from the private sector in 1974.

One of the profound ideological influences in Greenspan's life was his friendship with the novelist and philosopher Ayn RAND, whose fictional and nonfictional works promoted "objectivism," a value system that trumpeted free-market capitalism and an individualistic lifestyle. Ayn Rand

helped persuade Greenspan to join Richard NIXON's 1968 presidential campaign. Six years later, after several informal consultations with the president, Greenspan became chairman of the Council of Economic Advisors. When Nixon resigned in 1974, Greenspan remained in office during the Gerald FORD administration. When Ford's brief tenure as U.S. president ended in January 1977, Greenspan left the public sector and subsequently served on the boards of several American corporations. He returned to government service when President Ronald REAGAN appointed him chairman of the Federal Reserve in 1987. During his years as chairman, Greenspan sought to use his position to reduce government involvement in the economy and promote greater deregulation of the national banking industry. Although a Republican, Greenspan openly supported Democratic president Bill CLINTON's plan to reduce the federal deficit by cutting government spending and using the savings to pay off part of the national debt. When Clinton left office in 2001, Greenspan remained chairman under the presidency of George W. BUSH. Although early on in the Bush administration he agreed that Bush's proposed 2001 tax cut would stimulate greater economic growth, he disagreed with the president over the general health of the economy. In particular, Greenspan had earlier (in the 1990s) expressed concern over the "irrational exuberance" that investors and observers had demonstrated in buying up speculative shares in unproven companies, particularly in the high technology sector. When stock market prices declined in 2000, and especially after the terrorist attacks on SEPTEMBER 11, 2001, Greenspan responded by reducing interest rates in order to stimulate lending to businesses that would generate increased consumer spending and promote confidence in the economy. Over the course of his career as chairman of the Federal Reserve, Greenspan presided over the longest period of uninterrupted economic growth in American history. He retired in 2006 and was replaced as Fed chairman by Ben Bernanke.

Greenwich Village Bohemian residential district of lower Manhattan in the U.S.'s NEW YORK CITY; extending south from 14th St. to Houston St. and

west from Washington Square to the Hudson River. In recent decades "Greenwich Village" has come to signify three distinct areas: the West Village, roughly west of Seventh Avenue; Greenwich Village proper, west of Broadway; and the East Village, east of Broadway. An influx of foreign immigrants settled here and nearby on the Lower East Side after 1880, and by 1901 it was already famous as a hotbed of avant-garde artists, radicals and free-thinkers. Its longtime reputation was reinforced in the Beat era of the 1950s (see BEAT GENERATION) and the Flower-Power 1960s when the artists, poets and writers were joined by musicians, religious cultists, HIPPIES, homosexuals and just about anyone that the larger society considered different—all of it supported by cafés, galleries and clubs for jazz, folk and every other kind of music. Among the district's 20th-century residents were writers MILLAY, WHARTON, O'NEILL, DOS PASSOS, AUDEN, Dylan THOMAS; painters HOPPER and SLOAN; and journalist John REED.

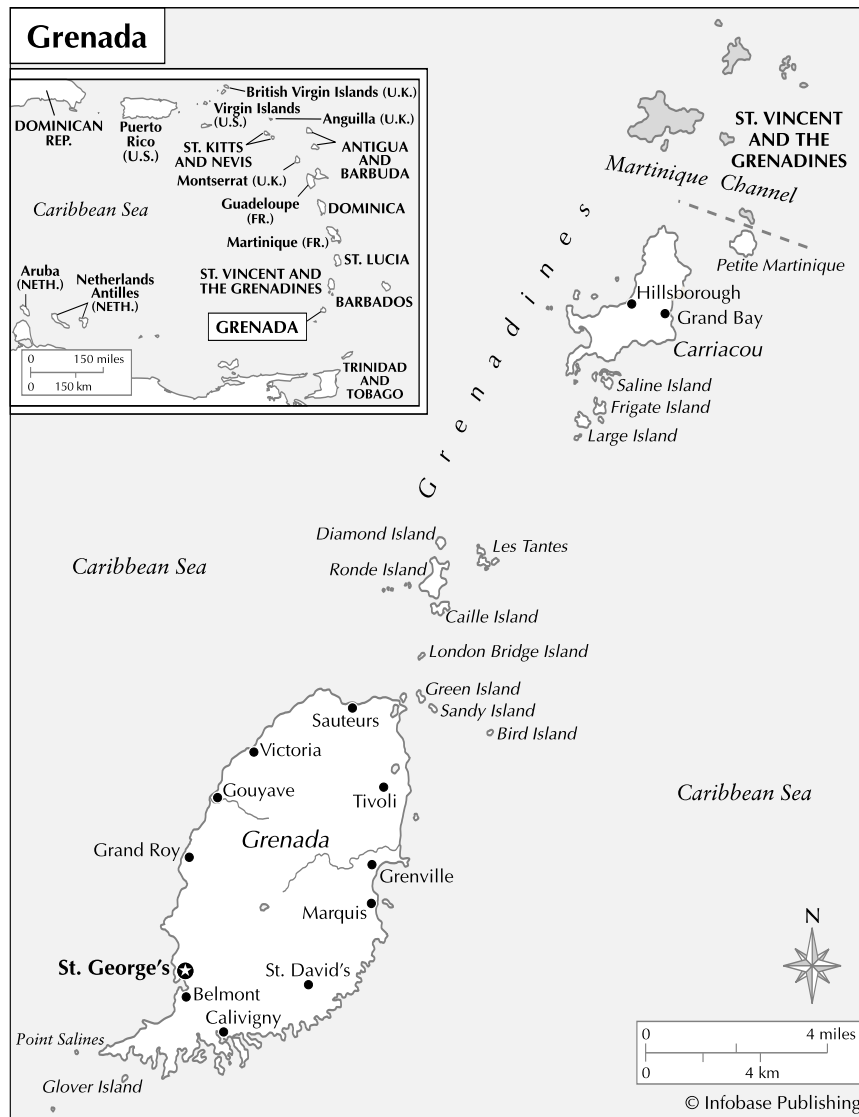

Greer, Germaine (1939–) Australian author and feminist. Greer's controversial first book, *The Female Eunuch* (1971) brought her instant international celebrity and made her reputation as a leading figure in FEMINISM and the WOMEN'S MOVEMENT. The book argued that women's sexuality has been denied and misrepresented as passivity, and that the stereotypical feminine behavior societally imposed on women is essentially that of a eunuch. Her subsequent and varied works include *Sex and Destiny* (1984), *Shakespeare* (1986) and *Daddy, We Hardly Knew You* (1989). An English scholar, Greer was latterly a special lecturer at Newnham College, Cambridge.

Gregory, (Isabella) Augusta, Lady (née Persse) (1852–1932) Irish playwright and patroness of the arts. An Irish nationalist instrumental in the IRISH LITERARY REVIVAL, Lady Gregory was a cofounder of the ABBEY THEATRE along with W. YEATS and J. M. SYNGE. Her many plays, which include *Spreading the News* (1904), *The Goal Gate* (1906) and *Dervorgilla* (1906) were written in Irish dialect and celebrated Irish tradition and folklore. She also translated the works of Molière for the Irish theater and collaborated with

Yeats on numerous plays, including *Cathleen ni Houlihan* (1902). She successfully fought the censorship of Synge's *PLAYBOY OF THE WESTERN WORLD* and G. B. SHAW's *The Shewing up of Blanco Posnet*. Her house at Coole Park in County Galway was for many years a second home for some of IRELAND's leading literary figures. Lady Gregory recorded her memoirs of the early days of the Abbey in *Our Irish Theatre* (1913).

Gregory, Cynthia (1946–) American ballerina. Known for her technical skill and purity of line in such classical ballets as *Swan Lake*, Gregory first danced with the San Francisco Ballet (1961–65). She joined AMERICAN BALLET THEATRE (ABT) in 1965 as a principal dancer and created roles in many ballets, including Alvin AILEY's *The River* (1971) and Rudolph NUREYEV's production of *Raymonda* (1975). Acclaimed as one of America's outstanding prima ballerinas, she dances in works from ABT's modern repertory, such as *Dark Elegies* and *Theme and Variations*, as well as in the classical ballets. In 1991 Gregory gave her farewell performance dancing opposite Fernando Bujones as Odette-Odile in *Swan Lake*.

Grenada The most southerly of the Windward Islands in the eastern Caribbean Sea, Grenada has a total land area of 132.8 square miles, which includes the dependent islands of the Southern Grenadines to the north-northwest. Grenada attained full independence from Britain in 1974, and Sir Eric Gairy became premier. His corrupt regime was overthrown in a bloodless coup in 1979 by left-wing rebels led by Maurice Bishop. Bishop's failure to draft a new constitution or to hold elections, as well as his growing alignment with CUBA, resulted in another coup in 1983 during which Bishop and his associates were murdered by extremist elements in his movement. This led to the invasion of Grenada by troops from the UNITED STATES in October 1983. Afterward, the constitution was restored, and elections were held in 1984. Since the end of the COLD WAR in 1991, Grenada has attempted to improve relations with foreign countries, particularly the U.S., by forming a series of centrist coalition governments. However, repeated alle-

gations of Grenada's complicity in money laundering schemes resulted in strained relations between the island and states such as Canada, China, France and the U.S. until Grenada began cooperating with international financial investigations in 2002.

Grenfell, Joyce (Joyce Irene Phipps Grenfell) (1910–1979) British actress and film comedienne. For more than 40 years, Grenfell was a popular fixture on stage, screen, radio and television. Her career included appearances in numerous revues, plays, one-woman shows, radio and television programs and international tours to Australia, Canada and the U.S. She also entertained Allied troops during WORLD WAR II. She used her long, toothy visage to create the character of a dotty, upperclass English spinster whom she made vastly popular with her audiences.

Gresley, Sir Herbert Nigel (1876–1941) British engineer known for the design of railroad locomotives, including streamlined types that achieved outstanding performance and speed. Gresley was in charge of locomotive design for the Great Northern Railway, and after World War I when British railway systems were reorganized, he became chief mechanical engineer for the newly created London & North Eastern Railway. In 1923, his design for a Pacific locomotive (with 4-6-2 wheel arrangement) became a new standard for both

GRENADA

- | | |
|------|--|
| 1974 | Grenada proclaims independence, as riots against Prime Minister Eric Gairy rock the island. |
| 1979 | Gairy is overthrown in a coup led by Maurice Bishop. The constitution and parliament are retained. A two-year technical pact is signed with Havana. |
| 1983 | Bishop is ousted, placed under house arrest, and later executed. U.S. and Organization of Eastern Caribbean States (OECS) forces invade the island and, after heavy fighting, capture General Austin, Bernard Coard, and other coup leaders. |
| 1984 | Elections are held |
| 1985 | The House of Representatives validates all laws enacted during the suspension of the constitution from March 1979 to November 1983. |
| 1991 | Grenada joins the OECS. |
| 1996 | Grenada signs two treaties with the U.S. |
| 2004 | Hurricane Ivan devastates the island. More than 90% of homes are damaged or destroyed. |

freight and passenger service. Beginning in 1932, a drive for speed records developed in English railroading, and in 1934, a Gresley Pacific pulling the *Flying Scotsman* reached a peak speed of 100 mph. The first streamlined Gresley Pacifics were of the A4 class of 1935, with the famous MALLARD setting a record speed of 126 mph in 1938. These locomotives were also notable for their reliability and performance in routine service in which they maintained high speeds over long runs in regularly scheduled service. Gresley was knighted in recognition of his achievements.

Gretzky, Wayne (1961–) Canadian ice hockey player. Born in Edmonton, Alberta, Gretzky is considered possibly the greatest player in the history of the game. He entered the National Hockey League in 1979 and played center for eight seasons for the Edmonton Oilers, leading them to four Stanley Cup championships. In 1988 he was traded to the Los Angeles Kings. On October 15, 1989, playing against his former team in his 780th game, he broke the NHL's all-time record for scoring points set by Gordie HOWE. Gretzky's lifetime record at the end of that game stood at 642 goals and 1,210 assists for a total of 1,852 points. Gretzky was the NHL's scoring leader every season from 1981 through 1987 (an NHL record) and won the Hart Trophy for most valuable player each of those years as well as in 1989, also a record. In the 1995–96 season the Kings traded Gretzky to the Saint Louis Blues, but Gretzky became a free agent at the end of the season and signed with the New York Rangers, where he finished his career in April 1999. In that same year Gretzky was voted into the Hockey Hall of Fame. In 2000 he became part-owner of the Phoenix Coyotes NHL team and in 2004 became their head coach. Gretzky also helps manage Canada's national hockey team, leading them to a gold medal in the 2002 Winter Olympics.

Grey, Sir Edward (Viscount Grey of Fallodon, 1916) (1862–1933) British statesman. Educated at Oxford, he was elected to Parliament as a Liberal in 1885, becoming foreign secretary in the years preceding WORLD WAR I (1905–16). During this period, he supported France in the Moroccan crises

of 1905 and 1911, concluded the ANGLO-RUSSIAN ENTENTE of 1907 and convened the London Peace Conference (1912–13) to negotiate an end to the BALKAN WARS. While hating the idea of war, the German violation of Belgian neutrality caused Grey in 1914 to urge Britain's entrance into WORLD WAR I. After the war, he championed the LEAGUE OF NATIONS and served as a special ambassador to the U.S. from 1919 to 1920.

Grey, Zane (1875–1939) American author of popular western fiction and nonfictional works on deep-sea and freshwater fishing. After graduating from the University of Pennsylvania in 1896, Grey practiced dentistry before turning to writing. He published his first novel, *Betty Zane*, in 1904 and his famous *Riders of the Purple Sage* in 1912. Grey swiftly became a staple on national bestseller lists and his works have remained continuously in print.

Grierson, John (1898–1972) Motion picture producer, director and prominent leader in the British and Canadian documentary film movements. The son of a Scots schoolmaster, he studied philosophy at Glasgow University and social sciences in Chicago. Convinced that cinema presented an unparalleled mode of rhetoric and persuasion, he produced films about British trade and unity for the Empire Marketing Board (EMB). *Drifters* (1929) his first film, eschewed the romantic approach to picturesque fishing villages and replaced it with a contemporary “epic of steam and steel,” depicting the modernization of the fishing trade. With his EMB Film Unit, an important group of rising young filmmakers, he produced over a hundred such films between 1930 and 1933. (After 1934 the Film Unit moved to the General Post Office and became known as the CROWN FILM UNIT.) In 1938 Grierson relocated to Canada, where he became film commissioner and the founder of the world-renowned Canadian Film Board. He continued throughout the postwar years to work tirelessly on behalf of the documentary film, forming International Film Associates in 1945, the Mass Communications and Public Information Department for UNESCO, and producing television documentaries in Scotland. By contrast to colleague Robert

FLAHERTY (with whom he worked for a brief period in the early 1930s), Grierson placed document and ideology ahead of poetry and entertainment. “I look on cinema as a pulpit,” he said in his numerous treatises and theoretical writings, “and use it as a propagandist.” The working person was his constant subject and his sympathies with labor issues and problems frequently ran him afoul of the government agencies that employed him. It was Grierson who first coined the term “documentary”—in a 1926 review of Flaherty's *Moana*.

Griffes, Charles Tomlinson (1884–1920) American composer. Born in Elmira, N.Y., Griffes studied in Berlin, where he was a pupil of Engelbert Humperdinck, who encouraged his work as a composer. After returning to the U.S., Griffes taught music in a Tarrytown, N.Y., boys school until his death. Influenced by French and Russian music, he developed an impressionist style that later matured into an extremely individualistic mode of expression. His numerous compositions include the *Roman Sketches* (1915–16), piano pieces that include the well-known *White Peacock*; the orchestral work *The Pleasure-Dome of Kubla Khan* (1920) and the piano sonata (published 1921). Among his other works are chamber music, pieces for the theater and songs.

Griffin, John Howard (1920–1980) American author. In 1959 Griffin decided to get a firsthand picture of the treatment of blacks in the American South by posing as a black man. He temporarily altered his skin color by using chemicals and ultraviolet light, then traveled throughout the South for six weeks. He chronicled his experiences in the book *Black Like Me*, which sold more than a million copies over the next several years and was made into a film.

Griffith, Arthur (1872–1922) Irish statesman and nationalist. Griffith was a pivotal figure in the Irish HOME RULE movement. In 1905 he helped found SINN FEIN, a political party that advocated a separate Irish Parliament. When in 1916 he was elected to Parliament (British), he refused to serve. Instead he helped found the Irish revolutionary assembly, the DÁIL ÉIREANN.

He was imprisoned by the British several times (1916–18). In 1921 Griffith lead the delegation that negotiated the Treaty of Westminster, which created the Irish Free State.

Griffith, D(avid) W(ark) (1875–1948). America's greatest filmmaker during the SILENT FILM period and one of the most important influences on the course of international cinema. Raised in Louisville, Ky., under the influence of his father, a Civil War veteran, Griffith was steeped in the romance and chivalry of the Old South. Under the stage name of Lawrence Griffith he unsuccessfully tried acting and writing for the stage. Reluctantly, he turned to the new medium of motion pictures and gained a featured role in an Edwin S. Porter film, *Rescued from an Eagle's Nest* (1907). However, it was as a director, not an actor or writer, that Griffith soon made his way. From 1908 to 1913 he directed virtually all the short films for the popular BIOGRAPH COMPANY, forging a stock company that included Lillian GISH and her sister Dorothy, and consolidating most of the technical and stylistic advances in the medium—dramatic use of close-ups, parallel editing, moving camera, historical reenactments, multiple-reel narratives and flashbacks. He brought a stinging satiric lash to the traditional forms of melodrama he knew from his itinerant years on the stage. His greatest international success and his most ambitious films come from the 1913–24 period. He released through Mutual, UNITED ARTISTS, and PARAMOUNT classics like *THE BIRTH OF A NATION* (1915), *Intolerance* (1916), *Broken Blossoms* (1919), *Way Down East* (1920), *Orphans of the Storm* (1922), *America* (1924) and *Sally of the Sawdust* (1924); in 1919 he moved to his own production facility in Mamaroneck, N.Y. Often working from sketchy scripts and frequently with his favorite cameraman, G. W. ("Billy") Bitzer, Griffith produced a body of work that vaulted American cinema into worldwide prominence and prestige. Griffith's last years, however, saw a decline in his personal fortunes and an increasingly sophisticated audience impatient with his by-now "old-fashioned" style. Viewers laughed at his last film *The Struggle* (1931), a creaky drama of alcoholism. Except for an "honorary" ACADEMY AWARD in 1935 for

his "distinguished creative achievements," Griffith spent his last years in relative obscurity. He died, bitter, lonely, and virtually forgotten, from a cerebral hemorrhage in a Hollywood hotel room at age 73.

Grigorenko, Pyotr Grigorevich (1907–1987) Soviet military hero and dissident. Grigorenko won distinction in WORLD WAR II, but was later critical of the Soviet establishment. In 1961 he was stripped of his rank of major general, and was later committed to a series of mental hospitals—standard punishment for political dissidents in the USSR at that time. After being allowed to go to the U.S. for medical treatment in 1977, he was stripped of his Soviet citizenship.

Grimes, Martha (1931–) American novelist. Like P. D. JAMES, Grimes followed the model established earlier in the century by Dorothy SAYERS, writing detective novels of literary merit. Her first 11 novels, whose titles are the names of pubs featured in the text, are set in an England both real and imagined. Rich in geographical and psychological detail, as well as wit, they explore human fallibility, familial relationships, childhood and the nature of good and evil. Grimes shows that trust is the basis of social order, although it can be exploited. She taught writing at Johns Hopkins University. Her books include *The Man with a Load of Mischief* (1981), *The Old Fox Deceived* (1982), *The Old Silent* (1989) and *The Old Contemptibles* (1991). *The End of the Pier* (1992) marked a departure for Grimes, as the novel is set in western Maryland in the U.S.

Grin, Alexander (Alexander Stepanovich Grinevsky) (1880–1932) Russian writer. As a schoolboy Grin read avidly, although he was at times suspended from school for laziness. After a short time in the merchant marine he led a tramp's existence, and finally started a career as a writer. After fighting with the Red Army, ill and penniless he was rescued by Maxim GORKY. A chronic alcoholic, he spent the last few years of his life as a failed writer and geography teacher, turned to carving for a living, and died in poverty. His stories, frequently romantic and exotic in flavor, are underesti-

mated by Soviet critics, but they convey the turmoil the Soviet Union was undergoing. His best known works include *The Ratcatcher* (1924), *Fantastic Tales* and *The Road to Nowhere* (1930).

Gris, Juan (1887–1927) Spanish painter. Gris was a key figure in the artistic school of CUBISM and was heavily influenced by Pablo PICASSO. Gris first came to Paris in 1906 and lived for a time as Picasso's neighbor. But Gris did not begin to paint until 1910. His first major painting, *Hommage à Picasso*, was shown at the influential Salon des Indépendants exhibition of 1912. Gris is considered representative of the "synthetic" phase of cubism that followed after the initial "analytic" phase developed by Picasso and Georges BRAQUE. For Gris, the primary function of the artist was to transform the general concepts of the intellect and the imagination into unique yet comprehensible concrete forms. He was fond of comparing painting to mathematics and architecture in that it was a systematic means of representing the world and the evolving nature of human truth.

Grishchenko, Anatoly (1935–1990) Soviet aviator. He became a hero by flying his helicopter repeatedly over the site of the 1986 CHERNOBYL nuclear power plant disaster and dumping tons of sand and cement over the smoldering reactor. His actions were credited with helping to limit the effects of the disaster. He was given the SOVIET UNION's highest award for heroism. His death from leukemia was believed to have been radiation-induced.

Grissom, Virgil "Gus" (1926–1967) U.S. astronaut; one of the seven original MERCURY astronauts selected by NASA in April 1959. Grissom died in America's first major space tragedy, the APOLLO 1 fire on January 27, 1967—a tragedy waiting to happen. Grissom, who had flown a suborbital flight aboard *Liberty Bell 7* (July 21, 1961) as part of the Mercury-Redstone series and a GEMINI flight with John YOUNG (March 23, 1965), had been apprehensive about *Apollo 1*. More than 20,000 test failures of the spacecraft cabin and engines had been recorded—and did not inspire confidence. A week before the fatal accident that took the lives of Gris-

som and fellow astronauts Roger CHAFFEE and Edward WHITE, Grissom had hung a lemon inside the cabin, signifying his opinion of the craft. Tragedy struck—sudden and deadly—during a routine simulated flight. With the three astronauts sealed inside the Apollo command module, a fire broke out, turning the cabin into a blazing, smoke-filled death trap, killing the three men in a matter of minutes. A board of inquiry confirmed the late Grissom's fears. Five factors, the board found, led to the tragedy: an abundance of inflammable materials that produced toxic gases inside the cabin; poorly designed and unprotected electric cables; unprotected tubing, which contained inflammable and corrosive coolant; lack of a suitable escape system for the crew; and the unsettling fact that no fire or emergency crews were even on duty at the time of the accident.

Griswold v. Connecticut (1965) U.S. Supreme Court case legalizing contraception for married adults. A Connecticut statute imposed an outright ban on the sale of contraceptives. The law was challenged all the way to the U.S. Supreme Court, which struck it down as contrary to the Constitution. Although there is no explicit language regarding sexual practices in the Constitution, the Court, through Justice William O. DOUGLAS's opinion, reasoned that the Bill of Rights created a right of personal privacy. Accordingly, the Court held that a state may not legally impose an outright ban on the sale or use of contraceptives by married adults. The Court later applied this right of privacy to legalize ABORTIONS in the controversial case *ROE v. WADE* (1973).

Grivas, George (1898–1974) Commander of the Greek Cypriot National Guard. A right-wing Greek army officer, Grivas initiated the guerrilla campaign in CYPRUS in 1953, creating a terrorist movement, EOKA. He was later given command of the Greek Cypriot National Guard, against Archbishop MAKARIOS's wishes. Recalled to Athens in 1971, where he regarded Makarios's acceptance of Commonwealth membership as treason, Grivas later secretly returned to Cyprus (1971–74) and reorganized his followers against Makarios. His divisive legacy contributed to the disastrous coup and subsequent partition of

Cyprus in the summer of 1975. (See also Greek-Turkish CYPRIOT WAR OF 1974.)

Grofé, Ferde (1892–1972) Popular American composer of *The Grand Canyon Suite* and architect of the modern “jazz orchestra” sound. His earliest musical training came from family members in his native New York City. Later in California he wrote arrangements of popular songs in JAZZ idioms for the Paul WHITEMAN Orchestra. His orchestration of George GERSHWIN's *RHAPSODY IN BLUE* was performed (with Gershwin at the piano) in the legendary Whiteman concert, “An Experiment in Modern Music,” in New York's Aeolian Hall, February 12, 1924. His remaining years were devoted to a handful of movie scores—including an early talkie epic, *King of Jazz* (1929); *Minstrel Man* (1944), for which he won an ACADEMY AWARD; and a science fiction thriller, *Rocketship X-M* (1950). He also wrote many popular orchestral suites, notably *The Mississippi Suite* (1925) and *The Grand Canyon Suite* (1931). (Several other suites, particularly the *Hudson River Suite* and *The Atlantic Crossing Suite*, are kitschy concoctions marred by the sound effects, respectively, of bowling balls and radio loudspeakers!) His most popular original composition was “On the Trail,” from *The Grand Canyon Suite*. It was later adopted as the musical theme for Philip Morris cigarettes.

Gromyko, Andrei Andreyevich (1909–1989) Soviet diplomat and political figure, foreign minister of the USSR (1957–85). Gromyko served under every Soviet leader from Joseph STALIN to Mikhail GORBACHEV and played a leading role in the conduct of Soviet foreign policy in the post–World War II era. Born to a peasant family in Byelorussia, he joined the COMMUNIST PARTY in 1931 and quickly rose to become a diplomat in the foreign ministry. He was ambassador to the U.S. from 1943 to 1946 and headed the Soviet delegation to the 1944 DUMBARTON OAKS CONFERENCE on the foundation of the UNITED NATIONS. He was subsequently chief permanent Soviet delegate to the UN (1946–48), ambassador to Britain (1952–53) and deputy foreign minister. Named foreign minister in 1957, he played a largely subservient role to the outspoken Soviet leader Nikita KHRUSHCHEV. Under Khrushchev's suc-

cessor, Leonid I. BREZHNEV, he began to exercise greater control over foreign policy, particularly after he was made a full member of the Politburo in 1973. He helped engineer detente agreements with the U.S. in the 1970s and defended the Soviet invasion of AFGHANISTAN in 1979 and POLAND's martial-law crackdown on SOLIDARITY in 1981. Gromyko played a crucial role in Gorbachev's 1985 rise to power by nominating him as general secretary to the Soviet Communist Party. However, after assuming power, Gorbachev replaced Gromyko with the younger, more flexible Eduard A. SHEVARDNADZE, and relegated Gromyko to the largely ceremonial post of president. On Gromyko's death Gorbachev issued a lukewarm tribute and did not attend the funeral.

Gronchi, Giovanni (1887–1978) President of ITALY (1955–62). In 1915 Gronchi helped found the Italian Popular Party, the forerunner of the Italian Christian Democratic Party. He was an early proponent of the “opening to the left” in the early 1950s.

Grooms, Red (Charles Roger Grooms) (1937–) American artist. Born in Nashville, Tennessee, he studied at the Peabody Institute and Chicago Art Institute as well as with Hans Hofmann. His first one-man show took place in 1958, the same year he was involved in the HAPPENING *Burning Building*. Related to POP ART, his work is playful, figurative and often riotously funny. His large three-dimensional constructions of painted papier mâché and wood are witty tableaux of various contemporary scenes filled with expressively distorted characters and their surroundings. They include *Discount Store* (1970), *Ruckus Manhattan* (1975) and *Tut's Fever* (1988), an ironic look at the motion picture on permanent display at the Museum of the Moving Image, New York City.

Gropius, Walter (1883–1969) German architect who founded the BAUHAUS school. Along with LE CORBUSIER and Ludwig MIES VAN DER ROHE, Gropius was the creator of architectural MODERNISM and the INTERNATIONAL STYLE. The son of a Berlin architect, he studied architecture in Munich and Berlin (1903–07), then worked with Peter BEHRENS (1908–10). After serving in WORLD WAR

I, he became director of the schools of fine arts and applied arts in Weimar. Pursuing his theories about the relationship between art and design, Gropius merged the two schools to form the Bauhaus. He himself designed the Bauhaus building in DESSAU in 1925 and hired many of the faculty members. He directed the Bauhaus until 1928, when he resigned to set up a private practice in Berlin. After HITLER came to power, Gropius moved to England (1934), where he collaborated with Maxwell FRY in designing private houses and schools. In 1937 Gropius immigrated to the U.S., where he became a professor at Harvard. In this post he had an enormous influence on an entire generation of young American architects. Gropius was a prolific author and lecturer; among his best known books is the seminal *New Architecture and the Bauhaus* (1935).

Gropper, William (1897–1977) American painter and cartoonist. Born in New York City, Gropper was influenced in the development of his bitingly realistic style by his studies with Robert HENRI and George BELLOWS. In 1919 he began his career as a cartoonist for the New York *Tribune*. His left-wing views were soon illustrated by cartoons in such radical periodicals as *Rebel Worker* and *New Masses*. During the 1920s and 1930s he became a leading American realist, often treating themes of social injustice and class conflict. During this period, he created a number of important murals, including a series at the Department of the Interior Building, Washington, D.C. Intensely political and scathingly satirical, he also skewered the pompous and the corrupt in such paintings as *The Senate* (1935, Museum of Modern Art, N.Y.C.).

Groppi, James E. (1931–1985) American Roman Catholic priest. During the 1960s, Groppi served in a largely black neighborhood in his native Milwaukee, Wis. He drew national attention as a crusader for open housing. He led more than 200 marches and was arrested more than a dozen times. Later Groppi became active in advocating the rights of welfare recipients and American Indians. He was removed from the priesthood in 1976 for getting married.

Gross, Henry (1895–1986) American crime boss. Kingpin of a vast illegal gambling operation in the 1940s, Gross was convicted in 1951 of heading a multimillion dollar bookmaking ring. That case also led to the conviction of 22 policemen and the dismissal or resignation of 240 others. The scandal, which prompted major police reforms, also saw the departure of Police Commissioner William O'Brien and the resignation of Mayor William O'Dwyer. He committed suicide rather than go back to prison after his arrest on a heroin trafficking charge.

Grossman, Vasily Semyonovich (1905–1964) Russian writer. Grossman worked as an engineer in Donbas and Moscow. In 1934 his novel *Glyukauf* attracted the attention of Maxim GORKY, who published it. From 1941 to 1945 Grossman wrote stories and sketches for *The Red Star*, mostly about the war. After the war he turned his attention to writing a novel concerning the defense of STALINGRAD, and his play *If We Were to Believe the Pythagorians* (1946) was banned by authorities.

Grosz, George (1893–1959) German-American painter and graphic artist. Born in Berlin, Grosz attended the academies of Dresden and Berlin, where he became an illustrator of magazines and books. During WORLD WAR I he produced drawings and caricatures that depicted the brutality of war. Directly after the war (1919) he joined the DADA movement, and organized (1920) the First International Dada Fair. In the postwar years, he also attacked the degradation of German society and skewered the hypocritical bourgeoisie with jagged pen-and-ink drawings and (from 1924 on) scathing, acid-colored paintings unmatched in their satirical savagery. Among his best-known graphic portfolios is *Ecce Homo* (1923), containing incisive studies of high-and-low-life in a morally repugnant German society. Faced with the rise of NAZISM, Grosz immigrated to the U.S. in 1932. He became a teacher at New York's Art Students League in 1933 and achieved U.S. citizenship in 1938. His work became more mellow and realistic for a while, but he again turned to subjects of corruption and ravaged humanity after the outbreak of World War II. His work is well represented in American muse-

ums. His autobiography, *A Little Yes and a Big No*, was published in 1946.

Grotewohl, Otto (1894–1964) German communist politician, first prime minister of the German Democratic Republic (EAST GERMANY) from 1949 to 1964. A politician during the WEIMAR REPUBLIC, Grotewohl kept a low profile during the Nazi period. He refounded the German Social Democratic Party in 1945, joined the communists under Soviet pressure and became prime minister in 1949.

Grotowski, Jerzy (1933–1999) Polish theatrical director. Grotowski has been one of the most influential directors of the post-World War II era, due to his striking theories as to experimental theatrical performance. He studied at the Cracow Theater School and first came to international prominence as a result of his work with actors in the 1960s at the Polish Theater Laboratory. Grotowski's approach elucidated in his book *Towards a Poor Theater* (1968), focused upon an intensity of dramatic presentation that was heightened through encouragement of improvisation on the part of the actors, as well as free-form participation by the audience itself. Settings and costumes were to be minimally utilized. In the 1970s Grotowski worked with the Theater Laboratory in Poland. His theories much influenced the LIVING THEATER and the work of British director Peter BROOK.

Grottrup, Helmut (1916–1981) German rocket engineer. Of the group of rocketeers who had developed Germany's V-2 rocket at PEENEMÜNDE, Grottrup was the only principal scientist to surrender to the Soviets instead of to the Americans at the end of World War II. After working for the Russians in Germany for a time, he was taken to the Soviet Union in the autumn of 1946. He returned to Germany in 1953, disappointed in the level of opportunity given him and feeling that his work for the Soviets had been neither appreciated nor worthwhile.

Group of Seven Group of Canadian painters formed in 1920. They attempted to create a national art by depicting the grandeur of their nation's northern landscapes. Members of the

Group of Seven included Frank Carmichael, Lawren HARRIS, A. Y. Jackson, Frank Johnson, Arthur Lismer, J. E. H. MacDonald and Frederick Varley. Influenced by the techniques of modern European art but rejecting the dominance of European subject matter, these artists created large canvases that are vividly colored and expressively painted. The group disbanded in 1931 but continued to influence later generations of Canadian painters.

Group Theatre American theater movement headed by directors Harold CLURMAN, Cheryl Crawford and Lee STRASBERG. The goal of the Group Theatre, which was established in 1931 in New York City, was to present serious modern plays on the basis of quality alone, without regard to Broadway commercial concerns. Among the playwrights produced by the Group Theatre were Paul Green, Sidney Kingsley, Clifford ODETS and William SAROYAN. In 1941, due to funding difficulties and internal dissension, the Group Theatre disbanded. A similar theatrical movement, also called the Group Theatre, emerged in London in 1933, with Rupert Doone serving as principal director. The British Group Theatre staged plays by W. H. AUDEN, T. S. ELIOT, and Stephen SPENDER and often featured scores by composer Benjamin BRITTEN. It ceased production during World War II but was revived for a short time in the 1950s.

Grove, Robert Moses “Lefty” (1900–1975) American baseball player. An over-powering fastball pitcher, southpaw “Lefty” Grove finished his career with 300 wins. Over the course of 17 seasons with the Philadelphia Athletics (1925–33) and the Boston Red Sox (1934–41), he led the league in strikeouts seven consecutive times, earned-run average nine times and victories four times. In his early years he was famous for his inability to control either his pitches or his temper, and intimidated teammates and opponents alike. He was named to the Hall of Fame in 1947.

Groves, Leslie R(ichard) (1896–1970) American military engineer and administrator. Educated at the Massachusetts Institute of Technology and the U.S. Military Academy at West Point, by

1941 Groves was overseeing all U.S. military construction. From 1942 to 1947, he was the executive officer of the MANHATTAN PROJECT, responsible for coordinating the thousands of separate ultra-secret projects undertaken by the military, private corporations and universities that were necessary to the construction of the ATOMIC BOMB. In 1945 Groves was instrumental in the decision to drop the bomb, choosing the Japanese targets and training crews to perform the mission. In 1947 he organized the Armed Forces Special Weapons Project, which trained officers in the military aspects of atomic energy. He retired from the army in 1948 and became a business executive.

Gruen, Victor (Victor Gruenbaum) (1903–1980) Austrian-born architect and community planner. Gruen pioneered the design for American suburban shopping centers in the 1950s. His major projects set the pattern for large-scale shopping mall development in the U.S. He later disavowed the shopping mall concept and blamed land developers for corrupting the idea by promoting uncontrolled suburban sprawl and automobile traffic congestion. Gruen also founded one of the U.S.’s leading architectural, planning and engineering firms.

Gruentzig, Andres (1939–1985) German-born physician. In 1977, while working at a Zurich hospital, Gruentzig developed the revolutionary balloon catheter technique for cleaning arteries of fatty deposits. In 1980, the year he became a U.S. citizen, he also became a professor of cardiology and radiology at Emory University.

Grumiaux, Arthur (1921–1986) Belgian violinist. Grumiaux achieved world-wide fame through his stylish recordings and concert appearances. He often performed with pianist Clara Haskill, and their recordings of sonatas by Beethoven and Mozart came to be prized by collectors.

Grumman Corporation American aircraft and aerospace manufacturer and defense contractor. It was founded by Leroy Grumman (1901–82) in 1929 as an aircraft-repair shop in a converted basement. The company expanded rapidly and was the first to make aircraft

with folding landing gear. It also pioneered in the development of the collapsed wing. It manufactured the Hellcat fighters and Avenger torpedo bombers that played a pivotal role in the American victory in WORLD WAR II IN THE PACIFIC. The company later diversified; by the 1970s, it was largely dependent on defense and aerospace contracts, and in the 1980s was a major supplier of buses to American municipalities. The company is headquartered on Long Island, N.Y. In 1994 Grumman was acquired by Northrop Corporation.

Grundgens, Gustav (1899–1963) German theatrical actor and director. Grundgens was a star of the German stage as a romantic actor in the 1930s, appearing in numerous plays by George Bernard SHAW and winning acclaim for his 1938 lead portrayal in *Hamlet*. Grundgens’s startling successes at so early an age formed the inspiration for the novel *Mephisto* (1936) by Klaus Mann (the son of renowned German novelist Thomas MANN). After World War II, Grundgens worked both as a director and as an actor, starring as Mephistopheles in a touring production of Goethe’s *Faust* in 1957–58. His death was an apparent suicide.

Grundig, Max (1908–1989) West German electronics pioneer. Grundig founded one of Europe’s largest radio, television and high-fidelity stereo equipment manufacturing companies, Grundig AG. The firm was regarded as a symbol of WEST GERMANY’s post-World War II economic success. However, sales began declining in the late 1970s, due to increased competition from cheaper Japanese exports, and Grundig was forced into an alliance with N. V. Philips Gloeilampenfabrieken of the Netherlands.

Gruppe 47 (English: Group 47) Gruppe 47 was created in post-World War II GERMANY in 1947 by a diverse group of German writers who met initially to consider the founding of a literary journal. While the journal never came into being, Gruppe 47 achieved prominence as a vital source of encouragement—through its annual autumn meetings in which manuscripts were read and discussed—for the postwar generation of German writers. Prominent writers who attended Gruppe 47

meetings regularly or sporadically included NOBEL PRIZE-winning novelist Heinrich Böll, poets Günter Eich and Hans Magnus Enzensberger, and novelists Günter Grass, Siegfried Lenz, and Martin Walser.

Guadalcanal Volcanic island in the western Pacific Ocean, 100 miles southeast of New Georgia; a part of the Solomon Islands. A protectorate of Great Britain's since 1893, it was captured by JAPAN in 1942 (see WORLD WAR II IN THE PACIFIC). U.S. Marines seized a newly built Japanese airfield on August 7, 1942, in the first of a hardfought series of land and naval battles known as the **Battle of Guadalcanal**, from August 7 to November 13, 1942. Henderson Field, the bone of bitter contention, is now an international airport.

Guadeloupe Guadeloupe is a group of islands, including the larger islands of Basse-Terre and Grand-Terre, in the Caribbean Sea. Granted departmental status by France in 1946, the islands became a region of France in 1974 and were given greater autonomy in 1982.

Guam Island and unincorporated U.S. territory in the western Pacific Ocean; largest and southernmost of the MARIANA ISLANDS group. Discovered by Magellan in 1521 it was a Spanish possession until captured by the United States in 1898, during the Spanish-American War. The Japanese captured the island in 1941, at the beginning of WORLD WAR II in the Pacific; retaken by U.S. forces in 1944, Guam became a base for air assaults on the Japanese home islands. In the 1960s the U.S. used it for air operations against VIETNAM and LAOS.

Guantánamo (Guantánamo Bay) Harbor city in southeastern CUBA; the town is about 10 miles north of Guantánamo Bay. U.S. naval units landed here in 1898 during the Spanish-American War and have yet to leave. Often called the PEARL HARBOR of the Atlantic, "Gitmo" was leased by the U.S. in 1903 as a strategic naval station. Since 1960 it has been a bone of contention with the CASTRO government of Cuba, which has refused the token \$5,000 annual rent from the U.S. and has pressed for surrender of

the base. Following the U.S. invasion of AFGHANISTAN in October 2001 to overthrow the TALIBAN government and destroy the terrorist organization AL QAEDA, the U.S. has utilized part of its facilities at Guantánamo as a detention area for individuals it has termed enemy combatants.

Guarnieri, Johnny (1917–1985) American musician; one of the major JAZZ pianists of the SWING ERA. A prolific recording artist, in 1940 he made a series of recordings with Artie SHAW on which he played what were considered to be the first jazz harpsichord solos. Guarnieri also played with such noted musicians as Benny GOODMAN and Jimmy DORSEY.

Guatemala (Republic of Guatemala) Covering an area of 42,031 square miles, Guatemala is located in Central America, just south of Mexico. The repressive government of General Jorge Ubico (1931–44) was followed by

that of Juan José ARÉVALO BERMEJO, who initiated social, political and economic reforms. His successor, Colonel Jacobo ÁRBENZ GUZMÁN, confiscated land owned by the U.S. Fruit Company, which resulted in a successful U.S.-backed coup in 1954. All reforms were rescinded. Since then Guatemala was plagued by military coups and intense left-wing guerrilla activity, which has resulted in extreme military repression, massacre of suspected guerrilla supporters in the 1980s and international criticism for widespread human-rights violations. The government of President Mario Vinicio Cerezo Arévalo opened talks with the guerrilla leaders in 1987, but no solution to the conflict was reached until 1996, when the Guatemalan government signed a peace accord with the rebels, ending 36 years of civil war. In December 1999 Alfonso Portillo Cabrera was elected president. Cabrera's administration was plagued by accusations of theft and money laun-

GUATEMALA

1906	United Fruit Company develops banana plantations.
1917	Massive earthquake damages Guatemala City.
1920	Unionist Party overthrows dictator Estrada Cabrera after 22 years of rule.
1921	Liberal Party overthrows Unionists.
1925	Semi-feudal coffee plantations spread into highlands to be near Indian labor.
1930	Military coup.
1931	Jorge Ubico becomes dictator.
1938	Border with El Salvador defined.
1944	Revolution ousts Ubico; elections lead to progressive government under José Arévalo.
1951	Progressive programs expanded under President Jacobo Árbenz; huge redistribution is begun of unused land, including major holdings of United Fruit Company.
1954	U.S. backs and participates in coup placing Colonel Castillo Armas in place; Arbenz programs are cancelled and all land returned to United Fruit Company.
1956	New constitution ratified.
1957	Military coup.
1963	Relations broken with Britain over claim to territory of Belize.
1965	New constitution.
1966	Elections held; Julio César Méndez elected.
1967	Miguel Angel Asturias wins Nobel Prize in literature for stories based on Indian traditions.
1968	Church takes stand on social issues; Archbishop Casariggo kidnapped by right wing; violent leftist guerrillas active.
1976	Earthquake levels much of Guatemala City; 22,000 die.
1978	Leftist guerrilla activity increases; military mounts counterterror campaign, massacring rural villages; massive migration of Indians results.
1979	Government announces "Four Year Development Plan."
1982	Military coup by Efraín Ríos Montt voids elections.
1983	Military coup.
1984	Eugenia Tejada becomes first woman member of cabinet.
1986	Elections and new constitution.
1989	Guatemala City doubles in population since 1980.
1990	U.S. suspends military aid because of death squad activity by army.
1991	Election of Jorge Serrano Elías reflects growing political power of conservative evangelical Christian movement.
1996	Government and leftist rebels sign peace agreement ending civil war.
1999	The UN Historical Clarification Commission issues a report citing widespread human rights abuses by the Guatemalan government and the U.S. government during the civil war.
1999	President Bill Clinton apologizes for the role of the United States during Guatemala's civil war. Alfonso Antonio Portillo Cabrera is elected president (December).
2003	Óscar Berger Perdomo is elected president.

dering. In 2003 Óscar Berger was elected president.

Gucci, Guccio (1881–1953) Italian leather worker and designer, the founder of the present firm that carries his name. Guccio opened a shop in Florence in 1904 producing saddles and, eventually, luggage. His sons enlarged the business and opened a shop in Rome in 1939. Shops in Paris, London and American cities followed. Guccio products are of generally high quality and distinguished design. In recent years Guccio has taken a strong turn toward high fashion and status appeal. The use of a monogram logotype and a decorative motif of thin red and green stripes makes Guccio products easily recognizable.

Guchkov, Alexander Ivanovich (1862–1936) Leader of the moderate liberals in Russia (1905–17). Founder and chairman of the Octobrist Party and president of the third state DUMA. In World War I he was chairman of the duma committee on military and naval affairs, and subsequently chairman of the nongovernmental central war industries committee. He became the minister for war and navy in the provisional government. He was a critic of the imperial regime and in March 1917 went to Pskov and secured the abdication of the czar. He left for Paris after the OCTOBER REVOLUTION.

Guderian, Heinz (1888–1954) German general. A career officer, trained in the Prussian tradition, he was commissioned in the infantry in 1908 and served with distinction in World War I. Specializing in armored fighting, he developed the highly mobile Panzerwaffe (tank corps) that allowed GERMANY to pursue its devastating BLITZKRIEG attacks on Poland, Belgium and France in the early years of WORLD WAR II. He commanded a panzer army during the invasion of Russia in 1941, but was dismissed by HITLER for his failure to take Moscow. He was appointed inspector general of armored troops in 1943 and head of the general staff in 1944. In March 1945, as the Red Army advanced on Berlin, Guderian was finally relieved of his duties by Hitler.

Guernica (Guernica y Luno) Town in Spain's Vizcaya province, near Bilbao. Once the seat of the Basque parliament, Guernica was bombed in 1937 by German planes, acting on behalf of FRANCO's Nationalists during the SPANISH CIVIL WAR. The bombing indiscriminately killed men, women and children and was an early use of blanket air attacks on civilian targets with no other purpose than to terrify the enemy into submission. It shocked the world. The destruction was the subject of the great painting of the same name by Pablo PICASSO. By the artist's will, the painting was returned by New York City's MUSEUM OF MODERN ART in September 1981 to the Prado Museum in Madrid.

Guevara, Ernesto "Che" (1928–1967) Latin American revolutionary. Born into an upper-middle-class family in Argentina, Che became radicalized after witnessing American intervention in GUATEMALA in 1954. Guevara accompanied Fidel CASTRO to CUBA and played a prominent part in the guerrilla campaign (1956–59) that led to BATISTA's downfall. Minister for industries in Cuba (1961–65), he resigned and returned to the jungles of BOLIVIA to test his revolutionary the-

Marxist revolutionary and guerrilla Che Guevara in a poster protesting the Vietnam War
(RESISTANCE PUBLICATIONS, LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

ory. He was killed while leading a band of guerrillas against American-trained Bolivian troops in 1967. Che's rejection of both capitalism and orthodox communism made him a symbolic martyr for radical students throughout the world.

Guggenheim, Peggy (Marguerite Guggenheim) (1898–1979) American art collector and socialite. An expatriate millionaire who was the niece of philanthropist Solomon Guggenheim, Peggy Guggenheim assembled one of the foremost collections of modern art in her home on the Grand Canal in Venice. The collection included more than 250 works by BRAQUE, KLEE, MIRÓ, MONDRIAN, PICASSO, POLLOCK and other modern artists. It was valued at over \$35 million at the time of her death. Guggenheim was also known for her flamboyant lifestyle.

Guild, Lurelle (1898–1986) American industrial designer, one of a group active in the 1930s who provided styling for manufacturers eager to boost sales in the difficult years of the GREAT DEPRESSION. A 1920 fine arts graduate of Syracuse University, Guild first worked in magazine illustration. He later claimed to have designed as many as a thousand products in a year. Such products as a Norge refrigerator and a May oil-burner, each styled in the manner known then as "modernistic," are typical of Guild's innumerable designs of the 1930s. His willingness to admit to "styling down" to a supposedly low level of public taste sets Guild apart from most of his competitors, who generally believed they were elevating public taste. His Electrolux vacuum cleaner of 1937 is probably his most famous design, with many thousands still in regular use.

Guillén, Jorge (1893–1984) Spanish poet, critic and teacher. Guillén was born in Castile and educated at the universities of Madrid and Granada. Like other members of the GENERATION OF 1927, he supported the Loyalist cause in the SPANISH CIVIL WAR. Imprisoned in 1936, he went into exile in 1938. He taught at Wellesley (1941–57) as well as McGill, Harvard, Princeton and Yale. Guillén devoted 47 years

of work to *Antología: Aire nuestro* (1968), which incorporated *Cántico* (Canticle, four editions between 1928 and 1950), *Clamor* (Clamour, a trilogy published between 1957 and 1963) and *Homenaje* (1967, Homage). He received almost every international award except for the NOBEL PRIZE and was acknowledged in his lifetime as Spain's greatest poet. In 1972 the government of Madrid honored him with the first Cervantes Prize, the highest literary award of the world's Spanish-speaking nations. Guillén returned to Spain in 1977, two years after General FRANCO's death.

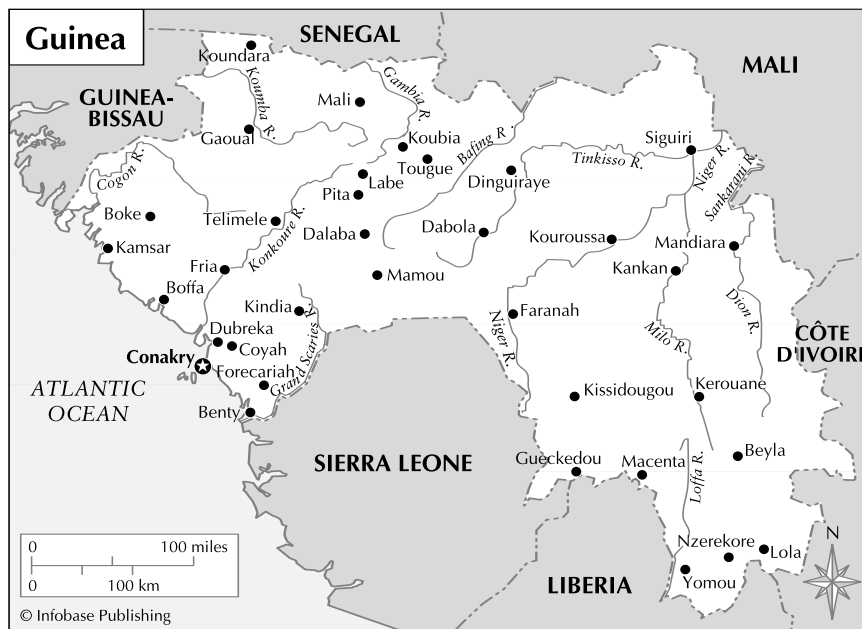

Guillén, Nicolás Batista (1904–1989) Cuban writer. Widely considered CUBA's national poet, Guillén was deeply concerned with the black experience in the Caribbean. A communist, he fought on the Loyalist side in the Spanish civil war. He later supported Fidel CASTRO, was a deputy in the Cuban assembly and served as president of the National Union of Writers and Artists of Cuba. His 12 books of verse began with *Motivos de son* (1930, Motifs of sound). Sensuous and rhythmic in character, his work incorporates elements of popular culture, incantations, dances and street cries. Other volumes of verse include *Sóngoro cosongo* (1931) and *Obra poética 1920–1958* (his complete poetry, published in 1973).

Guinea (Republic of Guinea) Located on the west coast of Africa, Guinea covers an area of 94,901 square miles. A French colony since 1890, Guinea became independent in 1958. The elected president, Ahmed Sekou Touré, governed from 1958 to 1984, putting down an attempted coup by Guinean exiles in 1970. Upon his death the military seized power, and Col. Lansana Conté became president. He foiled a coup attempt in 1985, which resulted in numerous executions, and was forced to endorse a return to a two-party system with an elected president and National Assembly after countrywide riots in 1988. In 1990 a new constitution was adopted. Guinea's first multiparty national elections in 1993 confirmed the continued rule of Conté and his Party of Unity and Progress. Despite Conté's success in 1993, as well as similar electoral successes in 1995, 1998, 2001 and

GUINEA	
1958	The Republic of Guinea is proclaimed, as Guineans overwhelmingly reject the French Community in a national referendum. Ahmed Sekou Touré is elected president.
1970	Portuguese-backed Guinean dissidents mount a seaborne invasion of Conakry. The invasion is foiled. In the aftermath of the invasion, mass purges are ordered by Touré. Nearly 10,000 are arrested. Over 100 persons are sentenced to death. More than 250 are convicted and sentenced to life imprisonment, including the Roman Catholic archbishop of Conakry.
1984	President Touré dies, and the army seizes power and installs the Military Committee for National Redressment (CMRN), with Col. Lansana Conté as head. The CMRN suspends the constitution and the National Assembly and releases all political detainees.
1985	Diarra Traoré leads an unsuccessful coup. He is arrested and immediately executed.
1989	Conté promises a return to a two-party system.
1990	A new constitution authorizing the transitional government is adopted.
1993	Facing seven opponents, Conté is reelected president, with 51% of the vote.
1995	Parliamentary elections are finally held after more than two years' delay. The ruling Party for Unity and Progress wins a majority of seats.
1996	Nearly a quarter of the military riots in the streets of Conakry, demanding higher pay and better working conditions. Thirty are killed, and the presidential palace is set ablaze in the <i>melée</i> . Conté dismisses his defense minister and negotiates with the protesters.
1998	Conté is reelected. Immediately thereafter Conté jails Alpha Condé, the leader of the opposition Guinean People's Rally (RPG), raising public criticism.
2001	In a poll that is boycotted by the opposition, voters approve President Conté's proposal to extend the presidential term from five to seven years.
2003	Conté wins a third presidential term in elections boycotted by the opposition.

2003, opposition to his rule has increased from political opponents, such as Alpha Condé and his Guinean Peo-

ple's Rally Party, and from military officials, as seen in the 1996 mutiny of the Guinea armed forces.

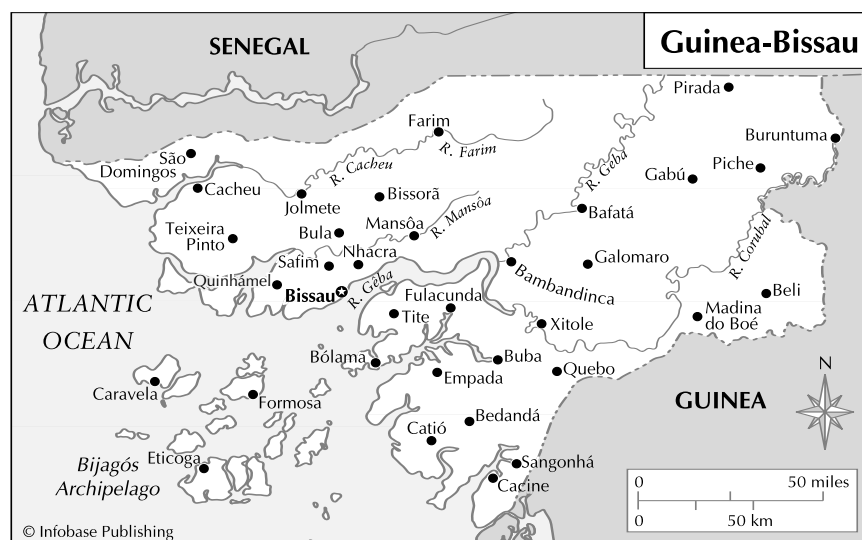

Guinea-Bissau Small country on the west coast of Africa, between Senegal and Guinea; formerly known as Portuguese Guinea. Guinea-Bissau was a part of Portugal's colonial empire from the time explorers first reached its coastline in 1446. Five hundred years later, in the early 1960s, a rebellion against colonial rule began. By 1974, independence had finally come—as a result of the 1974 Happy Revolution in Portugal. Guinea-Bissau was the first Portuguese colonial possession in Africa to become free. Since that time the nation has been trying to deal with the legacy of its colonial past, develop its health care and educational system, and make the infra-

structure improvements that are desperately needed. In 1994 João Bernardo Vieira was elected president in a free election. Vieira was overthrown by General Ansumane Mane in 1998. Mane established a six-month interim government (under former speaker of Parliament Malan Bacai Sanha) that administered Guinea-Bissau until the 2000 election of Kumba Yalá. Yalá was overthrown in September 2003 and was replaced by Henrique Rosa, who faced severe economic problems and political instability. (See also GUINEA-BISSAUN WAR OF INDEPENDENCE.) In 2005 João Bernardo Vieira was elected to the presidency, replacing Rosa.

Guinea-Bissauan War of Independence (1962–1974) Amílcar Cabral (1921–73), after founding the African Party for the Independence of Guinea and Cape Verde (PAIGC), attempted unsuccessfully to negotiate independence from the Portuguese. The PAIGC subsequently began a guerrilla campaign in late 1962. Bands established bases in the forest, while the Portuguese retaliated by bombing and raiding them. Tribalism and witchcraft threatened the rebels' unity until Cabral called a council and explained that the PAIGC was waging a dual revolution: against colonialism and outmoded beliefs. By 1973 it controlled two-thirds of Portuguese Guinea, and proclaimed independence as the Republic of GUINEA-BISSAU. Portugal refused recognition until 1974 when a military coup in Lisbon installed a new government. Luís de Almeida Cabral (b. 1931) became president after his brother Amílcar was assassinated in early 1973. Cape Verde Islands became an independent republic in 1975.

Guinness, Sir Alec (1914–2000) British theatrical and film actor. Known for his rich voice and for his ability to don the guises of varied characters, Guinness is one of the most acclaimed actors of modern times. He won fame both on the legitimate stage and in British and HOLLYWOOD films. Guinness began his career on the London stage in the 1930s, winning notice in productions by the Old Vic Company including a lead portrayal of Shakespeare's *Hamlet* (1938) in modern dress. After World War II, Guinness made notable appearances in his own stage adaptation of *The Brothers Karamazov* (1946), from the novel by Dostoyevsky, and in *The Cocktail Party* (1949) by T. S. ELIOT. Guinness began his film career in earnest in the late 1940s, appearing in a number of acclaimed movies, including the comedy *Kind Hearts and Coronets* (1949), and *The Bridge on the River Kwai* (1957), directed by David LEAN, for which he won an ACADEMY AWARD as best actor. His later projects included the *Star Wars* film trilogy (1977–83) and the role of spy George Smiley in television adaptations of the works of John LE CARRÉ.

Guinness Book of Records The Guinness Book of Records is an annual

GUINEA-BISSAU

1974	By formal agreement Portugal acknowledges independence of Guinea-Bissau and withdraws all Portuguese troops from the territory.
1980	A coup led by Prime Minister (Principal Commissioner) João Bernardo Vieira is successful.
1984	President Vieira is elected president for a five-year term.
1994	Vieira defeats seven opponents to retain the presidency of the country.
1997	Vieira is reelected prime minister.
1998	Former army chief of staff Ansumane Mane attempts to overthrow the government led by Vieira.
1999	The country again erupts into civil war.
2000	In presidential elections, Kumba Yalá defeats incumbent Malan Bacai Sanhá.
2003	Yalá is overthrown by a military coup. Henrique Rosa takes his place.
2005	Vieira wins the presidential election.

authoritative compendium of facts, feats and exploits of the world and its inhabitants. Conceived by Sir Hugh Beaver (1890–1967), managing director of Guinness Ltd., it was first published in the United Kingdom in 1955. Norris and Ross McWhirter edited the first edition as well as many subsequent editions. The first U.S. edition was published in 1956. In 1974 *The Guinness Book of Records* gained a place within its own pages as the top-selling copyrighted book in publishing history, with sales of 23.9 million copies. Sales passed 60 million copies by 1989. By 1990 there were 262 editions in 35 languages; the first Soviet edition was also published that year. By 2004 *Guinness* had published more than 100 million copies of the book in 37 languages.

Gulag Archipelago, *The* Three-volume history of Soviet prison camps from 1918 to 1956 (published between 1973 and 1976) by Alexander SOLZHENITSYN, the 1970 recipient of the NOBEL PRIZE in literature. Solzhenitsyn, who was himself a longtime prisoner in Siberia during the reign of STALIN,

created a unique blend of historical testimony and literary imagination in *The Gulag Archipelago*. Solzhenitsyn asserted in this work that a standard history of the camps was impossible, as too many of the millions who had suffered within them had died or were too afraid to recount their experiences. Thus Solzhenitsyn employed not only his own memories and the personal testimonies he had collected, but also literary metaphors and meditations on the meaning of so great a horror. *The Gulag Archipelago* was first published in Paris, after a copy of the manuscript had been smuggled out of the USSR. As a result of writing it, Solzhenitsyn was deported in 1974.

Gumilev, Nikolai (1886–1921) Russian poet. The son of a doctor, Gumilev studied at the University of St. Petersburg and the Sorbonne. He inaugurated two literary magazines. *Sirius* (1908) and *Apollon* (1909), the latter serving as a house organ for the ACMEISTS, a group of poets including Anna AKHMATOVA and Osip MANDELSTAM who opposed the neoromanticism

of the Russian Symbolist school. Gumilev's first book of poetry was *The Path of Conquistadors* (1905). Other major collections include *Romantic Flowers* (1908), *Pearls* (1910) and *Foreign Skies* (1912). His poetry is characterized by regal flourishes of love, heroism and death. He attempted suicide in 1908. Then in 1910 he married Akhmatova, but they were divorced eight years later. Gumilev was shot by Soviet authorities in 1921 for "counter-revolutionary activity."

Gunnarsson, Gunnar (1889–1975) Icelandic novelist. A well-known figure in Iceland, Gunnarsson also lived in Denmark for many years, writing in Danish as well as Icelandic. He resettled in Iceland in 1939. Gunnarsson is best known for the tetralogy, *The Family Borg*, first published in 1927 which follows four generations of an Icelandic farm family, and for his historical novels of Iceland, such as *The Sworn Brothers* (1920). Other works include *Blackbird* (1929) and a five-volume autobiographical series, *The Church on the Hill* (1923–28).

Gunther, John (1901–1970) American author. Gunther, who began his career as a news reporter, is best known for his "Inside" books, which include *Inside Europe* (1936), *Inside Latin America* (1941), *Inside U.S.A.* (1947) and the unfinished *Inside Australia* which was completed by William Forbis and published in 1972. The books are accessible, informative works combining history and journalism. Other nonfiction includes *Death Be Not Proud: A Memoir* (1949), *Inside Europe Today* (1961) and *Procession* (1965). Gunther has also written novels, including *The Lost City* (1964) and *The Indian Sign* (1970), which were not well received critically.

Gurdjieff, Georgei Ivanovitch (c. 1877–1949) Russian philosopher and spiritual teacher. Gurdjieff was one of the most fascinating and controversial spiritual teachers of this century. His written works, such as *Meetings with Remarkable Men* (1963), were all published posthumously. But Gurdjieff exercised his primary influence by face-to-face teaching encounters with his disciples and students, who included such eminent figures as

the New Zealand short story writer Katherine MANSFIELD, the British essayist A. R. Orage, and the Russian philosopher P. D. Ouspensky. Gurdjieff was born at Alexandropol near the Russo-Persian border. As a youth, he traveled to Central Asia and other remote regions and came in contact with various spiritual masters who taught Gurdjieff a mode of personal development strongly influenced by Sufism. In the 1920s, Gurdjieff established himself at Fontainebleau, France, and attracted a number of disciples. Gurdjieff employed such means as verbal paradox, music, and disciplined physical labor to compel his followers to come to terms with their personality weaknesses and to attain to their higher selves.

Gurney, Ivor (1890–1937) English poet and composer. Born in Gloucester, Gurney studied with Sir Charles Stanford at the Royal College of Music (1911–14). He showed much promise as a composer, but WORLD WAR I interrupted his studies. Serving as a private on the Western Front, he was wounded in the arm and later gassed at PASSCHENDAELE (see WORLD WAR I ON THE WESTERN FRONT). In 1918, after suffering a nervous breakdown, he was discharged with “deferred shell-shock.” Gurney published two wartime poetry collections, *Severn and Somme* (1917) and *War’s Embers* (1919), but a third collection was rejected by his publisher. Returning to the Royal College of Music, he studied with Ralph VAUGHAN WILLIAMS but was unable to concentrate; he left the college and returned to an irregular life in Gloucestershire. During this time (1919–22) he wrote many fine poems and also composed songs, but he suffered increasingly from delusions, and in 1922 was committed to Dartford insane asylum, where he spent the rest of his life. Gurney’s poetry was influenced by his wartime experiences and by his love for the Gloucester countryside; it is marked by subtle use of rhyme and by great imaginative resourcefulness. Largely unpublished during his lifetime, Gurney’s work was rediscovered during the 1970s and 1980s. Gurney is now recognized as one of the most original British poets of the 20th century. His songs also have found a place in the repertoire.

Guro, Elena (Eleonora Genrikhovna von Norenberg) (1877–1910) Russian Futurist poet. She was a professional painter who had graduated from the school of the Society for the Encouragement of the Arts, and was interested in French, German and Scandinavian literature. Guro is one of the most neglected of the early Russian Futurists. Her literary career started with *Early Spring* (1905), followed by *The Hurdy-Gurdy* (1909), *The Autumnal Dream* (1912), *The Baby Camels of the Sky* (1914) and other works. Her work remains unjustly overlooked.

Gusinsky, Vladimir (1953–) Russian media tycoon. Gusinsky studied petroleum engineering during the Soviet era and worked as a cab driver and a theater director in Moscow. In 1989, capitalizing on Soviet leader Mikhail GORBACHEV’s economic liberalization program of PERESTROIKA, Gusinsky created MOST Bank, which profited due to its loan speculation, funds management and close association with Moscow mayor Yuri Luzhkov. In February 1993 Gusinsky began to involve himself in the media business when he launched *Sogodnya*, a national newspaper, using funds he borrowed from MOST Bank, a lending institution of which he was chief executive officer. Eight months later he established NTV, a small television station also funded largely with loans from MOST that broadcast programs throughout the St. Petersburg area; NTV represented Russia’s first privately owned television station. Four years later Gusinsky left his position as CEO and establish Media MOST, a new banking company that held sizable shares of his television station and newspaper.

As a rising media mogul Gusinsky evoked his share of critics and admirers. In the early 21st century the government of President Vladimir PUTIN initiated legal proceedings against Gusinsky. His defenders claim that this was retaliation for the criticism of the government on NTV, Gusinsky’s BONUM-1 satellite network and the pages of *Sogodnya*. In 2001 the government-controlled gas corporation Gazprom purchased NTV. Critics of Gusinsky argued that his exposés on Putin and the Russian government served only to distract attention from his embezzlement of approximately \$250 million in loans from

Gazprom to Media MOST, for which he was first arrested in Moscow in 2000 and then rearrested—in 2003.

Gustav Line Stretching across Italy south of Rome, it was set up by the Germans as a main line of defense in WORLD WAR II. Bitterly defended, the key position of CASSINO, with the valley of the Liri River behind it, was reached by the attacking Allies in February 1944 but not taken by them until May.

Guthrie, Arlo (1947–) American folk and rock musician. The son of renowned folk singer Woody GUTHRIE, Arlo Guthrie burst into national prominence in 1967 due to the success of his album *Alice’s Restaurant*. Its wry and rambling title song tells the story of a diffident 1960s rebel who refuses to kill for the U.S. Army and is ultimately arrested for littering. *Alice’s Restaurant* became one of the anthems of the ANTIWAR MOVEMENT, and a film by the same title, directed by Arthur Penn and with Guthrie in a starring role, was produced in 1969. In the past two decades, Guthrie has recorded a number of albums, including a tribute to his father, and has joined with folk singer Pete SEEGER in a number of river clean-up campaigns. In 1995 Guthrie released *Alice’s Restaurant 2: The Massacre Revisited*.

Guthrie, Tyrone (1900–1971) English stage director. Noted for his inventiveness, Guthrie became famous for his direction of Elizabethan drama, especially the plays of Shakespeare. Initially, he was a director of the Scottish National Players (1926–27), then became director at the Cambridge Festival Theatre (1929–30) and the Old Vic (1933–34; 1936–37; 1951–52). In 1953 he founded the Shakespeare Festival in Stratford, Ontario, and subsequently served as one of the directors. In addition, he directed drama and opera in London and New York, and established a theater in Minneapolis in 1962, which bears his name and continues his theatrical legacy. Among his most important productions were *Hamlet* (Old Vic, 1938) and *Troilus and Cressida* (Stratford, Ontario, 1954).

Guthrie, Woody (Woodrow Wilson Guthrie) (1912–1967) American folksinger and political activist; widely

Folksinger Woody Guthrie (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

considered the preeminent American folksinger of the 20th century. Certain of his songs of the 1930s—"This Land Is Your Land," "Hard Traveling," and "So Long, It's Been Good to Know Ya"—have become enduring classics of American popular music. Guthrie was born in Indian territory in Oklahoma and traveled widely during the 1920s and the GREAT DEPRESSION era. For a time he worked for a California radio station on which he performed his songs. Moving to New York City in the late 1930s, he performed with fellow folk singer Pete SEEGER, contributed pieces to the socialist *Daily Worker* and recorded a number of DUST BOWL ballad albums—containing both original material and old folk songs collected by Guthrie—for the Archive of American Folk Song. Guthrie died after a painful 13-year struggle with Huntington's chorea. *Bound for Glory* (1943) and *Bound to Win* (1965) are autobiographical volumes; *Woody Says* (1975) is a posthumous collection. Singer Arlo GUTHRIE is his son.

Guttuso, Renato (1912–1987) Italian painter and Communist. He was perhaps the most commercially successful Italian painter of his generation. Most of his mature work was realistic or expressionistic in nature. Much of it dealt with political themes, from the execution of Spanish poet Federico GARCÍA LORCA in 1936 to the student uprisings of 1968. Guttuso also served in the Italian Senate.

Guyana Republic on the Atlantic coast of northeastern South America, bounded on the east and southeast by SURINAME, on the south and southwest by Brazil and on the northwest by VENEZUELA; formerly known as British Guiana. Its boundary with Venezuela, long a subject of controversy, became a serious issue in 1895, when U.S. secretary of state Richard Olney took a threateningly "American" view in Venezuela's dispute with Britain. An arbitration award in 1899 upheld most British claims; and the boundary with Brazil was similarly arbitrated in 1904. With the outset of World War II, the U.S. leased sites for military and naval bases on the De-

merara River and near Suddie. By 1966 the colony had achieved independence, and in 1970 it became a republic. Throughout the 1960s tension between East Indians, who control commerce, and blacks led to clashes and bloodshed, which subsided in the 1970s. International tensions were eased with the signing in 1970 of a 12-year truce with Venezuela and a mutual troop withdrawal agreement with Suriname. The Venezuela border controversy still simmers. In 1978 Guyana gained international notoriety as the scene of a mass suicide committed at JONESTOWN by followers of the U.S.-originated religious cult of the Reverend Jim Jones.

GUYANA	
1966	Guyana becomes a self-governing dominion within the Commonwealth. Venezuela occupies Anakoka Island and asserts a claim to land west of the Essequibo River.
1969	Government suppresses Rupununi rebels trying to establish an independent state. Border clashes with Suriname revive old border dispute.
1978	Jonestown, Guyana, is the scene of the bizarre and grisly suicide-murder of more than 900 members of the People's Temple Commune, led by U.S. cultist Jim Jones.
1980	Guyana adopts presidential form of government as new constitution is approved.
1991	Guyana becomes a member of the Organization of American States (OAS).
1992	Dr. Cheddi Jagan is elected president.
1997	President Jagan dies. Jagan is succeeded by his wife, American-born Janet Rosenberg Jagan, who wins 55 percent of the votes.
1999	President Janet Jagan resigns due to poor health. Bharrat Jagdeo becomes president.
2000	Guyana and Suriname resolve their border dispute.
2001	Bharrat Jagdeo reelected president in March.

The government continually proved unstable, and in the 1980s the nation faced severe economic problems. In the country's first entirely free election in 1992, Cheddie Jagan was elected president. After his death in 1997, he was succeeded by his wife, Janet, who resigned two years later for reasons of health. Her successor, Bharrat Jagdeo, was reelected in 2001.

Guyanana Rebellion of 1969 Rebel bands invaded from Brazil, seized the towns of Lethem and Annai in southwestern Guyana (January 2, 1969), but were driven out by Guyanese Army forces within several days. Several policemen lost their lives. The invasion was apparently sponsored by Americans owning large cattle ranches in the region, wishing to establish a state they could control.

Gysi, Gregor (1948–) East German lawyer, leader of the East German Socialist Unity (Communist) Party following the ouster of Egon KRENZ, who in October 1989 replaced Erich HONNECKER. A popular member of the reform wing of the party, he was nonetheless defeated by noncommunists who favored reunification with WEST GERMANY in March 1990 in the first free elections in EAST GERMANY.

H

Habibie, Baharuddin (1937–) President of INDONESIA (1998–99). On May 21, 1998, when the country's long-time dictator SUHARTO resigned, Vice President Habibie succeeded him in office. As president of Indonesia, Habibie is perhaps best known for his efforts to resolve the issue of EAST TIMOR, a province of Indonesia that sought independence. He agreed to a UN-sponsored and observed election that would allow the residents of East Timor to determine whether they would return to their traditional status as an autonomous region within Indonesia or secede and form an independent nation. In addition to the separatist agitation in East Timor and the region of ACEH, Habibie inherited a debilitated economy suffering from currency devaluation, high inflation and massive unemployment.

In an attempt to avert another round of the prodemocracy protests and violent street clashes that had precipitated Suharto's last days in office, Habibie promised that free presidential elections would be held in 1999. After he withdrew from the race, he was succeeded by Abdurrahman Wahid, a moderate Muslim and member of the National Awakening Party.

Habré, Hissène (1943–) Defense minister and president of CHAD (1982–90). In 1980 Habré launched a rebellion against the government of Goukouni Oueddei and immediately encountered opposition from Libyan forces sent to support the Oueddei regime. When the Libyans left the fol-

lowing year, Habré returned to the offensive, eventually capturing the town of N'Djamena from Oueddei in mid-1982. By 1988 the political, economic and military support that Oueddei received from Libya and Habré obtained from France had produced a stalemate. Both leaders then conceded the permanence of the situation by normalizing relations between the two entities they had carved out of Chad. However, in November 1990 the Patriotic Salvation Movement, a pro-Libyan insurgent group led by General Idriss Deby (a former cohort of Habré) overthrew Habré and replaced him with Deby, who assumed the presidency a year later. Habré fled into exile in Senegal, from where in 1992 he mounted an unsuccessful attempt to overthrow Deby. Although the Senegalese government criticized Habré's policies as president of Chad, it refused to charge him with the war crimes many critics have alleged he committed, or to revoke its offer of asylum.

Haddad, Wadi (c. 1928–1978) Palestinian pediatrician, terrorist and co-founder (1966) of the Popular Front for the Liberation of Palestine. Haddad directed several prominent airliner hijackings, including the hijacking of an El Al plane to Algeria (1968) and the hijacking of a Lufthansa jet to Somalia (1977); he was also behind the hijacking of four airliners that resulted in three of the planes being blown up on a runway in Jordan (1970). He was also apparently linked to the Tel Aviv airport attack by the Japanese Red Army (1972).

Haganah Protective force secretly formed by JEWS in PALESTINE in 1936 for defense of their communes against Arab attacks. Unlike purely terrorist organizations, it later became the nucleus of the Israeli army.

Hagen, Walter (1892–1969) U.S. golfer. He helped eliminate golf's elitist amateur image and turn it into a popular professional sport. A charismatic character who occasionally arrived at tournaments in a tuxedo, he was the leading golfer of the early 20th century, winning the U.S. Open in 1914 and 1919, the British Open four times between 1922 and 1929 and the PGA championship five times.

Hague, The (Den Haag; 's Gravenhage) Capital city of the Netherlands' South Holland province; 4 miles from the North Sea and 33 miles from Amsterdam. Developed as a permanent site for negotiation between sovereign nations, it saw peace conferences in 1899 and 1907 that unsuccessfully attempted to solve the problems of fin de siècle Europe. In the 1920s The Hague became the seat of the **World Court** (now the **International Court of Justice**) as well as of various Dutch governmental bodies. During WORLD WAR II, Germans occupied the city from 1940 to 1945, in January 1945 launching V-1 rocket-bombs against advancing Allied troops. In 1993 the Hague became the site for the International Criminal Tribunal for the Former Yugoslavia (see HAGUE WAR CRIMES TRIBUNAL FOR THE FORMER YUGOSLAVIA).

Hague Conventions International conferences convened by Czar NICHOLAS II; met May 18 to July 19, 1899, and June 15 to October 18, 1907, with the aim of "a possible reduction of the excessive armaments which weigh upon all nations" by "putting a limit on the progressive development of the present armaments." The first convention's achievements were limited but did include agreement on the use of gas, expanding bullets, the banning of explosives launched from balloons and the creation of a court of arbitration. The second convention reached agreement on a number of naval matters and on the employment of force to recover debts. A further convention was planned for 1915 but because of WORLD WAR I did not meet. The two conventions did influence the form of the LEAGUE OF NATIONS.

Hague War Crimes Tribunal for the Former Yugoslavia Also known as the International Criminal Tribunal for the former Yugoslavia (ICTY). Established on May 25, 1993, by UN Security Council Resolution 827, the ICTY was established to evaluate war crimes charges alleged to have been committed by individuals in the former YUGOSLAVIA since 1991. It is often referred to as the Hague War Crimes Tribunal because it has operated in the Dutch city of The HAGUE. As outlined by Resolution 827, the ICTY has investigated violations of the 1949 Geneva Convention on Warfare and other well-established wartime rules and regulations as well as alleged instances of genocide and crimes against humanity. While ICTY officials and judges acknowledge that the crimes they have investigated often fall under joint jurisdiction with national courts in the former Yugoslavia, Resolution 827 has given it a stronger claim to judge these alleged crimes. In an effort to maximize the impartiality of its decisions, the ICTY's judges have been selected from a variety of countries throughout the world, including the U.S., Britain, Italy, Germany, China, France, Guyana, Zambia, Australia, Jamaica, Turkey, Egypt, Malta, the Netherlands, South Korea, Argentina, the Czech Republic, Japan, Canada, Colombia, the Ukraine, Finland and Spain. Two of the judges serving on the ICTY had prior experience evaluating war crimes on the International Crimi-

nal Tribunal for Rwanda. In an effort to ensure that no bureaucratic organ of the ICTY contains national or cultural biases that would prejudice the institution's decisions, the more than 1,200 personnel assigned to the ICTY have come from 82 different countries. Since its creation the ICTY has passed judgment on more than 25 cases involving alleged war crimes committed during the course of the conflicts in Yugoslavia since 1991, including the trial of former Serbian president Slobodan MILOŠEVIĆ.

Hahn, Otto (1879–1968) German chemist. After obtaining his doctorate at the University of Marburg in 1901 Hahn studied abroad, first with William Ramsay in London and then at McGill University, Montreal, Canada, with Ernest RUTHERFORD. Hahn returned to Germany in 1907, where he took up an appointment at the University of Berlin, being made professor of chemistry in 1910. Two years later he joined the Kaiser Wilhelm Institute of Chemistry, where he served as director from 1928 to 1945.

Most of Hahn's career was spent in research on radioactivity. With Lise MEITNER he discovered a new element, protactinium, in 1917. He went on to define (1921) the phenomenon that arises when nuclei with different radioactive properties turn out to be identical in atomic number and mass. Hahn's most important work however, was done in the 1930s when, with Meitner and Fritz Strassmann, he made one of the most important discoveries of the century, namely nuclear fission. One of the strange features about Hahn's work was that he was repeating experiments already done and formulating hypotheses already rejected as nonsense or due to some contamination of the materials used.

Thus, when in 1938 Hahn bombarded uranium with slow neutrons and detected some strange, new half-lives, he assumed that the uranium had changed into radium, a close neighbor, with some undetected alpha particles. But when he tried to remove the radium all he could find was barium. This Hahn simply could not understand, for barium was far too low in the periodic table to be produced by the transmutation of uranium; and if the transformation was taking place it should be accompanied by the emission of a prodigious number

of alpha particles, which Hahn could not have failed to detect. The thought that the heavy uranium nucleus could split into two lighter ones was too outrageous for him to consider seriously. He did realize that something of importance was going on. Appropriately enough it was his old collaborator Meitner, in exile from the Nazis in Sweden, and her nephew Otto Frisch, who made the necessary calculations and announced fission to the world early in 1939. Hahn received the NOBEL PRIZE in chemistry in 1944.

Haider, Jörg (1950–) Austrian politician, governor of the state of Kärnten and leader (1986–2000) of the FREEDOM PARTY. In 1986 Haider assumed control of the Freedom Party and began to orient it toward the far right of the Austrian political spectrum. Over the next 14 years, he increased the party's representation in the Nationalrat, the Austrian parliament, by campaigning on a platform calling for increasing restrictions on the influx of foreign workers into Austria. In his first year as governor of Kärnten in 1989 he praised the policies adopted by the Nazi regime in Germany to end unemployment provoking an outcry throughout Austria and abroad that forced him to resign later that year.

In 1999 Haider and the Freedom Party scored their greatest political triumph, winning 52 seats and becoming the second-largest party in the Nationalrat. A year later the Freedom Party and the center-right People's Party formed a coalition government, but Haider's pro-Nazi comments, together with his harsh criticism of immigration, prevented him from obtaining a position in the coalition government. When other EU members continued to treat Austria as an international pariah, Haider announced that he would step down as party leader on February 28, 2000, and focus exclusively on governing the state of Kärnten.

Haig, Alexander Meigs (1924–) U.S. Army officer, presidential adviser and secretary of state (1981–82). A career army officer, Haig rose through the ranks and, as colonel, commanded a brigade in VIETNAM (1966–67). Military adviser to President Richard M. NIXON from 1969 to 1973, General Haig became Nixon's White House chief of staff

after the resignation of Robert Halde-
man during the WATERGATE crisis and
was a key figure in the White House
during the final days of Nixon's presi-
dency. Haig was subsequently com-
mander in chief of American forces in
Europe (1974–79) and supreme com-
mander of NATO. He retired from the
army with the rank of full general (four
stars) to enter political life in 1979. He
was appointed secretary of state by
President Ronald REAGAN in 1981.
When Reagan was shot by a would-be
assassin, Haig made his famous "I'm in
charge here" statement to the nation. As
secretary of state, Haig's policy was
often at variance with that of the presi-
dent and other members of the admin-
istration, and Haig resigned after further
differences with the president. He made
an unsuccessful bid for the Republican
presidential nomination in 1988.

Haig, Douglas (first earl Haig)
(1861–1928) British field marshal.
Born in Edinburgh, he was commis-
sioned in the cavalry in 1885. Posted
to the Sudan in 1898, he later served in
the BOER WAR from 1899 to 1902. He
was appointed an army corps com-
mander in France at the outbreak of
WORLD WAR I, becoming commander
in chief of the British Expeditionary
Force in 1915. Leading British troops
during the bloody First Battle of the
SOMME (1916) and Third Battle of
YPRES (1917), Haig was widely held re-
sponsible for the appallingly high toll
of British casualties in these engage-
ments. Opposed by Prime Minister

British military commander Field Marshal Douglas Haig (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

Lloyd GEORGE for wasting British lives,
he nevertheless retained the loyalty of
the British military. In 1918 Haig se-
cured the appointment of Ferdinand
FOCH as supreme Allied commander,
and the two generals collaborated in
the war's final campaigns. He was
made a peer in 1919, and spent the
rest of his life in activities for the
British Legion and in soliciting aid for
disabled veterans.

Haile Selassie (1892–1975) Last em-
peror of ETHIOPIA. Haile Selassie ruled
Ethiopia for half a century: as regent
(1916), as king (1928–30) and as em-
peror (1930–74). His reign was inter-
rupted for five years in May 1936
following the Italian invasion of
Ethiopia, which forced him into exile
(see ITALO-ETHIOPIAN WAR OF 1935–36).
In June 1936 he appealed to the LEAGUE
OF NATIONS for aid against the Italian in-
vaders but was refused. Selassie re-
turned to Ethiopia in 1942 and began a
series of modernization projects, in-
cluding administrative reform, eco-
nomic and judicial reorganization, the
abolition of slavery and feudalism and
the establishment of educational institu-
tions. In 1963 he summoned the first
meeting of the ORGANIZATION OF
AFRICAN UNITY and devised the charter
for the 38-member body, whose head-
quarters were in Addis Ababa. At his
suggestion, the UNITED NATIONS set up
the UN Economic Commission for
Africa, also in Addis Ababa. However,
he was unable to solve Ethiopia's social
problems, and radicals in the country
grew increasingly dissatisfied with his
rule. Haile Selassie was overthrown in a
1974 coup by left-wing army officers,
and died soon after under house arrest.

Haiti (Republic of Haiti) Covering
an area of 10,712 square miles, Haiti
comprises the western third of the
Caribbean island of Hispaniola as well
as several West Indian islets. Haiti has
been plagued by dire poverty and polit-
ical instability during most of the 20th
century. The murder of President Guil-
liame Sam in 1915 led to U.S. interven-
tion and administration of the country
until 1934. Between 1946 and 1957 a
succession of presidents were either de-
posed or overthrown during coups. In
1957 Dr. François "Papa Doc" DUVALIER
(1907–71) became dictator, creating a
personal militia (the Tontons Macoutes)

Fig. 101
(film p/u from
orig. ed. p.406)

Haile Selassie, last emperor of Ethiopia (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

and declaring himself president-for-life
(1964). Popular among a wide segment
of the population, Duvalier brought a
measure of stability; however, his per-
sonal charm belied his ruthlessness and
corruption. Upon his death he was suc-
ceeded by his son, Jean-Claude "Baby
Doc" Duvalier. The younger Duvalier
was forced to flee the country in 1986
after food riots and increasingly violent
demonstrations. A period of political
upheaval followed until Rev. Jean-
Bertrand ARISTIDE, a leftist priest, was
elected president in December 1990 in
the first truly democratic election in
Haiti's history. More than 100 people
died in the unrest that followed a failed
attempt to overthrow the Aristide gov-
ernment in January 1991. A second
1991 coup, staged in September by
General Raoul CÉDRAS, proved success-
ful, but Aristide returned to power in
1994 after the U.S.-CLINTON adminis-
tration forced the leaders of the military
government to relinquish power. In
February 2004, an uprising against
Aristide's rule plunged Haiti into a
bloody civil war. The George W. BUSH
administration, supported by France,
engineered Aristide's departure from the
country. In June 2004 the UN put in
place the UN Stabilization Mission in
Haiti (MINUSTAH) to attempt to stem
further civil unrest and pave the way for
elections when calm was restored. In
2006 former president René Préval is
again elected to the presidency.

Haitian Revolt of 1915 With the
country in chaos, Vibrun Guillaume
Sam (d. 1915) seized control of HAITI's
government in early 1915. A mob as-
sassinated Sam, July 28, 1915, and in

HAITI

1915	U.S. Marines land to restore order after murder of President Guiliame Sam.
1934	U.S. Marines withdrawn.
1957	Dr. François (Papa Doc) Duvalier is elected president.
1964	Duvalier declares himself president-for-life.
1971	Papa Doc dies and is succeeded by his son Jean-Claude (Baby Doc) Duvalier.
1985	Food riots break out in Gonaïves and spread rapidly to the capital, Port-au-Prince.
1986	Baby Doc flees the country.
1990	Supreme Court Justice Ertha Pascal-Trouillot assumes presidency; Jean-Bertrand Aristide wins landslide presidential election.
1991	A coup led by Tontons Macoutes attempts to prevent Aristide from assuming the presidency but is quickly crushed by the army; Aristide sworn in.
1991	Aristide overthrown by military coup.
1994	Aristide restored to office by U.S. pressure.
1996	René Préval becomes president with 88% of the vote.
2000	Aristide wins the presidential election with 91% of the vote.
2004	Aristide leaves country after severe political unrest.
2006	René Préval is again elected president.

the subsequent anarchy U.S. Marines reestablished order, protected foreigners and supervised elections. Philippe Sudre Dartiguenave (1863–after 1922), the new president enforced a treaty (September 16, 1915) in which Haiti became a political and economic protectorate of the United States, with customs and police under American control.

Haitian Revolt of 1918–19 An American-supervised 1918 plebiscite adopted by the questionable vote of 98,225 to 768 established a new constitution in Haiti, since 1915 a 10-year protectorate of the U.S. Philippe Sudre Dartiguenave (1863–after 1922) remained as president, while American officers ran the government and the gendarmerie revived the labor draft. In late 1918 Haitians led by Charlemagne Peralte (d. 1919) and Benoît Batraville (d. 1919) rebelled against the corvée and U.S. occupation. Between 20,000 to 40,000 poorly armed rebels believing themselves invincible through voodoo potions terrorized the region and attacked the capital, Port-au-Prince. The gendarmerie crushed them with U.S. Marine and air support. Peralte and Batraville were executed and peace was restored. American occupation was later extended until 1934.

Halas, George (Stanley) “Papa Bear” (1895–1983) American athlete, football coach, and sports executive. Halas was a cofounder of the **National Football League**, owner of the **Chicago Bears** team franchise, and the winningest head coach in NFL history. After a brief stint with baseball’s New York Yankees, Halas became player-coach of the Decatur (Ill.) Staleys of the American Professional Football Association. He bought the club and moved it to Chicago in 1921, renaming it the Chicago Bears. In 1922, he helped organize the NFL. He brought credibility to professional football by signing college star Red GRANGE in 1925. Halas coached for 40 years between 1920 and 1968, compiling a career record of 325 wins, 131 losses, and 31 ties. Under his leadership, the team also won six championships. Halas was inducted into the Pro Football Hall of Fame in 1963.

Haldane, John Burdon Sanderson (1892–1964) British geneticist. Hal-

dane became involved in scientific research at an early age through helping in the laboratory of his father the physiologist John Scott Haldane. His interest in genetics was first stimulated as early as 1901, when he heard a lecture on Mendel’s work, and he later applied this by studying inheritance in his sister’s (the writer Naomi Mitchison) 300 guinea pigs. On leaving school he studied first mathematics and then the humanities at Oxford University. He served in WORLD WAR I with the Black Watch Regiment and was wounded at Loos and in Mesopotamia. Some work on gas masks, following the first German gas attacks, marked the beginning of his physiological studies.

In 1919 Haldane took up a fellowship at Oxford, where he continued research on respiration, investigating how the levels of carbon dioxide in the blood affect the muscles regulating breathing. He was next offered a readership in biochemistry at Cambridge, where he conducted some important work on enzymes. These experiments, and later work on conditions in submarines, aroused considerable public interest because he frequently used himself as a guinea pig.

In 1933 Haldane became professor of genetics at University College, London, a position he exchanged in 1937 for the chair of biometry. While at London he prepared a provisional map of the X sex chromosome and showed the genetic linkage between hemophilia and color blindness. He also produced the first estimate of mutation rates in humans from studies of the pedigrees of hemophiliacs, and described the effect of recurring deleterious mutations on a population. With the outbreak of the SPANISH CIVIL WAR, Haldane joined the Communist Party and advised the republican government on gas precautions. In the 1950s he left the party as a result of Soviet acceptance and promotion of Trofim LYSENKO. In protest at the Anglo-French invasion of Suez, Haldane immigrated to India in 1957, becoming an Indian citizen in 1961. He was director of the laboratory of genetics and biometry at Bhubaneswar from 1962 until his death. Haldane’s books include *Enzymes* (1930), *The Causes of Evolution* (1932), and *The Biochemistry of Genetics* (1954); he also wrote a number of books popularizing science.

Haldane, Richard Burden (Viscount) (1856–1928) British statesman. Born in Edinburgh, Haldane attended Gottingen University in Germany. He served as a Liberal member of Parliament from 1885 to 1911. As war minister from 1905 to 1912, he increased the efficiency of the British army, creating a general staff, a territorial army, an officers’ training corps and an expeditionary force. In 1912 he traveled on a mission to Berlin, where he was unsuccessful in halting German naval rearmament and rejected a plea for British neutrality. He served as lord chancellor from 1912 to 1915 but was forced from public life at the outbreak of WORLD WAR I when his knowledge of German affairs caused him to be unjustly branded as pro-German. He briefly served again as lord chancellor in Ramsay MACDONALD’s first Labour government in 1924. Also a noted academic philosopher, Haldane was later the chancellor of the University of Bristol. His writings include a number of works on philosophy and an autobiography (1929).

Halder, Franz (1884–1972) German general. A career army officer, Halder succeeded General Ludwig Beck as chief of the German general staff in 1938, just after the MUNICH PACT. Although opposed to HITLER’s plans for European conquest, Halder engineered the German BLITZKRIEG victories against Poland, the Netherlands, Belgium, Luxembourg and France in 1939 and 1940. Hitler relieved Halder of his command in 1942. Halder was later arrested and imprisoned for his involvement in the plot to assassinate Hitler (July 20, 1944). He was freed by the Americans in April 1945.

Haley, Alex (1921–1992) American author. Haley became famous with the publication of the novel *ROOTS* (1976), which traces his ancestry back to Africa and follows his ancestors as they are captured and taken as slaves to the U.S. The book was adapted for television, becoming the first “miniseries,” and its popularity was something of a media phenomenon. The book sparked an interest in genealogy, particularly among black Americans, whose history was obfuscated by the practice of slavery. Haley’s other works include *The Autobiography of Malcolm X* (1965,

written with MALCOLM X) and *A Different Kind of Christmas* (1988).

Haley, Bill (1927–1981) American guitarist, singer, band leader, and pioneer of ROCK-and-roll music. With his group, the Comets, Haley recorded such early rock and roll hits as “Shake, Rattle and Roll” (1954), “Rock the Joint” and “Crazy, Man, Crazy.” The group’s biggest hit, however, was “Rock Around the Clock” (1955), which was the theme song to the film *The Blackboard Jungle*. It was written by Haley, and sold 22.5 million copies over the next 15 years. Haley’s performances throbbed with energy and exuberance and helped make rock and roll a major part of the American music idiom in the 1950s. Along with Elvis PRESLEY, Haley and the Comets were an important influence on the BEATLES and other prominent rock performers of the 1960s and 1970s. Although they are primarily thought of as a 1950s group, Haley and the Comets continued to perform successfully during the next two decades.

Haley, Sir William John (1901–1987) British journalist. In a career of nearly five decades, Haley headed the *Manchester Guardian* (1939–43), the BBC (1944–52) and the *Times* of London (1952–66), as well as the *Encyclopaedia Britannica* (1968–69). While director general of the BBC, he broadened its cultural programming by instituting a Third Channel on radio in 1946. Perhaps his most memorable achievement as editor in chief of the *Times* was his banishment, in 1966, of birth, death and marriage notices from the front page; he replaced them with news.

Halifax, Edward Frederick Lindley Wood (1881–1959) British statesman. Lord Halifax began his political career as a Conservative member of Parliament (1910–25). He headed the Board of Education from 1922 to 1924 and the Board of Agriculture from 1924 to 1925, when he was created Baron Irwin. In the post of Viceroy of INDIA from 1926 to 1931, he negotiated with Mohandas GANDHI and advocated dominion status for the country. He succeeded his father as Viscount Halifax in 1934 and was appointed lord privy seal the following year. Serving as foreign

secretary (1938–40) under Neville CHAMBERLAIN, he was at first a lukewarm supporter of the APEASEMENT policy toward Nazi GERMANY. Halifax was considered as a possible successor to Chamberlain as prime minister, but declined the appointment in favor of Winston S. CHURCHILL. He remained foreign secretary for several months under Churchill, then served as ambassador to the U.S. from 1941 to 1951. Halifax was created an earl in 1944. His autobiography, *Fullness of Days*, was published in 1957. Halifax was also chancellor of Oxford University from 1953 until his death in 1959.

Hall, Edward T. (1914–) American anthropologist whose studies and writing had a direct influence on modern thinking about design and architecture. Hall’s work became well-known with the publication of his books *The Silent Language* in 1959 and *The Hidden Dimension* in 1966. They reported on his studies of the ways in which human interactions are influenced by such physical circumstances as the size and shape of spaces, placement of furniture, quality of light, color, and similar elements of the environment. When related to human life, the concept of territoriality, first studied as an aspect of animal behavior, has led to an awareness of the problems created by crowding in modern cities, buildings and transport.

Hall, Gus (1910–2000) Secretary-general of the American Communist Party. The son of Finnish immigrants who were charter members of the American Communist Party, Hall himself joined the party at an early age. After serving in the Navy in World War II, he was imprisoned from 1949 to 1957 for conspiring to advocate the violent overthrow of the U.S. government. He was released in 1957, and in 1959 he became secretary-general of the party. In 1962, Hall refused to register the Communist Party with the federal government, as required by the McCarran Act, and in 1965 the United States Supreme Court ruled that the registration of individual members was unconstitutional. With the loosening of government restrictions, the party became more vocal throughout the 1960s, and Hall was nominated as the party’s presidential candidate in 1972, 1976, 1980 and 1984.

Hall, Joyce Clyde (1891–1982) U.S. greeting card pioneer. He started selling postcards while still in school, and later started a wholesale business in postcards with his brother. In 1913 Hall became convinced that standard greetings could be printed to fit almost every occasion, and his philosophy provided the business pattern followed almost universally since. Hall devised marketing practices, such as the independent display rack. He invented the special occasion cards, and quickly Hallmark became the biggest name in the field. His company also sponsored quality radio and TV drama.

Hall, Peter (1930–) British theatrical director. Hall attended Cambridge University, where he began his theatrical career. His earliest work was at the Theatre Royal, Windsor, and the London Arts Theatre. In 1957 he founded his own company, the International Playwrights’ Theatre. At the same time, he established a reputation as a Shakespearean director with his version of *Love’s Labour’s Lost* at Stratford-upon-Avon. From 1960 to 1968 he was managing director of the new ROYAL SHAKESPEARE COMPANY, creating an incomparable ensemble and staging plays at Stratford and at the Aldwych Theatre, London. Among his most highly acclaimed productions were the *War of the Roses* cycle (1963) and *Richard III* (1964). Hall succeeded Laurence OLIVIER as director of the National Theatre in 1973, producing a wide range of plays until his departure in 1988. Among the best known were *Hamlet* (1975), Chekhov’s *The Cherry Orchard* (1978) and Shaffer’s *Amadeus* (1979). In 1988 Hall founded the Peter Hall Company, which has performed in both London’s West End and New York’s Broadway to critical acclaim.

Halleck, Charles A(braham) (1900–1986) American politician. A Republican from Indiana, Halleck was elected to 16 consecutive terms in the House of Representatives after winning a special election in 1935 to fill the remainder of the term of an incumbent who had died. He twice served as House majority leader, in 1947–48 and again in 1953–54. Although a conservative REPUBLICAN PARTY loyalist, he was frequently allied with conservative Southern Democrats. He parted com-

pany with them on the issue of CIVIL RIGHTS, supporting all major civil rights legislation in the late 1950s and early 1960s. Halleck became well known to U.S. television audiences in the 1960s as a participant with Illinois Republican senator Everett DIRKSEN in broadcasts attacking Democratic administration policies.

Haller, Fritz P. (1924–) Swiss architect and furniture designer known for the system of office furniture that bears his name. Haller has been in practice as architect and urban planner at Solothurn (near Basel), Switzerland, since 1949. He developed several steel-frame building systems currently used in Europe. In 1960 he developed a related system of office furniture using interchangeable steel tubes and connectors to form frames that carry shelves, work-tops, files and other storage elements. Haller has taught at the University of Southern California and at the University of Karlsruhe, West Germany. He is the author of *Integralurban; a Model*, a study of urban planning, and is the winner of several design awards.

Hallinan, Hazel Hunkins (1891–1982) American women's rights activist. She began her career as a member of the National Woman's Party in 1916, after chemical companies told her that they did not hire women. In 1917 she and other suffragists were arrested for chaining themselves to the White House fence and setting fire to its lawn. After the NINETEENTH AMENDMENT was passed in 1920 she moved to London, where she campaigned for British women's rights and wrote the "London Letter" column for the *Chicago Tribune*. (See also WOMEN'S MOVEMENTS.)

Hallmark Hall of Fame The most honored anthology series in the history of television. Hallmark Cards, Inc., had been founded by Mr. Joyce HALL in Kansas City in 1910. In the late 1930s and early 1940s he began sponsoring a radio series called *Tony Wons' Scrapbook*. The *Hallmark Playhouse* debuted on radio in 1948 and featured such notables as Ronald Colman in *Around the World in 80 Days* and Herbert Marshall in *Lost Horizon*. Hallmark moved to television in 1951 underwriting a series of 15-minute interviews hosted by

Sarah Churchill (daughter of British prime minister Winston); and then later on Dec. 24 of that year with the groundbreaking live telecast of the first original opera created for television, *AMAHl AND THE NIGHT VISITORS*. As the Hallmark-sponsored series moved into its "golden age" over the next 30 years—seen under a variety of names, such as *The Television Playhouse* and, finally, *The Hallmark Hall of Fame*—it garnered many "firsts" for the medium. *Hamlet* (1953) was the first full-length Shakespeare on any network. That same year a re-broadcast of *Amahl* was the first color transmission (aired just two days after the FCC approved NBC's patented "color tinte" process). *Kiss Me Kate* (1958) was the first color video tape telecast. The 1960 version of *Macbeth*, filmed in Scotland, lays claim to being the first made-for-television movie. *The Tempest* (1960) was the first classic drama to rank in the Top 10 television ratings. Most of the great actors of stage and screen have appeared—including Julie HARRIS in 10 roles (including *Victoria Regina* in 1961), Katherine CORNELL in *There Shall Be No Night* (1957), James STEWART in *Harvey* (1972) and the team of Alfred LUNT and Lynne FONTANNE, in *The Magnificent Yankee* (1965). The series has won more than 56 Emmys, seven Peabody Awards, two Golden Globes, and numerous other distinctions. "I was convinced that the average American did not have the mind of a 12-year old," recalled Joyce C. Hall in his autobiography, *When You Care Enough* (1979), concerning his decision to sponsor these telecasts. "We wanted to reach the upper masses, not just the upper classes."

Hallstein, Walter (1901–1982) German lawyer and statesman. Hallstein was a key figure in the molding of WEST GERMANY's foreign policy after WORLD WAR II. He developed the doctrine of severing ties with any government (except the USSR) that recognized EAST GERMANY, but believed that it was important for West Germany to maintain diplomatic ties with the USSR. He was president of the EUROPEAN COMMUNITY from 1959 to 1967. In this post he worked for European unity.

Halonen, Tarja Kaarina (1943–) Finnish politician and Finland's first fe-

male head of state. Born in Helsinki, Halonen graduated from the University of Helsinki in 1968 and obtained a masters of law degree from the same institution. While working as a lawyer for the Central Organization of Finnish Trades Unions during the 1970s, she served as parliamentary secretary to the prime minister from 1974 to 1975 and then was elected to parliament as a member of the Social Democratic Party in 1979. She served as minister of social affairs from 1987 to 1990, minister of justice from 1990 to 1991, and foreign minister from 1995 to 2000. She was elected president of the country in 2000, becoming Finland's first female head of state.

Halsey, William F(rederick, Jr.) "Bull" (1882–1959) American admiral. Born in Elizabeth, N.J., Halsey graduated from Annapolis in 1904. During WORLD WAR I, he was a destroyer commander, and he was a naval aviator after 1935. During WORLD WAR II, the tenacious "Bull" Halsey commanded the Allied forces in the South Pacific (1942–44), successfully directing the Solomon Islands campaign. Commander of the U.S. Third Fleet in 1944–45, he was in charge of naval activities in the Philippines, defeated the Japanese fleet at Leyte Gulf in October 1944 and directed the sea-based bombardment of JAPAN in July 1945. He became a five-star admiral, the navy's highest rank, in 1945. He retired in 1947, the same year his memoirs, *Admiral Halsey's Story*, were published. (See also WORLD WAR II IN THE PACIFIC.)

Halston (Roy Halston Frowick) (1932–1990) American fashion designer. Halston first became famous as the milliner who created the "pillbox" hat worn by Jacqueline KENNEDY during her husband's inauguration in 1961. He showed his first clothing designs in 1966 and established his own couture line two years later. His ready-to-wear line was established in 1972. The simple, clean lines of his designs were immediately popular and won him such friends and clients as Liza Minelli, Elizabeth TAYLOR, and Bianca Jagger. He sold his business and his trademark name in 1973, leaving him with little say as to the products that bore his name.

Hamas A Palestinian Arab terrorist group formed in the late 1970s by its spiritual leader, Sheikh Ahmed Yassin, and which espouses a version of ISLAMISM, a fundamentalist Muslim philosophy that calls for purging Islamic societies of all non-Muslim elements. Hamas first came to international attention for its use of violent rhetoric and of actions against the Israeli state during the first Intifada (see INTIFADA I), or uprising, in 1987. Hamas called for Palestinians to support its campaign to eliminate the state of ISRAEL and expel all Israelis from the WEST BANK and GAZA STRIP. The military branch, called the Izzedine al-Qassam Brigades, have concentrated on the use of homemade bombs, often carried by suicide bombers and detonated in areas of high Jewish population density, in an effort to create an atmosphere of terror in Israel. In addition to trumpeting its political goals in the Middle East and denouncing any Arab-Israeli peace process that recognizes the state of Israel's right to exist, Hamas has also engaged in humanitarian aid in Palestinian areas by establishing Muslim schools and hospitals. Some Israeli observers, however, have charged that these institutions serve largely as recruiting grounds for future soldiers and suicide bombers in the Izzedine al-Qassam.

The PALESTINE LIBERATION ORGANIZATION (PLO) originally supported Hamas's actions. But by 1997 the PLO's successor, the PALESTINIAN AUTHORITY (PA), had begun denouncing the suicide bombings and arresting Palestinian members of Hamas. In 2000, when a second Intifada (see INTIFADA II) broke out in Israel, Hamas was again at the forefront of the violence, along with another Islamist group called the Islamic Jihad. Since the outbreak of this second wave of terrorist attacks and suicide bombings, the Israeli government has initiated efforts to eliminate Hamas's capability to wage a war of terror on Palestinians and Israelis alike through the selective assassination of Hamas military and political leaders. In March 2004 an Israeli missile killed Sheikh Yassin. Hamas shocked the world in January 2006 by winning the legislative elections of the Palestinian Authority, thereby obtaining the right to form a government that would take

control of the West Bank and the Gaza Strip.

Hamburg One of the largest ports in the world; a German cultural center and industrial city on the Elbe River, about 60 miles upriver from Cuxhaven, on the North Sea. The scene of communist rioting in 1923, since 1937 Hamburg has been coextensive with, and capital of, the state of Hamburg. During WORLD WAR II Hamburg was heavily bombed, so much so that much of the city today is brand new, while surviving buildings are identified as such by plaques. Many old churches were destroyed, but the baroque St. Michael's Church, built between 1750 and 1762, and the Church of St. Jacobi, begun in the 14th century, have survived. In 1989 Hamburg celebrated the 800th anniversary of its charter as a free city by Frederick Barbarossa.

Hamilton, George Heard (1910–2004) American art historian, teacher and museum director. Educated at Yale University, Hamilton taught art history there and was a curator at the Yale Art Gallery (1936–66). He was a professor at Williams College (1965–75), while serving as director of the Clark Art Institute, Williamstown, Mass. (1966–77). A specialist in European and American art of the 19th and 20th centuries, he is the author of such books as *Painting and Sculpture in Europe, 1880–1940* (1967) and *Nineteenth and Twentieth Century Art* (1970).

Hamilton, Scott (1958–) American figure skater. The adopted child of university professors, Hamilton was diagnosed in early childhood with a growth-inhibiting disease. The disease abated when he took up skating at the age of nine. Never topping 5 foot 3 inches and 110 pounds, he won three consecutive world championships from 1981 to 1983. His ease with spectacular triple jumps made him a favorite entering the 1984 Winter OLYMPICS. While his performance in the short and long freeskating programs fell somewhat short, as he finished second to his longtime rival, Canadian Brian Orser, his compulsory figures were enough to give him the gold medal. After retiring from competition, Hamilton's insight into his sport

led to a career as a skating commentator. In 1997 Hamilton was diagnosed with testicular cancer and immediately underwent a series of chemotherapy treatments and surgeries to eliminate the presence of cancerous cells.

Hamm, Mia (1972–) American women's soccer player. Born Mariel Margaret Hamm in Selma, Ala., she played women's soccer in high school in Wichita Falls, Tex., before moving with her family to Virginia. While in high school, she played in a match against the Chinese national team in August 1987 and joined the U.S. National Women's Team in 1988. Accepting an athletic scholarship to the University of North Carolina (UNC), Hamm helped guide UNC to four championships in the 1989, 1990, 1992 and 1993 seasons. In addition to her four championships, she had her soccer jersey retired by UNC for becoming the Atlantic Coast Conference's all-time leader in goals (103), assists (72) and points scored (278). In her sophomore, junior and senior years she was named to the All-American Team of the National Soccer Collegiate Athletic Association (NSCAA).

After graduating from UNC in 1994 with a B.A. in political science, Hamm continued to play soccer and qualified for the U.S. Team for the 1995 Women's World Cup in Sweden. She started all five games the U.S. played in that year's competition, and helped the U.S. finish in a tie for first place with Norway. The following year she played with Team USA at the Olympics in Atlanta, Ga., where she helped the U.S. win the Gold Medal by defeating the Chinese national team. In 1999, after three years of regional and global women's soccer tournaments, including helping the U.S. team win a gold medal at the 1998 Goodwill Games, Hamm again joined the U.S. in the 1999 Women's World Cup held that year in the U.S. Over 26 games Hamm guided the U.S. to the World Cup Championship, where she helped Team USA defeat China by nailing the fourth penalty kick.

Since her success in the 1999 Women's World Cup, Hamm continued to play as both an amateur and a professional athlete. In 2000 she again joined the U.S. Women's Olympic

Team and helped lead it to the silver medal, losing the final game to China. The following year Hamm signed on as a player on the Washington Freedom, one of the eight teams comprising the Women's United Soccer Association (WUSA), the first female soccer professional league in the U.S., formed because the large turnout within the U.S. during the 1999 Women's World Cup made it appear that women's professional soccer could become a profit-making enterprise. In 2003 the Women's United Soccer Association suspended operations because revenues were insufficient to support a fourth season. Hamm retired in 2004.

Hammar skjöld, Dag (1905–1961) Swedish statesman, secretary-general of the UNITED NATIONS (1953–61). Hammar skjöld was Sweden's deputy foreign minister from 1951 to 1953. Elected secretary-general of the UN in 1953, he was reelected in 1957. The dignity and impartiality with which he conducted UN affairs, especially during the SUEZ CRISIS, enhanced the standing of the organization. In 1960 his handling of the Congo crisis provoked hostility from the USSR. While seeking peace between the Congo and the secessionist province of KATANGA, Hammar skjöld was killed in an airplane crash. He was awarded the 1961 NOBEL PEACE PRIZE posthumously.

Hammer, Armand (1898–1990) American industrialist and Soviet expert. Born in New York City and trained as a physician, Hammer made his first visit to the USSR in 1921 on a medical mission. Retaining an abiding interest in Soviet-American friendship, he had personal contacts with Russian leaders from LENIN to GORBACHEV. A gifted entrepreneur, he soon became involved in trading U.S. grain for Soviet furs and caviar. Over the years, Hammer headed successful businesses in fields ranging from whiskey to broadcasting, but his greatest fortune was made through his building of Occidental Petroleum Co. into a major international oil company. He was also a major philanthropist and noted art collector.

Hammerstein, Oscar, II (1895–1960) American song lyricist and librettist best known for his collabora-

tions with Jerome KERN and Richard RODGERS. Hammerstein was born in New York into a musical theater family. After abandoning law studies at Columbia University he embarked upon a series of notable collaborations with Herbert Stothart (*Wildflower*, 1923); Sigmund ROMBERG (*The Desert Song*, 1926, and *New Moon*, 1928); and Jerome KERN (*Show Boat*, 1927). The historic partnership with Richard Rodgers began with *Oklahoma* (1943) and included such landmark musical shows as *Carousel* (1945), *South Pacific* (1949), *The King and I* (1951), *Flower Drum Song* (1958) and their last, *The Sound of Music* (1959). In contrast to Rodgers's previous collaborator, Lorenz HART (to whom he was frequently and unfavorably compared), Hammerstein had a positive and romantic style. To quote one of his songs, he was "stuck like a dope with a thing called hope." The style emerged at its best in "Oh, What a Beautiful Morning," "Younger Than Springtime," "Hello, Young Lovers" and "Billy's Soliloquy" (all with Rodgers); and at its worst in such saccharine ditties as "Happy Talk" and "Climb Ev'ry Mountain" (also with Rodgers). He wrote his autobiography, *Lyrics by Hammerstein*, in 1949, and died of cancer in 1960. He played an important part, wrote producer Max Gordon, in "laying the groundwork for what was to become America's undeniable contribution to the world's theatre."

Hammer v. Dagenhart (1918) U.S. Supreme Court decision striking down an early effort to ban child labor. During the early years of the century, young children were commonly employed in factories. Responding to popular outcries over this practice, Congress passed a federal Child Labor Law that outlawed the sale of goods produced by children working either more than six days a week or more than eight hours per day. The Supreme Court struck down the law as unconstitutional, however. The Court reasoned that manufacturing was not "commerce" and was outside the scope of Congress' regulatory authority. The case was not overruled until 1937 with the passage of the Fair Labor Standards Act, which severely limited the use of child labor in factories. (See also *BAILEY v. DREXEL FURNITURE CO.*)

Hammett, Samuel Dashiell (1894–1961) American novelist. Hammett's much-imitated fiction, beginning with *Red Harvest* (1929), is the origin of the tough, realistic genre of detective stories. His best known works include *The Maltese Falcon* (1930, filmed three times, most notably in 1941), which introduced the hard-boiled detective Sam Spade; and *The Thin Man* (1934, filmed 1934), which features Nick and Nora Charles. Hammett's writing was based on his own experiences as a private detective in the late teens. Following 1934, Hammett worked as a screenwriter in HOLLYWOOD. Among his credits is the screen adaptation for *Watch on the Rhine* (1943) by Lillian HELLMAN, who became Hammett's companion in 1930. During the MCCARTHY era, Hammett was jailed for refusing to testify in 1951. He was ill when he was released, and later impoverished as a result of increased scrutiny by the Internal Revenue Service.

Hammond, John (1910–1987) American record producer. A JAZZ and BLUES aficionado, Hammond's legendary talent scouting abilities led him to such finds as Bessie SMITH, Billie HOLIDAY, Benny GOODMAN and Count BASIE. In 1933 he became American recording director of the English division of Columbia Records. There he used his private income as an heir to the Vanderbilt fortune to subsidize many recordings by such artists as Fletcher HENDERSON and Chick WEBB. A champion of racial equality, he was proud of his role in creating jazz's first integrated group—the Benny Goodman Trio. In later years, he signed Aretha FRANKLIN, Bob DYLAN and Bruce SPRINGSTEEN to Columbia Records.

Hampshire, Sir Stuart (1914–2004) British philosopher. Hampshire is one of the best-known British philosophers of the post-World War II era, although he has been a clarifier and synthesizer of past ideas rather than an originator of a new philosophical system. Educated at Oxford, Hampshire taught there as well as at University College, London, and at Princeton University. The fields on which he has written include epistemology, philosophy of mind, aesthetics and metaphysics. One of his key ideas

has been that different conditions apply to the certainty of a statement, depending on the particular class of statement under consideration. Major works by Hampshire include *Spinoza* (1951), *Thought and Action* (1959), *Feeling and Expression* (1960) and *Freedom of the Individual* (1965) and the stage version of *Sunset Boulevard*, for which he won a Tony Award for Best Book of a Musical.

Hampton, Christopher James (1946–) British playwright. Hampton's first play, *When Did You Last See My Mother* (1966), was performed by the English State Company at the Royal Court Theatre, where Hampton was resident playwright from 1968 to 1970. There he wrote *Total Eclipse* (1968) and *The Philanthropist* (1970). Perhaps his best known work is *Les Liaisons Dangereuses* (1986, filmed 1989), which depicts a manipulative contest of seduction between a nobleman and lady in prerevolutionary France. Hampton has also translated the works of CHEKHOV, Ibsen and Molière. Other works include *Savages* (1973) and *Tales from Hollywood* (1980).

Hampton, Lionel (1909–2002) American jazz musician and bandleader. Born in Louisville, Kentucky, Hampton performed in the early part of his career with Paul Howard, Les Hite, and Louis ARMSTRONG, playing drums, xylophone and vibraphone. He was a popular performer with Benny GOODMAN from 1936 to 1940, before founding his own band in 1941. One of the most popular and exciting big bands of the 1940s, Hampton's group survived until 1965, when he moved more into rhythm and blues and founded the Jazz Inner Circle sextet.

Hamsun, Knut (Knut Pedersen) (1859–1952) Norwegian novelist. Hamsun first achieved acclaim with the novel *Sult* (*Hunger* 1890). Based on his own travails, the novel depicts a starving young writer attempting to establish himself. With its intense prose and hallucinatory passages, the novel has come to be regarded as a seminal modernist work. Important subsequent fiction includes *Mysterier* (*Mysteries* 1892), *Pan* (1894) and *Markens grode* (*Growth of the Soil*, 1917) Ham-

sun was awarded the NOBEL PRIZE in literature in 1920. Although he continued to write throughout his life, Hamsun's later works never received the attention of his early novels. He was an avid supporter of NAZISM during the 1930s and WORLD WAR II. After the war he was arrested by the Norwegian government and tried in 1947.

Hancock, Herbie (1940–) One of contemporary jazzdom's most visible and successful performers. While completing his education at Grinnell College in the late 1950s, Hancock returned to his hometown of Chicago on weekends to back such prominent jazz artists as Coleman HAWKINS. His successful recording debut as a leader in 1962 produced a hit song, "Watermelon Man," and an invitation to join Miles DAVIS's fabled quintet. With bassist Ron Carter and drummer Tony Williams, Hancock helped evolve a more open-ended and interactive approach to rhythm section playing that made the Davis fivesome one of the most influential groups of the 1960s. Following up the fusion experiments of Davis and groups like WEATHER REPORT, Hancock, since the late 1960s, has devoted much energy to various amalgams of rock, funk and jazz; his "Rockit" was a number-one pop hit in 1983. Hancock has made periodic returns to more conventional neo-bebop jazz settings, most significantly in his piano duos with Chick COREA. He has also scored feature films, including *Round Midnight* (1986), for which he won an ACADEMY AWARD. In 2004 he was the recipient of the National Endowment for the Arts Jazz Masters Fellowship, the U.S. government's highest award for jazz musicians. Among Hancock's original jazz standards are "Maiden Voyage," "Dolphin Dance," "Cantaloupe Island" and "Speak Like a Child."

Hand, Learned (1872–1961) American jurist. An honors graduate of both Harvard University and its law school, Hand was one of the best-known jurists of his day, although he was inexplicably never nominated to the U.S. Supreme Court. Hand favored the doctrine of judicial restraint, which requires courts not to substitute their views for those of the legislatures that make the laws. Under this doctrine courts should not make law or stretch laws beyond their

intended purpose. Perhaps his best-known opinion was in *DENNIS v. U.S.* (1949), in which he upheld the convictions of 11 leaders of the U.S. Communist Party under the SMITH ACT. Hand's opinion was later upheld by the Supreme Court, which adopted his view that the government could bar political speech even when it did not incite violence. Hand's brother Augustus was also a prominent federal appeals judge.

Handke, Peter (1942–) Austrian playwright and novelist. Handke established himself as an unorthodox author with the plays, *Publikumsbschimpfung* (*Offending the Audience*, 1966), *Kaspar* (1968), which shows the influence of the philosopher Ludwig WITTGENSTEIN, and *Der Ritt bei den Bodensee* (1971). His works examine use of language and communication. His novels include *Across* (1986) and *Repetition* (1988). Handke continued to publish well-received novels throughout the 1990s, including *My Year in the No-Man's Bay* (1998) and *On a Dark Night I Left My Silent House* (1999). In 1996 Handke created political controversy with his essay "A Journey to the Rivers," which defended Serbian actions following the disintegration of YUGOSLAVIA in 1991. In 1999 he returned literary prize money that he had won in 1973 in protest against the NATO bombardment of the Serbian capital of Belgrade.

Handl, Irene (1902–1987) One of Great Britain's most beloved character actresses, Handl excelled in comic portrayals of eccentric Cockneys. Although she did not turn to acting until her late 30s, she achieved quick success and emerged as a star of stage, cinema and television. Her biggest theatrical hit was *Goodnight Mrs. Puffin*, which ran for three years in the early 1960s. She was familiar to TV viewers for appearances in such comedy series as "For the Love of Ada" (1970–73) and "Never Say Die."

Handy, W(illiam) C(hristopher) (1873–1958) Noted American jazz composer. Handy initially studied organ and music theory, then cornet. His first significant professional experiences occurred at the turn of the 20th century with Mahara's Minstrels, first as a cornet soloist, later as the group's leader. In

1917 he moved to New York, where he supplemented his playing career with song writing; he also enjoyed some success as a music publisher. Though he continued performing into the 1940s, Handy's greatest significance was as a composer and collector of BLUES; his "Beale Street Blues" and "Memphis Blues" are among the most popular songs of the standard jazz repertoire. In 1928, a 17-minute film dramatized Handy's most famous and enduring composition, "St. Louis Blues"; the film is significant for the only cinematic appearance of legendary blues singer Bessie SMITH, who in the 1920s had helped popularize Handy's immortal tune; also important is the short film's status as perhaps the first widely released sound film to be based on a popular song and therefore a proto-forerunner of the music-video phenomenon. In 1957, Nat "King" COLE starred in a highly fictionalized biography of Handy, *St. Louis Blues*. Handy's autobiography is *Father of the Blues*.

Hanks, Tom (1956–) American television and movie actor. Born in Concord, Calif., Hanks began his acting career in theater performances in Ohio and California in 1977. His success in these theater pieces won him the attention of a team of television producers, who in 1980 cast him in *Bosom Buddies*, a sitcom about two men posing as women in order to live in an inexpensive apartment building reserved exclusively for women.

In 1984 Hanks debuted as a headlining motion-picture star in the film *Splash*, a comedic piece in which he starred as a man who falls in love with a mermaid (Daryl Hannah). In *Big* (1985), Hanks depicted the grown-up version of a 12-year-old who wished he could become adult overnight, and who then uses his childlike insight to create winning concepts for a toy industry giant. After receiving lukewarm receptions in reviews and at the box office in such films as *The 'Burbs* (1989), *The Bonfire of the Vanities* (1990) and *Joe Versus the Volcano* (1990), Hanks reversed this trend with his role as an alcoholic, misogynistic manager of a women's baseball team in *A League of Their Own* (1992). The following year *Sleepless in Seattle*, Hanks and Meg Ryan played two single people connected by Hanks's conversation with a radio psychiatrist, in which he un-

Academy Award–winning actor Tom Hanks, 1988 (PHOTOFEST)

knowingly describes himself as Ryan's soulmate, leading both to meet in New York. Hanks would team again with Ryan in *You've Got Mail* (1998), in which he played a bookstore executive who opens a shop near Ryan's children's bookstore, leading to competition between the two while they pursue an anonymous romance online.

His performance in *Philadelphia* (1993) a dark drama that chronicled the efforts of a successful lawyer (Hanks) to sue his employers for terminating his employment once they learned he had contracted the AIDS virus, won him a 1994 best actor award. The following year Hanks won the award again for his title role in *Forrest Gump*, a dramatic comedy in which he portrayed a mentally ill individual who navigated his way through life.

Hanks's later work generally has fallen into two camps, the dramatic and the comedic. The first category includes *Apollo 13* (1995), in which he costarred with Kevin Bacon and Bill Paxton as the three members of the doomed lunar mission; director Steven SPIELBERG's *Saving Private Ryan* (1998), in which he played an army Ranger captain sent to extract a soldier from battle in 1944 France; and *Cast Away* (2000), in which he appeared nearly alone throughout the film as a shipwrecked Federal Express executive. Hanks later provided the voice for Woody, a lanky cowboy, in the computer-animated films *Toy Story*, and *Toy Story 2*, which proved finan-

cial successes for Disney and Pixar Studios.

Hanks also moved into the producer's chair, with *From the Earth to the Moon*, a 1998 miniseries for HBO that traced the evolution of the American space program from its infancy to the first Apollo landing. Hanks reunited with Spielberg to produce *Band of Brothers*, a 2001 miniseries for HBO based on the book by historian Stephen Ambrose that chronicled the members of Easy Company of the 101st Airborne Division in WORLD WAR II.

Hanley, James (1901–1985) British author. Although Hanley never gained a large readership, he was regarded by some critics and fellow writers as one of the most important figures in 20th-century English literature. A number of his novels drew upon his youthful experiences as a seaman and led reviewers to compare him to Joseph CONRAD. Among the most acclaimed of his novels were *The Closed Harbor* (1952), *Levine* (1956), and *A Dream Journey* (1976). Although primarily a novelist, he probably achieved greater public recognition as a playwright. His plays were staged in London, New York and elsewhere.

Hanoi Capital of VIETNAM; on the Red River, about 75 miles upriver from the Gulf of Tonkin port of Haiphong. Occupied by France in 1883, Hanoi was the capital of French INDOCHINA from 1887 to 1946, a period of industrial development; during WORLD WAR II its Japanese occupiers were frequently bombed. From 1946 to 1954 Hanoi was the seat of the unrecognized (by France) Democratic Republic of Vietnam and a scene of heavy fighting between the French and the VIET MINH. After France threw in the colonial towel, Hanoi became the capital of **North Vietnam** and experienced a period of great industrial expansion—until the VIETNAM WAR of 1965–73. Heavily bombed by U.S. forces, its factories were dismantled and moved elsewhere but were speedily reconstructed after the war.

Hansberry, Lorraine (1930–1965) American playwright. Hansberry is best known for the celebrated play *A Raisin in the Sun* (1959, filmed 1961), which depicts a black family facing a

moral dilemma involving racial prejudice. The title of the play was taken from a poem by Nikki GIOVANNI. Hansberry's life was tragically short, and the only other of her works she was to see performed was *The Sign in Sidney Brustein's Window* (1964), which concerns Jewish life in New York City.

Hanson, Duane (1925–1996) American sculptor. An influential New Realist, Hanson is known for his life-sized figures of ordinary Americans caught in moments typical of their everyday lives. Among his uncannily realistic sculptures are the 1970 works *Hard Hat* and *Woman with Dog* (Whitney Museum of American Art, N.Y.C.).

Hanson, Howard Harold (1896–1981) American composer, conductor and educator. Hanson studied music at the University of Nebraska, the Juilliard School and at Northwestern University, Chicago. His 1920 composition earned him the Prix de Rome, for a three-year advanced study period in that city. In 1924, Hanson became director of the Eastman School of Music, Rochester (1924–64), and brought the school to national and international fame. He is considered one of the most influential teachers and composers of his time. Hanson founded the American Composers Concerts at Rochester, and wrote six symphonies, an opera and many other symphonic and choral works. He won a 1944 PULITZER PRIZE for his Fourth Symphony.

Hapoel Hamizrachi (The Mizrach Worker) In ISRAEL, a religious—moderately orthodox—center-left party. It joined with MIZRACHI in 1956 to form the **National Religious Party**.

happening Term for artistic event that emphasizes spontaneous developments. The term *happening* was coined in 1959 by conceptual artist Allan KAPROW to describe an artistic environment—whether in a public park or in a private art gallery—that allows participation by persons other than the artist in the creation of aesthetic works and moods. A key influence on the concept of a “happening” was the irreverent playfulness of the POP ART movement. Happenings featured artists painting, filming, and photographing on the spot; mass participa-

tion in the coloring of a canvas; dance and music; and any other activities that seemed to add to the joy and creativity of the situation. Happenings were as much philosophical statements on the stifled nature of societal behavior as they were aesthetic works of art. (See also BE-IN.)

Haram al-Sharif (Temple Mount) The site of a religious structure revered by both the Jewish and Muslim faiths. Haram al-Sharif, which means “Venerable Sanctuary,” is the Muslim name for the Temple Mount. Situated in the Old City of Jerusalem, the Temple Mount was the site of the First Temple of Israel, constructed in the 10th century B.C.E. atop the hill where Jewish tradition holds that God made a covenant with Abraham. It was alongside the Temple Mount that Herod the Great constructed what later became known as the Western (or Wailing) Wall, a retaining structure designed to provide structural support to the Temple. Jews have long since journeyed to the wall, inserting in its chinks prayers written on paper and mourning at the site. The Wailing Wall is all that remains of the original First and Second Temple structures.

The site is also sacred to Muslims. According to Muslim tradition, Muhammad traveled to Jerusalem to visit the site of God's covenant with Abraham, and later ascended to heaven from the ground of the temple. To commemorate this event Muslims built the Dome of the Rock and the al-Aqsa Mosque on the Temple Mount area. Pilgrimages to it from Muslims all across the world have made it the third most holy Muslim site in the world after Mecca and Medina.

In the autumn of 2000 a visit by Israeli prime minister Ariel SHARON to the Temple Mount, and his participation in the Jewish ritual associated with the site, helped touch off the second Intifada, or uprising, by Palestinian Arabs against Israeli occupation of the WEST BANK and GAZA STRIP (see INTIFADA II).

Harare (formerly Salisbury) Capital city of ZIMBABWE (formerly known as RHODESIA); in southeastern Africa. The largest city in Zimbabwe was founded in 1890 as a fort by the Pioneer Column, a mercenary force organized by Cecil J. Rhodes, a diamond-rich British imperialist and entrepreneur. The out-

post was named for Robert Arthur Salisbury, then prime minister of Great Britain. Salisbury was the capital of the **Federation of Rhodesia and Nyasaland** from 1953 to 1963. In 1965, when Rhodesia unilaterally proclaimed its independence, Salisbury became the capital—and remained so when white political domination ended and the land was officially recognized as the African nation of Zimbabwe in 1979. In April 1982 Salisbury became Harare, to honor a 19th-century tribal chief.

Harburg, Edgar Y. “Yip” (1896–1981) American song lyricist. Harburg first gained notice with his words to the 1932 song, “Brother, Can You Spare a Dime,” a poignant account of a man's dreams and hardships during the GREAT DEPRESSION. During his career he wrote the lyrics to more than 30 other well-known songs, which were often marked by touches of romantic imagination and strong feelings of social justice. He collaborated with some of America's leading popular composers on scores of stage and film musicals, including *Finian's Rainbow* and, most notably, *The Wizard of Oz*, which won him an ACADEMY AWARD in 1939. Undoubtedly his most acclaimed song was “Somewhere Over the Rainbow,” which made a star of Judy GARLAND.

hard-edge painting Term for American painting developed in the late 1950s that uses large blocks of monochromatic color in sharp-edged geometrical forms. In these works, there is usually an interplay between positive and negative space, image and field. Artists who have used various forms of this style include Ellsworth KELLY, Alexander Liberman, Agnes Martin and Frank STELLA.

Hardie, James Keir (1856–1915) British labor leader and politician, revered as a major figure in the early history of the British LABOUR PARTY. The Scottish-born Hardie was a leading figure in the British labor movement from the 1880s until his death and was a co-founder of the Labour Party. He sat in Parliament from 1892 to 1895 and again (as M.P. for Merthyr Tydfil) from 1900 until his death. He was the first chairman (1906–07) of the parliamentary Labour Party and, more than anyone else, was responsible for estab-

lishing the party's identity and program in its early days. A committed pacifist and nonconformist, he opposed Britain's entry into WORLD WAR I.

Harding, Field Marshal Lord John (Allan Francis) (1896–1989)

British army officer. Harding was the commander of British forces in North Africa during WORLD WAR II. As a brigadier general in 1940 he led Britain's Seventh Armoured Division, known as the "Desert Rats," in the battle of EL ALAMEIN, which turned the tide against the German forces in North Africa. After the war, he was appointed commander in chief of the British Army of the Rhine. He later served as governor of CYPRUS, where he was the target of death threats from a guerrilla group seeking unification with GREECE.

Harding, Warren G(amaliel) (1865–1923)

Twenty-ninth president of the United States. Harding studied at Ohio Central College, began a journalistic career and built a strong Republican political base in Ohio. In 1899 he went to the state legislature and in 1904 became lieutenant governor. He lost a bid for the governorship but continued to rise politically. At the Republican National Convention in 1912, he was chosen to present the nomination of William Howard TAFT. In 1914 he was elected to the U.S. Senate, where he had an undistinguished term. However, a group of his fellow Republican senators proposed his name for president at the Republican convention of 1920. When the convention became deadlocked, Harding was thought of as an ideal compromise candidate. He received the nomination on the 10th ballot and ran against Democrat James COX. The election of Harding was the first to be reported by radio.

Harding had promised to form a cabinet of only the "best minds." In many instances he chose his administrative team well, but he also chose others with little civic responsibility. According to one source, "the [Harding] administration . . . was marked by one achievement, the Washington (naval) Conference" (1921–22). In August 1923, Harding became the first president to visit ALASKA. On this trip he received some notice of scandals in

Warren G. Harding, 29th president of the United States (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

his administration, which had been kept from him until that time. On his way home, at San Francisco, Harding died unexpectedly under circumstances still not entirely clear. He was not to be troubled by the humiliating scandals that plagued the administration he left behind, including, but not limited to, the TEAPOT DOME SCANDAL (involving Secretary of the Interior Albert B. FALL and Attorney General Harry M. DAUGHERTY). (See also Calvin COOLIDGE.)

Hardwick, Elizabeth (1916–)

American author. Hardwick's fiction is noted for its insightful depictions of women and their roles within the family and for its cool, detached tone, which has been compared to that of Joan DIDION. Her novels include *The Ghostly Lover* (1945) and *Sleepless Nights* (1979). She has also published the collections of essays *Seduction and Betrayal: Women and Literature* (1974), *Bartleby in Manhattan* (1983) and a critical biography of Herman Melville (2000). Hardwick is a frequent contributor to *THE NEW YORKER* and other periodicals. She was the second wife of poet Robert LOWELL.

Hardy, Oliver See LAUREL AND HARDY.

Hardy, René (1912–1987) French RESISTANCE leader during WORLD WAR

II. After the war, Hardy's reputation was besmirched by charges that he had betrayed top Resistance leader Jean MOULIN to Klaus Barbie, the GESTAPO chief of Lyon. Hardy was twice tried for treason and twice acquitted. Nonetheless, many of his former Resistance colleagues continued to insist that he was guilty. In 1972 Barbie, then living in sanctuary in South America, said that Hardy had been a collaborator. Hardy, meanwhile, had become a successful novelist.

Hardy, Thomas (1839–1928)

English novelist, essayist and poet. Hardy is one of the unquestioned great figures in the history of English literature. Although born in the first half of the 19th century, his creative output and his influence extend well into the 20th. He earned his major renown for a series of intensely dramatic 19th-century novels set in his native Dorchester, which he renamed "Wessex" for fictional purposes. These include *Far from the Madding Crowd* (1874), *The Mayor of Casterbridge* (1886), *Tess of the D'Urbervilles* (1891) and *Jude the Obscure* (1896). In the late 1890s, spurred by bitter critical attacks on his novels but enjoying the financial security he had earned from them, Hardy resolved to devote the remainder of his writing career to poetry and poetic drama. He became, in the first three decades of the 20th century, a powerful practitioner in the standard metric forms of English verse, upholding tradition in the midst of the free verse literary revolution. The same pessimism and irony that pervades his fiction is also evident in his poetry. Among his key poetic works are the drama *The Dynasts* (1904) and the verse collection *Moments of Vision* (1917). Hardy's work has influenced many 20th century British poets and novelists, including the writers of the MOVEMENT of the 1950s, especially Philip LARKIN.

Harkness, Georgia E(lma) (1891–1974)

American Methodist theologian and social critic; one of the most influential Methodist thinkers and educators of her era. Harkness emphasized the need for equal rights for women within the Methodist Church, although she did not herself seek ordination as a priest. In 1948 and 1954, Harkness served as a delegate to the

ecumenical World Council of Churches. Beginning in 1950, Harkness also became an active opponent of nuclear armaments. Her writings include *Dark Night of the Soul* (1945) and *Women in Church and Society* (1971).

Harlan, John Marshall (1833–1911) U.S. Supreme Court associate justice (1877–1911); grandfather of John Marshall HARLAN II, who was later a Supreme Court associate justice. The elder Harlan, son of a U.S. congressman and a native of Kentucky, studied law at Transylvania University. Although a slaveowner, Harlan served as an officer in the Union Army during the Civil War. He was elected Kentucky's attorney general after the war and became prominent in the Republican Party. He was instrumental in securing the presidential nomination for Rutherford B. Hayes at the 1876 Republican convention and was later rewarded with his appointment to the Supreme Court. On the Court Harlan was known as a rustic who chewed and spat tobacco during Court sessions. He was also dubbed the "great dissenter" because of his opposition to many notable decisions, including *Plessy v. Ferguson* (1896), which upheld "separate but equal" public services along racial lines. However, Harlan outlasted many of his detractors, serving a remarkable 33 years on the Supreme Court.

Supreme Court associate justice John Marshall Harlan, engraved by Max Rosenthal (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

Harlan, John Marshall, II (1899–1971) Associate justice, U.S. Supreme Court (1955–71). A graduate of Princeton University and a Rhodes Scholar, John Harlan was the grandson of John Marshall HARLAN, who served on the Supreme Court from 1877 to 1911. Harlan worked with a Wall Street law firm for many years, although he took leaves of absence to serve as an assistant U.S. attorney, special state assistant attorney general, and chief council of a state crime commission. He was appointed to the influential U.S. District Court for the Second Circuit in 1954. Several months later, President Dwight D. EISENHOWER nominated him to the Supreme Court. On the Court Harlan was generally known as a moderate. He resigned shortly before his death in 1971.

Harlech, Lord (Sir [William] David Ormsby Gore) (1918–1985) British diplomat. During the 1950s Sir David Gore led Britain's delegation at the UNITED NATIONS (UN). His career reached its peak when he served as Britain's ambassador to the U.S. during the administration of John F. KENNEDY. A close personal friend of the president, he reportedly exercised a restraining influence on Kennedy during the CUBAN MISSILE CRISIS (1962). In the 1970s he played a key role in British negotiations with its former colony RHODESIA. (See also ZIMBABWE.)

Harlem Part of New York City's borough of Manhattan, its name derived from the original Dutch settlers of New York. In the early part of this century the migration of southern blacks in search of better-paying jobs in the industrial North turned New York's Harlem into one of the largest black communities in the nation. From the 1920s through the 1940s, the HARLEM RENAISSANCE reflected black cultural life. After World War II the Hispanic population grew considerably in East Harlem. The area is the home of the Abyssinian Baptist church, established in 1808 and headed for many years by Adam Clayton POWELL Jr. Harlem's historic Apollo Theater stage still supports and encourages black theatrical talent. Poet Countee CULLEN, writer James BALDWIN and singer Billie HOLLIDAY, among others, were residents. In 2001

former president Bill CLINTON established his office in Harlem.

Harlem Renaissance Called by Langston HUGHES "that fantastic period when HARLEM was in vogue," the term *Harlem Renaissance* refers to an era of extraordinary artistic achievement by African-American writers and artists centered in the Harlem section of New York City. Ushered in by the JAZZ AGE and the successful black revue *Shuffle Along* (1921), the 1920s Harlem Renaissance saw the publication of important works by such authors as Hughes, Sterling BROWN, Countee CULLEN, Zora Neale HURSTON, Claude McKay, Jean Toomer, and many others. Harlem became a lively mecca for black artists and writers, and the movement symbolized a national mood of increased optimism and pride among black Americans. *The New Negro* anthology, edited by Alain Locke, remains an important document of the period and was mirrored in the "New Negro" social-political movement. There was increased activity by the NAACP under the leadership of W. E. B. DUBOIS, Marcus GARVEY's Universal Negro Improvement Association, and the National URBAN LEAGUE. The GREAT DEPRESSION of the 1930s sent Harlem into a decline, together with the rest of the country, and African Americans would not again capture such national attention until the CIVIL RIGHTS MOVEMENT of the 1950s and 1960s.

Harlow, Jean (Harlean Carpenter) (1911–1937) Hollywood's first "blonde bombshell," Harlow was the American film industry's greatest sex symbol of the 1930s. After running away from home at 16, Harlow became an extra in silent films in the late 1920s. Howard HUGHES caught sight of her beauty and cast her as the leading lady in his epic early talkie, *Hell's Angels* (1930). The hit led to several more films, at several more studios, including *Public Enemy* (1931, WARNER BROS.) and *Platinum Blonde* (1931, COLUMBIA). But it was in METRO-GOLDWYN-MAYER films such as *Red Dust* (1932) with Clark GABLE that she became a national sex goddess. Her magnificent career was cut short by tragedy, when she died of uremic poisoning during the filming of *Saratoga* (1937).

Harmon, Ernest N. (1894–1979) American military officer. Harmon was one of America's most decorated generals and among the U.S. Army's most daring and aggressive armored division commanders in WORLD WAR II. He commanded an invasion task force in North Africa and later led the "Hell on Wheels" 2nd Armored Division to victory in the BATTLE OF THE BULGE.

Harmon, Thomas Dudley "Tom" (1919–1990) American football player and commentator. While playing as a tailback with the Michigan Wolverines in the late 1930s, Harmon set a college record with 33 touchdowns, and scored 237 points in 24 games. He completed 101 of 233 passes for 1,399 yards and ran for a total of 4,280 yards, averaging 5.5 yards per carry. He won the Heisman Trophy, college football's highest award, in 1940 and was named the Associated Press male athlete of the year. After World War II he played professional football briefly for the Los Angeles Rams. He retired from the game in 1948, and went on to a successful career in radio and television sports broadcasting. He was the father of actor Mark Harmon.

Harmsworth, Alfred Charles William See Lord NORTHCLIFFE.

Harnwell, Gaylord P. (1903–1982) American atomic physicist and educator. During WORLD WAR II Harnwell headed the U.S. Navy Radio and Sound Laboratory at the University of California. In this post, he was responsible for the development of SONAR. He was president of the University of Pennsylvania from 1953 to 1970, expanding its enrollment, facilities and research programs.

Harriman, W(illiam) Averell (1891–1986) U.S. public official who advised Democratic presidents from Franklin D. ROOSEVELT to Lyndon B. JOHNSON, primarily as a diplomatic troubleshooter. Born in New York City, the patrician Harriman was heir to the Union Pacific Railroad fortune amassed by his father. By 1932 he had become chairman of the board of Union Pacific and had also embarked on a number of ventures in banking, shipbuilding and international finance.

Along with Armand HAMMER, Harriman was one of the first Americans to seek business concessions from the Soviet government. In 1941, President Roosevelt sent Harriman to the USSR, where he remained until 1946, first as minister and then as ambassador. After serving briefly as ambassador to the U.K. (1946), Harriman became secretary of commerce in the TRUMAN administration. From 1949 to 1950 he helped administer the MARSHALL PLAN. During the KOREAN WAR he served as Truman's National Security Advisor. Harriman was elected governor of New York in 1954 but was defeated in 1958 by Nelson ROCKEFELLER. He ran unsuccessfully for the Democratic presidential nomination in 1952 and 1956.

During the KENNEDY administration he served in several state department posts and in 1963 was a key figure in negotiating the NUCLEAR TEST BAN TREATY between the U.S. and the USSR. In 1965 President Lyndon Johnson appointed Harriman ambassador-at-large to handle Southeast Asian affairs. Harriman traveled around the world seeking international support for the U.S. policy in VIETNAM while sounding out the possibilities of a negotiated settlement of the war. When preliminary peace talks between the U.S. and North Vietnam opened in mid-1968, Harriman went to Paris as chief U.S. negotiator. He was succeeded by Henry Cabot LODGE after the election of Richard M. NIXON. Harriman subsequently criticized Nixon's handling of the war and the peace talks.

Harrington, Michael (1928–1989) American political scientist and writer. One of the most visible spokesmen for socialist ideals in the U.S., Harrington was co-chairman of the Democratic Socialists of America. His 1962 book *The Other America: Poverty in the United States* sparked a national debate on poverty with its assertion that there was an underclass of poor Americans who lived below the poverty line and who were ignored by government and society. The book was said to have inspired federal programs for the poor in the 1960s that became known as the War on Poverty. Harrington was widely respected by allies and opponents alike for his compassion, sincerity and eloquence.

Harris, Arthur Travers "Bomber" (1892–1984) Marshal of the Royal Air Force who headed RAF Bomber Command during WORLD WAR II and directed the saturation bombing of German cities. Harris earned a reputation as a contentious and stubborn man. He defended the saturation bombing strategy against charges that it was wasteful and even immoral. Harris rejected arguments favoring precision bombing and claimed that his methods forced a concentration of German forces that would otherwise have been sent to the Russian front. His policy climaxed in the bombing of DRESDEN (April 1945), which destroyed the city and may have killed as many as 50,000 people.

Harris, Barbara (1951–) Reverend Barbara Harris became the first woman consecrated as a bishop in the Episcopal Church (February 11, 1989). Harris, an African-American CIVIL RIGHTS activist, had been ordained for the priesthood in 1980. However, she held no undergraduate degree and underwent no seminary training in theology. The controversial ordination was denounced as sacrilegious by traditionalist members of the church. Bishop Harris retired from her duties in 2002.

Harris, Frank (pen name of James Thomas Harris) (1856–1931) Irish-born author and editor. Harris, who is best remembered for his sexually explicit three-volume autobiography, *My Life and Times* (1923–27), was born in Ireland but at age 15 came to the U.S., where he worked at a variety of odd jobs including a stint as a cowboy. Harris then went to England, where he earned a law degree and established himself as a successful editor of the British *Saturday Review* from 1894 to 1898, during which time he befriended George Bernard SHAW and Oscar Wilde. He then returned to America to edit *Pearson's Magazine*, but his sympathy with the German cause during WORLD WAR I led to public criticism and spurred Harris to move to Europe; he spent most of his final years in France. *My Life and Times*, which was banned in both the U.S. and Europe, no longer shocks readers but does stand as an interesting social

portrait of the Edwardian era. Other works by Harris include a biography of Oscar Wilde (1920) and a five-volume essay series of *Contemporary Portraits* (1915–23) on famous friends and acquaintances.

Harris, Julie (Julia Ann Harris) (1925–) American stage actress. Harris first achieved critical acclaim for her role as the lonely tomboy in *The Member of the Wedding* (1950; repeating the role in the 1953 film version). Other major roles were Sally Bowles in *I Am a Camera* (1951; repeating the role in the 1955 film version) and Joan of Arc in *The Lark* (1955). Her most famous stage creation was the one-woman show *The Belle of Amherst* (1976), based on the life of Emily Dickinson. She also appeared on television and in other motion pictures, most notably *East of Eden* (1955). In 2001 Harris suffered a stroke and has since retired from the theater.

Harris, Lawren (1885–1970) An eminent Canadian landscape painter, Harris studied in Germany, returning to Toronto in 1907 to paint impressionist-style canvases. After a tour of northern Ontario in 1918, he began to paint large panoramas of the Canadian wilderness. A member of the Canadian GROUP OF SEVEN, he also painted dramatic, somewhat stylized landscapes of the Canadian Arctic and Rocky Mountains.

Harris, Patricia Roberts (1924–1985) American lawyer, educator, administrator and CIVIL RIGHTS activist. Harris achieved a number of historic firsts for African-American women. In 1965 she became the first black woman to serve as a U.S. ambassador when President Lyndon B. JOHNSON named her ambassador to Luxembourg. Later she became the first black woman delegate to the UNITED NATIONS (UN). In 1969 she became the first black woman to serve as dean of a law school, a position she held briefly at Howard University. She was the first black woman member of a presidential cabinet when President Jimmy CARTER made her secretary of housing and urban development in 1977. She was later Carter's secretary of health, education, and welfare.

Harris, Roy Ellsworth (1898–1979) American composer. Harris started learning music while working as a truck driver, and then attended the University of California (1919–29). His *Andante* (1926) brought him a Guggenheim Fellowship in Paris. His *When Johnny Comes Marching Home* (1935), a Civil War overture, gained wide attention. The completion of his *Third Symphony* in 1939 marked Harris as a leading American classicist. He served on the faculty of Colorado College from 1948 to 1967. His work includes six symphonies, music for school bands, choruses, string and piano quintets, and piano solos. A recipient of numerous awards, he also won the prestigious Coolidge Medal for chamber music, from the Library of Congress in 1942.

Harrison, Sir Rex (Reginald Carey Harrison) (1908–1990) British-born actor. Harrison's 60-year career included more than 40 films and numerous plays. Among the films were *Blithe Spirit* (1945), *Anna and the King of Siam* (1946), *The Ghost and Mrs. Muir* (1947), *Cleopatra* (1963) and *Dr. Dolittle* (1967). He specialized in portraying urbane, sophisticated and somewhat eccentric characters and was best known for his portrayal of the waspish linguist Henry Higgins in *My Fair Lady*. Appearing in both the stage and film versions of the play, he won an ACADEMY AWARD and a Tony Award for his performances as Professor Higgins.

Hart, Gary Warren (Gary Hartpence) (1936–) American politician. Born in Ottawa, Kan., Hart attended Bethany Nazarene College, Yale Divinity School and Yale Law School. He entered public life as an attorney for the Justice Department in 1964. In private practice from 1967 to 1974, Hart served as campaign director for George MCGOVERN in his unsuccessful bid for the presidency in 1972. He served as a Democratic senator from Colorado from 1975 to 1986. During his unsuccessful bid for the Democratic presidential nomination in 1988, the press discovered that Hart was openly having an extramarital affair with a young model. Hart's personal judgment became a campaign issue, and Hart was forced to withdraw from the race. He later reentered the race briefly. His political career effec-

tively ended, he returned to Colorado with heavy campaign debts. In 1998 Hart worked on the bipartisan Hart-Rudman Committee to investigate U.S. domestic security procedure against terrorist threats, which called for the creation of a homeland security department. The committee's report was largely implemented following the terrorist attacks of SEPTEMBER 11, 2001.

Hart, Herbert L(ionel Adolphus) (1907–1992) British philosopher. Hart was one of the major thinkers on the philosophy of law in the 20th century. For decades he taught at Oxford University as its professor of jurisprudence. He defined his major task as a philosopher as the proper analysis of legal concepts. One of his major ideas is that all legal concepts are defeasible, that is, capable of being transformed and superseded if certain conditions exist. For example, a particular contract may meet all the standard legal criteria but is voidable if it is induced by fraud. Hart also argued that commonsense notions of causation should bear a great relevance to the exercise of punishment in the criminal law. Major works by Hart include *Causation in the Law* (1959), *The Concept of Law* (1961) and *Law, Liberty and Morality* (1963).

Hart, Lorenz (1895–1943) American song lyricist and librettist, best known for his musical shows with Richard RODGERS. While a student at Columbia University, Hart was already writing shows; and when he met a fellow Columbian, erstwhile composer Richard Rodgers, they immediately began working together—beginning with *Poor Little Ritz Girl* (1920) and ending with a revival of *A Connecticut Yankee* (1943). In all, the team wrote 28 shows and four film scores, including *Evergreen* (1930), *Jumbo* (1935), *On Your Toes* (1936), *Babes in Arms* (1937), *The Boys from Syracuse* (1938) and *Pal Joey* (1940). They ignored the stereotypes and hokum of Broadway formulas, injecting a full-scale ballet, "Slaughter on 10th Avenue," choreographed by George BALANCHINE, into *On Your Toes*. Hart's lyrics to *Pal Joey* were ahead of their time, so full of sex and illicit love that critics like Brooks ATKINSON rhetorically asked at the time, "Can you draw sweet water from a foul well?" While Hart's unpredictable, cynical na-

ture lent an edginess to his finest songs, including “My Funny Valentine,” “The Lady Is a Tramp” and “Falling in Love with Love,” it may also have contributed to his chronic problems with alcohol. After a two-day drinking binge Hart died of complications from pneumonia in New York.

Hart, Moss (1904–1961) American playwright. Hart was a prolific writer for the theater who enjoyed steady popularity for over three decades. He remains best known for his comedy collaborations with fellow American playwright George S. KAUFMAN. These included *Once in a Lifetime* (1930), *Merrily We Roll Along* (1934), and two oft-performed classics—*You Can’t Take It with You* (1936), which won a Pulitzer Prize, and *The Man Who Came to Dinner* (1939). Hart then moved on to a solo career in which he wrote, among other plays, *Winged Victory* (1943), *Christopher Blake* (1946), *Light Up the Sky* (1948), and *The Climate of Eden* (1952). Hart also contributed to the text of numerous musicals, most notably *My Fair Lady* (1956) and *Camelot* (1960).

Hartack, William John “Bill” (1932–) Hartack was one of the most successful—and temperamental—jockeys in the history of American thoroughbred racing. Only the second jockey ever to win five Kentucky Derbys, Hartack was named the nation’s leading jockey three consecutive years (1955–57). He had both strong principles and a hot temper, which led him to resign from the Jockeys’ Guild over its treatment of another rider. The only rider of any prominence not to belong to the Guild, he was the first rider to post \$2 million in winnings and, soon thereafter, the first to win \$3 million. Although he never had a Triple Crown-winning mount, Hartack rode such notables as NORTHERN DANCER and Majestic Prince to victory in the Kentucky Derby and the Preakness. At the age of 40, he became the first jockey to win 4,000 races.

Hartal (Hind. “shop” “bolt”) Ceylonese (Sri Lankan) general strike organized by Marxists in 1953 in protest of rapid price rises, particularly of rice. Repressive measures were introduced, and there were clashes between gov-

ernment forces and strikers. Prime Minister Senanayake, of the United National Party, was forced to resign, and the opposition Sri Lankan Freedom Party won the 1956 election. (See also SRI LANKA.)

Hartdegen, Stephen J. (1907–1989) Franciscan scholar and renowned biblical scholar. From 1944 to 1970, Hartdegen served as editor in chief of a group of scholars who produced the *New American Bible*, a translation from the ancient Hebrew, Greek and Aramaic that supplanted the Douay Bible, the official bible used in Roman Catholic churches in the U.S.

Hartford, John (1937–2001) American bluegrass musician. Known for his skills as a singer, composer, performer and comedian, Hartford was not a child of the deep South, but was born in New York City. He developed his lifelong interest in bluegrass music and the riverboats near which it was performed as a result of growing up in St. Louis, Mo. By 1965 he had developed his own style and songs, modeled in part after those of Lester Flatt and Earl Scruggs. He went to Nashville, where he recorded his first album, *John Hartford Looks at Life*, in 1966. One of the individuals who heard Hartford’s first record was Johnny CASH, who was impressed by the modesty and talent of the young artist. A year later Hartford followed his debut record with *Earthwords & Music* (1967), which contained the single “Gentle on My Mind”; the song, which won three Grammy Awards, described a homeless man’s life and the pleasure brought to it by memories of an old lover, proved so popular that, by Hartford’s death, 300 different artists had performed and recorded versions of it. Following the success of *Earthwords*, in 1968 Hartford traveled to California, where he found work as a writer and performer on *The Smothers Brothers Comedy Hour* and *The Glen Campbell Goodtime Hour*. He later returned to Nashville, recording *Aero-Plain*, an album highly touted for its acoustic rather than studio sound. However, save his Grammy Award-winning solo album *Mark Twang* (1976), Hartford disappeared from national attention until he recorded “Down from the Mountain” for the 2000 movie *O Brother, Where Art Thou?* In 2001 Hart-

ford died of cancer at a hospital in Nashville.

Hartigan, Grace (1922–) American painter. A member of the second generation of ABSTRACT EXPRESSIONISM, she was introduced to such seminal members of the movement as Willem DE KOONING and Jackson POLLOCK in the late 1940s, and had her first one-woman show in New York City in 1951. Her early work was sensuously abstract, and she soon turned to a style that incorporates figurative imagery into an abstract context. Her large canvases are usually characterized by vivid colors, strong lines and bold brushstrokes.

Hartog, Jan de (1914–2002) Dutch-born British novelist and playwright. Hartog, who was born in Haarlem, Holland, and ran away to sea at the age of 10, led an adventurous life that was frequently reflected in his fictional works. His earliest writings were in Dutch. During WORLD WAR II, Hartog served in the Dutch underground RESISTANCE, was badly wounded, and ultimately escaped to Britain, where he learned the English language so well that he began to write in it. His play *The Fourposter* won an Antoinette Perry Award during its Broadway run. Hartog remains best known for his popular and well-plotted novels, most notably *The Lost Sea* (1951) and *The Distant Shore* (1952).

Hartung, Hans (1904–1989) German-French painter. Born in Dresden, Germany, Hartung settled in Paris in 1935, fought with the Foreign Legion and became a French citizen. Influenced at first by German EXPRESSIONISM and KANDINSKY, Hartung evolved a distinctive abstract style that made him a leading figure in the School of Paris. Allied with COLOR-FIELD PAINTING, his untitled mature paintings feature cloud-like clusters of extremely thin calligraphic lines that seem to hover over luminously colored grounds.

Hašek, Jaroslav (1883–1923) Czechoslovakian novelist, story writer and journalist. Early in his career Hašek was active as an anarchist and published widely in Czech political journals. During WORLD WAR I Hašek was a peripatetic soldier who served at various times in the Czech, Russian and

Austrian armies. After the war Hašek composed a four-volume picaresque novel, *The Good Soldier Schweik* (1920–23), that has been acclaimed as one of the great satires in world literature. Schweik, an infantry everyman, survives his war experiences—and the foolish, callous orders of his own officers—through simple peasant warmth, humor and guile. To many critics, Schweik is the archetypal portrait of the Czech people. A later collection of Hašek's work is *The Red Commissar* (1981).

Hasenclever, Walter (1890–1940) German playwright, novelist and poet. Hasenclever is best remembered as a figure in the Expressionist movement that dominated German theater in the years following World War I (see EXPRESSIONISM). His first major play, *The Son* (1916), focused on the difficult relationship between a father and son. Subsequent works included an adaptation of *Antigone* (1917), by the Greek tragedian Sophocles, and *Der Retter* (1919), an antiwar drama. Hasenclever then wrote comedies such as *A Man of Distinction* (1926) and *Marriages Are Made in Heaven* (1928). He committed suicide while imprisoned by the Nazis in France during WORLD WAR II.

Hassam, Childe (1859–1935) American painter and printmaker. One of the foremost American impressionists, Hassam was born in Boston, Mass., and studied (1886) at the Académie Julien in Paris, where he was influenced by French impressionist works. He returned to the U.S. in 1889, settling in New York City and joining (1898) “The Ten,” a group of American impressionists that included John Twachtman and Alden Weir. In 1913, Hassam exhibited in the ARMORY SHOW. His paintings include light-filled landscapes, people-filled cityscapes and lively interiors. Among his notable works are *Le Jour du Grand Prix* (1887, Museum of Fine Arts, Boston), *Isle of Shoals* and *Street Scene in Winter* (1901, both Metropolitan Museum of Art, N.Y.C.).

Hassan II (1929–1999) King of MOROCCO (1961–99). Born Moulay Hassan in Rabat to King Mohammed V of Morocco, Hassan was educated in Moroccan and French schools in Rabat and eventually qualified to practice

law during the French protectorate (1912–56). In 1957, a year after France granted Morocco full independence, Hassan was designated crown prince and was selected by his father to become commander in chief of the Moroccan army. In conjunction with his military responsibilities he received additional appointments as minister of defense, and vice premier in 1960, performing these duties until his father's death in February 1961. With the passing of Mohammed V, Hassan was crowned Hassan II.

During his reign Hassan attempted to reform the traditional economy of Morocco, inject some modern concepts into the lifestyle of the North African state and coordinate his domestic and foreign policies with those of the other independent countries of the region. However, the monarchical and conservative nature of his rule antagonized leftist activists in ALGERIA and LIBYA, two states identified with a radical brand of Arab nationalism that condemned monarchical rule and accepted aid from the Soviet Union. These groups were allegedly behind the two unsuccessful assassination attempts made on Hassan's life in 1961 and 1972. Hassan's unpopularity among Algerians increased in 1976 when he annexed part of WESTERN SAHARA, and then all of it in 1979. Hassan's actions thwarted Algerian efforts to ensure that the Popular Front for the Liberation of Saguia el Hamra and Rio de Oro, a leftist independence movement, came to power when Spain left the region in February 1976. In addition to opposition from Algeria, the annexations exposed Hassan, his military and his country to guerrilla attacks from Saharan separatists.

Other than the Western Sahara, the main focus of Hassan's foreign policy was the Israeli-Palestinian conflict in the Middle East. Because of his close ties with Western governments (especially the U.S. and France), Hassan proved willing to meet with Israeli leaders and diplomats on numerous occasions in an effort to promote an Arab-Israeli peace settlement. In 1999 Hassan II died of a heart attack and was succeeded by his son, Mohammed VI.

Hasselblad, Victor (1906–1978) Swedish inventor and industrialist. In the 1940s Hasselblad devised the high-

quality **Hasselblad camera**, which was used by professional photographers throughout the world. Hasselblad cameras were also used on all U.S. spaceflights.

Hatch Act of 1939 U.S. legislation, sponsored by Senator Carl Hatch of New Mexico, that prohibited most federal officeholders in the executive branch from using their position to influence presidential or congressional elections. In 1940 the law was amended to include state and local employees whose salaries were derived even partially from federal monies. The amendment also limited the annual expenditures of political parties and the amount of individual campaign contributions.

Hatem, Dr. George (Shaffick Hatem) (1910–1988) American physician who devoted his career to public health efforts in China. Hatem arrived in China in 1933 and remained to treat venereal disease in Shanghai. After the communists took control in 1949, he helped organize the country's public health effort and was widely credited with eliminating syphilis and gonorrhea from China. The Chinese knew him as Ma Haide, meaning “virtue from overseas.”

Hauptmann, Gerhart (1862–1946) German playwright, novelist and poet. Hauptmann, who won the NOBEL PRIZE in literature in 1912, is one of the major figures in the history of German theater. He first made his reputation for stark, naturalistic treatments of such issues as poverty, the effects of heredity and social pressures on individual freedom in plays such as *Before Dawn* (1889), *The Coming of Peace* (1890), *Lonely People* (1891) and *The Weavers* (1892), a study of an unsuccessful rebellion by the poor in the Silesian region of Germany in 1844. In his later work Hauptmann turned increasingly to fantastical Symbolist plots that utilized the supernatural. Noteworthy among these plays are *The Assumption of Hannele* (1893), *The Beaver Coat* (1893), *The Red Rooster* (1901) and *And Father Danced* (1906). Hauptmann was a fierce opponent of the Nazis, as evidenced by his four-part drama *Der Atriden* (1941).

Hausner, Gideon (1915–1990) Israeli politician. He served as ISRAEL's attorney general from 1960 to 1963, and led the prosecution of NAZI war criminal Adolf EICHMANN in 1961 and 1962. He later served in the Israeli Knesset (parliament) and as chairman of the Yad Vashem museum, which commemorated victims of the Nazi HOLOCAUST.

Haut-Zaire Province (formerly Orientale) of northeastern Democratic Republic of the CONGO (formerly Zaire); a postindependence stronghold of Patrice LUMUMBA, who, with Antoine Gizenga, attempted to set up a government at Kisangani (Stanleyville). The central government at KINSHASA (Léopoldville) regained control in 1962, only to face further unrest in 1964, 1966 and 1967.

Havel, Václav (1936–) Czechoslovak playwright, poet and essayist; president of CZECHOSLOVAKIA (1989–92) and of the CZECH REPUBLIC (1993–2003). Havel has emerged as one of the leading intellectual figures of the late 20th century and a major literary, political and moral force in eastern Europe. He was born into a well-to-do family in Prague. Because of his “bourgeois” background, he was denied the right to attend university in communist Czechoslovakia. Instead, he served a stint in the military, then found work as a stagehand in Prague. Havel's interest in the theater quickly burgeoned; in 1963, at age 27, his first play was performed (*The Garden Party*, tr. 1969). He was subsequently enrolled at the Academy of Dramatic Arts in Prague, graduating in 1967. During the 1960s Havel satirized the communist bureaucracy and the politics of conformity in Czechoslovakia in a series of plays. His work of this time borrows from the THEATER OF THE ABSURD. Havel was an active supporter of the PRAGUE SPRING reform movement of 1968. After the movement was crushed by the SOVIET INVASION OF CZECHOSLOVAKIA that summer, his work was banned by the hard-line regime that replaced the reform government of Alexander DUBČEK. However, he continued to write; his manuscripts were circulated privately and also produced in western Europe. Havel was a founding member of the human rights organization CHARACTER 77; because of his activities on behalf of this group, and because of his

stature as a public figure who openly challenged the communist authorities, he was imprisoned from 1979 to 1982. He was rearrested during an anticommunist protest in January 1989 and released on parole that May. In November he formed a new opposition group, Civic Forum, and held talks on political reform and power-sharing with the Czechoslovak premier during a period of mass protest against communist rule. With the resignation of communist president Gustáv HUSÁK (December 10), the formation of an interim coalition cabinet and the promise of free elections, Havel announced his candidacy for the presidency.

On December 29 the Federal Assembly (parliament) unanimously elected Havel as Czechoslovakia's first noncommunist president in more than 40 years. During the first year of his presidency he was preoccupied with the difficult task of guiding Czechoslovakia's return to democracy. When the Czech and Slovak parliaments voted for the dissolution of Czechoslovakia in 1992, Havel resigned in protest. In March 1993 he was elected president of the Czech Republic and was reelected in 1998. Havel chose not to run in 2003 and retired from politics. Among Havel's plays are *The Memorandum* (1966; tr. 1967), *The Increased Difficulty of Concentration* (1968; tr. 1972), *Private View* (1975; tr. 1978) and *Protest* (1978; tr. 1980). *Disturbing the Peace: A Conversation with Karel Hvizdala* (published underground in Prague in 1986; tr. 1990) presents his thoughts on life, literature, politics and the Czechoslovak identity; *Letter to Olgo* (1988) contains his correspondence to his wife while he was imprisoned from 1979 to 1982.

Havemann, Robert (1910–1982) East German chemist and dissident. Havemann joined the Communist Party in 1932. During WORLD WAR II he took part in the RESISTANCE movement and was imprisoned by the Nazis. After the war he lived in East Germany but became an outspoken critic of TOTALITARIANISM. He was purged from the East German Communist Party in 1964, and was held under house arrest from 1979 until his death.

Hawke, Robert James Lee (1929–) Prime minister of AUSTRALIA (1983–

91). Born in Bordertown, South Australia, Hawke was educated at the University of Western Australia, from which he received bachelor's degrees in law and economics. He won a Rhodes scholarship to Oxford University in 1953, taking a bachelor of letters degree there in 1955. Active since 1958 in the Australian Council of Trade Unions as research officer and advocate, he was its president from 1970 to 1980. Concurrently, from 1972 to 1980, he served on the governing body of the International Labor Organization. From 1973 to 1978 Hawke was president of the Australian LABOUR PARTY, which he had joined at age 17. In 1980 he was elected to parliament as representative of the federal electorate of Wills, later becoming the party's spokesman for industrial relations, employment and youth affairs. Early in 1983 Hawke was unanimously elected leader of the opposition. As Labour candidate for the office of prime minister, he led his party to victory and was sworn in on March 11, 1983. Hawke was reelected prime minister in 1984, 1987 and again in 1990 for a record fourth consecutive term. Hawke's tenure as prime minister ended in 1991. The following year he became an adjunct professor at the Australian National University.

Hawking, Stephen William (1942–) British astrophysicist, widely considered one of the most brilliant scientific minds since Albert EINSTEIN. A graduate of Oxford University, Hawking obtained his Ph.D. from Cambridge, where in 1977 he was appointed to the chair of gravitational physics. He subsequently held the seat of Lucasian Professor of Mathematics at Cambridge, a chair once held by Isaac Newton. Hawking has worked mainly in the field of general relativity and on the theory of BLACK HOLES. He is a leading authority on the BIG BANG THEORY. Hawking has been at the forefront of the search for a unified theory to account for, and reconcile, the general theory of relativity (which is concerned with the extraordinarily vast) and quantum theory (concerned with the extraordinarily tiny); such a theory, Hawking believes, would give “a complete description of the universe we live in.” Hawking's book on the nature of time and the universe for the nonspecialist, A

Brief History of Time (1988), was a phenomenal bestseller.

Since the early 1960s, Hawking has suffered from motor neuron disease, known as Lou Gehrig's disease, which has confined him to a wheelchair. In 1985 he underwent a tracheostomy operation, which left him unable to speak. However, a speech synthesizer and specially designed personal computer have allowed him to communicate his brilliant and complex concepts to the rest of the world. Since *Brief History* Hawking has published several books designed to explain theoretical physics and astrophysics to the layman: *Black Holes and Baby Universes and Other Essays* (1993); *The Theory of Everything* (1996), which Hawking subsequently denounced for its allegedly unauthorized publication; and a sequel to *Brief History* called *The Universe in a Nutshell* (2001).

Hawkins, Coleman (1904–1969)

A native of St. Joseph, Mo., Hawkins is significant for his pioneering role in establishing the tenor saxophone as a bona fide and primal voice in jazz. In the 1920s, during the early phase of his career with Mamie Smith's Jazz Hounds and Fletcher HENDERSON's big band, and then in the 1930s as an international jazz star in both Europe and the U.S., Hawkins perfected a robust sound, strong rhythmic drive and technical command that made his solos among the most exciting in jazz. His 1939 recording of "Body and Soul" was not only Hawkins's biggest hit, but also a declaration (and affirmation) that the tenor saxophone has arrived—an equal to the trumpet as the jazz world's most important "front-line" solo instrument. Throughout his career, Hawkins, unlike a number of his peers, welcomed innovations such as those spawned by the bebop revolution of the 1940s; but, although adapting newer elements that he deemed compatible with his overall style, Hawkins's rhythmic buoyancy, full-blooded tone and swinging inventiveness never faltered. Historically, Hawkins's muscular style is often contrasted to that of Lester YOUNG, whose lighter tone and more melodic improvisations had a profound influence on such 1950s "cool school" stylists as tenor saxophonist Stan GETZ. In actuality, virtually all saxophonists (and horn

players) have been enriched by the contrasting yin and yang styles of Young and Hawkins, jazzdom's seminal pioneers of the tenor saxophone.

hawks Term coined in the 1960s to describe American politicians who wished to continue, intensify or escalate the VIETNAM WAR. The term came to be applied generally to politicians taking an aggressive stance on foreign policy issues.

Hawks, Howard Winchester (1896–1977) American motion picture producer, writer and director. Hawks grew up in California studying mechanical engineering, working in the PARAMOUNT prop department, racing cars and, during WORLD WAR I, flying planes in the Army Air Corps. He began directing films in the mid-1920s. In the next 45 years his best work depicted professional groups in dangerous occupations: flying aces and air mail pilots in *The Dawn Patrol* (1930) and *Ceiling Zero* (1938); wacky scientists and journalists in the "screwball comedies" *Bringing up Baby* (1938) and *His Girl Friday* (1940); cattle drovers and gun-slingers in the westerns *Red River* (1948) and *Rio Bravo* (1959); bombshells and weightlifters in the musical *Gentlemen Prefer Blondes* (1953); and racketeers and convicts in the gangster films *Scarface* (1932) and *The Criminal Code* (1931). The character groupings and dialogue in his pictures displayed an interlocking, machinelike precision. *His Girl Friday*, perhaps the fastest-talking movie of them all, snaps briskly along like a class sports car. *Only Angels Have Wings* (1930), by contrast, rolls by with the well-oiled, lordly deliberation of a Rolls Royce. Hawks was not interested in flashbacks, skewed camera angles or decorative cutting, preferring to be head-on, direct and functional. Famous for his insistence on autonomy—he refused to shoot while a producer was on the set—he wrote or supervised the writing of most of his films. Although Hawks received only one ACADEMY AWARD nomination during his career (for *Sergeant York* in 1941), in 1975 he received a special Award for lifetime achievement.

Hawley-Smoot Tariff Act Protectionist legislation enacted in 1930 that brought U.S. tariffs to the highest level

in history. Overall increases averaged approximately 5% but rates on agricultural raw materials increased from 30% to 50% in real terms. Sugar and textiles were given special protection. The act brought retaliation from other nations and led to a sharp decline in U.S. trade.

Haxell, Frank (1913–1988) British labor leader and the communist secretary general of one of Great Britain's most powerful labor unions, the Electrical Trades Union (ETU), forerunner of the Electrical, Electronic, Telecommunications and Plumbing Union (EETPU). Haxell headed the ETU from 1955 until his downfall in 1961, when he was removed from office after a High Court ruled that his election victory of 1959 had been rigged.

Hay, Gyula (1900–1975) Hungarian playwright. Hay scored his first major theatrical triumph with the play *Gott, Kaiser, Bauer* (1932), which was staged in Berlin by the renowned theatrical impresario Max REINHARDT. A politically controversial writer, Hay spent many years in exile from his native country. After his return, Hay was imprisoned in 1956 for his role in the 1956 HUNGARIAN UPRISING against Soviet authority. Other plays by Hay include *Tiszazug* (1945), *Das Pferd* (1964), a study of the Roman emperor Caligula, and *Gaspar Varros Recht* (1965), which featured an anticommunist theme.

Haya de la Torre, Víctor Raul (1894–1979) Peruvian statesman and major spokesman for democratic political movements in Latin America for half a century. In 1924 Haya de la Torre founded the American Popular Revolutionary Alliance (APRA). Although it was anti-capitalist and Marxist in outlook, it did not favor Soviet-style communism. APRA called for a program of land, tax and educational reforms for landless peasants, urban laborers, Indians and other disadvantaged groups. On three occasions the military prevented Haya de la Torre from taking the presidency of PERU. He spent much of his life in exile, hiding and imprisonment. Nonetheless, his writings on economics and political theory had great influence throughout Latin America.

Haydée, Marcia (Marcia Pereira de Silva) (1937–) Brazilian-born ballerina and ballet director. One of the great dramatic ballerinas of the 1960s and 1970s, Haydée danced at the Rio de Janeiro Teatro Municipal before joining Grand Ballet de Marquis de Cuevas in 1957. She became an internationally acclaimed prima ballerina after joining the Stuttgart Ballet (1961) where she created roles in John CRANKO's ballets, including Juliet in *Romeo and Juliet* (1962), Tatyana in *Onegin* (1965), and Kate in *Taming of the Shrew* (1969). She also has appeared with other companies, and created roles in Kenneth MACMILLAN's *Miss Julie* (1970) and Glen TETLEY's *Voluntaries* (1973), among others. In 1976 she was appointed artistic director of the Stuttgart Ballet and, in 1993, the Santiago Ballet. She retired from both in 1995.

Hayden, Robert E. (1913–1980) African-American poet. Hayden's work evoked Afro-American themes. He was the first black to hold the position of consultant in poetry to the Library of Congress (1978–80), and was also a member of the American Academy and Institute of Arts and Letters. He taught at the University of Michigan. His collections include *Words in Mourning Time* (1971) and *Angle of Ascent: New and Selected Poems* (1975).

Hayes, Helen (Helen Hayes Brown) (1900–1993) American actress. Born in Washington, D.C., Hayes made her stage debut there in 1905, first appeared in New York in 1908 and became a well-known child actress. She made her adult debut in *Dear Brutus* (1918). Her many notable performances have included roles in Kaufman and Connelly's *To the Ladies* (1922), SHAW's *Caesar and Cleopatra* (1925), ANDERSON's *Mary of Scotland* (1933) and the bravura title role in Laurence Houseman's *Victoria Regina* (1935–39). Hayes won an Academy Award in 1932 for *The Sin of Madelon Claudet*. She made her London debut in 1945, as Amanda in WILLIAMS' *The Glass Menagerie*. Other later roles included Norma Melody in O'Neill's *A Touch of the Poet* (1958) and Mrs. Antrobus in WILDER's *The Skin of Our Teeth* (1961). Among her films are *Arrowsmith* (1931), *A Farewell to Arms* (1933),

Anastasia (1956) and *Airport* (1969). A beloved and widely respected figure, she was long known as the First Lady of the American Theater.

Hay-Herrán Treaty See COLOMBIA.

Haynes, Elwood (1857–1925) American inventor. Haynes was one of the pioneers in the development of the automobile. In 1893–94 he designed and constructed a horseless carriage, the oldest American automobile in existence and now on exhibit at the Smithsonian Institution. He was the first to use aluminum in automobile engines and was the inventor and builder of a rotary engine in 1903. Haynes discovered tungsten chrome steel and developed an alloy of cobalt and chromium for making cutting tools. The Haynes Stellite Company manufactured tools from 1912 to 1920 and developed **stainless steel**, which was patented in 1919.

Hays Code Code of self-censorship adopted by the HOLLYWOOD film industry in self-defense against threatened government censorship. The Hays Code derived its name from Will H. Hays, a former chairman of the Republican National Committee who in 1922 was appointed by Hollywood studio owners to head a newly formed film standards organization, the Motion Picture Producers and Distributors of America, Inc. In the 1920s, Hays wielded little actual power over the content of films, but in the 1930s, as the public outcry over sexually suggestive movies (such as those starring Jean HARLOW and Mae WEST) and violent gangster films increased, the Hays Code took on real teeth: The new enforcement policy was that films that violated the Code would not be distributed by the powerful studios or exhibited by the theaters they owned. The Code strictly limited the sexual content of films, tacitly forbade any religious controversy and demanded that, if evil was depicted powerfully, it should be punished to an equivalent extent—thus encouraging a predictable happy ending in which good emerged triumphant. In the 1950s, directors such as Otto PREMINGER helped to weaken the artistic shackles imposed by the Code. In the 1960s, the Code was replaced by the current rating system, which focuses on exclud-

ing younger audience members from scenes of explicit sex and violence.

Hayter, Stanley William (1901–1988) British-born abstract artist and printmaker; his Paris studio, Atelier 17, was widely regarded as the most influential print workshop of the 20th century. Many major artists, including Pablo PICASSO, Marc CHAGALL and Jackson POLLOCK worked under Hayter either in Paris or in New York City, where Atelier 17 was based in the 1940s.

Hayward, Max (1924–1979) British scholar and translator. Hayward specialized in contemporary Soviet literature, translating works by Boris PASTERNAK, Alexander SOLZHENITSYN and other authors who were banned or banished in their own country. His colleagues at Oxford and elsewhere regarded him as “the custodian of Russian literature in the West.”

Hayworth, Rita (Margarita Carmen Casino) (1918–1987) Mexican-American dancer and actress. Rita Hayworth was one of the most popular HOLLYWOOD film stars of the 1940s. Her career reached its peak in the years during and after World War II, when she shared pinup queen status with Betty GRABLE. She starred in a series of films that highlighted her lush beauty. Her screen persona was perhaps best realized in *Gilda* (1946), in which she played the title role, a seductress in black satin. Her second husband, Orson WELLES, directed her in another of her well-known films, *The Lady from Shanghai* (1948). In 1949 she left Hollywood to marry the third of her five husbands, Prince Aly Khan. She came back to Hollywood three years later, but never recaptured the glory of the war years. She suffered from Alzheimer's disease in the last years of her life.

Hazam, Louis (1911–1983) American television documentary writer and producer. Working for the National Broadcasting Company (NBC) from 1945 until 1966, Hazam was a pioneer in the field of broadcasting. He was credited with producing the first live telecast of a medical operation, the first telecast of the birth of a baby, and the first television report from the inside of a mental hospital. In 1956, his March

of Medicine series became the first television program to receive an Albert Lasker Medical Journalism Award. He also received acclaim for his cultural productions, *Vincent Van Gogh: A Self-Portrait*, *Shakespeare: Soul of an Age* and *Michelangelo: The Last Giant*.

Hazaras An ethnic group inhabiting the central mountain ranges of AFGHANISTAN. Speaking an antiquated version of Farsi, the language of Iran, and hailing originally from northwestern China, the Hazaras largely earn their living from sheep husbandry and farming. Their confessional identity with the Shi'ite sect of Islam makes the Hazaras an oddity among the other groups in Afghanistan, the vast majority of which belong to the Sunni branch. During the late 1970s, Shi'ite practices resulted in severe repression of the Hazaras by the TALIBAN government, which espoused a fundamentalist brand of Sunni Islam and implemented Sunni Islamic law throughout the portion of Afghanistan it ruled.

Head, Edith (1907–1981) HOLLYWOOD costume designer. The most famous fashion designer in the history of the movies, Head was chief designer for PARAMOUNT PICTURES (1938–67) and UNIVERSAL (1967–81). During her long career she designed clothes for more than 1,000 movies and was nominated for 34 ACADEMY AWARDS. She won the award a record eight times, for *The Heiress* (1949), *All About Eve* (1950), *Samson and Delilah* (1950), *A Place in the Sun* (1951), *Roman Holiday* (1953), *Sabrina* (1954), *The Facts of Life* (1960) and *The Sting* (1973). She created screen wardrobes for such stars as Sophia Loren, Marlene DIETRICH, Elizabeth TAYLOR and Ingrid BERGMAN. Her clothes were also worn by the male and female leads in most of Alfred HITCHCOCK's Hollywood films.

Healey, Denis Winston (1917–) British politician. Born in London of Irish parents, Healey rose to become a senior figure in the LABOUR PARTY from the 1960s through the 1980s. He was a major in the commandos during WORLD WAR II, and entered Parliament in 1952. He was defense minister (1964–70) in the cabinet of Harold WILSON and chancellor of the exchequer (1974–79) under Wilson and his

successor, James CALLAGHAN, who defeated Healey for the party leadership in 1976. In 1980 Healey again sought the leadership but was defeated by Michael FOOT. He served as deputy leader from 1980 to 1983. Although himself a leading moderate in the party, he was critical of the GANG OF FOUR moderates who left the party in 1981 to form the SOCIAL DEMOCRATIC PARTY (1981), and did not join them. Healey did not challenge Neil KINNOCK for the Labour Party leadership in 1983 but, as shadow foreign secretary, remained a respected and influential voice in the House of Commons. In 1992 Healey became a life peer in the House of Lords.

Heaney, Seamus (1939–) Irish poet, critic, essayist and teacher. Heaney is widely considered to be the most important Irish poet since W. B. YEATS and one of the finest English-language poets of his generation. Born into a Catholic farming family in County Derry, NORTHERN IRELAND, Heaney was educated at Queen's University, Belfast, where his early work attracted favorable notice. His first book, *Death of a Naturalist* (1966), established him as an important poet; this reputation was confirmed by *Door into the Dark* (1969) and *Wintering Out* (1972). Full of closely observed details of Northern Irish country life, these books display the characteristic style and themes of his early period. With *North* (1975), Heaney addressed the ongoing civil strife in Northern Ireland, although in an oblique fashion. Around this time, partly to escape the turmoil and tensions of Belfast, Heaney moved to County Wicklow in Ireland, where he wrote most of the poems for his next book, *Field Work* (1979). In a country where the written word traditionally has had significant political implications, Heaney has been consistent in his refusal to reduce complex social and political issues to simple slogans or to endorse partisan causes. Heaney's more recent work, notably in *Station Island* (1985) and *The Haw Lantern* (1987), has often been allegorical and has drawn on the *Divine Comedy* of Dante and on the work of such contemporary central European writers as Czesław MIŁOSZ. Since the 1970s, Heaney has divided his time between Ireland and the U.S., where he teaches at Harvard University. In 1995 he was awarded the NOBEL PRIZE in literature.

Hearst, Patricia Campbell (1954–) American heiress and kidnap victim. A scion of newspaper tycoon William Randolph HEARST, Patricia Hearst was kidnapped from her Berkeley, Calif., apartment on February 4, 1974, by the Symbionese Liberation Army (SLA), a radical, anti-capitalist terrorist organization. As ransom, the SLA demanded that her father, Randolph Hearst, provide \$400 million worth of food for California's poor; he eventually initiated a \$2 million program. Two months after her abduction, Hearst announced that she had joined the SLA and changed her name to Tania. She was later seen on film taking part in an armed bank robbery. In another incident, she fired on a store to free SLA members Emily and Bill Harris, and the three fled to San Francisco. After sending a final taped message on June 7, 1974, Hearst went underground. On September 18, 1975, the FBI captured Hearst and the Harries in San Francisco. Celebrated attorney F. Lee BAILEY represented her at her trial, contending that she had been brainwashed and was not responsible for her actions as Tania. On March 20, 1976, she was found guilty and sentenced to a total of 35 years in prison. After several attempts to appeal her conviction, Hearst's lawyers petitioned for and received presidential clemency from President Jimmy CARTER in 1979. Hearst later described how she had been kept in a closet, tortured and given propaganda by the SLA, and general public opinion is that she was indeed brainwashed. Hearst detailed her ordeal in the book *Every Secret Thing* (1982), and a film of her story was made in 1988. She married her former bodyguard, Bernard Shaw, in 1979. In 2001 Hearst was pardoned by President Bill CLINTON in the final hours of his presidency.

Hearst, William Randolph (1863–1951) American editor and publisher. During the first half of the 20th century Hearst controlled one of the great communications empires in history. His first step in creating what would become the nation's largest newspaper chain was rebuilding the *San Francisco Examiner* (1887). His purchase of the *New York Journal* (1895) resulted in the famous newspaper war with Joseph Pulitzer's *New York World* during which the term *yellow journalism* was coined

to describe their exaggerated journalistic style. Among the many magazines he owned were *Good Housekeeping*, *Cosmopolitan* and *Harper's Bazaar*. He bought or started papers in Chicago, Boston, Los Angeles and elsewhere. His empire also included Hearst News Service, King Features, radio stations and film companies. Hearst wielded power in politics, serving as New York representative to Congress (1903–07); he ensured Franklin D. ROOSEVELT's 1932 presidential nomination and used his papers for political propaganda.

Heartfield, John (Helmut Herzfeld) (1891–1968) German artist and graphic designer known for his early and successful use of photomontage. Heartfield was a Berlin artist who, in the 1920s, became an active member of the DADA movement. His special contribution was the development of a montage technique in which photographs and other image materials are cut up and reassembled using a technique similar to collage. In the late 1920s and early 1930s, he used this technique to create propagandistic works attacking HITLER and the rise of NAZISM. By 1933 he was forced to leave Germany, staying briefly in Czechoslovakia before relocating in England where he changed his name (translating his German name into English) and continued his graphic work. Heartfield's role in 20th century design is based on his development and exploitation of the montage technique, which has become a widely used part of the vocabulary of modern graphic design.

Heart of Atlanta Motel, Inc. v. United States (1964) Unanimous U.S. Supreme Court decision that banned racial discrimination in the provision of public accommodations in restaurants and hotels. Although discrimination at facilities operated by state and local governments was outlawed in the early 1950s, private discrimination was still common in the early 1960s. The CIVIL RIGHTS ACT OF 1964 contained a controversial provision outlawing racial discrimination in public accommodations that were privately owned. The law was challenged as an unwarranted governmental regulation of private business. A unanimous Supreme Court upheld the law,

reasoning that hotels and restaurants serve interstate travelers, and Congress also has the power to regulate local activities that may have a harmful effect on interstate commerce.

Heart of Darkness Novella of 1902 by Joseph CONRAD. Notable both for its literary subtlety and for its examination of the contemporary human condition, *Heart of Darkness* is considered one of the supreme masterpieces of English-language fiction of the 20th century. Narrator "Marlow" (who both is and is not Conrad) recounts his journey up the Congo to find the trader Kurtz, who had disappeared earlier. The journey is not only geographic but also metaphorical, from certainty into doubt and back into self-knowledge. Conrad examines the ambiguous relation between civilization and barbarism and addresses themes of greed and colonialism. Kurtz's dying words—"The horror! the horror!"—may indicate Conrad's apprehension about the 20th century.

Heath, Edward (1916–2005) British statesman, prime minister of the UNITED KINGDOM (1970–74). Born at Broadstairs, Heath was educated at Chatham House School and Balliol College, Oxford. He served as an artillery officer from 1940 to 1946 and left the territorials in 1951 as a lieutenant colonel. A member of the CONSERVATIVE PARTY, he was elected to Parliament in 1950 and has sat in the House of Commons continuously since then. From 1955 to 1959 he held the influential post of Conservative chief whip. He entered the cabinet of Alec DOUGLAS-HOME as minister for trade and industry (1963–64). In 1965, he defeated Reginald MAUDLING and Enoch POWELL for the Conservative Party leadership. He became prime minister with the Conservatives' general election victory in June 1970.

A lifelong champion of European cooperation and unity, Heath led Britain into the EUROPEAN ECONOMIC COMMUNITY in 1973—the capstone of his political career. However, his government was less successful in domestic affairs and was marred by labor strife. His Industrial Relations Act (1971), designed to democratize Britain's trades unions and regulate strikes, was denounced by the unions.

A coal miners' strike in late 1971–early 1972 led to power blackouts throughout Britain. Heath's attempt to impose limits on wage increases during an inflationary period led to further industrial action by the militant miners, and in January 1974 Heath put the nation on a three-day work week because of the resulting power crisis (see THREE-DAY WEEK). Seeking a mandate for his policies, Heath called a general election for February 1974 but failed to win a majority and resigned. The following year he was deposed as head of the party by Margaret THATCHER, who accused him of ineffectual leadership. After the Conservatives returned to power in 1979 he was a frequent critic of Thatcher's hard-line right-wing policies and allied himself with the so-called WETS within the party. Heath, a bachelor, was also known as a fine amateur conductor and yachtsman. In 2001 he retired from the House of Commons.

Hébert, Anne (1916–2000) Canadian poet and novelist. The daughter of a literary critic, Hébert was given a strict Catholic upbringing. Her struggles with the constraints of her faith are evident in her poetry, which includes *Le Songes en équilibre* ("Dreams in Equilibrium," 1942), *Le Tombeau des rois* (The Tombs of the Kings, 1953) and *In The Shadow of the Wind* (1984). Hébert has also written novels, which include *Kamouraski* (1970) and *Les Enfants du sabbat* (1975; Children of the Black Sabbath 1977); and plays, some of which are collected in *Le Temps sauvage*, *La Mercière assassinée*, *Les Invités au procès: Théâtre* (1967).

Hecht, Ben (1893–1964) U.S. writer. He worked for CHICAGO newspapers and was a correspondent in Germany and the Soviet Union between 1918 and 1920. He produced his most famous play, *The Front Page* (1928), with Charles MacArthur. In 1923 he founded and edited for two years the *Chicago Literary Times*. In addition to plays, he wrote novels and short stories, and produced and directed many motion pictures. Other well-known works include *Twentieth Century* (1933) and *A Child of the Century* (1954). *The Scoundrel* screenplay won Hecht and MacArthur an ACADEMY AWARD in 1935. Hecht was also active in his support of Jewish refugees.

Hecht, Harold (1970–1985) American film producer. As a pioneering independent HOLLYWOOD producer, Hecht was considered largely responsible for breaking the grip of the studio system. In the late 1940s, he and actor Burt LANCASTER formed a partnership that over 15 years was responsible for a number of hits, including the ACADEMY AWARD–winning *Marty*. After production costs forced the dissolution of their partnership, Hecht went on producing on his own. In 1965, he made *Cat Ballou*, for which Lee Marvin won an Academy Award as best actor.

Heckel, Erich (1883–1970) German painter. Born in Dobeln, Saxony, Heckel studied architecture in Dresden (1904). In 1905 he, Ernst Ludwig KIRCHNER and Karl SCHMIDT-ROTTLUFF cofounded DIE BRÜCKE. His earlier works are characterized by the slashing brushstrokes, angular forms, violent color and emotional drama of German EXPRESSIONISM. Heckel was a medical corpsman in World War I. He lived in Berlin from 1918 to 1934, when he was denounced by the Nazis and fled to Switzerland. He returned to Germany after the war and taught at the Karlsruhe Academy from 1949 to 1955. His later works often turned from figures, many of them nudes, to landscapes and became more gentle and meditative.

Hedayat, Sadeq (1903–1951) Iranian author and playwright. Hedayat's works, which include the novel *Buyf-i kur* (1936, translated as *The Blind Owl*, 1957) and the short story collections, *Zanda bi gur* (Buried Alive, 1930), *Se qatra kuhn* (Three Drops of Blood, 1932), and *Saage velgard* (Stray Dog, 1942), reflect his fundamentally hopeless and pessimistic worldview. A significant figure in Iranian literature, Hedayat has also translated some of the works of KAFKA, among others, into Persian. Hedayat committed suicide in Paris in 1951.

Heidegger, Martin (1889–1976) German philosopher. Heidegger was one of the most influential of 20th-century philosophers. He concerned himself primarily with metaphysical and ontological questions on the nature of being and of ultimate reality and helped to establish EXISTENTIALISM as a

major philosophical movement. Raised as a Catholic, Heidegger was educated at the University of Freiberg where he studied under the phenomenologist Edmund HUSSERL. After a period of intense thought and retirement in the Black Forest, Heidegger produced his major work, *Being and Time* (1927), which posited categories of authentic and inauthentic being and argued for angst as a major motivating force in human development. Heidegger was a member of the Nazi Party from 1933 to 1945 and was named rector of the University of Freiberg by the HITLER government. His refusal to repudiate his Nazi political beliefs after the war caused much controversy. Other works by Heidegger include *An Introduction to Metaphysics* (1953) and *What Is Philosophy?* (1956).

Heiden, Eric Arthur (1958–) American speed skater. In 1977 Heiden became the first American ever to win the men's all-around speed skating championship. His performances at the 1980 Lake Placid Olympics focused American attention on the little-watched sport of speed skating. He won gold medals in the 500-, 100-, 1500-, 5000- and 10,000-meter events, while setting a new record in each event. He retired after the 1980 Olympics to pursue a career in bicycle racing. Heiden's records held until they were broken in the 2002 Salt Lake City winter games.

Heidenstam, Verner von (1859–1940) Swedish poet and novelist. An important Swedish literary figure in his time, Heidenstam's reputation has not lasted, possibly, in part, due to the conservative and aristocratic bent of his later work. Heidenstam's lyric poetry includes, *Vallfart och vandringsar* (Pilgrimage: The wander years, 1888) and *Nya Dikter* (New poems, 1915). His fiction includes *Endymion* (1889); the stories, *Korolinerna* (The Charles men, 1897–98), and the two-volume novel *Folkunga Tradet* (The tree of the Folkungs, 1905–07). Heidenstam was awarded the NOBEL PRIZE in literature in 1916.

Heifetz, Jascha (1901–1987) Lithuanian-born violinist. Heifetz was one of the most renowned violinists of the 20th century. He achieved great success as a child prodigy in Europe be-

Violinist Jascha Heifetz (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

fore immigrating to the U.S. in 1917 with his parents at the onset of the RUSSIAN REVOLUTION. His October 1917 debut at New York City's CARNEGIE HALL became the stuff of musical legend. For the next 50 years he performed regularly in the U.S. and around the world. His playing was notable for tonal brilliance, technical perfection and fidelity to the written score. He recorded a memorable series of chamber music performances with pianist Artur RUBINSTEIN and cellist Gregor Piatigorsky. Heifetz retired from the concert stage in 1972, but continued to teach master classes at the University of Southern California until shortly before his death.

Heijermans, Herman (1864–1924) Dutch playwright and critic. Heijermans first achieved success with the play *Ahasverus* (1893), presented under the pseudonym Ivan Jelakowitch as he thought the Dutch favored foreign authors. Heijermans is best known for his later social dramas, which include *Ghetto* (1899), *Op van Zegen* (1900), *The Good Hope* (1903), and *Eva Bonheur* (1917, translated as *The Devil to Pay*, 1925). Heijermans was also a theatrical critic, and wrote novels under the pseudonym Koos Habema, and short sketches using the name Samuel Falkland.

Hein, Piet (1905–1996) Danish designer, mathematician and poet-humorist well known for his small books

of poems and cartoon sketches called "Grooks." Hein's design reputation is largely based on his remarkable invention of a new geometric shape, the super-ellipse, a form sharing some of the characteristics of the true ellipse, the oval, and the rectangle—it might be called a somewhat squared ellipse. It has been used as the plan layout for a traffic "circle" in central Stockholm, as the form for the top of a table manufactured by Bruno Mathsson, and, in three-dimensional form, to make the super-egg—a solid that has the peculiar property of being able to stand on end as readily as on its side.

Heinlein, Robert A(nson) (1907–1988) One of the world's most popular, prolific and influential writers of science fiction, Heinlein was voted an unprecedented four Hugo awards for best science fiction novel of the year. The awards, voted on by science fiction fans who are voting members of each year's annual world convention, were given for *Double Star* (1956), *Starship Troopers* (1959), *Stranger in a Strange Land* (1961) and *The Moon Is a Harsh Mistress* (1966). The best selling *Stranger in a Strange Land* was regarded as a sort of "hippie bible" in the 1960s. In 1975 Heinlein was the first recipient of the Grand Master Award of the Science Fiction Writers of America, given for lifetime achievement. A graduate of the U.S. Naval Academy, Heinlein's navy career was cut short by illness and followed by graduate studies in physics and mathematics, then a raft of different jobs and in 1939 his first story sale, to *Astounding* magazine. From then until his last novel, *To Sail Beyond the Sunset* (1987), Heinlein's matter-of-fact integration of technological innovation with a pugnaciously American frontier attitude that challenged all social ideas, in fast-moving but sometimes rambling plots, the whole carried forward by competent, no-nonsense men and women, yanked science fiction forever out of its pulp fiction straitjacket.

Heisenberg, Werner Karl (1901–1976) German physicist. Heisenberg was educated at the universities of Munich (where his father was a professor of Greek) and Göttingen, where in 1923 he obtained his doctorate. After spending the period from 1924 to 1926 in

Copenhagen working with Niels BOHR, he returned to Germany to take up the professorship of theoretical physics at the University of Leipzig. In 1941 Heisenberg moved to Berlin where he was appointed director of the Kaiser Wilhelm Institute for Physics and where he played the key role in the German atomic bomb program. After the war he helped establish the Max Planck Institute for Physics at Göttingen, serving as director and moving with it to Munich in 1955, where he was also appointed professor of physics.

In 1925 Heisenberg formulated a version of quantum theory that became known as matrix mechanics. It was for this work (later shown to be formally equivalent to the wave mechanics of Erwin SCHRODINGER) that Heisenberg was awarded the 1932 NOBEL PRIZE for physics. In 1927 he went on to explore a deeper level of physical understanding when he formulated his fundamental "uncertainty principle": It is impossible to determine exactly both the position and momentum of such particles as the electron. He demonstrated this by simple "thought experiments." Like Max BORN, Heisenberg had found it necessary to introduce a basic indeterminacy into physics.

After his achievements in quantum theory in the 1920s Heisenberg turned his attention to the theory of elementary particles. In 1932, shortly after the discovery of the neutron by James CHADWICK, Heisenberg proposed that the nucleus consists of both neutrons and protons. He went further, arguing that they were, in fact, two states of the same basic entity—the "nucleon." As the strong nuclear force does not distinguish between them, he proposed that they were "isotopes" with nearly the same mass, distinguished by a property he called "isotopic spin." He later attempted the ambitious task of constructing a unified field theory of elementary particles. Although he published a monograph on the topic in 1966 it generated little support.

Unlike many other German scientists, Heisenberg remained in Germany throughout the war and the whole Nazi era. He was not a Nazi but thought it essential to remain in Germany to preserve traditional scientific values for the next generation. In 1935, when he wished to move to the

University of Munich to succeed Arnold Sommerfeld, he was violently attacked by the Nazi Party press for refusing to compromise his support for the physics of Albert EINSTEIN. Eventually, the post went to the little-known W. Muller. With the outbreak of war in 1939 Heisenberg was soon called to Berlin to direct a program to construct an atom bomb. Heisenberg's exact role in the program is a matter of controversy. He has claimed that he never had any real intention of making such a bomb, let alone giving it to HITLER. As long as he played a key role he was, he later claimed, in a position to sabotage the program if it ever looked like being a success. He conveyed such thoughts to Niels Bohr in 1941 in Copenhagen, hinting that Allied physicists should pursue a similar policy. Bohr later reported that if such comments had been made to him they were too cryptic for him to grasp; he was rather under the impression that Heisenberg was trying to find out the progress made by the Allies. At any rate, when talking to German audiences Heisenberg was more inclined to explain the failure of the German atomic bomb program by the comparative lack of resources in the wartime economy after 1942. But by 1957 he was declaring publicly that he would not "in any way . . . take part in the production, the tests, or the application of atomic weapons."

Hejaz (Al-Hijaz) Province along the Red Sea coast of western Saudi Arabia. Thousands of Islamic pilgrims visit its holy cities of Mecca and Medina annually. A railroad built from Damascus to Medina by the Ottoman Turks has been in disuse since the Turks lost their Arabian empire after WORLD WAR I. Husein ibn Ali, who gained independence for the province in 1916, was defeated by Ibn Saud of Nejd in 1924. The two provinces became a dual kingdom in 1926, and the single kingdom of SAUDI ARABIA in 1932.

Hejiang (Ho-Chiang) Formerly, a province of Chinese MANCHURIA created in 1945 by the Kuomintang (Guomintang) Nationalists. Hejiang became a part of Songjiang (Song-Chiang) province after the communist victory in the CHINESE CIVIL WAR OF 1945–49;

five years later it was incorporated into Heilongkiang province.

Helgoland (Heligoland) Resort island off the North Sea coast of Germany. Near the mouth of the Elbe River and the western end of the Kiel Canal (the great imperial naval base was at Kiel, on the Baltic Sea end of the canal) Helgoland was the almost inevitable site for several naval battles fought between Great Britain and Germany during WORLD WAR I. An early German defeat, on August 28, 1914, did much to discourage the Germans from leaving local waters to use their new, expensive fleet. The postwar TREATY OF VERSAILLES saw the dismantling of the island's fortifications, which were rebuilt under Adolf HITLER. Used by Germany as a naval base during WORLD WAR II, Helgoland was not surrendered to the Allies until May 5, 1945. In the British occupation zone, the island's fortifications were dynamited on April 18, 1947.

Heller, Joseph (1923–1999) American author. Heller achieved success with his iconoclastic first novel, *Catch-22* (1961, filmed 1970). Based on Heller's experiences as a bombardier in WORLD WAR II, the book depicts the absurdity of war and the system that promotes it. Its hero, Yossarian, who wants to be declared insane to get out of the war, is told that if he is sane enough to want to leave, he cannot be discharged for insanity, and that is the catch of the title. Heller maintained his reputation satirizing modern life in such novels as *Something Happened* (1974), *Good as Gold* (1979) and *Picture This* (1988). In 1984 he was stricken with a rare paralyzing disease, Guillan-Barré syndrome, that he chronicled in *No Laughing Matter* (1986). Heller also wrote plays and screenplays. Heller published *Closing Time* in 1994 a sequel to *Catch-22*, and his last novel, *Portrait of an Artist as an Old Man*, in 2000.

Heller, Robert (1899–1973) American industrial designer whose work of the 1930s carried streamlining and MODERNISM (as related to ART DECO) to an extreme. Heller's best-known work in a streamlined electric fan designed in 1938 for the A. C. Gilbert Company. Although his 1933 building for radio

station WCAU in Philadelphia has been destroyed, its interiors were a showcase of Art Deco interior design, while the street facade of blue cement with zig-zag trim in stainless steel symbolized the glamour of radio. However, conservative architects of that time and place found it offensive.

Heller, Walter W(olfgang) (1915–1987) American economist. Heller served as chairman of the Council of Economic Advisers under two presidents, John F. KENNEDY and Lyndon B. JOHNSON. He held the post from the start of the Kennedy administration until the end of 1964, but continued to serve as consultant to Johnson until 1969. Heller was regarded as the architect of the historic tax cut of 1964 that led to an unprecedented boom in the U.S. economy. After he left office, he helped develop the theory of **revenue sharing**, under which state and local governments were deemed more efficient spenders of federal tax revenues than the federal government itself. Heller was a professor emeritus at the University of Minnesota.

Hellman, Lillian Florence (1905–1984) American playwright and memoirist. The New Orleans-born playwright studied at New York University, Columbia and Tufts. She worked as a manuscript reader and reviewer before her first Broadway success, *The Children Hour* (1934). She began a tempestuous, lifelong relationship with mystery writer Dashiell HAMMETT in the early 1930s. Because she visited Russia in 1936 and 1945 and was active on the political left, she was called before the HOUSE UN-AMERICAN ACTIVITIES COMMITTEE in 1952 but refused to testify against her friends and colleagues. Her best-known plays include *The Little Foxes* (1939), *The Watch on the Rhine* (1941), *Another Part of the Forest* (1946) and *Toys in the Attic* (1960). Her memoirs appeared as *An Unfinished Woman* (1969), *Pentimento* (1973) and *Scoundrel Time* (1976). In her final years she engaged in a notorious public feud with novelist Mary MCCARTHY, who, in an interview on national television, had charged that Hellman was a liar.

Helms-Burton Act Formally known as the Cuban Liberty and Democratic Solidarity Act, the Helms-Burton Act of

1996 is a piece of congressional legislation sponsored by Republican senator Jesse Helms of North Carolina and Democratic congressman Dan Burton of Indiana that formalized the nature of U.S. sanctions against the regime of Fidel CASTRO in CUBA. It authorized the U.S. government to refuse to issue visas to individuals, shareholders and families of individuals who work for companies that have purchased or invested in property nationalized by Castro. The most controversial element of the act is Title III, which asserts that U.S. companies and individuals whose property was nationalized by the Cuban government after 1960 may sue, in a U.S. court, any foreign company that has purchased such property. This precipitated a wave of protests from nations such as Britain, Canada, France and Mexico—all countries with companies interested in investing in sectors of the Cuban economy that were nationalized. These four nations vowed to use the WORLD TRADE ORGANIZATION and the NORTH AMERICAN FREE TRADE AGREEMENT to compel the U.S. to revoke the law. However, since the act's passage, the U.S. has delayed implementation of Title III.

Helpmann, Sir Robert (1909–1986) Australian dancer, choreographer, actor and director. As the principal male dancer for the Vic-Wells Ballet (1930–50), Helpmann danced classical, dramatic and comic roles with equal command and formed a celebrated partnership with Margot FONTEYN that contributed to the development of the ROYAL BALLET Company. He has choreographed works for several companies, and is noted for the unified dramatic effect of his creations, which include *Comus* (1942), *Hamlet* (1944), and *Elektra* (1963). An accomplished actor as well as dancer, he played leading roles in several Shakespearean plays, receiving special acclaim for his Hamlet. In addition, he appeared in the films *The Red Shoes* (1948) and *The Tales of Hoffman* (1951). He became coartistic director of the Australian Ballet in 1965, and collaborated with Rudolph NUREYEV in filming the company's *Don Quixote* in 1973 in which he played the title role. Knighted by Queen ELIZABETH II in 1968, he retired in 1976 after producing the Australian Ballet's most popular work, *The Merry Widow*.

Helsinki Accords The Helsinki Accords, a result of the Conference on Security and Cooperation in Europe, were signed by 33 European nations plus the U.S. and Canada, on August 1, 1975. Although the agreement does not have the legal status of a treaty, it served as a keystone of DETENTE. The accords implicitly recognized Soviet dominance of Eastern Europe while guaranteeing human rights in those nations, facilitating trade within Europe and easing political and military tensions.

Hemingway, Ernest (1898–1961) Hemingway was one of the most famous American writers of the 20th century. Born in Oak Park, Ill., after high school he became a reporter in Kansas City. During WORLD WAR I he joined a volunteer ambulance unit in Italy, where he was wounded. Remaining in Europe after the war, he became part of the literary scene in Paris, associating with such American expatriate writers as Gertrude STEIN and F. Scott FITZGERALD. His first and perhaps most famous novel, *The Sun Also Rises* (1926), is a moving tribute to the “lost generation” of expatriate Americans whose beliefs were shattered by the war. Hemingway’s World War I experiences inspired *A Farewell to Arms* (1929), considered a classic novel of the war despite its flaws. His writings reflected his many interests, including bullfighting and African big game hunting. After observing the SPANISH CIVIL WAR firsthand he wrote *For Whom the Bell Tolls* (1940). His WORLD WAR II reporting took him on many of the major Allied campaigns of WORLD WAR II IN EUROPE; his novel *Across the River and Into the Trees* (1950) is set during the war. Hemingway won a PULITZER PRIZE in 1953 for his novella *The Old Man and the Sea*, and the following year was awarded the NOBEL PRIZE in literature. Hemingway developed a type of laconic male character who typically faced violence and destruction with courage—what Hemingway called “grace under pressure.” His deceptively simple prose style and his amoral outlook make Hemingway one of the leading figures of literary MODERNISM. He committed suicide by shooting himself at his home in Ketchum, Idaho.

Hempel, Carl G(ustav) (1905–1997) German philosopher. Hempel was trained in physics and mathematics and earned his doctoral degree at the University of Berlin in 1934. He was a member of the Berlin group of philosophers who contributed to the theories of the Vienna Circle—led by Rudolf CARNAP—that led to the formulation of the school of LOGICAL POSITIVISM. One of Hempel’s key theories was that of a “translatability criterion” for truth: A statement was meaningful only if it was translatable into empiricist language. Hempel fled GERMANY and the Nazi regime in 1934 and ultimately came to the United States, where he taught at Princeton and Yale. Major works by Hempel include *Fundamentals of Concept Formation in Empirical Science* (1952) and *Aspects of Scientific Explanation* (1965).

Hench, Philip Showalter (1896–1965) American physician. Hench earned his M.D. from the University of Pittsburgh in 1920 and began work at the Mayo Clinic three years later. Over the course of his long career there, he researched a treatment for rheumatoid arthritis and was the first to use cortisone, developed by Edward KENDALL, to treat the condition. He shared the 1950 NOBEL PRIZE in physiology or medicine with Kendall and Tadeus Reichstein.

Henderson, Arthur (1863–1935) British statesman. Born in Glasgow, Scotland, at 12 Henderson was apprenticed to an iron molder. Becoming an iron worker, he was soon a leader in the labor union movement. In 1900 he was a cofounder of the Labour Representation Committee, the forerunner of the British LABOUR PARTY, and three years later he was elected to Parliament. He headed the 1906 conference that formally established the Labour Party, acting as the party’s parliamentary leader from 1908 to 1911 and 1914 to 1917, and as its secretary from 1911 to 1934. He held various posts in ASQUITH’S WORLD WAR I coalition government and was home secretary (1924) and foreign secretary (1929–31) in the Labour government of Ramsay MACDONALD. Losing his parliamentary seat in 1931, he became president of the World Disarmament Conference the following year. For the rest of his life Henderson devoted himself to his party

and to the cause of world peace, and in 1934 he was awarded the NOBEL PEACE PRIZE. His books include *The Aims of Labour* (1917), *Consolidating World Peace* (1931) and *Labour’s Way to Peace* (1935).

Henderson, Edwin (1883–1977) American educator. Henderson was the first black instructor of physical education in the U.S. (1904). He was also active in the NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE (NAACP). During the 1950s he served two terms as president of the NAACP’s Virginia chapter.

Henderson, Fletcher (1897–1952) American bandleader-arranger. like Duke ELLINGTON, Henderson was raised in an upper-middle-class family. He received early training in European classical music from his mother, a piano teacher who shunned blues, gospel and jazz forms as “unworthy.” After graduation from Atlanta University as a chemistry major, Henderson moved to New York; unable to secure employment in his field because of racial prejudice, he became a song-plugger and music producer, putting together various acts for tour and club work. Soon, he became a bandleader. And by 1925, though he initially lacked any real jazz experience, his band featured such rising jazz talents as trumpeter Louis ARMSTRONG and saxophonist Lester YOUNG. Arrangements for Henderson’s band, regarded as the prototype of the big swing bands that would dominate the 1930s, were made by Don Redman. When Redman departed, Henderson was forced to write much of his band’s material. Fortunately, Henderson’s arranging gifts proved immense. Indeed, he was pivotal in establishing the basic format of the big band arrangement, featuring interplay between the reed and brass sections (sometimes in call-and-response dialogues, other times with one section playing background riffs behind the other), with improvised solos interspersed between the written passages. Though Henderson’s lack of business acumen precluded his own large-scale success, his arrangements of tunes such as “King Porter Stomp” and “Down South Camp Meeting” helped catapult Benny GOODMAN to fame in the

mid-1930s and, with Goodman, the entire big band swing phenomenon.

Henderson, W(esley) Loy (1892–1986) U.S. diplomat. Henderson was one of the first career officers in the U.S. foreign service, ambassador to India and Iran. He was prominent in Middle East diplomacy in the decade following World War II, and was credited with having played a major role in preventing the communist takeover of GREECE in the late 1940s.

Hendrix, Jimi (James Marshall Hendrix) (1942–1970) American ROCK guitarist and vocalist. Hendrix is widely regarded as one of the greatest guitarists in the history of rock and roll. Hendrix learned his musical craft in the early 1960s, when he performed as a backup musician for stars including B. B. KING, Little Richard and Ike and Tina Turner. It was Keith Richards, guitarist for the ROLLING STONES, who brought Hendrix to the attention of music industry people capable of making him a star. Hendrix signed a recording contract in 1967 and had immediate success with his classic single “Hey Joe” (1967). That same year he performed with his band the Jimi Hendrix Experience at the Monterey Pop Festival—a performance preserved in the film *Monterey Pop* (1969)—and riveted the audience by burning his guitar for his finale. Hendrix died from a drug overdose in 1970. His noteworthy albums include *Are You Experienced* (1967), *Axis-Bold as Love* (1967), *Electric Ladyland* (1968) and *Rainbow Bridge* (1971).

Heng, Samrin (1934–) Heng Samrin is president of CAMBODIA and leader of the country's official Communist Party. With little formal education, in the 1950s he became involved in illicit cattle trading across the Vietnamese border—the beginning of his contact with Vietnamese communists. He took up the revolutionary cause in 1959, then fled to the jungle in 1967 as Khmer communists escaped repression in Phnom Penh. Based in the eastern zone, near the Vietnamese border, in 1978 he joined the pro-Hanoi faction of the party. Samrin fled to Vietnam to escape POL POT's purges of cadres in the eastern zone. Shortly thereafter he returned to Cambodia with the Viet-

namese invading force and became president of liberated Cambodia in January 1979. Heng resigned the presidency upon the return in 1991 of the Cambodian king Norodom SIHANOUK.

Henie, Sonja (1912–1969) Norwegian-born skater and film star. Born to one of Norway's wealthiest families, Henie won an unequalled three OLYMPIC figure skating gold medals, in 1928, 1932 and 1936. Her popularity became so great during her skating career that police had to provide crowd control wherever she appeared. After winning 1,473 skating trophies, she signed with 20th CENTURY-FOX. Her first film *One in a Million* (1936) was an enormous success, and a string of films whose plots revolved around skating followed. She retired from films in the 1940s. At her death she was worth an estimated \$47 million.

Henri, Robert (1865–1929) American painter. Born in Cincinnati, Henri attended the Pennsylvania Academy of the Fine Arts, and continued his art studies in Paris from 1888 to 1891. Returning to teach in Philadelphia, he moved to New York City in 1900 and established his own school there nine years later. An advocate of a vivid and very American realism and an opponent of overly refined and mannered academic styles, Henri was a member of the group known as the EIGHT and its articulate spokesman. His bold, broad brushstroke was particularly effective in outstanding portraits, which include *Eva Green* (Wichita Art Museum), *Spanish Gypsy* (Metropolitan Museum, N.Y.C.) and *Young Woman in Black* (Art Institute of Chicago). At his school until 1912 and later at the Art Students League, Henri was an inspired and extremely influential teacher who numbered among his students George BELLOWS, William GLACKENS, Edward HOPPER, Rockwell Kent, George Luks and John SLOAN.

Henson, James “Jim” (1939–1990) Creator of the “Muppets” and a successful television and motion picture producer-director. Henson was born in Greenville, Miss., and after college landed his first television show, *Sam and Friends*, on WRC-TV in Washington, D.C. He referred to his hand-operated characters as “muppets”—a

combination of the words “puppet” and “marionette.” Such familiar characters as Kermit the Frog, Fozzie Bear, Miss Piggy and Cookie Monster were developed for the Children's Television Workshop program, *Sesame Street* (1969) and its spin-off *The Muppet Show*, which began in London in 1976. Henson then starred his Muppets in three motion pictures, *The Muppet Movie* (1979), *The Great Muppet Caper* (1981) and *The Muppets Take Manhattan* (1984). Meanwhile, his company, Henson Associates, Inc., began a successful licensing campaign, a Saturday morning children's show, *The Muppet Babies* (1984) and two “serious” movie fantasies, *The Dark Crystal* (1982) and *The Labyrinth* (1985). He sold the rights to the Muppets to Walt Disney Enterprises for a reported \$150 million in 1989. Henson's style adroitly blended gentle, positive humor for children with a satiric edge finely honed for the adults. Henson died suddenly of pneumonia in 1990.

Henze, Hans Werner (1926–) German composer. Born in Gutersloh, he studied piano, percussion and composition, and was a student of Wolfgang Fortner and Rene Leibowitz. A British prisoner of war in World War II, he moved to Italy in 1953. Influenced by STRAVINSKY, HINDEMITH and BARTOK, he began writing twelve-tone music with his first violin concerto of 1947. Since the 1960s, Henze has modified that system into a more personal but no less dissonant style. He is probably best known for his operas, which include *King Stag* (1955), *Elegy for Young Lovers* (1961), *The Bassarids* (1965) and *La Cubana* (1973). In recent years Henze has composed a variety of musical works, including operas, such as *L'Upupa oder der Triumph der Sohnesliebe* (2003); solo concertos, such as *Scorribanda Sinfonica* (2001); and symphonies, such as his Symphony No. 10 (2002).

Hepburn, Katharine (1907–2003) Celebrated American stage and motion picture actress. Hepburn won four ACADEMY AWARDS, including for *Morning Glory* (1932), *Guess Who's Coming to Dinner* (1967) and *On Golden Pond* (1981). The Bryn Mawr-educated daughter of a distinguished New England family had the uncanny knack of

Legendary actress Katharine Hepburn (PHOTOFEST)

appearing in movies that paralleled her own life and temperament. *A Woman Rebels* (1936), the story of a 19th-century feminist leader, could also have been a portrayal of Hepburn's suffragist mother. The events in *Stage Door* (1937) resembled her own attempts to break into Broadway. (*Holiday* [1938] allowed her to take on a role that she had understudied on the stage a decade earlier.) The men's clothes worn by her title characters in *Christopher Strong* (1933) and *Sylvia Scarlett* (1935) suggested her own fashion predilections. Her liberal political views surfaced in the politician's wife she portrayed in Frank CAPRA's *State of the Union* (1947). Her personal and professional relationship with Spencer TRACY began with *Woman of the Year* (1942) and ended only with his death during the shooting of *Guess Who's Coming to Dinner?* (1967).

Hepworth, Cecil (1874–1953) Pioneering British motion picture director, producer and inventor at the turn of the 20th century. If first honors must go to Robert W. Paul as the Father of the British Film, Hepworth, lagging behind by only a few years, assumed the forefront of the British film industry for the first 15 years of the new century. The son of a noted lantern-slide lecturer, Hepworth designed and sold projector lamps. In 1898 he set up a company at Walton-on-Thames to process and make short films. Five years later at his own studio he began making short news films and trick films in the manner of MELIÉS and Paul.

His production in 1905 of the six-minute "Rescued by Rover" (directed by Lewin Fitzhamon) was a spectacular success and, like the American *The Great Train Robbery* (1903), helped establish the narrative film as the most important form of cinema entertainment. "I have never in my life before or since witnessed such intense enthusiasm as these short, crude films evoked in audiences who saw films for the first time," he recalled in his autobiography, *Came the Dawn* (1951). In 1910 he patented an early system for the synchronization of image and phonographic sound, the Vivaphone. However, after 1914 his career went into decline; new developments in the industry overtook him as his own films, including *Annie Laurie* (1916) and *Boundary House* (1918), lapsed into routine formulas. In 1924 Hepworth declared bankruptcy and after 1927 he made no more feature pictures. His last years were spent directing short advertising films and trailers.

Hepworth, Dame Jocelyn Barbara (1903–1975) English sculptor. She studied at the Royal College of Art, London and absorbed Romanesque and Renaissance styles as well as stone-cutting techniques in a 1924 study trip to Italy. Her work, carved directly in stone or wood, and later also cast in bronze, is simplified, abstract and organic. Often hollowed out and pierced, her sculpture has been compared to BRANCUSI, Henry MOORE and Jean ARP. After 1937, Hepworth often included color in her work and, after 1938, she also included string or wire into her compositions, giving the effect of abstract musical instruments. She is noted for several monumental public pieces, as in her work in the Royal Festival Hall, London, and she is particularly well represented in the Tate Gallery collection, London. Along with Moore and her husband Ben NICOLSON, she is considered one of the most important figures in British art (and in modern sculpture) in the 20th century.

Herbert, Frank (1910–1986) American science-fiction author. Herbert's epic novel *Dune* (1965) became an international bestseller and cult favorite. The lavish and expensive 1984 film version of the novel, although panned by U.S. critics, found success in Europe

and Japan. *Dune* was the first book in what began as a trilogy and grew to six novels. After his death two novels were published posthumously, *Man of Two Worlds* (with his son Brian Herbert) in 1986, and *The Ascension Factor* (with Bell Ransom) in 1988.

Herbert, Victor (1859–1924) Irish-American composer, conductor and cellist. Born in Dublin, he studied at the Stuttgart Conservatory. He came to the U.S. in 1886 as a cellist for the Metropolitan Opera, N.Y.C. Herbert conducted various military bands and orchestras and was the conductor of the Pittsburgh Symphony Orchestra from 1898 to 1904, after which he devoted most of his time to composing. Famous for his light-hearted, melodious operettas, he is best known for *Babes in Toyland* (1903), *The Red Mill* (1906), *Naughty Marietta* (1910) and *Sweethearts* (1913) and for such songs as "Ah! Sweet Mystery of Life" and "Gypsy Love Song." He also wrote the grand operas *Natoma* (1911) and *Madeleine* (1914), music for the ZIEGFELD FOLLIES, orchestral pieces and a cello concerto.

Herbert, Zbigniew (1924–1998) Polish poet, essayist and playwright. Herbert was one of the finest postwar Polish poets. His verse is noteworthy for its taut, austere style that deals movingly with themes of war, loss, love and the diminished meanings of faith and myth in a desacralized world. Herbert was born in Lvov, Poland, and

Composer Victor Herbert (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

fought against the NAZIS in the underground RESISTANCE during WORLD WAR II, during which time he also began to write poetry. After the war, Herbert studied economics, law and philology at the universities of Krakow and Torun. In the 1950s he traveled in western Europe, and he was Poet in Residence at the Free University of West Berlin in the late 1960s. His major volumes of verse include *The Chord of Light* (1956), *Hermes, Dog and Star* (1957) and *Study of the Object* (1961). *The Barbarian in the Garden* (1963) is a collection of travel essays. A volume of *Selected Poems*, including translations of Herbert's verse by NOBEL PRIZE laureate Czesław MIŁOSZ, was published in English in 1968.

Hérelle, Félix d' (1873–1949) French-Canadian bacteriologist. D'Hérelle, the son of a Canadian father and Dutch mother, went to school in Paris and later studied medicine at the University of Montreal. He worked as a bacteriologist in Guatemala and Mexico from 1901 until 1909, when he returned to Europe to take up a position at the Pasteur Institute in Paris. D'Hérelle moved to the University of Leiden in 1921 but after only a short stay resigned to become director of the Egyptian Bacteriological Service (1923). In 1926 d'Hérelle was appointed to the chair of bacteriology at Yale, a position he held until his retirement in 1933. He is best known for his discovery of the **bacteriophage**—a type of virus that destroys bacteria. This work began in 1910. A similar discovery of what d'Hérelle termed a "bacteriolytic agent" was announced independently by Frederick Twort in 1915. D'Hérelle published his own account first in 1917, followed by his monograph *The Bacteriophage, Its Role in Immunity* (1921). He spent the rest of his career attempting to develop bacteriophages as therapeutic agents. He tried to cure cholera in India in 1927 and bubonic plague in Egypt in 1926 by administering the appropriate phage to patients.

The importance of the bacteriophage as a research tool in molecular biology cannot be disputed. The so-called phage group, centered on Max DELBRÜCK, made many of the early advances in this discipline in the 1940s.

Herman, Woody (Woodrow Charles Herman) (1913–1987) American musician. A JAZZ clarinetist and big band leader, Herman's career spanned five decades. He led a series of ensembles, generally called his "Thundering Herd," in a wide range of styles that reflected the continually changing character of popular music. Alumni of various "Herds" included such popular musicians as Stan GETZ, Milt Jackson and Terry Gibbs.

Herriot, Edouard (1872–1957) French statesman. A moderate leftist, Herriot was an important figure in the political life of the Third and Fourth Republics and the leader of the Radical Socialist party of FRANCE. Elected mayor of Lyon in 1905, he held the office until 1941 and from 1945 until his death. Becoming a member of the senate in 1912 and of the chamber of deputies in 1919, he was a strong voice in opposing militarism and clericalism and promoting civil liberties and republicanism. Premier in 1924–25, he was responsible for withdrawing French forces from the Ruhr valley region and for recognizing the USSR. His unpopular stand in favor of paying war debts to the U.S. was the prime reason for the defeat of this government and for the failure of his next two terms as premier in 1926 and 1932. President of the Chamber of Deputies (1936–40), he opposed the VICHY government and was arrested in 1942. Deported to Germany in 1944, he was liberated the following year. Herriot served as president of the National Assembly from 1947 to 1954. Also a noted man of letters, Herriot was the author of literary studies and a biography of Beethoven.

Herrmann, Bernard (1911–1975) American composer. Herrmann, who was educated at the Juilliard School of Music in New York, established himself as one of most important composers of HOLLYWOOD film scores. He showed a special talent for eerie and ominous scores that effectively blended with the visual imagery of suspense master Alfred HITCHCOCK. Herrmann's auspicious debut as a film composer was the score for *CITIZEN KANE* (1941), the masterpiece of director Orson WELLES. Hitchcock films for which Herrmann composed music include *The Man Who*

Knew Too Much (1956), *Vertigo* (1958), *North By Northwest* (1959) and *Psycho* (1960), the chilling score for which Herrmann remains best known. His last work was the score for *Taxi Driver* (1976) directed by Martin SCORSESE.

Hersey, John Richard (1914–1993) American journalist and novelist. Hersey was born in China, and spoke the language fluently. He began his career as an assistant to Sinclair LEWIS and later began writing for *TIME* and *LIFE* magazines, serving as a war correspondent for them during WORLD WAR II. Hersey is best known for his journalistic novels about various countries during the war. These include *Man on Bataan* (1942), *A Bell for Adano* (1944, filmed 1945), which won a PULITZER PRIZE in 1946; *Hiroshima* (1946), which first appeared in *The New Yorker*; and *The Wall* (1950), a study of Poland under the Nazis. Later works include *Aspects of the Presidency* (1980), *The Call* (1985) and *Blues* (1987).

Hershey, Franklin Quick (1907–1997) American automobile designer best known for his work on the original (1955) Ford THUNDERBIRD, although a major portion of his career was spent with GENERAL MOTORS. Hershey studied at Occidental College in California before going to work for the California custom automobile design firm of Walter M. Murphy in 1927, where he remained (except for a brief period in 1928 at General Motors in Detroit) until the firm closed in 1931. He was briefly with Hudson before joining GM in 1932 to take charge of styling for Pontiac and later for Buick and overseas GM divisions. After World War II he returned to GM to work on Cadillac design and in the firm's experimental design studio. In 1953 he was placed in charge of styling at FORD. In 1956 he left automotive design to work for KAISER Aluminum and then, until his retirement in 1978, for Wright Autotronics in California. Hershey's work spanned a wide range of automotive design concepts, extending from the peerless custom body of the early 1930s through GM models of the 1930s and early 1940s to the elegant and greatly admired 1955 Thunderbird, a sports car of simple form. Surprisingly, he also directed the design of other Ford cars,

such as the 1957 Fairlane 500, which typified the trend toward oversized fenders and heavy CHROMIUM trim.

Hertz, Gustav (1887–1975) German physicist. The nephew of 19th-century physicist Heinrich Hertz, Gustav Hertz was born in Hamburg, Germany. He attended the universities of Berlin and Munich and afterward taught in Berlin and Halle. In 1925 Hertz shared the NOBEL PRIZE in physics with his colleague James Franck, for “discovering the laws governing the impact of an electron on an atom.” Beginning in 1928, he worked as an instructor at the Technical University in Berlin. From 1935, when he was forced by the Nazis to leave his teaching position, until the end of WORLD WAR II, he worked as an industrial physicist for Siemens. In the decade following the war, Hertz helped to develop the Soviet atomic bomb. From 1955 until his retirement in 1961, he was a professor at the Physics Institute in Leipzig.

Herut (Hebrew for “Freedom Party”) Extreme right-wing political group in ISRAEL, founded by Menachem BEGIN and a successor to the **Revisionist Party**. It was later a part of Gahal.

Herzl, Theodor (1860–1904) Founder of modern ZIONISM. A Hungarian Jew, Herzl studied law at the University of

Theodor Herzl, founder of modern Zionism (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

Vienna, receiving a doctorate in 1884. He became a journalist and was sent (1891) to Paris by the Viennese newspaper *Neue Freie Presse* and covered the Dreyfus Affair. His earlier experiences with anti-Jewish feeling coupled with the appalling ANTI-SEMITISM that he witnessed during the infamous trial turned Herzl against the idea of Jewish assimilation and convinced him that it was necessary for JEWS to have a nation of their own. He expressed this idea in the landmark work *The Jewish State* (1896), in which he suggested establishing this nation in the original Jewish homeland of PALESTINE. The following year Herzl convened the first World Zionist Congress in Basel, Switzerland, and he served as its president until his death. He worked tirelessly to promote Zionism and to secure both the necessary funding to realize his dream and the positive world opinion that would ease the way to a Jewish state. A year after the creation of ISRAEL, Herzl's body was moved from Vienna to Jerusalem.

Herzog, Chaim (1918–1997) President of ISRAEL (1983–93). Herzog was born in Belfast, Ireland. He studied at the Universities of Dublin, London and Cambridge and at Hebron's yeshiva. He moved to PALESTINE in 1935, served as a British major during World War II and then on the Allied General Staff in Germany. He headed the Jewish Agency's security section (1947–48) and served as director of military intelligence (1948–50, 1959–62) and, from June 1967, as first military governor of the West Bank. He was Israel's ambassador to the United Nations from 1975 to 1978, became a Labor Party member of the Knesset in 1981 and was made president in 1983. A lawyer by training, he is the author of *Israel's Finest Hour*, *Days of Awe*, *War of Atonement* and *Who Stands Accused*. He was awarded a KBE in 1970. Although Herzog has kept aloof from internal politics since becoming head of state in 1983, the series of presidential pardons he has granted to settlers and to members of the security service implicated in the killing of Palestinians has put him firmly on the right in Israel's political spectrum.

Herzog, Werner (1942–) German film director. Herzog is one of the

most unique film directors of modern times. All of his films have an intensely visionary quality, and many critics have noted resemblances between his thematic concerns and those of the German Romantic writers of the 19th century. Herzog's first major film project, which was self-funded, was the satiric *Even Dwarfs Started Small* (1969). He achieved international fame for *Aguirre, the Wrath of God* (1975), which starred Klaus Kinski and dealt with greed and obsession in the age of the Spanish conquistadores. Subsequent films by Herzog include *Nosferatu the Vampire* (1979), *Woyzeck* (1979) and *Fitzcarraldo* (1982). During the 1990s Herzog worked on two documentaries: *Night of the Filmmakers* (1995), which examined German motion picture directors such as himself, Leni RIEFENSTAL and Wim Wenders; and *My Best Fiend* (1999), which chronicled his partnership with Klaus Kinski in the 1970s.

Hesburgh, Theodore M. (1917–) American educator. Hesburgh, who was ordained as a Roman Catholic priest in 1943, earned his doctorate from Catholic University in 1945. He was named president of Notre Dame University in 1952 and successfully transformed that institution from a strictly Catholic school to a secular university with a high academic standing. Hesburgh also entered the sphere of national politics through his appointment in 1957 by President Dwight EISENHOWER to the U.S. Commission on Civil Rights. Hesburgh remained on the Commission for fifteen years, served as its chairman from 1969 to 1972, and was instrumental in fostering the passage of major CIVIL RIGHTS legislation in the 1960s. Hesburgh was subsequently named by President Jimmy CARTER to the Overseas Development Council. In 1981 he was appointed by President Ronald REAGAN to the Select Commission on Immigration and Refugee Relief. Hesburgh continued to publish after his retirement, penning the autobiographical *Travels with Ted and Ned* (1992) and *The Challenge and Promise of a Catholic University* (1994).

Hess, Dame Myra (1890–1965) English pianist. Born in London, Hess studied at the Royal Academy of

Music, London. She became a major soloist with her brilliant debut in London in 1907, playing Beethoven under the baton of Sir Thomas BEECHAM. Concertizing throughout Europe, the U.S. and Canada, she was known for her sensitive interpretations of the classical repertoire, particularly the works of Bach, Mozart and Beethoven. During WORLD WAR II she organized the famous luncheon concerts at the National Gallery, London, playing in many of them herself. For these performances, some occurring while bombs fell on London, Hess was made a Dame of the British Empire in 1941.

Hess, (Walter Richard) Rudolf (1894–1987) German Nazi official. An early member of the Nazi Party, Hess was Adolf HITLER's first great admirer, and in 1920 he became Hitler's political secretary and closest associate. He participated in the Munich BEER HALL PUTSCH (1923). During their subsequent term in prison, Hitler dictated his political tract *MEIN KAMPF* to Hess. In 1934 Hess was named deputy party leader, and was officially second only to GÖRING behind Hitler in the hierarchy of the Third Reich. However, Hess was a naive man of limited intelligence and ability, essentially a dreamer rather than a doer. His influence waned with the rise of HIMMLER, GOEBBELS, and other more practical-minded Nazis. In 1941, on his own initiative, Hess made a solo flight to Scotland in a bizarre bid to end WORLD WAR II. He hoped that British leaders would negotiate with him and that this bold move would restore his flagging reputation in Germany. Instead, Hitler was infuriated by what he viewed as Hess's treason, while the British government refused to take Hess seriously. Hess was immediately imprisoned, and remained in British custody throughout the war. He was tried and convicted during the NUREMBERG WAR CRIMES TRIALS and sentenced to life imprisonment in SPANDAU PRISON in West Berlin. The last survivor of the 19 German officials convicted by the tribunal, by 1966 he was Spandau's only occupant, remaining there (at the insistence of the Soviet government) until his death, despite various appeals for his release. In the 1970s he became an object of international attention when a British doctor claimed that the

prisoner in Spandau was not Hess but a double. This charge was never proved.

Hesse, Eva (1936–1970) Born in Hamburg, Germany, in 1936, Hesse fled from the Nazis with her family to New York City. When she was 10 years old her mother committed suicide. After studying at Pratt Institute in Brooklyn and Cooper Union in Manhattan, she received a scholarship to the School of Art and Architecture at Yale University in 1957, where she studied painting with Josef Albers. She graduated in 1959 and became a textile designer in New York City. Throughout the 1960s she had several solo shows of her art in New York and Germany, which included three-dimensional objects such as a costume made of chicken wire and soft jersey as well as drawings and latex and fiberglass sculpture. In 1969 she was diagnosed with a brain tumor and died the following year.

Hesse, Hermann (1877–1962) German-Swiss novelist, poet and essayist. Winner of the 1946 NOBEL PRIZE in literature, Hesse is known for his psychological probing of the dichotomy between spirit and flesh, art and life, emotion and intellect, independence and involvement, in his major works. His first successful novel, *Peter Camerzind*, was published in 1904. After World War I, Hesse produced his greatest works, which reflected his personal crises, his political views and his philosophical interests, especially in Confucianism and Buddhism. Important works include the novels *Siddhartha* (1922), *Der Steppenwolf* (1927) and *Das Glasperlenspiel* (1943); the poetry collection *Gesammelte Gedichte* (1952); and the volume of essays titled *Blick ins Chaos* (1920).

Hewitt, Don (1922–) American journalist and producer of television news programs. Born in New York City, Hewitt began his career in journalism in 1942 as a copyboy for the *New York Herald-Tribune*. During WORLD WAR II, he was a war correspondent for the *Herald-Tribune*. When the war ended in 1945, Hewitt found work as a nighttime editor at the Memphis, Tenn., bureau of the Associated Press, followed by a brief tenure (1946–47) as editor of the *Pellham Sun*

and the night telephoto editor for Acme News Pictures (1937–48). Hewitt began his career in television news with Columbia Broadcasting Systems (CBS) in 1948, working as an associate director (and later producer-director) for the weeknight news program *Douglas Edwards with the News*. In 1968 Hewitt created *60 Minutes*, an hour-long news program for CBS. Unlike other news programs, Hewitt patterned *60 Minutes* after variety magazines that contained exposé pieces, human interest stories and sports previews, along with the more traditional topics covered in news programs. For his work in developing *60 Minutes*, Hewitt received the President's Award for Lifetime Achievement from the Overseas Press Club in 1998 and was inducted into the National Association of Broadcasters Hall of Fame in 1993. He retired as executive producer of *60 Minutes* in 2004.

Heston, Charlton (Charlton Carter) (1923–) American film actor. Heston studied acting at Northwestern University and made his Broadway debut in *Antony and Cleopatra* (1947). Turning to the new media of television he became a respected actor in productions of *Julius Caesar* (1948), *Wuthering Heights* (1949), *Macbeth* (1949) and others. In the 1950s he starred in several films, including *The Greatest Show on Earth* (1952), but it wasn't until he portrayed Moses in Cecil B. DE MILLE's talkie remake of *The Ten Commandments* (1956) that he became known as America's leading actor in historical epics. Three years later he won the ACADEMY AWARD for best actor in the blockbuster remake of another silent hit, *Ben-Hur*. During his career Heston also had success in several off beat roles; he played a Mexican narcotics officer in Orson WELLES's masterpiece *Touch of Evil* (1958) and an astronaut stranded in the future in the science fiction classic *Planet of the Apes* (1968). Heston served as president of the NATIONAL RIFLE ASSOCIATION (NRA) from 1998 to 2003 before retiring because of Alzheimer's disease.

Heyerdahl, Thor (1914–2002) Norwegian anthropologist and explorer. Heyerdahl became an international celebrity when he made his 4,100-mile raft journey across the Pacific Ocean in

1947. He developed a theory that ancient peoples migrated by sea as well as by land routes. To prove the feasibility of this theory, Heyerdahl and five others built a balsa-wood raft, called the *Kon-Tiki*, which was like the type used by early South American Indians, and traveled from Peru to Polynesia (1947). His 1969 attempt to further test his theory, by crossing the Atlantic from Morocco to South America in a papyrus boat, had to be abandoned. In 1997 he published his memoir, *In the Footsteps of Adam*.

He Yingqin (Ho Ying-ching) (1889–1987) Chinese military leader. A long-time associate of Gen. CHIANG KAI-SHEK, he served as Chinese minister of war from 1930 to 1944. He was commander in chief of the Chinese army when 1 million Japanese troops surrendered at Nanjing in 1945. He fled to TAIWAN in 1949 with Chiang after the Communist victory in the CHINESE CIVIL WAR OF 1945–49. He served as Taiwan's defense minister until 1958.

Heyse, Paul (1830–1914) German writer, poet and playwright. Heyse is best known for his fiction, which includes the novellas *L'arrabbiata* (The Angry Girl, 1857) and *Bild der Mutter* (The Mother's Portrait, 1859), and the novels *Kinder der Welt* (Children of the World, 1873) and *Merlin* (1892). Heyse's romantic, lyric poetry was overshadowed by the Naturalists who followed him, and he is better remembered for his translations of Italian poets. His plays include, *Hans Lange* (1866) and *Maria von Magdala* (Mary of Magdala, 1899). Heyse was awarded the NOBEL PRIZE in literature in 1910, the first German writer to be so honored.

Heywood, Eddie (1915–1989) American JAZZ pianist, arranger and composer. Heywood's sextet was one of the most popular jazz groups of the 1940s. A bout of severe arthritis forced his retirement in 1947; he then turned to composing such hits of the 1950s as *Land of Dreams*, *Soft Summer Breeze* and *Canadian Sunset*. In his later years he suffered from Parkinson's disease and Alzheimer's disease.

Hezbollah (Hizbollah) Radical Shi'ite guerrilla group in LEBANON advocating the creation of an Islamic state in that

country. Its name means "Party of God." During the 1980s Hezbollah received material support from the Iranian government, which hoped that Hezbollah's success would lead to a wave of Islamic governments in the Arab world and place ISRAEL in a precarious position. Generally, Hezbollah has restricted its actions to terrorist operations designed to undermine Israeli efforts to create a Lebanese state tolerant of Israel, for which Israel and the U.S. have repeatedly labeled it a terrorist organization. Hezbollah also conducted military raids from its bases in Lebanon on Israeli territory and on Lebanese territory controlled by Israeli allies. In addition, Hezbollah is a political party with representation in the Lebanese parliament. When the PALESTINE LIBERATION ORGANIZATION (PLO) and Israel made efforts to establish a working relationship between each other with the 1993 Oslo Accords and the 1995 Interim Agreement, Hezbollah denounced these efforts and insisted that the goal of all Arab Muslims was the destruction of the state of Israel. In January 2004 Israel and Hezbollah exchanged several prisoners as a result of negotiations sponsored by Germany. However, on July 12, 2006, armed Hezbollah forces shelled northern Israeli towns, crossed the border into Israel and captured two Israeli soldiers. Israel responded with air attacks and a naval blockade of Lebanon.

Hidalgo del Parral (Parral) Transportation and mining center in northern Mexico's Chihuahua state; a hotbed of Francisco Modero's revolt of 1917, Parral was also where popular hero Pancho VILLA was assassinated in 1923.

Higashikuni, Naruhiko (1887–1990) Japanese monk. A member of JAPAN's imperial family, he became the country's first premier after World War II. He was the first member of the imperial family to head a cabinet, which he formed two days after the Japanese surrender on August 15, 1945. His government lasted less than two months. In 1947 he was deprived of his title and became a Buddhist monk.

Highsmith, (Mary) Patricia (1921–1995) American novelist. Although they fall into the mystery genre Highsmith's novels have received acclaim from such critics as Brigid BROPHY for

their psychological insight as well as their literary style. Perhaps best known in the U.S. is her first novel, *Strangers on a Train* (1950), which was filmed by Alfred HITCHCOCK in 1951. Highsmith's novels have a large following in Britain. Other of her many works include *The Talented Mr. Ripley* (1955, filmed as *Purple Noon* in 1961), the first of a series of novels featuring the repugnant anti-hero Ripley; *Found in the Street* (1986) and *The Animal Lovers Book of Beastly Murder* (1988). Highsmith originally published some of her early work under the pseudonym Clair Morgan.

Hilbersheimer, Ludwig Karl (1885–1967) German architect and town planner known as a teacher and writer who was influential in advancing BAUHAUS theory as it applied to urban planning. Hilbersheimer was trained in architecture and planning at the Institute of Technology at Karlsruhe in Germany and established his own practice thereafter in Berlin. From 1928 until 1932 he was at the Bauhaus, teaching architecture, construction, housing and town planning. In 1938 he emigrated to the U.S. to become a professor of city planning at Illinois Institute of Technology in Chicago and, after 1955, director of the department of city and regional planning there. He was the author of many articles and a number of books, including *Groszstadt Architektur* (1927), *The New City* (1950) and *The Nature of Cities* (1955). Hilbersheimer's writing emphasizes historical study of urban forms, while his own approach to planning is highly theoretical, leading to abstract, geometric forms generated by studies of prevailing wind directions in relation to industrial pollution output and to the logical study of density, land use and circulation patterns. Although his proposals now seem overly mechanistic, Hilbersheimer's basic concepts remain significant for all modern urban planning.

Hilbert, David (1862–1943) German mathematician, generally considered one of the greatest of the 20th century. Hilbert studied at the universities of Königsberg and Heidelberg and also spent brief periods in Paris and Leipzig. He took his Ph.D. in 1885, by 1892 was a professor and in 1895 moved to Göttingen to take up the chair that he occupied until his

official retirement in 1930. Hilbert's mathematical work was wide-ranging; there were few fields to which he did not make some contribution and many he completely transformed. From 1885 to 1888 he solved the central problems of the newly created theory of invariants. He created entirely new methods for tackling problems, in the context of a much wider general theory. The fruit of this work consisted of many new and fundamental theorems in algebra. Much of his work on invariants was later applied to the new subject of homological algebra.

Hilbert next turned to algebraic number theory and probably his finest work. He produced not only a masterly account of number theory but also a substantial body of original and fundamental discoveries. The work was presented in *Zahlbericht* (1897) with an elegance and lucidity of exposition that has rarely been equaled. Hilbert moved to another area of mathematics and wrote a classic work, *Grundlagen der Geometrie* (1899, *Foundations of Geometry*), an account of geometry as it had developed in the 19th century.

In mathematical logic and the philosophy of mathematics, Hilbert is one of the major proponents of the formalist view, which had a formative impact on the development of mathematical logic. Hilbert aimed at formalizing as much of mathematics as possible and finding consistency proofs for the resulting formal systems. It was soon shown by Kurt GÖDEL that "Hilbert's program" could not be carried out, at least in its original form; but Gödel's own revolutionary meta-mathematical work would have been inconceivable without Hilbert. Hilbert's contribution to mathematical logic was important, especially to the development of proof theory.

Hilbert also made notable contributions to analysis, to the calculus of variations and to mathematical physics. His work on operators and on "Hilbert space" (a type of infinite-dimensional space) was of crucial importance to QUANTUM MECHANICS. His considerable influence on mathematical physics was also exerted through his colleagues at Gottingen, who included Minkowski, Weyl, SCHRÖDINGER and HEISENBERG. In 1900 Hilbert presented a list of 23 outstanding unsolved mathematical problems to the International Congress of Mathematicians in Paris. A number of

these problems remain unsolved, and the mathematics created in solving the others has fully vindicated his deep insight. Hilbert was an excellent teacher and during his time at Gottingen built the university into an outstanding center of mathematical research, which it remained until the dispersal of the intellectual community by the Nazis in 1933.

Hill 60 Hill in Belgian province of West Flanders, about three miles southeast of YPRES—a bloody battle site during the first spring of WORLD WAR I, between April 17 and May 5, 1915.

Hill 70 Hill in Pas-de-Calais department of northern France, 14 miles northeast of ARRAS. During WORLD WAR I occupied by Germany after fighting in September 1915; retaken by Canadian troops on August 15, 1917.

Hill 102 (Mamai Kurgan) Hill in Russian city of Volgograd (formerly Tsaritsyn; STALINGRAD). In WORLD WAR II, occupied by the invading Germans in the summer of 1942, it soon became the scene of intense combat. The Russians struggled in vain to recapture the hill on September 14, at the beginning of the German army's 66-day siege of Stalingrad.

Hill 192 Strategically located hill in French province of NORMANDY, on the road from Saint-Lô to Bayeux; during the Allied invasion of France in WORLD WAR II, Hill 192 was part of a fierce U.S. offensive before capture on July 11, 1944.

Hill 304 Hill in the Meuse department of northeastern France, 10 miles from VERDUN. During WORLD WAR I the Germans attempted an advance on Verdun by way of Hill 304, in May 1916. In August 1917 fighting resumed and the French pushed the Germans out of the area.

Hill 516 See CASSINO.

Hill 609 Hill overlooking Mateur in northern Tunisia. In WORLD WAR II, occupied by Germany in December 1942, it was regained by Allied forces on May 1, 1943, after several days of bitter combat.

Hill, Lord Charles (1904–1989) British physician, politician and administrator. Hill became a household name in Britain during WORLD WAR II as the "Radio Doctor" who discussed medical problems in a homespun manner. He also served as secretary of the British Medical Association during negotiations preceding the establishment of Britain's NATIONAL HEALTH SERVICE (NHS). He was elected to Parliament as a Conservative in 1950 and served in several cabinet posts. After being appointed chairman of the Independent Television Authority (ITA), he was named chairman of the BRITISH BROADCASTING CORPORATION (BBC) in 1967.

Hill, Edwin C. (1884–1957) American author and radio commentator. From 1904 to 1923 he worked as a reporter for the *New York Sun*. He was director of the Fox News Reel (1923–24) and scenario editor for the Fox Film Corporation (1925–26). Hill was a feature writer for the *Sun* from 1927 to 1932, when he became a syndicated feature writer and radio broadcaster known for his "Human Side of the News."

Hill, Geoffrey (1932–) British poet. Hill was raised in Bromsgrove, Worcestershire, where his father was a police constable. Hill's first poems, published in the early 1950s while he was a student at Keble College, Oxford, attracted critical attention. His subsequent collections—*For the Unfallen* (1959), *King Log* (1968), *Mercian Hymns* (1972), *Tenebrae* (1979) and *The Mystery of the Charity of Charles Peguy* (1984)—have consolidated his reputation as perhaps the most important British poet of the second half of the 20th century. In his relatively small but extremely concentrated body of work, Hill addresses the brutal forces of history and the savagery of the human condition. His dense, formal, highly learned and allusive poetry is in many respects the verse equivalent of Simone WEIL's prose; the two writers share a similar visionary and uncompromising religious consciousness. Hill has taught successively at Leeds, Cambridge and Boston universities. A recipient of the Gregory Award (1961), Hawthornden Prize (1969) and Heinemann Award (1972), he is a Fellow of the Royal Society of Literature. Hill was

elected to the American Academy of Arts and Sciences in 1996 and received the 2000 T. S. Eliot Award, as well as the 2001 Heinemann Book Award for *The Triumph of Love* (1998). Other late collections include *Canaan* 1996, *Speech! Speech!* (2000), *The Orchards of Syon* (2000) and *Scenes from Comus* (2005).

Hillary, Sir Edmund (1919–) New Zealand explorer and mountaineer. Hillary became a mountain climber/explorer after WORLD WAR II, joining a New Zealand expedition to Garhwal, India, in 1951, then a British expedition to Cho Oyu, west of Mt. Everest, in 1952. During a 1953 expedition organized by the Royal Geographical Society and the Alpine Club, Hillary and his Sherpa guide Tenzing Norkay became the first people to reach the summit of Mt. Everest. He led the New Zealand contingent of the Commonwealth Trans-Antarctic Expedition, successfully completing the overland journey from the Ross Sea to the South Pole in 1958. Hillary's many books about his explorations include *No Latitude for Error* (1961). He became ambassador to India in 1985.

Hillenkoetter, Roscoe Henry (1897–1982) American naval officer and first director of the CENTRAL INTELLIGENCE AGENCY (CIA) (1947–50). A graduate of the U.S. Naval Academy (1919), he was a diplomatic courier in Europe in the mid-1930s. Before the U.S. became officially involved in WORLD WAR II, he was a naval attaché to the VICHY government of France (1940–41), and also worked with the French RESISTANCE movement. Toward the end of 1941 he was transferred to the Pacific and was wounded in the Japanese attack on PEARL HARBOR (December 7, 1941). Later in the war he served as head of naval intelligence on Admiral NIMITZ's staff, then commanded a destroyer in the Pacific. In 1947 he was appointed director of the Central Intelligence Group, which evolved into the CIA, but was removed from his post by President TRUMAN in 1950. During the KOREAN WAR he commanded a navy task force. He retired from the navy in 1957 with the rank of vice admiral.

Hillman, Sidney (1887–1946) American labor leader. Hillman was born in

Zagare, Lithuania, and immigrated to the U.S. in 1907, where he worked in the garment industry. He was the guiding spirit behind the formation of the Amalgamated Clothing Workers of America and became its first president in 1914. Hillman promoted union-management cooperation and pioneered in developing union health and welfare programs, cooperative housing and banking. An advocate of industrial unionism, he was one of the founders of the CONGRESS OF INDUSTRIAL ORGANIZATIONS and served as its vice president from 1935 to 1940. He was codirector of the Office of Production Management from 1940 to 1942. Hillman was a strong supporter of Franklin D. ROOSEVELT and an influential figure in the Democratic Party. He was the founder of the American Labor Party in 1944 and helped create the World Federation of Trade Unions in 1945.

Hillsborough Accord (1985) Agreement between the UNITED KINGDOM and the Republic of IRELAND regarding the governing of NORTHERN IRELAND. The accord set up an Anglo-Irish intergovernmental conference to deal with political, security, legal and judicial matters affecting Northern Ireland, and to promote cross-border cooperation. Both governments pledged not to change the status of Northern Ireland without the consent of the majority of the people of Northern Ireland. In return, the Irish republic was given a consultative role in Northern Irish affairs. The agreement followed 15 months of secret negotiations and was the first of its kind since Ireland was partitioned in 1922. Although the accord was denounced by loyalist (Protestant) and republican (pro-IRA) extremists, it was widely regarded as a major step toward solving the complex sectarian conflict in Northern Ireland.

Hillsborough Stadium Disaster On April 15, 1989, 95 British soccer fans were killed and nearly 200 injured when several thousand late-arriving fans surged into the stands at an important match between Liverpool and Nottingham Forest at Hillsborough Stadium in Sheffield. When 4,000 Liverpool supporters massed at one entrance to the already crowded stadium, orders were given to throw open an exit gate to allow the fans to enter. In the ensuing rush, fans already in the "terraces,"

or standing room, were pushed forward and those in the front were pushed up against metal fences. Eventually a gate to the field was opened and the injured and dying were treated on the field. Afterward both government and popular demands were made to eliminate standing room; but the expense of stadium renovation, and the pull of tradition, put the issue to rest.

Hilton, Conrad Nicholson (1887–1979) Founder and chairman of Hilton Hotels Corp. and Hilton International. Conrad Hilton began in the hotel business in 1919, investing \$5,000 in a Texas hotel. The business grew into a chain of hotels worldwide. At the time of his death, the business was valued at over \$500 million. Located mainly in large cities and resorts, Hilton hotels generally provided a high standard of luxury, catering to executive business travelers and to well-off tourists. Many of Hilton's older hotels, such as the Waldorf-Astoria in New York, had been established by other owners; each of these hotels had its own distinct characteristic. However, after World War II, Hilton began the trend of building new hotels with identical architectural designs and standard features throughout the world.

Hilton, James (1900–1954) British novelist. Hilton is best remembered for the novels *Lost Horizon* (1933, filmed 1937), set in mystical Shangri-La in the Tibetan mountains, and *Goodbye, Mr. Chips* (1934, filmed 1939), the nostalgic story of a school master. In 1936 Hilton moved to HOLLYWOOD to work on screenplays. His film credits include the ACADEMY AWARD-winning *Mrs. Miniver* (1942). Hilton also wrote a mystery novel under the pseudonym Glen Trevor.

Hilton Hotels See Conrad HILTON.

Himachal Pradesh Himalayan state of northern INDIA, bordering on Tibet and China. Twenty-one former Punjab hill states were joined with it to form a union territory on April 15, 1948. Enlarged several times afterward, the territory became a state in 1970. Largely underdeveloped, its capital is at the hill resort of Simla.

Himmler, Heinrich (1900–1945) German Nazi leader, head of the notorious ss (Schutzstaffel). Himmler was

Heinrich Himmler in Russia, 1941 (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

an early member of the Nazi Party, and took part in HITLER's failed BEER HALL PUTSCH in Munich in 1923. During much of the remainder of the 1920s he was a chicken farmer. In 1929 he was appointed head of the party's SS organization, which then consisted of only 300 men. During the early 1930s he consolidated his power. After helping to liquidate Brownshirt leader Ernst ROEHM and other of Hitler's Nazi rivals on the NIGHT OF THE LONG KNIVES (June 30, 1934), Himmler was assured a leading position in the Nazi hierarchy. Two years later he was made head of the unified police forces within GERMANY and given the title Reichsführer of the SS. Under his direction, the SS became virtually a state within the German state and made possible the Nazis' totalitarian control of all aspects of German life.

More than any other single individual, Himmler was responsible for putting into practice the so-called FINAL SOLUTION—the HOLOCAUST that saw the destruction of the JEWS of Europe. A cold and brutally efficient bureaucrat, Himmler administered the CONCENTRATION CAMPS from his Berlin headquarters. He was named minister of the interior in 1943. In the final days of the Nazi Reich, Himmler hoped to negotiate a peace settlement with the Allies and to succeed Hitler as leader of Germany at the war's end; however, his efforts were rebuffed by the Allies, who demanded Germany's unconditional surrender. Several weeks after the end of the war, Himmler was captured and arrested by British forces, on May 25, 1945. He committed suicide while in custody. (See also NAZISM.)

Hindemith, Paul (1865–1963) German composer. Born in Hanau, he studied at the Frankfurt Conservatory and began his career playing the viola and the violin. He was concertmaster for the Frankfurt Opera orchestra (1915–23), violist for the Amar Quartet (1922–29) and professor at the Berlin Hochschule (1927–37). When the Nazis came to power, his work was banned for its “decadent” modernism. Hindemith journeyed to the U.S. in 1937, becoming a professor of music theory at Yale University in 1940. He became an American citizen in 1946, but settled in Switzerland in 1953 to teach at the University of Zurich. One of the foremost composers of the early 20th century, he was extremely prolific and stylistically varied, usually employing the contrapuntal techniques of classical music in a contemporary idiom. His earlier compositions are usually atonal, while his later works display a tonality that has been dubbed **neoclassicism**. He is particularly known for his so-called *Gebrauchsmusik* music written specifically for performance by amateurs.

Hindemith composed in nearly all of the musical genres: opera, chamber work, instrumental music, orchestral work, song, choral and others. His best known composition is the symphony (1934) derived from his opera *Mathis der Maler*. Among his other important works are the song cycle *Das Marienleben* (1923, 1948), the viola concerto *Der Schwanendreher* (1935), the ballet *Nobilissima Visione* (1938), the piano interludes and fugues of *Ludus Tonalis* (1942) and the choral and orchestral treatment of Whitman's *When Lilacs Last in the Dooryard Bloom'd* (1946).

Hindenburg, Paul von (1847–1934) German military and political leader. The son of a Prussian officer, Hindenburg entered the Prussian Cadet Corps at the age of 11 and was commissioned in the army in 1866. He first saw service in the Franco-Prussian War (1870–71), was appointed to the general staff in 1878 and retired from active service as a general in 1911. Recalled to command the army in East Prussia at the beginning of WORLD WAR I (1914), he won decisive victories over the Russians at Tannenberg, the Masurian Lakes and the eastern front (see WORLD WAR I ON THE EASTERN FRONT). Acclaimed as Germany's leading war hero, Hindenburg was appointed a field marshal and commander of the German armies in the East in 1914, then succeeded General Falkenhayn as commander-in-chief in 1916, with LUDENDORFF serving as first quarter-master-general. Together, they virtually ran wartime Germany, controlling policies at home, imposing harsh terms on Russia, strengthening the HINDENBURG LINE and mounting the 1918 offensive on the western front. The entry of the U.S. into the war in 1917 together with the counteroffensive of FOCH caused severe German reversals, and Hindenburg was forced to seek an armistice in October 1918. Subsequently Kaiser WILHELM II abdicated, but Hindenburg remained in command of the army until his retirement in July 1919. A monarchist, he

German military leader and president Paul von Hindenburg (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

nonetheless supported the new republican government and was elected president in 1925. In 1932 the elder statesman was returned to office, but, unable to cope with his nation's enormous political, social and economic crises, he appointed Adolf HITLER chancellor in January 1933. Increasingly senile and losing all real power, he remained the figurehead president until his death, when Hitler abolished the office. Goldsmith, Margaret, *Hindenburg*. New York: Ayer, 1972 (repr).

Hindenburg disaster Accident that destroyed the German dirigible *Hindenburg* at Lakehurst, N.J., on May 6, 1937. Designed by German aviation engineer Dr. Hugo Eckener and completed in 1936, the sumptuously outfitted *Hindenburg* was the world's first commercial aircraft to make regular transatlantic flights. Carrying over 70 passengers and a substantial cargo, and fitted out with private staterooms, lounges, a formal dining room and ship-like promenades, it made many 50-to-60-hour crossings during its almost two years of service. While most airships were inflated with helium, German airships at the time were filled with highly inflammable hydrogen gas because the U.S. refused to export helium to Nazi Germany. While landing at Lakehurst, the hydrogen ignited and the *Hindenburg* was destroyed in half a minute. Thirty-five passengers and crew and a member of the ground staff were killed in the conflagration. A radio news reporter covering the dirigible's landing captured the disaster in unforgettable commentary, and a motion-picture camera also recorded the event. Most authorities believe that electricity in the air was responsible (there was a lightning storm nearby), but some have claimed that the *Hindenburg* was sabotaged by anti-Nazi agents. In any case, the disaster destroyed public confidence in the dirigible and ended the commercial use of airships. The cause of the explosion has never been conclusively determined.

Hindenburg Line Named for Field Marshal von Hindenburg, this fortified German defense line extended across northeastern France during WORLD WAR I. Consolidated in 1916, it was a locus for heavy fighting, particularly in

1917 and when it was finally breached in the fall of 1918.

Hine, Lewis (1874-1940) American documentary photographer particularly known for his dramatic interpretation of machine and other 20th-century industrial forms. Hine's earliest work documented the experience of immigrants arriving at ELLIS ISLAND. From 1908 to 1916 he worked for the National Child Labor Committee documenting working conditions in factories, workshops, and mines, with the goal of exposing little-known abuses. After World War I, his reputation for outstanding photography of industrial locations led to assignments from industry that accentuated the beauty of many mechanistic subjects. For example, from 1930 to 1931 he documented the men constructing the EMPIRE STATE BUILDING in New York in hundreds of striking photographs. Whether documenting the abuses of child labor or the drama of industry, Hine's work was always of fine technical and artistic quality, making him an important figure in the development of modern documentary photography.

Hines, Earl "Fatha" (1905-1983) American JAZZ musician, known as the father of modern jazz piano playing. He created the "trumpet style" of playing jazz piano while working with Louis ARMSTRONG in the 1920s, and established a place for piano as a solo instrument in jazz. Hines led big and small bands intermittently until his death, including a Chicago big band that launched the careers of vocalists Sarah VAUGHAN and Billy ECKSTINE.

Hinkle, Samuel F. (1900-1984) American research chemist and business executive. Hinkle played a major role in the growth of the Hershey Foods Corp. He began as Hershey's director in 1924, when the company was still a small candy manufacturer. By the time he became chairman (1962), Hershey was a giant food-products conglomerate. He retired in 1965. Hinkle developed the K, C and D rations issued to U.S. soldiers in WORLD WAR II.

hip-hop American genre of music. Also known commercially as "rap music," hip-hop emerged in the 1970s among African-American and His-

panic-American minorities in large urban centers in the U.S. Originally it largely consisted of rhyming lyrics (sometimes improvised during a performance) set to percussion background music, and was usually accompanied by a form of dancing known as break dancing, in which performers would move acrobatically from a new-lying to a standing position. In later years, disco and "funk" music was used as background accompaniment to the "rapping" content of the artist's performance. In the early 1980s hip-hop performers included a variety of ethnicities, such as the all-white (and all-Jewish) Beastie Boys, who mixed rap with a certain amount of heavy metal musical accompaniment, and Grandmaster Flash, a musician largely influenced by funk. In 1990, hip-hop music had begun to go mainstream, with the first hip-hop single, M. C. Hammer's "U Can't Touch This," reaching number one on the pop music chart and staying there for a week. Hammer was followed the next year by a slightly longer stay of three weeks for Vanilla Ice's "Ice, Ice, Baby." However, it was not until 1992 when hip-hop music became a powerful force in the music industry with the popular national appeal of Dr. Dre and Snoop Doggy Dog (later Snoop Dog), two artists who collaborated regularly between 1992 and 1996. During the rise of these artists and others, such as Public Enemy, Run-DMC, and Jam Master Jay, Queen Latifah and Da Brat, hip-hop music developed an intranational rivalry between East Coast rappers coming from urban ghettos in cities such as New York, Philadelphia and Baltimore and West Coast rappers coming from the suburban ghettos in southern California. This rivalry derived from the style of the rappers and also from each faction's efforts to describe the other as not truly representing the mentality of a modern-day gangster. This conflict was fatally personified in the cases of Tupac Shakur and Notorious B.I.G., West and East Coast rappers, respectively, who belittled each other's claims to represent the true "gangsta" lifestyle, and both of whom were the victims of unsolved shootings. While hip-hop music in the early 21st century has evolved into a more mainstream genre, involving

catchy beats from artists like P. Diddy and Nelly (neither of whom go to the extremes of Shakur and B.I.G. to prove the “gangsta” credibility), the genre still remains the target of allegations from political figures such as Lynne Cheney and Tipper Gore, who have campaigned against the artists EMINEM and Public Enemy, respectively, for their glorification of violence. Women’s groups and gay rights groups have also complained that hip-hop music incites violence against their members through their lyrics.

hippies Name first given in the 1960s to long-haired members of the era’s COUNTERCULTURE. The precise derivation of the word “hippie” remains unclear, but one theory has it stemming from “hip,” which was one of the favorite words of praise of the Beatniks of the 1950s, who exercised a tremendous influence on the hippies of the next decade. Indeed, many of the literary heroes of the BEAT GENERATION—such as novelists William BURROUGHS and Jack KEROUAC and poets Allen GINSBERG and Gary Snyder—were highly popular with hippies as well. But the hippie phenomenon was based on more than a mere recycling of cultural trends. There were radically new factors at work in the 1960s. One of them was the research into the drug LSD being conducted by Harvard University psychology professor Timothy LEARY, who lost his academic position due to his enthusiasm for the drug’s spiritual and psychological “benefits.” Leary became a highly influential spokesman for hippies, who relished the Leary motto “Tune in, turn on, drop out.” Hippies were also unique in their musical tastes, discarding the favored jazz of the 1950s beatniks for “psychedelic” rock such as that of the GRATEFUL DEAD, JEFFERSON AIRPLANE and other San Francisco-based groups. There were many superficial and faddish elements to the hippie phenomenon, such as love beads, day-glo posters and long hair.

Many hippie enthusiasms have transformed themselves, over the decades, into ongoing cultural influences in America, including: ecological awareness, nutritional consciousness and the value of organically grown foods, respect for Native American tribal traditions, widespread marijuana

cultivation and use, and the entrepreneurial willingness to consider people-oriented forms of organizational structure in social and business contexts. Politically, hippies ranged from apolitical societal dropouts who went to live on isolated communes to fervent peace activists who contributed greatly to the strength of the ANTIWAR MOVEMENT. Hippie popularity in America and Europe reached its peak in the late 1960s with BE-INS in major urban parks that drew as many as 25,000 people in a single day. Hippies continue to carry on their freeform lifestyles—albeit in much smaller numbers—to the present day.

Hirohito (1901–1989) Emperor of JAPAN. The first member of the imperial family to travel abroad, Hirohito was appointed regent in 1921, shortly after a visit to Europe and the U.S. He succeeded to the Chrysanthemum Throne in 1926 upon the death of his father, Emperor Yoshihito (1879–1926). He married Princess Nagako Kuni in 1924, and his heir, AKIHITO, was born in 1933. A quiet, introspective and scholarly man, trained as a marine biologist, he apparently exerted little influence over political events in Japan during the 1930s and was not consulted during the military’s drift toward WORLD WAR II or over its strategy during the war. However, in 1945 he was instrumental in

Hirohito, the longest reigning emperor in Japanese history (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

persuading Japanese officials to accede to unconditional surrender and thus save the nation from total destruction. In 1946 Hirohito renounced the concept of imperial divinity as well as claims to all but ceremonial authority. The new Japanese constitution of 1946 proclaimed him a “symbol of the state and of the unity of the people,” and he remained a beloved figure to the Japanese public.

Hiroshima City and prefectural capital at the western end of Japan’s Inland Sea. Founded in the 16th century, it grew in population and importance along with the railroad in the 19th century, also becoming a military headquarters. During WORLD WAR II it was devastated by the first ATOMIC BOMB dropped on an inhabited location (August 6, 1945). JAPAN surrendered eight days later, after another atomic bomb was dropped on NAGASAKI. Almost totally rebuilt, Hiroshima is a prosperous commercial center and hosts an annual world conference on the deterrence of nuclear weaponry.

Hirshfield, Morris (1872–1946) Polish-American painter. A self-taught primitive painter, Hirshfield began to paint when he was 65 years old. His entire output consists of 77 paintings, often of women or animals, created from 1937 until just before his death. His decorative, colorful, flat and highly patterned works are included in several museum collections, notably the Museum of Modern Art, N.Y.C.

Hiss, Alger See HISS-CHAMBERS CASE.

Hiss-Chambers case Confrontation between Alger Hiss (1904–96) and Whittaker Chambers (1901–61) over Hiss’s alleged membership in the Communist Party and espionage activities. A distinguished public official, the Baltimore-born Hiss attended Harvard Law School and worked for the Agricultural Adjustment Administration (1933–36) and the Justice Department (1935–36) before joining the State Department. There he rose quickly, becoming a key adviser at many international conferences, most importantly YALTA. Leaving the government in 1947, he was appointed president of the Carnegie Endowment for International Peace. His steady rise to emi-

nence was halted in 1948 when Whitaker Chambers, a New York-born magazine editor and self-confessed communist agent during the 1930s, in testimony before the HOUSE UN-AMERICAN ACTIVITIES COMMITTEE (HUAC) accused Hiss of having been part of a communist underground. This accusation marked the beginning of a decades-long drama of denunciation and denial.

Soon Chambers expanded his testimony to include accusations that Hiss had provided him with secret State Department documents destined for transmittal to the Soviet Union. To prove his assertions, Chambers produced microfilms of the documents, supposedly typed on Hiss's Woodstock typewriter and then hidden in a hollowed-out pumpkin. These so-called Pumpkin Papers were handed over to the anticommunist California congressman Richard M. NIXON. Throughout all this, Hiss denied knowing Chambers, insisted that he had never been a member of the Communist Party and claimed that the evidence against him had been fabricated by a psychopathic liar. The statute of limitations for the charge of espionage had run out, so Hiss was indicted on two counts of perjury in 1949. The first trial resulted in a hung jury; the second found Hiss guilty. Sentenced to five years in prison, Hiss served 44 months, from 1951 to 1954.

The controversial Hiss-Chambers case caused a furor in American political circles. Hiss supporters claimed that he had been railroaded by MCCARTHYISM and accused the FBI of evidence tampering. Chambers allies applauded his courageous anticommunism. Each principal pressed his case in print, Chambers in *Witness* (1952) and Hiss in *In the Court of Public Opinion* (1957). In 1992 a search of Soviet archives by Russian general Dimitry Volkogonov failed to confirm Hiss's service as a Soviet spy, although the evidence of his espionage activities from other sources was still compelling.

Histadrut (Hebrew, Federation of Labor) Organizational body of the Israeli trade-union movement.

Hitchcock, Alfred (Joseph) (1899–1980) British-born film director,

known for his mastery of cinematic technique and screen suspense. In a career spanning half the century, Hitchcock directed scores of psychological thrillers, nightmares of menace and the macabre that became film classics. He became famous for planning every scene in advance, down to the smallest detail, and he pioneered new cinematic techniques. He made England's first talking picture, *Blackmail*, in 1929. Working in England in the 1930s, he won international acclaim for such spy thrillers as *The Man Who Knew Too Much* (1934), *The Thirty-nine Steps* (1935), and *The Lady Vanishes* (1938). In 1939 he moved to HOLLYWOOD, where he went on to make such stylish melodramas as *Rebecca* (1940), *Suspicion* (1940), *Lifeboat* (1944), *Notorious* (1946), *Strangers on a Train* (1951), *Rear Window* (1954), *Vertigo* (1958), and *North by Northwest* (1959). With *Psycho* (1960), Hitchcock's films became more overtly shocking and violent. He worked with such stars as Laurence OLIVIER, Ingrid BERGMAN, Cary GRANT and James STEWART. He was nominated for five ACADEMY AWARDS for best director, but never won. He also hosted a popular weekly television show in the late 1950s and early 1960s.

Hitchcock, Henry-Russell (1903–1987) American architectural historian and teacher. Beginning in the 1920s, Hitchcock was a leading advocate of the INTERNATIONAL STYLE in architecture. He is believed to have coined the term.

Hitchings, George H(erbert) (1905–1998) American pharmacologist. Born in Hoquiam, Washington, he attended Washington State University and Harvard. He taught at Harvard and at Western Reserve before joining the Burroughs Wellcome Laboratory, Tuckahoe, N.Y., in 1942. His distinguished career spanned some 50 years of research at this lab. Along with his longtime collaborator Gertrude B. ELION, Hitchings made discoveries that had a fundamental impact on the development of various disease-fighting drugs. The two developed a central principle of contemporary pharmacology that is based on blocking the workings of nucleic acids (the chemical substances that control heredity and cell function) in diseased cells while allowing it to

function in healthy cells. This discovery came about through the two scientists' study of the chemical components of nucleic acids. They applied the principle to the creation of various forms of chemotherapy, achieving their first success in the 1950s when, working with researchers at the Sloan-Kettering Institute, they produced the first effective drug against leukemia. During the next decades they worked on drugs to treat autoimmune, viral and infectious diseases and to fight organ rejection. Their studies led directly to the development of various modern drugs, including AZT for the treatment of AIDS. Hitchings and Elion were awarded the 1988 NOBEL PRIZE in physiology or medicine with Sir James Black.

Hitler, Adolf (1889–1945) Chancellor of GERMANY (1933–45). Along with Joseph STALIN, Adolf Hitler ranks as the most heinous of all 20th-century dictators. He plunged Germany and the world into a war that saw the destruction of ancient cities, the dismemberment of entire nations and the deaths of millions of soldiers and civilians both in combat and through a calculated plan of extermination. Born at Brannau, Austria, across the Inn River from Germany, Hitler was the son of a minor government official and his young wife. He was raised near Linz, Austria. His father died when Hitler was in his early teens; soon thereafter Hitler left school. In 1907 he moved to Vienna with vague hopes of pursuing a career as an artist or architect. Rejected by the Vienna Academy of Fine Arts, he lived an aimless existence, living in doss houses and wandering the city as a malcontent. During this time he developed a fanatical belief in the superiority of the German-speaking people and a profound hatred of the JEWS (see ANTI-SEMITISM) and the institutions of bourgeois civilization. Obsessed by dreams of personal and national grandeur, he took to haranguing anyone who would listen to his ideas. He painted postcards to support himself but otherwise took no definite steps to improve his position in life. In 1913 he moved to Munich.

The outbreak of WORLD WAR I gave Hitler a focus for his discontented energy. He enlisted in the German army and served in the trenches on the western front (see WORLD WAR I ON THE

WESTERN FRONT). During the war he was wounded and was also temporarily blinded by mustard gas. He received two Iron Crosses and reached the rank of corporal. Germany's defeat and the harsh terms imposed on the country by the TREATY OF VERSAILLES gave Hitler another cause to claim as his own. His life took a fateful turn in 1919 when he was hired as a police informer and assigned to report on the fledgling German Worker's Party, a minor political organization in Munich. Hitler joined the group as its seventh member and soon found that it gave him a platform from which to express his discontent with the state of the world. By 1921 he had gained control of the group and transformed it into a disciplined organization whose political aims matched his. The party name was changed to National Socialist German Workers' Party (abbreviated as NSDAP in German); the group soon became better known as the Nazi Party. Discovering his considerable power as an orator, Hitler expounded his philosophy of NAZISM to ever larger audiences. In 1923 Hitler, joined by World War I hero General ERICH LUDENDORFF and some 2,000 Nazi storm troopers, attempted to seize control of the Bavarian government in the BEER HALL PUTSCH. The event proved a fiasco for the Nazis; Hitler was arrested and sentenced to five years in prison. There he dictated his political gospel *MEIN KAMPF* to his aide Rudolf HESS. Hitler served only nine months of his sentence before being released. He spent the following decade rebuilding the Nazi Party.

The beginning of the worldwide GREAT DEPRESSION, which caused economic and political chaos in Germany, gave Hitler an opportunity to emerge as a formidable politician. National elections in 1932 gave the Nazis the largest share of the vote, although not an absolute majority. With this backing Hitler maneuvered for the post of chancellor, claiming that he was the only political leader able to deal with the Depression and with the perceived menace posed to the middle and upper classes by German communists. The aging President HINDENBURG was ultimately persuaded to name Hitler chancellor on January 30, 1933. Although the leaders of the conservative German political establishment distrusted

Hitler and indeed found him distasteful, they believed that they would be able to control him and, when necessary, remove him from office. The REICHSTAG FIRE (February 27, 1933) gave Hitler an excuse to suspend constitutional guarantees; he was, in effect, given dictatorial powers to cope with the perceived state of emergency. On the so called Night of the Long Knives (June 30–July 1, 1934) he eliminated his chief rivals within the party, the left-wing Nazi Gregor Strasser and the SA head Ernst ROEHM; he also dissolved the SA. Upon Hindenburg's death a month later, Hitler proclaimed himself "Führer" (leader) of the German people.

He quickly proceeded to suppress all remaining political opposition. This achieved, he worked to rebuild Germany's military might, ordering increased arms production, compulsory military service (March 1936) and the reoccupation of the Rhineland (March 1936)—all in violation of the Versailles Treaty. In the latter half of the 1930s, he systematically pursued his LEBENSRAUM foreign policy. He formed an alliance (the AXIS) with MUSSOLINI'S ITALY in 1936, annexed Austria in March 1938 (see ANSCHLUSS) and demanded and won the annexation of the German-speaking SUDETENLAND region of CZECHOSLOVAKIA in the MUNICH PACT (September–October 1938). In March 1939 he annexed the Czech regions (Bohemia and Moravia) of Czechoslovakia.

The NAZI-SOVIET PACT (August 1939) gave Hitler a free hand to invade POLAND (September 1939) without Soviet interference. However, upon the invasion of Poland, the UNITED KINGDOM and FRANCE, which had pledged to support Poland's independence, declared war on Germany. During the early part of the war Hitler enjoyed success as the Germans won victory after victory. The BLITZKRIEG tactics that had defeated Poland led to the capitulation of BELGIUM, the NETHERLANDS, FRANCE and NORWAY in 1940; BULGARIA and ROMANIA also fell into the Nazi fold. These successes emboldened him to pursue further conquests. His assault on Britain, however, failed to yield the island's submission (see BATTLE OF BRITAIN). Frustrated, Hitler turned his attention to his erstwhile ally, and attacked the Soviet Union. The difficulty of supplying the

German forces over great distances, along with the tenacity of the Soviet defenders and the severity of the Russian winter, left the German armies in a fatal position. On December 19, 1941, Hitler made another costly mistake. Convinced of his genius as a military leader, he assumed direct command of Germany's army. From this point onward he ignored the advice of his generals, with dire consequences for Germany. Yet, even with military defeat inevitable, Hitler pursued his most terrible crime, the so-called FINAL SOLUTION to the Jewish problem—the extermination of Europe's Jews (see HOLOCAUST).

As Britain, the USSR and other allies (now joined by the UNITED STATES) rallied against the German forces, Hitler became increasingly withdrawn and isolated from reality. German staff officers led by Count Claus von Stauffenberg attempted to assassinate Hitler on July 20, 1944. The Führer was wounded but survived. Feeling betrayed by the German people who had failed to win the victories he expected of them, he decided that Germany deserved to be destroyed rather than surrender to the Allies. Trapped in his Berlin bunker as Soviet forces fought their way into the city, Hitler married his longtime mistress Eva Braun on April 30, 1945; shortly thereafter the couple committed suicide.

Hitler-Stalin Pact See GERMAN-SOVIET Non-AGGRESSION PACT.

Hitler Youth (Hitler Jugend) German youth organization of the 1930s and early 1940s. The Hitler Youth was formed to indoctrinate young Germans into the "ideals" of Adolf HITLER and to create the Nazis of the next generation. Like the Boy Scouts and other youth organizations in democracies, the Hitler Youth stressed outdoor and educational activities. However, it added the poison of NAZISM, crushing its members' individually into unquestioning loyalty to the state and the Nazi Party. As an auxiliary arm of the party, the Hitler Youth Organization was active even before Hitler became chancellor in 1933. At the end of 1932, there were 110,000 members; by the end of 1936, that number had swelled to six million. The organization was led by a young idealist, Baldur von Schirach, whose parents

had been born in the U.S. As the German army collapsed toward the end of the war, many teenage members of the Hitler Youth were pressed into military service, and many died in combat.

HIV See AIDS.

Hoaglund, Hudson (1899–1982) American neuroendocrinologist. Hoaglund pioneered in the study of brain waves and the use of the electroencephalogram, or EEG. In 1944 he co-founded the Worcester Foundation for Experimental Biology in Massachusetts, which developed the birth control PILL.

Ho Chi Minh (Nguyen Tat Thanh) (1890–1969) Vietnamese communist and nationalist leader, president of North Vietnam (1954–69). Born Nguyen Tat Thanh in central VIETNAM, he left Vietnam as a ship's steward, traveling to London (1912), where he worked as a hotel chef, and Paris (1917), where he wrote articles for socialist newspapers and was a founder of the French Communist Party. He lived in the USSR from 1922 to 1925, becoming a member of the Comintern's Southeast Asia Bureau and studying Marxism and revolutionary techniques. He went on to China in 1925, organizing various communist groups. In China in 1938 he aided the communist revolution and planned his own country's struggle against colonialism, taking the name of Ho Chi Minh, "he who enlightens," in 1940. Ho returned to Vietnam at the beginning of WORLD WAR II after a 30-year absence and formed the VIET MINH, with which he began a guerrilla war against the Japanese. Taking HANOI in 1945, he declared Vietnamese independence and became president, serving in that office until his death. Ho was the chief spokesman for the nationalistic aspirations of the Vietnamese people and fought for an independent and communist-led Vietnam, first against the French (1946–54) and, after the Geneva conference split the country in 1954, against the South Vietnamese and the U.S. Becoming less involved in governing after 1959, he remained the symbol of Vietnamese communism. (See also VIETNAM WAR.)

Ho Chi Minh Trail Popular name for the jungle supply route by which

North Vietnam sent soldiers as well as arms, ammunition, food and other materiel into the South during the VIETNAM WAR. Construction of the strategic route was begun in 1959 and included existing mountain trails, incorporating them into a large network of roads. It was the work of over 30,000 troops and various other workers and measured over 12,500 miles. Beginning in 1965, repeated raids by U.S. bombers slowed the flow of men and supplies, but the North Vietnamese repaired the road constantly and the trail was never completely closed.

Hockney, David (1937–) English painter. Born in Bradford, he studied at the Royal College of Art, London. Considered one of the major figures in contemporary British art, Hockney is noted for his witty, realistic imagery and masterful draftsmanship. The artist, who has lived in Southern California for some years, is known for sunny, stylized scenes of contemporary life where POP ART elements mix with a highly personal style. He has also created a number of print series and has designed stage sets, such as those for England's Glyndebourne Opera.

Hodges, Gil (1924–1972) American baseball player and manager. Hodges was an outstanding first baseman with the Brooklyn (and L.A.) Dodgers (1948–61). Beloved by Brooklynites, he continued to make his home there after the close of his career. He closed out his playing days with the New York Mets in 1963. During his career he had 370 home runs, 1,921 base hits, 1,274 runs batted in and a .273 lifetime batting average. Following his retirement as a player, Hodges managed the Washington Senators (1963–67) and the New York Mets from 1968 until his death. In 1969 he guided the once-lowly Mets, who became known as the "Miracle Mets," over the favored Baltimore Orioles to victory in the World Series.

Hodgkin, Howard (1932–) English painter. Born in London, Hodgkin lived in the U.S. from 1940 to 1943. He studied at the Camberwell School of Art, London and the Bath Academy of Art, where he taught from 1956 to 1966. He later taught at various institutions, and in the late 1980s was Kress Professor at the National

Gallery, Washington, D.C. His first one-man show was held in London in 1962. His early works concentrated on the figure in an interior, blending the abstract and the figural in a flat and brightly colored geometry. His importance to English painting was recognized when he was chosen to represent Great Britain in the Venice Biennale of 1984. Hodgkin's paintings have always been relatively small in scale and most are worked on over a period of years. In his recent work elements such as the figure, the interior and the landscape are inferred rather than stated in swags, dots and arcs of vivid colors that cover the wood panel of the painting and its frame.

Hodgson, William Hope (1877–1918) British writer of maritime romances and supernatural horror. An important transitional figure between Edgar Allan Poe and H. P. LOVECRAFT, Hodgson translated the materials of the gothic romance into the modern forms of science fiction. The son of a clergyman, he ran away to sea as a boy. In 1899 after eight years and three voyages around the world, he returned to Blackburn to establish a body-building/physical culture academy and pursue a writing career. The bulk of his fiction, written in 1906–14, may be categorized into three groups. *The Boats of the "Glen Carrig"* (1907), *The Ghost Pirates* (1909) and the short-story collection *Men of Deep Waters* (1914) are all nautical horror tales. The great novels, *The House on the Borderland* (1908) and *The Night Land* (1912), are dystopian nightmares of a future Earth wracked by war, holocaust and extradimensional invasion by monstrous life-forms. The stories of a psychic detective named Carnacki pit 20th-century rationalism and technology against the traditional gothic apparatus of haunted houses and vengeful ghosts. Hodgson died in WORLD WAR I, killed in action near Ypres as an enlisted man in the Royal Field Artillery.

Hoffa, James R(iddle) "Jimmy" (1913–1975) American labor leader. Born in Brazil, Ind., Jimmy Hoffa moved to Detroit after his father's death and while still in his teens became actively involved in the teamster's union. Aligning himself with midwestern criminals, he strong-armed his way

into enormous power in the union. In 1952 Hoffa became a vice president of the union, and five years later he succeeded Dave Beck as its president (see BECK CASE). Intensively investigated by federal agencies, he was tried and found guilty of jury tampering and pension fraud, beginning a 13-year prison sentence in 1967. In 1971 Hoffa was pardoned by President Richard M. NIXON. After his release, in spite of a court order to stay out of union affairs until 1980, he apparently attempted to wrest control of the Teamster's from union president Frank FITZSIMMONS. On July 30, 1975, Hoffa left his home in Detroit and disappeared. He was widely assumed to have been murdered; his body has not been found.

Hoffman, Abbott Abbie (1936–1989) Radical American protest leader of the 1960s ANTIWAR MOVEMENT and founder of the Yippies (Youth International Party). Hoffman rose to national prominence as a defendant in the raucous CHICAGO SEVEN TRIAL (1969–70). The seven defendants had been charged with inciting a riot during the 1968 Democratic National Convention in Chicago. Hoffman and four other defendants were convicted following a trial that featured antics such as Hoffman stomping on a judicial robe, but the convictions were later overturned. In 1973 he was arrested on charges of selling cocaine to an undercover narcotics officer; before the case came to trial, he went into hiding and spent six years (1974–80) working as an environmental activist in upstate New York and as a food reviewer in Europe, using an alias. He surfaced in 1980 for a nationally televised interview with Barbara WALTERS and eventually pleaded guilty to a lesser charge that netted him a brief prison sentence. His death was an apparent suicide.

Hoffman, Dustin (1937–) American film and stage actor. Hoffman has been a major film star since his acclaimed debut as the confused Benjamin Braddock in *The Graduate* (1967), directed by Mike NICHOLS. His consistent stardom has been unusual in that Hoffman has more often appeared in character roles than in standard romantic leads. Hoffman began his career on the New York stage in the 1960s, winning an Obie Award for his per-

formance in *The Journey of the Fifth Horse*. His successful films include *Little Big Man* (1970), in which he played a 112-year-old Indian survivor of Custer's last stand; *Papillon* (1973), in which he portrayed a nearsighted prisoner in a French penal colony; *All the President's Men* (1976), in which he appeared as reporter Carl Bernstein; and *Tootsie* (1982), in which he starred as a male actor who disguises himself as a female to get work. Hoffman won his first best actor ACADEMY AWARD for his role as a divorced father in *Kramer Versus Kramer* (1980) and his second for his performance as a man suffering from autism in *Rain Man* (1988). In 1997 Hoffman was again an Academy Award nominee for his role as a Hollywood producer in the drama *Wag the Dog*. Two years later, he received the Lifetime Achievement Award from the American Film Institute.

Hoffman, Malvina (1887–1966) American sculptor. Born in New York City, Hoffman studied with Auguste Rodin. She executed a number of realistic portraits of important figure of her day such as Jan PADEREWSKI and John MUIR, and is noted for her bronze figures of dancers, such as *Pavlova gavotte*, and monumental public commissions such as *The Sacrifice* at Harvard University's War Memorial. Hoffman is probably best remembered for a series of 100 anthropological portraits of the world's races she executed for the Hall of Man at the Field Museum in Chicago. She spent five years in travel and research preparing for this project and described it in her book *Heads and Tales* (1936). She was also the author of *Sculpture Inside and Out* (1939).

Hoffmann, Josef (1870–1956) Austrian architect and designer, a pioneer in the development of MODERNISM as expressed in the Werkstätte and Secession movements. Hoffmann was a pupil of Otto Wagner. After traveling in Italy, he returned to Vienna to work for Wagner from 1895 until 1899. He became a professor of architecture at the Vienna School of Applied Arts in 1899 and held that position until 1941. A member of the Secession, he helped found the Werkstätte in 1903. Hoffmann visited England in 1902 and was strongly influenced by the work of Charles Rennie

MACKINTOSH. His work moved away from the curvilinear forms typical of Wagner's work and became more rectilinear with squares, cubes and spheres appearing as favorite motifs. The Puckersdorf Sanatorium outside Vienna (1903–06) was a major example of the geometrically abstract direction in Hoffmann's work, while the special furniture designed for it carried the same themes. Hoffmann's major architectural masterpiece was the Palais Stoclet in Brussels (1905–11). It is a large town mansion in a geometrically austere style, with elaborate ornamentation inside and out. Much of its artwork is by Secessionist collaborators, including Gustav KLIMT and Carl CZESCHKA. Rich materials are used and detailing is elaborate, including special furniture, lighting fixtures, hardware and textiles. Hoffmann's designs included work for Werkstätte craftsmen and for factory production in great variety. Hoffmann was the designer of the Austrian pavilion at various exhibitions (Cologne in 1914, Paris in 1925, and Stockholm in 1930, among others), but it is his work of 1902 to 1910 that has attracted most interest in his career, particularly in recent years when the modernism of Secession work, with its characteristic ornamentation, has drawn increasing attention because of postmodern trends in both architecture and object design. Hoffmann remained active in both design and teaching, although few of his works were actually executed. Now much admired and collected, a number of his designs for furniture, metalwork, ceramics and textiles are currently produced in reproduction.

Hofmannsthal, Hugo von (1874–1929) Austrian playwright, story writer, poet and opera librettist. Hofmannsthal was a gifted and versatile writer who achieved his greatest successes as a playwright who combined a romantic sensibility with a deep moral intelligence. The first of his plays to win notice, *Death and the Fool* (1898), was a lyrical romance. *The Adventurer and the Singer* (1898) and several adaptations from classic Greek tragedies—*Elektra* (1903), *Oedipus and the Sphinx* (1905), *King Oedipus* (1907) and *Alcestis* (1909)—followed. His most acclaimed play was *Everyman* (1911), based on a famous medieval mystery play. Subsequent plays

by Hofmannsthal include *The Difficult Man* (1921) and *The Tower* (1925), both of which deal with social issues. Hofmannsthal also won renown as a librettist for operas by Richard STRAUSS, including *Elektra* (1909), *Der Rosenkavalier* (1911), and *Ariadne auf Naxos* (1912). Hofmannsthal was a cofounder, in 1920, of the SALZBURG FESTIVAL.

Hofstadter, Robert (1915–1990) U.S. physicist. He won the NOBEL PRIZE in 1961 for his research into the size and structure of the particles that make up the nucleus of the atom. The Royal Swedish Academy praised him for providing the first “reasonably consistent” picture of the nuclear structure of the atom, and for determining the size and shape of the proton and neutron. He taught at Stanford University from 1950 to 1985.

Hogan, William Ben(jamin) (1912–1997) U.S. golfer. The winner of more than 60 tournaments, he is considered one of the finest players in golf history. Known as “Bantam Ben” (he weighed only 135 pounds) he was a four-time winner of the U.S. Open. His most memorable Open win came in 1950, less than a year-and-a-half after a serious automobile accident left his future in doubt. He also won the PGA tournament twice, the Masters title twice and the British Open once.

Hogarth Press See Virginia WOOLF.

Holbrooke, Richard (Charles Albert Holbrooke) (1941–) American diplomat. Born in New York City, Holbrooke graduated from Brown University with a B.A. in 1962. He joined the foreign service and, after a four-year stint in Vietnam, Holbrooke served in Paris with the U.S. negotiating team seeking a peace agreement with the North Vietnamese. Holbrooke left government service in 1969 to serve as a postgraduate fellow at the Woodrow Wilson School at Princeton University, where he remained until 1970, when he began a two-year stint as the director of the Peace Corps in Morocco. In 1972 Holbrooke became editor of *Foreign Policy*, a quarterly magazine devoted to international affairs. Four years later he joined the new Democratic administration of President Jimmy

Carter as assistant secretary of state for Asian and Pacific affairs, and remained in that post until Carter’s defeat by Ronald REAGAN in 1980 sent him to the private sector.

In 1993 Holbrooke returned to government service when President Bill CLINTON nominated him as the U.S. ambassador to Germany, where he aided the administration in its efforts to redefine the U.S. relationship with its European allies under NATO and the emerging EUROPEAN UNION. In 1993 Holbrooke became assistant secretary of state for European and Canadian affairs. Holbrooke became well known for his role in attempting to persuade the Bosnian, Croat and Serb factions to suspend their military operations in the Yugoslav civil war (1991–95) and sit down at the negotiating table. In 1995 he brokered a cease-fire and a power-sharing arrangement that was incorporated in the DAYTON ACCORDS. Holbrooke left the State Department in 1996 to pursue a career as an investment banker at Credit Suisse First Boston. In 1999 he was confirmed by the Senate as the U.S. delegate to the United Nations after a long and better nomination process and served for the remainder of the Clinton administration.

Holiday, Billie (Eleanora Fagan, Eleanora Gough) (1915–1959) American jazz and blues singer, known as Lady Day; one of the great tragic figures in American jazz. The daughter of an unwed cleaning woman and a guitarist, Holiday was born in Baltimore, Md. She went to New York and by age 15 was singing in HARLEM nightclubs while living in poverty. Her rise was extraordinary; her talent was recognized almost immediately not only by the public but also by the greatest jazz musicians of the day. In the 1930s she sang with the bands of Benny GOODMAN, Count BASIE and Artie SHAW and performed with such greats as pianist Teddy WILSON and saxophonist Lester YOUNG; her partnership with Young ranks as one of the all-time great collaborations in jazz. Despite her professional success, her personal life was chaotic and insecure. Her later years were marred by heroin addiction and alcoholism, which took a sad toll on her health and her career.

At its peak, Holiday’s voice was at once casual and yet haunting; her un-

canny phrasing and intonation, married to her life experience, gave her the ability to communicate the inner meaning of a given song. What Edith Piaf is to French ballad singing, Billie Holiday is to the blues. Among the songs for which she is best known are “I’ve Got My Love to Keep Me Warm,” “The Very Thought of You,” “These Foolish Things” and “Autumn in New York.” Her autobiography is *Lady Sings the Blues*.

Hollister Anabale, Gloria (1902–1988) American explorer. In 1931, Hollister set a woman’s world record for ocean descent in a bathysphere. She was the chief assistant of famed oceanographer William Beebe on many of his voyages in the 1920s and 1930s. She also served with other expeditions of the New York Zoological Society.

Holloway, Stanley (1890–1982) A beloved showman of the now-vanished British music halls, Stanley Holloway worked in a fish market before becoming a singer. In the 1930s his comic monologues as “Sam Small of Lancashire” made him an instant sensation, and he recorded several novelty tunes. In the 1940s and ’50s he appeared in films, notably as the gravedigger in

Jazz singer Billie Holiday, photographed by Carl Van Vechten (CARL VAN VECHTEN COLLECTION, LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

Laurence OLIVIER's *Hamlet* (1948) and costarring with Alec GUINNESS in *The Lavender Hill Mob* (1951). But it was onstage that Holloway had his greatest triumph, as dustman and philosopher/drunk Alfred Doolittle in the LERNER and LOEWE musical *My Fair Lady* (1956). The show (and film, in 1964) featured his classic renditions of "With a Little Bit of Luck" and "Get Me to the Church on Time." In 1960 Holloway was awarded the Order of the British Empire. In 1980, when he was 90 years old, Holloway gave a "royal command performance."

Holly, Buddy (Charles Hardin Holley) (1936–1959) Rock and roll composer, vocalist, and guitarist. Holly is one of the great founding figures of ROCK AND ROLL. In addition to his performing excellence as lead guitarist and vocalist of his band, Buddy Holly and the Crickets, he also stands as one of the foremost songwriters in the history of rock and roll. His classic hits, all of which were recorded between 1956 and 1959, include "That'll Be the Day," "Everyday," "Peggy Sue," "Oh Boy," "Words of Love" and "Raining in My Heart". Holly was born in Lubbock, Tex., in 1936 and learned the guitar at age 12. He formed his first band while in junior high school and won national fame when "That'll Be the Day" hit Number One on the Billboard charts in 1957. He died in a famous 1959 plane crash that also took the lives of rock stars "Big Bopper" (J. P. Richardson) and Richie Valens. Paul MCCARTNEY, who purchased the rights to most of Holly's songs, is among the many stars of contemporary rock music who was deeply influenced by Holly's work.

Hollywood A section of LOS ANGELES, CALIFORNIA, celebrated as the center of the American motion picture and television industries. In 1883 a Kansas prohibitionist, Harvey Wilcox, opened a real estate office seven miles from Los Angeles, subdivided a 120-acre tract and (at his wife's suggestion) filed the name "Hollywood" with the county recorded on February 1, 1887. Ten years later a post office was established, and the area became a sixth-class city. In 1910 it was annexed to Los Angeles, and its permanent boundaries were established in 1937: Doheny Drive on the west, the top of the Santa Monica

Mountains on the north, the Los Angeles River on the east and Melrose Avenue on the south. The consistent, sunny weather and the area's distance from the New York film trusts encouraged filmmakers to establish studios there as early as 1907, when the Selig Polyscope Company arrived to shoot scenes for *The Count of Monte Cristo*. Although every major studio built production facilities in the area within the next 20 years, only COLUMBIA, PARAMOUNT and RKO were located within city limits (today, only Paramount). During the film industry's peak production years in the late 1930s, an estimated 750 features were made annually in Hollywood and environs.

Popular landmarks include Grauman's Chinese Theater (with its courtyard of celebrity footprints and handprints), the Griffith Park Observatory, the Hollywood Bowl, the Hollywood Hotel and the Brown Derby (the last two now closed or relocated). Hollywood has survived the crises of Depression, three wars, air pollution, the growing presence of drugs and prostitution, and the competitive inroads of radio, television and the recording industry—and continues as a symbol of the hope and heartbreak of the American Dream. Much of Tinseltown's colorful past has perished over the years, through greed and neglect, but recently there have been encouraging signs of change. The "Walk of Fame," for example, was instituted in 1960—emblazoning the names of famous entertainers onto brass stars and implanting them into the sidewalks of Hollywood Boulevard and Vine Street. (At a rate of one name per month, by 2004 the total included 2,150 stars. In 1978 the legendary "Hollywood" sign, built on the side of Mt. Cahuenga in 1924, was restored. But there are still no holly and no woods in Hollywood.

Hollywood at war When the U.S. entered WORLD WAR II (Dec. 1941), the HOLLYWOOD film industry was eager, but ill-prepared, to play a major role in the war. Working under the restrictions of the PRODUCTION CODE had forced filmmakers to eliminate most social and political commentary from films. The war called for Hollywood to be a soldier in a PROPAGANDA campaign to convince people that democracy was worth fighting for.

Hollywood stood at the peak of its influence in 1941, averaging some 85 million paid admissions in the U.S., and dominated the world market. In June 1942 the U.S. created an official propaganda agency, the **Office of War Information**, and appointed Elmer Davis as its director. OWI immediately opened a Hollywood office, the Bureau of Motion Pictures, and began to work with studios to ensure that films complemented U.S. war policy. A government manual asked studios: "Will This Picture Win the War?" Films were to emphasize the war as a "people's war" against FASCISM, stress unity among the Allies and point out the strengths of democratic society. At the behest of the government the industry churned out films praising America's allies. *Mission to Moscow* (WB, 1943) was the industry's tributes to STALIN, and *North Star* (Goldwyn, 1943) a salute to the heroic Russian people; *The White Cliffs of Dover* (MGM, 1944) portrayed the British war effort; *Casablanca* (WB, 1943) united U.S. and French citizens; even China emerged as a great democracy in *Dragon Seed* (MGM, 1944).

Some of Hollywood's finest directors left the comfortable confines of Hollywood to make documentary and propaganda films for the War Department. William WYLER's *The Memphis Belle* (1944), John FORD's *The Battle of Midway* (1942) and John HUSTON's *The Battle of San Pietro* (1945) and *Let There Be Light* (1945) stood out. Perhaps the finest combination of documentary and propaganda film to emerge from the war was Frank CAPRA's series of films, *Why We Fight*, which told military recruits why America was fighting Germany, Japan and Italy and what they were preserving by so doing. Hollywood stars such as James STEWART, Tyrone Power, Douglas Fairbanks, Jr., Robert Montgomery and Clark GABLE entered the service and many others gave freely of their time to entertain troops and help raise money for the war effort. Hollywood emerged from the war as the premier mass entertainment force in the world, but would soon see its position collapse from the challenge of television and the rise of worldwide film production.

Hollywood Ten Term coined to describe a group of American screenwrit-

ers and directors who were imprisoned and blacklisted following allegations before the HOUSE UN-AMERICAN ACTIVITIES COMMITTEE of communist affiliations. The committee had begun an "investigation" of HOLLYWOOD in the fall of 1947. Refusing to answer questions under the freedom of speech guaranteed by the First Amendment rather than the self-incrimination clause in the Fifth, they were voted in contempt of Congress on November 24, 1947. The following year they were tried in federal court, found guilty, and each sentenced to a year in prison. After the Supreme Court refused to review the convictions, they went to prison in the spring of 1950. The Ten were screenwriters Alvah Bessie, Herbert Biberman, Lester Cole, Ring LARDNER, Jr., John Howard Lawson, Albert Maltz, Samuel Ornitz, Adrian Scott, Dalton Trumbo, and director Edward Dmytryk. After their release, many were blacklisted by the film industry. Some could gain work only by using pseudonyms. The best-known example was Trumbo's "Robert Rich," the name under which he won an ACADEMY AWARD for best screenplay for *The Brave One* (1956). Ironically, those went to the Federal Correctional Institution in Danbury, Connecticut, found that J. Parnell Thomas, former head of the HUAC committee that had condemned them, was also there, serving time for taking kickbacks.

Holm, Hanya (1898–1992) German-American dance teacher and choreographer. Through her teaching and lecture-demonstrations, Holm became one of the molders of the modern dance movement in America. She danced with Mary Wigman's company (1921–30), then opened the New York City branch of the Wigman School (1931), which became the Hanya Holm Studio (1936–67), one of the most important modern dance schools. In 1941 she founded the influential Center of the Dance in the West in Colorado Springs. She gained popular acclaim as a choreographer of such Broadway musicals as *Kiss Me Kate* (1948), *My Fair Lady* (1956) and *Camelot* (1960).

Holman, M. Carl (1919–1988) American poet, activist, editor and scholar described as the godfather of the CIVIL RIGHTS movement. President

of the National Urban Coalition from 1968, Holman was noted for his adeptness at forming coalitions among diverse groups and individuals. He emphasized to blacks the importance of education, warning them that without it the next generation would become economically superfluous.

Holmes, Oliver Wendell, Jr. (1841–1935) Associate justice U.S. Supreme Court (1902–32). Arguably the greatest justice of the 20th century, Holmes was the son of the author-physician, Oliver Wendell Holmes, who was not only a leading poet, essayist and novelist but also a professor of anatomy at Harvard Medical School. Young Holmes was educated at Harvard, where he was class poet of 1861. After graduation he joined the Union Army, served in the Civil War and was wounded several times. After the war Holmes again enrolled at Harvard, but instead of following medicine, as had his father, he enrolled in the law school. A practicing lawyer, Holmes also taught law at Harvard. In 1881 his slim volume, *The Common Law*, containing a series of his public lectures, was published and immediately established Holmes as a legal philosopher of international reputation. He became an associate justice of the Massachusetts Supreme Court after Louis BRANDEIS was appointed to the U.S. Supreme Court, and he was later elevated to be the state's chief justice. Twenty-three years after, President Theodore ROOSEVELT tapped him for the U.S. Supreme Court. Justice Holmes was famous for short, well-reasoned majority and dissenting opinions. He applied the law equitably without favoritism or agenda. He served 29 years with distinction, retiring at age 90.

Holmes à Court, Michael Robert Hamilton (1937–1990) South Africa-born financier. He built a business empire in AUSTRALIA that made him that country's wealthiest man. He started out with a small textile mill and an ailing road haulage and engineering concern in 1973. By 1987, through a series of shrewd business and stock deals, his company was worth A\$1.3 billion. He lost much of his fortune in the worldwide stock market crash of 1987, but had rebuilt it to A\$700 million by 1990.

Holocaust Name commonly used to describe the systematic mass murder of millions of JEWS in Nazi-dominated Europe, and the period when this took place. For Jews and many non-Jews alike, the Holocaust is regarded as the most horrific event in modern history. The Holocaust was more or less simultaneous with WORLD WAR II, but constitutes a separate event. It served no military purpose, but rather grew out of Adolf HITLER's intense ANTI-SEMITISM and his desire to "purify" the German Reich. Hitler's book *MEIN KAMPF* had outlined his contempt for the Jewish people; this virulent antisemitism became a cornerstone of NAZISM. Hitler's repeated insistence that the Jews were responsible for Germany's and the world's ills found a responsive chord among many Germans who sought a scapegoat for their problems. In the early 1930s, acts of intimidation against Jews in Germany became widespread. Nazis urged boycotts of Jewish businesses, and paramilitary storm troopers frequently attacked Jews, beating them and destroying Jewish property. After Hitler became chancellor in early 1933 many Jews, fearing the worst, fled Germany for the U.S., Britain and other countries. The majority, however, remained behind. In 1935 the Nazis enacted the **Nuremberg Laws** (1935), depriving German Jews of many of the rights of German citizens. On the evening of Nov. 9, 1938—**Kristallnacht** ("Night of Broken Glass")—Nazi thugs began a deliberate campaign of violence against Jews throughout Germany. Synagogues were burned, Jewish shops were looted and thousands of Jews were arrested. The German occupation of much of Europe during World War II brought millions of other Jews under Nazi jurisdiction. Initially, many of these Jews were confined to ghettos in the occupied countries. They were then systematically rounded up and transported to concentration camps, there to be used for slave labor or killed. Hitler's policy of exterminating the Jews—designated as "the FINAL SOLUTION to the Jewish problem"—was formalized at the **Wannsee conference** in January 1942. German killings of Jewish civilians continued up to the last days of the war. Although many of the Jews of Western Europe died, many were also sheltered or helped to escape by sympathetic gentiles

in those countries, themselves victims of German occupation. The more numerous Jews of Eastern Europe—particularly in Poland and Ukraine—were virtually wiped out. More than 90% of Poland's 3.5 million Jews died in concentration camps; at the war's end, only 4,000 Jews remained in Poland. Altogether, an estimated 6 million Jews died during the Holocaust; their suffering and the suffering of those who managed to survive this dark period cannot be measured.

Holst, Gustav (1874–1934) English composer. Born in Cheltenham, Gloucestershire, Holst was the son, grandson and great-grandson of musicians. He studied at the Royal College of Music, London, and later taught there from 1919 to 1924. At various times a church organist, trombonist and music school administrator, he organized British army musical activities in Greece and Turkey during WORLD WAR I. Early in his career, Holst was influenced by composers Richard STRAUSS and Ralph VAUGHAN WILLIAMS and folklorist Cecil Sharp; the latter two aroused his interest in English folk music. A composer of brilliant harmonic inventiveness, Holst is best known for his orchestral suite *The Planets* (1914–16), in which each movement corresponds to a planet of the solar system. The immense popularity of *The Planets* has tended to obscure the excellence of many of Holst's compositions. These include the choral *Hymn of Jesus* (1917), the opera *A Perfect Fool* (1920–22), the *Choral Symphony* (1923–24), the symphonic poem *Egdon Heath* (1927) and the orchestral *Hammersmith* suite (1930).

Holt, John (1923–1985) American educator. Holt's landmark book *How Children Fail*, a diary based on his experience as a teacher, touched off a national debate on the failings of American education during the 1960s. The book and its sequel, *How Children Learn*, sold well over a million copies and were translated into 14 languages. Based on his conclusions, he founded the magazine *Growing without Schooling* (1977), which was designed to help parents educate their children at home.

Holt, Victoria (Eleanor Burford Hibbert) (1906–1993) British novel-

ist. Holt was best known for her gothic novels filled with plot twists and intrigue. *Mistress of Mellyn* (1960), *The Demon Lover* (1982) and *The Captive* (1989) were popular ones. Under the pseudonym Jean Plaidy she wrote historical novels, which received critical and popular acclaim. These include *Beyond the Blue Mountains* (1947), *Queen of the Realm: The Story of Elizabeth I* (1985) and *Victoria Victorious* (1986). Notable for her extraordinary prolificacy, Holt also was published under her maiden name, Eleanor Burford, and the pseudonyms Philippa Carr, Elbur Ford, Kathleen Kellow, and Ellalice Tate.

Holtby, Winifred (1898–1935) British author and feminist. Holtby left Oxford to serve with the WAAC in WORLD WAR I. Her experiences led her to a more international political stance, which, along with FEMINISM, figures in her journalism and novels. Her novels include *Anderby World* (1923), *The Land of Green Ginger* (1927) and *South Riding* (1936), which takes place in her native Yorkshire and is perhaps her best-known work. Holtby was a frequent contributor to the *Manchester Guardian*, *Time and Tide* and many other British periodicals. She is the subject of *Testament of Friendship* (1940), written by her friend Vera BRITAIN.

Holyoake, Keith Jacka (1904–1983) Prime minister of NEW ZEALAND (1957, 1960–72). Holyoake was a farmer who then entered parliament as a Nationalist Party member in 1932. He later served as deputy prime minister and minister of agriculture from 1949 to 1957, when he briefly took over as prime minister when Sir Sidney Holland became ill. He was elected prime minister in 1960 serving until 1972. Holyoake was an advocate of multiracialism, and outspoken against APARTHEID in SOUTH AFRICA and the regime of Ian SMITH in Rhodesia. He maintained close ties to the United States, and backed it by sending troops to VIETNAM in the 1960s. He was instrumental in the creation of the special trade relationship with Australia (NAFTA). Holyoake was governor-general from 1977 to 1980 when he became New Zealand's first knight of the garter.

Home, Lord See Alec DOUGLAS-HOME

Home Rule Movement in IRELAND, backed by the Liberals in Great Britain, seeking to establish a parliament in Dublin responsible for internal Irish affairs. The Home Rule Association was founded in 1870 by Isaac Butt (1813–79) and gained momentum under the leadership of his successor Charles Parnell. Home Rule bills introduced in the British Parliament under Gladstone (1886, 1893) were defeated. A third bill introduced in 1912 was opposed by Ulster Protestants, who feared potential domination by the Roman Catholic majority in the south of Ireland. By 1914 the issue of Home Rule had brought Ireland to the brink of civil war and led to the EASTER REBELLION (1916). In May 1921 six counties in northern Ireland obtained Home Rule with a parliament at Stormont, Belfast, forming the loyalist state of NORTHERN IRELAND. The remaining 26 counties negotiated for the status of a dominion with control over foreign affairs as well as internal and representation in the LEAGUE OF NATIONS, which was agreed to in December 1921. (See also DE VALERA.)

Honduran Civil War of 1909–11

Former Honduran president, Manuel Bonilla led his conservative supporters in revolt against liberal president Miguel R. Davila, who was placed in office by Nicaraguan dictator José Santos Zelaya after the HONDURAN-NICARAGUAN WAR OF 1907. The ensuing civil war was inconclusive, and in an armistice February 8, 1911, both sides agreed to abide by the forthcoming elections. Bonilla was elected president October 29, 1911.

Honduran Guerrilla War of 1981–90

Thousands of Salvadorans, Miskito Indians and anti-Sandinista Nicaraguans took refuge in Honduras, which feared conflict in their nations would exacerbate leftist struggle against the government. Cuban-trained Marxist guerrillas carried out urban terrorism, and police and military forces increased efforts to suppress them, prompting the U.S. to increase its military aid. The Honduras-based Nicaraguan Democratic Force (FDN) rebels continued raids into Nicaragua, heightening tensions with that country.

In 1990 the contras left Honduras, ending the guerrilla war.

Honduran-Nicaraguan War of 1907 José Santos Zelaya, who became president of NICARAGUA through a liberal revolt in 1893, ruled as a dictator and meddled in the affairs of his neighbors. In 1903 Honduran conservative Manuel Bonilla overthrew the Hon-

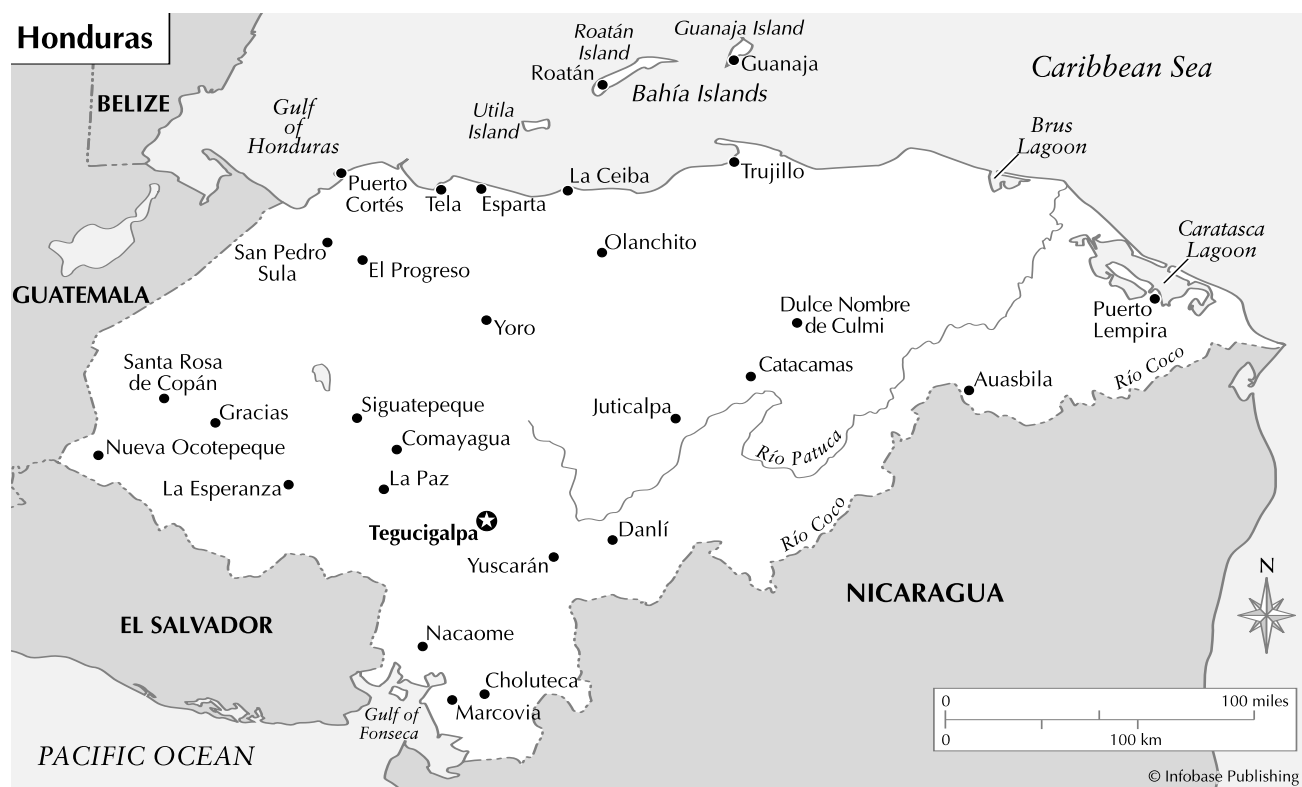

duran liberal government supported by Zelaya. Honduran rebels in 1906 attempted to oust Bonilla, getting Zelaya's support. Honduran troops invaded Nicaragua in pursuit of rebels, and Zelaya demanded war reparations. Honduras refused, and Nicaraguan forces invaded Honduras and on March 18, 1907, won the Battle of Masague, the first battle fought in Cen-

tral America with machine guns. Nicaraguans occupied the Honduran capital, Tegucigalpa, Bonilla fled, and Zelaya named Miguel R. Dávila as president. (See also HONDURAN CIVIL WAR OF 1909–11.)

Honduras (Republic of Honduras) Nation located on the Central American isthmus. Honduras covers an area

HONDURAS

1900	American fruit companies establish huge holdings; build railroads and docks.
1903	U.S. Marines intervene to end political strife; install Miguel Dávila as president.
1923	Civil war; Marines return; U.S. sets policy of nonrecognition of revolutionary governments; government formed by military-dominated PNH Party holds power for 31 years, despite challenges.
1931	"Sigatoka" blight damages banana crop; attempted revolution.
1943	Death of Froilán Turcios, novelist.
1948	PNH President Andino steps down.
1957	Liberal government elected; begins land reforms and social security programs.
1963	Military coup.
1969	Football war; border disputes with El Salvador erupt into two-week war after fans riot at a soccer match.
1971	First major north-south paved highway completed.
1974	Hurricane Fifi destroys three-quarters of banana crop.
1975	United Fruit Company admits \$1.25 million bribe to "high government official" for relaxation of export duties.
1976	Continued border conflict with El Salvador seriously damages foreign trade; President López overthrown by young officers who restart land reform.
1978	Political parties resume activity.
1980	Military government effectively ended by assembly elections.
1982	Liberal government elected; new constitution removes control of military from president; country joins in forming Central American Democratic Community.
1983	Contra rebels use Honduras as base to strike in Nicaragua; CIA conducts anti-Sandinista operations from Honduras.
1986	First succession of one elected government to another since 1929.
1987	Sixty percent of arable land owned by government, United Brands and Standard Fruit.
1990	"Banana War"; 600,000 workers threaten general strikes, win pay raise; UN troops disarm contras; conservative Callejas elected president.
2001	Ricardo Maduro is elected president.
2006	Manuel Zelaya takes office as president.

of 43,266 square miles, including several islands off its Caribbean Sea coast and 288 islands in the Gulf of Fonseca off its Pacific coast. Politically unstable, Honduras was under the control of the military almost continuously from 1923 to 1975. Power was gained through numerous coups and maintained through rewritings of the constitution. The so-called Soccer War with EL SALVADOR, which began in 1969, was ostensibly over the outcome of a football (soccer) match but in reality was over economic issues. A 1980 treaty resolved the conflict but left Honduras weakened politically and economically. A return to a democratic government occurred in 1982 with the election of Roberto Suazo Córdova as president; all military political power was ended in 1984. Elections in 1990 brought Rafael Leonardo Callejas to the presidency, continuing the democratic process. Throughout the 1990s Honduras made strides toward a democratic society, such as electing a Liberal Party candidate president in 1993 and 1997, ending compulsory military service in 1995 and placing the armed forces under civilian control in 1999. In 2001 Ricardo Maduro became the

sixth democratically elected president since the end of the military dictatorship in 1992. José Manuel Zelaya Rosales of the Liberal Party of Honduras was elected president in 2005.

Hone, Evie (1894–1955) Irish painter and stained-glass designer. Born in Dublin, Hone studied in London with Walter Sickert and in Paris with Andre Lhote and Albert Gleizes. Her early work consisted mainly of abstract paintings executed in deep, jewel-like colors. Hone was strongly influenced by Georges Rouault in her painting and in the stained glass she created from 1933 until her death. Her most celebrated works are the *Crucifixion* and *Last Supper* windows at the Eton College Chapel (1942–52).

Honecker, Erich (1912–1994) East German communist political leader, secretary-general of the Socialist Unity (Communist) party (1971–89). Honecker joined the German Communist party in his teens, was arrested under HITLER in 1935, sentenced to 10 years in prison in 1937 and released at the end of WORLD WAR II. He was first secretary of the party's youth organization

from 1946 to 1955. He joined the Central Committee in 1946 and the Politburo as candidate member in 1950 and as full member in 1958. Honecker succeeded Walter ULBRICHT as party leader in 1971. His policy was aimed at strengthening EAST GERMANY economically while repressing any challenges to the party's authority. He presided over East Germany's transformation into an industrial and military power second only to the USSR in the WARSAW PACT. His hardline leadership was successfully challenged in 1989 as East Germany's economy declined, tens of thousands of East Germans fled to the West and hundreds of thousands more took to the streets demanding an end to Communist rule. Honecker was ousted from his post on Oct. 10, 1989. Subsequent investigations revealed that he had led a lavish, privileged lifestyle at the expense of the East German people; he was put under house arrest, but because of ill-health he had not been formally tried for corruption as of March 1991. He later fled to the USSR.

Honegger, Arthur (1892–1955) French composer. Born in Le Havre of Swiss parents, he studied at the Zurich

Conservatory and the Paris Conservatory. With Darius MILHAUD, Francis POULENC and three other young French composers, Honegger was a member of the 1920s group known as the six. Often polyphonic and polytonal, his music is strongly rhythmic and sharply dissonant. He is particularly noted for his theatrical works, such as the ballet *Judith* (1926), the oratorio *King David* (1921–23) and the film music for *May-erling* (1935). His other works include the tone poem *Pacific 231* (1923), five symphonies, piano works, chamber music and songs.

Honeymooners, The See Jackie GLEASON.

Hong Kong Former British Crown colony located on the southeast coast of China. The territory of Hong Kong included Hong Kong island (ceded to Britain in 1841) and adjacent islands, the Kowloon Peninsula (ceded in 1860) and the New Territories (acquired by 99-year lease in 1898), which consist of a mainland area adjacent to Kowloon and 235 islands. Hong Kong covers a total area of 414 square miles and was administered by Great Britain. The Japanese occupied Hong Kong during WORLD WAR II (1941–45), after which British rule resumed. Long a major center of trade, in the last third of the 20th century Hong Kong also became a leading center of manufacturing and international finance; along with JAPAN, it has taken a lead in the production of computers, radios, television sets, audio-video equipment and cameras. Historically an important center for refugees, Hong Kong experienced problems in the 1970s from increased illegal emigration from China, and in the 1980s from the arrival of huge numbers of Vietnamese BOAT PEOPLE. In 1989 Britain began a forced repatriation of the boat people to alleviate some of the problems. The Sino-British Joint Declaration of 1985 provided for China to regain sovereignty over Hong Kong on July 1, 1997. Fears over Hong Kong's future under Chinese rule led to increased emigration from the territory and pressure on Britain to admit the millions born in Hong Kong who can claim British passport rights under the British National (Overseas) category of immigration. In 1997 Great Britain re-

turned Hong Kong to China. It is now a Special Administrative Region of China, under the country's "one country, two systems policy." Hong Kong retains its economic system and a large measure of autonomy on local matters.

Hood, Raymond M. (1881–1934) American architect, one of many to work on the design of ROCKEFELLER CENTER, who moved toward MODERNISM at a time when eclecticism was the dominant direction in architecture in the U.S. A graduate of MIT, Hood was associated with J. Andre Fouilhoux and John Mead Howells. Together they won a competition for the design of the Chicago Tribune Building (1922), a neo-Gothic skyscraper with useless flying buttresses at its top. Under the influence of European modernism, Hood moved toward a noneclectic, modern style with details relating to ART DECO. His vertically striped Daily News and horizontally banded McGraw-Hill buildings (1930 and 1934), designed with Fouilhoux, exemplify this shift. Hood played a major role in the Art Deco design characteristics of Rockefeller Center (begun in 1932).

Hook, Sidney (1902–1989) American social philosopher. Hook was a prolific writer on politics, public policy and education. He described himself as a socialist and a "secular humanist," which he defined as someone who considered morality to be linked to human nature and separate from religious belief. Although a staunch anticommunist, he was also an early critic of the anticommunist crusade of Senator Joseph MCCARTHY in the 1950s. Hook taught at New York University from 1927 to 1969. In 1973 he became a senior research fellow at the Hoover Institution on War, Revolution, and Peace at Stanford University. His best-known books included *Toward the Understanding of Karl Marx: A Revolutionary Interpretation* (1933), *The Hero in History* (1943), and *Pragmatism and the Tragic Sense of Life* (1974).

Hoover, Herbert Clark (1874–1964) President of the United States (1929–33). One of the great humanitarians of the 20th century, Hoover had the misfortune to preside over the beginning of the GREAT DEPRESSION of the 1930s. Born into a Quaker family in

Herbert Hoover, 31st president of the United States
(LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

West Branch, Iowa, Hoover was orphaned at the age of eight and thereafter lived with various relatives. He attended Stanford University, graduating with a degree in geology (1895), and joined a London-based mining firm. During the next 20 years he worked as a mining engineer in some 14 countries, including Australia and China, where he supervised important mining projects and introduced new mining techniques. He formed his own consulting firm in 1908 and became a millionaire.

In London at the outbreak of WORLD WAR I, Hoover turned to public service and played a major role in humanitarian relief efforts. Heading the American Relief Committee and the Committee for the Relief of Belgium, he organized food relief for 11 million refugees in war-torn Belgium and northern France. When the U.S. entered the war in 1917, President Woodrow WILSON appointed him chairman of the Food Administration Board, responsible for food rationing and conservation efforts in the U.S. Hoover continued his overseas relief work after the war, helping to avert famine in defeated Germany and the massive famine in the USSR in 1921.

As secretary of commerce (1921–28) under Presidents Warren G. HARDING and Calvin COOLIDGE, Hoover modernized the Commerce Department. He reformed the bureaus of Foreign and Domestic Commerce and the Bureau of Fisheries. He declared the radio airwaves public property, and introduced

radio station licensing. During his tenure, the number of commercial radio stations in the U.S. increased from two to several hundred. Hoover also called the first commercial aviation conference (1922) and the first national conference on highway safety (1923), promoted uniform manufacturing standards and supported child health and welfare activities and conservation programs.

One of the most energetic but self-effacing figures of the 1920s, Hoover was also one of the few high officials who were not implicated in the scandals of the Harding administration. With a reputation for integrity, brilliant administrative abilities and wide practical experience, Hoover was selected as the Republican presidential candidate in 1928. He defeated Al SMITH by the second-largest popular vote margin up to that time.

Hoover promised to bring high standards to government and pledged to end poverty and hunger in America. However, the STOCK MARKET CRASH OF 1929 intervened. Hoover established the Reconstruction Finance Administration to make loans to stricken businesses, adopted a budget designed to stimulate the economy, and urged the Federal Reserve Board to ease the money supply and lower interest rates. However, he refused to involve the federal government in direct relief, believing that the efforts of private business and individual initiative would best revive the economy. As his administration progressed, Hoover was severely criticized for appearing to favor big business while ignoring the plight of the ordinary citizen. His apparent lack of concern was reinforced by his cold, humorless manner and his inability to communicate his ideas convincingly to the people. His claim that "prosperity is just around the corner" was not taken seriously by the majority of voters, and he was soundly defeated by Democrat Franklin D. ROOSEVELT in the election of 1932.

Hoover remained a vocal critic of Roosevelt and the NEW DEAL, claiming that FDR's big-government programs threatened individual liberty and stifled initiative. He initially opposed the U.S. entry into WORLD WAR II, believing that the war was not America's concern. At war's end in 1945, acknowledging Hoover's expertise, President Harry S. TRUMAN asked Hoover to again undertake famine relief efforts. In 1946

Hoover traveled over 50,000 miles, visiting 38 countries to determine how food could be distributed to the areas where it was most needed. His efforts helped save millions of Europeans and Asians from starvation. Hoover continued as an adviser to Truman. His Hoover Commission (1947–49) studied the organization of the executive branch of government and issued 273 recommendations to improve its efficiency; the majority of these recommendations were adopted. Hoover also advised President Dwight D. EISENHOWER on a number of issues, and won new respect as the elder statesman of the REPUBLICAN PARTY.

For more than a generation after his 1932 electoral defeat, Hoover was largely viewed as a heartless reactionary and do-nothing, a villain in 20th-century American history. However, historians have reevaluated Hoover's presidency and acknowledged his substantial positive accomplishments.

Hoover, J(ohn) Edgar (1895–1972)

American government administrator, director of the Federal Bureau of Investigation (FBI). Born in Washington, D.C., Hoover studied law at George Washington University, joined the U.S. Department of Justice in 1917, and from 1919 to 1921 worked extensively on the PALMER RAIDS. In 1924 he began his lifelong career as director of the Bureau of Investigation, which was renamed the FBI in 1935. During these years Hoover personified the FBI, both in its successes and its failures. At the time he took it over, the Bureau was inefficient and scandal-ridden. Hoover

J. Edgar Hoover, director of the FBI for 48 years

quickly turned it into a crack policing agency, doing away with political appointments and recruiting improved staff, establishing centralized fingerprint and statistical files, developing a crime laboratory and founding a training academy. In the early 1930s he launched a war on "public enemies," engineering manhunts for high-profile criminals such as John DILLINGER, "Pretty Boy" FLOYD and "Baby Face" NELSON. This proved a highly successful public relations ploy but did little to dislodge the hold of organized crime, which Hoover had been criticized for largely ignoring. During WORLD WAR II, he was given the responsibility of protecting the U.S. from sabotage or subversion by enemy agents. In the COLD WAR era he renewed his earlier campaign against COMMUNISM by pursuing what he perceived as left-wing organizations and sympathizers with an obsessive tenacity that brought him charges of civil-rights violation and the prosecution of personal vendettas. During his many years in office serving under eight presidents, Hoover amassed tremendous personal power and became the subject of enormous controversy.

Hoover Dam Formerly known as Boulder Dam, this immense engineering wonder was erected on the Colorado River, between Nevada and Arizona, between 1931 and 1936. Built by the U.S. Bureau of Reclamation, it is still one of the largest and most important hydroelectric power sources in the world and contributed greatly to the postwar growth of the southwestern U.S. Project workers founded Boulder City, Nev.

Hope, Bob (Leslie Townes Hope)

(1903–2003) American entertainer, comedian and film star. Born in England, he moved with his family to Ohio at the age of four. One of the most popular entertainers on radio during the 1930s and 1940s and on TV beginning in the 1950s, he gained world renown for his seven "Road" movies (1940–53) costarring Bing CROSBY and Dorothy Lamour. During his career he made over 50 films. One of the most charitable figures in the performing arts, he made annual trips overseas to entertain American troops during WORLD WAR II, the KOREAN WAR, the VIETNAM WAR and in peacetime. He continued to work in commercials and TV specials and occasionally entertained troops. A personal friend of several U.S.

presidents, he was awarded the Presidential Medal of Freedom in 1969. He also received the Hersholt Award, an Emmy and an honorary ACADEMY AWARD.

Hopkins, Anthony (1937–) British film, stage and television actor. Born in West Glamorgan, Wales, Hopkins began acting at age 17 at the local YMCA. Entranced by the theater, in 1960 he enrolled in the Royal Academy of Dramatic Art (London). That year he made his stage debut in *The Quare Fellow*. For four years, Hopkins worked in regional repertory theaters before he won recognition for his London performance in *Julius Caesar*. He made his inaugural performance as a film actor in *The White Bus* (1967); he received greater notice for *The Lion in Winter*, a

picture released the following year in which he played one of the sons of King Henry II (Peter O'Toole) and Eleanor of Aquitaine (Katharine HEPBURN). The role for which he is best known is Hannibal Lecter, a cannibalistic psychologist who aides and evades the FBI, in *The Silence of the Lambs* (1990), *Hannibal* (2000) and *Red Dragon* (2002). For his first depiction of the deranged genius, Hopkins won the Oscar for best actor. Hopkins also garnered critical review in the Merchant-Ivory picture *The Remains of the Day* (1993), in which he portrayed the butler of a British aristocrat who sympathizes with the Nazi regime, and the Oliver Stone film *Nixon* (1995), in which he played the American president. *Nixon* also gained Hopkins another Academy Award nomination for best actor. In all, he has starred in over 60 films. Hopkins received a knighthood from Queen ELIZABETH II in 1993, which he later renounced to become a U.S. citizen.

Hopkins, Harry Lloyd (1890–1946) American public official and presidential adviser. Born in Sioux City, Iowa, Hopkins was trained as a social worker, and after college he settled in New York City. There, in 1931, he was appointed by then-governor Franklin D. ROOSEVELT as director of the Temporary Emergency Relief Administration. After Roosevelt became president, he made Hopkins chief of the Federal Emergency Relief Administration and the Civil Works Administration. Hopkins subsequently headed the WPA (1935–38) and served as secretary of commerce (1938–40). He was the key figure in administering NEW DEAL public assistance programs and in supplying jobs to some eight million workers. A close

friend of Roosevelt, Hopkins was called on frequently by the president to serve as an emissary, confidant and adviser, particularly during WORLD WAR II. Administering the LEND-LEASE program in 1941, he also went on many wartime missions in London and Moscow. Despite ill health, he accompanied the president to all the major conferences of the war and helped shape peacetime alliances. After Roosevelt's death, at the request of President TRUMAN, the gravely ill Hopkins held talks with STALIN in 1945 regarding the UNITED NATIONS.

Hopkins, Sam "Lightnin" (1912–1982) American country BLUES singer. Hopkins began his career in 1920 as a minstrel at Texas country fairs. He subsequently performed throughout the South and built a national reputation. After a hiatus of 15 years he regained prominence through appearances at New York's CARNEGIE HALL and the Village Gate club. Hopkins was one of the greatest and the last of the original blues performers. He was widely acclaimed by critics for his imaginative guitar playing, which exerted a major influence on ROCK guitar players.

Hopman, Harry (1906–1985) Australian tennis player; captain of Australia's Davis Cup team in 1938 and 1939 and again from 1950 to 1969. During the latter period, known as the golden age of Australian tennis, he

*British actor Sir Anthony Hopkins during the
filming of SELECTED EXITS, 1993 (PHOTOFEST)*

worked with such great players as Rod Laver and John Newcombe. Hopman helped Australia capture the Davis Cup 15 times. He moved to Florida in the late 1970s to open an international tennis camp for young players.

Hopper, Edward (1882–1967) American painter. One of 20th-century America's finest realists, Hopper was born in Nyack, N.Y. He studied in New York City, with Robert HENRI, George Luks, Arthur B. Davies and others from 1900 to 1906. Hopper gained his first recognition through his early etchings. He traveled to Europe a number of times from 1906 to 1910, but was little affected by the new movements he encountered there. Hopper lived in New York City, exhibited at the ARMORY SHOW (1913), had his first one-man show at the Whitney Studio Club in 1919 and his first retrospective at the Museum of Modern Art in 1933. Hopper's paintings fall within the tradition of his teacher Henri and of the Ashcan School, but with a very personal approach. Painting his native New York or the landscapes of New England, he depicted slices of streets in cities or small towns strongly lit and shadowed with a cold light, often peopled with solitary figures, nearly always evoking a sense of profound loneliness and isolation. Unsensational and starkly geometric, his best known works include *From Williamsburg Bridge* (1928, Metropolitan Museum, N.Y.C.), *House by the Railroad* (1925, Museum of Modern Art, N.Y.C.), *Early Sunday Morning* (1930, Whitney Museum, N.Y.C.) and *Nighthawks* (1942, Art Institute of Chicago).

Horenstein, Jascha (1898–1973) Russian-born conductor. Born in Kiev, Horenstein and his family moved to Vienna in 1904. He studied music there and in Berlin. In 1929 he was appointed director of the Düsseldorf Opera and conducted the company. In the 1930s he traveled and conducted throughout Europe. He settled in the U.S. in 1941, became an American citizen, and conducted in the U.S. and Latin America. After World War II Horenstein settled in Switzerland. A thoughtful and meticulous conductor, he was particularly known for his interpretations of the symphonies of Anton Bruckner and Gustav MAHLER.

Horne, Lena (1917–) American singer and actress. Known for her stylish interpretations of jazz and pop standards, Horne was born in Brooklyn, New York. While a teenager, she sang in a chorus at the famous Cotton Club in HARLEM. In the early 1940s she went to HOLLYWOOD, where she was featured in several all-black movies, most notably *Stormy Weather* (1943), whose title song became her signature tune, and also in several all-star musicals, where her own numbers could be neatly cut from the films when they played theaters in the South. The first black woman vocalist to be featured with a white band, Horne faced and fought discrimination for much of her career. She toured Europe and frequently appeared in nightclubs and on television variety shows in the 1950s and '60s. In 1981 Horne made a triumphant return to Broadway in a one-woman show, *Lena Horne: The Lady and Her Music*. In 1996 Horne won a Grammy Award for the best vocal jazz performance for *An Evening with Lena Horne* (1995).

Horney, Karen (1885–1952) German-American neo-Freudian psychoanalyst. Born in Hamburg, Germany, Karen Horney received her M.D. in Berlin in 1915. After World War I, she began work at the Berlin Psychoanalytic Institute. Horney took exception to many of the negative aspects of FREUD's theories, particularly those regarding women, and, like Alfred ADLER, went on to develop her own theories of personality and neurosis and to question key Freudian concepts and methods. Her books *Our Inner Conflicts* and *Neurosis and Human Growth* are considered landmark publications. Horney moved to the U.S. in 1932, and in 1941 she resigned from the New York Psychoanalytic Society and founded the Association for the Advancement of Psychoanalysis and the American Institute of Psychoanalysis.

Horniman, Annie Elizabeth Fredericka (1860–1937) British theatrical patron. A champion of modern drama, the wealthy Horniman founded Miss Horniman's Company of Actors. She financed a permanent home for the Irish National Theatre Company in the ABBEY THEATRE, Dublin. Though an admirer of W. B. YEATS, she had a difficult relationship with Lady GREGORY. Horniman

withdrew her funding of the Abbey in 1910 when the theatre was kept open on the day of King EDWARD VII's funeral. She then focused on the Gaiety Theatre in Manchester, in which she had begun to invest in 1907. There she promoted new plays by local playwrights until 1921.

Hornsby, Rogers (1896–1963) American baseball player. Hornsby is a legend among baseball players and fans. He was the batting champion in the National League from 1920 to 1925, and again in 1928. Considered one of the greatest hitters of all time, his 1924 batting average of .424 still stands as a modern-day league record. He was player-manager for the St. Louis Cardinals in 1925 and 1926, leading the team to a winning World Series in 1926. He maintained a lifetime batting average of .358 from 1915 to 1933, won the most valuable player awards in 1925 and 1928, and was elected to the Baseball Hall of Fame in 1942.

Hornsby-Smith, Margaret Patricia, Baroness (1914–1985) British politician; a prominent figure in the British House of Commons as Conservative MP for Chislehurst. Appointed parliamentary secretary to the ministry of health in 1951, she was, at 37, the youngest woman to hold office in any government. Hornsby-Smith held that post until 1957. When sworn of the Privy Council in 1959, she was the youngest woman ever to have received that honor.

Hornung, Paul Vernon (1935–) American football player. A stand-out running back at Notre Dame, Hornung was named winner of the prestigious Heisman Trophy in 1956. He turned professional with the Green Bay Packers and in 1960 set a season scoring record with 176 points. Under coach Vince LOMBARDI, he helped lead the team to three consecutive NFL championships (1960–62). Known for his relaxed approach to training, Hornung was suspended for the 1963 season for gambling on football games, although he never bet against his own team. His most memorable performance came in 1956, when he ran for five touchdowns.

Horowitz, Vladimir Samoylovich (1903–1989) Russian-born pianist

whose technical brilliance and idiosyncratic interpretations placed him in the fore-front of modern keyboard virtuosos. Born in Kiev, Horowitz studied with Felix Blumenfeld, a pupil of Anton Rubinstein. His friendship with the composer Alexander Scriabin confirmed his ambitions to specialize in music of the late Russian romantics. He left the USSR in 1925 and three years later made his sensational CARNEGIE HALL debut with the Tchaikovsky 1st Piano Concerto (Thomas BEECHAM on the podium made his U.S. conducting debut). He immediately assumed his place among a galaxy of keyboard luminaries in New York including his great friend, Sergei RACHMANINOFF. He became best known for the speed and terrifying intensity of his Liszt and Rachmaninoff performances, although he also championed the icy fire of Scriabin and the poised clarity of Muzio Clementi and Domenico Scarlatti. His concert career, which made him the highest paid classical pianist in history, was frequently interrupted by “retirements” due to ill health and a high-strung temperament. His return to Moscow in 1986 was a spectacular media event and was broadcast live worldwide. He made more than 150 records and won more than 20 Grammy Awards. Since 1933 he was married to Wanda Toscanini, the daughter of conductor Arturo TOSCANINI.

Horrocks, Sir Brian (1895–1985) British military officer. Horrocks fought in WORLD WAR I. As a general in WORLD WAR II, he helped the British take North Africa from the Germans at the crucial battle of EL ALAMEIN (1942). He also played a major role in the June 1944 D day INVASION OF NORMANDY. He retired from active duty in 1949 and was knighted and given the important ceremonial post of Black Rod in the House of Lords. He was also a historian and a well-known British television personality.

Horthy de Nagybányai Miklós (1868–1957) Hungarian admiral and political leader. An aide-de-camp to Emperor FRANZ JOSEPH from 1911 to 1913, Horthy de Nagybányai commanded the Austro-Hungarian fleet during WORLD WAR I. After Béla Kun became head of the Hungarian govern-

ment in 1919, Horthy led a counter-revolution that ousted the Marxists. In 1920 he became regent and headed a nationalistic and conservative regime, guiding the country in the years between the two world wars and helping to recover some of the lands lost by HUNGARY in post-World War I settlements. He reluctantly joined WORLD WAR II on the side of GERMANY but continued to maintain ties with the Allies. In 1944, after Russian troops entered Hungary, Horthy unsuccessfully sued for a separate peace with the USSR and was soon imprisoned by the Germans. Freed by U.S. troops, he testified at the NUREMBERG TRIALS (1946), and in 1949 he settled in Portugal, where he died.

Horvath, Odon von (1901–1938) German novelist and playwright. Horvath was one of the most critically admired German writers of his generation prior to his untimely death. He enjoyed a series of successes on the stage with socially poignant and romantic plays, including *Revolte auf Cafe* (1927), *Sladek* (1929), *Italianische Nacht* (1931), *Hin und Her* (1934) and *Der Jungste Tag* (1937). His novels include *Der Ewige Spiesser* (1930), *Ein Kind Unserer Zeit* (1938) and *Jugend Ohne Gott* (1938).

Houdini, Harry (Ehrich Weiss) (1874–1926) Legendary American magician and escape artist. Born in Hungary, he later changed his name in honor of the French magician Houdin. In 1922 he went to New York City as a trapeze artist, and later began a magic act with his brother. On a trip to England, he mystified Scotland Yard with a staged escape and earned a wide reputation. He was particularly noted for his ability to escape from almost any seemingly impossible situation. He left instructions that, after death, he would return to a specific bridge in Chicago, and his followers have kept their vigil on that day each year—without result. He left his library of magic to the Library of Congress.

Hounsfield, Godfrey (1919–2004) British engineer who developed the first commercially successful CAT SCAN machines in Britain. For this work, Hounsfield shared the 1979 NOBEL PRIZE in physiology or medicine with Alan Macleod CORMACK.

Magician and illusionist Harry Houdini (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

Houphouët-Boigny, Félix (1905–1993) African statesman, president of the Republic of the Ivory Coast (see CÔTE D'IVOIRE). Born in Yamoussoukro, Houphouët-Boigny was the son of a chief in the French colony of the Ivory Coast. He studied medicine in Paris, and returned to Africa to supervise his family's cocoa plantation and practice (1925–40). He entered politics and became chairman of the powerful African Democratic Rally in 1946. He served in the French National Assembly from 1946 to 1958. When the Ivory Coast attained autonomy within the FRENCH COMMUNITY in 1958, Houphouët-Boigny assumed the duties of president of the constituent assembly, and in 1959 he became the prime minister. Leading the country to full independence in 1960, he became president and was returned to that office in subsequent elections. He maintained close ties to France in commercial and cultural affairs.

House, Edward Mandell (1858–1938) U.S. diplomat. A political adviser to several Democratic Texas governors (1892–1904), House was given the honorary title of “colonel.” He assumed a major role in Woodrow WILSON's 1912 presidential campaign, and refused a cabinet post, choosing instead to help Wilson in a variety of

political and administrative functions. As Wilson's chief agent in foreign affairs, he helped explore mediation alternatives with European countries in WORLD WAR I. As head of the U.S. mission, he was one of the signers of the TREATY OF VERSAILLES in June 1919. Because of disagreements about ratification of the treaty, and possible U.S. entry into the LEAGUE OF NATIONS, Wilson and House separated, never seeing each other again.

Houseman, John (Jacques Haussman) (1902–1988) American actor and producer. In the 1930s he teamed with Orson WELLES on a series of projects. Their most famous collaboration was the 1938 radio production "War of the Worlds." He was best known for creating the role of Professor Kingsfield in the movie and television versions of *The Paper Chase*. Houseman's portrayal of the crusty law professor won him an Oscar in 1974 and led to a series of television ads for the Smith Barney investment firm. He also helped establish the Juilliard drama school and the Acting Company repertory group.

House Un-American Activities Committee (HUAC) Special committee of the U.S. House of Representatives established in 1938. At first called the Dies Committee, for its chairman, Texas Democrat Martin Dies, Jr., it was formed to investigate fascist, communist and other "subversive" organizations in the U.S. It became a standing committee in 1945. For 30 years after the end of World War II, HUAC concentrated on ferreting out communists and left-wingers in a variety of American institutions and industries. In 1947 it investigated the film industry and condemned the HOLLYWOOD TEN. The following year, it shifted its efforts to investigating the State Department and conducted hearings regarding the HISS-CHAMBERS CASE. In 1950 HUAC sponsored a bill that became the McCarran Act, which, until some provisions were overturned by the courts, necessitated the registration of American communists as foreign agents, severely limiting their travel and preventing them from serving in government and certain strategic industries. As the RED SCARE of the 1950s lessened in intensity, HUAC gradually became less powerful. Re-

named the Internal Security Committee in 1969, it was abolished in 1975.

Housman, A(lfred) E(dward) (1859–1936) English poet and scholar. Housman remains one of the most widely read of English poets. While he was by no means a prolific poet, a number of his rhymed, elegiac verses—reflecting as they do the sunset of Victorian England—have taken their place as beloved classics of the language. Poems from *A Shropshire Lad* (1896), *When I Was One-and-Twenty* and *To an Athlete Dying Young* have been memorized by generations of English schoolchildren. *Last Poems* (1922) is a representative collection of Housman's verse. Housman led a quiet, academic life, serving for most of his adult years as a Latin professor at Cambridge University.

Houston, Whitney (1963–) American pop musician. Born in Newark, N. J., Houston's familial connections placed her in an advantageous situation to develop her talents. Her mother Cissy was both a member of a gospel music choir and backup singer for Elvis PRESLEY; her cousin Dionne Warwick was a female pop music legend in her own right. When she turned 11 Houston began to refine her vocal talents by following in the footsteps of her mother, singing in her church choir, and singing backup for Chaka Kahn and Lou Rawls. In 1985 Houston's first album, *Whitney Houston*, debuted and soon reached the top of the pop music charts, with one of its songs, "Saving All My Love for You," earning her a Grammy in 1986. In 1987 her second album, *Whitney*, premiered, with another single, "I Wanna Dance with Somebody (Who Loves Me)," resulting in another Grammy (1988) for the young singer. Her critical and commercial success on both albums, which sold 10 million copies each, established her as a powerhouse in pop music.

In the 1990s Houston began to diversify her talents by pursuing parts on the silver screen. In 1992, two years after the premier of her third album, *I'm Your Baby Tonight*, and a year after her marriage to R&B singer Bobby Brown, she starred with Kevin COSTNER in *The Bodyguard*, a film describing the budding relationship between a former Secret Service agent turned bodyguard (Costner) and an award-winning

singer and actress (Houston) whom he agrees to protect from a deranged fan bent on killing her. Houston's remake of "I Will Always Love You," a song originally written and performed by Dolly Parton, for the movie's soundtrack was hugely successful. In 1994 Houston won four Grammys for the performances associated with the *Bodyguard* soundtrack. However, her attempt to mirror her *Bodyguard* character's critical success remained elusive. While *Waiting to Exhale* (1995) and *The Preacher's Wife* (1996) were popular movies, neither garnered her much praise from reviewers.

hovercraft Invented by British engineer Sir Christopher Cockerell in 1955, the hovercraft is an air-cushion vehicle that can travel over water or flat terrain. It is technically an aircraft but resembles a boat. The hovercraft is lifted several feet off the ground by air pressure generated under the hull by propellers. The pressure is contained by a flexible rubber "skirt" around the hovercraft's hull. Following his patent of the hovercraft, in 1956 Cockerell formed his own company, Hovercraft Limited, and interested the British government in his invention. The first practical hovercraft was flown in 1959. Further refinements were made, and in 1968 the largest hovercraft ever built, the SR.N4, was introduced. This model, which can carry up to 600 passengers as well as automobiles, is in regular commercial service on the English Channel between Dover and Calais.

Hovhaness, Alan (1911–2000) American composer. Hovhaness, of Scottish and Armenian parentage, is noted for the variety of international influences in his musical compositions. Born in Massachusetts, Hovhaness studied at the New England Conservatory and at Tanglewood. From 1948 to 1952 he taught at the Boston Conservatory, after which he moved to New York and devoted many years to extensive travel. His compositions, which are often intensely melodic with a modal foundation, sometimes feature Eastern musical touches such as a repetition of single notes within a limited pitch and range. Major works by this prolific composer include *Lousadzak* (1944), *Khaldis* (1951), *Meditation on Orpheus* (1958),

Mountains and Rivers without End (1968) and *Mount Saint Helens* (Symphony no. 50 [1982]).

Howard, Leslie (1893–1943) British film and stage actor and director. Howard was a gifted and sensitive leading man who made his mark in a number of memorable films of the 1930s. Howard served in the British Army in World War I and afterward suffered from shell-shock, which led him to pursue an acting career on the stage to distract him from his difficult memories. He rapidly achieved renown and made his Broadway debut in *Just Suppose* (1922); Howard's film debut came in *Outward Bound* (1930). He achieved stardom as the victimized lover of Bette Davis in *Of Human Bondage* (1934). Subsequent successes included *The Scarlet Pimpernel* (1935), *The Petrified Forest* (1936), *Pygmalion* (1938) and *Gone With the Wind* (1939), in which he played Confederate gentleman Ashley Wilkes. Howard disappeared at sea in 1943 during WORLD WAR II, when the plane he was flying in was shot down while he was on a diplomatic mission for Britain.

Howard, Robin Jared Stanley (1924–1999) British dance patron. Howard founded the London Contemporary Dance Theatre and helped popularize modern dance in England. He also established the Contemporary Dance Trust and the London Contemporary Dance School. In 2001 the theater at the school was renamed the Robin Howard Dance Theatre in his honor.

Howard, Roy (1883–1964) American newspaper reporter, editor and publisher. He began his career as a news reporter in 1902 for the *Indianapolis News*, and later worked in St. Louis, Cincinnati and New York. In 1907 he became the New York manager of United Press International Association, and finally its president from 1936 to 1952. In 1925 he became chairman of the Scripps-McRae newspaper chain, which later became Scripps-Howard—a leading newspaper conglomerate with over 30 papers. Founder of the conglomerate *New York World-Telegram and Sun*, he was its editor until 1960 and its president until 1962.

Howard, Trevor (1916–1988) British actor. Howard made the transition from theater to film in 1944 and appeared in more than 70 films, including such classics as David LEAN's *Brief Encounter* (1946) and Carol REED's *The Third Man* (1950). In 1962, he portrayed Captain William Bligh opposite Marlon BRANDO's Fletcher Christian in a remake of *Mutiny on the Bounty*.

Howe, Sir Geoffrey (later: Baron Howe of Aberavon) (1926–) British politician. A Conservative MP, Howe served as solicitor-general (1970–72) and minister for trade (1972–74) under Edward HEATH. Howe was a senior figure in the cabinet of Margaret THATCHER (1979–90). As her first chancellor of the exchequer (1979–83), he introduced strict monetarist policies (see MONETARISM). He served briefly as home secretary before becoming foreign secretary in 1983. In 1988 Howe was promoted to the nominal post of deputy prime minister, but his influence in the cabinet waned as a result of disagreements with Thatcher's European policy. Howe's dramatic resignation from the cabinet in October 1990 followed by his open criticism of Thatcher in the House of Commons led to Thatcher's ouster as leader of the CONSERVATIVE PARTY and as prime minister. Howe was the longest-serving member of Thatcher's cabinet. In 1990 Howe resigned from Thatcher's cabinet over her policies toward Europe and the adoption of a single European currency. Howe retired from politics in 1992 and was made a life peer. He published his memoirs, *Conflict of Loyalty* in 1994.

Howe, George (1886–1955) American architect whose work moved from eclecticism to MODERNISM and who exercised considerable influence as an educator and spokesman for modern architecture. Howe was educated at Harvard and at the École des Beaux-Arts in Paris. He joined the Philadelphia firm of Mellor, Meigs & Howe where he produced a variety of traditional houses and other buildings. After meeting William LESCAZE in 1929, Howe converted to modernism ideas and designed, with Lescaze as a partner, the Philadelphia Savings Fund Society building (PSFS 1932), the first excellent example of modern skyscraper design in America. Independently, Howe designed a handsome

house with a strikingly cantilevered deck at Bar Harbor, Maine (1939), which was included in the MUSEUM OF MODERN ART exhibit and book *America Builds*. From 1950 to 1954 Howe was chairman of the architecture department at Yale University where he introduced Louis I. KAHN as a teacher and brought about reforms that made Yale a leading architectural school.

Howe, Gordon “Gordie” (1928–) Canadian athlete. Perhaps the greatest ice hockey player of all time, Howe retired holding every major record for scoring, endurance—and penalties. He was named the National Hockey League's Most Valuable Player six times and was leading scorer six times. Known for his quick and sneaky use of his elbows to intimidate lesser players, Howe was a complete athlete who amazed teammates and rivals alike with his stickhandling ability. He spent the first 25 years of his incredible career with the Detroit Red Wings. He was named to the Hockey Hall of Fame in 1972, but emerged from retirement in 1973 to join the WHA's Houston Aeros, where, at 45, he skated alongside his sons, Mark and Marty. Howe returned to the NHL with the Hartford Whalers in 1977 and finally retired in 1980.

Howe, Irving (1920–1993) American writer. A leftist social and literary critic, he is the author of such works as *William Faulkner: A Critical Study* (1952), *Politics and the Novel* (1957), *Decline of the New* (1970) and *Celebrations and Attacks* (1978). Winner of the National Book Award, his *World of Our Fathers* (1976) is an evocative history of New York's immigrant Jewish community. Howe has played a prominent role in liberal American periodicals as the founding editor (1953) of *Dissent* and writer for *The Partisan Review*, *The New Republic* and *The New York Review of Books*. Also a prolific editor, Howe is the author of the 1982 autobiography *A Margin of Hope*.

Hoxha, Enver (1908–1985) Albanian communist leader, first secretary of the Albanian Communist Party (1941–85). Hoxha was the longest-ruling communist leader of the 20th century. Educated in France, he became a communist in the early 1930s. After his return to ALBANIA, he was a

cofounder of the Albanian Communist Party and became its first secretary. During WORLD WAR II he was active in the RESISTANCE movement against the Italian occupation of Albania. With the establishment of a communist regime at the end of the war, he became Albania's premier and foreign minister. He held these posts until the early 1950s, when he resigned them to consolidate his power as party head. A strict Stalinist, Hoxha remained loyal to the USSR until STALIN's death in 1953 (see STALINISM). He then severed diplomatic ties with Moscow and joined Peking in its ideological struggle against the Soviets. After the death of Chairman MAO ZEDONG he drifted away from China, though without severing diplomatic ties. He subsequently turned Albania into an even more isolated and secretive nation than it had been.

Hoyle, Sir Fred (1915–2001) British astronomer. Hoyle studied at Cambridge University, graduating in 1938. Hoyle lectured in mathematics at Cambridge from 1945 to 1958 when he became Plumian Professor of Astronomy. He also served as director of the Cambridge Institute of Theoretical Astronomy from 1967; he left Cambridge in 1973. He has held numerous research and visiting posts at such institutions as the California Institute of Technology, Cornell University, Manchester University and the Royal Institution in London. From 1954 to 1948 he was a staff member of the Mount Wilson and Palomar Observatories. He was one of the first to adopt the steady-state theory of Thomas Gold and Hermann BONDI and did much to introduce it to a wider audience in such works as *The Nature of the Universe* (1950); he was also one of the last to support the theory. He argued that violations found in the homogeneity of both space and time in the universe were more apparent than real, for they could be simply small-scale effects, whereas the steady-state theory was concerned with uniformities on the order of a billion light-years or more. Hoyle's contributions to cosmology and astrophysics have been numerous, deep and extensive. One of his main achievements was to show how elements heavier than hydrogen and helium could have been produced. With W. A. Fowler and

Margaret and Geoffrey BURBIDGE, Hoyle gave in 1957 the first comprehensive account of how the elements are produced in the interior of stars.

A prolific writer on a wide variety of subjects, Hoyle wrote a number of science fiction novels beginning with *The Black Cloud* (1957), on the history of astronomy in *Copernicus* (1973), on archaeoastronomy in *From Stonehenge to Modern Cosmology* (1972), on the origin of disease in *Lifecloud* (1978) with Chandra Wickramasinghe, and on questions of social policy in *Commonsense in Nuclear Energy* (1980). Such works are noted for their originality, rigor and a willingness to speculate and to argue in new and unexpected fields. He also wrote a prodigious number of lectures, papers, textbooks and monographs, of which some of the most significant are his *Frontiers of Astronomy* (1955), *Astronomy and Cosmology* (1975) and, with J. V. Narlikar, various papers on gravity.

Hua Guofeng (1920–) Chinese political leader. A communist functionary and political disciple of MAO ZEDONG, he was minister of public security and deputy premier until the death of ZHOU ENLAI, becoming premier in 1976. When Mao died later that year, Hua also became the Communist Party chairman and head of the Military Affairs Commission. Responsible for the arrest of CHIANG CH'ING and the GANG OF FOUR, he was nonetheless criticized for his own political errors and personal cult of personality. In conflict with Deputy Premier DENG XIAOPING, he gradually lost leadership and power. In 1980 he was ousted as premier, the following year he lost the post of party chairman, and the year after that he was stripped of his seat on the Politburo. Hua continued to serve on the Central Committee of the Communist Party until November 2002. In October 2001 allegations surfaced that Hua had left the Communist Party for health reasons.

Huai-Hai, Battle of Important engagement from November 1948 to January 1949, at the end of the CHINESE CIVIL WAR OF 1945–49. The battle is named for the two main defensive positions held by the Nationalists, the Huai River and the Lung Hai railway. The defeat of the Nationalist armies by

overwhelming communist forces led to the fall of Suchow on December 1. Destroying massive amounts of Nationalist supplies and severely undermining Nationalist morale, this battle opened the invasion route to Nanjing and Shanghai, which were conquered by communist forces in the spring of 1949 and helped to seal the communist victory in the war.

Huang, Kechang (1903–1986) Chinese communist military officer. A survivor of the LONG MARCH of 1934–35, Huang was made chief of staff of CHINA's People's Liberation Army in 1958, although he was demoted the following year in a political struggle. In 1967 during the CULTURAL REVOLUTION, he was denounced as a rightist and remained in hiding for a decade.

Huang He (Hwang Ho; Yellow River) Almost 3,000 miles long and of immense historical importance, this river rises in China's Qinghai province and flows eastward through Kansu and Inner Mongolia, then south along the northern border of Henan. Its lower course has changed many times over the centuries and is vital to the farmlands of the Great Plains. In 1938 the Chinese diverted its course southward to deter Japanese invasion during the second SINO-JAPANESE WAR—a shift that cost nearly a million lives and was not rectified until 1947. Its perennial floods have earned it a reputation as “China's Sorrow.”

Huascaran Site of one of the worst natural disasters of this century. This mountain in the Ancash department of western Peru is the highest in the country and one of the highest in the Andes. In 1962 an avalanche rolled down its slope, burying the village of Ranrahirca, situated at its foot. But the worst was yet to come: In 1970 earthquakes destroyed 10 villages.

Hubbard, L. Ron (1911–1986) American writer. Hubbard's best selling 1950 book, *Dianetics: The Modern Science of Mental Health*, became the basis for the Church of **Scientology**, founded by Hubbard in 1954. The church was based on a form of psychotherapy called “auditing” and not on the worship of a god. Hubbard lived on a huge yacht from 1968 to 1975, avoiding var-

ious law enforcement officials who had accused him of fraud and other crimes. In 1975 his church was the target of investigations by both the Internal Revenue Service and the Federal Bureau of Investigation.

Hubbell, Carl Owen (1903–1988) American baseball player. A star pitcher famed for his screwball, Hubbell won 253 games for the New York Giants between 1928 and 1943. He hurled five consecutive 20-win seasons and led the New York Giants to the World Series three times. Hubbell was named the National League's most valuable player in 1933 and 1936 and was an eight-time all star. In a legendary feat in the second All-Star Game (1934), he struck out in succession five of the game's greatest hitters: Babe RUTH, Lou GEHRIG, Jimmie FOXX, Al Simmons and Joe CRONIN. He was elected to the Baseball Hall of Fame in 1947.

Hubble, Edwin Powell (1889–1953) American astronomer and cosmologist. Hubble was educated at the University of Chicago where he was influenced by astronomer George Hale. A good athlete, he was offered the role of Great White Hope in a match against black heavy-weight champion Jack JOHNSON. Instead, he accepted a Rhodes scholarship to Oxford where, between 1910 and 1913, he studied jurisprudence, represented Oxford in athletics and fought French boxer Georges Carpentier. He practiced law briefly in America, but in 1914 returned to the study of astronomy at the Yerkes Observatory of the University of Chicago; he earned his Ph.D. in 1917. After being wounded in France in World War I he took up an appointment in 1919 at the Mount Wilson Observatory in California, where Hale was director and where he spent the rest of his career.

Hubble's early work involved studies of faint nebulae, which in the telescopes of the day appeared as fuzzy, extended images. After the powerful 100-inch telescope went into operation at Mount Wilson, he produced some of the most dramatic and significant astronomy of the 20th century. In 1923 he succeeded in resolving the outer region of the Andromeda nebula into "dense swarms of images which in no way differ from those of ordinary stars." Several of them were cepheids,

which allowed him to determine their distance as the unexpectedly large 900,000 light-years. Between 1925 and 1929 he published three major papers showing that the spiral nebulae were at enormous distances, well outside our own galaxy, and were in fact isolated systems of stars, now called spiral galaxies.

In 1929 Hubble made his most significant discovery, announcing what came to be known as **Hubble's Law**. Using his own determination of the distances of 18 galaxies and the measurements of radial velocities from galactic red shifts carried out by Vesto Slipher and Milton Humason, he saw that the recessional velocity of the galaxies increased proportionately with their distance from us. It was this work that demonstrated to astronomers that the idea of an expanding universe, proposed earlier in the 1920s by Alexander FRIEDMANN and Georges LEMAITRE, was indeed correct. The expansion of the universe is now fundamental to every cosmological model. Hubble's Law was soon seen as containing the key to the size, age and future of the universe. Hubble also made a major contribution to the study of galactic evolution by producing the first significant classification of galaxies, a scheme that is still used as the basis for galactic classification.

Hubble Space Telescope Astronomical instrument designed and constructed in the 1980s to orbit the Earth and, with its 94.5-inch mirror, to peer deeper into space and with a clarity 10 times greater than ever achieved by an Earth-based telescope. Launched by the space shuttle *Discovery* and deployed into an orbit 381 miles above Earth on April 25, 1990, the *Hubble* at first experienced problems with its antennas. After this was solved, the telescope began to send its first images back to Earth—pictures that were blurred due to an improper curvature in *Hubble's* primary mirror. Images from *Hubble* were still clearer than those from Earth-based astronomy but were only one-third as sharply focused as had been intended. The unexpected defect dashed hopes that *Hubble* might soon search for BLACK HOLES, distant quasars and possibly begin a calculation of the size of the universe, one of the telescope's chief objectives. In the early 1990s scientists used computers to im-

prove the resolution of *Hubble's* images. For the next 15 years, the *Hubble Space Telescope* took more than 700,000 photos of celestial objects such as galaxies and dying stars, providing spectacular images to the general public and valuable information to astronomers. Its photos have helped to prove the existence of dark energy, tracing gamma-ray bursts to distant planets and providing sample images of their atmosphere.

Hudson, H. Claude (1886–1989) African-American leader who helped found the NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE (NAACP). Born to a family of former slaves in rural Louisiana, Hudson later went on to become the first black student to receive a law degree from Loyola University. He moved to Los Angeles in 1923 and eventually became one of the city's most respected black leaders.

Hudson, Rock (Roy Scherer Jr.) (1925–1985) American actor. Hudson's rugged good looks led him to superstardom under the old HOLLYWOOD studio system. He was twice voted the top box-office draw in the United States. His best-known films were *Giant* (1956), for which he received his sole ACADEMY AWARD nomination, and *Pillow Talk* (1959), one of three romantic comedies in which he starred with Doris Day. In the 1970s, he became one of the first movie stars to make a successful transition to television when his series *MacMillan and Wife* ran for six seasons. His disclosure that he had been diagnosed as having AIDS helped to build worldwide awareness and increased public support to fight the disease.

Hudson, William H(enry) (1841–1922) Argentine-born English writer. Hudson was born into a family of Americans (of British descent) who had immigrated to Argentina to start a ranch. His early, active years in the Argentina countryside were to leave a lasting influence on Hudson, who at age 15 contracted rheumatic fever and was thereby compelled to adapt to the more secluded life of a writer. He moved to London in 1874 and lived in poverty for more than two decades until his writings—natural history essays, memoirs and fiction—began to

win him first a critical and then a popular following. His best books include the story collection *The Purple Land* (1885), the novels *Green Mansions* (1904) and *A Shepherd's Life* (1910) and the nature study *Adventures among Birds* (1913).

Hue (Hué) Ancient capital of the Annamese kings of INDOCHINA. This agricultural city, near the mouth of the Hue River in central Vietnam, was badly damaged during the FRENCH INDOCHINA WAR OF 1946–54, and was again a scene of heavy fighting in 1968, during the TET OFFENSIVE of the VIETNAM WAR, when most of the city, including the palaces and tombs of the old kings, was destroyed.

Hufnagel, Charles Anthony (1916–1989) Heart surgeon, Hufnagel developed and implanted the first artificial human heart valve in 1952. He also participated in the first human kidney transplant operation (1947) and made a major contribution to the development of the heart and lung machine. In 1974 he was part of a three-doctor team that evaluated the health of President Richard M. NIXON (who was suffering from complications from an operation to treat his chronic phlebitis) and concluded that Nixon was too ill to testify at the WATERGATE conspiracy trial. Ironically, Hufnagel died of heart, lung, and kidney disease.

Hughes, Charles Evans (1862–1948) American statesman, presidential candidate, associate justice, U.S. Supreme Court (1910–16), chief justice (1930–41). A graduate of Brown University and Columbia University Law School, Hughes spent several years in private practice and later was special council to a state commission investigating business fraud. His success in this role led to his election as governor of his native New York (1907–10). A Republican, he was appointed to the U.S. Supreme Court in 1910 by President William Howard TAFT. However, he resigned in 1916 to run for president against Woodrow WILSON, who defeated him. Hughes served as secretary of state (1921–25) in the HARDING and COOLIDGE administrations. When Hughes was nominated for chief justice by President Herbert HOOVER, the nomination was opposed

because of Hughes's past representation of big businesses. Despite his pro-business leanings, Hughes voted in favor of much of the NEW DEAL legislation. He retired in 1941 after serving as chief justice for 11 years.

Hughes, Howard Robard (1869–1924) American inventor and industrialist. After working in the oil drilling business, Hughes invented a revolutionary cone-shaped drill bit (1908). He later founded the successful Hughes Tool Company, which manufactured his bits and other tools. He was the father of multimillionaire aircraft pioneer Howard HUGHES.

Hughes, Howard Robard (1905–1976) American industrialist, aviator and film producer. Hughes studied at Rice Institute of Technology and California Institute of Technology, and inherited the family fortune at his father's death in 1924. He went to California to produce motion pictures. His *Two Arabian Knights* won an ACADEMY AWARD in 1928. He brought to fame stars like Jean HARLOW, Paul MUNI and Jane Russell. He founded Hughes Aircraft Company in 1933. In one of his personally designed planes he set a world speed record in 1935, flying at 352 miles per hour. In 1938 he completed a flight around the world in record time. Later he designed the world's largest airplane, which made only one short flight (1947), with Hughes at the controls. He also acquired controlling interest in Trans World Airlines (1959), and purchased major stock interest in Northeast Airlines. He bought enormous tracts of land in and around Las Vegas in the late 1960s, and was instrumental in development of that resort community.

Becoming a recluse in later life, he moved to Nicaragua and England and was widely followed by the media as one of the world's wealthiest and most mysterious figures. He was being flown from Mexico to Houston for medical treatment in early April 1976, when he died en route of liver failure.

Hughes, Langston (1902–1967) American author. Hughes dropped out of Columbia University and was traveling in Europe when his verse was discovered by Vachel LINDSAY in 1925. Subsequent praise for his work en-

abled him to graduate from Lincoln University in Pennsylvania in 1929, and he worked in New York City as a prominent member of the Harlem literary revival. His free-verse poetry is especially noted for its colloquial rhythms, as in "The Negro Speaks of Rivers" (1926) and "Weary Blues" (1926). His writings include novels and autobiographical works.

Hughes, Richard (1906–1984) Australian foreign correspondent, historian and Far East expert. Based in Hong Kong, he covered the area for the London *Sunday Times* and wrote articles for *The Economist*, the *Sun* and *Herald* of Melbourne and the *New York Times*. He was one of two journalists permitted to interview British turncoat spies Donald MacLean and Guy BURGESS when they surfaced in Moscow in 1956. Hughes was a model for characters in spy novels by Ian FLEMING and John LE CARRÉ.

Hughes, Richard Arthur Warren (1900–1976) British author, poet and playwright. After a youth spent traveling and sometimes begging or performing for his keep, Hughes established his reputation with his first novel *The Innocent Voyage* (1929, published in Great Britain as *A High Wind in Jamaica*), which was adapted as a play in 1943 and a film in 1965. This novel and his second, *In Hazard* (1938, published in Great Britain as *In Hazard: A Sea Story*) was a popular work. Critics consider *Human Predicament* a series that consists of *The Fox in the Attic* (1961) and *The Wooden Shepherdess* (1973), his most important work. Volume three was unfinished at Hughes's death. His other works include the poetry *Lines Written Upon First Observing an Elephant Devoured by a Roc* (1922), *Confessio Juvenis: Collected Poems* (1926), and the plays collected in *The Sisters' Tragedy and Other Plays* (1924, reprinted as *Plays*, 1966).

Hughes, Ted (1930–1998) English poet. Born and raised in Yorkshire, Hughes is perhaps the most prominent poet to have emerged in postwar England. He was named Poet Laureate in 1984, succeeding John BETJEMAN. Educated at Cambridge University, Hughes was married from 1956 to 1963 to poet Sylvia PLATH. Hughes's free verse style is marked by a taut, energetic use

of language. He frequently employs violent imagery drawn from the struggle for survival in nature. His major volumes of poems include *The Hawk and the Rain* (1957), *Crow* (1970), *Gaudete* (1977) and *New and Selected Poems* (1982). Hughes also wrote numerous children's stories and has translated a number of East European poets.

Hughes, William Morris (1864–1952) Prime minister of AUSTRALIA (1917–23). Born in London, Hughes immigrated to Australia in 1884. He founded the Waterside Workers' Federation in Sydney in 1893. In 1894 he was elected to the New South Wales parliament as a Labour MP and transferred to the first federal parliament in 1901. Hughes held office in the Labour government of 1904, and named attorney-general in 1910, and became prime minister in 1915. He left the LABOUR PARTY in 1917 after his military conscription proposals were rejected, but he continued to lead a National Coalition until 1923. Hughes was instrumental in establishing the United Australia Party in 1931. He subsequently served as minister for external affairs (1937–39), attorney-general (1939–41), and minister for the navy (1940–41). Hughes was an intelligent and gifted orator who often aroused controversy as prime minister with his opinionated and emotional stance. During WORLD WAR I, he was regarded as a strong wartime leader, but at the PARIS PEACE CONFERENCE in 1919 he offended many, particularly the Japanese, with his imperialistic attitudes.

Huie, William Bradford (1910–1986) American author and activist. An Alabama journalist and CIVIL RIGHTS CRUSADER, Huie wrote more than 20 books, including the novel *The Revolt of Mamie Stover* and *The Americanization of Emily* (filmed, 1964). He was also the author of *He Slew the Dreamer*, a controversial biography of Dr. Martin Luther KING Jr.'s convicted assassin, James Earl Ray, and *The Execution of Private Slovik*, about Eddie SLOVİK, the only U.S. serviceman put to death for desertion in the 20th century. During the 1960s Huie emerged as the arch-opponent of the segregationist policies of Alabama governor George C. WALLACE. Huie was often a target of harassment, including cross-burnings.

Hull, Cordell (1871–1955) American statesman. Born near Byrdstown, Tennessee, Hull became a lawyer and Democratic member of the state legislature before his election to the House of Representatives, where he served from 1907 to 1921 and 1923 to 1931. A supporter and confidant of President Franklin D. ROOSEVELT, Hull resigned from Congress in 1933 to become secretary of state, an office he held until 1944. He was particularly interested in international trade as a method of fostering worldwide accord, instituting the Reciprocal Trade Agreements of 1934 and the “good neighbor policy” toward Latin America. As WORLD WAR II broke out in Europe, Hull urged economic aid for the Allies. After the U.S. entered the war, he fostered coordination among the Allied powers, traveling to Moscow in 1943 to press for greater cooperation. An internationalist in the Woodrow WILSON mode, Hull was convinced that a new world peace-keeping organization was absolutely essential to the creation of a lasting peace. As a delegate to the 1945 San Francisco Conference, Hull was a prime architect of the UNITED NATIONS, a role that brought him the NOBEL PEACE PRIZE later that year.

Hull, Robert Marvin “Bobby” (1939–) Canadian hockey player. A left wing with the Chicago Black Hawks, Hull was the dominant scorer of the 1960s, leading the National Hockey League in goal-scoring seven times and points three times. His slap-shot terrorized goaltenders, but his gentlemanly play won him the Lady Byng Trophy for good sportsmanship in 1966. A member of only one Stanley Cup winner, he lent instant credibility to the fledgling World Hockey Association by being the first name player to “jump” in 1972, signing with the Winnipeg Jets. When that league folded in 1979, he finished his career, with the NHL Jets and Hartford Whalers, retiring in 1980. He was named to the Hockey Hall of Fame in 1983.

Hulme, T(homas) E(dward) (1883–1917) British literary critic and poet. Although he wrote relatively little and died tragically young, Hulme exercised a major influence on literary MODERNISM. Both his critical essays and his poems were greatly admired by T. S. ELIOT and

Ezra POUND, among the notables. Hulme was a literary critic with a philosophical bent and austere, classical standards of aesthetics. He argued against the rhetorical excesses of Romanticism and favored a spare style in both prose and poetry. Hulme's admiration of what he termed hard, dry imagery influenced the poetic school of IMAGISM. Five brief poems by Hulme were published in 1912 in the literary journal *The New Age* under the ironic title *The Complete Poetical Works of T. E. Hulme*. Hulme was killed in WORLD WAR I. His major essays, edited by Herbert Read, were collected in two volumes, *Speculations: Essays on Humanism and the Philosophy of Art* (1924) and *Notes on Language and Style* (1929).

human engineering One of several terms that describe the relationship of human users to mechanical and other industrial products. The fields of anthropometrics and ERGONOMICS, which emerged after World War II, overlap the concerns of human engineering, with the latter term increasingly used to describe all such studies.

Human Genome Project Scientific project designed to discern and comprehend the entire genetic structure of human beings, involving the identification of the approximately 31,000 genes in the nucleus of a single human cell and the mapping out of the locations of these genes on chromosomes. The genesis of the project stemmed from a series of conferences that occurred between 1985 and 1987, in which scientists from the U.S., Britain, France, Germany and Japan planned the endeavor and conferred about the general procedures they would use. In 1990 the project began in the U.S. under the direction of James WATSON (one of the three initial discoverers of the DNA structure) and financed by the National Institutes of Health and the Department of Energy. Private firms also participated in this effort: Celera Genomics, led by J. Craig Venter, began testing a genome sequencing method that differed from the nationally funded efforts in the hopes of identifying a human genome sequence. Both privately and publicly funded scientists completed their work, and published their results in February 2001.

The goal of the project is to use the knowledge of genetic sequences to determine which genes are associated with physical traits in human beings, particularly those that cause inherited diseases or predispositions to such diseases. Additionally, it is hoped that the knowledge gained and the advances made possible by the project will allow the development of new medicines that capitalize on knowledge of the genetic structure of humans to fight diseases and illnesses.

Human Rights Watch U.S.-based human rights group devoted to publishing impartial findings on human rights abuses committed by countries throughout the world. Founded in 1978, it originally was called Helsinki Watch, and served to monitor the compliance of the Communist governments in Eastern Europe with the human rights provisions contained in Basket Three of the 1975 Helsinki Final Act. During the 1980s it expanded its operation to include Americas Watch, which exposed human rights abuses by Latin American governments. By 1988, after similar regionally focused "watch" groups had sprung up for Africa and Asia, their leaders united the associations under the umbrella organization Human Rights Watch.

Since the end of the COLD WAR and the disintegration of the Soviet Union in 1991, Human Rights Watch has evolved into an international non-governmental organization advocating the protection of civil liberties, women's and children's rights, academic freedom, prisoner's rights, worker's rights and the humane treatment of refugees. In addition to criticizing countries such as China, Serbia, Rwanda, Israel, Sudan and Indonesia for their violation of these rights, Human Rights Watch has also issued reports critical of the U.S., particularly for alleged mistreatment of prisoners and illegal immigrants, and issues relating to police brutality and capital punishment. In 1997 the organization won the NOBEL PEACE PRIZE for its role in organizing the International Campaign to Ban Landmines.

Hume, George Basil (1923–1999) Roman Catholic Cardinal. Hume, a prominent Catholic religious leader in modern day Britain, first undertook

monastic studies in 1941 at the Benedictine Abbey of St. Laurence. He joined the Benedictine Order in 1945 and was ordained as a priest in 1950. From 1963 to 1976 Hume served as abbot of Ampleforth before being elevated in 1976 as the archbishop of Westminster. He was also made cardinal in 1976 with St. Silvestro in Capite, Italy, as his titular church. Hume holds a curial membership on the Council on Christian Unity.

Hume, John (1937–) Politician and activist in NORTHERN IRELAND, leader of the Social Democratic and Labour Party (SDLP), and winner of the NOBEL PEACE PRIZE (1998). Born in Londonderry into a blue-collar Catholic family, Hume initially intended to study for the priesthood and enrolled in Saint Patrick's College in Maynooth, Northern Ireland, to prepare for ordination. When his interest in the seminary waned, he became involved in efforts in his city to create a credit union that would enable residents to purchase their own homes.

Hume later participated in the various efforts by the Catholic community to ensure just and fair treatment of its members by Protestant government officials and citizens in Northern Ireland. As Londonderry became one of the leading centers of Catholic activism, Hume helped found and become the first chairman of the SDLP in 1970. In this role he worked to provide Catholics with a political organ to address their grievances at the local and regional level. His election to the parliament of Northern Ireland a year earlier provided the party with effective representation in the governing structure of Northern Ireland. Four years after the founding of the SDLP, Hume joined a coalition government for Northern Ireland, serving as minister of commerce until the short-lived coalition collapsed in 1975.

In 1979 Hume was elected a delegate to the European Parliament, where he attempted to ensure that as European integration increased, it would minimize the division of Northern Ireland from the Irish Republic. Four years later he was elected to the British House of Commons. Hume used all of these positions to further his goals of improving the status of Catholics in Northern Ireland, in reducing the consequences of Ireland's territorial division and in ensuring that the economic prosperity that

was the goal of the EUROPEAN UNION would improve economic conditions in Northern Ireland. By the mid-1980s, when it was clear that Londonderry's economy was reviving under the initiatives supported by Hume. He used the rebirth of his district as a model to initiate discussions with SINN FÉIN, the political voice of the IRA, to arrange for a cease-fire in its struggle against the British and their supporters.

Three years after the cease-fire began in August 1994, Hume participated in multilateral peace negotiations among all the major political parties in Northern Ireland. Headed by former U.S. senator George Mitchell, the talks eventually resulted in an agreement between Ireland and Northern Ireland in which both entities agreed to share power in Northern Ireland. For his efforts as head of the SDLP in this endeavor, Hume shared the 1998 Nobel Peace Prize with David TRIMBLE, the leader of the Ulster Unionist Party. In December 2000 Hume left the Northern Ireland assembly for reasons of health. He resigned as chairman of the SDLP following the September 2001 Irish elections in which the SDLP lost heavily to the IRA.

Humphrey, Hubert Horatio, Jr. (1911–1978) U.S. senator, vice president of the United States (1965–69). Humphrey graduated from the University of Minnesota in 1939, earned an M.A. from Louisiana University in 1940, and worked on a number of jobs, before he became state campaign

Senator Hubert H. Humphrey, Jr. (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

director for Franklin D. ROOSEVELT's 1944 presidential campaign. In 1945 he was elected mayor of Minneapolis, then served as a U.S. senator from 1948 to 1964 and again from 1971 to 1978. A progressive Democrat, he became assistant majority leader of the Senate in 1961, and was instrumental in passing the historic CIVIL RIGHTS ACT OF 1964. In 1964 he was Lyndon B. JOHNSON's vice presidential running mate, then served as vice president from 1965 to 1969.

After Johnson declared his intention not to seek reelection in 1968, Humphrey announced his candidacy. He won the Democratic presidential nomination in 1968 in a race marred by violent protests against the VIETNAM WAR and the political establishment, and by the assassination of rival candidate Robert F. KENNEDY. He narrowly lost the election to Richard M. NIXON but continued to remain active in political life, later winning reelection to the Senate. Humphrey received numerous awards during his life. His protégé, Walter MONDALE, served as vice president under President Jimmy CARTER and was the Democratic presidential candidate in 1984.

Hundred Days The "Hundred Days" is a term used to denote the 1933 special session of Congress in which much of President Franklin D. ROOSEVELT's NEW DEAL legislation was passed. When Roosevelt was inaugurated in March 1933 the U.S. economy had effectively ceased functioning and the country (with much of the world) was in the throes of the GREAT DEPRESSION. Roosevelt boldly called Congress into a special session that produced sweeping economic and social legislation, to aid victims of the depression, and installed economic reforms. Roosevelt's unofficial advisers—his BRAIN TRUST—developed many of these programs. Banks were closed for a "bank holiday" and only solvent institutions were permitted to reopen, which rebuilt confidence in the nation's banking system. Congress also passed the Securities Act of 1933, regulating the issue of corporate stock; the NATIONAL INDUSTRIAL RECOVERY ACT (which established the NRA, the NATIONAL RECOVERY ADMINISTRATION), regulating business, including minimum wages and maximum hours; the CIVILIAN

CONSERVATION CORPS (CCC), which put the unemployed to work in conservation projects; and the AGRICULTURAL ADJUSTMENT ADMINISTRATION (AAA) to aid farmers. In 1935 Congress approved another notable group of laws, including the WORKS PROGRESS ADMINISTRATION (WPA, later renamed the Work Projects Administration), the NATIONAL LABOR RELATIONS ACT and the SOCIAL SECURITY ACT. The 1935 session is known as the "Second Hundred Days."

Hung, Rham (Pham Van Thien) (1913–1988) Vietnamese communist political figure, premier of VIETNAM from June 1987 until his death. Hung had served for seven years as interior minister, supervising Vietnam's huge internal security system. He played key roles from 1960 to 1975 in the war against the U.S.-backed government of South Vietnam.

Hungarian Civil War of 1921 Former Austro-Hungarian emperor CHARLES I, exiled in Switzerland since 1919, returned to regain his throne, calling on regent Miklós HORTHY DE NAGYBÁNYA I to step down in March 1921, but opposition to Charles was violent and he departed. He returned in October at Odenburg, Hungary, and marched with troops on Budapest. Government troops repulsed them and arrested Charles, who was exiled to Madeira while the Hungarian Diet nullified all Hapsburg claims to the Hungarian throne.

Hungarian Revolution of 1918 Defeats and food shortages during World War I led Hungarian leftists and nationalists to agitate for independence from Austrian (Hapsburg) rule. The Hungarian diet called its troops home, Count Mihály Károlyi (1875–1955) headed a liberal national council and Hungarians demanded an end to the war. Emperor CHARLES I made Károlyi premier (October 31, 1918) and a radical-socialist coalition came to power. But the ethnic nationalism of Slovaks, Serbs and Romanians threatened the state and Károlyi accepted peace terms with France, withdrawing Hungarian troops; Serb troops occupied the south, Romanians moved into Transylvania and Czechoslovakian soldiers into Slovakia. The Austro-Hungarian

monarchy had collapsed, and on November 16, 1918, the national council declared HUNGARY a republic.

Hungarian Uprising Unplanned revolt by the people of Hungary against Soviet control of their nation and against their own communist government; occurred from October 23 to November 4, 1956. Hungarian students, workers and others gathered in Budapest on October 23 to demonstrate, demanding economic reforms, free elections, the withdrawal of Soviet forces and the reinstatement of Imre NAGY, the anti-Soviet premier who had been forced from office the previous year. Violence erupted when police fired on the peaceful demonstrators. As the uprising spread throughout the country, the Soviets at first seemed to favor cooperation with a new regime and a new party administration. Nagy was recalled as premier on October 24 and soon proclaimed his nation's neutrality, an end to Hungary's participation in the WARSAW PACT, an end to its one-party state and the release of the imprisoned anticommunist Cardinal József Mindszenty. János Kádár became party secretary. Meanwhile, revolutionary councils formed throughout the country, seized its political institutions and factories in the name of the new Hungary, and Soviet forces began to withdraw. The changes were too drastic for Kádár, who left Budapest to form a new government in eastern Hungary, and for the Soviets, who, having massed their tanks, returned to the capital on November 4 and ruthlessly destroyed the revolution. While Nagy called in vain for United Nations support, Hungarians fought in the streets. Within weeks, many thousands were killed, wounded or imprisoned, and some 200,000 Hungarians fled the country. Kádár took over and did institute some political and economic reforms, but Hungary's ties to the Soviet Union were not to be severed for more than 30 more years.

Hungary (Hungarian Republic) A landlocked country in the Danube Basin of east-central Europe, Hungary today covers an area of 35,910 square miles. Once part of the Austro-Hungarian Empire, it was reduced to its present size after the empire's defeat in WORLD WAR I. Plagued by economic woes and ethnic and class struggles, in 1920 Hungary

HUNGARY

1914	As part of Austro-Hungarian Empire, Hungary enters World War I on the side of Germany and the Central Powers.
1918	Hungary becomes an independent republic after end of World War I.
1919	Béla Kun's Red Terror.
1920	Adml. Miklós Horthy becomes regent and refuses to allow King Karl to return to Hungary.
1944	Germans occupy Hungary and begin exterminating Hungary's Jews and Gypsies; Stalin authorizes the formation in Debrecen of a provisional government comprising all the non-fascist parties.
1945	The last German forces leave Hungary.
1947	Hungary signs peace treaty with Allied powers, giving up all territories acquired after 1937.
1948	The Social Democrats are forcibly merged with the communists to form the Hungarian Workers' Party.
1949	Opposition political parties are outlawed; Roman Catholic primate of Hungary, Cardinal József Mindszenty, sentenced to life imprisonment.
1953	Imre Nagy becomes premier and introduces liberal and political reform.
1956	Soviet army invades Hungary; Nagy is executed; János Kádár is made premier.
1967	Jenő Fock becomes premier.
1968	The regime initiates a series of reforms known as New Economic Mechanism, decentralizing authority.
1989	Law passed allowing formation of new political parties; (June) body of Imre Nagy exhumed and reburied after a state funeral on the 31st anniversary of his execution.
1990	Soviets agree to complete pullout from Hungary.
1991	Military alliance of the Warsaw Pact ends.
1999	Hungary joins NATO.
2004	Hungary joins European Union.

was invaded by Romanian troops who overthrew a communist regime and placed in power Admiral Miklós HORTHY. He aligned the country with Nazi GERMANY, which occupied Hungary in 1944. After WORLD WAR II the communists gained control of the government, promoting industrialization and collectivization of agriculture. Poland's defiance of Soviet authority in 1956 led to huge demonstrations in Hungary demanding Soviet withdrawal. The Soviet army intervened, killing thousands of Hungarians and setting up a puppet government under János KÁDÁR (see HUNGARIAN UPRISING). The previous reformist prime minister, Imre NAGY, was executed in 1958. Gradually the Kádár

regime moved toward economic reforms and a loosening of repressive political controls, and by the 1970s Hungary was regarded as the most liberal country in the Eastern Bloc. Prodemocracy demonstrations in 1988–89 led to approval of the formation of a multiparty democratic system, and a transitional constitution was drafted. In Oct. 1989 Hungary was proclaimed a republic; Nagy was formally rehabilitated and his memory officially honored. After abandoning communism and leaving the Soviet orbit in 1990, Hungary oriented itself toward western Europe, joining the NORTH ATLANTIC TREATY ORGANIZATION (NATO) in 1999 and the EUROPEAN UNION in 2004.

Hun Sen (1952–) Cambodian politician and prime minister (1985–). Born in the province of Kâmpóng Cham, Hun Sen became interested in national politics in high school as a result of the 1970 military coup against Prince Norodom SIHANOUK, the ruler of CAMBODIA. Not long after Sihanouk's replacement by a pro-U.S. regime, Hun Sen entered the ranks of a pro-Sihanouk coalition including the KHMER ROUGE, a Communist guerrilla group that was backed by the government of North Vietnam. During the final assault by the KHMER ROUGE on the capital of Phnom Penh, during the final stages of the CAMBODIAN CIVIL WAR in 1975. Hun Sen was

severely wounded and lost the use of one of his eyes.

As a reward for his loyalty, the new Khmer Rouge government appointed Hun Sen a regimental commander and stationed him in eastern Cambodia. However, his unit's wartime affiliation with the Vietnamese marked him as suspect, causing him to flee to Vietnam to avoid arrest.

The Vietnamese government placed him in a leadership role in the Khmer National United Front for Salvation (KNUFNS), an anti-Khmer Rouge organization formed by Cambodian refugees who had also fled to Vietnam. By December 1978, when Vietnam invaded Cambodia, Hun Sen was named to the central committee of KNUFNS, which took control of Cambodia in January of 1979, when the Khmer Rouge were toppled. Hun Sen quickly moved to establish the People's Republic of Kampuchéa (PRK) in Cambodia, in which he initially served as foreign minister. Soon after renaming the country, he established the single national party that would control all facets of government—the Kampuchéan People's Revolutionary Party (KPRP), and began his advancement in the new regime, by 1981 he had ascended to the premiership.

When Vietnam withdrew its troops from Cambodia in 1989, the Khmer

Rouge fought PRK forces until both sides initialed a peace agreement two years later and transferred temporary control of the state to the UN and a national council representing all political factions in Cambodia. Hun Sen moderated his ideological position in 1990 by abandoning the pursuit of socialism and changing the name of the KPRP to the Cambodian People's Party (CPP). After the UN and the governing council had restored order to Cambodia, national elections were held in 1993 to select representatives to the Cambodian parliament. Eventually the CPP and FUNCINPEC, a monarchist party committed to restoring Sihanouk to power, agreed to form a coalition government with FUNCINPEC leader Norodom Raniddh (the son of Prince Sihanouk) and Hun Sen sharing prime ministerial duties. In the division of governmental ministries, Hun Sen made certain that CPP officials obtained control of the Cambodian army, police force and key provincial posts throughout the country.

In 1997, after four years of deteriorating relations between the CPP and FUNCINPEC, Hun Sen deposed Raniddh. In response to vigorous international protests, Hun Sen announced that national elections would be held in July 1998 under international supervision. As a result of those elections Hun

Sen joined a coalition government with his old foes in FUNCINPEC, this time without a power-sharing arrangement within the prime minister's position, which Hun Sen occupied by himself.

Hunt brothers silver scandal

Commodities scandal in which the Hunt family of Texas attempted to manipulate the world's silver supply. The three wealthy Hunt brothers, Nelson, Herbert and Lamar, purchased silver commodities and made enormous profits as the price of silver skyrocketed. In March of 1980 the Hunts were either unwilling or unable to pay \$100 million of margin calls from their commodity brokers, which caused panic selling in silver commodities. The price of silver dropped just as precipitously, from \$52 to \$10.50 an ounce, and the Hunts reportedly lost over \$235 million. Although government investigations were conducted, no criminal charges were brought against the three brothers, who did, however, have to contend with lawsuits from a number of investors who claimed to have been harmed by their manipulations.

Hunter, Evan (1926–2005) American novelist and screenwriter. Hunter achieved success with his second novel *The Blackboard Jungle* (1954, filmed 1955), which reflected his experiences teaching at an inner-city vocational school in New York. His popular novels—among them *Mothers and Daughters* (1961), *Last Summer* (1968, filmed 1969), *Love, Dad* (1981) and *Lizzie* (1984)—often depict disenfranchised American youth. His screenplays include *Strangers When We Meet* (1960), based on his novel of the same name; *The Birds* (1963), based on a short story by Daphne du Maurier and directed by Alfred Hitchcock; and *The Chisholms* (1980). Hunter has written a successful series of detective novels under the pseudonym Ed McBain and has also published under the names Hunt Collins and Richard Marsten. The Mystery Writers of America awarded him its Grand Master Award for lifetime achievement in 1986, and in 1998 he received a Cartier Diamond Dagger from the Crime Writers Association of Great Britain, the first American to ever do so.

Huntington, Anna Hyatt (1876–1973) American sculptor. Born in

Cambridge, Massachusetts, Huntington studied at the Art Students League in New York City. Huntington is noted for her realistic studies of animals, such as the Bronzes *Reaching Jaguar* (1926, Metropolitan Museum of Art) and *Fighting Elephants*. Among her public sculptures are an equestrian statue of Joan of Arc that stands on New York's Riverside Drive and a figure of El Cid, also in the city. Other large public pieces are located in Gloucester, Mass., Seville, Spain, and Buenos Aires, Argentina.

Huntley, Chet (Chester Robert Huntley) (1911–1974) American news commentator. Known for his serious, straightforward demeanor, Huntley worked as a newsman for CBS and ABC, but it was for his stint with NBC from 1955 to 1970 that he is best remembered. During this time he co-anchored the *Huntley-Brinkley Report*, an evening news program, with David BRINKLEY. Huntley was later the anchor for syndicated news commentaries for Horizon Communications (1970–74). At its peak, the *Huntley-Brinkley Report* reached an audience of over 17,000,000 viewers.

Hurley, Patrick J. (1883–1963) American lawyer and diplomat. Hurley served as secretary of war under President Herbert HOOVER from 1929 to 1933. Hurley was the personal representative of the United States to the Soviet Union in November–December 1942 and to Egypt, Syria, Lebanon, Iraq, Iran, Palestine, Saudi Arabia, India, China and Trans-Jordan in 1943. He was the American ambassador to China in 1944, where he strongly criticized the U.S. diplomats in that country for undermining the position of Generalissimo CHIANG KAI-SHEK. He negotiated an agreement between Mexico and five expropriated oil companies in 1940 and was the Republican candidate for U.S. senator from New Mexico in 1946 and 1948.

Hurley, Ruby (1909–1980) Black American civil rights activist. During the 1950s and 1960s, as an official of the NAACP, Hurley helped lead the CIVIL RIGHTS MOVEMENT in the American South. Known to her associates as “the queen of civil rights,” she played a leading part in investigations of racial violence and in the legal struggles of

black students who sought to enter previously all-white Southern universities.

Hurok, Sol (Solomon Hurok) (1888–1974) American impresario and theatrical manager. Born in Russia, he immigrated to the U.S. in 1906. He worked at a number of menial jobs before arranging concerts for various labor groups, his first attempts (1911) at putting together performances. During his career, Hurok presented thousands of artists and companies in performances and tours. Among the artists whose work he sponsored were the dancers Anna PAVLOVA and Isadora DUNCAN, singers Jan PEERCE and Marian ANDERSON, musicians Artur RUBINSTEIN, Andres SEGOVIA, Benny GOODMAN and Van CLIBURN, and such companies as the Comédie Française, the Old Vic, the Royal Ballet and the Bolshoi Ballet. His 1946 autobiography is titled *Impresario*.

Hurst, Fannie (1889–1968) American novelist. Born in Hamilton, Ohio, she graduated from Washington University in 1909. She is known for her popular sentimental tales, often of women in distress over romance or marriage. He novels include *Stardust* (1919), *Lummo* (1923), *Back Street* (1931), *Imitation of Life* (1932) and *Anitra's Dance* (1934). Hurst was also the author of theater treatments and screenplays.

Hurston, Zora Neale (1901–1960) American author. Hurston began publishing short stories and essays while studying anthropology at Barnard College, in 1928 becoming that school's first black graduate. She then researched folk traditions and published ethnographic studies that include *Mules and Man* (1935) and *Tell My Horse* (1938). Winner of Rosenwald (1934) and Guggenheim (1936–37) fellowships, she became the most prolific black writer of the 1930s. Her novels include *Jonah's Gourd Vine* (1937) and *Seraph and the Suwanee* (1948).

Husák, Gustáv (1913–1991) President of CZECHOSLOVAKIA (1975–89). A leader of the 1944 Slovak uprising against the Nazis, after the war Husák held party and government posts until purged by Joseph STALIN. He was reha-

Folklorist and author Zora Neale Hurston, 1935 (LOMAX COLLECTION, LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

bilitated after a decade in prison; following the SOVIET INVASION OF CZECHOSLOVAKIA in 1968, he replaced the liberal Alexander DUBČEK as party secretary. A hardliner, he was made president of the country in 1975, holding the post until 1989, when he was succeeded by Václav HAVEL, the first noncommunist president of Czechoslovakia in four decades. In 1990 Husák was expelled from the Communist Party.

Hussein (1935–1999) King of JORDAN (1952–99). Educated at the Sandhurst military academy in Britain, Hussein succeeded his father, who had been forced to abdicate because of his mental illness. A moderate, pro-Western Arab with close personal ties to Britain and the U.S., he took steps to modernize his country. Although unsympathetic to the left-wing Arab nationalism of Egyptian president NASSER, he allied Jordan with EGYPT and attacked ISRAEL in the SIX-DAY WAR (1967). Badly defeated, Jordan lost the WEST BANK and Jerusalem to Israel. The country became a haven for Palestinian refugees, and the PALESTINE LIBERATION ORGANIZATION (PLO) used Jordan as a base from which they launched guerrilla attacks on Israel without Hussein's approval. Hussein's attempts to control the guerrillas led to the JORDANIAN CIVIL WAR OF 1970–71; nevertheless, he was able to expel the PLO. He refused to endorse the Camp

King Hussein of Jordan, 1979 (RICHARD MELLOU/
CORBIS SYGMA)

David accords (see CAMP DAVID TALKS), but sought to use his influence with the PLO and other Arab nations to work toward a peaceful solution of the Arab-Israeli conflict. Kin Hussein supported IRAQ during the PERSIAN GULF WAR (1990–91). In 1994 Hussein signed a peace treaty with Prime Minister Yitzhak RABIN of Israel. Before his death in 1999, Hussein worked to improve Palestinian-Israeli relations and aided in the negotiations for the **Wye River Memorandum** in October 1998.

Hussein, Saddam (1937–) President of IRAQ (1979–2003). A Sunni Moslem, Saddam Hussein joined the BA'ATH Party in 1957. He was involved in the 1959 attempt on the life of Iraqi leader Abd al-Karim KASSEM. Sentenced to death, he escaped to Egypt, returning in 1964 to organize the civilian wing of the Ba'ath. He rose to become deputy secretary-general of the party in 1966 and vice chairman of the Revolutionary Command Council in 1969. As president of Iraq, Hussein followed an aggressive, militaristic policy aimed at making Iraq—and himself—the strongest power in the Arab world. A territorial dispute with neighboring IRAN led to Hussein's invasion of Iran and the subsequent bloody eight-year IRAN-IRAQ WAR, which ended in a stalemate. In this conflict, Hussein used poison gas on the Iranians and also against the Kurds of his own country. On August 2, 1990, Hussein launched a surprise invasion of KUWAIT, bringing that country under his control in a matter of days (see PERSIAN GULF WAR). Hussein was condemned by the UNITED NATIONS, and a multinational coalition of Arab and Western nations, led by the U.S. under President George H. W. BUSH, sent forces to prevent an

Iraqi invasion of SAUDI ARABIA. Comparing the Iraqi dictator to Adolf HITLER, Bush repeatedly called on Hussein to withdraw from Kuwait; despite a further buildup of U.S. and Allied forces and a UN deadline for withdrawal (Jan. 15, 1991), Hussein refused. On Jan. 16, the Allies launched a bombing campaign against military targets (Operation Desert Storm). Hussein responded by launching Scud missile attacks on Saudi Arabia and ISRAEL, but to little avail. Suffering a swift and humiliating defeat after the coalition's ground invasion of Kuwait and Iraq in late February 1991, Hussein was forced to sue for peace. With his army effectively destroyed and much of Iraq in ruins, Hussein's future was uncertain. Various Iraqi groups—disaffected soldiers, Shi'ite Muslims and Kurds—openly rebelled against Hussein, but Hussein quelled the rebellion and maintained his grip on Iraq despite international sanctions. In 1998 Hussein forced the departure of the UNITED NATIONS SPECIAL COMMISSION (UNSCOM), an international team sent to verify that Iraq had abandoned its efforts to acquire weapons of mass destruction (WMDs). In March 2003, after U.S. president George W. BUSH insisted that Iraq had WMDs, a U.S.-led coalition invaded Iraq and occupied the country, forcing Hussein to go into hiding. He was caught near the city of Tikrit in December 2003 and was put on trial in 2005 for war crimes.

Hussein bin Dato Onn (1922–1990) Malaysian politician, Prime Minister of MALAYSIA (1976–81). The country's third prime minister since independence, Hussein had replaced his brother-in-law, Abdul Razak, following Razak's death in 1976. He resigned in 1981 and selected Mahathir Mohamad to succeed him. The two men broke with each other in 1988 over Mahathir's attempt to purge his opponents in the ruling United Malays National Organization.

Husseini, Faisal (1940–2001) Founder of the General Union of Palestinian Students (GUPS, 1959), a member of the Palestinian delegation to the Middle East Peace Conference in Madrid and chief PALESTINIAN LIBERATION ORGANIZATION (PLO) representative in Jerusalem. Born into a prominent Pales-

tinian Arab family, Husseini became involved as a teenager in Arab efforts to expel the Israelis from what Arab nationalists regarded as Arab land in the former British Mandate of Palestine. While living in Cairo, he later founded a group designed to educated Palestinian Arab students. After he left Cairo in the mid-1960s Husseini studied military science at the Syrian Military College (B.A., 1967) and joined Fatah, a militant faction of the PLO.

In 1964 he returned to Jerusalem and became a prominent participant in Palestinian protests against the creation of new Israeli settlements in the WEST BANK and GAZA STRIP after Israel gained those territories in the SIX-DAY WAR of 1967 and was repeatedly arrested by Israel authorities. In 1987, when the first Palestinian Intifada (see INTIFADA I) or "uprising" began in an effort to end the Israeli presence in the West Bank and Gaza, Husseini emerged as the chief spokesman of the PLO. Unlike many PLO officials, Husseini tempered his militancy with efforts to understand his Israeli foes and to convey to them what he and his followers perceived as the injustice of the Israeli presence in the West Bank and Gaza. He learned Hebrew and regularly engaged Israeli leaders and media personalities on radio and television shows in an effort to present the PLO and Palestinian Arab perspective. He headed a Palestinian delegation that met with U.S. secretary of state James BAKER shortly after the 1991 PERSIAN GULF WAR in an effort to jump-start the Arab-Israeli peace negotiations the U.S. had promised to promote at the end of the conflict. On the other hand, throughout the 1990s he defended Palestinian suicide bombings as part of "a war of independence." He died of a heart attack on May 31, 2001.

Husserl, Edmund (1859–1938) German philosopher. Husserl is regarded as the founder of the highly influential 20th-century philosophical school of PHENOMENOLOGY. Basically, phenomenology acknowledges that human thought is capable only of subjective, experiential analyses of reality—but it seeks to heighten the validity of such analyses by rigidly excluding personal value systems. Husserl, who taught philosophy at the Universities of Göttingen and Freiberg, wrote numerous books,

including *Logical Investigations* (1900–1901), *Ideas* (1913), *The Phenomenology of Internal Time-Consciousness* (1928) and *Formal and Transcendental Logic* (1929). His writings greatly influenced Martin HEIDEGGER, Jean-Paul SARTRE and the development of EXISTENTIALISM.

Huston, John (1906–1987) American film director, writer and actor. The son of actor **Walter Huston**, John Huston's early years were full of restless travels and unfulfilled ambitions. He toured in vaudeville, rode in the Mexican cavalry, boxed, and studied painting in Paris. He collaborated on several successful screenplays before directing *The Maltese Falcon* (1941), one of the great directorial debuts in screen history. The film's cynical tone, claustrophobic interiors and ill-fated characters prefigured such later Huston classics as *The Treasure of the Sierra Madre* (1948, for which he won the best writer and best director ACADEMY AWARDS), *Key Largo* (1948), *The Asphalt Jungle* (1950), *The Misfits* (1960) and *Wise Blood* (1979). Humphrey BOGART was the quintessential antihero in several of Huston's early films, and won his only Academy Award in Huston's *The African Queen* (1951). Huston served in the Signal Corps during WORLD WAR II, producing two classic wartime documentaries—*The Battle of San Pietro* (1943), one of the screen's finest antiwar statements, and *Let There Be Light* (1946), which chronicled the effects of battle fatigue on combat veterans, and which was suppressed by the government until 1980. Indeed, many of Huston's critical and box-office failures of the late 1950s and 1960s reveal inconsistencies of tone and technique. Yet he rebounded with a moving adventure film, *The Man Who Would Be King* (1975), adapted from a story by Rudyard KIPLING, and directed his daughter **Anjelica Huston** in an Academy Award-winning performance in *Prizzi's Honor* (1985). He spent his last years in Mexico and Ireland but continued to work despite increasing ill-health, directing a faithful adaptation of James JOYCE's *The Dead* (1987) shortly before his own death.

Hutchins, Robert Maynard (1899–1977) American educator. Appointed president of the University of Chicago at age 29, Hutchins revolutionized Ameri-

can higher education with his belief that college students should be taught not vocational skills but to reason. Over the next five decades he frequently commented on educational and public policy issues. Leaving the university in 1951, he founded (1954) and headed the Center for the Study of Democratic Institutions, an organization studying social and political questions.

Hutton, Sir Leonard (1916–1990) English cricketer. In a playing career that lasted from 1934 to 1956 (with a six-year interruption for World War II), he scored a total of 40,000 runs, including 129 centuries. In 1938 he scored 364 runs against the Australian team—a record that stood for 20 years. In 1952, he was appointed the first professional captain of the English national team. The following year he led the team in regaining the Ashes trophy from AUSTRALIA for the first time since 1938, and retained it in 1954–55. Upon his retirement in 1956, he became a cricket commentator for the *Observer* and wrote three books about his experiences.

Huxley, Aldous (1894–1963) British novelist, essayist and philosopher. Huxley was the descendant of an eminent British family that included the 19th-century Darwinian theorist Thomas Henry Huxley and the 20th-century biologist Julian Huxley. Huxley first gained literary renown for his witty, satiric novels of the 1920s, including *Crome Yellow* (1921), *Antic Hay* (1923), *Those Barren Leaves* (1925) and *Point Counter Point* (1928). During that decade he formed a close friendship with D. H. LAWRENCE with whom Huxley traveled in Italy and France. In 1932 Huxley published his most famous work, *BRAVE NEW WORLD*, which marked his shift to a more somber, philosophical, novelistic style, further developed in *Eyeless in Gaza* (1936) and *After Many a Summer Dies the Swan* (1940). Huxley, who moved to the United States in 1938, assembled an anthology of worldwide mystical writings, *The Perennial Philosophy* (1945), and an influential study of consciousness expansion through mescaline, *The Doors of Perception* (1954). Huxley died in Los Angeles in 1963.

Huxley, Andrew Fielding (1917–) English physiologist. Huxley, a grandson

of T. H. Huxley and half brother of ALDOUS and JULIAN HUXLEY, graduated in 1938 from Cambridge University, receiving his M.A. there three years later. He is best known for his collaboration with Alan Hodgkin in elucidating the “sodium pump” mechanism by which nerve impulses are transmitted, for which they were awarded, with John Eccles, the NOBEL PRIZE in physiology or medicine (1963). He has also done important work on muscular contraction theory and has been involved in the development of the interference microscope and ultramicrotome. Huxley was reader in experimental biophysics at Cambridge (1959–60), and since 1960 has been Jodrell Professor of Physiology at University College, London. In 1980 he became president of the Royal Society, and in 1983 was admitted to Britain's Order of Merit.

Huxley, Sir Julian Sorell (1887–1975) English biologist. A grandson of noted Victorian biologist T. H. Huxley, and brother of novelist Aldous HUXLEY, Julian Huxley graduated in zoology from Oxford University in 1909. He did research on sponges at the Naples Zoological Station (1909–10) before taking up the post of lecturer in biology at Oxford (1910–12). From 1912 until 1916 he worked at the Rice Institute, Houston, Texas, where he met the famous American geneticist Hermann Muller. Before returning to Oxford to take up the post of senior demonstrator in zoology (1919–25) he saw war service in Italy. He was next appointed professor of zoology at King's College, London (1925–27), resigning from this post to devote more time to writing and research.

Huxley was a keen ornithologist. In the 1930s he was involved in the production of natural-history films, the most notable of which was the highly praised *Private Life of the Gannet* (1934). One of the leading popularizers of science of modern times (especially the years before and just after World War II), Huxley spent much of his life explaining advances in natural science to the layman and in advocating the application of science to the benefit of mankind. To many he is best remembered as a most capable and lucid educationalist, but Huxley was also eminent in many other fields.

In 1946 he was appointed the first director-general of UNESCO, a post he held for two years. As an administrator, he also did much to transform the Zoological Society's collections at Regent's Park (London Zoo). Viewing man as "the sole agent of further evolutionary advance on this planet," he caused considerable controversy by advocating the deliberate physical and mental improvement of the human race through eugenics. Huxley's biological research was also extensive, including work on animal hormones, physiology, ecology, and animal (especially bird) behavior as it relates to evolution. He was president of the Institute of Animal Behavior and the originator of the term *ethology*, now used to define the science of animal behavior. He also introduced several other scientific terms, such as cline and clade. Huxley was knighted in 1958.

Hu Yaobang (1915–1989) Chinese political leader. He joined the Communist Party in 1933 and, following the communist revolution in 1949, held a series of party posts. Purged during the CULTURAL REVOLUTION of 1966, he was rehabilitated in 1973, became a member of the politburo in 1978 and was named to the chairmanship of the Communist Party in 1980. Widely regarded as a protégé of DENG XIAOPING, Hu supported Deng's reform policies and was expected to succeed him. However, the student rebellions of 1986 forced his resignation early in 1987.

Hyde, Douglas (1860–1949) Irish playwright, author and first president

of IRELAND (1938–45). A member of the Protestant Ascendancy, Hyde was a leading figure in the IRISH LITERARY REVIVAL, and committed to promoting the Irish language. He founded the Gaelic League in 1893 and was its president until 1915. His play *Casadh* (1901) was performed by the Irish Literary Theatre and was the first play in Irish professionally performed. Hyde served as vice president of the ABBEY THEATRE and often collaborated with Lady GREGORY and W. B. YEATS. Hyde's other works include *Love Songs of Connacht* (1893) and *A Literary History of Ireland* (1892). In recognition of his services to Irish language and culture, in 1938 he was elected Ireland's first president, a largely ceremonial but prestigious post.

hydrogen bomb By far the most destructive weapon developed during the 20th century, the hydrogen bomb (H-bomb) can produce an explosion much more powerful than that of an ATOM BOMB. Whereas the atom bomb releases energy by fission, splitting the heavy uranium atom, the H-bomb produces its destructive force through the fusion of hydrogen atoms, the lightest atoms. Scientists recognized the theoretical possibility of hydrogen atom fusion as early as 1922. During WORLD WAR II, U.S. and Allied scientists concentrated on developing an atom bomb using uranium, which presented fewer technical problems (see MANHATTAN PROJECT). The Germans did preliminary work on a hydrogen bomb, attempting to produce the "heavy water" needed for the bomb in Norway. After the war ended, expert opin-

ion in the West was split over the issue of whether to develop a hydrogen bomb. After the USSR exploded its first atom bomb in 1949, President TRUMAN ordered work on the hydrogen bomb; the Soviets (whose research was led by physicist Andrei SAKHAROV) also raced to build a hydrogen bomb. The first H-bomb was tested by the U.S. on November 1, 1952, at the Pacific atoll of Eniwetok; it produced an explosion equal to 12 megatons (million tons) of TNT. The Soviets tested their bomb a few months later. Britain tested its first hydrogen bomb in 1957. American H-bomb tests during the 1950s at BIKINI atoll and other sites proved the immense destructive force of the bomb.

During the 1950s, there was great fear throughout the world that there might be a Third World War between the U.S. and USSR, in which the use of H-bombs could cause destruction on an unprecedented scale. Radioactive fallout from H-bomb tests proved that the initial explosion wasn't the only danger of atomic warfare; the fallout from such a war could result in millions of other deaths over a long period of time. There were at least 500 H-bomb tests before the NUCLEAR TEST BAN TREATY of 1963 ended above-ground hydrogen bomb testing by the two superpowers and Britain. China and France, however, developed their own H-bombs in 1967 and 1968, respectively, and continued to test bombs above ground. Despite the nuclear non-proliferation treaty (effective in 1970) banning the development or acquisition of H-bombs by other nations, several other nations may possess the

Hydrogen bomb test (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

bomb or have the technology and materials necessary to build it. The end of the COLD WAR brought new hope that the H-bomb will never be used. However, there are fears that the bomb could fall into the hands of international terrorists.

Hyland, L(awrence) A. (Pat) (1897–1989) Pioneer in RADAR technology and aircraft communications equipment. As vice president and chief

executive of Hughes Aircraft Co. (1955–76), and president and chairman (1976–84) following the death of founder Howard HUGHES Hyland helped build the firm into the largest U.S. military electronics company and a leading builder of communications satellites.

Hynek, J(osef) Allen (1910–1986) U.S. astronomer. Hynek gained wide recognition during the more than two

decades (1948–69) he served as a consultant to a U.S. Air Force research project regarding unidentified flying objects. He came to believe that reports of UFO's were to be taken more seriously than the air force was willing to take them. In his 1972 book *The UFO Experience* Hynek coined the phrase, "close encounters of the third kind." He subsequently served as technical adviser on the 1977 Steven SPIELBERG film of the same name.

I

Iacocca, Lee (Lido Anthony Iacocca) (1924–) American automobile executive. An innovator in automotive engineering and marketing, Iacocca took over the financially distressed Chrysler Corporation in 1978 and was primarily responsible for transforming it into a profitable company by 1982. He began his career as a mechanical engineer, joined the Ford Motor Company and became a corporate vice president and general manager of the Ford division (1960) and president (1970). He introduced successful new models at Ford and introduced new fuel-efficient cars as head of Chrysler Corporation. In 1992 Iacocca retired from the Chrysler Corporation.

Ia Drang Valley in northwestern Vietnam, southwest of Pleiku, near the Cambodian border; site of the first major battle between the U.S. and North Vietnamese armies during the VIETNAM WAR. On November 14, 1965, 400 men of the U.S. 1st Battalion, 7th Cavalry, were surprised in the Ia Drang Valley by more than 2,000 North Vietnamese troops. Although heavily outnumbered at first, the Americans were successfully reinforced, and the North Vietnamese disengaged, some retreating across the border into Cambodia and others fleeing into the jungle. On March 10, 1975, the North Vietnamese army launched their final offensive against South Vietnam from a few miles south of the Ia Drang Valley.

Ibárruri, Dolores Gómez (1895–1989) Spanish Communist political

figure and partisan known as “La Pasionaria.” Ibárruri won fame with her impassioned oratory during the SPANISH CIVIL WAR (1936–39) in defense of the Republican cause. She was one of the founders of the Spanish Communist Party in 1920. With the outbreak of the 1936 revolt by army commander General Francisco FRANCO and his troops, Ibárruri gave a renowned radio speech in which she told Spaniards, “It is better to die on your feet than to live on your knees! They shall not pass!” The last phrase, borrowed from the French slogan at VERDUN in WORLD WAR I, became the rallying cry of the republic. She left SPAIN in 1937 shortly before the republic fell to Franco, and fled to the USSR, where she lived until 1977. After Franco’s death she returned to Spain and was elected to the Spanish parliament. At her death she was honorary president of the Spanish Communist Party.

Ibert, Jacques (1890–1962) French composer. He studied at the Paris Conservatory, where he was a student of Gabriel FAURÉ. He won the Prix de Rome in 1919, later returning to the Italian city as director of its French Academy from 1937 to 1955. Thereafter (1955–57), he directed the Paris Opera and the Opéra-Comique. Lively and melodic in the French tradition, his music proved to be quite popular with the public. His best known piece is probably *Escapes* (*Ports of Call*, 1924), an orchestral suite that evoked his life while a French sailor in World War I. Other popular works are the orchestral *Divertissement* and the

woodwind quintet *Trois pièces brèves* (both 1930) and the concerto for saxophone (1935). Among his many other compositions are ballets, operas, songs, chamber music and symphonic poems.

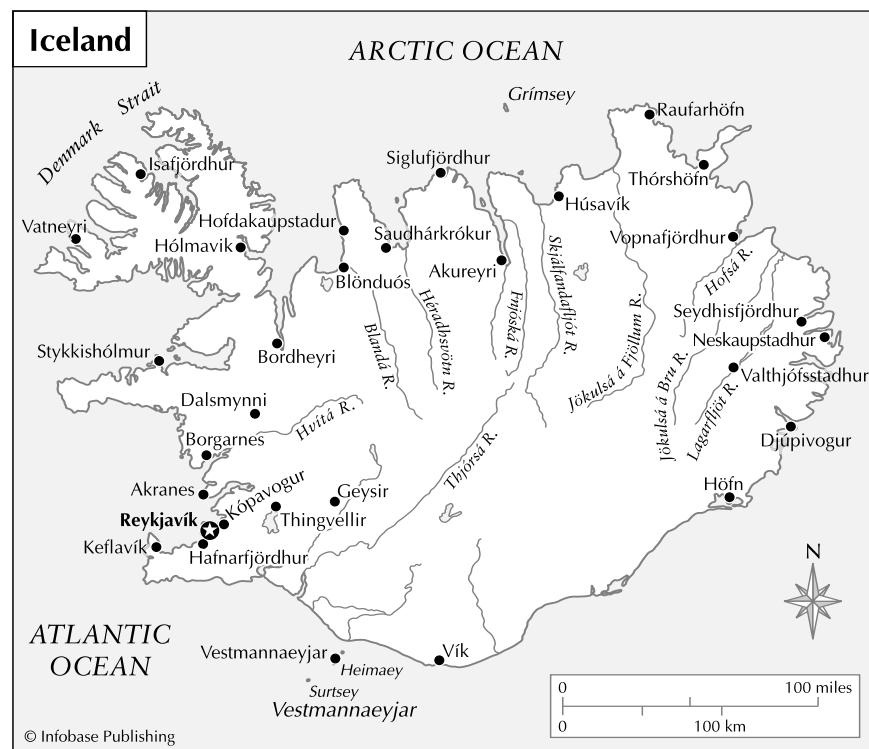

IBM (International Business Machines) Leading American international corporation. IBM was founded in 1914 when Thomas J. Watson, Sr., a former executive of the National Cash Register Company, put together several small firms to create the Computing-Tabulating-Recording Company. The firm was a manufacturer of scales and time clocks, which gradually expanded into production of other types of business equipment. In 1924 the present name, International Business Machines Corp. (IBM), was adopted. Under Watson, IBM grew on strength of an aggressive sales and service orientation. IBM’s involvement with design began when Thomas J. Watson Jr. returned to the company in 1945 after service in World War II. He became president in 1952 and chief executive officer in 1956. Watson’s acquaintance with architect and industrial designer Eliot Noyes led to his being given various design assignments and, eventually, general responsibility for all IBM design. Noyes was the designer of postwar IBM electric typewriters, including the 1961 Selectric model that became a virtual universal standard, while the punch card (now commonly known as an “IBM card”) became a standard format for data storage and manipulation. As IBM entered into computer development (with the 1943 Harvard Mark I), the visual

design of the enclosures and consoles gave IBM products an identity and air of quality that helped push the firm into a leadership role. Noyes's advice and influence brought about an extraordinary level of design quality in all IBM products. Marcel BREUER, Ludwig MIES VAN DER ROHE, Edward Larrabee Barnes, and Eero SAARINEN are among the architects who have designed for IBM. Charles EAMES was the designer of a number of IBM exhibits and produced a variety of educational films that aided understanding of the complex theories behind the function of IBM computer products. Although IBM failed to obtain to a position of dominance in the personal computer market in the 1980s and 1990s, it did develop server platforms to capitalize on the emerging business and consumer applications of the INTERNET.

Ibn Saud, Abd al-Aziz (ca. 1880–1953) Founder and king (1932–53) of SAUDI ARABIA. Born in Riyadh, Ibn Saud was an adherent of the Wahabi branch of Sunni Islam. During his youth, the Turkish-supported house of Rashid controlled most of Arabia, and he and his family were forced to live in exile in Kuwait (1891–1902). In 1902, Ibn Saud organized Arab resistance and, with his army, seized Riyadh. By 1912 he was in control of central Arabia, and in 1913 he expelled the Turks from eastern Arabia. In 1924–25, he defeated his rival Hussein Ibn Ali, captured the cities of Jeddah, Medina and Mecca and proclaimed himself king of Hijaz and Najd. Solidifying his power over the Arabian Peninsula, he renamed his kingdom Saudi Arabia in 1932. Ibn Saud granted oil concessions to American companies in the 1930s, and the riches that flowed from his nation's oil wells made it one of the wealthiest countries in the world. During World War II, he was officially neutral but favored the Allied cause. At his death in 1953 he was succeeded by his son Saud.

ICBM An intercontinental ballistic missile (ICBM) is a land-launched missile that can deliver a nuclear warhead more than 3,000 nautical miles. American ICBMs include the Titan and Minuteman; Soviet ICBMs included the Sego, Sinner, Spanker, Satan, Stiletto and Sickle.

Iceland (Republic of Iceland) The volcanic island of Iceland, covering an

area of 39,758 square miles, is located in the North Atlantic Ocean approximately 186 miles east of Greenland, 559 miles west of Norway and 497 miles north of Scotland. In 1918 Iceland achieved full sovereignty but remained under the Danish Crown. After a friendly occupation by Britain and the U.S. during WORLD WAR II, the country declared its independence in 1944, and Sveinn Björnsson became the first pres-

ident. Iceland became a founding member of NATO in 1949. Conflict with Britain over fishing limits led to incidents at sea during the Cod War of 1972–76, which ended in compromise. Iceland declared itself a nuclear-free zone in 1985 after mounting opposition to the U.S./NATO base on the island. In 1994, through the European Economic Area agreement, Iceland gained full access to the European Union market.

ICELAND	
1918	Iceland achieves full self-government under the Danish Crown.
1940	British forces occupy Iceland after Germany invades Denmark; U.S. troops take over in 1941.
1944	Iceland proclaims itself a sovereign republic with a new constitution.
1949	Iceland joins NATO.
1975	Iceland extends territorial limits to 322 km (200 mi), triggering third Cod War.
1994	The agreement on a European Economic Area (EEA) takes effect, giving Iceland full access to the internal market of the European Union (EU).

Ickes, Harold LeClaire (1874–1952) American statesman and a leading figure in the NEW DEAL of the 1930s. Born in rural Pennsylvania, Ickes attended the University of Chicago, earning a law degree in 1907. A crusading reformer as a newspaper reporter and as a lawyer, he was extremely active in Progressive Republican politics in the midwest. In 1933 President Franklin D. ROOSEVELT appointed Ickes—an avid conservationist—secretary of the interior, a post he held for 13 years. “Honest Harold” reformed the notoriously corrupt department into a model of government efficiency, helping to conserve the nation’s natural resources and opposing overexploitation by private industry. As head of the PUBLIC WORKS ADMINISTRATION he oversaw the spending of some \$6 billion on various public works programs. Following a political dispute, Ickes resigned from President TRUMAN’s cabinet in 1946. His books include *The New Democracy* (1934), *The Autobiography of a Curmudgeon* (1934) and *The Secret Diary of Harold L. Ickes* (3 vols., 1953–54).

Idris Shah, Sultan (1924–1984) Ruler of the Malaysian state of Perak from 1963 until his death. In 1983 Idris Shah joined with other sultans to force the elected government to alter constitutional amendments aimed at limiting the powers of the rulers of the nine Malaysian states. At the time of his death he was the frontrunner in the election of Malaysia’s next king.

Ilf and Petrov Pseudonym of a literary partnership between Russian writers Ilya Arnoldovich Fainzilberg (1897–1937) and Yevgeny Petrovich KATAYEV (1903–42). In 1928 they published *The Twelve Chairs* and in 1931 *The Golden Calf*, both novels satirizing aspects of Soviet society. They also visited the United States and wrote *Little Golden America* (1936). Ilf and Petrov were frowned upon under STALIN, but their work later recovered its popularity.

Illia, Arturo (1900–1986) President of ARGENTINA (1963–66). A political moderate, Illia was elected in one of the freest elections in Argentina’s history up to that time. He was overthrown by the military in a bloodless coup in 1966, however. He remained politically active

thereafter, working to return Argentina to civilian government.

Illich, Ivan (1926–2002) Austrian-born educator and social critic. Illich, was ordained as a Roman Catholic priest in 1951, has become well known as a strident voice of dissent within the church, calling for increased social activism. Illich studied history and psychology at the University of Salzburg and earned his doctoral degree there in 1951. From 1951 to 1956, Illich was a priest in New York City, and from 1956 to 1960 served as vice-rector of Catholic University in Ponce, Puerto Rico. His major works include *Celebration of Awareness* (1970) and *De-Schooling Society* (1971).

I Love Lucy. Innovative American television comedy series starring Lucille BALL. In its first six years of weekly half-hour shows (1951 to 1957), it never ranked lower than third in popularity among all television programs. (During its remaining four years the series was reduced to several one-hour specials, later rerun under the title, *The Lucille Ball/Desi Arnaz Shows*.) The mix was unlikely—a Cuban bandleader (Desi), a redheaded, clownish wife (Lucy) and a mismatched married couple (Vivian Vance and William Frawley)—but superb scripts by writers Madelyn Pugh and Bob Carroll Jr. and Lucy’s Chaplinesque antics captivated viewers in the 1950s as no show had done since Milton BERLE’s *Texaco Star Theater* in the late 1940s. Among its innovations, largely at Lucy’s insistence, was the decision not to broadcast live from New York but to film it in HOLLYWOOD with a three-camera process. Print quality was superior to that of kinescopes (film made from a picture tube image) and guaranteed the series a long life in syndication.

Ilyushin, Sergei Vladimirovich (1894–1977) Soviet aircraft designer. Ilyushin first became known for his Il-2 Stormovik, a dive bomber widely used by the Soviet Union during WORLD WAR II. He later worked on commercial aircraft, designing the jet airliner Il-62 (1962) and other airplanes used by the Soviet national airline Aeroflot. Altogether he designed more than 50 planes.

imagism American school of poetics, led by Amy LOWELL and Ezra POUND,

which first emerged in the 1910s and has remained influential throughout the century. The central argument of imagism was that the poetry of the Victorian and Edwardian eras had become clogged with excess verbiage, which was inserted by poets into their lines of verse simply for the sake of metrical completion. This excess verbiage did result in a superficial musicality, but it also diminished the vividness of poetic metaphor—the presentation of new and powerful sensual images to the reader—due to its tendencies toward vagueness and conventionality. Imagism called for spare, evocative poetic compositions that relied on an exactitude of verbal presentation in a free verse form. Major poets such as T. S. ELIOT, D. H. LAWRENCE and William Carlos WILLIAMS were highly influenced by imagist theory.

Imagists, Russian A postrevolutionary literary movement. Russian imagism evolved more or less separately from Anglo-American IMAGISM. The imagists founded the movement in 1919 as a successor to FUTURISM. Characteristics of Imagism are the primacy of the image, coarse language and pessimism; these features can be seen in Sergei ESENIN’s *Confession of a Hooligan* (1920). In the first manifesto or declaration of Imagism, signed by Esenin, Ivnev, Mariengov and Shershenevich (1893–1942), the image was defined as “the naphthalene preserving a work of art from the moths of time.” The movement, although in agreement with the ethic of the October Revolution, found itself unable to maintain an apolitical stance during the Civil War, and by 1927 it had disintegrated.

Ince, Thomas Harper (1882–1924) Prominent producer, director and writer in the SILENT FILM era. After an itinerant life with his actor parents, he began his film career in 1910 in New York directing Mary PICKFORD films for Carl LAEMMLE’s Independent Motion Pictures Company. Moving to Los Angeles in 1912, he built a studio he dubbed “Inceville” upon 20,000 acres of land. There, he contracted for the cowboys, Indians and equipment of the “Miller 101 Wild West Show” to make the westerns that soon made him famous. Epic two-reelers like *War on the Plains* (1912) pioneered the modern

western movie. Releasing through several distribution outlets in the next 10 years, Ince featured his top stars, William S. Hart and Charles Ray, in some of the finest outdoor dramas of the day, including *On the Night Stage* (1914), *Hell's Hinges* (1916) and *The Coward* (1916). His most important contribution to the movies lay in developing the shooting script system still used today and in personally supervising his various projects. He was convinced that it was the writer/producer, not the director, whose personal stamp should go on every film. His epics, like *Civilization* (1916), are of less interest today than his smaller, social-problem films, like the remarkably tough and poignant *The Italians* (1915), a gritty drama of immigrants come to grief in the New World. Ince's mysterious death during a yachting party in 1924 has never been adequately explained.

Inchon City and port on the Yellow Sea coast of South Korea, 25 miles from SEOUL. Opened as a treaty port in 1883, it was expanded during the Japanese occupation (1904–45). In September 1950, during the KOREAN WAR, U.S.-led UN forces made a brilliantly successful amphibious landing here, following it up with an offensive northward.

India (Republic of India) Nation on the Indian subcontinent of southern Asia, covering an area of 1,222,396 square miles south of the Himalaya Mountains and between Pakistan and Myanmar; India is the seventh largest country in the world. Centuries of British influence and rule in India ended in 1947 when the predominantly Hindu country was granted independence, after Mohandas GANDHI had made the nationalist movement a powerful force through his civil disobedience campaigns (1920–46). The last British governor-general, Lord (Louis) MOUNTBATTEN, partitioned British India into two states, India and PAKISTAN, to avoid religious conflict between Muslims and Hindus. Nevertheless, war between India and Pakistan over the disputed Indian state of KASHMIR erupted in 1948 and ended in an unresolved cease-fire in 1949, only to explore again in 1965 (see INDO-PAKISTANI WAR OF 1947–48, INDO-PAKISTANI WAR OF 1965). A peace was achieved in 1966 through Soviet medi-

ation. Under Prime Minister Jawaharlal NEHRU's leadership (1947–64) India adopted a new constitution and became a republic (1950). During his daughter Indira GANDHI's ministry (1966–77, 1980–84) India again fought with Pakistan over its support of an independent BANGLADESH (East Pakistan) in 1971, while Sikh militancy in the state of Punjab culminated in Mrs. Gandhi's assassination (1984). Though her son and successor, Rajiv GANDHI, granted some Sikh demands, violence continued throughout the 1980s. Political crisis continued with the resignation of Prime Minister Chandra Shekhar in March 1991 and attempts by Rajiv Gandhi to regain the post. Gandhi was himself assassinated in 1991. After P. V. Narasimha Rao was sworn in as prime minister in June 1991, the Congress Party began a

sharp decline in popularity that culminated in a humiliating defeat in the 1994 parliamentary elections at the hands of the Hindu fundamentalist BHARATIYA JANATA PARTY (BJP). Acute political instability marked the next several years, with a succession of weak coalition governments. In 1998 the BJP's leader, Atal Bihari Vajpayee, became prime minister, and his party achieved a decisive majority in the 2000 parliamentary elections.

In the meantime, important changes had taken place in India. In May 1998 the government in Delhi announced that it had conducted five nuclear tests, which prompted India's arch-rival, Pakistan, to conduct two tests of its own later in the month. Tension between India and Pakistan further rose over the disputed region of KASHMIR and led to some hair-raising confrontations be-

INDIA

1906	Muslim League formed.
1913	Poet Rabindranath Tagore wins Nobel Prize.
1920	Mohandas Gandhi launches first civil disobedience campaign for self-rule.
1930	Gandhi makes salt march, defying British.
1931	Gandhi represents Indian National Congress at Round-table conference on constitutional reform in London.
1936	Jawaharlal Nehru becomes president of Indian National Congress.
1940	Muslim League calls for independent status in Muslim majority areas.
1942	British offer dominion status in exchange for support of war effort; Gandhi launches Quit India movement.
1947	Independence; Pakistan divided from India, igniting religious war.
1948	(January) Gandhi assassinated; discrimination against untouchables banned.
1952	First international birth control organization founded in Bombay.
1964	Nehru dies.
1965	War with Pakistan over Kashmir.
1984	Army assaults Golden Temple of Amritsar to suppress Sikh uprising; Prime Minister Indira Gandhi assassinated by Sikh bodyguards; succeeded by her son Rajiv Gandhi; poison gas leak devastates Bhopal.
1990	Hindus storm Babri Masjid mosque, claiming site is birthplace of god, Rama; final episode aired of <i>Mahabharata</i> , most popular tv program ever.
1991	Former prime minister Rajiv Gandhi is assassinated.
1996	Congress Party is defeated in parliamentary elections, ushering in period of weak coalition governments. One is headed by Shri Atal Bihari Vajpayee from the Hindu nationalist party BHARATIYA JANATA (BJP).
1998	India conducts a nuclear weapons test.
1999	Vajpayee begins second consecutive term as head of coalition government.
2000	The BJP wins a decisive majority in parliament.
2004	Congress Party is returned to power after winning elections. Dr. Manmohan Singh, a Sikh, becomes first non-Hindu prime minister of India.

tween these two newly nuclear-armed states. In the early 21st century India began to achieve an impressive record of economic growth facilitated by the government's export-oriented strategy. The outsourcing of employment to Indian companies by technology-intensive industries in the U.S. helped to promote a boom in the country's service industry. (See Also AMRITSAR MASSACRE; INDO-PAKISTANI WAR OF 1971; GOLDEN TEMPLE MASSACRE.)

Indian Civil War of 1947–48

During 1947 efforts to arrange independence of a unified Indian subcontinent from Great Britain foundered when the Muslim League and the Indian National Congress failed to agree to a federal formula. Riots between Muslims and Hindus, endemic since the "Great Calcutta Killing" (August 16–20, 1946), erupted into civil war when partition into INDIA and PAKISTAN was announced August 14, 1947. At least 5,500,000 refugees moved between West Pakistan and western India, and 1,250,000 between East and West Bengal; rioting took at least a million lives, in part because Indian prime minister Jawaharlal NEHRU prevented British troops from intervening. War between India and Pakistan over KASHMIR (1947–48) exacerbated refugee conflicts. Mohandas K. GANDHI, Indian spiritual and nationalist leader, attempting to calm Hindu-Muslim tensions, was assassinated by a Hindu extremist. The shock restored order and unified the Indian government.

Indian Ocean earthquake, 2004

See TSUNAMI DISASTER OF 2004.

Indochina Large peninsula in Southeast Asia, presently divided as the nations of BURMA, CAMBODIA, LAOS, THAILAND, VIETNAM and west MALAYSIA. The 19th-century struggle for colonial empire saw the British in control of the western and southern sections (Burma and Malaysia); while Thailand, in the center and then known as Siam, retained its independence with some difficulty. The eastern part became French Indochina and consisted of the colony of Cochin China (south Vietnam) and protectorates over Tonkin (north Vietnam), Annam (central Vietnam), Laos and Cambodia. WORLD WAR II put an end to

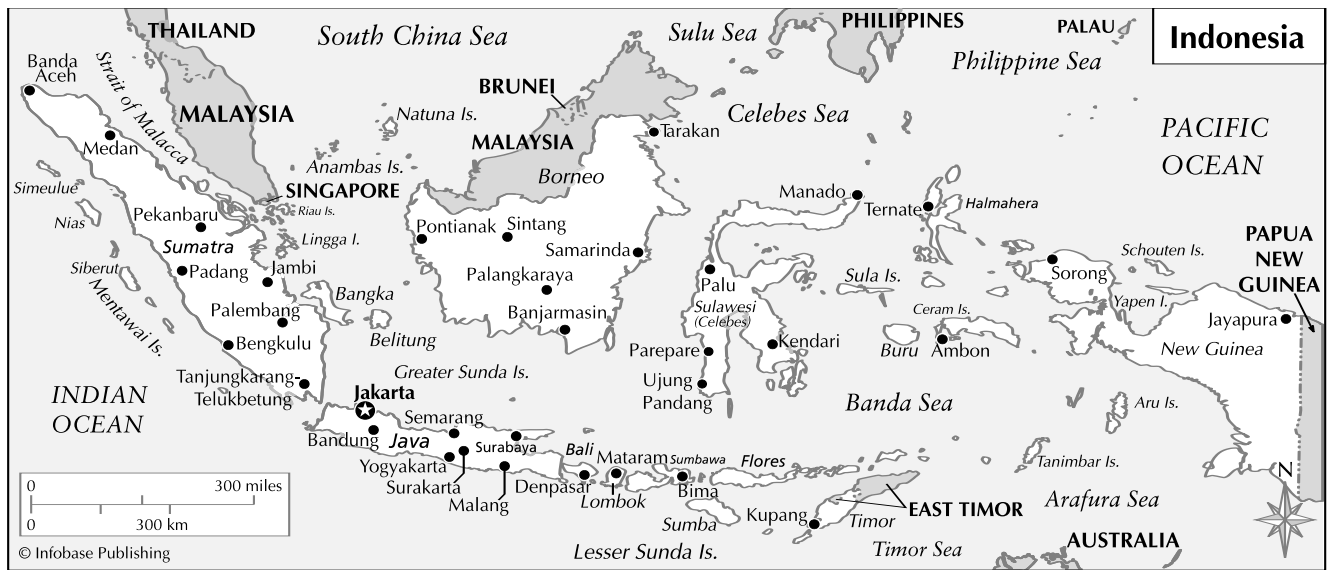

France's colonial empire. Although most of the region was reoccupied by France after the Japanese surrender at the end of the war, Vietnamese demands for independence from France were soon backed up by military action. The climax came in 1954 at DIEN BIEN PHU, a French military base in the northwest that fell to insurgent forces on May 7. That same year Laos and Cambodia gained their independence; and Vietnam, formed out of Annam, Cochinchina and Tonkin in 1949–50, was partitioned into north and south sections—a division intended to be temporary.

Indonesia, Republic of Vast archipelago-nation of more than 13,000 islands, off the coast of Southeast Asia. After hundreds of years under Dutch rule and exploitation, the Netherlands East Indies (or Netherlands Indies) saw the beginnings of Indonesian nationalism and the push for independence in the early 20th century. But it took the Japanese invasion of WORLD WAR II to disrupt Dutch rule. After the Japanese occupiers surrendered in 1945, nationalist leader SUKARNO proclaimed independence; a spontaneous revolution against the returning Dutch finally led

to the Europeans' relinquishing sovereignty to the U.S. of Indonesia late in 1949. Under Sukarno's leadership, Indonesia became a leader of the THIRD WORLD and by 1965 had developed close ties with China and the USSR. After an unsuccessful communist takeover attempt in 1965, Gen. SUHARTO led a right-wing coup, seized power and opened a campaign against the communists in Java and Bali, killing more than 100,000. In 1976 Suharto invaded Portuguese East Timor (also in the archipelago) and brutally eliminated all opposition. Since that unfortunate time, Indonesia enjoyed generally favorable relations with the West, as a member of the ASEAN economic and political alliance. In 1998 protests and riots occurred throughout Indonesia in response to the plummeting value of the rupiah, leading to the fall of Suharto. He was replaced by B. J. Habibie. In 1999, the country's first free multiparty elections since 1955, the Muslim leader Abdurrahman Wahid was elected as Indonesia's fourth president. In the same year the population of EAST TIMOR voted for independence setting off a wave of rioting by Indonesians on the island. In 2001 Wahid was removed from office for financial irregularities by the national assembly and was replaced by his vice president, Megawati Sukarnoputri, the daughter of former president Sukarno. After what was viewed as a mediocre term in office, she was defeated for reelection in 2004 by Susilo Bambang Yudhoyono. In May and July 2006 severe earthquakes on Java left more than 6,000 dead and over 40,000 people injured.

Indonesian-Malaysian War of 1963–66 In 1963 Indonesian "Lifetime President" Achmed SUKARNO refused to recognize the democratic federation of MALAYSIA, and urged Indonesians to crush it. Britain aided Malaysia to fight infiltrating Indonesian guerrillas in Sabah and Sarawak and Indonesian paratroops in Malaya. The war was financially costly for INDONESIA, and Indonesian communists (PKI) attempted to seize power September 30, 1965. General SUHARTO squashed the coup and carried out a bloody anticommunist purge; at least 300,000 leftists were killed. Sukarno, who had been supported by the PKI and had been friendly with communist

China, failed to regain government control. Eventually he had to surrender all authority to Suharto, who became acting president in 1967 and was elected president in 1968. Malaysia and Indonesia ended hostilities by a treaty signed at Djakarta on August 11, 1966.

Indonesian War in East Timor (1975–1999) Rival factions contended for power in Portuguese Timor (East Timor). (West Timor, formerly Dutch, had become part of INDONESIA in 1950.) The Revolutionary Front for the Independence of East Timor (FRETILIN) called for independence, another faction for merger with Indonesia, a third for remaining with PORTUGAL. Civil war erupted August 1975, the Portuguese governor left, and FRETILIN gained control. Opposing groups requested Indonesian intervention, and Indonesia eagerly complied, capturing Dili, the capital, December 7, 1975, and driving FRETILIN fighters into the mountains. Despite UNITED NATIONS condemnation of aggression, Indonesia annexed EAST TIMOR on July 17, 1976. FRETILIN guerrillas continued to resist, and East Timor lay in ruins with many of its people starving in internment camps. In a 1999 UN-sponsored referendum the people of East Timor voted for independence, and the region came under UN control for a transitional period.

Indonesian War of Independence Following the Japanese occupation

(1942–45) of the Dutch East Indies (now INDONESIA) in WORLD WAR II, Indonesian nationalists proclaimed independence. Not recognizing the new government, Dutch and British soldiers landed at Djakarta to restore Dutch control. Fighting led to negotiations and the Cheribon Agreement (1946), creating the U.S. of Indonesia under the Dutch crown. Disagreements and disorder led to a large-scale Dutch police action arousing world opinion. The blockade of republican territory coincided with guerrilla warfare waged by Muslim extremists against both Dutch and republicans, and a communist uprising. The Dutch seized the republic's capital, Djakarta, and principal leaders, but resistance and United Nations condemnation continued. Indonesian and Dutch representatives met at The Hague (August 23–November 2, 1949), and the NETHERLANDS transferred full sovereignty to the U.S. of Indonesia with Achmed SUKARNO as president, Muhammed Hatta as premier. The state became the Republic of Indonesia in 1950.

Indonesian Wars of 1957–62 Continued Dutch rule of West New Guinea angered Indonesian president Achmed SUKARNO. INDONESIA claimed the area as West Irian, asking without success for the United Nations to resolve the dispute. In December 1957 Sukarno began a strike against Dutch businesses, expelled Dutch subjects

and expropriated Dutch holdings. While the Dutch prepared New Guinean natives for self-determination and defense, Indonesia obtained warships and planes from the USSR and in 1962 landed paratroops in West New Guinea to fight alongside rebel guerrillas against the Dutch. The U.S. and the United Nations sponsored negotiations to avert full-scale war. In an agreement of August 15, 1962, the NETHERLANDS transferred West New Guinea to UN control, which subsequently transferred it to Indonesia (1963).

Indo-Pakistani War of 1947–48

The partition into INDIA and PAKISTAN left the status of Jammu and KASHMIR undecided. An independent, largely Muslim kingdom bordering West Pakistan, Jammu and Kashmir was ruled by a Hindu Maharaja. Demands for democracy and revolts by Pathan Muslims against Hindu landlords encouraged Pakistan to attack, seizing Muzaffarabad and Uri in October 1947, advancing toward the Kashmiri capital of Srinagar. The Maharaja asked for India's help, receiving it October 27, when he ceded the state to India. Sikh troops pushed the invaders back, and Pakistan was about to send troops until its British officers threatened to resign. Then Pakistan transferred "volunteers" into the invaded area to hold it as Azad (free) Kashmir. The turmoil exacerbated

INDONESIA

1901	"Ethical Policy" seeks better treatment of native populations under Dutch rule.
1910	Under the "Forward Movement," Dutch expand control through outer islands to reach present boundaries of Indonesia.
1927	Indonesians educated in Europe under Ethical Policy form groups of nationalist intellectuals; Sukarno founds Party National Indonesia.
1942	Japanese occupation; Sukarno cooperates, builds national power base.
1945	Three days after Japanese surrender, Sukarno declares independence; Dutch attempt at reentry meets guerrilla war.
1949	Federal republic established, with democratically elected parliament.
1954	Young officers mutiny in Sumatra.
1955	Afro-Asian conference at Bandung.
1956	Sukarno suspends parliament; begins "Guided Democracy" leading to martial law.
1963	Netherlands hands over West Irian (western New Guinea); Sukarno pursues friendship with China; influence of local Communists grows; economy falters.
1965	Sukarno leaves UN; young communists within military attempt coup; General Suharto crushes it, and becomes real power in nation; 500,000 communists killed as CIA assists in round-up.
1967	Sukarno stripped of office.
1968	Suharto assumes presidency; "New Order" signals turn to West.
1969	Separatist guerrillas acting in West Irian.
1975	Indonesia invades newly independent Portuguese East Timor; over 200,000 residents killed; oil boom brings relative prosperity.
1976	Government officials charged with taking bribes from U.S. corporations; government oil company collapses.
1984	Muslims violently protest Suharto's attempts to secularize society.
1989	FRETELIN guerrillas active in East Timor.
1990	Launches first communications satellite.
1998	General Suharto is forced from office.
1999	East Timor declares independence after UN-sponsored referendum. In the country's first free multiparty elections since the mid-1950s, Muslim leader Abdurrahman Wahid is elected president.
1999	Some 96% of 116 million registered voters cast ballots in the first free multiparty elections since 1955. Muslim leader Abdurrahman Wahid becomes Indonesia's fourth president, and PDI leader Megawati Sukarnoputri its vice president. UN peacekeeping forces mediate the rampage of paramilitary forces who oppose the popular 78.5% vote favoring East Timor's independence from Indonesia.
2001	National assembly removes Wahid from office for corruption and replaces him with his vice president, Megawati Sukarnoputri.
2004	Megawati Sukarnoputri is defeated by Susilo Bambang Yudhoyono in reelection bid.
2006	Severe earthquakes strike Java, killing over 6,000 people.

Hindu-Muslim tensions in India, contributing to Mohandas K. GANDHI's (1869–1948) assassination by a Hindu extremist. Intervention by the United Nations resulted in a cease-fire and a de-facto boundary at the battle line; but Indo-Pakistani disputes over Kashmir continued.

Indo-Pakistani War of 1965 Hostility between INDIA and PAKISTAN increased after 1958 when General Mohammed AYUB KHAN seized power in Pakistan, signing a treaty with China that put Kashmir's Chinese boundaries into question. Indian and Pakistani forces first clashed (April 9–30, 1965) in the Rann of Kutch. In August and early September both sides crossed the Kashmiri cease-fire line, and on September 6 India launched a drive toward Lahore with 900,000 troops. Four hundred-fifty Pakistani tanks were lost before the UNITED NATIONS arranged a cease-fire September 27, averting intervention by China. Mediation by Britain, the U.S. and the USSR led to a conference in Tashkent (1966) in which promises of friendship, cooperation and a Kashmiri plebiscite were made; but Prime Minister Lal Bahadur SHASTRI died within hours of the conference. His successor, Indira GANDHI, fulfilled most of the promises, but intervening events prevented the plebiscite from being held.

Indo-Pakistani War of 1971 The Pakistani Civil War of 1971 forced more than 10 million refugees from East Pakistan (BANGLADESH) into West Bengal. INDIA appealed for international aid, but instead, the U.S., supporting PAKISTAN, cut off India's American credit. Pakistani warplanes attacked Indian airfields in Kashmir (December 3, 1971), and the next day India attacked both West and East Pakistan, recognizing Bangladesh's independence December 6. Indian forces captured Dacca, forced the surrender of Pakistan's forces in Bangladesh, and took 90,000 prisoners December 16; India established a cease-fire on both eastern and western fronts the following day. Pakistan lost over half its population and was on the verge of economic and military collapse. It finally recognized Bangladesh in 1974; the U.S. did so April 4, 1972.

Industrial Party In the Soviet Union, an allegedly subversive group

of the technical intelligentsia that was said to be wrecking the first Soviet FIVE-YEAR PLAN at capitalist instigation. The members were tried and condemned in 1930, together with a number of those considered sympathetic to them. (See also PURGES.)

Industrial Workers of the World (IWW) Revolutionary union founded in 1905 by the Western Federation of Miners and other labor groups. Representing the principles of syndicalism, the organization was at first headed by Eugene DEBS and Daniel De Leon, with leadership soon passing to Vincent St. John and William Haywood. The IWW, whose members were known as Wobblies, aimed at organizing skilled and unskilled workers into one union, which, after a general strike, would topple capitalism and introduce a socialist industrial democracy. After 1908, it concentrated on organizing the unskilled. While meeting with strong opposition from local and federal government, the IWW amassed an impressive roster of membership, including agricultural, textile, dock, metal and lumber workers. It also made a special point of organizing both blacks and migrants. Membership reached a height of from 60,000 to 100,000 by the outbreak of World War I. Rejecting arbitration and collective bargaining, the IWW advocated direct action and conducted some 150 strikes. In the process, it was successful at achieving better working conditions and shorter hours for its members. In 1917 the Department of Justice arrested more than 200 Wobbly leaders for antiwar efforts. The RED SCARES of postwar America did much to discredit the IWW, and by the late 1920s it had ceased to be an important force in the American labor movement. After World War II the organization continued to lose membership amid the repressive measures of the McCarthy era and the general economic prosperity of the period. But it resumed its organizing activities and was involved in several struggles for workers' rights and free speech for the remainder of the century. In 2006 it moved its headquarters to Cincinnati, Ohio, as its membership had dwindled to about 2,000.

Indy, Vincent d' (1851–1931) French composer. He was a pupil and

disciple of composer César Franck, succeeding his master as president of the Société Nationale de Musique. Also a follower of Richard Wagner, he did much to introduce the German composer's music to French audiences. He wrote noted biographies of both his mentors (1906 and 1930), as well as of Beethoven (1911). In 1894 d'Indy was one of the founders of the Schola Cantorum in Paris, teaching composition at the influential music school and directing it from 1911 until his death. His three-volume work *Cours de composition musicale* (1903, rev. 1950) embodies his teaching methods and philosophy. As a composer, he followed Franck's model in using recurring themes throughout various movements. His spare and contained compositions also employ plainsong and baroque elements. His most often-played works include the *Symphony on a French Mountain Air* (1887) and the symphonic variations *Istar* (1897). He also wrote three other symphonies, chamber music, piano pieces, choral works and the opera *Fervaal* (1897).

INF Treaty The Intermediate-Range Force (INF) Treaty, signed by the U.S. and the Soviet Union in December 1987, was the first agreement between the two nations that eliminated an entire class of missiles. Under its terms, the U.S. agreed to destroy all CRUISE and Pershing II missiles and the Soviet Union agreed to eliminate all SS-20s; both types of missiles were intended primarily for development in Europe. With the collapse of the Soviet Union in December 1991, the Russian Federation replaced the Soviet Union as a party to the INF Treaty and continued to abide by the treaty's provisions. In May 1994, an amendment to the INF Treaty made the U.S., Russia, Belarus, Kazakhstan and Ukraine parties to the INF Treaty and responsible for its continued implementation. The U.S. and Russia (together with the other parties) had the right to conduct 10 short-notice inspections per year of the other's former missile operating bases and former support facilities (more than 35 sites for the U.S. and over 125 for the other parties). These inspection rights ended on May 31, 2001. While no longer subject to inspection under INF, the parties remain obligated to observe the restrictions and prohibitions

contained in the treaty, which are of indefinite duration.

Inge, William Motter (1913–1973) American playwright. Inge was noted for such “slice of life” dramas as *Come Back, Little Sheba* (1950), *Picnic* (PULITZER PRIZE, 1953), *Bus Stop* (1955) and *The Dark at the Top of the Stairs* (1957). Many of his plays were made into successful films. He won the 1961 ACADEMY AWARD for best story and screenplay (written directly for the screen) for *Splendor in the Grass*.

Inge, William R(alph) (1860–1954) British clergyman. Inge played a dominant role in the Anglican Church in the first half of the 20th century. Educated at Cambridge University, he taught there and at Oxford University before becoming dean of St. Paul's Cathedral in London, a position he held from 1911 to 1934. Inge achieved broad public recognition throughout Britain by virtue of his well-attended sermons and lectures, which frequently expressed a dour pessimism that earned Inge the nickname of “the gloomy Dean.” Inge was also a prolific author. His major works include *Christian Mysticism* (1897), *Outspoken Essays* (1919), *Mysticism in Religion* (1948) and *Diary of a Dean* (1949).

Ingersoll, Ralph McAllister (1900–1985) American journalist and publisher. Ingersoll played a key editorial role in the development of magazines such as *The NEW YORKER*, *Fortune*, *TIME*, and *LIFE*. He was best known as owner of the New York City newspaper *PM* (1940–48). Noted for its in-depth coverage of various issues with a liberal standpoint and for its policy of carrying no advertising, *PM* was the first major American newspaper to advocate U.S. entry into WORLD WAR II.

injection molding Manufacturing technique in which PLASTIC in a semi-liquid state is forced into a hollow mold where it hardens into the shape determined by the mold. The finished part is ejected from the mold ready for use or for whatever further finishing and assembly steps are required. While automatic machines can produce small injection moldings at high speed at relatively low cost, the high cost of the molds tends to limit use of the process to the production of ob-

jects and parts where demand can be expected to be high. Thermoplastics such as styrene and polyethylene are the usual materials used for injection molding to produce everyday objects such as plastic knives and forks, containers and toys.

Inkatha Zulu cultural and political organization in SOUTH AFRICA; led since 1975 by Chief Mangosuthu BUTHELEZI. Ostensibly, the group seeks to revive Zulu traditions and instill pride among Zulus. Some observers claimed that Inkatha was supported by the white minority government only to fracture the anti-APARTHEID movement in South Africa. In the late 1980s and early 1990s, Inkatha members were involved in violent clashes with blacks from other tribes and with members of the AFRICAN NATIONAL CONGRESS. After the end of apartheid in 1993, Inkatha emerged as one of the leading political parties in South Africa.

Inner Mongolia (Inner Mongolian Autonomous Region) Autonomous region of China bordering on Outer Mongolia and the USSR; the capital is at Hohhot. Nominally under Chinese rule until 1911, it then became part of the Chinese Republic; in 1947, the first autonomous region established by the Chinese communist government. (See also MONGOLIA.)

İnönü Village in Turkish province of Bilecik. During the GRECO-TURKISH WAR OF 1921–22, Greek offensives were twice halted at İnönü by Turks under İsmet Pasha, who, as a result of these victories, took the name of the village as his surname. As İsmet İNÖNÜ he became president of Turkey in 1938.

İnönü, İsmet (İsmet Pasha) (1884–1973) Turkish soldier and statesman. İnönü was born in İzmir. After a distinguished military career, he became ATATÜRK's chief of staff during the GRECO-TURKISH WAR OF 1921–22. He was first premier of the Republic of TURKEY (1923–38) and, after Atatürk's death, its second president (1938–50). He introduced free elections and a multiparty system in Turkey. After the 1950 elections, İnönü became leader of the parliamentary opposition. Under the Gursel government (1961–65), he

was again premier, but resigned owing to lack of sufficient parliamentary support.

Institutional Revolutionary Party (Partido Revolucionario Institucional; PRI) Ruling political party in MEXICO from 1929 to 2000. Originally titled the National Revolutionary Party, the PRI was formed by President Plutarco Elías CALLES as a result of the assassination of President-elect Álvaro Obregón in 1928. The original purpose of the PRI was to end the rampant unrest in the army and the political, ideological and regional conflict that divided the country and unite the Mexican people under the banner of political reform and stability. A system developed in which the sitting president would select the PRI nominee shortly before national elections were to take place in order to avoid infighting within the party and the government. It also virtually guaranteed the election of the president's designee due to the PRI's total control of the country's political system.

Calles thought that the affiliation of a governing institution with the ideal of an ongoing national revolution would unite the key factions within Mexico behind it. In 1938 President Lázaro Cárdenas renamed it the Party of the Mexican Revolution to emphasize the influence of local organizations of white-collar workers, unionized labor and farmers, which he mobilized within the existing political structure. In 1946 the party was renamed the Institutional Revolutionary Party, to reflect the desires of its leadership to “institutionalize” the changes that it had enacted over the previous 18 years. In doing so it partly discarded its appeal to the workers, farmers and skilled professionals Cárdenas had embraced. Instead, it began to focus on modernizing the country's infrastructure and industrial system and promoting foreign investment.

The PRI used its position as the dominant political force in Mexico to gain control of the various branches of the federal, state and local government, as well as nongovernmental organizations. This process ensured that the head of the Mexican Workers Confederation (CTM), an association of all the country's labor unions supported by the government, was on the Central

Executive Committee of the PRI. PRI officials were also dispersed throughout the labor organization to ensure its cooperation with government policies.

Allegations of corruption that permeated President Carlos SALINAS DE GORTARI's six-year term in office, beginning in 1998, caused a decline in the PRI's popularity among Mexican voters. In March 1994, after the party's first candidate, Luis Donaldo Colosio Murrieta, was assassinated, he was replaced on the party ticket by his campaign manager, Ernesto Zedillo Ponce de León. Zedillo won with a bare majority of the popular vote, strengthening the position of the opposition parties in Mexico—the conservative National Action Party (PAN) and the leftist Party of the Democratic Revolution (PRD). In the July 1997 midterm elections, opposition parties won a majority of the seats in the lower house of the Mexican congress and opposition candidates won several state governorships. By 2000 the PRI had lost additional ground in the lower house as well as its control of the upper house. In the same year the PRI presidential candidate lost to the PAN candidate, Vicente Fox; for the first time in 71 years, the PRI was out of power. Despite its declining presence in national politics, party officials remained influential in many governmental bureaucracies and non-governmental organizations.

insulin A natural substance produced by the pancreas and necessary for proper metabolism of glucose (sugar). Before the 20th century anyone whose pancreas stopped producing insulin developed diabetes mellitus and died. In 1921 Canadian Frederick BANTING extracted insulin from the pancreas of a dog and in January 1922 successfully treated a 14-year-old boy with diabetes mellitus. Insulin became commercially available by late 1922. A milestone 20th-century medical advance, insulin use has become routine and saved the lives of countless diabetes sufferers.

Intel American manufacturer of computer components, specifically microprocessors and integrated circuitry (see COMPUTERS). Founded in 1968 by computer engineers Gordon Moore and Bob Noyce, Intel was an abbreviation of *integrated electronics*, which Moore, Noyce and Andrew Grove (who joined

the company soon after its founding) hoped to develop for the burgeoning computer market. Intel's first task was the construction of a semiconductor that was cost-effective and could replace the large magnetic core memory units currently in use. In 1971 it developed the dynamic random-access memory circuit (DRAM) which kept information in the computer's memory through a constant recharging of the computer's random access memory (RAM) chips. In the same year engineer Ted Hoff, came up with the idea for installing a central processing unit (CPU) in computers that was condensed into a single computer chip. The result was the 4004, a one-sixth by one-eighth-inch computer chip with 2,300 transistors that equaled the output of ENIAC, the world's first computer. Eventually the 4004 and its successor, the 8080, became a vital component of a variety of machines such as calculators and the emerging personal computer (PC).

The increased speed of the Intel CPUs and the increasing popularity of the PC resulted in the installation of Intel units in an estimated 15 million machines by 1988. In 1989 Intel came out with a new CPU, the 486, followed by the first of four Pentium chips in 1993. This new model of CPU contained 5.5 million transistors, making it approximately 300 times more powerful than ENIAC. The continued improvement of CPU's with the development of the Pentium 2 (1997) 3 (2000) and 4 (2001) chips cemented Intel's reputation as one of the leaders in the development of computer hardware. In 1998 the U.S. Federal Trade Commission (FTC) accused Intel of attempting to force computer manufacturers to use Pentium chips by refusing to share technical information with them, making it difficult for these companies to produce hardware components compatible with Pentium chips or other products. Although dispute was settled out of court the following year. Intel remained in the sights of government agencies responsible for monitoring of antitrust violations.

interferon Any one of a naturally occurring protein family that functions as part of the body's defense mechanism by interfering with the multiplication of viruses within living cells. Discov-

ered in 1957 by English scientist Alick Isaacs and his assistant Jean Lindenmann, interferons were subsequently produced by cells cultured outside the body. Recombinant-DNA technology and chemical synthesis commercially produced human interferons used to treat such diseases as shingles and certain types of cancer.

International The first International was formed in London by Karl Marx in 1864; its aim was to coordinate working-class movements in different countries and thereby to establish international socialism. There were disputes between the Marxist and anarchist members, culminating in the final separation between Marx and Bakunin (1872). The movement was dissolved in 1876. The Second International was formed in Paris in 1889, comprising the radical parties of Austria, Belgium, Denmark, Germany, Spain, Sweden and Switzerland. A non-revolutionary movement, it collapsed with the outbreak of World War I. The Third International (COMINTERN) was formed in Moscow by LENIN and the BOLSHEVIKS in 1917 and comprised the communist elements excluded from the Second International. Its aim was world revolution. A Fourth International was formed by TROTSKY in Mexico in the 1930s, and there was also a Fifth—the Situationist International—formed in 1954. There have been two revivals of the Second, nonrevolutionary Socialist International. The first (1923) ceased to operate in 1940. The second (1951) is the currently operative Socialist International. Its congress meets at least once every two years and its council, in which the Socialist Union of Central-Eastern Europe is represented, at least twice a year.

International Atomic Energy Agency (IAEA) Intergovernmental organization created to help its members develop nuclear power plants while preventing non-nuclear powers from developing nuclear weapons. Founded in 1957 and located in Vienna, Austria, the IAEA strives to improve the peaceful, economic and environmental state of the world by educating its members on the proper ways of using nuclear materials to generate electricity, as well as advocating research into alternate, non-fossil-fuel sources of

energy. During the COLD WAR this organization failed to prevent international powers like France and China from developing nuclear weapons programs, although the U.S. and the USSR both used their superpower status to minimize the proliferation of atomic knowledge that could be used to develop nuclear weaponry. With the end of the cold war and the disintegration of the USSR in 1991, many international observers thought that the end of the bipolar rivalry would lead to greater cooperation among the U.S., Russia (the USSR's predecessor) and the other world nuclear powers to encourage countries to join the agency, acquire knowledge on how to build nuclear reactors and renounce efforts to obtain nuclear weapons. However, some countries, notably NORTH KOREA, IRAQ, and IRAN, have attempted to build reactors capable of producing weapons-grade plutonium. In 2003 the unwillingness of Iraqi president Saddam HUSSEIN to abide by the guidelines of the IAEA and submit to unrestricted inspections of suspected nuclear sites was one of the reasons cited by U.S. president George W. BUSH and British prime minister Tony BLAIR for invading Iraq and deposing Hussein. Three years later the IAEA reported Iran to the UN Security Council for its nuclear activities.

International Bank for Reconstruction and Development See WORLD BANK.

International Committee of the Red Cross A council of 25 Swiss citizens, with headquarters in Geneva, Switzerland, that acts as an administrative body coordinating the activities of individual Red Cross societies worldwide and of the Red Cross and wartime belligerents. The Red Cross grew from the work of Jean Henry Dunant, a Swiss humanitarian who aided the wounded in the battle of Solferino (1859). In 1863 the Geneva Public Welfare Society was formed and sponsored an international conference that laid the groundwork for the International Committee of the Red Cross (ICRC). The Red Cross became active in 1864, increasing its efforts in the Franco-Prussian War (1870–71) and the BALKAN WARS (1912–13). It grew in international scope, spreading to chapters around the world, including the founding of the American Red Cross in

1881. The organization assumed enormous importance with the outbreak of WORLD WAR I, when it trained volunteers, aided PRISONERS OF WAR and helped in repatriation. For its work the ICRC received the 1917 NOBEL PEACE PRIZE. The organization again played a great role in humanitarian efforts during and after WORLD WAR II, helping PRISONERS OF WAR and attempting to aid victims of the HOLOCAUST. It received its second Nobel Prize for peace in 1944. Today, the Red Cross has a membership of about 100 million, with affiliates in 74 countries. It continues to provide services for victims of war and to assure the carrying out of the GENEVA CONVENTIONS. In addition, its services have been extended to many peacetime activities, including running blood banks, caring for disaster victims, aiding refugees and offering first-aid training. In 1963, its centennial year, the ICRC received a third Nobel Prize, this time shared with the LEAGUE OF RED CROSS SOCIETIES. Its emblem of a red cross on a white field (the reverse of the Swiss flag, replaced in Muslim countries by a red crescent and in Israel by a red star of David) remains an international symbol of humanitarianism and neutrality.

International Geophysical Year (IGY) An international project (July 1, 1957–December 31, 1958) designed to study the geophysics of the Earth and its environment. The project was timed to coincide with increased sunspot activity. This enabled scientists to study the effects of sunspots on atmospheric magnetism and radio waves. More than 60,000 scientists from 60 nations were involved in research relating to the IGY. Some of the most important experiments were conducted by researchers stationed in ANTARCTICA. During the project, the first instrumented Earth satellites were launched, leading to the discovery of the VAN ALLEN radiation belts. Hugh Odishaw, the American scientist who coordinated the U.S. effort, called the IGY “the single most significant peaceful activity of mankind since the Renaissance and the Copernican Revolution.”

International Labour Organisation Specialized agency, originally created in 1919 by the TREATY OF VERSAILLES and affiliated with the LEAGUE OF NATIONS. Its original purpose was to establish inter-

national guidelines for improving labor practices, working conditions and standards of living for workers worldwide. In 1946 the International Labour Organisation (ILO) became an agency of the UNITED NATIONS. In its mission to improve the lives of workers, the ILO promotes standards for working hours, adequate wages, safe and disease-free working conditions, vacations, unemployment insurance, protection of women and children and other such matters and provides technical assistance for vocational and management training. The ILO consists of a general conference of representatives of its 151 member states (in 1985), a governing body and an International Labour Office; it is financed by its member states. In 1969 it was the recipient of the NOBEL PEACE PRIZE. The U.S. withdrew from the ILO in 1977 because of the organization's criticism of ISRAEL and apparent favoring of leftist political movements; however, the U.S. rejoined the organization in 1980. By 2004 the ILO membership had grown to include 177 states.

International Style Term used to describe architectural design that is simple, functional, and unornamented, following the theoretical teaching of the BAUHAUS and the leading figures of MODERNISM of the 1920s and 1930s. While historic period design generally has been associated with national or regional traditions—as in French Gothic or Italian Renaissance styles—early modernism developed in France, Germany, the Scandinavian countries and elsewhere in similar patterns, so that all such work can be considered truly international in character. The term was used as the title for an exhibition and related book at the MUSEUM OF MODERN ART in New York curated by Henry-Russell HITCHCOCK and Philip JOHNSON in 1932. Most of the work shown shared such characteristics as flat roofs, large glass areas, plain white walls, and an emphasis on the use of steel and concrete as building materials. The term has come to be associated with and applied to such designs, whereas other types of modern work (that of Frank Lloyd WRIGHT, for example) are not described by this term.

Internet Global information network of computers, computer networks and

servers joined by the transmission of data—information, files, text, graphics and sound—through satellites and/or fiber optic cables. It eventually developed into a very useful tool for personal, commercial, industrial and administrative tasks. However, its decentralized structure, which allows connections between any computer network regardless of transmission speed or computer model, has made it difficult for governments, businesses and citizens to regulate. To connect to one of these networks, an individual needs only a computer with a modem, a fiber optic cable and an Internet service provider (ISP). In some cases the ISP is a company or branch of government for which the individual works or a college/university in which the individual is enrolled. In others it is a commercial company, such as America Online (AOL), NetZero, MSN, Juno or Earthlink, which provides the connection to the Internet for a monthly fee.

The Internet was developed as a result of U.S. Defense Department research in the 1960s. The goal of the study was to create a communication system that would connect Defense Department posts after a nuclear attack, which would take information on one computer, and compress it into packets of coded data for electronic, cable-bound transfer to another computer. The result was the Advanced Research Projects Agency Network, or ARPANET, which produced ground- and satellite-based means of transferring such “packets” of information between computers. However, researchers quickly learned that the manner in which each of these ARPANETs were constructed made them incompatible with other ARPANETs, causing them to search for means of allowing connections between computer networks, hence the term *Internet*. The result of this additional research was the creation of Transmission Control Protocol and Internet Protocols, commonly abbreviated as TCP/IP, a series of computer communication rules that ensure that information packets transferred between different computers are communicated in a manner discernable to all types of computers, and that the information sent from one machine to another can be deciphered. The flexibility and rapid transfer of informa-

tion over the Defense Department's network made the system popular with other bureaucracies and institutions, such as the National Science Foundation's NSFNET and the Department of Energy's Magnetic Fusion Energy Network (MFENET).

By the 1980s the rapid communication that these networks afforded prompted private companies to develop similar networks within the firms, or intranets. Researchers working on the ARPANET also began to look for ways to transmit audio, video, and graphics over the evolving Internet. Another breakthrough came with the creation of a computer program that allowed its users to understand and utilize the full array of options, or menus, available as a result of a particular Internet connection. The computer program Gopher was one early effort to provide this service. By 1989 enough advances had been made in the transfer of information over the Internet that a new computer network, termed the World Wide Web, was created to facilitate rapid communication among physicists around the world and allow them to collaborate on research projects. Many businesses immediately saw the commercial applications of this computer network and began to petition the U.S. government to expand access to the Internet beyond the scientific and military communities. By the end of the 1980s the Internet was open for commercial ventures. By the middle of the next decade companies like AOL had vastly increased the appeal of the Internet among consumers, while Internet transmission technology allowed the packaging and reception of text, graphics, audio, visual and program files. Academic institutions, libraries, governments and businesses scrambled to reap the benefits of this new communication network.

Some problems with the structure and nature of the Internet became evident by the dawn of the 21st century. Foremost among them, for example, the methods of transmitting information were not originally designed to handle the high volume of Internet traffic that developed. As a result many small institutions, such as colleges, have developed Ethernets, which allow for more rapid connections and transmission of data between computers. Another response has been to utilize

BROADBAND connections, rather than those provided by telephone lines. Because broadband sends out information over a greater number of fiber optic cables than the connections established through telephone cables, this allows for a faster transmission and reception of information.

The issues that have raised the greatest concern are those involving security and content. As more users have transmitted personal information over the Internet, purchasing goods online with credit cards and opening seemingly harmless ELECTRONIC MAIL (e-mail) attachments, they have become the targets of hackers, viruses and moles that were previously confined to the large corporations with connections to the Web. The result has been a continued effort by government agencies and Internet Service Providers to ensure the secure transmission of all data over Internet connections. Also, recent efforts by the U.S. government to prohibit the transmission over the Internet of material it deemed indecent have been struck down by the U.S. Supreme Court (1997) and a federal court (1999). Both courts ruled that the 1996 Communications Decency Act and the 1998 antipornography Child Online Protection Act constituted violations of the First Amendment. In 2003 the state of Utah took aim at another Internet-related problem—spam, or unsolicited e-mail. In an effort to ensure their citizens were not the recipients of such messages, the state made it illegal for most businesses and agencies to send such e-mails without the consent of their recipients.

Intifada I (1987–1993) (Arabic “shaking off”) An uprising among many parts of the Palestinian Arab population directed against the Israeli military occupation of the GAZA STRIP and the WEST BANK that began in December 1987 when the residents of the Gaza Strip rose up against the Israeli occupation. It resulted in the stoning of Israeli troops by Palestinian youths, and was fueled by incendiary statements by Muslim clergymen. It quickly spread to the West Bank, the other predominantly Palestinian territory occupied by ISRAEL since 1967. Though originally a spontaneous outbreak, the Intifada came under the control of the PALESTINE LIBERATION ORGANIZATION

Child injured during Intifada I, 1990 (ELDAD RAFAELI/CORBIS)

(PLO), HAMAS (the Islamic Resistance Movement) and ISLAMIC JIHAD. While all three groups initially demanded that the future state incorporate all of Mandate Palestine, the PLO began in 1988 to move toward the acceptance of an Israeli state with the pre-1967 borders and to advocate some form of co-existence with Israel, causing a split within the movement.

As a result, Hamas, Islamic Jihad and other more radical Palestinian organizations began to dominate the Intifada. These groups increasingly relied on terrorist tactics, such as the placing of bombs in Israeli shopping malls, markets, discotheques and restaurants. The intensity and frequency of these attacks, in addition to the stoning of Israeli troops by Palestinian youths, made it difficult for Israel to develop an effective counterinsurgency strategy. Israeli efforts to shatter the infrastructure of the uprising impeded but did not end the Intifada, because it was not a movement controlled by a rigidly defined hierarchy that was vulnerable to operations against specific individuals or locations. Rather, it was a loosely

controlled organization responding to individual initiatives as well as directives from Hamas and Islamic Jihad.

The first Intifada ended as a result of the opening of negotiations between Palestinians and the Israeli government. As a consequence of the 1991 PERSIAN GULF WAR, U.S. president George H. W. BUSH promised the Arab states that had joined the coalition against Iraq that the U.S. would take an increasingly active role in promoting a lasting settlement of the Palestinian issue. As a result of intensive negotiations begun under the Bush administration (1989–93) and resumed under the administration of President Bill CLINTON, the PLO and Israel signed a peace agreement in September 1993, effectively bringing the Palestinian uprising to an end.

Intifada II (2001–2004) A second uprising by the Palestinian Arab community that began after negotiations between Israeli prime minister Ehud BARAK and PALESTINIAN AUTHORITY (PA) leader Yasir ARAFAT to establish a Palestinian state composed of the Gaza Strip

and most of the West Bank broke down in late 2000. This second Intifada consisted largely of Palestinian militants with concealed explosives and metal projectiles blowing themselves up in densely populated areas of Israel and the occupied territories. Although these attacks on Israeli nightclubs, restaurants, buses, etc., were apparently the work of HAMAS and Islamic Jihad and Arafat publicly condemned them, the hard-line government of prime minister ARIEL SHARON, who defeated Barak in 2001, accused Arafat of duplicity in the uprising—of officially condemning the destruction in English but communicating approval in Arabic to Palestinian Arabs.

Israeli security forces responded to the violence with a harsh crackdown on suspected terrorists and their supporters. They eventually razed part of PA headquarters, including Arafat's living quarters, and placed Arafat under a virtual house arrest. The Sharon government also authorized military strikes on West Bank towns suspected of harboring Intifada militants. In July 2003 Sharon authorized construction of a tall barrier separating Israel and contiguous Israeli settlements from the West Bank, in order to prevent would-be suicide bombers from reaching Israeli population centers. Negotiations based on the U.S. "Roadmap to Peace" made little headway. After Arafat's death in 2004 and the subsequent election of Mahmoud ABBAS as Palestinian leader, both sides appeared to take a more conciliatory stance and to be willing to work toward a meaningful resolution.

in vitro fertilization Method of fertilizing a human egg outside the body of the mother, creating an embryo that can then be transplanted into the mother's uterus and develop normally. The child produced by this technique of fertilization has been popularly called a "test-tube baby." The technique was developed by British physician Patrick C. STEPTOE and Robert G. Edwards and was first used successfully in 1978. It was originally created for those cases of infertility in which the egg is produced normally but cannot be transmitted down the fallopian tube and into the uterus; it is now used in cases of low sperm count as well. The egg, or group of eggs, is removed from the mother's body, exposed to the fa-

ther's sperm in a special culturing medium, fertilized and allowed to undergo several cell divisions before the tiny embryo is returned to the uterus. The technique has raised a number of ethical controversies but has provided an opportunity for thousands of previously infertile couples to have children.

Ioffe, Adolf Abrahmovich (1883–1927) Soviet revolutionary and diplomat, a supporter of TROTSKY. A member of the Menshevik Party, he joined Trotsky in Vienna in 1908. They both joined the BOLSHEVIKS in 1917. After the revolution he was one of the negotiators of the Russian-German Treaty of BREST-LITOVSK, and he was made ambassador to Germany in 1918. He headed diplomatic missions to Geneva (1922) and China (1923). He remained a strong supporter of Trotsky in the power struggle after LENIN's death (1924). When Trotsky was defeated by STALIN, he committed suicide.

Ionesco, Eugène (1912–1994) French playwright and essayist. Ionesco, who won international fame with the premier of his very first play, *The Bald Soprano* (1950), was one of the leading figures of the THEATER OF THE ABSURD and the most gifted comic playwright to emerge from within that movement. Ionesco was a master at crafting absurdist, non sequitur dialogues that illustrated the fragility of language and of the social fabric itself. He adopted the existential outlook that society was based on arbitrary values and hence instilled a spirit of alienation in its citizens, who continued to hunger for meaning. This hunger was portrayed by Ionesco with a remarkably light touch, making his plays popular with theater audiences around the world. Other major plays by Ionesco include *The Lesson* (1951), *The Chairs* (1952), *Amedee, or How to Get Rid of It* (1954), *The New Tenant* (1955), *The Killer* (1959), *Rhinoceros* (1960), *Exit the King* (1962) and *A Stroll in the Air* (1963). *Notes and Counternotes* (1964) contains a selection of his essays on the theater.

Ipatyeff, Vladimir Nikolayevich (1867–1952) Russian chemist. He pioneered work on high-pressure catalytic reactions in hydrocarbons. He was made chairman of the government's chemical committee in 1914

and continued to work for the Soviet government after the revolution. He was, however, anticommunist and in 1927 he left the USSR to settle later in the U.S. He is best known for his work during World War II, when his process for manufacturing high-octane gasoline from low-octane fuels was used to produce aviation fuel.

IRA See IRISH REPUBLICAN ARMY.

Iran (Islamic Republic of Iran) Iran encompasses an area of 646,128 square miles in Southwest Asia. Known as Persia since ancient times, REZA PAHLAVI changed the country's name to Iran in 1935. For the first 26 years of the 20th century Persia was ruled by the Oajar dynasty, a period marked by chaos and foreign intervention. After the shah was crowned in 1926, he introduced a modernization program, but his close relationship with Germany led Britain and Russia to invade Iran in 1941, forcing the shah to abdicate in favor of his son. The new shah, MUHAMMAD REZA Pahlavi, pur-

sued economic and social reforms (called the White Revolution). The continued Westernization and secularization of Iran brought increased opposition, spearheaded by exiled Islamic Shi'ite leader Ayatollah KHOMEINI. The situation became so volatile that the shah fled Iran in January 1979, and Khomeini assumed power. He started the Islamic Cultural Revolution that prompted the Revolutionary Guards to storm the American Embassy in Teheran (November 1979), resulting in a hostage situation that lasted until January 1981. Historical claims to Iranian territory led neighboring IRAQ to invade Iran in 1980. The eight-year IRAN-IRAQ War was devastating, and Iran sued for peace in 1988 under provisions of a UNITED NATIONS plan. The U.S.'s covert involvement in the war surfaced in 1986 as the IRAN-CONTRA SCANDAL, involving secret arms deals with Iran in exchange for Iranian intervention to free American hostages in LEBANON. Since Khomeini's death in 1989, his successor Hashemi Rafsanjani has pursued a more moderate

IRAN

1907	Anglo-Russian agreement to protect foreign mineral interests effectively divides the country into three zones: Russian, British and neutral.
1914	Britain acquires controlling interest in the Anglo-Persian Oil Company.
1920	Gilan, an autonomous Soviet republic, is formed in the north of Iran.
1921	(Feb. 20) Col. Reza Khan takes over Gilan in a coup.
1923	Reza Khan becomes prime minister.
1926	Reza Khan is crowned Reza Shah Pahlavi.
1935	To curry favor with the Nazis, the shah changes the name of his country, Persia, to Iran—meaning “Aryan.”
1941	Britain and Russia invade in 1941; Reza Shah Pahlavi abdicates in favor of his son Mohammad Reza.
1946	British and Russian occupation troops leave Iran; Azerbaijani dissidents establish independent republic and are put down by Iranian troops; Kurdish republic of Mahabad is proclaimed and suppressed by Iranian troops.
1952	With the support of Prime Minister Mohammad Mossadeq the Anglo-Iranian Oil Company is nationalized; relations with Great Britain are broken; shah dismisses Mossadeq but is forced to reinstate him; Mossadeq assumes complete control of the government; shah is forced to flee the country; in a counter coup, General Fazlollah Zahedi rallies army behind the shah and the shah is returned to power.
1954	Under a plan devised in Washington and London a consortium of oil companies is placed in charge of the AIOC (now called British Petroleum).
1955	Iran joins CENTO.
1957	SAVAK, the secret police, is established.
1960	Diplomatic recognition of Israel; Egypt breaks diplomatic relations as a result.
1963	Shah launches “White Revolution”; land reform and woman suffrage increased; Literacy Corps organized.
1967	Coronation of the shah.
1969	Dispute with Iraq over Shatt al-Arab erupts into open conflict.
1970	Iran accepts UN mediation on its claim to Bahrain.
1973	Oil industry is nationalized; Iran joins OPEC oil price hike.
1975	Restakhiz is made the sole political party.
1977	(October) Ayatollah Khomeini’s son dies, sparking riots and strikes.
1978	(October) Khomeini’s expulsion from Iraq to France highlights his position as opposition leader; strikes and demonstrations break out against the shah, country thrown into turmoil.
1979	(Jan. 16) The shah flees the country; (Feb. 1) Ayatollah Khomeini returns to Iran; (Nov. 4) Revolutionary Guards storm the U.S. embassy and take diplomatic personnel hostage.
1980	(Jan. 25) Abolhassan Bani Sadr elected as the first postrevolutionary president; Revolutionary Council disbands as Bani Sadr cabinet takes office; (March) nationalization of most

medium- to large-size industries and financial institutions is begun; (Apr. 25) U.S. military attempt to rescue the embassy hostages fails; (Sept. 22) Iraq invades Iran, beginning bloody eight-year war.

1981	(Jan. 21) American hostages released; (June) impeachment proceedings commence against Bani Sadr; (July) Mohammed Ali Radjai named president; (August) Radjai and Prime Minister Bakhonar killed in bomb attack launched by the Mujaheddin.
1985	U.S. offers arms deal to Iranians in an attempt to obtain release of American hostages in Lebanon.
1988	Iran sues for peace with Iraq on the basis of a UN resolution passed in 1987.
1989	(Feb. 14) Khomeini calls for the death of author Salman Rushdie for his book <i>The Satanic Verses</i> ; (June) Khomeini dies; Hashemi Rafsanjani emerges as preeminent leader and is elected president.
1990	(Sept. 24) Iran states it will not violate UN trade sanctions imposed on Iraq for its invasion of Kuwait.
1997	Reformer Mohammed Khatami is elected president against the candidate of the hard-line clerics.
2001	Khatami is reelected president with 78% of the vote.
2005	Hard-line major of Teheran Mahmoud Ahmadinejad is elected to succeed Khatami as president. Negotiations continue between European powers and Iran over Iran's attempt to develop a nuclear program, which has drawn sharp criticism from the U.S.
2006	The International Atomic Energy Agency reports Iran to the UN Security Council for attempting to construct a nuclear bomb.

course. He declared Iran's neutrality in the UN-backed war against Iraq for its invasion of Kuwait in 1990, and tried to act as peacemaker during the conflict. Moderate influences within the Iranian government increased with Mohammad KHATAMI's presidential election in 1997 and 2001, and the 2000 parliamentary election. But the reformist Khatami was continually reined in by the hard-line clerics under Supreme Leader Ayatollah Ali Khomeini, who maintained effective control of the country's political life. During the early years of the 21st century, Iran become the object of harsh criticism from U.S. president George W. BUSH for its alleged support of international terrorism and its efforts to develop a nuclear program. The power of the Islamic hard-liners was strengthened in 2005 when the conservative mayor of Teheran, Mahmoud Ahmadinejad, was elected to succeed Khatami as president. In 2006 the INTERNATIONAL ATOMIC ENERGY AGENCY reported Iran to the UN Security Council for allegedly trying to develop a nuclear bomb. (See also IRAN HOSTAGE CRISIS; PERSIAN GULF WAR.)

Iran-contra scandal Political scandal that rocked the second term in office of President Ronald REAGAN. When Reagan came to office in 1981, the U.S. and IRAN were bitter adversaries. After the IRANIAN REVOLUTION OF 1979, Iran had held more than 50 American hostages for over a year. Reagan denounced Iran because of its support of terrorism but later funded the "contra" movement, which was fighting a guerrilla war against the leftist Sandinista government of NICARAGUA. The Democrat-controlled Congress objected and voted to stop any financial support of the contras. In 1986 the press revealed that the U.S. government had secretly shipped arms to Iran and diverted the funds to a Swiss bank account controlled by the contras in violation of Congress' ban. Highly publicized congressional investigations revealed that the prime movers in the scandal were U.S. Marine Lieutenant Colonel Oliver North and his boss, Vice Admiral John Poindexter. Also implicated was Robert "Bud" McFarland, the national security adviser. The hearings caused a sensation. Although President Reagan denied involvement and was never directly

implicated, the scandal put his credibility and competence into question.

Iran hostage crisis After Mohammad REZA SHAH PAHLAVI of IRAN was forced to leave his country in January 1979, and was subsequently admitted to the U.S. for medical treatment, tensions between the U.S. and Islamic fundamentalists within Iran greatly increased. On November 4, 1979, Iranian students, with the support of fundamentalists in the provisional government, seized the U.S. embassy in Teheran and held 63 members of the embassy staff hostage. The students demanded the return of the ousted shah for trial. The crisis received almost continual television and press coverage in the U.S. and virtually paralyzed the administration of U.S. president Jimmy CARTER. An American military rescue attempt failed disastrously on April 25, 1980, further exacerbating matters. The crisis and Carter's handling of it became a major issue in the 1980 U.S. presidential election and contributed to Carter's defeat by Ronald REAGAN in November 1980. Behind-the-scenes diplomacy and the payment of a substantial sum

of U.S.-held Iranian assets finally secured the hostages' release, which the Iranians timed to coincide with Reagan's inauguration. Most Americans viewed the crisis as a manifestation of anti-American feelings and a test of U.S. strength. However, many Middle East experts interpreted the hostage-taking as part of a power struggle between hard-line Islamic fundamentalists and pro-Western moderates within the provisional government. The fundamentalist faction (led by Ayatollah KHOMEINI) gained the upper hand and purged the moderates, establishing an Islamic republic.

Iranian Revolution of 1979 IRAN'S Shah Muhammed Reza PAHLAVI was opposed by Iranian liberals for his authoritarianism and by conservatives for his westernism. These groups collaborated in 1978 under exiled Muslim religious leader Ayatollah Ruhollah KHOMEINI until rioting forced the shah to flee in January 1979. Strikes, huge demonstrations, the neutrality of the army and the return of Khomeini to Iran brought down the government by February. Khomeini declared Iran an Islamic republic, establishing a revolutionary council to rule. Trials and executions of opponents ensued. The regime was approved overwhelmingly by a March 30, 1979, referendum, but the terror continued. Iran broke relations with the West and the Islamic world, and on November 4, 1979, militants seized U.S. embassy staff as hostage for the return of the shah's assets (see IRAN HOSTAGE CRISIS). Despite the shah's death (July 1980) the hostage crisis continued until Algerian mediation led to a U.S.-Iranian agreement freeing the hostage as Ronald REAGAN was being inaugurated as U.S. president (January 20, 1981). Khomeini's Islamic revolution continued in Iran.

Iran-Iraq War Capping a long dispute over the Shatt-al-Arab waterway, and Ayatollah Ruhollah KHOMEINI's attempts to destabilize Iraq's government under President Saddam HUSSEIN, IRAQ invaded IRAN on September 21–22, 1980. With its well-equipped army it hoped for a quick victory. Iranian forces retaliated; Khomeini called for total mobilization and threatened oil shipments through the Strait of Hormuz. Despite massive offensives (Iraq

had a 500,000-man army, Iran had 2 million), neither side was able to occupy enemy territory, and the war settled into a vicious, costly stalemate until 1988. Iraqi air attacks against tankers in the Persian Gulf led the U.S. to initiate an international naval patrol tilted against Iran, which was held responsible for terrorist attacks. Iraq also employed chemical warfare, and, after many failed attempts the UNITED NATIONS arranged a cease-fire in August 1988. (See also PERSIAN GULF WAR.)

Iraq (Republic of Iraq) Iraq, encompassing the river valleys of the Tigris and Euphrates, was a birthplace of many of the civilizations of the ancient world. It is situated northwest of the PERSIAN GULF and is bordered by IRAN to the east, KUWAIT and SAUDI ARABIA to the south, JORDAN and SYRIA to the west and TURKEY to its north—an area of 167,881 square miles. Britain occupied the cities of BASRA and BAGHDAD during WORLD WAR I, and Iraq, carved out of the crumbled OTTOMAN EMPIRE, became a British

mandate in 1920. The growth of nationalist feeling led to the termination of the mandate in 1932 and Iraq's acceptance as an independent country in the LEAGUE OF NATIONS. Britain again occupied Iraq during WORLD WAR II. The corrupt pro-British government that ruled after the war was overthrown and the royal family executed during the revolution of 1958. The new government of Abd al-Karim KASSEM was overthrown in 1963. Five years of war with Iraq's Kurdish minority ended with another coup, which brought Ahmed Hasan al-BAKR to power (1968). When Bakr resigned in 1979, Saddam HUSSEIN became president. Hussein invaded Iran (September 1980), claiming Iraqi rights to the Shatt al-Arab waterway and the Iranian province of Khuzistan. The eight-year IRAN-IRAQ WAR was devastating for both countries and ended with a cease-fire in 1988. In August 1990 Hussein invaded and occupied Kuwait, at the head of the Persian Gulf, claiming historical rights to the territory. UN air forces, led by the

IRAQ

1914	(November) British occupy Shatt al-Arab waterway, removing it from control of Germany's ally, the Ottomans; modernize port at Basra.
1917	(March) British occupy Baghdad; promise postwar independence, encouraging a nationalist movement.
1920	San Remo Conference; League of Nations makes Iraq a British mandate; Faisal I installed as king.
1923	Oil discovered.
1932	Nominal independence granted; British keep military bases.
1941	"Golden Square" officers group attempts anti-British, pro-German coup; Britain reoccupies.
1945	Pro-British prime minister installed; corruption rises.
1958	"Free Officers" group under Abd al-Karim stages coup; royal family and prime minister killed; U.S. lands Marines in Lebanon in response to this and other Arab nationalist activity.
1961	Death of Jawid Salim, creator of huge modern sculpture, "Monument to Revolution," in Baghdad.
1962	Nationalists agitate for union with Nasser's United Arab Republic; communists oppose.
1963	Nationalist coalition seizes power; massacres communists; coalition includes Ba'athists, who favor a pan-Arab, secular socialist state.
1964	Civil war with Kurds in northern Iraq.
1968	Ba'athists seize power after Arab defeat in Six-Day War; under Ahmed Hasan al-Bakr, country turns toward Soviets.
1972	Oil companies nationalized; price boom brings great wealth to government.
1974	Civil war with Kurds.
1978	Shi'ite Muslims (majority of population) oppose secular policies of Ba'athists; violent oppression of Shi'ites results.
1979	Ayatollah Khomeini leaves exile to foment Shi'ite revolution in Iran; vows to carry it to Iraq; Saddam Hussein succeeds Bakr.
1980	Saddam Hussein invades Iran; bloody eight-year war follows.
1988	Cease-fire with Iran.
1990	Iraq overruns Kuwait and declares annexation; U.S. organizes large force in Saudi Arabia and Turkey; issues ultimatum that Iraq pull back.
1991	After the heaviest aerial bombardment in history, U.S.-led forces invade Iraq; infrastructure of the country is destroyed; Hussein fails to draw Israel into war (and hence drive out Arab members of U.S. coalition); he remains in power despite Shi'ite and Kurdish rebellions; Kurds begin disastrous exodus into mountains of Turkey, where thousands die.
1998	Hussein expel UN weapons inspectors from Iraq.
2003	U.S.-led, coalition invades Iraq and overthrows Hussein's regime.
2005	First free elections in 50 years lead to formation of Iraqi government dominated by Shi'ite and Kurd representatives. The new government begins work to prepare a constitution.

U.S., attacked Iraq on January 16, 1991, after Hussein refused to withdraw from Kuwait. Six weeks of intensive high-precision bombing virtually destroyed Iraq's infrastructure; by the end of February 1991, Iraqi forces were in disarray and the nation was forced to accept a cease-fire on U.S. terms. Various rebel groups within Iraq subsequently turned against Hussein, and the country fell into civil strife. Hussein succeeded in suppressing rebellions by Kurds in the north and Shi'ites in the south. Iraq's repeated refusal to allow international weapons inspection teams such as UNSCOM and UNMOVIC full access to suspected sites of weapons of mass destruction resulted in a March 2003 U.S.-led invasion that deposed Hussein (see IRAQ WAR). The U.S. administration in Iraq after the fall of Hussein turned over political authority to the Interim Iraqi Governing Council composed of representatives from the Kurdish, Shi'ite and Sunni communities, and democratic elections were held in January 2005. The new government, with Kurdish leader Jalal Talabani as president and Shi'ite leader Ibrahim Jafare as prime minister, set out to write a new constitution for the country. After the overthrow of Hussein, the U.S.-led military occupation and its predominantly Kurdish and Shi'ite Iraqi allies faced a bloody insurgency dominated by Sunni militants. (See also PERSIAN GULF WAR.)

Iraq War (2003–) In the aftermath of the terrorist attacks against New York City and Washington, D.C., on SEPTEMBER 11, 2001, U.S. president George W. BUSH began to criticize the Iraqi government of Saddam HUSSEIN for allegedly maintaining ties with radical Islamic terrorist groups, such as the one (al-QAEDA) that initiated the attacks. He also accused Hussein of undertaking a program to acquire weapons of mass destruction (WMDs; nuclear, biological, and chemical weapons) in violation of UN resolutions. Although the Iraqi government adamantly denied ties to Islamic terrorist groups and allegations that it was developing such weapons, U.S. and British intelligence agencies claimed to have evidence of an Iraqi WMD program. After failing to obtain authorization from the UN Security Council to

authorize a military operation against Iraq in the winter of 2002–03, President Bush assembled a “coalition of the willing” outside the auspices of the world body. While the original list of the coalition included 48 members, the U.K. and Australia were the only countries that supplied more than a token contingent of fighting forces. In March and April 2003, coalition forces drove into Iraq from a staging area in Kuwait, defeated the Iraqi army, overthrew the government of Hussein and occupied the country. The coalition was supported by an Iraqi Kurdish militia comprising more than 50,000 troops. The deposed Iraqi dictator went into hiding with several of his associates but was later captured and prepared for trial as a war criminal. On May 1, 2003, President Bush announced that major combat operations were over, but as the U.S.-led occupation set up an interim government to administer the country, a violent insurgency broke out in areas inhabited by Sunni Muslims, who felt marginalized by the Kurdish and Shi'ite groups that were jockeying for the political power that had eluded them under Hussein's Sunni-dominated regime. For the next several years U.S. forces worked to train Iraqi military and police units to take over the task of defeating the insurgency, as the American public lost its enthusiasm for a long military occupation and the costs and casualty figures mounted. In early 2005 nationwide elections in Iraq brought to power a government dominated by Shi'ite and Kurdish factions, which began to write a constitution for the country. The Sunni minority (bolstered by foreign fighters who slipped into the country across its porous borders with Syria and Iran) continued its violent insurgency, which resulted in horrific scenes of carnage as suicide bombers attacked Iraqi soldiers, police and civilians, as well as U.S. troops. After an intensive investigation, U.S. occupation authorities found no evidence of ties between the Hussein regime and Islamic terrorist groups or of Iraqi government programs to create WMDs. The Bush administration thereupon sought to justify the invasion on the grounds that the introduction of democratic rule in the Middle East would lead to political stability and economic progress in this volatile part of the world, which would in turn reduce the

appeal of terrorism to its disenfranchised and destitute inhabitants.

Ireland (Eire; Republic of Ireland)

Island nation in the Atlantic Ocean, 50 miles west of Great Britain. The Republic of Ireland occupies the south, central and northwest regions of the island of Ireland. Ireland entered the 20th century as part of the UNITED KINGDOM, represented in the British Parliament. Intermittently throughout the 19th century, the Irish had agitated for independence. In the late 19th century, two bills proposing HOME RULE for Ireland were introduced in Parliament but defeated; a third was passed in 1914. Northern Protestants, led by Sir Edward CARSON, were determined to defend the union with Britain by force. However, Home Rule was deferred for the duration of WORLD WAR I. Moderate Irish nationalists supported the British war effort. In April 1916, militant nationalist and left-wing elements, including SINN FÉIN, launched the abortive EASTER REBELLION in DUBLIN under the leadership of Patrick PEARSE and James CONNOLLY; the British quickly suppressed the rebellion, but the subsequent execution of the 16 rebel leaders turned them into martyrs and led to increased public support for Irish independence. In the 1918 British general elections, Sinn Féin won 72 of the 105 Irish seats in the House of Commons; the Sinn Féin members refused to take their seats, but instead created a rebel Irish parliament, the DÁIL EIREANN, in Dublin (1919).

Several years of guerrilla war followed as the rebels battled the constabulary, which was reinforced by the “Black and Tans.” Under the Government of Ireland Act (December 1920), the six Protestant-dominated counties of Ulster were given their own home rule parliament. An Anglo-Irish Treaty (December 1921) created the **Irish Free State** as a self-governing dominion within the British COMMONWEALTH. NORTHERN IRELAND opted to remain with the U.K. The new Irish Free State consisted of 26 of the 32 Irish counties. The IRISH CIVIL WAR (1922–23) followed in the Free State between those accepting the treaty and a majority of Sinn Féin, led by Eamon DE VALERA and supported by the IRISH REPUBLICAN ARMY (IRA), who opposed the

partition of Ireland. The pro-treaty side prevailed, and in 1927 de Valera took his Dail seat as leader of the new FIANNA FAÏL party in opposition to a government led by the forerunner of the FINE GAEL party. Following Fianna Fáil's election victory in 1932, de Valera became prime minister and brought in a new constitution (1937), still largely in force, which described the national territory as "the whole island of Ireland" and enshrined Roman Catholic moral and social precepts. Ireland remained neutral during WORLD WAR II (officially known as "the Emergency") and maintained Irish neutrality in the postwar era.

The 1948 elections brought to power a four-party coalition. The country subsequently adopted the name Republic of Ireland and left the COMMONWEALTH (1949). In the same year,

British legislation guaranteed that Northern Ireland would not cease to be part of the U.K. without the consent of the Northern Irish parliament. De Valera was again prime minister (1951–54, 1957–59), then became president of the republic until his death in 1973. Under the Fianna Fáil government of Sean Lemass (1959–66), Ireland achieved significant economic progress and established free trade with the U.K. The Fianna Fáil government of Jack Lynch (1966–73) took the republic into full membership of the EUROPEAN COMMUNITY and the EUROPEAN ECONOMIC COMMUNITY, to the advantage of Irish agriculture. Successive Dublin governments sought a U.K.-Irish cooperative framework within which to address the conflict of aspirations between Protestants and Catholics in Northern Ireland,

where escalating violence from the late 1960s had impelled the U.K. government to impose direct rule in 1972–73 and again from 1974. In August 1979, Lord MOUNTBATTEN was murdered by the IRA while visiting Ireland, and 18 British soldiers in Northern Ireland were killed the same day in a separate IRA attack. As a result Lynch (who had succeeded Cosgrave as prime minister in 1977) agreed to strengthen border security. In 1979 Charles Haughey (whose career had survived allegations of gun-running for the IRA in 1970) became Fianna Fáil leader and prime minister, but elections two years later brought another Fine Gael/Labour coalition to power under Garrett Fitzgerald. In November 1985 Fitzgerald and U.K. prime minister Margaret THATCHER signed an Anglo-Irish agreement (the HILLSBOROUGH ACCORD) giving Ireland a consultative role in Northern affairs in return of accepting that reunification could be achieved only with the consent of a Northern majority. Although Haughey had opposed the accord, he agreed to abide by it after he regained office in 1987.

Ireland faced serious economic problems in the 1980s—high inflation and unemployment. In the late 1980s, the new Haughey government intensified its predecessor's economic austerity program, seeking to reduce a huge budget deficit. In November 1990, Mary Robinson of the left-wing Labour Party became Ireland's first woman president (the official head of state) in an electoral upset.

In 1998 the major Catholic and Protestant factions in the struggle over Northern Ireland met with British and U.S. diplomats and signed the Good Friday Agreement, which created a joint power-sharing arrangement for the territory's rule. However, conflicts between and within the parties representing these sectarian groups have led to the repeated suspension of the agreement, despite the efforts of some Catholic and Protestant leaders, such as John HUME and David TRIMBLE, to make the settlement stick. Violent conflict decreased after the agreement, and in 2005 the Provisional IRA (PIRA) announced the end of its armed campaign. In the meantime Ireland experienced a remarkable spurt of economic growth in the early years of the 21st century. Its skilled and flexible workforce and

IRELAND

1904	W. B. Yeats and Lady Gregory found Abbey Theatre; Irish literary renaissance continues.
1905	Founding of Sinn Féin, independence movement; <i>Irish Independent</i> publishes first issue.
1916	Easter Uprising by Irish Republican Brotherhood crushed by British; 16 rebel leaders executed.
1918	After general election, Irish members of British Parliament refuse to report to London; convene as the Dáil in Dublin (1919).
1920	British offer limited autonomy to both Northern and Southern Ireland; the south rejects it.
1921	Anglo-Irish Treaty: British agree to Irish Free State, with expanded autonomy; six counties of Northern Ireland remain within United Kingdom.
1922	Civil war between factions accepting Free State compromise and those demanding full independence; Yeats wins Nobel Prize in literature; James Joyce's <i>Ulysses</i> published in Paris, banned in Ireland.
1923	Fighting ends but IRA continues guerrilla struggle for independence; IRa outlawed.
1932	Eamon de Valera elected prime minister; begins cutting ties to Britain.
1937	Dail adopts new constitution, embodying Catholic stance on many moral issues.
1941	Ireland remains neutral in World War II to show displeasure with Britain.
1949	Independence declared; republic established; Ireland withdraws from Commonwealth.
1961	First television station.
1965	Anglo-Irish free-trade treaty.
1973	Legal ban on contraceptives relaxed.
1979	Lord Mountbatten assassinated by IRA in Sligo; IRA continues terrorist campaign for independent Northern Ireland.
1980	Population at one-half the level of 1840.
1985	Prime Minister Garret FitzGerald signs Anglo-Irish Agreement (Hillsborough Accord) on Northern Ireland with British prime minister Thatcher.
1990	President Lenihan brought down by scandal; Mary Robinson elected as first woman president.
1991	Death of writer Sean O'Faolain.
1995	A national referendum legalizes divorce, effective in 1997.
1998	Irish prime minister Bertie Ahern and British prime minister Tony Blair sign the Good Friday Agreement, by which Ireland renounces all territorial claims to Northern Ireland and a North-South Ministerial Council composed of ministers from both governments is established. The agreement is approved by referenda in both countries and becomes effective in 1999.
2001	The IRA begins disarmament.
2005	The Provisional IRA (PIRA) announces the end of its campaign of violence.

low corporate tax rates attracted a substantial amount of foreign investment. Agriculture, long the dominant sector of the economy was overtaken by the industrial and service sectors. Exports were the primary engine of the country's growth, which catapulted it

to the second rank of per-capita gross domestic product among the EUROPEAN UNION's 25 members by 2005.

Ireland, John Nicholson (1879–1962) English composer. Ireland studied at the Royal College of Music, Lon-

don, where he later taught. He also served as a church organist in Chelsea (1904–26). His many influences include the scenic beauty of the Channel Islands, folk music, German romanticism and Celtic myth. He is most admired for the simple beauty of his over

70 songs, many of them set to poems by writers such as John Masfield, A. E. HOUSMAN and Thomas HARDY. Ireland's other works include chamber music, piano works including a concerto (1930), choral pieces and orchestral music such as the *Symphonic Rhapsody* (1920–21) and the *London Overture* (1936).

Irgun Zvai Leumi Zionist terrorist organization founded in 1937. From 1943, Menachem BEGIN was its commander. Its most notorious act of terrorism was the blowing up of the KING DAVID HOTEL in Jerusalem on July 22, 1946. The British administration was housed in the southwest wing of the hotel, which was completely destroyed, and 91 people were killed. Irgun claimed responsibility for more than 200 terrorist acts against the British and the Arabs.

Irian Barat A province of INDONESIA that comprises the western half of the island of NEW GUINEA and approximately 12 nearby islands; formerly known as Dutch, or Netherlands, New Guinea. Occupied by the Japanese during WORLD WAR II, it was not returned to Dutch control until 1949. Indonesian claims to the region led to a Dutch handover of the territory in 1963; Indonesia's sovereignty was recognized following a plebiscite in 1969.

Irian Jaya (West Papua) Western half of the island of New Guinea belonging to INDONESIA. The largest Indonesian province, Irian Jaya is nearly three-quarters tropical jungle. Although sparsely populated, the western half of the island possesses large copper and oil reserves, and its nearby coves and bays are full of fish and shrimp. In an effort to reduce overcrowding on several of its other islands caused by excessive population growth, Indonesia resettled residents and migrants from Java, Bali and Sulawesi in Irian Jaya during the 1970s. By the mid-1980s these new residents and migrants were forced to enter the forested regions to carve out a niche for themselves, leading to poaching on national reserves, the transformation of forest land into farmland and commercial logging. Because the ethnic composition of Irian Jaya has changed drastically since the

1970s, the primary schools were flooded with students who lacked the necessary language skills to complete their education.

Following the example of EAST TIMOR, several indigenous movements have emerged in Irian Jaya to demand independence from Indonesia. The three most important independence movements are the Papuan Presidium Council (PDP), the Free Papua Movement (OPM) and West Papua Action (WPA). The Indonesian government has actively attempted to suppress these movements, but separatist agitation has continued.

Irish Civil War See ANGLO-IRISH CIVIL WAR OF 1916–23.

Irish Free State See IRELAND.

Irish Literary Revival A resurgence in nationalist Irish literature that began in the latter decades of the 19th century and continued into the 1920s. Some Irish nationalists favored a “Gaelic revival” but were unsuccessful in reintroducing the Gaelic language. Most writers supported W. B. YEATS, who felt that a national literature could exist even though written in English. The beginnings of the movement occurred with a renewed interest in Irish folklore and culture evidenced by works such as *Love Songs of Connaught* by Samuel Ferguson (1810–86) and *Literary History of Ireland* (1892) by Douglas HYDE. The same year Yeats's first play *The Countess Cathleen* (1892) appeared, thus launching a solely Irish drama separate from that of England. In 1899 Yeats and Lady GREGORY founded the Irish Literary Theatre to promote Irish drama. It became the Irish National Theatre Society, giving its first performance in 1902 of AE's *Deirdre* and Yeats' *Cathleen Ni Houlihan*. In the following year John Millington SYNGE's *In the Shadow of the Glen* and Padraic Colum's *Broken Soil* were presented. With the help of Annie HORNMANN, the society found a home in the ABBEY THEATRE in 1904. Periodicals fundamental to the revival include *The Irish Statesman*, a literary review edited by AE, and the *Irish Review*, which was founded in 1911 by Colum, James STEPHENS, and Thomas MacDonagh. Other writers associated with the Irish literary revival include George MOORE,

Sean O'CASEY, George Bernard SHAW and James JOYCE.

Irish Republican Army (IRA) Nationalist organization whose goal is an independent and unified IRELAND. It was formed in 1919 by veterans of the 1916 EASTER REBELLION led by Michael COLLINS. Becoming the military arm of the SINN FÉIN party, it fought the British Black and Tans; after the partition of Ireland and the formation of the Irish Free State in 1922, it refused to recognize a separate NORTHERN IRELAND and, as a secret terrorist organization, continued an armed struggle against the new government. The IRA's hit-and-run bombings and street fights were quite successful for about 10 years, but it was significantly weakened after former IRA supporter Eamon DE VALERA became head of the Free State in 1932. Its violent tactics and pro-German activities during WORLD WAR II further lessened the IRA's popularity. After the war, it was outlawed by both Irish governments but continued to operate and to perpetuate terrorist attacks throughout the 1950s. After a comparatively peaceful time in the 1960s, the IRA broke into two groups (1969), forming a moderate or official wing, which pursued political means, and a radical or provisional wing, which continued to use violent techniques. Subsequently, the provisional mounted a campaign of terror in Northern Ireland, often concentrating on members of the British armed forces. In the early 1990s, the IRA continued to operate as an underground terrorist organization, and sporadic acts of violence perpetrated by its members continued in the two Irelands and England. In 1994 the IRA declared a cease-fire and Sinn Féin entered into talks with Britain, but the talks and the cease-fire ended in 1996. Sinn Féin did, however, accept the Good Friday Agreement of 1998 that established a power-sharing arrangement for Northern Ireland. In 2001 the IRA announced it had begun disarmament.

Iron Curtain Term used to denote the boundary between Soviet-dominated Eastern Europe and the democratic West during the COLD WAR. The Iron Curtain was not so much a physical barrier between two geographical areas as a metaphor for the constraints on the movement of people and ideas that the

communist regimes imposed on their citizens. The term was coined by Sir Winston CHURCHILL during a speech he delivered at Westminster College in Fulton, Missouri, on March 5, 1946. "From Stettin in the Baltic to Trieste on the Adriatic, an iron curtain has descended across the continent." Denouncing the "people governments" that the USSR was establishing in Eastern Europe, Churchill added that "this is certainly not the liberated Europe we fought to build up." (See also BERLIN WALL.)

Iroquois Theater fire Disastrous fire of December 31, 1903, that killed more than 500 patrons at the Iroquois Theater in Chicago. A matinee audience at the sumptuous theater was engulfed in flames after the stage caught fire and the asbestos safety curtain failed to function. Some were burned to death or died of smoke inhalation, but most of those killed were crushed or suffocated in the hysterical dash for exists. The death toll made the fire the worst single-structure fire in American history.

Irving, Clifford (1930–) American novelist and master literary forger. Irving began his writing career as a novelist and published three now-forgotten volumes of fiction. But he assured himself of a dubious immortality as the coauthor (with children's book writer Richard Susskind) of a forged autobiography of reclusive American billionaire Howard HUGHES, for which McGraw-Hill, the publisher of Irving's novels, paid Irving \$765,000 in 1971. The autobiography manuscript (complete with notes in Hughes's handwriting, forged by Irving) was drawn both from library research and from illicit plagiarism of an unpublished work on Hughes's financial empire by journalist James Phelan, who was one of the first to point the finger at Irving as a forger. Deemed by many as the greatest literary hoax of the 20th century, the forged autobiography was never published and earned Irving, as well as Irving's wife (who deposited the advance check made out to Hughes in a false Swiss bank account) and coauthor Susskind, brief prison terms.

Irving, John Winslow (1942–) American novelist. Irving had already written three fanciful novels when he drew critical acclaim and national atten-

tion with *The World According to Garp* (1978, filmed 1982), which tells the story of novelist T. S. Garp, son of an iconoclastic single mother, Jenny Field. The book presents a dark side of modern life, but not without humor; and like Irving's subsequent fiction, imbues contemporary situations with traditional, romantic values. His other works include *The Hotel New Hampshire* (1981, filmed 1984), *Cider House Rules* (1985) and *A Prayer for Owen Meany* (1989). Irving's screen adaptation of *Cider House Rules* won an Academy Award for best adapted screenplay in 2000.

Irwin, James (1930–1991) U.S. astronaut, popular public speaker and founder of the High Flight Foundation, a nonprofit religious organization. Irwin spent almost three days on the surface of the moon in 1971, but most recently has led five expeditions to Mount Ararat in Turkey, searching for the remains of Noah's Ark. Irwin says that he experienced a religious revelation during his *APOLLO 15* (July 26–August 7, 1971) flight; he resigned from NASA on July 1, 1972. Born in Pittsburgh, Pennsylvania, Irwin attended the U.S. Naval Academy at Annapolis, receiving a B.S. in 1951. After earning an M.S. in aeronautical engineering and instrumentation engineering from the University of Michigan, he entered the U.S. Air Force, serving as a fighter pilot. Irwin joined NASA in 1966, where he tested lunar module systems and served on the support crew for *Apollo 10*. As lunar command module pilot for *Apollo 15*, Irwin and fellow astronaut David Scott were the first astronauts to make use of the Lunar Rover, an electric car that carried them more than 18 miles on three moon excursions lasting a total of 21 hours.

Isherwood, Christopher (William Bradshaw Isherwood) (1904–1986) British-born author. Educated at Cambridge, during the 1930s Isherwood was closely associated with poet W. H. AUDEN. The two collaborated on three verse plays and a travel book about China. Isherwood immigrated to the U.S. in 1939 and settled in California. He was best known for the stories he wrote in the 1930s about pre-Nazi BERLIN, which became the basis for the play and film *I Am a Camera* and the stage and screen musical *Cabaret*. These adaptations enabled him to give up the

HOLLYWOOD screenwriting with which he had supported himself for a number of years. Isherwood was one of the first international figures to admit that he was homosexual, and in the 1970s became a leading spokesman for GAY RIGHTS. His autobiography, *Christopher and His Kind*, dealt candidly with homosexuality.

Iskander, Fazil (1929–) Soviet writer. Although born in Abkhazia, Iskander's stories and poetry are written in the Russian language. The plots of his stories are simple, and the style is conversational and witty, although this does not weaken the strong satire. Iskander's best-known novel is *The Goatibex Constellation* (1966), in which bureaucrats aspire to crossbreed an ordinary goat with a mountain wild ox, thus resolving the problem of food production in the Soviet Union and affirming Michurinist genetics.

Islamic Salvation Front (FIS) Algerian political party (1989–92). The FIS was a political party formed in 1989 as a result of the newly revised Algerian constitution. Previously, politics in ALGERIA had been dominated by the National Liberation Front (FLN), a political organization formed in 1954 that led the country to independence from France in 1962. After independence, the FLN monopolized political power and established a secular state. When the new constitution provided for multiparty local and provincial elections in 1990, the FIS nominated a slate of candidates throughout the country who called for an end to secularization. These candidates trumpeted an Algerian version of ISLAMISM, a political philosophy calling for a return to Islamic practices as specified in the Koran and the transformation of the country into an Islamic republic modeled on the one in Iran. The FIS achieved a stunning political victory in the 1990 elections, winning a sizable majority of municipal and provincial offices. As the party entered the first round of the national elections in January 1992. The returns indicated that the FIS would win a majority in parliament and therefore would be in a position to create an Algerian theocracy. In response, a military and civilian cabal forced President Chadli Benjedid to resign, suspended the elections and created a high committee of state to govern the country.

This committee promptly attempted to suppress the FIS and its sources of support. After the nullification of the election and the suppression of the FIS, its militants mounted an insurrection against the secular government and its supporters—military officers, government officials, teachers, journalists and liberal members of the clergy. In 1994 FIS supporters seized hostages in an attempt to force the high committee to reverse its actions.

Although suppressed by the government, the FIS did attempt to restrain its more violent supporters. In 1997 it ordered all its members to observe a cease-fire, announcing that it had begun negotiations with the high committee to reach a settlement that would allow the FIS to remain a force in Algerian politics and society. However, by then the FIS faced a rival among fundamentalist Muslims—the Armed Islamic Group (GIA)—which planned and executed terrorist acts against the secular Algerian regime, such as a series of car bombings. By the end of the 20th century, it was estimated that more than 75,000 people had died as a result of the FIS and GIA's insurgency and the government's efforts to suppress it.

Islamism An extreme version of Islam that demands that Islamic governments strictly enforce the tenets of the Koran. Islamism originated in response to the dissolution of the OTTOMAN EMPIRE after WORLD WAR I and the emergence of increasing Western influences in the new Arab states that succeeded it in the Middle East. To

preserve the Muslim heritage from the secular influences of Western life, some devout Muslims turned to a more extreme version of their faith. After the emergence of secular trends in the Arab world, Islamists also fought against secular Arab states, such as Gamal Abdel NASSER's EGYPT and FLN ALGERIA. Toward the end of the 20th century, Islamists made the U.S. a focus of their opposition: the stationing of its military forces near the holy sites of Mecca and Medina in SAUDI ARABIA, its continued support for the state of ISRAEL, and its support of secular regimes in predominantly Muslim countries made it an enemy of the basic tenets of Islamism.

Islamism was the major motivation behind various attempts to end what its adherents regarded as the corrupt, decadent influence of Western culture in Islamic societies. When the Ayatollah RUHOLLAH KHOMENI, a Shi'ite cleric, came to power in IRAN following the deposition of the shah (see MOHAMMAD REZA SHAH PAHLAVI) in 1979, he created a theocratic state dedicated to enforcing Muslim law throughout the nation that fulfilled the goals of Islamism. Other examples of Islamists include the TALIBAN, a fundamentalist Muslim group that ruled a large portion of AFGHANISTAN from 1994 to 2001, and AL-QAEDA, a paramilitary terrorist group given sanctuary by the Taliban. The Wahhabi sect in Saudi Arabia has had a powerful influence on the domestic affairs of that country, and the ISLAMIC SALVATION FRONT, a political party in Algeria, in

1992 attempted to take power through democratic elections, and then reverted to guerrilla warfare when the secular government nullified its electoral victory. In recent years, Islamism has been dealt a series of setbacks. The Taliban was forced out of power in Afghanistan by U.S. military forces in December 2001, and ruling clerics in Iran faced growing opposition from groups favoring an accommodation with Western nations and the secularization of Iranian society. Moreover, many governments in predominantly Islamic countries openly cooperated with the U.S. in its ongoing war on terror by keeping Islamists within their borders under surveillance to determine if they are directly or indirectly supporting al-Qaeda.

isolationism Diplomatic policy under which a nation maintains its rights and interests without alliances. The U.S. pursued a successful isolationist policy from 1800 until 1917, when it joined other countries to fight Germany in WORLD WAR I. After the war isolationism again dominated U.S. policy until WORLD WAR II and the ensuing COLD WAR made the policy untenable. The U.S. joined the UNITED NATIONS and established several defensive alliances, which have often entangled the country in foreign upheavals, such as the VIETNAM WAR. Cultural isolationism existed for much of the century in the USSR and China.

Israel Israel is situated in the Middle East along the eastern shores of the Mediterranean Sea; its area, as defined

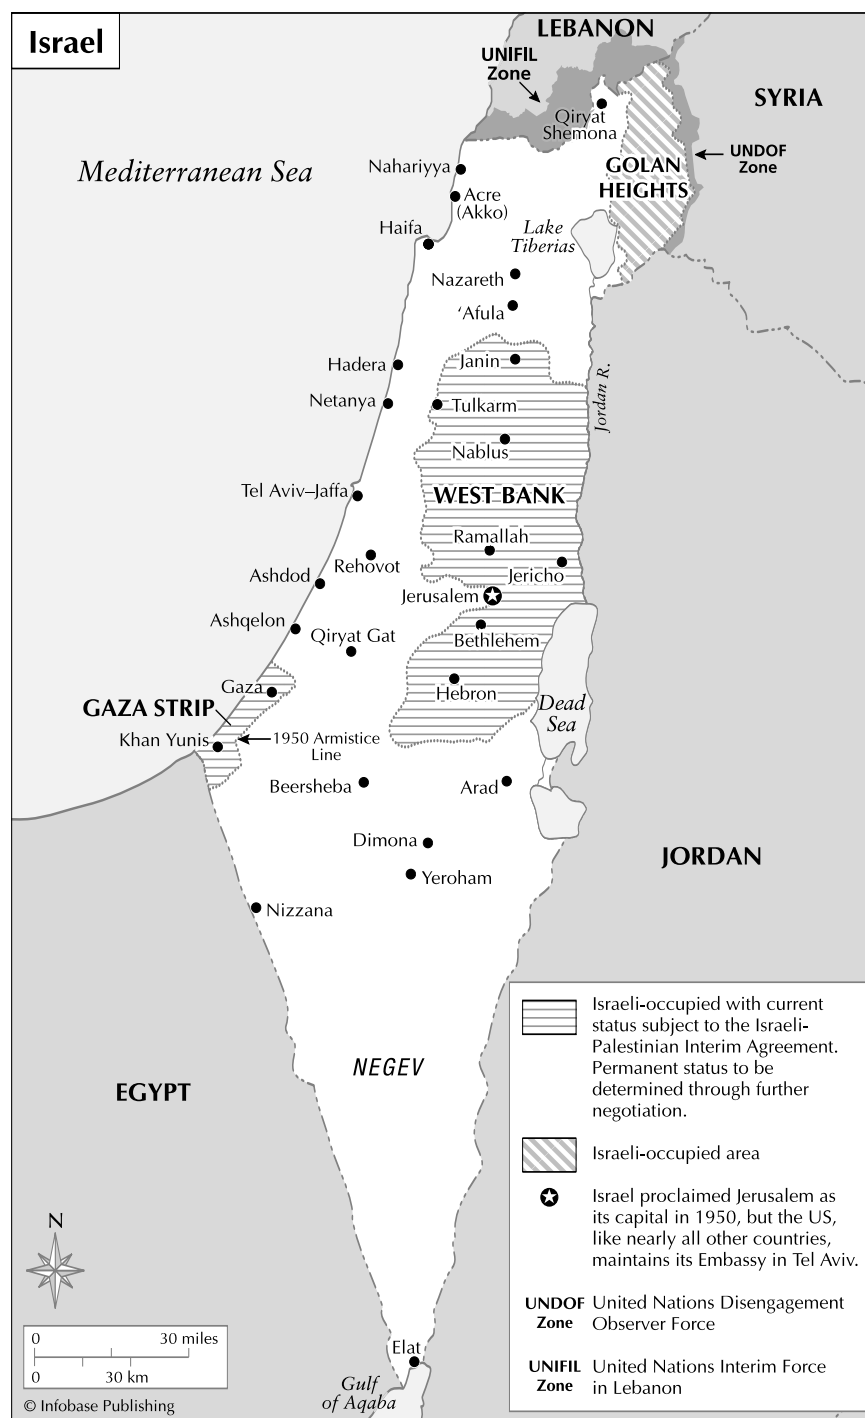

ISRAEL

- 1909 Tel Aviv, the first modern all-Jewish city, is founded.
- 1917 British Balfour Declaration calls for national Jewish home in Palestine but respects rights of Palestinians.
- 1922 Britain given League of Nations mandate over Palestine.
- 1929 As a result of increased Jewish presence, bloody riots break out in Jerusalem, Hebron and Safed between Jews and the indigenous Palestinian Arabs.
- 1946 Israeli terrorist bomb King David Hotel in Jerusalem, kill 91.
- 1948 Britain leaves Palestine; State of Israel proclaimed in Tel Aviv; Egypt, Transjordan, Syria, Iraq and Lebanon invade Israel; Israel survives the war and adds territory to land granted by the UN; 780,000 Palestinians are displaced from their homes; Chaim Weizmann is elected first president and David Ben-Gurion first prime minister.

(Table continues)

ISRAEL (CONTINUED)

- 1949 Israel joins the UN.
- 1956 Suez War: Israel, with the backing of Britain and France, attacks Egyptian positions in Gaza and overruns the Sinai Peninsula, from which it withdraws after UN condemnation.
- 1960 Adolf Eichmann is kidnapped from Argentina and after a long trial is found guilty and hanged (1962).
- 1964 Palestine National Council is formed advocating armed struggle to liberate Palestine; the Palestine National Council establishes the PLO.
- 1967 Israel begins the Six-Day War; captures the Sinai Peninsula, Gaza, the West Bank and the Golan Heights; UN Resolution 242 passed, calling for Israeli withdrawal from captured territory and "mutual respect for the sovereignty of all states within secure boundaries."
- 1969 Golda Meir becomes prime minister.
- 1972 Palestinian terrorists kill 11 Israeli athletes at the Olympic Games in Munich.
- 1973 Yom Kippur War starts when Egypt and Syria attack Israel on the Jewish holy day. Cease-fire declared October 24.
- 1974 Golda Meir resigns and is replaced by Yitzhak Rabin.
- 1976 Israeli commandos free 110 hostages held at Entebbe Airport in Uganda by Arab terrorists.
- 1977 Rabin steps down and is replaced by Menachem Begin, who favors Israeli settlements of the occupied territories; Anwar Sadat becomes the first Arab leader to visit Israel, address the Knesset.
- 1978 Israel attacks PLO bases in Lebanon in retaliation for PLO raids on Israeli border settlements; Israel annexes the Golan Heights.
- 1979 Anwar Sadat of Egypt and Menachem Begin of Israel sign Camp David Accords.
- 1982 Israel invades Lebanon after an attempt to assassinate the Israeli ambassador in London; with Israeli complicity, Christian Falangist militiamen enter the Palestinian refugee camps of Sabra and Shatila and kill about 700; Israel begins phased withdrawal from Lebanon.
- 1984 Labor and Likud form a coalition, with Shimon Peres as prime minister.
- 1986 Yitzhak Shamir becomes prime minister.
- 1987 The Intifada (Palestinian uprising) begins.
- 1991 Israel hit by Iraqi Scud missiles during Persian Gulf War but does not enter conflict; U.S. secretary of state James Baker launches new Arab-Israeli peace plan.
- 1995 Israel and Palestinian Authority sign the Interim Agreement on the West Bank and the Gaza Strip providing for Palestinian self-government and the redeployment of Israeli security forces.
- 1998 Wye River agreement provides for continuation of the Interim agreement.
- 2000 Israeli forces withdraw from South Lebanon.
- 2001 U.S.-sponsored peace plan (the "Roadmap") fails. Second Intifada begins. Likud leader Ariel Sharon is elected prime minister.
- 2003 Prime Minister Sharon authorizes construction of a barrier separating Israel (and contiguous Israeli settlements) from the West Bank to protect against terrorist attacks.
- 2005 Israel begins the evacuation of Israeli settlements from the Gaza Strip.
- 2006 A stroke forces Sharon from office. He is replaced by Ehud Olmert. Hezbollah partisans in Lebanon shell northern Israeli towns and kidnap two Israeli soldiers across the border, precipitating a wider conflict.

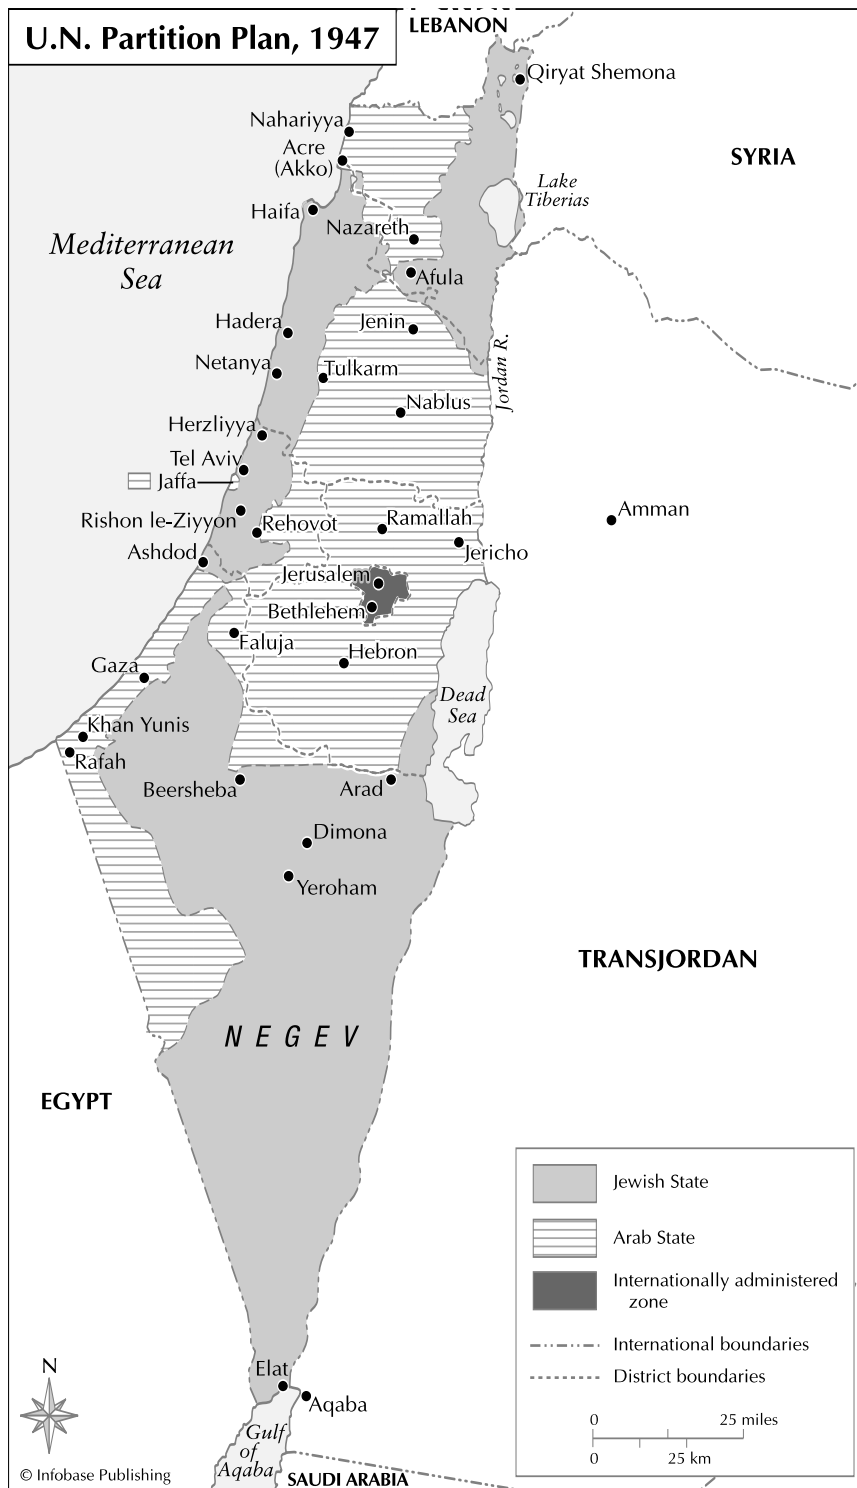

by the 1949 Arab-Israeli armistice, is approximately 8,017 square miles. Excluded are occupied territories in the GAZA STRIP, the WEST BANK and the GOLAN HEIGHTS, acquired during the SIX-DAY WAR in 1967. Sacred to Judaism, Christianity and Islam, the land has been a battleground for millennia. Carved out of the post-World War I ruins of the OTTOMAN EMPIRE,

PALESTINE was administered by Britain under a LEAGUE OF NATIONS mandate (1922–47). Jewish immigration increased, as did Arab opposition; riots in 1929 progressed to sustained guerrilla warfare (1933 onward) between Arabs and JEWS. Attempts to partition the land into separate Arab and Jewish states failed (1937, 1947); Britain withdrew in 1947, leaving the coun-

try in a state of civil war. The state of Israel was proclaimed in 1948, with BEN GURION as the first prime minister. The problem of displaced Palestinian Arabs in the new state remained unresolved and led to the formation of the PALESTINE LIBERATION ORGANIZATION (PLO) in 1964. The PLO has launched repeated terrorist attacks against Israel and its primary ally the U.S. to force establishment of a Palestinian state. Israeli prime minister Menachem BEGIN signed the first peace treaty with an Arab country (Egypt) in 1979 (see CAMP DAVID TALKS). Israel invaded LEBANON in 1982 to destroy PLO bases but withdrew in 1986. Rapid Jewish settlement of the occupied West Bank led to the INTIFADA (Palestinian uprising), which began in 1987. Internal division within the current government led by Yitzhak SHAMIR has hampered resolution of the Palestinian question. During the PERSIAN GULF WAR between UN forces and Iraq (January–February 1991) Israel suffered Iraqi Scud missile attacks but remained uninvolved. After the war, U.S. president George H. W. BUSH announced a new peace initiative to resolve the ongoing Arab-Israeli dispute.

The Israeli government headed by Prime Minister Yitzhak RABIN attempted to resolve its differences with the Palestinian Arabs by signing the 1993 Oslo Accords, which allowed the PALESTINIAN AUTHORITY to govern part of the West Bank and Gaza Strip. However, the election of hard-liner Ariel SHARON as prime minister, and an outbreak of terrorist activities by Palestinian extremists (see INTIFADA II) damaged the peace process. International hopes for the “Roadmap to Peace”—a timetable for Israeli withdrawals, Israeli-Arab negotiations and Palestinian statehood proposed by the U.S. in 2001–02—was undermined by Sharon’s 2003 decision to construct a 700-kilometer (420-mile) barrier between Israel and the West Bank (incorporating territory occupied by Jewish settlements in the West Bank) that was designed to prevent future Palestinian suicide bombers. In 2004 Sharon announced his decision to withdraw Israeli presence unilaterally from the Gaza Strip and areas of the West Bank by summer 2005, a promise he kept before a stroke forced him from office in 2006.

Israeli War of Independence See ARAB-ISRAELI WAR OF 1948–49.

Issigonis, Alec (1906–1988) British automotive engineer and automobile designer whose work included some of the most important and inno-

vative designs produced by the English motor industry. Issigonis was trained in London as an engineer and began work as a draftsman for Rootes Motors. He later joined Morris Motors and became that firm's chief engineer in 1961. His design (both engineering and ap-

pearance) for the Morris Minor of 1948 made it one of the most popular British cars of its era—it remained in production for 20 years. The Morris Mini of 1951 was an even more successful design, introducing the modern transverse engine and front-wheel drive in a small car. The Mini offered surprising space and comfort along with excellent economy and mechanical simplicity in a way that has made it immensely popular in a number of variations, including the sporty Mini Cooper. The Mini set a high standard for aesthetic design along with its technically advanced engineering. It remains in production in a somewhat updated form.

Istanbul (Byzantium; Constantinople) Partly in Europe and partly in Asia, this ancient city in northwestern TURKEY is located on both sides of the Bosphorus. A busy port and Turkey's largest city, it was here that in 1908 a revolt of the YOUNG TURKS called for a parliament for the entire OTTOMAN EMPIRE. Turkey fought with the CENTRAL POWERS—the losing side—in WORLD WAR I, and Constantinople fell to the Allies in 1918. Its centuries-old empire shredded to pieces, Turkey was declared a republic, and the capital was moved from Constantinople to Ankara by Kemal ATATÜRK in 1923. Istanbul (officially renamed in 1930) retains many notable signs of its past diversity and greatness, especially the church of Hagia Sophia, a masterpiece of Byzantine architecture.

Itala Films Important early Italian motion picture studio, which helped vault that country's cinema to world prominence in the years before World War I. Founded in Turin in 1905 under the name "Rossi," Itala developed under the management of Giovanni PASTRONE into a successful operation, producing numerous short action pictures and short comedies (especially slapstick farces featuring the French actor "Cretinetti," the pseudonym of André Deed). Its most significant production, the feature *Cabiria* (1914), became, along with rival studio Cine's *Quo Vadis* (1913), the most influential movie in the world. It confirmed that the feature-length film was the wave of the future and heavily influenced the epic ambitions of the American director D. W. GRIFFITH. Itala quickly followed up *Cabiria's* success with a series

of historical vehicles for the strongman star, “Maciste” (Bartolomei Pagano), anticipating by decades the vehicles for later musclemen such as Steve Reeves and Arnold Schwarzenegger. At its height, Itala became part of the *Unione Cinematografica Italiana*, the most powerful film consortium in the world. The company went into decline when Pastrone retired and the *Unione* went bankrupt in 1923.

Italian Somaliland Now a part of SOMALIA, this former Italian colony in East Africa extended from Cape Asir to the Kenya border; its capital was Mogadishu. A small protectorate, set up by the Italians in 1889, was enlarged by subsequent additions, until it became a state of Italian East Africa (which included ETHIOPIA and ERITREA) in 1936. Invaded in 1941 by the British during WORLD WAR II, it remained under their control until 1950; in 1960 it was joined with British Somaliland to form the independent republic of Somalia.

Italian Uprisings of 1914 A new, moderate conservative government being formed by Premier Antonio Salandra was faced with popular uprisings on June 7, 1914, in which radicals confronted strike-breakers, staged antidraft demonstrations, and began to take over Bologna, Ancona and other cities, with the Romagna declaring itself a republic. More than 100,000 soldiers were needed to restore order; but by July Italy was preoccupied with moves to declare neutrality, despite its alliance with Germany and Austria, in the imminent world war.

Italo-Ethiopian War of 1935–36 As early as 1928, Benito MUSSOLINI, fascist dictator of ITALY since 1922, had planned to avenge the Italian defeat in the Italo-Ethiopian War of 1895–96. In a blatantly underhanded way, he sought to convince the world of Italy's right to ETHIOPIA, appealing to the LEAGUE OF NATIONS—after altering treaty documents of 1887, 1896 and 1900 and a great power agreement of 1908. His ploy worked: The League of Nations suggested partition, but Ethiopia rejected the Hoare-Laval plan, which would have given Italy most of the country. In 1934 a bloody clash occurred between Italian and Ethiopian

forces at Ualual, a disputed area on the Italian Somaliland border. As Italy slowly massed an invasion force, Ethiopia's Emperor HAILE SELASSIE pulled his troops back 20 miles from the Eritrean border; nonetheless, the Italians invaded Ethiopia, without declaring war, on October 3, 1935. Using aircraft and modern weapons, Italian forces slowly destroyed Ethiopia—so slowly, in fact, that it took seven months for the supposedly modern and superior armies of Generals BADOGLIO and Graziani to conquer the “inferior” Ethiopians. The Ethiopian capital of Addis Ababa was captured on May 5, 1936.

Haile Selassie fled and made a vain appeal for help to the League of Nations; Italy, however, had already called its own king “emperor of Ethiopia,” had

annexed Ethiopia and had united it with Eritrea and Italian Somaliland to form Italian East Africa. The Italians executed the archbishop of the Ethiopian Coptic Church, massacred monks and decimated Addis Ababa. Although it had failed to conquer the entire country, Italy occupied Ethiopia until 1941, when it was liberated by British, Free French and Ethiopian troops during WORLD WAR II. Haile Selassie regained his throne on May 5, 1941.

Italy (Italia) Republic of southern Europe; a long, boot-shaped peninsula, it is bounded on the north by France, Switzerland, Austria and Slovenia. But most of its border is a water-lapped coastline touched on the east by the Adriatic Sea and on the

ITALY

1900	Umberto I assassinated by anarchist.
1907	Prince Borghese wins Beijing to Paris auto race.
1915	Italy enters World War I on the side of the Allies.
1919	Vote granted to women; Mussolini publishes Fascist Manifesto.
1922	Mussolini leads fascist March on Rome; forms government.
1926	Mussolini abolishes all political opposition.
1929	The Lateran Treaties establish Italian recognition of the Vatican as a sovereign state.
1933	Toscanini boycotts German music festival to protest Nazi repression of artists.
1936	Italy conquers and annexes Ethiopia; Mussolini announces Axis pact with Germany.
1939	"Pact of Steel" with Germany.
1940	Italy enters World War II on Axis side; unsuccessfully attempts to invade Greece.
1943	Mussolini deposed; Italy signs armistice with Allies, declares war on Germany; Germans help Mussolini escape.
1945	Mussolini captured, tried and executed by partisans.
1946	King Victor Emmanuel III abdicates; Italian referendum narrowly rejects monarchy; Victor Emmanuel's son Humbert II also abdicates.
1959	Aldo Moro heads Christian Democrats.
1966	Floods devastate Florence.
1972	Michelangelo's <i>Pietà</i> vandalized.
1978	Red Brigade members kidnap and kill Aldo Moro.
1981	Pope John Paul II wounded in assassination attempt.
1982	Italy enjoys first World Cup Soccer victory; 100,000 demonstrate against Mafia.
1985	Rome airport bombed by terrorists.
1990	CIA-backed anticommunist network exposed; restoration of Sistine Chapel ceiling completed; Alberto Moravia dies.
1991	In Persian Gulf War, Italian forces fight in coalition to drive Iraq from Kuwait.
1994	Freedom Alliance, right-wing a coalition, forms government under media magnate Silvio Berlusconi, leader of the new Forza Italia Party, but Berlusconi soon resigns amid allegations of bribery.
1999	Italy participates in NATO air campaign against Serbia.
2001	Forza Italia wins legislative elections, and Berlusconi is named prime minister.
2003	Italy joins "coalition of the willing" in Operation Iraqi Freedom to topple the regime of Saddam Hussein.
2006	Romano Prodi wins narrowly over Berlusconi in national elections.

west and south by the Mediterranean Sea. Also a part of Italy are the large islands of Sardinia and Sicily, the smaller

islands of Capri, Ischia and Elba, and the Lipari Islands. After the late-19th-century occupation of Somaliland

(now SOMALIA) and ERITREA on the Red Sea and an unsuccessful invasion of ETHIOPIA in 1896, Italy occupied LIBYA,

across the Mediterranean on the coast of North Africa, in 1911. Italy joined the Allied WORLD WAR I effort in 1915, but only after a secret agreement that, if victorious, it would gain Austrian-held Trieste and desirable territories in Africa and the OTTOMAN EMPIRE (including more territory in Libya). A victorious postwar Italy saw the Christian Democrats and the Socialists develop into mass political parties that were largely ineffective in coping with postwar problems. Former socialist Benito MUSSOLINI (1883–1945) developed the theory of FASCISM and became leader of the movement. He and his BLACKSHIRTS marched on Rome in October 1922; King VICTOR EMMANUEL III named him premier, and by 1927 Mussolini ruled as dictator. Almost continuously at war in a barely pacified Ethiopia from 1935, Italy also intervened on the side of FRANCO and the FALANGE in the SPANISH CIVIL WAR.

As a partner in Adolf HITLER'S AXIS, Italy entered WORLD WAR II, in June 1940, only to suffer humiliating defeats in Africa and in Greece, which was subsequently overrun by Germany. The Allies invaded Sicily on July 10, 1943. Mussolini was subsequently dismissed by King VICTOR EMMANUEL III and imprisoned, but he was rescued by German paratroops and established the Republic of Salò in northern Italy under German protection. As the war's devastation moved from south to north, all the way up the peninsula, many cities, including Naples, Rome, Genoa and Milan, suffered heavy bombing, although Rome was declared an open city and taken by the Allies without ground fighting. Mussolini was killed in April 1945 by partisans while trying to escape to Switzerland. Victor Emmanuel abdicated in May 1946 and Humberto II briefly became king, but on June 2 the Italians narrowly voted to replace the monarchy with a republic.

From 1948 until the early 1980s the Christian Democrats (a broad center-right party) were in power (with only two interruptions). Despite a proliferation of political parties, and numerous political crises resulting in frequent changes of prime ministers and cabinets, Italy's postwar democracy remained a stable force, enabling the country to rebuild after the war. The country has since enjoyed close cooperation with the rest of Western Europe and the U.S. In

1949 Italy was a founding member of the NORTH ATLANTIC TREATY ORGANIZATION (NATO). The country was also an original member of the EUROPEAN COAL AND STEEL COMMUNITY and, later, of the EUROPEAN ECONOMIC COMMUNITY (EEC). The long political monopoly of the Christian Democrats led to a measure of inertia and corruption in the late 1960s; the Italian Communist Party, the strongest communist party in western Europe, has consistently proved an attractive alternative for a sizeable percentage of the Italian electorate. The Christian Democrats formed coalitions with other parties, including the Socialist, in order to exclude the Communists from government. Extremist terrorism of the left and right in the late 1970s attempted to disrupt Italian society; trains and railroad stations were bombed, and in 1978 former premier Aldo MORO was kidnapped and murdered by the notorious RED BRIGADES. Terrorism abated in the 1980s. For four years after the 1983 elections, the Socialist Party headed the government. Italy joined the coalition against IRAQ in the PERSIAN GULF WAR (1990–91), and Italian pilots flew sorties from Saudi Arabia during Operation Desert Storm. Elections in March 1994 brought SILVIO BERLUSCONI and his Forza Italia center-right political movement to power. Berlusconi was defeated in 1996 elections following the collapse of his cabinet but regained primiership in 2001. His five-year government was the longest of the Italian Republic. In 2003 Italy was one of several nations that participated in the U.S.-led "coalition of the willing," that entered IRAQ and deposed Saddam HUSSEIN. In 2006 former prime minister and European Commission president Romano Prodi defeated Berlusconi by a slim margin. Italy remains a center of the traditional arts and culture, a main attraction of world tourism. Rome is the capital, and other major cities are Naples, Milan, Palermo and Genoa.

Iturbi, José (1895–1980) Spanish-American pianist and conductor. Born in Valencia, he studied at the Paris Conservatory. Renowned for his interpretations of the music of Spain, he toured Europe and made his American debut in 1929, later settling in the U.S. He was a much sought-after concert artist, touring worldwide, playing with many of the foremost symphony or-

chestras and often performing with his sister, the pianist Amparo Iturbi (1898–1969). He conducted the Rochester Philharmonic Orchestra from 1936 to 1944. Iturbi was best known to the general public for his appearances in a number of American musical films during the 1940s.

Ivanov, Vsevolod Vyacheslavovich (1895–1963) Soviet writer. Ivanov is best known for his short stories and novels, notably *The Partisan* (1921) and *Armored Train 14–69* (1922), which described Soviet expansion into Siberia. A protégé of Maxim GORKY, he used his wide experience as partisan fighter, sailor, actor and circus performer in his writing. His plays include *The Compromise of Niab Khan* and *Twelve Young Lads from a Snuffbox*. He published his memoirs, *Meeting with Gorky*, in 1947. His early work, with its vivid, naturalistic description that attracted Gorky's attention, is considered to be his best.

Ivanov, Vyacheslav Ivanovich (1866–1949) Russian symbolist poet. In 1903 Ivanov published a volume of lyric poetry, *kormchiye zvezdy*, which established him as leader of the St. Petersburg symbolist movement. *Cor Ardens* (1911) is considered his most important poetical work. He was also a philosopher and classical scholar. He was made professor of Greek at Baku University in 1921 and in 1924 immigrated to Italy, where he became a Catholic.

Ivanov-Razumnik (1878–1946) Pseudonym of Razumnik Valsilyevich Ivanov. He was a writer and critic and leader of "The Scythians," an intellectual group that believed in Russia's destiny as a part-Asian nation. Before the revolution he wrote populist and revolutionary works; after the revolution his even stronger inclination toward the Left eventually brought about his arrest in the 1930s, as a "populist ideologist." He left the Soviet Union for Germany during the war and died in Munich. He wrote an account of his life, including his imprisonments and exile.

Ivens, Joris (Georg Henri Anton) (1898–1989) Dutch film maker. Ivens specialized in documentaries portraying the social impact of revolution, particularly in communist countries. His masterpiece was considered to be

The Spanish Earth (1937), a documentary about the SPANISH CIVIL WAR that featured a commentary written and read by Ernest HEMINGWAY.

Ives, Burl (1909–1995) American folksinger and actor. Born in Illinois, Ives came out of a folksinging tradition. He traveled throughout the U.S., walking, hitchhiking and riding boxcars, before coming to New York City in 1937. Important in popularizing the folksong genre, he is remembered for his renditions of “The Foggy, Foggy Dew” and “The Wayfaring Stranger,” which became the title of his radio show in 1940. Ives began acting in motion pictures in 1945, and won an ACADEMY AWARD for his performance in *The Big Country* in 1958. He is best known, however, for his role as Big Daddy in the Broadway production of Tennessee WILLIAMS’s *Cat on a Hot Tin Roof* (1955) and in the film version that followed in 1958.

Ives, Charles Edward (1874–1954) America’s first pioneer in modern musical expression. Because of his abhorrence of publicity and reclusive nature, Ives allowed few works to be published or performed in his lifetime; only in his last years did musicians like Leonard BERNSTEIN and Leopold STOKOWSKI present world premieres of some of his major works. Ives was born in Danbury, Connecticut, and received his musical training and inspiration from his father, a bandmaster in General Grant’s army. He graduated from Yale in 1898 and began a long and prosperous career in life insurance, establishing his own successful firm, Ives and Myrick, in New York in 1906. For the next 20 years Ives lead a double life, working by day in his Manhattan office and at night composing music at his farm in Redding, Connecticut. By 1917 he had completed four symphonies, hundreds of songs, two piano sonatas, and numerous other miscellaneous works. After a heart attack that year, Ives reconsidered his publishing proscriptions and released a huge volume of songs; later, he published his massive *Concord Piano Sonata*. At a time when most American composers still depended heavily upon the traditions of European academies and conservatories, Ives turned to the vernacular music styles of the New England Yankees. As if in response to Ralph Waldo Emerson’s charge that

American artists should “embrace the common,” Ives evoked in his music the street bands of his youth. He quoted popular songs like “De Camptown Races” and “Old Black Joe.” Years before the experiments by STRAVINSKY, BARTÓK and SCHOENBERG, Ives utilized modernist idioms in his work—double aural images, dissonance, polyrhythms and polytonalities. Ives composed little after 1918, choosing to live quietly at his farm with his wife of many years, Harmony Twichell. Only recently, it seems, has modern music caught up with Charles Ives. He died in New York City of complications following an operation in 1954.

Ivory Coast See CÔTE D’IVOIRE.

Iwo Jima Largest of the Volcano Islands; in the western Pacific Ocean, 660 nautical miles southeast of Tokyo. Iwo Jima was of strategic importance during WORLD WAR II because of its air base and its proximity to the Japanese main islands. The battle for control of the island—from February 19 to March 15, 1945—was one of the bloodiest in U.S. history. A memorable moment occurred on February 23, when men of the 28th Regiment of the

Fifth Division of U.S. Marines scaled Iwo Jima’s heavily fortified **Mount Suribachi** and planted the American flag on its summit. Administered by the U.S. until 1968, Iwo Jima was then returned to Japan.

Izetbegović, Alija (1925–2003) Bosnian politician and president of BOSNIA AND HERZEGOVINA (1990–2000). Born in Bosanski Šamac, Izetbegović became involved early on in the predominantly Muslim community in the Yugoslav province of Bosnia. When YUGOSLAVIA became a communist country at the end of WORLD WAR II, his radical Islamic activities led to his arrest and imprisonment in 1946. After serving a three-year sentence, Izetbegović enrolled in the University of Sarajevo in 1949 to study law. After he obtained his law degree he practiced in Bosnia while campaigning for greater autonomy for the predominantly Muslim province. In 1983 he was arrested and sentenced to 14 years in prison.

After his early release from prison in 1988, Izetbegović plunged into the anti-communist activism that was sweeping Eastern Europe as a result of Soviet leader Mikhail GORBACHEV’s policy of GLASNOST. In 1990 he helped found the

The American flag being raised in victory at Iwo Jima, 1945

Party of Democratic Action (PDA), a Bosnian nationalist party that, while representing the predominantly Muslim population in the province, called for an independent secular government. Six months after its creation the PDA won a plurality of votes in the country's first free election. Izetbegović joined six other party leaders in the creation of a collective presidency for Yugoslavia. The secession of Croatia, Slovenia and Macedonia from Yugoslavia in 1991 exacerbated tensions within Bosnia, with its large Croat and Serb minorities that began to clamor for their own autonomous districts within the autonomous province of Bosnia and Herzegovina. In a referendum in early 1992, a majority of the province's citizens were in favor of independence, while most Bosnian Serbs boycotted the referendum. Izetbegović declared Bosnia and Herzegovina independent in March 1992, unleashing a bloody civil war among Bosnians, Croats and Serbs.

After more than three years of bloodshed, Izetbegović met with his Croatian (Franjo TUDJMAN) and Serbian (Slobodan MILOŠEVIĆ) counterparts in Dayton, Ohio, at a peace conference cosponsored by the U.S. and the EURO-

PEAN UNION. Signed in November 1995, the DAYTON ACCORDS established a power-sharing arrangement in Bosnia—between the Bosnian Muslim and Croat federation on the one hand and the Serbian Republic on the other—that brought peace to the troubled country. The accords also created a new three-member presidency that (along with a national legislature) would administer both the Bosnian Croat and the Bosnian Serb portions of Bosnia and Herzegovina. In September 1996 Izetbegović was elected by his constituents as the Muslim representative on the three-member presidency. He was reelected to that post in 1998. In 2000 Izetbegović resigned as president of Bosnia for reasons of health and withdrew from politics altogether the following year by relinquishing his post as head of the PDA.

Izvestiya (News) Daily newspaper published by the Supreme Soviet Presidium; it was founded after the February 1917 Revolution as the organ of the Petrograd Soviet. It was published jointly by the central executive committee of Soviets and the Petrograd Soviet from August 1917, but became very similar to *PRAVDA* from October

1917. In 1918 publication was transferred to Moscow, and in 1957 the circulation stood at 1,550,000. However, under the editorship of Alexei Adzhubey (editor, 1959–64) the style of the newspaper changed, and it became an evening publication in 1960. It became popular and in the late 1970s the circulation was 8.6 million. A weekly supplement *Nedeliya* (The Week), as of 1980 sold separately, was also published. *Izvestiya* ceased publication after the disintegration of the Soviet Union in December 1991.

Izvol'sky, Count Alexander Petrovich (1856–1919) Russian diplomat. As foreign minister he concluded a treaty with Britain resolving Anglo-Russian disagreements in the Middle East, but he was dismissed in 1910 following an unsuccessful agreement with Austria. In 1910 he was transferred to Paris, where he served as the Russian ambassador until 1917. He had sought Austrian help in 1908 in asserting Russia's right to use the DARDANELLES, but the resulting agreement strengthened Austria in the BALKANS at Russia's expense, and no aid was given in the Dardanelles question.

J

Jaccottet, Philippe (1925–) French poet, diarist, translator and literary critic. Jaccottet is one of the finest of the post–World War II generation of French poets. In his often lyrical verse, Jaccottet rejects the linguistic obscurity and experimentation of SURREALISM and other abstruse schools of French poetics in favor of a more emotionally direct expressiveness that takes in the beauty of nature and the fragility of civilized values in the nuclear age. Born in Switzerland, Jaccottet was educated at the University of Lausanne and is married to the artist Anne-Marie Hassler. His major books of poems include *Requiem* (1947), *Airs* (1967) and *Pensées sous les nuages* (1983).

Jackson, Glenda (1936–) English actress. An outstanding actress of stage, screen and television, Jackson received international acclaim in the London and New York productions of Peter WEISS's play *Marat/Sade* (1964–65). Performing with the ROYAL SHAKESPEARE COMPANY she gained recognition for her roles in *Hedda Gabler* (1975) and *Antony and Cleopatra* (1978), among others. Title roles in Hugh Whitmore's *Stevie* (1977, about Stevie SMITH) and Andrew Davies's *Rose* (1980; Broadway, 1981) were personal triumphs. She has appeared in numerous films, receiving a best actress ACADEMY AWARD for *Women in Love* (1969). On television she triumphed as Elizabeth I in a BBC series. In 1992 she abandoned her acting career for politics, winning a seat in Parliament as a Labour representative of Hamp-

stead and Highgate. She became a vocal critic of the Conservative governments. In 1997, when the Labour Party was swept back into power, Jackson was named minister for transport in London. She later became an adviser to the mayor of London on homelessness.

Jackson, Henry M(artin) "Scoop" (1912–1983) U.S. senator. Jackson was born in Everett, Wash. After two years of private legal practice, he entered Democratic politics in 1935, was elected to the House of Representatives in 1940 and to the Senate in 1953. Thereafter, he served six terms. In domestic affairs, he was generally a liberal, maintaining close ties with organized labor and establishing a record as a dedicated environmentalist. In foreign affairs, he advocated large military expenditures from his seat on the Armed Services Committee, seeking to counter Soviet power. Jackson was a candidate for the Democratic nomination for president in 1972 and 1976.

Jackson, Jesse Louis (1941–) U.S. CIVIL RIGHTS leader and politician. Raised in the poor black section of Greenville, N.C., he starred on the basketball, football and baseball teams of all-black Sterling High School. An honor student and the college quarterback, he led the student protest in 1963 that resulted in the integration of Greensboro (North Carolina) theaters and restaurants. Jackson entered Chicago Theological Seminary in 1965. The same year he joined Dr. Martin Luther KING Jr. in

his civil rights actions in SELMA, Ala. Named head of the Chicago branch of Operation Breadbasket, he became its national director in 1967. He was ordained a Baptist minister in 1968. Jackson continued to gain national prominence and following, and in 1971 founded Operation Push (People United to Save Humanity) in Chicago.

He gained valuable support and experience in the field of politics in 1984 when he launched a campaign to win the Democratic presidential nomination. Again during the 1988 presidential primaries, Jackson received astonishing support, including from white voters, and received widespread press attention. Although Jackson has not run for political office since 1988, he was active in promoting voter registration, universal health care and corporate investment in poor communities. He also undertook several unofficial diplomatic assignments in world trouble spots. He brought hostages out of Kuwait and Iraq in 1990 before the PERSIAN GULF WAR and negotiated the release of U.S. soldiers held hostage in Kosovo in 1999. President Bill CLINTON awarded him the Presidential Medal of Freedom in 2000. Jackson's prestige was damaged shortly after the contested presidential election of that year when it was revealed that he had had an extramarital affair with a young staffer that resulted in the birth of a daughter. Allegations also surfaced that Jackson had used his influence and reputation to advance his family's financial interests.

The Reverend Jesse Jackson leads a march for jobs in 1975, Washington, D.C., photographed by Thomas J. O'Halloran (U.S. NEWS AND WORLD REPORT MAGAZINE COLLECTION, LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

Jackson, Mahalia (1911–1972) American gospel singer. She began making records in 1934, and later went on many concert tours in Europe and the U.S. She sang for President Eisenhower on his birthday in 1959, and at President Kennedy's inauguration in 1961. During the 1960s she became associated with the CIVIL RIGHTS MOVEMENT. She made eight records that sold over a million copies each.

Jackson, Michael (1958–) American pop singer; began his career with his brothers as one of the Jackson Five. The group recorded four consecutive number-one hits, including "ABC" and "The Love You Save." He recorded three top-five solo singles during the early 1970s, including the number-one "Ben," a love song to a rat sung in Michael's trademark falsetto. He made his film debut in 1978 playing the scarecrow in *The Wiz*, an all-black version of *The Wizard of Oz*. In 1979, his career began to skyrocket, with the album *Off the Wall* providing four top-10 hits. His 1982 release, *Thriller*, set new music industry standards for success, with seven top-ten hits and sales topping 40 million. Jackson's child-like beauty and vulnerability have made him a teen idol in two decades, albeit that appeal is widely rumored to have been assisted by extensive plastic surgery. Jackson's subsequent

albums, *Dangerous* (1991), *HIStory* (1995) and *Invisible* (2001), did not sell as well as *Thriller*, in part because of allegations of child abuse and molestation that surfaced in 1993 and again in 2003. Early in 2005 he went on trial in California, charged with 10 counts of child molestation but was acquitted in June on all counts.

Jackson, Reggie (1946–) American baseball player. Born in Wyncote, Pa., Jackson attracted the attention of baseball scouts while a student athlete at Arizona State University (1964–66). The Kansas City Athletics (A's), signed him to a contract in 1966 and to insert him into their minor-league farm system. The A's called him up during the 1967 season, and by 1969 Jackson had established a reputation as a power hitter, finishing the season with 47 home runs and 118 runs batted in.

After nine seasons with the A's and with only one year remaining on his contract, Jackson was traded to the Baltimore Orioles. However, the team's lackluster performance that season convinced Jackson to test his free agency, and he signed the following year with the New York Yankees. It was with New York that Jackson experienced his greatest professional success, helping to steer the Yankees to two World Series titles, in 1977 and 1978.

In the race for his first Major League championship, Jackson performed an extraordinary feat in the fifth and sixth games against the Los Angeles Dodgers, hitting four consecutive home runs on the first pitch he received from four different pitchers. As a result of his role in the 1977 World Series, Jackson was labeled "Mr. October" (the month in which the Series occurs) for his ability to perform under great pressure. Jackson finished his career with the Yankees, retiring in 1987. In 1993 he was inducted into the Baseball Hall of Fame.

Jackson, Robert H. (1892–1954) Associate justice, U.S. Supreme Court (1941–54). Jackson did not attend college but spent one year at Albany Law School in addition to studying law in a lawyer's office. He first gained attention as general counsel of the Internal Revenue Service. A loyal Democrat, he served President Franklin D. ROOSEVELT as assistant U.S. attorney general, solicitor general and attorney general. In 1941, Roosevelt elevated Jackson to the Supreme Court. During 1945–46, Jackson served as chief prosecutor at the NUREMBERG TRIALS. Jackson is credited with charging the Nazis with crimes against humanity.

Jackson apparently did not always get along with his fellow justices on the high court. Reputedly, two justices threatened to resign if President TRUMAN elevated Jackson to the position of Chief Justice. Jackson died in 1954 while still a member of the Court.

Jackson, Shirley (1919–1965) American writer of contemporary fantasy and horror. Jackson's works have been frequently adapted to movies and television. She was born in San Francisco and early in childhood developed an absorbing interest in witchcraft and the occult. After placing several stories in *THE NEW YORKER* magazine, she became an international sensation with *The Lottery* (1947), a violent tale of ritualized murder in a New England farming community. Although she continued to write disturbing tales of madness and horror—notably, the extraordinary *The Bird's Nest* (1954), a story of a woman with multiple personalities; *The Sundial* (1958), an evocation of imminent global apocalypse; and *The Haunting of Hill House* (1959), a truly terrifying novel of the psychic investigation of a "haunted

house”—she also wrote delightful accounts of her own husband and children, amusing stories of family life collected under that titles, *Life among the Savages* (1953) and *Raising Demons* (1957). This duality is striking. She was, by turns, nondescript, thoroughly domestic, and essentially “normal,” and by others, withdrawn, paranoid, increasingly the victim of barbiturates and alcohol. Only half-jokingly, she referred to herself late in life as the only practicing witch in New England. “The very nicest thing about being a writer is that you can afford to indulge yourself endlessly with oddness, and nobody can really do anything about it . . .,” she wrote. Shortly before her death from a heart attack she wrote in her unfinished autobiographical novel, *Come Along with Me*: “How can anyone handle things if her head is full of voices and her world is full of things no one else can see?” Her husband, Stanley Edgar Hyman, published two posthumous collections of her work, *The Magic of Shirley Jackson* (1966) and *Come Along with Me* (1968).

Jackson State shootings Killing of two black students at Jackson State College, Jackson, Miss., by state lawmen on May 14, 1970. The shootings followed campus violence and were pictured as wanton killings by onlookers and as resistance to sniper fire by the police. A federal grand jury was convened later that year but failed to return any indictments. The shootings were viewed as emblematic of the campus unrest and civil rights strife that occurred in the U.S. during the late 1960s and early 1970s.

Jacobi, Lotte (1896–1990) German-American photographer. Born in Berlin, she was influenced by the artistic movements of her youth, using surrealist and cubist techniques in her many portraits. She was closely associated with Berlin’s theatrical world in the 1920s and 1930s, creating strikingly original portraits of such figures as Bertolt BRECHT, Kurt WEILL and Lotte LENYA. Fleeing Germany for the U.S. in 1935, she settled in New York. There she continued portrait photography and, in the 1950s, began experiments with abstract “photogenics” and with the photographs, called “photograms,” taken without benefit of a camera.

Jacobs, Walter L. (1896–1985) Business executive who founded Amer-

ica’s first car-rental agency, which later became the Hertz Corp. In 1918, having acquired 12 Model T Fords, Jacobs started the Rent-A-Ford company in Chicago. In 1923 he sold the business to John D. Hertz, owner of a Chicago taxicab company. Jacobs remained with the company until 1960, serving as its president and chief operating officer.

Jacob’s Pillow Dance Festival The world-renowned Jacob’s Pillow Dance Festival, located on 150 acres near Lee, Massachusetts, became the first dance festival in the U.S. when it was established in 1941. In 1930 dancer Ted SHAWN bought the land as a summer rehearsal place for the Denishawn Dancers, then his Men Dancers. An interested group purchased the land, started a school, and established the festival (1941), with Shawn as director (1942–72). In 1942 the Shawn Theatre was built; it was the first theater in the western hemisphere to have a stage constructed exclusively for dance. Since its inception, the Festival has welcomed all kinds of dance. The American debuts of many European dancers and companies have taken place at this annual summer Festival, and over 300 new works have been premiered there. Since Shawn’s death (1972), the Festival has had several directors; as of 1990, the director was Liz Thompson. Thompson was succeeded as director by Samuel Miller (1990–94), Sali Ann Kriegsman (1995–97) and Ella Baff (1997–).

Jaehn, Sigmund (1937–) German cosmonaut-researcher and the first German in space. Jaehn flew aboard *Soyuz 31* (August–September 1978). An air force pilot, he had held an appointment at the Gagarin Air Force Academy in the USSR before becoming an inspector for the general staff of the East German air force. After the reunification of Germany in 1993, he represented Germany at the European Space Agency.

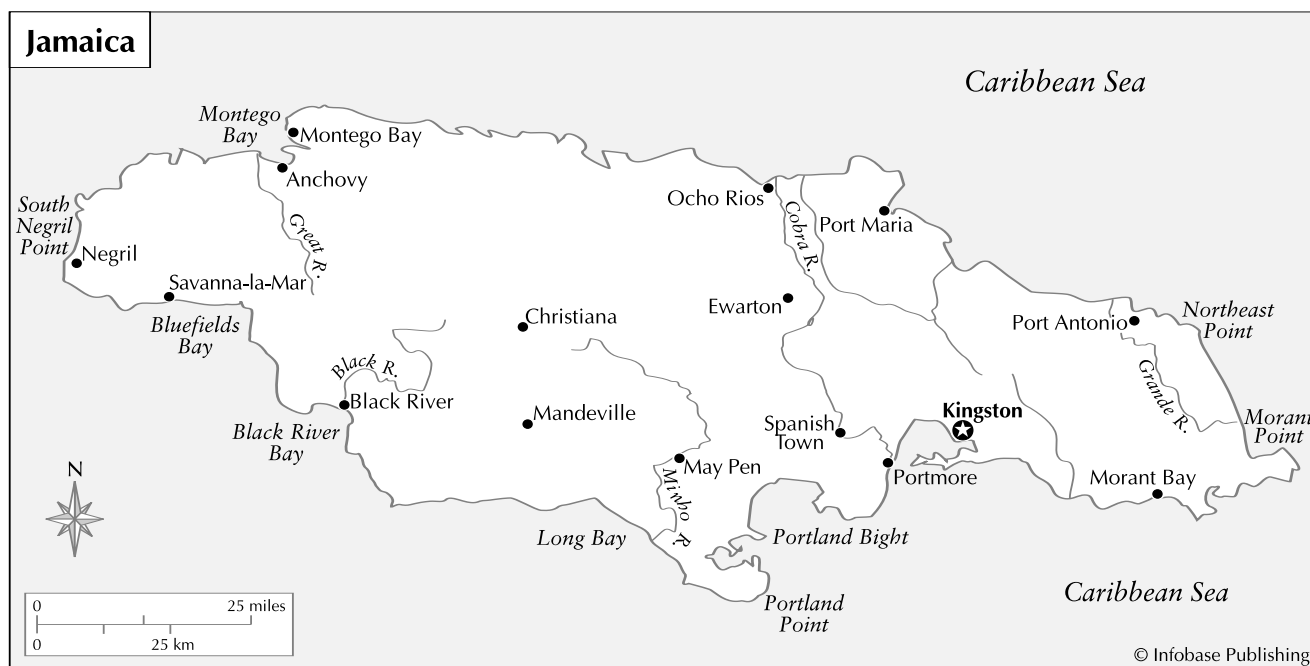

Jagger, Mick (Sir Michael Philip Jagger) (1943–) British ROCK songwriter and vocalist. Jagger has achieved international fame as the lead vocalist for the British rock band the ROLLING STONES. Jagger was born in Dartford, Kent, to a middle-class family and enrolled as a student in the London School of Economics in 1960. His love

for American blues and rock music, notably Chuck BERRY and MUDDY WATERS, led Jagger to take up singing in 1962. His early gigs included guest spots with Alexis Korner’s Blues Incorporated. In 1962 Jagger became a founding member of The Rolling Stones, and by 1963 he was a star in Britain. A 1964 Rolling Stones tour of the U.S. established Jagger on both sides of the ocean. Regarded as the “bad boy of rock and roll” because of his irreverent attitudes, Jagger is best known for his distinctive vocal style—insinuating and sneering, but also capable of great emotive power. He has also teamed with Keith Richard to write the majority of the Rolling Stones’s hit songs, including the classic “(I Can’t Get No) Satisfaction” (1965). Five solo albums, including *She’s The Boss* (1985), *Primitive Cool* (1987), *Goddess in the Doorway* (2001) and *Alfie* (movie soundtrack, written with Dave Stewart [2004]). In June 2002 Jagger was knighted by Queen ELIZABETH II for “services to popular music.”

Jajce Congress Meeting held November 29–30, 1943, in the Bosnian town of Jajce. Consisting of Yugoslavian delegates to the Anti-Fascist National Liberation Committee, the Jajce Congress agreed to the postwar creation of a federated republic of YUGOSLAVIA. The congress also established the committee as Yugoslavia’s provisional government and gave communist partisan leader Josip TITO the title of Marshal. Exactly two years later, the Federal People’s Republic of Yugoslavia was officially proclaimed.

Jakarta (Djakarta; formerly Batavia) Capital city of INDONESIA; on the island of Java’s Jakarta Bay, an inlet of the Java Sea. Known to its longtime Dutch occupiers as Batavia, Jakarta is the largest city of Indonesia, as well as its leading commercial and industrial center. During WORLD WAR II, the Japanese captured the city in March 1942 and held it until 1945. In December 1949 Batavia was renamed and made the capital of the newly independent Indonesia.

Jamaica Island republic in the West Indies, south of CUBA and west of HAITI; capital is Kingston. As a British colony, Jamaica experienced civil strife caused by poverty and British racial policies. This came to a peak in violent rioting in

1938, which brought about universal adult suffrage in 1944. Jamaica regained internal autonomy in 1953, and in 1958 joined the WEST INDIES FEDERATION. A campaign led by nationalist labor leader Sir Alexander BUSTAMENTE led to Jamaica's withdrawal from the federation in 1961. In 1962, Jamaica became an independent member of the COMMONWEALTH with Bustamante as its first prime minister. Michael MANLEY of the People's National Party became prime minister in 1972 and instituted socialist reforms, but Jamaica's economy suffered, and some factions violently protested his government. In 1980, Edward P. Seaga, a conservative Labour Party member, defeated Manley and encouraged a return to capitalistic policy. Jamaica suffered in the recession of the early 1980s, but in 1984 Seaga responded with a series of reforms, including devaluation of the Jamaican dollar, which resulted in an increase in tourism, agriculture and manufacturing. Concurrent inflation, however, left many Jamaicans in poverty. In 1989, Manley was reelected, though on a more moderate platform than its previous administrations. The People's National Party continued to dominate the political scene throughout the 1990s and into the 21st century, despite a steep recession that began in 1999.

Jamalzadeh, Mohammed Ali (c. 1895–1997) Iranian short story

writer. Jamalzadeh received a progressive, Western-style education in Dijon and Lausanne, where he studied law. His father was a leading figure in the Iranian national revival. During World War I, he joined emigrés in Berlin to fight against the Anglo-Russian occupation of Iran; thereafter he worked at the Iranian embassy in Berlin. In 1931 he took up permanent residence in Switzerland. His first book, *Yeki bud va yeki nabud* (1921, *Once upon a time*), gave a critical and realistic picture of Iranian life. He published no more books until 1941. *Dar ol-majanin* (1942, *Lunatic asylum*), *Qualtashan Divan* (1946, *Dictator of the imperial office*) and *Sar o tahe yak karbas ya Esfahanname* (1956, *All of a Pattern, or the book of Isfahan*) were longer works dealing with social themes. Jamalzadeh has also translated Schiller, Wilde and Anatole FRANCE.

James, C(yril) L(ionel) R(obert) (1901–1989) Trinidad-born political historian, literary critic and cricket writer who was a leader of the pan-African movement. After moving to London in the 1930s, James became a Marxist and involved himself in several left-wing political causes. He rejected STALIN's version of COMMUNISM, however, and allied himself with Stalin's exiled rival, Leon TROTSKY. After spending 15 years in the U.S., he was expelled in 1953 during a period of intense anti-

communism (see MCCARTHYISM). He then traveled to Africa and became involved in the African independence movement. In 1958 he returned to Trinidad at the invitation of Chief Minister Eric WILLIAMS and later became secretary of the West Indies Federal Labour Party coalition. His books included *The Black Jacobins: Toussaint L'Ouverture and the San Domingo Revolution* (1938) and *Beyond the Boundary* (1963).

James, Harry (1916–1983) American trumpet player and bandleader. James began playing in bands at age eight. He played in the band of Benny GOODMAN from 1937 until 1939, when he started his own group. He added romantic ballad arrangements to his repertoire beginning in 1941 with *You Made Me Love You*. He helped launch the careers of singers Frank SINATRA, Dick Haymes, Helen Forrest, and Connie Haines. In 1943 he married film star Betty GRABLE and appeared in several films, which brought him more popularity. Along with Glenn MILLER, James developed and refined the big band sound known as swing, the most popular jazz style in the U.S. during World War II. (See also SWING ERA.)

James, Henry (1843–1916) American novelist whose works are remarkable for their subtlety, psychological penetration and stylistic care. One of the most influential figures in American

JAMAICA

1907	Kingston leveled by earthquakes; governor of British Crown colony resigns after misunderstanding leads to landing and rapid departure of U.S. Marines.
1916	Black Nationalist Marcus Garvey immigrates to U.S.
1930	Economic depression leads to rioting and strikes.
1939	Norman Manley founds People's National Party.
1940	U.S. granted military bases as part of Lend-Lease program.
1944	British allow internal self-government; first House of Representatives election is dominated by Jamaican Labour Party.
1945	Blight and wartime disruption of shipping discourage banana planting, lead to agricultural diversity and increased self-sufficiency.
1954	PLP purges leftist members and wins elections.
1958	Jamaica joins West Indian Federation.
1962	Full independence from Britain granted; secession from WIF; Bustamente of the JLP elected first prime minister; University of the West Indies chartered.
1965	International air routes make tourism an important industry.
1969	Jamaican dollar replaces the pound.
1970	Population down 15% from 1960, due to emigration.
1972	Michael Manley of the PNP elected; launches radical leftist programs, including land reform and ties to Cuba.
1975	Tourism slumps; oil prices rise; economy devastated.
1979	Prime Minister Manley refuses to accept conditions set by International Monetary Fund; denied desperately needed loans; middle-class emigration increases.
1980	Seven-hundred killed in election violence between PNP and JNP; Seaga of JNP elected.
1981	Seaga reverses Manley policies; seeks new ties with U.S.; encourages free enterprise; adopts IMF-backed austerity programs; singer Bob Marley dies; tourism up.
1988	Hurricane Gilbert leaves 20% of island's population homeless.
1989	Manley and the PNP, projecting a more moderate image, are reelected.
1990	Young & Rubicam, one of New York's leading advertising agencies, pleads guilty to bribing Jamaican officials in return for a large contract to promote tourism there.
1992	Manley retires for health reasons and is succeeded by Percival J. Patterson.
1997	Patterson leads the PNP to an unprecedented third consecutive term as governing party.
1999	Severe economic downturn leads to high unemployment and an enormous budget deficit.
2005	The murder rate in the country soars to 1,145, the highest in the island's recorded history.

literature, James was born in New York and educated abroad and at Harvard Law School. His father was a theological writer, and his older brother, William JAMES, became an eminent

philosopher. James began his career contributing to periodicals. His first major novel, *Roderick Hudson* (1876), appeared in *The Atlantic Monthly* in 1875. James settled in England in

1875, and much of his work insightfully contrasts European worldliness with American naivete. Such novels include *Daisy Miller* (1879), *Portrait of a Lady* (1881), *THE AMBASSADORS* (1903),

American author Henry James (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

and *The Golden Bowl* (1904). Some of his fiction, including *The Spoils of Poynton* (1897) and *The Awkward Age* (1899), focuses more specifically on the nature of the English. James was a mentor and close friend to Edith WHARTON; a volume of their correspondence was published in 1989. In addition to a number of other novels, James also wrote short stories, the best known being *The Turn of the Screw* (1898); travel sketches; and plays. James became a British subject shortly before his death. A four-volume biography of James was written by Leon Edel between 1953 and 1972.

James, M(ontague) R(hodes) (1862–1936) British medieval scholar and educator, commonly acknowledged as the 20th century's greatest master of the ghost story. The son of a Suffolk clergyman, James decided, after attending Eton and King's College, Cambridge, not to follow his father and brother into the Church. Rather, as Provost of King's College and, later, Eton, he pursued his scholarship of medieval manuscripts and architecture. He is best known today for his hobby—writing ghost stories for annual Christmas gatherings with his friends. The spectral tales first appeared in the collection, *Ghost Stories of an Antiquary* (1904) and in subsequent books, *More Ghost Stories of an Antiquary* (1911), *A Thin Ghost* (1919) and *A Warning to the Curious* (1926). Although the props and characters might

seem at first glance rather clichéd—haunted wells, yawning graves, vampires and ghosts—he has added some novel effects of his own. These include witchcraft on a tram car (*Casting the Runes*), a pair of haunted binoculars (*A View from a Hill*), and an inexplicable, “face of crumpled linen” of some haunted bedsheets (*Oh, Whistle, and I'll Come to You, My Lad*). Yet the stories are set against careful and meticulous backgrounds of bookish, antiquarian lore; and they are written in a sober, refined narrative style. Notoriously reticent about his work, James best summed up his intent in the Latin inscription found on a certain ancient whistle in one of his stories: “Quis est qui venit?” (“Who is this who is coming?”) The answer was usually dreadful—and superbly memorable.

James, P(hyllis) D(orothy) (baroness James of Holland Park) (1923–) British novelist. Born in Oxford and educated at Cambridge University, she was an administrator in the NATIONAL HEALTH SERVICE from 1949 to 1968. In 1968 she transferred to the Home Office, where she worked as a senior civil servant in the police and criminal law departments. Her first book, *Cover Her Face* (1962), introduced readers to Scotland Yard detective Adam Dalgleish, who appears in most of her subsequent books. In 1979 she resigned from her job to write full time. James adapted the detective mystery genre (perfected in the 1930s by Dorothy L. SAYERS) to examine the social order in late-20th-century Britain. Her realistic novels transcend the customary limits of the mystery genre, and she is regarded as being in the mainstream of contemporary English literature. Several of her books have been adapted for television by the BBC. These include *The Black Tower* (1982), *A Taste for Death* (1986) and *Devices and Desires* (1989). In 1991 P. D. James was made a Dame of the British Empire and was elevated to the peerage as baroness James of Holland Park.

James, William (1842–1910) American philosopher and psychologist. James stands among the most original and influential thinkers that America has ever produced. He came from a remarkable New England family—his father, Henry James Sr., was a prominent theologian, and his brother Henry JAMES

was one of the greatest American novelists. William James earned a medical degree from Harvard University in 1869 and went on to teach anatomy, physiology, psychology and philosophy at Harvard. In 1884 James helped found the American Society for Psychical Research. His two-volume *Principles of Psychology* (1890) was a pioneering work in a then new field of social science. *Varieties of Religious Experience* (1902) remains a classic work on the nature and modalities of religious beliefs. James is best known for his formulation of the philosophy of **pragmatism**, which argues that we live in a pluralistic universe in which truth is relative and best measured by the extent to which it serves human freedom. James's key philosophical essays are contained in *Pragmatism* (1907) and *Essays in Radical Empiricism* (1912).

James Bond Fictional British secret agent (“007”) with a “licence to kill”; created by novelist Ian FLEMING, Bond first appeared in the novel *Casino Royale* (1954) and was subsequently featured in numerous feature films, beginning in the 1960s and continuing into the 1990s. James Bond was an immensely popular character; his far-fetched adventures bore little resemblance to actual espionage work but rather reflected male fantasies. Bond was first portrayed by actor Barry Nelson, on American television; in the movies, Bond was first portrayed by Scottish actor Sean CONNERY and afterward by David Niven, George Lazenby, Roger Moore, Timothy Dalton, Pierce Brosnan and Daniel Craig.

Jameson, (Margaret) Storm (Mrs. Guy Chapman) (1891–1986) British novelist and feminist. As president of the English section of PEN from 1938 to 1944, Jameson worked tirelessly to rescue and assist writers from countries under Nazi occupation. Three of her finest novels stemmed from that period: *Cousin Honore*, *Europe to Let* and *Cloudless May*. Perhaps her most important postwar work was her two-volume autobiography, *Journey from the North* (1969–70).

Janáček, Leoš (1854–1928) Czech composer. Born in Moravia, his father was an organist, and his earliest musical experience was a choirboy. He began directing choirs at the age of 16 and later (1875–80) studied composition at Prague, Leipzig and Vienna. He

moved to Brno in 1881, teaching and conducting there. He was a professor at Prague from 1921 to 1923. Janáček was an avid student and collector of Slavic folk music, and his work was influenced by its rhythms and melodies as well as by the inflections of the Czech language itself. He is particularly noted for his operas, including *Jenufa* (1904), *Katya Kabanova* (1921), *The Cunning Little Vixen* (1921) and *From the House of the Dead* (1930). Among his other works are the symphonic poem *Taras Bulba* (1915–18), the song cycle *The Diary of One Who Vanished* (1916–19) and the *Glagolitic Mass* (1926), as well as many orchestral, chamber, piano, vocal and choral compositions.

Janco, Marcel (1895–1984) Romanian-born Israeli painter and architect. Janco helped found the DADA movement in Switzerland in 1916. Together with Hans ARP, Tristan TZARA and other artists, Janco formulated an approach to art that abandoned traditional conventions in favor of art without preconceived ideas. This approach, DADAISM, was a forerunner of SURREALISM and modern ABSTRACT ART. Janco was best known for his abstract masks recalling the Japanese and Greek theater. In 1953 he founded Israel's first art colony, Ein Hod.

Janet, Pierre Marie-Félix (1859–1947) French psychiatrist. Janet was one of the pioneers of clinical psychiatry and a dominant figure in the administration of mental health programs in France. In the 1880s and 1890s, he served as the director of the prestigious Salpêtrière clinic. For the first four decades of this century, he taught at the Collège de France. In papers written in the 1880s, Janet anticipated certain theories of Sigmund FREUD as to the unconscious symptomology of hysteria and other mental disorders. Janet also conducted researches into hypnosis and the clinical classification of mental illness. His major works include *Neuroses and Fixed Ideas* (1898), *The Mental State of Hysteria* (1911) and *Psychological Medicine* (1923).

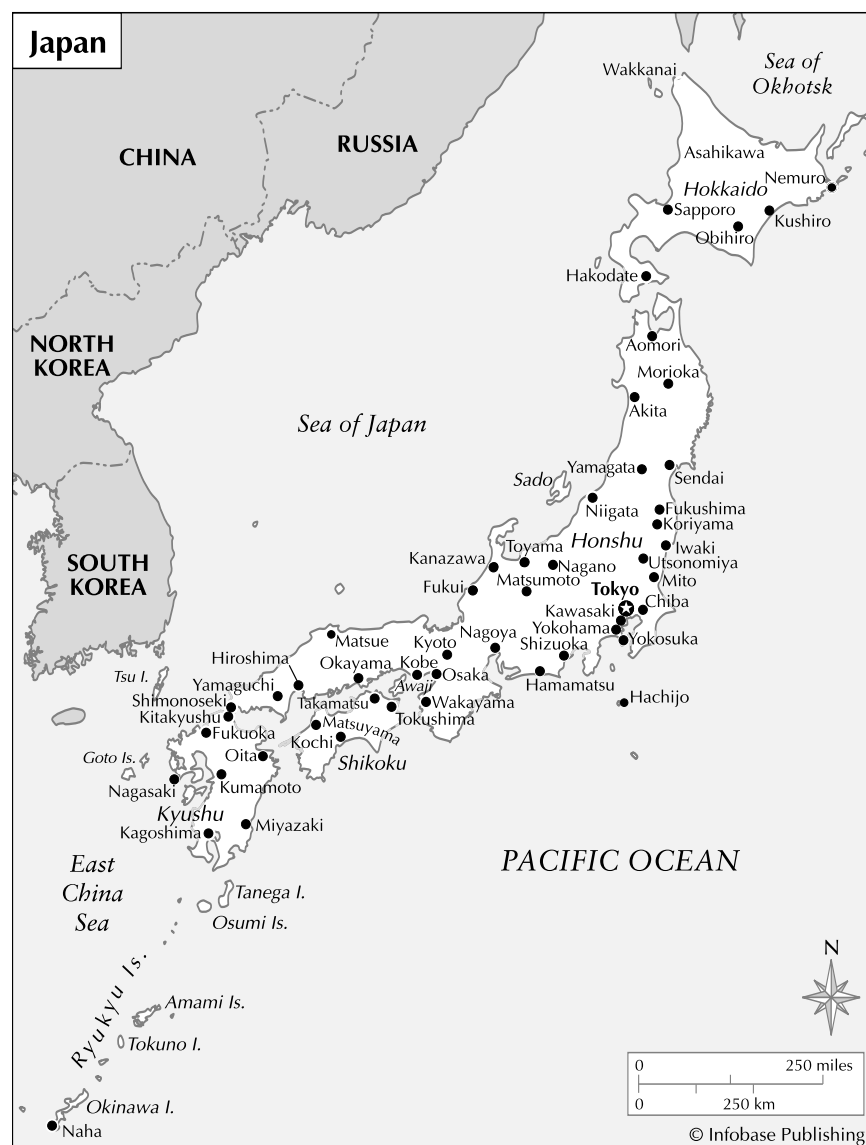

Janson, H(orst) W(oldemar) (1913–1982) American art historian and teacher. Born in Leningrad, Janson studied at the universities of Hamburg

and Munich and at Harvard, where he began his teaching career. He also taught at the Worcester Art Museum, Iowa State University and Washington University before becoming a professor of art history at New York University in 1949. One of America's most distinguished art historians, he is best known for his comprehensive survey, *History of Art* (1962), which sold more than 2 million copies internationally. Janson was also the author of such works as *Apes and Ape Lore in the Middle Ages* (1952) and *The Sculpture of Donatello* (1957).

Janssen, Werner (1899–1990) U.S. conductor and composer. A specialist in 20th-century music, in 1934 he became the first American-born conductor ap-

pointed to lead the New York Philharmonic orchestra. He later moved to Los Angeles, where he led his own Janssen Symphony (1940–52). He wrote scores for such films as *Blockade* (1938) and *The General Died at Dawn* (1936).

Japan Japan entered the modern era in 1868 when young members of the military oligarchy installed Emperor Meiji on the throne and launched a vast program of industrialization and modernization. Japan opened its doors to Western influences and ideas, imported Western technologies and concluded friendship treaties with such countries as the U.S., Britain and the Netherlands. It was RUSSIA and CHINA, however, that were to play a major role in Japanese foreign affairs between the

JAPAN

1904	(Feb.) Attacks Russia and declares war; wins territorial objectives in Korea and Manchuria.
1926	Accession of Emperor Hirohito.
1931	The Mukden incident of 1931, involving an explosion on the Manchurian rail line; results in annexation of Manchuria and army control of political power.
1932	(May) Prime Minister Takashi Inukai is assassinated, ending the last nonmilitary-controlled government.
1936	Japan joins the Axis powers in a pact against the Soviet Union.
1937	(July) War with China erupts after Marco Polo Bridge Incident.
1941	(Dec. 7) Japan attacks Pearl Harbor in the U.S. Hawaiian Islands; (Dec. 8) U.S. declares war on Japan.
1942	Defeats at Midway Island and the Coral Sea break Japanese sea power.
1945	Philippines reconquered; (Aug. 6) Atomic bomb dropped on Hiroshima; (Aug. 8) Soviet Union declares war on Japan; (Aug. 9) Atomic bomb dropped on Nagasaki; (Aug. 14) Japan accepts the unconditional surrender terms of the Potsdam Declaration; (Sept. 2) Formal surrender signed; Gen. Douglas MacArthur becomes supreme commander of Allied forces occupying Japan.
1946	Demobilization and demilitarization are completed; civil and land reform commence.
1948	War Crimes Tribunal sentences 25 to death or life imprisonment; (Dec. 23) General Hideki Tojo is hanged.
1949	San Francisco Peace Conference promises full sovereignty to Japan by April 1952.
1952	Security treaty is signed with the U.S.
1955	Industrial output meets peak prewar levels.
1956	Japan admitted to the UN.
1960	Hayato Ikeda begins four-year term as prime minister.
1964	Tokyo Olympics; Eisaku Sato begins eight-year term as prime minister.
1970	EXPO '70, the first world exposition held in Asia, is hosted by the city of Osaka; United States returns Okinawa and Ryukyu islands.
1973	Oil embargo causes Japan to shift industrial focus to high-tech areas such as consumer electronics.
1974	Prime Minister Kakuei Tanaka is implicated in the Lockheed scandal and is arrested for accepting a 500 million-yen bribe; Sato wins Nobel Prize for peace.
1986	To stem exports, Plaza Accord obliges Japan to accept a 40% upward valuation of the yen.
1988	Japan becomes the largest donor of foreign aid and largest supplier of foreign aid.
1989	(Jan. 7) Emperor Hirohito dies and is succeeded by his son Crown Prince Akihito.
1993	A coalition of eight opposition parties forms a government headed by Morihiro Hosokawa, ending the LDP's long rule.
1994	Tomiichi Murayama becomes Japan's first Socialist prime minister since 1948 as head of a coalition including the LDP.
1997	The Japanese economy slides into its longest recession since the end of World War II.
2001	Junichiro Koizumi becomes prime minister.
2006	Economic indicators show positive growth for the first time in eight years. Koizumi is succeeded as prime minister by Abe Shinzo.

1890s and 1930s. The first Sino-Japanese War, over Korea, was fought in 1894–95; the RUSSO-JAPANESE WAR, over Manchuria, followed in 1904–05. Victorious in both encounters, Japan greatly increased its sphere of influence and gained tremendous military prestige. During WORLD WAR I, Japan was on the side of the Allies and became their major supplier of ammunition and ships. Its economic development was further enhanced by increasing demand from Asia and Africa, which could no longer rely on British and German exporters. The war also proved beneficial for Japan politically because, as an ally of Britain, it was asked to destroy German warships protecting German interests in China; this ultimately led to Japan's occupation of Shantung (now Shandong) province in China.

By 1922 Japan had been recognized as a major Asian power, and its navy had become the world's third largest after that of Britain and the U.S. The 1920s were a decade of rapid economic growth. An important step in the gradual democratization of Japan was taken in 1925 when the government enacted universal suffrage for males. Soon after the 1926 ascension to the throne of Emperor HIROHITO Japan was hit by the worldwide economic depression. The economic dislocations and discontent led to political violence (two prime ministers were assassinated in the early 1930s), to the rise of radical nationalistic groups and to the reemergence of the military, who felt that Japan should become "master of Asia." Without the knowledge of the country's political leaders, the Japanese armed forces took advantage of the political disarray in China and in 1931 invaded MANCHURIA. In 1932 the military proclaimed Manchuria an "independent" state, renamed MANCHUKUO, and installed a puppet government. The occupation of Manchuria was just the beginning of a protracted conflict between Japan and China, which escalated into another Sino-Japanese War in 1937 and lasted until 1945.

After signing military pacts with GERMANY and ITALY in 1940, Japanese military leaders began to plan an attack on the U.S. Pacific Fleet in order to prevent the United States from interfering with Japanese "liberation" of European colonies in East Asia (French INDOCHINA, British Malaya and BURMA

and the Dutch East Indies). In April 1941 Japan concluded a nonaggression treaty with the Soviet Union to postpone any military encounter with the country. On December 7, 1941, Japanese bombers attacked PEARL HARBOR on Oahu and destroyed or severely damaged most of the U.S. ships and aircraft anchored there. Other U.S. military installations in the Pacific, including two airfields near Manila in the Philippines and bases on GUAM, MIDWAY and WAKE, were successfully attacked the same day. In January 1942 Japan captured the PHILIPPINES, and by the following spring it had conquered a vast area stretching from Malaya eastward to the Pacific islands of Wake and Guam and southward to the Dutch East Indies (present-day INDONESIA). U.S. armed forces soon struck back, and in early May 1942, in the battle of the CORAL SEA off New Guinea, stopped the Japanese expansion. The next three years saw a number of fierce battles (at Midway, GUADALCANAL, LEYTE GULF) and a steady American advance. In January 1945 the Philippines were recaptured. Meanwhile, in May 1945 peace in Europe was concluded, and the U.S. decided to use the newly developed ATOMIC BOMB to force Japan to surrender. Two bombs were dropped in August 1945, on HIROSHIMA and on NAGASAKI, causing the death of about 340,000 people. On August 14, 1945, Japan unconditionally surrendered to the Allied powers.

The U.S. military occupation of Japan, headed by Gen. Douglas MACARTHUR, lasted from 1945 to 1952. It was a period of far-reaching changes in Japanese society, politics and economy. Japan had lost over three million people during the war, and when the hostilities ended it was economically devastated, with most of its industry in shambles. The American occupation administration, working through a capable Japanese bureaucracy, set up a massive rebuilding course for the country. With huge amounts of American aid, and the Japanese tradition of hard work, the economic recovery was fast and impressive. Recovery was also helped by the KOREAN WAR of 1950–52, when Japan became the major base for the U.S., providing airfields, harbors, repair and medical services, ships and other materiel. Politically, the aim of the U.S. occupation was the demilitarization and

democratization of Japan. After military leaders and others were executed for war crimes and acts of cruelty, the power of the military oligarchy was effectively broken.

In 1947 a new constitution was promulgated, renouncing war, abolishing the divinity of the emperor and proclaiming the sovereignty of the people. The Japanese started to transform their country. Relations with the West were codified in a peace treaty in 1951. At the same time Japan concluded a bilateral security treaty with the U.S., which stipulated that U.S. armed forces would retain military bases in Japan and would assist Japan in case of aggression. Japan also normalized relations with its Asian neighbors. In 1965 diplomatic ties with South Korea were established, and in 1972 Japan established full relations with the People's Republic of China. A treaty for economic aid and investment between Japan and China was agreed upon in 1988. When Prime Minister TAKESHITA announced in 1988 that his government would spend U.S. \$5 billion in foreign aid over the next five years (and thus become the world's largest donor of foreign aid), it became clear that Japan intended to play a global economic role, as befits a nation with the second largest GNP in the world.

For a short period in 1947 socialists controlled the government; otherwise, postwar Japan has been governed by conservatives. Two leading conservative parties, the Liberals and the Democrats, merged into a single party in 1955; since that time the LDP has been the predominant political force in Japan. Eisaku SATO, who served as prime minister from 1964 until 1972, was awarded the NOBEL PEACE PRIZE in 1974 for his "reconciliation policy that contributed to a stabilization of conditions in the Pacific area." The first OLYMPIC GAMES to be held in Asia took place in Tokyo in the summer of 1964; six years later the Japan World Exposition was held in Osaka, and in 1972 Sapporo hosted the Winter Olympics. The thousands of visitors to these events were impressed by the highly developed Japanese technology, especially in transportation.

Kakuei TANAKA, Sato's successor, was in office during the first major oil crisis in 1973, which Japan withstood by making its industry more efficient

and less energy-intensive. Politically, Tanaka fared worse. He had to resign in 1974; and in 1976 he was charged with, and later found guilty of, accepting bribes from the Lockheed Corporation. Tanaka was succeeded as prime minister by Takeo Miki, Takeo Fukuda, Masayoshi Ohira, Zenko Suzuki and in 1982 by Yasuhiro NAKASONE—who differed from the previous prime ministers by his forceful, almost flamboyant style, and his great international visibility. He visited the U.S., Australia, Southeast Asia and Europe, promoting political and economic ties. Domestically, he concentrated on restructuring government-run enterprises; on fiscal reform, aimed at eliminating the deficit; and on liberalization of the educational system. In 1987, Nakasone stepped down (after an unsuccessful bid for another term), and Noboru Takeshita became the new prime minister. Takeshita's political victory was overshadowed by a scandal involving many highly placed politicians and business executives who bought shares in a real estate company before they were publicly traded and thus made huge profits. The scandal eventually led to Takeshita's resignation. He was succeeded briefly by Sosuke Uno, who was himself forced to resign by another scandal.

Emperor Hirohito died in January 1989 and was succeeded by Crown Prince AKIHITO. In the 1993 national elections the LDP was forced from power by an eight-party coalition. The coalition collapsed the following year and was replaced by a government of LDP and Socialist politicians. Throughout the remainder of the 1990s and into the 21st century Japan was plagued by a persistent economic slowdown that showed signs of recovery only in 2006. In the early years of the 21st century, tensions between Japan and Asian victims of its aggression during World War II (such as China and South Korea) escalated, as Japanese government officials insisted on visiting shrines to convicted war criminals and refused to alter school textbooks that downplayed Japan's wartime atrocities.

Japanese-Americans, internment of Forced detention of Americans of Japanese ancestry and resident aliens at the beginning of WORLD WAR II. After the Japanese attack on PEARL HARBOR

Japanese Americans in an internment camp in Turlock, Calif., 1942 (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

(December 7, 1941), a wave of anti-Japanese sentiment swept the U.S. Lt. Gen. John L. DeWitt, security chief for the western U.S., alleged that Japanese Americans posed a security threat. Convinced congressmen urged internment on President Franklin D. ROOSEVELT, who signed an executive order early in 1942 authorizing army relocation and detention of anyone considered dangerous. DeWitt established a military area in western Washington, Oregon and California and decreed that all people of Japanese origin be removed from it. With only a few days notice, some 120,000 Japanese Americans were forced to sell what they owned and were removed to guarded barbed-wire-rimmed barracks in desolate parts of the West, where they were kept for two to three years. While most Americans were ignorant of this legal scandal, news of the internment gradually reached the public. In 1976 President FORD proclaimed that the detention had been wrong, and in 1988 a bill was passed that called for government apology and for the payment of \$20,000 apiece to all survivors.

Jaray, Paul (1889–1974) Swiss engineer who pioneered in the development of automobile design using streamlined forms. As an engineer for the ZEPPELIN works, Jaray designed dirigible airships. In 1922 he patented an automobile design of streamlined form based on aerodynamics. Although he never designed a production car, his ideas have had a major influence on all modern automotive design.

Jarrell, Randall (1914–1965) American critic and poet. Born in Nashville Tenn., and educated at Vanderbilt University, Jarrell was known as a vitriolic and even cruel critic. His friend Robert LOWELL said he was “almost brutally serious about literature.” He taught at many colleges and universities and contributed to prestigious literary journals. In 1961 *The Woman at the Washington Zoo* won a National Book Award for poetry. He was a master of the modern plain style, where poetry resembles a colloquial mode of speech. One of his favorite themes was war: His most famous poem is a five-line lyric, “The Death of the Ball Turret Gunner.” His best-known critical work is *Poetry and the Age* (1953).

Jarry, Alfred (1873–1907) French playwright, novelist and poet. Although not a prolific writer, Jarry has exercised as great an influence on 20th-century theater as any playwright. Jarry's plays are the founding blocks of the THEATER OF THE ABSURD, and his overall oeuvre served to inspire both DADA and SURREALISM. Jarry, who began his literary career as a symbolist and an aspiring dandy, shocked Parisian theatrical circles with his raw absurdist play, *Ubu Roi*, which featured an obscenity-spouting monarch whose unending appetites and cynical lack of values made a mockery of all societal values. Riots broke out in the theater on the night of the first performance. Jarry's other works include a volume of poems *Days and Nights* (1897), the novel *The Supermale* (1902) and two further *Ubu* plays. Jarry coined the term **pataphysique**—loosely translated as the study of absurdity—which is still widely used in France.

Jaruzelski, Wojciech (1923–) Polish general and communist prime minister (1981–89) and president (1989–90) of POLAND. Jaruzelski took

office to restore order following the unrest (1980–81) that had arisen in fear of Soviet intervention. As prime minister, he initially made further concessions to the independent trade union *SOLIDARITY*. However, having also become leader of the Polish Communist Party, he proclaimed martial law in December 1981 and arrested Solidarity leaders, including union leader Lech WAŁĘSA. Some relaxation occurred the following year, but tension between the government and Solidarity led to sporadic outbursts of unrest throughout the 1980s. In 1989 Jaruzelski agreed to the relegalization of Solidarity and far-reaching constitutional reforms, including free elections. He became president under the new government system (1989) but resigned at the end of 1990 after Walesa was elected president. In 1993 Jaruzelski was charged with criminal conduct in the 1970 deaths of demonstrating workers, but the trial was delayed because of technicalities. In 2005 Jaruzelski apologized for the participation of Polish troops in the Soviet-led invasion of Czechoslovakia in 1968.

Järvi, Neeme (1937–) Estonian conductor. Järvi was born in Tallinn, Estonia, and continued his music studies at the Leningrad State Conservatory, where he made his conducting debut at the age of 18. His first major appointment was Director of the Estonian Radio and Television Orchestra and the Tallinn Opera. A first prize at an international conducting competition in Rome in 1971 led to invitations to work with major orchestras throughout the world. He left the USSR in 1980 and became a resident in America where he made his Metropolitan Opera debut with *Eugene Onegin* in the 1978–79 season. His subsequent principal appointments include principal conductor of the Gothenburg Symphony Orchestra and musical director of the Scottish National Orchestra. A prolific performer and recording artist, Järvi has won special praise for his interpretations of composers once associated with his Gothenburg Symphony Orchestra, notably Jean SIBELIUS. A long-cherished project of great importance has been his recording of the complete orchestral works of fellow Estonian Edward Tubin. From 1989 to 2003 Järvi served as music director of the Detroit Symphony Orchestra. In 2003 he ac-

cepted the same position with the New Jersey Symphony Orchestra.

Jarvik heart Artificial heart designed by the American physician Robert K. Jarvik. The first heart replacement intended for permanent implantation into a patient, the air-powered system is fitted with a disk-shaped pump, a power system, two ventricles and a system of air tubes. The Jarvik-7 was first used in a human recipient in 1982, when it was implanted in Barney Clark, who survived 112 days. Subsequent recipients had the heart implanted as a temporary or permanent measure, but there were a number of serious problems with blood clots and stroke.

Jarvis, Gregory (1941–1986) American astronaut, one of seven killed in the explosion of the space shuttle *Challenger* (January 28, 1986). He was an engineer with the Hughes Aircraft Co.

Jaspers, Karl Theodor (1883–1969) German philosopher, psychiatrist and essayist. Jaspers was one of the leading influences upon the emerging philosophical school of *EXISTENTIALISM*. He began his career as a practicing psychiatrist at the University of Heidelberg hospital and produced a medical work, *General Psychopathology* (1913). But shortly thereafter Jaspers turned his primary attention to philosophy, which he believed represented man's unending search for ultimate reality. He emphasized the vital importance of individual freedom as opposed to socially conditioned values and behaviors. Forced into academic retirement by the Nazis, Jaspers continued his teaching career after World War II at the University of Basel in Switzerland. He forthrightly acknowledged a national German guilt for Nazi crimes and urged that serious attention be paid to the horrible lessons of recent history. Major works by Jaspers include the three-volume *Philosophy* (1932), *Reason and Existence* (1938) and *The Origin and Goal of History* (1949).

Jaurès, Jean (1859–1914) French socialist writer, orator and political leader. Born of middle-class parents in Castres, he studied at Toulouse University, where he subsequently taught philosophy. He served in the Chamber of

Deputies (1885–89, 1893–98 and 1902–14) and became a socialist; he was a leading supporter of Alfred Dreyfus. A noted writer and orator, he was founder (1904) and editor of the influential left-wing daily *L'Humanité*. In 1905, Jaurès was successful in uniting the various factions of the socialist movement into a unified French Socialist Party. His was an idealistic socialism; he advocated economic equality through peaceful revolution and the separation of church and state while denouncing nationalism and *ANTI-SEMITISM*. A noted historian, he is remembered for his *Histoire socialiste de la Révolution française* (1901–07). As World War I approached, Jaurès favored arbitration as an alternative to armed conflict. He was assassinated by a nationalist fanatic in 1914.

Java [Djawa] Island in the Greater Sunda Islands group of Indonesia, southeast of Sumatra and south of Borneo. Two-thirds of *INDONESIA*'s population lives on Java, although it is only the fifth-largest of the archipelago-nation's islands. The population includes Javanese, Sudanese, Madurese, Chinese and Arabs; people from India were the first colonizers and the Japanese were the last, occupying Java during *WORLD WAR II*. The Dutch tried to restore their rule after the war ended but had to fight Indonesian forces intent on winning independence, which they did by 1949. Jakarta is the nation's capital and largest city; Surabaya (Indonesia's major naval base) and Bandung (site of the *BANDUNG CONFERENCE*), both on Java, are the second- and third-largest cities.

Java Sea Arm of the western Pacific Ocean, between the islands of Java and Borneo. An important naval battle was fought here between Japanese and Allied forces on February 27, 1942, early in *WORLD WAR II*. The Allies were defeated and *JAVA* was laid open to Japanese attack.

Javits, Jacob Koppel (1904–1986) American politician. The son of Jewish immigrants, Javits became a leader of the liberal wing of the *REPUBLICAN PARTY*. A U.S. senator representing New York from 1957 to 1981, he played a part in the 1973 War Powers Act, the creation of the National Endowment for the Humanities, and the 1974 Pension Reform

Act. His age and ill health cost him his first and only electoral defeat in a 1980 primary contest.

Jaworski, Leon (1905–1982) American attorney. A graduate of Baylor University and the George Washington University and the George Washington University School of Law, Jaworski made his reputation as a lawyer in Houston. Among his clients was then-congressman Lyndon B. JOHNSON. Jaworski also served as a prosecutor at the NUREMBERG WAR CRIMES TRIALS after World War II, and as president of the American Bar Association. Jaworski may be best remembered for his role as the special prosecutor during the investigation of the WATERGATE scandal that eventually forced the resignation of President Richard M. NIXON. Jaworski was appointed to the post after Nixon ordered the previous prosecutor, Archibald COX, fired in the infamous Saturday Night Massacre. Jaworski's investigation revealed wrong-doing at the highest levels and forced the resignation of both the U.S. attorney general John MITCHELL and also President Nixon himself.

Jayewardene, Junius Richard (1906–1996) Jayewardene was elected the first president of SRI LANKA in 1978 and reelected in 1982. He led the country through the most difficult period of its postindependence, pursuing a carrot-and-stick policy toward Tamil moderates and militants until 1987. Under his rule military forces committed brutal atrocities against Tamil civilians. In 1987, in a remarkable change of policy, he signed an agreement with Indian prime minister Rajiv GANDHI, in which the Tamils were allowed a degree of regional autonomy and India effectively committed itself to maintain the unity of Sri Lanka. Jayewardene declined to seek a third term in 1988.

Al-Jazeera Arabic television news station. Meaning “the Island” of “the Peninsula” (referring to the Arabian Peninsula), it began its operations toward the end of 1996, broadcasting out of Qatar, largely because the BBC World Service closed its two-year-old Arabic TV station rather than continue to operate under the stringent censorship guidelines of Saudi Arabia. Stepping in to fill the void left by the BBC

(and hiring many of the former BBC employees), al-Jazeera premiered and heralded itself as the Middle East's only independent source of news. However, its repeated insistence of editorial objectivity has been somewhat impeded by the network being owned by the government of Qatar.

It came to prominence as a result of the terrorist attacks committed against the U.S. on SEPTEMBER 11, 2001. Not long after the attacks on New York and Washington, D.C., al-Jazeera broadcast video footage of Osama BIN LADEN and Sulaiman Abu Ghaith offering justification for the use of three airplanes to destroy the WORLD TRADE CENTER and to damage the Pentagon. Soon after this footage aired, the U.S. government developed a generally hostile stance toward the network, alleging that it served as a propaganda organ for bin Laden, Iraqi dictator Saddam HUSSEIN and the leadership of the TALIBAN, for whom Al Jazeera has aired statements between 2001 and 2003. Also, al-Jazeera repeatedly aired graphic videos of casualties in the U.S.-led assault in Afghanistan (2001), and in Operation Iraqi Freedom (2003), during which they displayed footage of five captured American soldiers. During Operation Iraqi Freedom, U.S. units shelled and incapacitated an al-Jazeera news outlet in Baghdad, prompting criticism from the network of the U.S. pledge to limit civilian casualties and collateral damage during the war. However, there were efforts to bridge the gap between the Western government and the Arabic news agency. For instance, the U.S. offered to “embed” a reporter from al-Jazeera with one of its units during the fighting, thereby giving the station access to front-line footage along with CNN, NBC, ABC, CBS, and Fox News. Also, during Operation Iraqi Freedom, CENTCOM always had a journalist from al-Jazeera included in its briefings, and made certain to afford him a prayer room for the five times Muslims are required to pray each day. Al-Jazeera has also received criticism from some of its Arab and Muslim constituents for its willingness to air statements and interviews with Israeli statesmen, which was seen as giving legitimacy to the Israeli cause.

jazz Jazz is generally thought to have developed from a fusion of elements

present in the 19th-century musical heritage of southern culture, specifically along the Mississippi River. A blend of European, Creole and traditional African rhythms, jazz drew upon the black field work songs, and spiritual and special funeral music. Other influences were the BLUES and RAGTIME. The first jazz records were made in 1917. Concerts given in New York City in 1917 by the ORIGINAL DIXIELAND JAZZ BAND led to the first official, critical acknowledgment of jazz. This group also played in London, England, in 1919. Another famous jazz group was King OLIVER's Creole Band. Among the finest musicians who played with Joseph “King” OLIVER were saxophonist Sidney Bechet, and perhaps the greatest jazz soloist, cornetist Louis ARMSTRONG. From New Orleans, jazz spread to other cities like Memphis, St. Louis, Kansas City, Chicago, New York and to the West Coast. A number of styles emerged, often associated with a particular city or area. By the early 1930s, jazz had ceased to be strictly a southern phenomenon and had become a long-established national and international tradition.

Jazz Age Name commonly given to the 1920s, particularly in the U.S. and Britain. The jazz age generally coincides with PROHIBITION, the laissez-faire policies of Presidents HARDING and COOLIDGE, post-World War I prosperity and a hedonistic outlook on life prevalent among the leisured classes. The Jazz Age was largely a reaction to the cares engendered by the war and to the refined seriousness of the prewar era. For the wealthy, this period was marked by lavish parties and social events, fast cars and lighthearted liaisons—in short, a carefree attitude. The bouncy rhythms and flippant lyrics of contemporary jazz songs gave the era its name. The American novelist F. Scott FITZGERALD is regarded as the supreme chronicler of the Jazz Age; his novel *THE GREAT GATSBY* captures the high spirits and ultimate wastefulness of the age. The Jazz Age effectively ended with the STOCK MARKET CRASH OF 1929, which in turn brought on the GREAT DEPRESSION of the 1930s.

Jebel ed Druz (Jebel Druze; Djebel-Druze) Area in southwestern SYRIA, bordering on Jordan; formerly a subdivision of Syria. Its capital of Es Suweida

lies on the site of an ancient Roman town, about 50 miles south of Damascus. A region of plateaus and mountains, Jebel ed Druz is inhabited by the Druse Muslims, who also dwell in Israel, Lebanon and Jordan. Druse beliefs differ radically from those of both the Sunni and Shi'ite branches of Islam. The Druse resisted France after the French were given a LEAGUE OF NATIONS mandate over Syria and LEBANON in 1920. Between 1925 and 1927, with the aid of Syrian nationalists, the Druse led a revolt against the French and captured Damascus. In 1944, with Syria about to obtain its independence from France, the Druse in Jebel ed Druz agreed to give up their autonomous rights. Since the late 1970s they have attempted to maintain their independence amid conflicts among Lebanese, Syrian and Israeli forces.

Jeffers, (John) Robinson (1887–1962) American poet. Son of a Presbyterian minister and scholar of biblical literature, Jeffers was born in Pittsburgh and educated at several colleges in the U.S. and at the University of Zurich. He did graduate work in forestry and medicine. After 1924, he built a stone house and tower near Carmel, California, where he lived in seclusion with his family. He termed his pessimistic philosophy “Inhumanism”; it called for a “recognition of the transhuman magnificence” and detachment from human concerns. After two minor volumes he made his name with *Tamar and Other Poems* (1924); the title poem is a long narrative of passion and incest based on an Old Testament story. *The Women at Point Sur* (1927), *Cawdor and Other Poems* (1928) and *Thurso's Landing and Other Poems* (1932). *Hungerfield and Other Poems* won a PULITZER PRIZE in 1954. His reputation has been controversial, in part due to his wartime isolationist stance. Many readers find his philosophy repugnant; others see him as an American prophet.

Jefferson Airplane American ROCK band. Jefferson Airplane was the most commercially successful of the so-called psychedelic bands to emerge from the psychedelic rock scene that centered in SAN FRANCISCO in the late 1960s. The original members of the band, which released its first album *Jefferson Airplane Takes Off* in 1966, were

vocalist Signe Anderson, vocalist and guitarist Marty Balin, bassist Jack Casady, drummer Spencer Dryden and guitarists Paul Kantner and Jorma Kaukonen. Shortly after that album was released, vocalist Grace Slick replaced Anderson. The group's next album, *Surrealistic Pillow* (1967), reached number three on the Billboard pop album chart and featured two hit songs, “Somebody to Love” and “White Rabbit.” Subsequent albums included *Crown of Creation* (1968) and *Volunteers* (1969). In the 1970s the group's name was changed to **Jefferson Starship** and issued an album that reached number one on the Billboard pop chart, *Red Octopus* (1975). With numerous personnel changes, Jefferson Starship issued recordings through the 1980s and 1990s and through 2000, including *Deeper Space/Extra Virgin Sky* (1995), *Windows of Heaven* (1999) and *Across the Sea of Suns* (2001).

Jeffries, James J. (1875–1953) American prizefighter. Born in Carroll, Ohio, Jeffries began boxing in 1896. A powerful defensive fighter, he won the heavyweight championship in 1899 and defended his title six times before retiring undefeated in 1905. Touted by fight promoters as “the Great White Hope,” he came out of retirement in 1910 to fight the black Jack JOHNSON; Johnson knocked Jeffries out in the 15th round of their championship bout at Reno, Nevada.

Jelgava (Yelgava; Mitau (German); Mitava (Russian)) City on the Lielupe River in southern Latvia. Occupied by German forces during WORLD WAR I, in October 1919 it was a headquarters for BOLSHEVIK troops until they were driven out by a Latvian and Lithuanian army. A part of independent LATVIA between 1920 and 1940, it was taken by the Soviet Union in 1940, reoccupied by Germany from 1941 to 1944 and reoccupied by counterattacking Russian forces in 1944.

Jellicoe, John Rushworth (first earl (1925)) (1859–1935) British admiral. A career naval officer, he entered the Royal Navy in 1872, was made a captain in 1897, vice admiral in 1910 and full admiral in 1915. In WORLD WAR I, he served as com-

mander in chief of the Grand Fleet (1914–16), winning a Pyrrhic victory at the battle of JUTLAND. He was first sea lord (1916–17) and naval chief of staff at war's end. Jellicoe was governor general of New Zealand from 1920 to 1924.

Jenkins, Herbert (1907–1990) U.S. police chief. He held the post of police chief at Atlanta from 1947 to 1973. His policy of accommodating CIVIL RIGHTS leaders in the 1960s helped Atlanta's image as a Southern city that cooperated in the civil rights movement. He maintained order during sit-ins at lunch counters and gave police protection to “freedom riders.” In 1967, he was the only southerner appointed by President Lyndon B. JOHNSON to the National Advisory Commission on Civil Disorders. In 1968 he also provided a police escort for a KU KLUX KLAN march through one of the city's black sections, preventing conflict.

Jenkins, Roy Harris (1920–2003) British politician. Born in Wales, Jenkins was the son of a miner who became a union organizer and later an M.P. After leaving Oxford Jenkins served as an army captain in WORLD WAR II. He was elected to parliament in 1948. Jenkins was on the executive committee of the FABIAN SOCIETY from 1949 to 1961. A leading figure in the British LABOUR PARTY, he served as minister of aviation (1964–65), home secretary (1966–67, 1974–76) and chancellor of the exchequer (1967–70). Jenkins left Parliament in 1976 to serve as president of the EUROPEAN ECONOMIC COMMUNITY until 1980. In 1981 along with Shirley WILLIAMS, David OWEN and William RODGERS, he co-founded the SOCIAL DEMOCRATIC PARTY and served as its first leader until 1983. In a 1982 by-election, Jenkins was reelected to the House of Commons. He was elevated to the House of Lords in 1987. Jenkins was the author of biographies of Clement ATTLEE, Herbert ASQUITH and Charles Dilke. In 1997 Jenkins was appointed to head a commission to recommend reforms of the British electoral system.

Jensen, Alfred Júlio (1903–1981) Guatemalan-born abstract painter who developed a highly distinctive style in his lushly colored, intricate-patterned

canvases. Jensen was first associated with the abstract expressionists, then with the American avant-garde movement and the so-called New York School. He began exhibiting in New York in 1952, and his paintings were displayed in major museums throughout the world.

Jensen, Georg Arthur (1866–1935)

Best known of all Danish craft designers for his high-quality modern jewelry and silverware. Jensen was trained as a goldsmith and also studied sculpture at the Copenhagen Academy. Beginning in 1895 he worked in ceramics with Joachim Petersen. Some of his work was exhibited at the Paris Exhibition of 1900. In 1904 he opened a small shop in Copenhagen, offering jewelry and silver of his own design. As the business grew, it produced and sold designs of other Danish designers and craftsmen, eventually distributing a wide variety of Scandinavian products of high design quality, which combine the aesthetics of MODERNISM with traces of Nordic traditionalism. The firm is now international, with the New York shop well known as a primary showcase for Danish design.

Jensen, Johannes (1873–1950)

Danish novelist. To support himself as a medical student at the University of Copenhagen, Jensen wrote a series of detective novels under the name Ivar Lykke. He also began work on his first serious novel, *Danskere* (Danes, 1896). With the publication of *Einar Elkoer* (1897), Jensen abandoned his medical studies. He first attracted critical acclaim with *Himmerlandsfolk* (Himmerland people, 1898), a collection of stories situated in his native Jutland, which he followed with several similar volumes. Jensen's best known work is the trilogy *Konages Fald* (*The Fall of the King*, 1901), which presents the life of Danish king Christian II, combining myth and realism. Between 1908 and 1922 Jensen published the six-volume *Den lange rejse* (*The Long Journey*, 1922–24), a fictional expression of his evolutionary theories, which begins in prehistoric Jutland, and ends with Columbus discovering the New World. Jensen then produced the 11-volume *Myter* (Myths) published between 1907 and 1944. Jensen was awarded the NOBEL PRIZE in literature in 1944. His other works include *Digte*

(Poems, 1906) and *Andens Stadier* (The stages of the mind, 1928).

Jeritza, Maria (1887–1982)

Czech-Austrian opera singer. A dramatic soprano, Jeritza made her debut as Elsa in Wagner's *Lohengrin* in 1910 and went on to huge successes in major roles at the Vienna Opera and New York's Metropolitan Opera over the next 25 years. She was a favorite soprano of both Richard STRAUSS and Giacomo PUCCINI. Strauss wrote the roles of Ariadne in his *Ariadne auf Naxos* and the Empress in *Die Frau ohne Schatten* for her. Her performances in the title roles of Puccini's *Tosca* and *Turandot* were considered definitive. Known for her brilliant voice, dramatic stage presence, and glamorous star quality, Jeritza was not only one of the greatest singers of her day but also an international celebrity.

Jersey

Largest and most southerly of the CHANNEL ISLANDS. In the English Channel, 15 miles from the coast of France's Normandy, Jersey was occupied by the Germans during WORLD WAR II, from 1941 to 1945; a part of the U.K. since the Norman Conquest, some 10,000 of its inhabitants had been evacuated to Britain. French is the official language of Jersey.

Jerusalem

Ancient city, sacred to three religions and capital of ISRAEL; 35 miles inland from the coast of the Mediterranean Sea and 13 miles west of the Dead Sea. The city is venerated by JEWS, Christians and Muslims. Inspired by the Zionist movement in the late 19th century, Jews began to settle once more in and around Jerusalem, until by 1900 they were the largest group in the city (see ZIONISM). During WORLD WAR I the city was captured by the British (Dec. 1917) from the Ottoman Turks, longtime rulers of PALESTINE. From 1922 until 1948 the city was under British rule as part of a LEAGUE OF NATIONS mandate. Exasperated by continuous Jewish-Arab conflict, Britain handed over its mandate to the UNITED NATIONS in 1947; the UN planned to partition Palestine between Jewish and Arab states and guarantee Jerusalem as a neutral city. On the expiration of the mandate in 1948, the Jews (emboldened by the informal BALFOUR DECLARATION of

1917, which pledged British support for a new Jewish state) and the Arabs went to war. JORDAN seized Jerusalem's old city, and the Israelis the new city, which they declared the capital of their new state of Israel. During the SIX-DAY WAR (1967) the old city was captured by Israel and integrated with the new, or Israeli, sector. Jerusalem as a whole was formally made the capital of Israel in 1980; although international recognition of that status has not been accorded.

Jessner, Leopold (1878–1945)

German theatrical director and producer. Jessner was one of the leading forces in German theater in the 1910s and 1920s, serving as a producer at prominent state theaters in Hamburg, Königsberg, and Berlin. In particular, he fostered the rise of EXPRESSIONISM in German drama, championing the works of playwright Frank Wedekind, among others. Jessner also won renown for his adaptations of classic theatrical works by Shakespeare and Lessing. A Jew, Jessner fled Nazi Germany in 1933, going first to Palestine and then to the U.S.

jet engine

The jet engine is similar to the rocket engine, but takes oxygen from the atmosphere to burn its fuel, whereas the rocket engine carries its own oxygen. Jet engines generate greater thrust than piston-driven propellers; thus, jet planes can fly significantly faster. British engineer Frank Whittle patented the turbo-jet engine in 1930 and subsequently tested a successful jet engine on the ground. The first British jet aircraft, powered by Whittle's engine, flew in May 1941. German aviation engineer Ernst Heinkel developed a twin-engine jet fighter that flew in small numbers near the end of World War II. After the war, the British and Americans developed passenger jet aircraft. The late 1950s saw the dawning of the "jet age" with the introduction of long-distance passenger jets.

Jet Propulsion Laboratory (JPL)

NASA research laboratory in Pasadena, California. It was transferred from U.S. Army jurisdiction to NASA in 1958 and operated in conjunction with the California Institute of Technology. JPL managed the unmanned RANGER and SURVEYOR missions to the moon, as well as many later planetary missions, such

as PIONEER missions to Jupiter and Saturn and VOYAGER missions to Jupiter, Saturn, Uranus and Neptune. The laboratory's staff has continued to play vital roles in U.S. space missions such as the *Cassini* space probe sent in 2002 to examine Saturn and its moons, and the Mars *Global Surveyor* mission that in 2003 began to probe the planet's surface for indications that Mars once had water on its surface.

Jews Jews are descendants of the Hebrews, a term including many Semitic, nomadic tribes of biblical times. Jews are not a separate race, but rather members of a religious or ethnic community drawn together by centuries of persecution and a minority status wherever they settled. Most Jews can trace their ancestry to either the Ashkenazim, which includes the Jews of central and eastern Europe, or the Sephardim, who were expelled from Spain and Portugal at the end of the 15th century. Currently, there is also an informal distinction between people of Jewish ancestry who associate themselves with the political aims and culture of the Jews but are not religious, and those who strictly uphold the practice of Judaism. Of the approximately 18 million Jewish people in the world, some 6 million live in the United States, about 3 million in ISRAEL and about 3 million in the former Soviet Union. Other countries with significant Jewish populations include Argentina, Canada France and the United Kingdom.

A renewed wave of anti-Semitism swept Europe toward the end of the 19th century. In Germany and Austria-Hungary, many sought to prove the inferiority of the Jews to the Aryans. In Russia, where Jews already had a diminished legal status, many were massacred during the POGROMS. Some 2 million Jews immigrated to the United States where they found their rights legally protected, although they still faced discrimination. In France, the Dreyfus affair brought increased hostility toward the Jews. Theodor HERZL, a Jewish lawyer who reported on the Dreyfus case, was moved to form the World Zionist Organization and propose a separate Jewish homeland. In the early 1900s, Zionists began establishing colonies in PALESTINE. During WORLD WAR I,

Great Britain seized Palestine from Turkey, then in 1917 issued the BALFOUR DECLARATION, which gave British endorsement to the formation of a Jewish state in Palestine. The LEAGUE OF NATIONS approved the declaration, and Palestine was made a mandated territory of Great Britain in 1920. In the face of much Arab opposition, many Jews immigrated to Palestine in the 1920s and '30s.

In 1933 Adolf HITLER came to power in GERMANY. His Nazi Party began disseminating vicious propaganda blaming the Jews for Germany's economic woes and proclaiming the superiority of the Aryan people. In 1935, German Jews were deprived of their citizenship. Many fled Germany, but many others, their property seized by the Nazis, were sent to CONCENTRATION CAMPS. Some, like Anne FRANK and her family, went into hiding. In 1941, Hitler proposed the FINAL SOLUTION, a systematic plan to exterminate all European Jews. Nazi firing squads murdered thousands of Jews, and concentration camps were outfitted with gas chambers for the mass annihilation of Jews. Approximately 6 million European Jews were killed during the HOLOCAUST in Nazi Germany.

Following WORLD WAR II, the decimated Jewish population renewed its efforts to form a state in Palestine but met continual opposition from the Arabs. In 1947 Britain urged the UNITED NATIONS to intervene. The UN proposed that Palestine be divided into an Arab state and a Jewish one, ISRAEL, which became independent the following year. Arab hostilities did not subside, however, and Israel was at war with its Arab neighbors in 1948, 1956, 1967 and 1973.

In the Soviet Union, Jewish culture and the practice of Judaism continued to be suppressed and the emigration of Jews restricted. Following years of protest, emigration laws began to ease in the early 1970s, and with the advent of PERESTROIKA, Jews regained many rights of expression and movement. American Jews—in the 20th century, the most secure and successful—are concerned about the loss of their tradition and heritage as they become increasingly assimilated into American culture. Many maintain strong ties to Israel, which they consider their spiritual homeland. Jews continue to experience

anti-Semitism and fear such extremist organizations as the KU KLUX KLAN and Neo-Nazis in the U.S. and elsewhere.

Jhabvala, Ruth Prawer (1927–) British novelist and screenwriter. With her first novel, *To Whom She Will* (1955, published in the U.S. as *Amrita*, 1965), Jhabvala established her reputation as a perceptive chronicler of contemporary India, which she has maintained with a steady output of acclaimed fiction including, the novels *A New Dominion* (1972, published in the U.S. as *Travelers*, 1973), *Heat and Dust* (1975, filmed 1983), *Three Continents* (1987), and the short stories, *An Experience of India* (1971) and *How I Became a Holy Mother and Other Stories* (1976). In 1966 she became associated with the filmmaking team of director James Ivory and producer Ismail Merchant. She has adapted many of her novels for the screen and co-authored screenplays with Ivory. These include *Shakespeare Wallah* (1966) and *The Europeans* (1979), based on the novel by Henry JAMES. In 1992 Jhabvala won another Academy Award for best adapted screenplay for *Howards End* (1991).

Jiang Qing (Chiang Ch'ing) (1914–1991) Chinese political leader and wife of MAO ZEDONG. Born in Shandong province. Jiang Qing became an actress, touring China and settling in Shanghai. In 1933 she joined the Communist Party, meeting Mao in Yanan and marrying him. She stayed removed from politics until the 1960s, when she became an enormous force in the CULTURAL REVOLUTION, wielding great power over all aspects of Chinese culture and propaganda. In 1969 she was appointed to the Politburo. After Mao's death in 1976, Jiang and three colleagues, known as the GANG OF FOUR, were arrested and tried for crimes against the state. Convicted in 1981, she was sentenced to death, but she remained imprisoned after several reprieves.

Jiang Zemin (1926–) Chinese political figure, general secretary of the Chinese Communist Party (1989–2002) and president of CHINA (1993–2003). Born in Yangzhou, a city in eastern China, Jiang's association with the Chinese Communist Party (CCP) began soon after his uncle died fighting for the

CCP against the military forces of Japan in the SINO-JAPANESE WAR (1937–45). When news of his uncle's death reached Jiang's father, it was decided that Jiang would be adopted by his uncle's family: his uncle had no male heirs, and as it was considered a great misfortune to depart from life without leaving behind a son to carry on the family name and heritage. When the CCP defeated the Nationalist forces in 1949 to win the CHINESE CIVIL WAR OF 1946–49, Jiang became known to many as the adopted son of a Communist martyr who had died for the party in one of its darkest hours.

In 1946, when hostilities between the Communists and Nationalists broke out, Jiang joined the CCP. After graduating from Shanghai's Jiaotong University in 1947 with a degree in electrical engineering, he worked as an engineer for a local factory, and was promoted to factory manager.

After 24 years in the heavy-industry sector of China's centralized economy, Jiang's responsibilities shifted to managing the country's export-oriented enterprises created under the reformist leadership of DENG XIAOPING. In 1982 Jiang was designated vice minister of China's burgeoning electronics industry and appointed to the CCP's Central Committee. Three years later he was named mayor of Shanghai, one of the cities in the Special Economic Zones that was booming as a result of the massive influx of foreign capital and orders for Chinese products.

Following the governments' crack-down on the pro-democracy protesters in TIANANMEN SQUARE (June 3–4, 1989), Deng chose Jiang as the new general secretary of the CCP to replace ZHAO ZIYANG, who had opposed the repressive response to the unrest. In the same year Deng also named Jiang his successor as chairman of the Central Military Commission, the party organ that controlled the military. After Deng's retirement in 1993, Jiang was chosen by the Politburo as his successor.

At the 15th CCP Congress in 1997, Jiang began to unveil a new vision of China's economic future from that diverged from that of Mao and Deng (who had died earlier in the year.) While remaining committed to Deng's vision of adapting socialist principles to the Chinese way of life, he also announced that he would begin selling

off state-run companies to private individuals and corporations. This new policy led to the creation of a mixed economy that combined elements of free-market capitalism with a highly centralized state.

Jiang's foreign policy focused on economic concerns. He worked tirelessly for China's admission into the WORLD TRADE ORGANIZATION (WTO) and to ensure that the recently acquired former British colony of HONG KONG continued to enjoy its economic prosperity as a Special Administrative Zone. He cultivated a friendly relationship with the U.S., despite continuing American criticism of China's treatment of political prisoners, the persecution of groups such as the FALUN GONG and the government's coercive "one child" birth policy. Jiang proved less conciliatory on the issue of TAIWAN, authorizing a large naval exercise near the island and strongly condemning any talk of independence for China's "wayward province." In November 2003 Jiang selected vice president Hu Jintao to replace him as Communist Party general secretary and president of China.

Jigme Singye Wangchuk (1955–) King of BHUTAN. As a 17-year-old, he ascended the throne when his father died in 1972. He followed his father's policy of working with the National Assembly and moved to increase popular participation in economic planning. In 2005 King Wangchuck announced his decision to abdicate the throne in 2008.

jihad Arabic word meaning a "spiritual struggle" constantly required of all Muslims. Generally, there are four ways in which individual Muslims may fulfill this duty: through their hearts by battling against vices and evil passions, through their tongues by acting as apostles of Islam throughout the world, through their hands by propagating good works and deeds throughout their daily lives and through the sword by waging war against non-Muslims.

It is the last of these four categories of jihad that has had international repercussions, generating controversy between the Muslim and non-Muslim world as well as within the Muslim world. It is the interpretation of Islamic law that has caused the greatest con-

cern in non-Muslim states. According to one interpretation of the Koran and Islamic law, Muslims are required to fight in jihads of the sword until all nations surrender to Islamic rule and are promised lavish rewards in heaven if they die in that struggle. It is in the context of this radical interpretation that some fundamentalist Muslim groups, such as AL-QAEDA, HAMAS and Islamic Jihad, have attempted to justify their attacks on the citizens of "infidel" countries such as the U.S., ISRAEL and on those who do not strictly follow the Koran. It is interesting to note that Islamic law requires the forced conversion or execution only of *kafir*, a term denoting practitioners of religions with no spiritual connection to Islam, such as Buddhists and Hindus. Jews and Christians, by contrast, qualify as "people of the book"—individuals not subject to execution if they refuse to convert to Islam provided that they acknowledge their subservience to an Islamic government. Moderate Muslim clergymen and practitioners emphasize their devotion to the three peaceful forms of jihad (the heart, tongue and hand), and denounce most of the actions undertaken by terrorist groups in the name of jihad as barbaric and against the teachings of Islam.

Jiménez, Juan Ramón (1881–1958) Spanish poet. Jiménez published his first poetry in *Vida nueva* (New Life) in 1899, where it attracted the attention of Rubén DARÍO, among other notable Spanish-language writers, after which he devoted himself to writing poetry and later helped found the literary journals, *Helios* (Helium) and *Renacimiento* (Renaissance). His first volumes of poetry, such as *Almas de violeta* (Violet souls, 1900) and *Ninfeas* (Water lilies, 1900), now dated in their sentimentality, were still unique in their form and lyrical sensuality. He continually evolved in his style and scope. *Dario de un poeta recién casado* (Dairy of a newlywed poet, 1917) is a hallmark in the use of free verse in Spanish poetry. Jiménez served as a cultural attaché in the U.S. at the outbreak of the SPANISH CIVIL WAR; following FRANCO's rise to power in 1939, Jiménez decided to remain abroad, finally settling in Puerto Rico. He was awarded the NOBEL PRIZE in literature in 1956. Other works include *Animals*

de fondo (Animal of depth, 1949) and *Tercera antologia poética* (Third poetic anthology, 1957).

Jinnah, Muhammad Ali (1876–1948) Founder of PAKISTAN. Born in Karachi, Jinnah studied law in England and was admitted to the bar there. Returning to India, he practiced law and entered politics as part of the Indian National Congress Party in 1906. Opposing Hindu dominance of the party and disapproving of the tactics of Mohandas GANDHI, Jinnah joined the Muslim League in 1913, becoming its president in 1916 and finally breaking with the CONGRESS PARTY in 1930. He reshaped the league into an organization that at first promoted parity between India's Hindus and Muslims. By the mid-1930s all the Muslim members of the Congress Party had joined the league, and a disillusioned Jinnah was calling for the partition of India and the creation of the independent state of Pakistan. During WORLD WAR II, Jinnah was an active supporter of the British, increasing his standing in British eyes. Muslim pressure and the bloody Hindu-Muslim riots of 1946 helped convince the Congress Party to accept the establishment of Pakistan in August 1947. Jinnah became the first governor general of Pakistan and died in office a little over a year later.

Jobs, Steve(n) (1955–) Founder of Apple Computer, a pioneering company in the creation of personal COMPUTERS. Jobs began his career in the computer industry as a high school student in Los Altos, California, while serving as a summer employee at Hewlett-Packard (HP), a company engaged in the construction of computers and other business-oriented machines. At HP Jobs met Stephen Wozniak, who was working on the development of new electronic machines for commercial use.

In 1975, Jobs convinced Wozniak to help him build a computer for sale to individuals, which he named Apple I after a pleasant summer job experience Jobs had picking apples in Oregon. In 1976 the two formed Apple Computer Company and brought out the Apple I model, which sold more than 600 units at a price of less than \$700. The next model, Apple II, proved extremely successful in the emerging personal computer market, prompting Jobs and

Wozniak to incorporate the company in 1977 in order to raise capital to expand their operations.

By 1983 Apple had developed the basic computer format still in use today. Instead of a machine relying on keyboard-typed prompts to access programs and initiate functions, Apple's latest computer, Lisa, allowed its users to begin activities by moving a hand-operated "mouse" to icons displayed on the computer screen and clicking on those icons with a button on the mouse.

Shortly after developing Lisa, Apple developed Macintosh, the first personal computer (PC) designed and priced for the average consumer. In 1985, despite producing a popular machine at an affordable price, declining sales led shareholders to force Jobs to resign from the company in 1985.

After an unsuccessful attempt to form another computer company, Jobs raised funds to purchase Lucasfilm Ltd.'s computer special-effects division for \$60 million. He then took this detached component, transformed it into Pixar Animation Studios and concentrated on the development of computer graphics and special effects for the film, television and computer software industries. The Pixar eventually succeeded in enhancing the quality of computer-generated images and graphics, as well as the animation of shapes generated by computers.

In the following year, Apple's executive board fired its CEO, Gilbert Amelio, and hired Jobs as interim CEO while the company sought to refine its consumer appeal, improve its hardware and software and raise investment capital. In 1997 the company unveiled the iMac, a new PC with a transparent design and fused into a single unit that came in multiple colors. Apple later developed a laptop version of the iMac, as well as the iPod, a device designed to download music from computers and record it in electronic form on a small, rectangular-shaped device that could be carried anywhere and could retain thousands of songs in its memory for over a month. As a result of his role in rescuing the company, Jobs was appointed CEO of Apple in 2000.

Jochum, Eugen (1902–1987) German conductor. Jochum held posts

with various German orchestras between 1926 and 1949. Though he remained in Germany during WORLD WAR II, he did not join the Nazi Party. He founded the Bavarian Radio Symphony in Munich in 1949. After 1960 he concentrated on guest appearances with such major orchestras as the Berlin Philharmonic, Amsterdam Concertgebouw and London Symphony. His repertoire included the music of Bach, Mozart, Haydn, Schubert, Wagner, Richard STRAUSS, and Karl ORFF, among others. He recorded all the Beethoven and Brahms symphonies three times, and was the first conductor to record all of Anton Bruckner's symphonies. Jochum was one of the last representatives of the German romantic school of conducting. Like Wilhelm FURTWÄGLER, he concentrated on the spiritual aspects of music, and his flexible tempos reflected a personal response to the composer rather than a literal reading of the score.

Joffrey, Robert (Abdullah Jaffa Anver Beykhan) (1930–1989) American dancer, choreographer and ballet director. Founder and artistic director of the popular Joffrey Ballet, he was born in Seattle of Afghan descent. He trained as a dancer and joined Roland Petit's Ballet de Paris as a soloist in 1948. However, he found his metier as an impresario, company manager and choreographer when he launched his own company, which began as a raggle-taggle group that toured the U.S. in a loaned station wagon in 1956. His vision of hip, young, lithe Americana became widely admired, and his company played an instrumental role in expanding the audience for ballet in general. Joffrey's style came to be known as strong, sleek, fast and sexy, with an athletic wit and a willingness to perform modern dance as well as ballet. His most important works include *Gamelon* (1962), *Astarte* (1967) and *Remembrances* (1973). In the 1980s Joffrey turned his attention to the past, embarking on ambitious revivals of rarely performed works of historical significance, by such choreographers as Vaslav NIIJINSKY, Bronislava NIIJINSKA and Frederick ASHTON. Following Joffrey's death, Gerald ARPINO became artistic director of the company.

John XXIII (Angelo Giuseppe Roncalli) (1881–1963) Supreme Pontiff of the Roman Catholic Church (1958–63). Born Angelo Giuseppe Roncalli into an Italian peasant family and ordained in 1904, he rose through the echelons of Vatican diplomacy, becoming the VATICAN's first permanent observer of UNESCO, patriarch of Venice and, finally, pope. As Pope John XXIII, he worked for world peace and favored the interchange of ideas with other religions. In 1962 he convened the SECOND VATICAN COUNCIL (also known as Vatican II), an ecumenical council that called for greater religious tolerance and Christian unity and brought about dramatic reforms within the Catholic Church.

John, Augustus Edwin (1879–1961) British painter. Born in Wales, he studied (1894–98) at London's Slade School of Art, where he was acclaimed for his phenomenal draughtsmanship. He journeyed to Paris and was influenced by the work of Puvis de Chavannes and PICASSO. John lived an exotic and bohemian life, from time to time tramping through Europe and living in gypsy caravans. He became a renowned portraitist, painting with verve and without flattery and numbering many of the important political, social, literary, artistic and theatrical figures of the day among his sitters. These included David LLOYD GEORGE, Queen ELIZABETH II, W. B. YEATS, Sir Jacob EPSTEIN, George Bernard SHAW and Tallulah BANKHEAD. Also a gifted etcher, John was the author of an autobiography, *Chiaroscuro* (1952).

John, Sir Elton Hercules (Reginald Kenneth Dwight) (1947–) British singer and songwriter. Paired with lyricist Bernie Taupin, Elton John dominated the pop charts in the 1970s. A rock pianist with classical training, his hit single "Your Song" (1970) was the first in an unbroken string of top-10 hits, culminating in the first album ever to debut at number one, *Rock of the Westies* (1975). Among his more critically acclaimed works were the double album *Goodbye Yellow Brick Road* (1973), and the autobiographical *Captain Fantastic and the Brown Dirt Cowboy* (1975). His performances have often included outrageous costumes and spectacular spectacles. The first rock star ever to tour the Soviet Union, he continued to achieve

popular success through the 1980s and 1990s, and played to a record-breaking 600,000 people in New York's Central Park on September 13, 1980. In 1997, several months after John's musical eulogy of DIANA, Princess of Wales, at her funeral ceremony, he was knighted by Queen ELIZABETH II. In December 2005 he entered a civil partnership with David Furnish, a former advertising executive. John scored the horror musical *Lestat*, which opened on Broadway in 2006 to tepid reviews.

John Birch Society Organization founded in the U.S. by Robert H. W. Welch Jr. in 1958. Named after Captain John Birch, who was killed by Chinese communists in 1945 and is considered the first hero of the COLD WAR, the society is strongly anticommunist and promotes ultraconservative causes. It has denounced most welfare programs and called for U.S. withdrawal from the UNITED NATIONS. The society is headquartered in Belmont, Massachusetts, and publishes several pamphlets and papers.

John Paul I (Albino Luciani) (1912–1978) Supreme Pontiff of the Roman Catholic Church. Pope John Paul I has left an enduring memory as a man of great kindness and piety, even though his 34-day reign as pope was the shortest since the 18-day rule of Pope Leo XI in 1605. Born Albino Luciani, he was raised in Forno di Canale (now Canale D'Agordo), a village in northeastern Italy. His father was a worker and a socialist, his mother a devout peasant. Luciani was ordained as a priest in 1936 and worked in the parish of his native village for a time before moving on to a teaching career. He served as vicar general from 1954 to 1958, when he was appointed bishop of Vittorio Veneto. In 1969 he became patriarch of Venice. One of his first acts in this prestigious office was to allow parishes to sell church jewels for the benefit of the poor and the handicapped. Throughout his years of service, Luciani emphasized the need to teach Christian truths simply, with respect for the needs of ordinary people. He was elected pope in 1978 but died shortly thereafter.

John Paul II (Karol Wojtyła) (1920–2005) Supreme Pontiff of the

Roman Catholic Church. Karol Józef Wojtyła was born to a devout Catholic family in Wadowice, Poland, in 1920. He and his widowed father moved to Kraków in 1938, where he studied literature and philosophy at Jagiellonian University with the intention of becoming a priest. After the German occupation of Poland the following year, he studied at an underground seminary in Kraków and took theology courses at the university while working in a quarry and a chemical plant to support himself. He was ordained in 1946 and took two master's degrees and a doctorate before beginning service as an assistant pastor at a church in Kraków in 1949. In 1954 he became an assistant professor at the Catholic University of Lublin, the only Catholic university in the communist world, and commuted between the two jobs. In 1956 he was appointed to the professorial chair in ethics at Catholic University and two years later was designated as the auxiliary bishop of Kraków. He was chosen as archbishop of the city in 1964 and was named by Pope Paul VI to the college of cardinals in 1967. Throughout the 1960s Wojtyła wrote learned philosophical tracts about ethics and phenomenology that established his reputation as a deep theological thinker.

After the death of Pope John Paul I in September 1978, the college of cardinals elected Wojtyła on the eighth round of balloting. He chose the name of his predecessor, whose reign had been cut short by a heart attack after only 34 days on the papal throne. He was the first non-Italian pope since the Dutch-born Adrian VI in 1522–23 and, at 58, the youngest pope in 132 years. Eight months after his inauguration, John Paul III returned to his native Poland for nine emotional days, during which huge crowds cheered him as he urged his countrymen to fight for their human rights, to the embarrassment of the Communist regime in power. He frequently criticized the communist system in his public statements during the 1980s and publicly praised the underground Polish political movement Solidarity, emboldening Catholics in other eastern European countries to oppose their oppressive governments until the fall of communism at the end of the decade. The pope also spoke out against right-wing dictatorships in Latin America and

elsewhere. On trips to the U.S. he did not hesitate to warn his hosts about the evils of materialism and the need to share their wealth with the poor people of the world. A fierce opponent of contraception, abortion and euthanasia, the pontiff accused the industrialized world of fostering "a culture of death" by tolerating such practices. John Paul II was criticized for his unbending insistence on theological conformity on the part of teachers in Catholic universities the world over. His strong views on priestly celibacy, homosexuality, and the role of women in the church also brought him into conflict with reformist elements. His staunch opposition to the use of contraceptives became particularly controversial after the outbreak of the AIDS epidemic in the 1980s.

John Paul II traveled more than any of his predecessors, visiting more than 100 countries and all of the continents. He spoke before crowds of admirers numbering in the millions and held audiences with many heads of state and of government, during which he forcefully expressed his views on a number of subjects. In 1981 a Turk named Mehmet Ali Ağca shot the pope twice in an assassination attempt, but he recovered from his wounds and resumed his globetrotting. In 2001 it became apparent that the pope was suffering from Parkinson's disease, but even this disability did not prevent him from following his packed schedule of foreign trips. He died in 2005 and was succeeded by Cardinal Joseph Ratzinger of Germany, who took the title BENEDICT XVI.

Johns, Jasper (1930–) American artist. A major figure in contemporary American art, he was born in Allendale, S.C., studied at the University of South Carolina and settled in New York City in 1952. He burst on the art scene with his first one-man show in N.Y.C. in 1958. Influenced in subject matter by the commonplace objects used by Marcel DUCHAMP and the DADAISTS and by the painterly techniques of ABSTRACT EXPRESSIONISM, Johns became a precursor of the POP ART movement with his paintings of flags, targets, maps, letters and numbers. In these works, he sought to explore the relationship between the object portrayed and the image that

portrays it, transforming ordinary subjects into art. His best known paintings include *Target with Four Faces* (1955, Museum of Modern Art, N.Y.C.) and *Flag on an Orange Field* (1957, Wallraf-Richartz Museum, Cologne). Johns is also noted for his graphics and for his brass castings of objects such as the beer cans portrayed in *Painted Bronze* (1964).

Johnson, Amy (1903–1941) British aviator. Johnson taught herself to fly and in 1929 became the first woman to hold an Air Ministry ground engineer's certificate. In 1930 she made a solo flight from Croydon, England, to Darwin, Australia, in 20 days, which brought her great celebrity. In recognition of this feat she was made a Commander of the British Empire. In 1931 she set a 10-day record flying from London to Tokyo, and in 1932, flew solo to Cape Town. From 1932 to 1938, she was married to the aviator Jim Mollison (1905–59) and flew with him from London to the U.S. in 1932. During WORLD WAR II Johnson served in the Air Transport Auxiliary as a ferry pilot, and died in the line of duty when she bailed out before her aircraft crashed in the Thames estuary.

Johnson, Ben (1961–) Canadian sprinter who lost his Olympic gold medal after it was revealed that he had cheated by using steroids. Johnson blazed to fame in 1987 when he set a new world record time of 9.83 seconds for the 100-meter sprint at the 1987 World Championships. After he won the 100-meter race at the OLYMPIC GAMES, a routine drug test revealed that he had used illegal steroids; he was stripped of his gold medal and disgraced. The use of steroids by athletes subsequently became a major subject of concern. In the Montreal international track meet of 1993 Johnson again tested positive for steroids and received another life suspension.

Johnson, Dame Celia (1908–1982) British stage and screen actress. Johnson trained at the Royal Academy of Dramatic Art (RADA). Her long and distinguished career included roles in some of the best contemporary British films, modern plays and the classical repertory. Her films included *Rebecca*

(1940), *In Which We Serve* (1942), *Brief Encounter* (1946) and *The Captain's Paradise* (1953). She gave acclaimed performances in plays by AYCKBOURN, CHEKHOV, SHAW, and Shakespeare. She was awarded her title by Queen ELIZABETH II in 1981.

Johnson, Clarence L. ("Kelly") (1910–1990) American aeronautical engineer whose work had extensive influence on the design of modern aircraft and on all modern industrial design. Johnson was a graduate of the University of Michigan and began work for LOCKHEED in 1933. By 1938 he became chief engineer. The Lockheed P-38 fighter of 1941 was his first outstanding and original design. Later projects include the P-80 jet fighter, the U-2 spy plane and the C-130 Hercules military transport. His work is often credited with having had a strong influence on automotive design in 1952, when airplane-like tail fins appeared on American automobiles purely for style.

Johnson, Earvin "Magic" (1959–) American basketball player in the National Basketball Association (NBA; 1980–91, 1992, 1996). Born in Lansing, Michigan, he was nicknamed "Magic" after scoring 36 points, grabbing 18 rebounds and recording 16 assists in a high school game. In college he played basketball for Michigan State, which he guided to victory in the 1979 National Collegiate Athletic Association championship.

After being drafted by the Los Angeles Lakers the rookie point guard helped the Lakers win the NBA championship, the first of five he won with the team. During his 11-year career, Johnson became famous for his scoring and his passes as well as his rivalry with Larry Bird of the Boston Celtics, as the two teams fought each other for eight titles. In the autumn of 1991, after losing the NBA finals to the Chicago Bulls, Johnson retired after learning that he had contracted the AIDS virus. But he joined the 1992 U.S. Olympic men's basketball team (nicknamed the "Dream Team," because it was the first Olympics open to professional basketball players), which frightened players on several national teams, who feared that an on-court cut could expose them to infection. But

Johnson was warmly greeted by fans and the U.S. captured the gold medal. Johnson also worked to increase awareness about the AIDS virus and how to avoid it by writing a book and appearing on numerous television shows.

In 1992 Johnson announced he would return to basketball and signed a new contract with the Lakers. Several NBA players criticized Johnson's decision as endangering the lives of other players. After this cold reception and several disappointing performances, Johnson retired again at the beginning of the 1992–93 season and subsequently worked as a TV commentator for NBA games. The following year Johnson returned to the Lakers yet again, this time as their head coach, but resigned at the end of the season. Johnson made one final return as an NBA player in 1996 and played occasionally at the point guard and power forward positions before retiring permanently with a legacy that included 13 All-Star Game appearances, three season NBA MVP selections and NBA Finals MVP designations and a record as the second all-time career leader in assists.

Johnson, Eyvind (1900–1976) Swedish novelist. On his own from the age of 13, Johnson educated himself by reading. His early novels, such as *Timans och rattfardigheten* (Timans and justice, 1925), are strongly influenced by James JOYCE and Sigmund FREUD. Johnson began working a journalist, and during WORLD WAR II coedited *Et Handslag* (A handshake) with Willy BRANDT for the Norwegian RESISTANCE. In Sweden Johnson is perhaps best known for the tetralogy, *Romanen om Olof* (The novel about Olof, 1934–1937), which depicts the rise of the Swedish proletariat through one youth's development. Internationally, he is better known for *Strandernas svall* (1946), translated as *Return to Ithaca: The Odyssey Retold as a Modern Novel*, in 1952, which began a series of novels emphasizing the repetition of history. Johnson was awarded the NOBEL PRIZE in literature in 1974 jointly with Henry MARTINSON. Of Johnson's 30 novels, only four have been translated into English.

Johnson, Hiram (1866–1945) U.S. politician. Johnson won election as

governor of California in 1910 on a platform of political reform. During his administration he smashed the Southern Pacific Railroad machine, which had long dominated the statehouse, and passed the Public Utilities Act, which created one of the most effective systems of railroad control in the country. A founder of the Progressive Party, Johnson ran as vice president on the 1912 ticket headed by Theodore ROOSEVELT. In 1916 Johnson was elected to the Senate on the Progressive ticket. In the upper house he developed a reputation as an independent, reluctantly supporting U.S. entry into WORLD WAR I but criticizing Woodrow WILSON's foreign policy. Although he initially supported President HOOVER, he became increasingly critical of the administration, blaming it for much of the distress of the Great Depression. Johnson backed Franklin ROOSEVELT in 1932 but later refused to support FDR's foreign and domestic policy. He was one of the Senate's most consistent isolationists. Johnson was a leading candidate for the Republican nomination in 1920. When he lost the nomination to Warren HARDING, he refused offers of the vice presidential nomination; he served in the Senate until his death.

Johnson, Howard Deering (1896–1972) American ice cream maker and entrepreneur. In 1924, Howard Johnson bought a soda fountain in Wollaston, Mass., and started to sell his famous “28 flavors” of ice cream. Five years later, he began to license his name and products, creating the chain of Howard Johnson's restaurants. The firm flourished in the postwar years, and by 1964, when Johnson retired, it had grown into the largest food distributor in the United States.

Johnson, James Weldon (1871–1938) American writer, diplomat and civil rights activist. A graduate of Atlanta University, he was the first African American admitted to the bar in Florida (1897). He also served as consul to Venezuela and Nicaragua. In 1901 Johnson moved to New York to collaborate with his brother on the lyrics for light operas and popular songs. Their “Lift Every Voice and Sing” was considered virtually a black national anthem. He taught creative literature at Fisk Uni-

The first African-American heavyweight champion, Jack Johnson (GEORGE GRANTHAM BAIN COLLECTION, LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

versity from 1930 to 1938. His only novel, *The Autobiography of an Ex-Colored Man*, was published in 1912.

Johnson, John Arthur “Jack” (1878–1946) American boxer. Jackson fought his way through the ranks and, in 1908, became the first black world heavyweight champion. His flamboyant ways and lavish lifestyle led to his becoming the immediate subject of an outpouring of hate, which culminated in the search for a “great white hope” to take back the heavyweight crown. The searchers found former champion Jim JEFFRIES, whom Johnson decisively beat in 1910. In 1915 Johnson lost his title to Jess Willard in a bout held in the broiling sun of Havana, Cuba. Johnson's three marriages to white women aroused further racial prejudice, and he was harassed by federal authorities on a variety of trumped-up charges—including white slavery—that led him to flee to Europe to tour in theatrical shows. He returned to the U.S. in 1920, and served eight months of a one-year sentence at Leavenworth Penitentiary.

Johnson, John Harold (1918–2005) U.S. publisher. He started his Chicago-based publishing empire with emphasis on stories of black achieve-

ment. In 1942 he started *Negro Digest*, which changed its title to *Black World* in 1970. Other Johnson magazines include *Ebony* (1945) and *Jet* (1951). Johnson was named Publisher of the Year in 1972. The company ranks first nationally in earnings among black enterprises.

Johnson, Lyndon Baines (1908–1973) Thirty-sixth president of the UNITED STATES (1963–69). Born near Johnson City, Tex., the son of a farmer, Johnson worked his way through teachers college and was a high school teacher before entering politics in 1932 as secretary to a Democratic congressman from Texas. Committed to the principles of the NEW DEAL, he became a protégé of Sam RAYBURN, who successfully urged President Franklin D. ROOSEVELT to appoint him director of the National Youth Administration in 1935. He was first elected to the House of Representatives in 1937, serving there as an active supporter of Roosevelt's military and foreign policies until his election to the Senate in 1948. He was soon one of the nation's most powerful senators, becoming Democratic leader in 1953 and majority leader in 1954. A canny strategist and shrewd compromiser, he supported most of the programs of President Dwight D. EISENHOWER and was known for his moderate to conservative positions. He ran for the Democratic presidential nomination in 1960, but lost to John F. KENNEDY, who chose Johnson as his vice presidential running mate.

Johnson was sworn in as president after the assassination of President Kennedy on November 22, 1963. As president, Johnson energetically endorsed the social programs promised by his predecessor and used his considerable political skills to see them enacted. Persuaded by Johnson, Congress passed a broad tax cut and the landmark CIVIL RIGHTS ACT OF 1964. Calling for what he called a GREAT SOCIETY, Johnson pressed for a vigorous domestic program that included a war against poverty and sweeping economic and social reform and legislation.

His domestic achievements were largely overshadowed by his troubles abroad, as Johnson became increasingly enmeshed in the VIETNAM WAR. After passage of the TONKIN GULF RESOLUTION, Johnson began the massive

bombing of North Vietnam in 1965 and increased U.S. troop levels from some 20,000 to over 500,000. War costs increased, and many Great Society programs proved too expensive. Riots soon broke out in America's black ghettos, and the ANTIWAR MOVEMENT gained momentum across the country. Ailing and increasingly unpopular, Johnson announced that he would not run for reelection in 1968. He remained a powerful force in Democratic politics and saw to it that his chosen successor, Vice President Hubert HUMPHREY, was nominated for the presidency. Humphrey lost by a narrow margin to Richard M. NIXON, and Johnson retired to his Texas ranch in 1969. His memoirs, *The Vantage Point*, were published in 1971.

Johnson, Martin (1884–1937) American explorer and writer. Johnson joined author Jack LONDON on the cruise of the *Snark*. He made well-known expeditions to the SOLOMON and NEW HEBRIDES islands (1914) and BORNEO (1917–19 and 1935). He and his wife Osa traveled around the world six times, wrote, lectured and gained a reputation as jungle experts, especially on Africa. They were famed for their motion pictures of their explorations, such as *Simba* and *Congorilla*, and also cowrote *Cannibal Land* (1917), *Camera Trails in Africa* (1924) and *Lion* (1929); Osa also wrote *I Married Adventure* (1940).

Johnson, Pamela Hansford (1912–1981) British novelist, playwright, and critic and wife of novelist C. P. SNOW. Although she did not achieve the same level of popularity as her husband, Johnson's work was highly regarded by critics. Among her 25 novels were *An Impossible Marriage* and *The Good Husband*.

Johnson, Philip Cortelyou (1906–2005) American architect. Born in Cleveland, Johnson attended Harvard University. He became one of the leading advocates of the new European architecture as the coauthor (with Henry-Russell HITCHCOCK) of *The International Style: Architecture since 1922* (1932) and as head of the department of architecture at the MUSEUM OF MODERN ART (1932–34, 1945–54). Johnson brought the INTERNATIONAL STYLE to the U.S. in his own

buildings, designing a number of houses that were greatly influenced by MIES VAN DER ROHE. These include his own “glass house” (1949–50) and the Wiley house (1953), both in New Canaan, Connecticut. Johnson collaborated with Mies on the Seagram Building in New York City (1958), a great amber slab that is considered one of modern architecture's greatest skyscrapers. Johnson largely abandoned the International Style in the 1960s and produced such classically influenced buildings as the Sheldon Art Gallery, Lincoln, Nebraska (1963), and the New York State Theater at Lincoln Center (1964). In the 1970s he created innovative structures such as Pennzoil Place, Houston, Texas (1976), and the AT&T Building, New York City (1978), whose massive Chippendale-like broken pediment has been seen as an emblem of POSTMODERNISM.

Johnson, Randy (1963–) American baseball player, winner of several Cy Young Awards (1995 American League; 1999–2002 National League). Johnson began his major league baseball career when he signed as a pitcher with the Montreal Expos of the National League (NL) in 1988. After being traded to the Seattle Mariners of the American League (AL) in May 1989, Johnson initially struggled as a pitcher. In 1995 his 2.48 earned run average and his 18-2 win-loss record secured him his first AL Cy Young Award for the best starting pitcher in the AL. In 1997 he set an AL game record for strikeouts by a left-handed pitcher (19) against the Oakland Athletics. In the same year he was traded to the NL Houston Astros, before signing with the newest NL team, the Arizona Diamondbacks, as a free agent.

As a Diamondback pitcher from 1999 to 2002, Johnson recorded 81 wins to 27 losses, threw 787 strikeouts, walked only 284 batters and won four consecutive NL Cy Young Awards. In 2001 he helped guide the Diamondbacks to the World Series, where he pitched and won the second and sixth games, helping to defeat the Yankees four games to three. In recognition of his performance on the pitching mound, Johnson was named co-MVP of the series along with his fellow pitcher Curt Schilling. He was traded to the New York Yankees before the start of the 2005 season.

Johnson, Robert (1912–1938) African-American blues composer, vocalist and guitarist. Johnson, who never reached a sizeable audience outside his native Mississippi during his lifetime, achieved a posthumous reputation as perhaps the greatest songwriter and performer in the history of the blues. Contemporary musicians who have sung his praises (and performed his songs) include Eric CLAPTON and Bob DYLAN. Johnson ran away from home at an early age to learn guitar from blues master Son House. In the 1930s, Johnson performed in Mississippi with fellow blues greats Howlin' Wolf and Elmore James. His greatest recordings, featuring Johnson's heartrending, moaning vocals, include "Hellhound On My Trail," "Milkcow's Calf Blues" and "Terraplane Blues." Blues guitarist Robert Jr. Lockwood is his stepson.

Johnson, Walter (1887–1946) American baseball player. Elected to the Baseball Hall of Fame in 1936, Johnson ranks as one of the greatest fastball pitchers in history. While pitching for the Washington Senators from 1907 to 1927, he won 416 games. He set a career strikeout record of 3,508, and in 1913 pitched 56 consecutive innings without allowing a run. In his career, he pitched seven opening-game shutouts.

Johnson-Sirleaf, Ellen (1938–) Liberian politician and the first elected female president of an African country. Born in Liberia, Johnson-Sirleaf was educated at Madison Business College, the University of Colorado, and Harvard University (from which he received a masters degree in public administration in 1971) before returning to her native country. After serving as minister of finance in 1972–73, she was imprisoned for criticizing the military regime of President Samuel Doe and was then exiled to Kenya. In exile she gained a great deal of experience in financial affairs, working for Citibank in Nairobi and holding the post of senior loans officer at the World Bank. Originally a supporter of President Charles Taylor, she returned to Liberia in 1997 to mount an unsuccessful campaign against him. A sharp critic of Taylor's corrupt practices and authoritarian rule, Johnson-Sirleaf headed the Governance Reform Commission that was formed in 2003 to bring the bloody

civil war in Liberia to an end. Hailed by her supporters as the "iron lady" for her steely determination, she defeated the popular former soccer player George Weah in the presidential elections of 2005 and was inaugurated in January 2006. She declared that her foremost goal was to heal the wounds that still festered from the Liberian civil war.

Johnson Space Center NASA center at Clear Lake, Texas, near Houston. Originally known as the Manned Spacecraft Center, this site houses NASA Mission Control, which managed all manned spaceflights after lift-off from CAPE CANAVERAL Air Force Station (MERCURY, GEMINI and most unmanned missions) or from KENNEDY SPACE CENTER (APOLLO, SKYLAB and SPACE SHUTTLE missions). It was named for President Lyndon B. JOHNSON.

Johore (Johor) A state of MALAYSIA, on the southern extremity of the Malay Peninsula, opposite SINGAPORE; its capital is Johore Bahru. Occupied by Japan during World War II, Johore joined the Federation of Malaya in 1957 and became a part of Malaysia in 1963.

Joliot-Curie, Frédéric (1900–1958) French physicist. Frédéric Joliot, the son of a prosperous tradesman, was education at the School of Industrial Physics and Chemistry. In 1923 he began his research career at the Radium Institute under Marie CURIE, where he obtained his doctorate in 1930. He was appointed to a new chair of nuclear chemistry at the Collège de France in 1937 and, after World War II (in which he played an important part in the French RESISTANCE) was head of the new Commissariat à l'Energie Atomique (1946–50). In 1956 he became head of the Radium Institute.

In 1926 Joliot married the daughter of Marie CURIE, Irène, and changed his name to Joliot-Curie. In 1931 they began research that was to win them the NOBEL PRIZE for physics in 1935 for their fundamental discovery of artificial radioactivity (1934).

In 1939 Joliot-Curie was quick to see the significance of the discovery of nuclear fission by Otto HAHN. He confirmed Hahn's work and saw the likelihood of a chain reaction. He further realized that the chain reaction could be produced only in the presence of a moderator to slow the neutrons down.

A good moderator was the heavy water that was produced on a large scale only in Norway at Telemark. With considerable foresight Joliot-Curie managed to persuade the French government to obtain this entire stock of heavy-water, 185 kilograms in all, and to arrange for its shipment to England out of the reach of the advancing German army.

Joliot-Curie, Irène (1897–1956) French physicist. Irène Curie was the daughter of Pierre and Marie CURIE, the discoverers of radium. She received little formal schooling, attending instead informal classes where she was taught physics by her mother, mathematics by Paul Langevin, and chemistry by Jean-Baptiste Perrin. She later attended the Sorbonne although she first served as a radiologist at the front during WORLD WAR I. In 1921 she began work at her mother's Radium Institute, with which she maintained her connection for the rest of her life, becoming its director in 1946. She was also, from 1937, a professor at the Sorbonne.

In 1926 Irène Curie married Frédéric JOLIOT and took the name Joliot-Curie. In 1935 the Joliot-Curies won the NOBEL PRIZE in physics for their discovery in 1934 of artificial radioactivity.

Irène later almost anticipated Otto HAHN's discovery of nuclear fission but like many other physicists at that time found it too difficult to accept the simple hypothesis that heavy elements like uranium could split into lighter elements when bombarded with neutrons. Instead she tried to find heavier elements produced by the decay of uranium.

Like her mother, Irène Joliot-Curie produced a further generation of scientists. Her daughter, Hélène, married the son of Marie Curie's old companion, Paul Langevin, and, together with her brother, Paul, became a distinguished physicist.

Jolson, Al (Asa Yoelson) (1886–1950) American stage and motion picture entertainer. A Russian immigrant, Jolson sang in a New York synagogue during his youth and also performed in VAUDEVILLE and blackface theaters. Popular entertainment won out, and at his peak in the early 1920s many people considered Jolson the greatest all-round performer in the

world. It was his habit to interpolate into his shows any song that struck his fancy. Thus, during a performance of his hit show *Sinbad* (1918), he sang a little thing he had heard at a party, "Swanee"; the song's immediate success catapulted its composer George GERSHWIN into the big time. Jolson's film career did not spring full-blown from *The Jazz Singer*. He had been tested for the cameras many years previously; and he had made a sound short several months before beginning *The Jazz Singer*. His famous "throw-away" line—"You ain't heard nothing yet"—was actually a "signature" piece, already well known in his stage performances. And it was not *The Jazz Singer* so much as Jolson's immediate follow-up, *The Singing Fool* (1928)—with smash-hit songs "Sonny Boy," "There's a Rainbow Round My Shoulder" and "I'm Sittin' on Top of the World"—that really launched the TALKING PICTURES. In semi-retirement in the 1940s, Jolson found a new generation of admirers thanks to two less-than-truthful biographical films, *The Jolson Story* (1946) and *Jolson Sings Again* (1949), starring Larry Parks and utilizing Jolson's dubbed voice. Jolson died of a heart attack after a tour entertaining U.S. troops in Korea.

Jones, Blanche Calloway (Blanche Calloway) (1902–1978) American singer. Blanche Calloway first appeared in 1920 with the Earl "Fatha" HINES and Louis ARMSTRONG bands. In the 1930s she became the first woman to lead a major American dance band. After retiring as a singer in 1944, she became the first woman disk jockey in the American South. She was the sister of JAZZ bandleader and performer Cab CALLOWAY.

Jones, Bobby (1902–1971) U.S. golfer. His domination of the sport in the late 1920s and early 1930s was challenged only by Gene SARAZEN and Walter HAGEN. In 1930 he won the U.S. Open, British Open, British Amateur and U.S. Amateur titles, completing an unprecedented "Grand Slam." He won the U.S. Open a total of four times, the British Open three times and the U.S. Amateur title five times. Although he retired at the age of 28, his influence on golf continued as he cofounded the Augusta National Golf Club. In 1934 he

established the Masters Tournament, which rapidly became one of golf's most prestigious championships.

Jones, David (1895–1974) British poet, essayist and artist. Jones was born in Kent, England, but was strongly influenced by the Welsh ancestry of his family, an influence that shows in his poetic works. He served in the British army during WORLD WAR I, an experience that he drew upon in composing his literary masterpiece, *In Parenthesis* (1937), a haunting narrative blending of poetry and prose that explores wartime suffering along with the chivalric legends of King Arthur and the Welsh *Mabinogion*. Other works by Jones include *The Anathemata* (1952), *The Sleeping Lord* (1974) and *The Dying Gaul* (1978). Jones was also a gifted artist who produced engravings, watercolors and drawings to accompany his own writings as well as books by his contemporaries.

Jones, James (1921–1977) American novelist. During WORLD WAR II he served in the Pacific and fought at GUADALCANAL. His wartime experiences formed the background to his subsequent work as a writer. Jones is best known for his first—and many consider, his best—novel, *From Here to Eternity* (1951, filmed 1953) an expansive story that takes place on an army base prior to the bombing of PEARL HARBOR. This insightful, unsentimental study of masculine attitudes and interaction told in plain, blunt language won the National Book Award in 1951; the film won three ACADEMY AWARDS in 1953. Jones felt that the success of *From Here to Eternity* overshadowed his subsequent fiction, which includes *The Thin Red Line* (1962, filmed 1964), *The Ice-Cream Headache and Other Stories* (1968) and *Whistle*, edited by Willie Morris and published posthumously in 1978.

Jones, James Earl (1931–) American stage and film actor. Born in rural Mississippi, Jones attended the University of Michigan. He first came to public attention in the early 1960s as a member of the New York Shakespeare Festival playing, among others, Caliban in *The Tempest* (1962) and the title role in *Othello* (1964) and returning as Lear in 1973. He became a star in the role of

prizefighter Jack JOHNSON in *The Great White Hope* (1968; filmed 1970). Since then he has lent his superb acting skills and magnificent voice to such plays as *The Iceman Cometh* (1973), *Of Mice and Men* (1974), *Master Harold and the Boys* (1981) and *Fences* (1985) and to such films as *Star Wars* (1977, as the voice of Darth Vader), *Field of Dreams* (1989) and *The Hunt for Red October* (1990). He has also appeared in many television dramas, notably in the starring role of the early 1990s series *Gideon's Fire*. In 1991 Jones won an Emmy Award for best actor on the television series *Gabriel's Fire* and for best supporting actor for his part in the made-for-TV movie *Heat Wave*, which depicted the 1968 Watts riots.

Jones, Spike (Lindley Armstrong) (1911–1964) American musician and bandleader. Spike Jones enjoyed a major success in show business in the 1940s and 1950s, when his madcap style of comical musical performance led to appearances by himself and his band on radio and on a regular television series. Jones was born in Long Beach, Calif., and first came to national attention with his recording of *Der Fuhrer's Face* (1942), a satirical attack on Hitler that featured a loud Bronx cheer. Jones toured the U.S. for many years with his band, the City Slickers, which featured such extemporaneous instruments as doorbells, pistols, hammers and anvils, and the "Latrinophone"—a toilet seat with catgut strings.

Jonestown massacre Mass suicide on Nov. 18, 1978, of members of the People's Temple religious cult, in the agricultural commune of Jonestown, Guyana. The group, led by Rev. Jim (James Warren) Jones (1931–78), an Indiana-born minister, began in Indianapolis in the late 1950s. With a predominately black congregation, Jones preached equality of social and racial status, favored apocalyptic predictions and made himself absolutely central to his flock's well-being. He and his growing band of followers moved to California in 1965, settling in San Francisco. As membership grew to the thousands, Jones expanded his activities to include social programs for the city's poor. In 1976 the popular preacher was named chairman of the San Francisco Housing Authority.

However, word of his bizarre practices, including rigid and violent discipline, extortion of money and property, death threats and sexual misconduct, soon surfaced.

In 1977 Jones, together with several hundred cult members, fled to Guyana and settled on land Jones had acquired earlier. Some Temple members wrote relatives detailing the conditions of physical and psychological abuse under which they were forced to live abroad. On the basis of these complaints, Rep. Leo Ryan of California and an entourage of aides and press visited Jonestown in November 1978. After spending a night there, Ryan and his party, together with some residents who had decided to leave the commune, proceeded to the local airstrip, where they were set upon by an armed group of Jones's followers. In the ensuing gunfire, Ryan and four others were killed and a number wounded. After the ambush was revealed to Jones, he ordered his band to commit suicide by drinking a fruit punch laced with cyanide. Most followed the order without question; some resisted but were forced to consume the poison or were shot; some escaped. Jones and several top aides shot themselves to death. Altogether, 911 died in the massacre.

Jong, Erica Mann (1942–) American novelist and poet. A native New Yorker educated at Barnard College, Jong published a well-received book of poems in 1971 before she burst on the scene with *Fear of Flying* (1973). This erotic feminist bestseller introduced her fictional alter ego, Isadora Wing, whose sexual exploits, marriages and divorces were later chronicled in *How to Save Your Own Life* (1977) and *Parachutes and Kisses* (1984). *Fanny, Being the True History of Fanny Hackabout-Jones* (1980) is a picaresque novel in the style of Fielding, Defoe and Cleland. *Serenissima: A Novel of Venice* (1987) follows its 20th-century heroine through a time warp similar to that of Virginia Woolf's *Orlando*. Jong has also continued to produce poetry of indifferent quality. She has been much praised for her lusty humor and liberated fantasies and much derided for her tawdriness. It is safe to say, however, that she occupies a unique place in American literature. In 1998 Jong

received the UN Award for Excellence in literature.

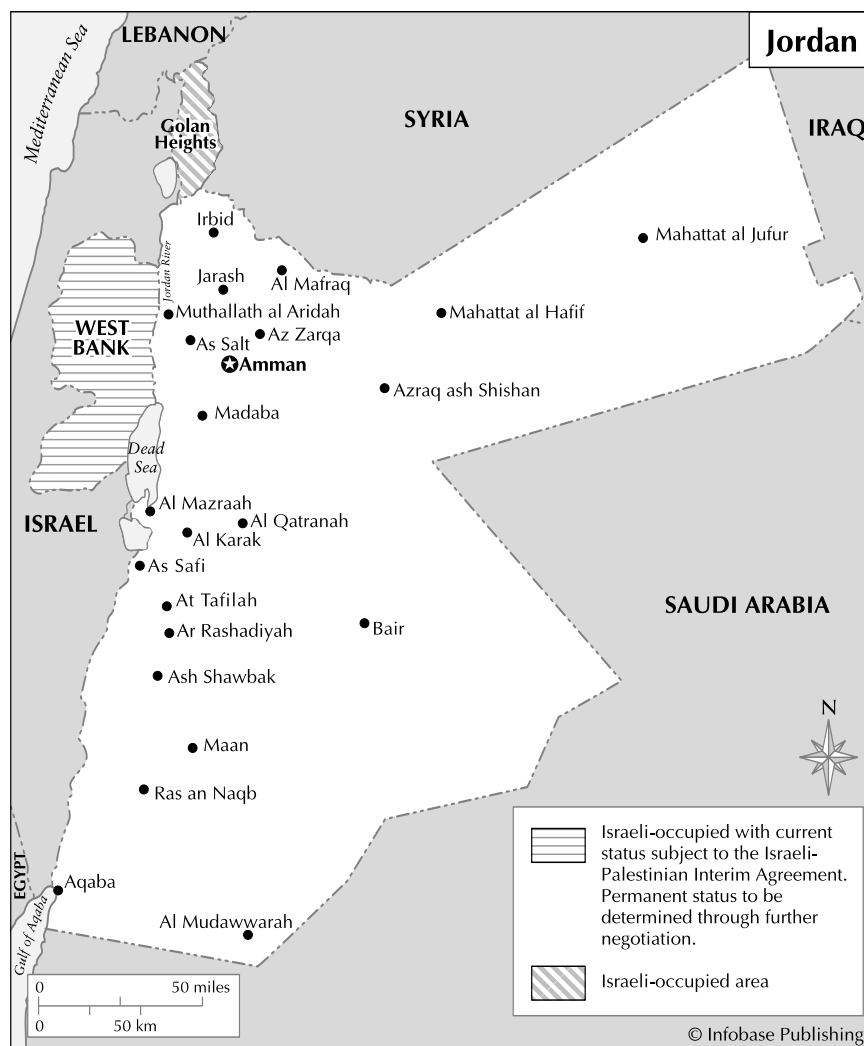

Jooss, Kurt (1901–1979) German choreographer. Jooss was the first choreographer to successfully combine elements of modern dance with classical ballet. He introduced his new concepts with his ballet company in Essen, Germany, in the late 1920s and early 1930s. He fled to Britain after Adolf Hitler's rise to power, and did not return to his homeland until 1951. His ballets were noted for their compassion and social consciousness. His most famous ballet, *The Green Table* (1932), was perhaps the most acclaimed anti-war ballet ever choreographed.

Joplin, Janis (1945–1970) American rock-and-roll vocalist. Joplin was perhaps the greatest vocalist to emerge from the psychedelic era of the 1960s. Born and raised in Texas, she moved to San Francisco in 1966 and became the lead singer for a band, Big Brother and the Holding Company, which soon won international acclaim due to the sheer power and emotion of Joplin's bluesy, throaty vocals. *Cheap Thrills* (1968) remains a classic album of the era and features the hit single "Piece of My Heart." In 1969 Joplin pursued a solo career and released two noteworthy albums, *I Got Dem Ol' Cosmic Blues Again* (1969) and *Pearl* (1971), the latter including the hit single "Me and Bobby McGee." She died in 1970 from a heroin overdose. Posthumously released albums include *In Concert* (1972), *Janis* (1974), *Farewell Song* (1982) and *Janis Joplin in Concert* (1987).

Joplin, Scott (1868–1917) American pianist-composer; the preeminent exponent and popularizer of RAGTIME, a corruption of "ragged time," the popular pianistic form of the late-19th century that originated in the South and Midwest of the U.S. As developed by Joplin, the style typically set a highly syncopated, or "ragged," right-hand melody against a comparatively straightforward rhythmic pattern in the left-hand or bass. After initial successes playing "sporting houses" (brothels) in his native Texarkana, Tex., Joplin traveled throughout the Midwest scoring impressive triumphs, including the 1893 Chicago World's Fair. Joplin was the undisputed king of ragtime musi-

cians. In addition to his spirited yet precise playing, Joplin became a prominent composer whose through-composed works included "Maple Leaf Rag," "The Entertainer" and "Gladiolus Rag." Royalties from his published rags enabled him to settle comfortably in St. Louis. However, a disastrous attempt to produce his ambitious opera *Treemonisha* (1911) broke Joplin's spirit, health and finances. In the 1970s, Joplin's rags enjoyed a huge revival by virtue of their use in the soundtrack of the hit motion picture, *The Sting* (1973), and due to the immensely popular recordings of pianist-musicologist Joshua Rifkin, who took to heart Joplin's admonition—"It is never right to play 'Ragtime' fast"—in performances clearly revealing the pristine, pre-jazz elegance of Joplin's original conception.

Jordan (Hashemite Kingdom of Jordan) Jordan is located in the region of southwest Asia known as the Middle East and covers an area of 37,129 square miles, of which 2,565 square miles (known as the WEST BANK) are currently occupied by ISRAEL. For centuries a part of the OTTOMAN EMPIRE, modern Jordan took form in 1920 as **Transjordan**, a British sphere of influence. Autonomy was granted under Emir Abdullah in 1923, and full independence achieved in 1946. Now a constitutional monarchy, Jordan has been led by King HUSSEIN Ibn Talal since 1952. As a result of the 1967 SIX-DAY WAR, Israel occupied the West Bank of the Jordan River and East Jerusalem, both formerly held by Jordan. Tensions between the Jordanian government and the PALESTINE LIBERATION ORGANIZATION (PLO) led to the expulsion of the PLO in 1970–71. Hussein reconciled with PLO leader Yasir ARAFAT in 1983, while Jordan and Egypt formed a moderate Arab bloc to work for a solution to the issue of a Palestinian homeland. During the PERSIAN GULF WAR (1990–91) King Hussein supported the initial UNITED NATIONS resolutions condemning IRAQ for its invasion of KUWAIT. However, the majority of Jordanians (including its sizeable Palestinian refugee population) opposed military action by the allied coalition against Iraq, and Jordan lent its vocal support to Iraq's president, Saddam HUSSEIN. As a result,

Jordan's ties with the U.S. and with other Arab nations who opposed Iraq were strained. Jordan joined the peace process in the Middle East by signing a peace treaty with Israel in 1994. Following the death of King Hussein in February 1999, his son Crown Prince Abdullah was sworn in as King ABDULLAH II. In 2002 a U.S. diplomat was gunned down outside his home in Amman. Eight Islamic militants were sentenced to death for the slaying in 2004.

Jordan, Michael Jeffrey "Air" (1963–) American professional basketball player (1984–93, 1995–98, 2001–03). Born in Brooklyn, N.Y., Jordan and his family moved to Wilmington, N.C., where in high school he attracted attention from college basketball coaches, who offered him full scholarships to play for their teams. After choosing the University of North Carolina, Jordan helped the Tar Heels win the 1982 National Collegiate Athletic Association (NCAA) Men's Basketball championship by scoring the game-winning shot. Jordan recorded impressive statistics at North Carolina and led the U.S. men's basketball team to a gold medal at the 1984 Olympics.

At the end of his junior year Jordan was drafted by the Chicago Bulls and promptly recorded impressive statis-

JORDAN

1918	Region of present-day Jordan gains independence from Ottoman Empire.
1920	Jordan east of the Jordan River administered by Britain as Transjordan, a part of Britain's League of Nations mandate for Palestine.
1946	Jordan gains full independence.
1949	Transjordan renamed Jordan; annexes West Bank and East Jerusalem.
1952	Mentally ill King Tallal is deposed; his son Hussein declared king.
1967	Jordan loses West Bank to Israel in Six-Day War; 200,000 Palestinians seek refuge in Jordan.
1970	Jordanian army routs Palestinian guerrillas in a civil war; Hussein and Arafat truce.
1991	King Hussein supports Iraq in Persian Gulf War; aid from U.S. placed under review.
1994	King Hussein signs peace treaty with Israel.
1999	King Hussein dies and is succeeded by his son Abdullah II.
2002	U.S. diplomat is shot dead in Amman.
2004	Eight Islamic militants are convicted of the 2002 shooting.

tics—28.2 points, 6.5 rebounds, 5.9 assists and 2.4 steals per game—and won the NBA's Rookie of the Year Award and a position on the NBA All-Star Team in 1985.

From 1988 to 1993 Jordan led the Bulls under coach Phil Jackson to three NBA championships. At the end of the 1992 postseason Jordan added another honor to his career: two-time Olympic gold medalist on the U.S. men's basketball team, which swept the Olympic tournament, never losing a game, and always winning by at least 20 points, against the best basketball players in the world.

At the end of the 1992–93 season, Jordan retired from basketball, stating that after three NBA championships, three MVP awards, three NBA finals MVP selections and seven season scoring titles, he had nothing left to prove to himself and his fans. In 1994 he surprised everyone by signing with the Chicago White Sox, a Major League Baseball team. However, after several poor performances, he was sent down to the Sox's AA team, the Birmingham Barons, where he recorded a mediocre performance during the 1994 season.

The following year Jordan returned to the Bulls, whom he helped to advance to the second round of the 1995 playoffs, but he showed constant signs of fatigue and on occasion poor decision-making skills that contributed to the Bulls' postseason exit. In the 1995 off-season Jordan began a rigorous conditioning program to refine his basketball skills, that had become rusty during his retirement. Returning to his All-Star performance level, Jordan's 10th full year with the Bulls was one of the best for any franchise in NBA history. The Bulls stampeded to a 72-10 season, the best in the NBA, and the franchise's fourth NBA title. Jordan also picked up another scoring title, as well as regular and postseason MVP honors. During the next two years Jordan helped the Bulls win a fifth and sixth NBA championship and earned a fifth regular season MVP trophy. In 1999, Jordan again retired from the NBA. Then in 2001 Jordan announced he would again return to the basketball court and play two seasons for the Washington Wizards, an NBA franchise. After playing far below his past performance level, Jordan retired for what he said would be the final time at the end of the 2002–03 season.

Jordanian Civil War of 1970–71

After the SIX-DAY WAR 400,000 Palestinian refugees joined 700,000 others already in JORDAN. From Jordan some Palestinians conducted terrorist attacks against Israel. Adherents of Yasir ARAFAT's PALESTINE LIBERATION ORGANIZATION (PLO) claimed Jordanian law did not apply to them; Israel staged retaliatory raids. King HUSSEIN, his regime threatened, resolved to destroy PLO power in Jordan, and after Palestinian hijackers flew airliners to Amman, Jordan's capital ("Black September," September 6–9, 1970), he declared martial law September 16. His troops surrounded refugee camps, disarming guerrillas and deporting militant leaders. By September 25 a cease-fire had been arranged by Arab heads of state, but battles against guerrilla bands continued until July 1971, when Palestinian bases were destroyed. Palestinian organizations subsequently moved to LEBANON.

Jorgensen, Christine (George Jorgensen) (1926–1989)

The first American transsexual to announce that she had undergone a sex-change operation. In Jorgensen's 1967 biography, the former army private said she had had a normal, happy childhood but, as an adult, had come to feel that she was a woman trapped in a man's body. Following the operation, which took place in Denmark in 1952, she became the focus of intense tabloid newspaper interest. She later starred in a nightclub act that featured her theme song, "I Enjoy Being a Girl."

Josephson, Brian David (1940–)

British physicist. Josephson was educated at Cambridge University, where he obtained his Ph.D. in 1964. He remained at Cambridge and in 1974 was appointed to a professorship of physics.

His name is associated with the **Josephson effects** described in 1962 while still a graduate student. The work came out of theoretical speculations on electrons in SEMICONDUCTORS involving the exchange of electrons between two superconducting regions separated by a thin insulating layer (**Josephson junction**). He showed theoretically that a current can flow across the junction in the absence of an applied voltage. Furthermore, a small direct voltage across the junction produces an alternating current with a frequency that is inversely proportional to the voltage. The

effects have been verified experimentally, thus supporting the BCS theory of superconductivity of John BARDEEN and his colleagues. They have been used in making accurate physical measurements and in measuring weak magnetic fields. Josephson junctions can also be used as very fast switching devices in computers. For this work Josephson shared the 1973 NOBEL PRIZE in physics with Leo ESAKI and Ivar GAEVER. More recently, Josephson has turned his attention to the study of the mind.

Jourdain, François (1876–1958)

French architect and interior designer whose career extended from the ART NOUVEAU era through the MODERNISM of the 1930s. Jourdain was trained as a painter but after 1909 worked only as an interior and furniture designer. He was interested in low cost, prefabricated furniture of simple design. His work and publications of the 1920s were well known and influential since he was a strong champion of the austere, undecorated design vocabulary of the time. After 1945 he focused on historical writings about art and design.

Jouvet, Louis (1887–1951)

French theatrical actor, director and producer. Jouvet was a major force in the French theater in the years between the two world wars. He served as director of several theaters, including a stint at the Comédie des Champs-Élysée from 1924 to 1934. Jouvet was noted for his popular touch in direction and production and was instrumental in first bringing the works of French playwrights Jean GIRAUDOUX and Jules ROMAINS to the attention of the French public. Jouvet also appeared as an actor in many of his own productions.

Joyce, James (Augustine Aloysius Joyce) (1882–1941)

Irish novelist, short story writer and poet. Best known for his novel *ULYSSES* (1922), he is one of the towering figures of 20th-century literature and of MODERNISM. Born in DUBLIN, he was educated in Catholic schools and graduated from University College, Dublin (1902). After briefly studying medicine in Paris, he returned to Dublin, where, on June 16, 1904—the date on which he later set the events of *Ulysses*—he met his future wife, Nora Barnacle. From 1905 on, he lived successively in Italy, Switzerland

Irish author James Joyce (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

and France—in self-imposed exile from Ireland, a country he felt had rejected him. Moreover, he believed exile to be necessary for his art, which he felt should transcend the ties of family, country and religion. His first book of poems, *Chamber Music* (1907), was followed by a volume of stories, *Dubliners* (1914), the autobiographical novel *A Portrait of the Artist as a Young Man* (1916), and a play, *Exiles* (1918). After *Ulysses*, Joyce devoted nearly two decades to *Finnegans Wake*, a STREAM-OF-CONSCIOUSNESS dream book in which he transformed the English language by way of elaborate puns, sound-play and immense erudition.

Joyner, Florence Griffith (1959–1998) American athlete. Joyner broke the world record for 100 meters (10.49 sec.) on July 16, 1988. At the OLYMPIC GAMES she won three gold medals: 100 meters, 200 meters (21.34 sec., another world record) and 4x100 relay. Her sister-in-law **Jackie Joyner-Kersey** (b. 1962) is also a world record-holder. She won the seven-event heptathlon in the 1988 Seoul Olympics with a record 7,291 points. Griffith Joyner won a second Olympic medal in the long jump and holds the U.S. records for heptathlon, long jump and 100-meter high jump. In 1995 Griffith Joyner was inducted into the U.S. Track and Field Hall of Fame. She died in 1998 of a heart seizure at the age of 38.

József, Attila (1905–1937) Hungarian poet. Born in Budapest, József spent his entire life in extreme poverty and used his poetry to protest the misery of the poor and express his own suffering. The influence of both Marx and Sigmund FREUD is evident in his work. At the age of three, he was abandoned by his father; at nine he attempted suicide; at 14 his mother died. His first volume, *Szepseg Koldusa*, appeared in 1922. In 1925 he was expelled from the University of Szeged for a revolutionary poem and left to study in Vienna and Paris. He joined the illegal Hungarian Communist Party in 1930 but was expelled in 1933 by Stalinists who attacked him as a fascist. Though he entered psychoanalysis in 1931 he was later hospitalized for severe depression. He committed suicide by throwing himself under a freight train. His poems began to be translated in the 1960s.

Juan Carlos I (1938–) King of Spain (1975–). The grandson of King ALFONSO XIII, Juan Carlos was named by dictator FRANCISCO FRANCO as future king in 1969. Crowned in 1975, shortly before Franco's death, he encouraged the restoration of democracy in Spain and established himself as a constitutional monarch, with effective power in the hands of a prime minister. Juan Carlos has been instrumental in developing and preserving Spain as a democracy, a function he began to exercise in 1981 when he helped avert a right-wing military coup.

Jubaland (Transjuba) Region of southwestern SOMALIA between the KENYA border and the Juba River. Once a province of Kenya, it was transferred by Britain to ITALY in 1925 and administered as a separate territory until July 1, 1926, when it was absorbed into Italian Somaliland.

Judson, Arthur (1881–1975) American impresario and concert manager. Judson was a major figure in the formative years of commercial recording and broadcasting in the U.S. He was a co-founder of the COLUMBIA BROADCASTING SYSTEM (CBS) and at one time was the sole owner of Columbia Records. From 1930 to 1935 he simultaneously managed the New York Philharmonic, the

Philadelphia Orchestra, several summer concert series and was president of Columbia Concerts Corp., a major book-ing agency.

July Days Period of July 16–18, 1917, after the FEBRUARY REVOLUTION when Russian soldiers and civilians, in sympathy with the BOLSHEVIKS, tried to seize power from KERENSKY's provisional government in Petrograd. LENIN considered their rising inopportune. They received no significant support and the attempt failed. Bolshevik involvement was ascribed to pro-German sympathies and Bolsheviks in general were accused of treason. Lenin fled to Finland.

Jung, C(arl) G(ustav) (1875–1961) Swiss psychologist. Jung was one of the most famous psychological theorists of the 20th century. His most famous concept, that of the **collective unconscious**—a reservoir of inherited mental imagery and structure from which all members of the human race draw myth and meaning—has exercised a pervasive influence not only in psychology but also in philosophy and the arts. Jung received his medical degree in 1900 and began his professional career as a psychiatrist at the University of Zurich. In 1907 he met Sigmund FREUD and became closely associated with Freud's emerging school of psychoanalysis. But within a few years Jung broke with Freud over the latter's insistent emphasis on sexuality alone as the dominant factor in unconscious motivation. Jung subsequently developed his theories of the animus and the anima—the male and female elements of the unconscious psyche that must be brought into harmony. *Two Essays on Analytical Psychology* (1956) provides a useful introduction to Jung's thought. His *Memories, Dreams, Reflections* (1965) is a revelatory autobiography.

“just-in-time” system See Shigeo SHINGO.

Jutland (Jylland) A peninsula, about 250 miles long, projecting into the North Sea from Germany; comprised of continental Denmark and the German state of Schleswig-Holstein. The only major fleet action of WORLD WAR I was fought by British and German DREADNOUGHTS and supporting vessels on May 31 and June 1, 1916, approx-

imately 60 miles off Jutland's northwest coast. Although the British suffered heavy casualties and the loss of many smaller vessels, their capital ships (and Germany's) were largely undamaged; the smaller German fleet was forced to retreat, and Britain retained control of the North Sea. Winston CHURCHILL said of the victorious Admiral JELlicoe that he was the only man who could have lost the Great War in a single day. In Germany the

BATTLE OF JUTLAND is known as the battle of Skagerrak.

Jutland, Battle of (1916) Part of British strategy against Germany in WORLD WAR I was to maintain a naval blockade in the North Sea to keep all shipping from German ports. Germany tested Britain's navy when its High Seas Fleet under Admiral Reinhard Scheer (1863–1928) sailed into Skagerrak, the sea passage between Jutland (Den-

mark) and Norway, May 31, 1916. British scouting squadrons encountered it and sustained severe losses. The British Grand Fleet under Admiral John R. JELlicoe arrived by evening, nearly entrapping the High Seas Fleet, but the Germans managed to escape in darkness and fog, losing only nine warships (out of 103) to the British loss of 14. Despite the heavier losses, the battle maintained British supremacy of the seas.

K

Kabalevsky, Dimitri Borisovich (1904–1987) Soviet composer, conductor and musicologist. He studied composition under Nicholas MYASKOVSKY and piano under SCRIBIN at the Moscow Conservatory. He taught at the conservatory from 1932, becoming a professor there in 1939. His works include the operas *Colas Breugnon* (1938), *Semya Tarasa* (1950) and *Nikita Vershinin* (1955). He has composed four symphonies, including his No. 1 in commemoration of the 15th anniversary of the Russian Revolution, three piano concertos, a violin concerto and a cello concerto, as well as many choral works, songs and piano works.

Kabila, Laurent Désiré (1939–2001) President of the Democratic Republic of the CONGO (1997–2001). Born in Jadotville when the Congo was still a colony of Belgium, Kabila strongly supported Patrice LUMUMBA, a Marxist and the state's first postindependence prime minister, Lumumba was overthrown and murdered a few months after assuming power, and Kabila went underground to train with supporters of Lumumba's philosophy (including the Argentine revolutionary Che GUEVARA). After Colonel Joseph MOBUTU, the organizer of the coup against Lumumba, installed himself as dictator of the Congo (renamed ZAIRE in 1971 by Mobutu), Kabila traveled to Tanzania, where in 1967 he founded the People's Revolutionary Party (PRP) and established a rebel "government" in the high country near Lake Tan-

ganyika in southeastern Zaire. When his rebel domain collapsed in the mid-1980s, Kabila returned to Tanzania and became a gold merchant.

In 1996 Kabila joined the insurrection initiated by the Tutsis, an ethnic group living in the eastern portions of the nation. Uniting Tutsi dissidents with veteran opponents of Mobutu under the Alliance of Democratic forces for the Liberation of Congo (AFDL). For seven months the AFDL fought Mobutu's supporters with substantial support coming from Rwandan and Angolan forces. By May 1997 the AFDL had marched on Zaire's capital, Kinshasa, ousted Mobutu and renamed the country the Democratic Republic of the Congo (DRC) with Kabila as president.

Not long after coming to power, Kabila was accused of being a front man for the Rwandan government, whose leader, Paul KAGAME, had been instrumental in the AFDL's victory. He also made many enemies by using military forces to disperse protesters against his administration. In 1998 Kabila's two major allies, RWANDA and UGANDA, turned against him and supported a rebellion against Kabila that began in the eastern portions of the DRC. Although managed to block the rebels' advance with help from Angola, Chad, Namibia and Zimbabwe. Kabila was assassinated in January 2001 and was succeeded by his son Joseph.

Kabul Capital city of AFGHANISTAN. In recent times Kabul has been engulfed in three bloody conflicts to determine

the leadership of the Afghan state. In 1979 it was occupied by Soviet military forces at the request of its government that was considered controlled by Communists subservient to Moscow. It remained under Soviet occupation until 1989, when Soviet president Mikhail GORBACHEV ended the 10-year war against Muslim fundamentalist guerrilla MUJAHIDEEN that had spearheaded the resistance to the Soviet occupation. Within three years of the Soviet withdrawal, Kabul had again become the focus of a conflict among the victorious mujahideen factions, each vying to ensure that it would dominate the post-Soviet Afghan state. These miniature wars subsided in 1996, when the TALIBAN, a guerrilla group championing the creation in Afghanistan of a Islamic state that strictly enforced the dictates of the Koran, managed to seize control of Kabul and establish its Islamist rule over much of Afghanistan. In 2001 the Taliban's rule in Kabul ended when, as a result of its refusal to hand over leaders of the Islamic terrorist organization AL-QAEDA residing in its borders, a U.S.-led military force entered Afghanistan and removed the Muslim fundamentalists from power.

Kádár, János (1912–1989) Hungarian communist leader; he came to power in the wake of the 1956 HUNGARIAN UPRISING against Soviet domination and remained Hungarian Communist Party leader until 1988. During the uprising, he had initially sided with popular reformist premier Imre NAGY but later

negotiated in secret with Moscow and arranged to be installed as premier, supported by the Soviet invasion force. For years, Hungarians viewed him as a traitor to the uprising and to the reform movement. Nonetheless, in the early 1960s he initiated his own brand of economic and political liberalization, which made HUNGARY one of the most prosperous and tolerant members of the Eastern bloc and won Kádár a measure of grudging respect. His limited reforms eventually led to calls for more substantial changes, changes that Kádár was not prepared to make. As the Hungarian economy stagnated in the 1980s, he came to be viewed as an opponent of needed reform. He was replaced as party leader in May 1988 by Károly Grosz and was given the figure-head position of party president; in early 1989 he was removed from this position due to failing health.

Kadet Party Russian political party. The name was formed by the initials of the Constitutional-Democratic Party, which represented members of the bourgeoisie and petty bourgeoisie civil servants, army officers, shopkeepers and the like. It was founded in October 1905 and was headed by Pavel Mil-iukov, who advocated government on a constitutional basis to be attained by legal methods. He looked to Great Britain for a model of his ideas. Nearly all the ministers in the provisional government were Kadets. The party was suppressed in 1917.

Kafka, Franz (1883–1924) Austrian novelist and short story writer. Born in Prague (then a part of the Austro-Hungarian Empire) of a Jewish family, he studied law at the University of Prague and thereafter worked for most of his life in a government insurance office while writing in his off hours. Although his life was outwardly uneventful, he was tormented by phobias and dark obsessions. His novel *Amerika* (1927) was a fantasy of a country he never visited, and the novella *Metamorphosis* (1915) has its protagonist, Gregor Samsa, transformed into a giant cockroach. *The Trial* (1925) is a dreamlike novel of bureaucratic justice forever postponed, while *The Castle* (1926) concerns a royal summons that can never be fulfilled. Kafka also produced numerous other novellas, stories, parables and aphorisms. Most of his

Austrian author Franz Kafka (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

work was published only after his death, in spite of his request that his manuscripts be destroyed. His work prefigured that of such later writers as Albert CAMUS and Samuel BECKETT (see EXISTENTIALISM). The word “Kafkaesque” has become part of the vocabulary of the 20th century; it refers to the helplessness of the individual in the face of an absurd situation.

Kagame, Paul (1957–) President of RWANDA (2000–). Born in Gitarama, a region in western Rwanda, he and his family left the country and traveled to UGANDA in 1961 because of growing sentiment in Gitarama against Tutsis, his ethnic group. In 1979 he joined the National Resistance Army (NRA) headed by Yoweri Museveni, and helped Museveni wage guerrilla war against the government of Uganda. In 1986 Kagame left the NRA to form a similar organization in Uganda in 1989 called the Rwandan Patriotic Front (RPF), which was dedicated to overthrowing the government of Rwanda. In October 1990 the RPF invaded Rwanda from its bases in Uganda. In July 1994, after four years of fighting against the Rwandan government of Juvenal Habyarimana, which had perpetrated a genocidal massacre of Tutsis, the RPF took control of the government, with Kagame serving as he took the posts of vice president and minister of defense under President Pasteur Biz-

imungu. In 2000, tensions between Kagame and Bizimungu over Kagame's suppression of opposition to the government prompted Bizimungu to resign. In response Kagame imprisoned the former president and repressed the Democratic Republican Movement (MDR), an opposition political party. In the national elections held in August 2003 Kagame was elected president of Rwanda for a seven-year term.

Kaganovich, Lazar Moyseyevich (1893–1991) Communist and disciple of LENIN. In 1911 Kaganovich joined the Bolshevik Party and played a prominent role in the leather workers' union. He assisted in organizing party affairs and rapidly advanced from post to post, including membership in the central committee from 1924, head of party organization in the Ukraine (1925–28) and, from 1930, membership in the Politburo. He was in charge of the collectivization of agriculture from 1929 to 1934 and the party purge in 1933–34. He became one of STALIN's chief lieutenants, but in 1957, as a member of the “anti-party group,” Kaganovich was expelled from the central committee and the Presidium. (See also ANTI-PARTY GROUP CRISIS.)

Kahn, Albert (1869–1942) American architect best known for his work on industrial buildings, often of outstanding modernist design. Kahn was born in Germany but came to the U.S. as a child. He worked for a Detroit architectural firm for some years before establishing his own office in 1902. Much of his work was for automobile manufacturers in the Detroit area. While the work tended to be conservative in ornamental detail, it excelled in the functional parts of factories where large glass areas and roof skylights generated forms related to those of more doctrinaire European modernists. The firm of Albert Kahn, Inc., was at its best with such works as the Chrysler Motor Company truck assembly plant building of 1936 near Detroit, with its dramatic structural trusses, or the Kellogg grain elevators in Battle Creek, Michigan. Kahn built projects around the world; there are many in the USSR and even a few in China and Japan.

Kahn, Herman (1922–1983) American nuclear strategist, economic theorist

and futurist. Kahn established a reputation as a strategist while working at the Rand Corporation in California from 1948 until 1961. He later founded and directed the **Hudson Institute**, a “think tank” in Croton-on-Hudson, N.Y., where a range of political, foreign policy and economic topics was explored. He believed that nuclear war was likely but survivable. He argued that nuclear deterrence was unworkable, and that policy planners must develop survival techniques. In economics he predicted that poverty and unemployment in the U.S. would disappear as a result of zero-inflation growth. He was consulted by every U.S. president from Harry S. TRUMAN to Ronald REAGAN.

Kahn, Louis Isadore (1901–1974)

American architect and architectural educator whose influence far outstrips the extent of his executed work. Kahn was born in Estonia and studied art and architecture, the latter at the University of Pennsylvania in Philadelphia from 1920 to 1924, when the program there was oriented toward classical Beaux-Arts design. He worked for several Philadelphia firms and turned toward MODERNISM while working with George HOWE and Oscar Stonorov. Kahn was asked to teach at Yale by Howe in 1947. He stayed until 1957 and became known for his Yale University Art Gallery addition (1953) with its triangular, trussed structure visible as gallery ceilings. His Richards Medical Research Laboratories at the University of Pennsylvania, with all the service elements grouped in external towers, followed in 1957–61. Although a controversial work disliked by many of its users, it established his international reputation. From 1957 until his death he taught at the University of Pennsylvania in Philadelphia, where he is credited with becoming a major influence in developing the “Philadelphia school” of modernism. Kahn came to have an almost mystical power as an educator and architectural theorist in a way that went far beyond the seeming modesty of such works as his Unitarian Church (1963) in Rochester, N.Y., and his Salk Institute Laboratories (1965) in La Jolla, Calif. His last works included government buildings in Dacca, Pakistan (under construction at the time of his death) and the Kimbell Art Museum (1972) in Fort Worth, Tex. Kahn’s de-

sign was generally simple in detail but powerful in form and full of complexities and subtleties that have made him one of the most admired and studied of all modern architects.

Kahn, Lord Richard Ferdinand

(1905–1989) British economist. Kahn introduced the concept of the “multiplier” in an article in the *Economic Journal* in 1931. An associate of John Maynard KEYNES, he contributed to the discussions that formed the basis of Keynes’s general theory of employment, interest, and money. He was also the author of *Selected Essays on Economic Growth* (1973) and *The Making of Keynes’ General Theory* (1984).

Kahnweiler, Daniel-Henry (1884–

1979) German-born art dealer and art historian. Kahnweiler was an early champion of the cubist painters in his Paris gallery (see CUBISM). He met Pablo PICASSO in 1907 and was closely associated with him until Picasso’s death in 1973.

Kaifu, Toshiki (1931–)

Japanese politician, prime minister of JAPAN (1989–91). Born in central Japan, Kaifu began his political career in 1960, when he was elected to the Japanese diet as a member of the governing Liberal Democratic Party (LDP). Kaifu’s reputation for effectiveness and honesty earned him several high posts within the government, including deputy chief cabinet secretary (1974–76) and minister of education (1976–77, 1985–86). In 1989, as the government of Uno Sosuke faced repeated charges of corruption, causing a decline in support for the LDP among Japanese voters, Kaifu was chosen to succeed Prime Minister Uno Sosuke amid charges of corruption. Kaifu’s success in combating corruption led the LDP to a victory in the diet elections of 1990. But, his government fell in September 1991 because of opposition from factions within the LDP and public dissatisfaction with the economic decline that began in 1991.

Kaiser, Georg (1875–1945)

German playwright. Kaiser was one of the leading figures in the rise of EXPRESSIONISM as a dominant force in German theater between the two world wars. His plays relied upon dramatic incident, sharp and rapid dialogue, and frequently

dealt with the clash between individual freedom and the economic and social demands of the machine age. A highly popular voice in the theater, Kaiser was no longer allowed, after the rise of the Nazis in 1933, to have his works publicly performed. Kaiser’s major work is his dramatic trilogy *The Coral* (1917), *Gas I* (1918) and *Gas II* (1920).

Kaiser, Henry John (1882–1967)

American industrialist. Born in Sprout Brook, New York, Kaiser began in the construction business in 1913, becoming a leader in the road-paving industry. He became known as a builder of dams and bridges, participating in the construction of the Boulder (HOOVER) DAM (1936), Bonneville and Grand Coulee dams and the San Francisco–Oakland Bay Bridge. An important contributor to the war effort in WORLD WAR II, he and his companies produced enormous numbers of ships, planes and other military vehicles. After the war he headed Kaiser Industries (1945–67), presiding over the company as it prospered and grew to include steel, aluminum, cement and home-building. One of his few failures was the postwar automobile called the Kaiser-Frazer.

KAL 007

Early in the morning of September 1, 1983, a Korean Airlines Boeing 747 strayed from its normal flight path and was shot down by Soviet fighters. All 240 passengers and 29 crew members aboard the airliner, Flight 007 from New York to Seoul, Korea, were killed. The world was horrified; U.S. president Ronald REAGAN condemned the downing of the airliner and demanded an apology. The Soviets insisted that they had believed the plane was a military aircraft, and that the pilot had ignored their signals to identify himself. Some Americans speculated that flight KAL 007 had deliberately “strayed” into Soviet airspace to carry out a spying mission. The incident seemed to confirm President Reagan’s assertion that the USSR was an “evil empire.”

Kaledin, Alexei Maksimovich

(1861–1918) Russian Cossack leader and soldier. Kaledin served from 1914 in command of a cavalry division but opposed the military reforms of the provisional government and in 1917

was forced to resign. Returning to the Don region, he was elected hetman of the Cossacks and organized an anti-Bolshevik campaign, but he suffered many defeats and shot himself in February 1918.

Kaline, Al (1934–) American baseball player. A 16-time All-Star, Kaline was known as Mr. Tiger, spending all of his 20-year career with Detroit. In 1955 he became the youngest player in American League history to capture the batting title. His average that year was .340, with 27 home runs and 102 runs batted in. Formidable on both offense and defense, his steady play in right field netted him 10 Gold Gloves. Kaline retired in 1974 and was named to the Hall of Fame in 1980.

Kalinin, Mikhail Ivanovich (1875–1946) Communist statesman, born at Tver (now Kalinin). An active revolutionary arrested many times after 1898, he became one of the first supporters of LENIN. He supported STALIN in the party struggle following Lenin's death. In 1919 he became chairman of the all-Russian executive committee of the Soviets and a member of the central committee. He was a member of the Politburo from 1926 and chairman of the Supreme Soviet of the USSR from 1938 to 1946.

Kaliningrad (Königsberg) Russian Baltic seaport on the Pregolya River, 80 miles east-northeast of Gdańsk. Before WORLD WAR II Königsberg was a part of German East Prussia and a major German naval base. Soviet troops captured it as they advanced toward Berlin at the end of the war. Under the POTSDAM agreement it was transferred to the USSR and renamed in honor of communist statesman Mikhail Ivanovich KALININ. With the breakup of the USSR in 1991, the Kaliningrad administrative district was cutoff from Russia. With the enlargement of the EUROPEAN UNION to include Poland and Lithuania in 2004, Kaliningrad became a geographical enclave within the EU.

Kalmyks (Kalmucks) Mongol people of the Tibetan Buddhist faith living in the Kalmyk Autonomous Soviet Socialist Republic. They migrated from western China to Russia (Nogay Steppe) in the early 17th century. In

1920 a Kalmyk autonomous oblast was established and in 1933 it became an autonomous republic. Occupied in part by the Germans in 1942, it was thought that the Kalmyks had collaborated with the enemy; as a result they were exiled to Soviet Central Asia. Rehabilitation of the Kalmyks was announced in 1957 and they returned to their homes. In 1979 Kalmyks numbered about 150,000.

Kaltenborn, H(ans) V(on) (1878–1965) Pioneering radio news reporter. Born in Milwaukee, Kaltenborn attended Harvard University, then became a newspaperman, working on the *Brooklyn Eagle* from 1910 to 1930. While on the *Eagle* (1922), he began delivering current events talks on a New York City radio station (a "local" station, as were all the primitively powered stations of the time). Eight years later he began work at CBS as a news commentator, and in 1936 he traveled to Spain to report the SPANISH CIVIL WAR. Returning to New York, he continued to broadcast news bulletins along with running commentary, and was particularly noted for his broadcasts on the 1938 Munich crisis. Kaltenborn became famous for his quick, clipped delivery in a somewhat nasal voice and for an encyclopedic knowledge that allowed him to discourse on nearly any subject without preparation. His autobiography, *Fifty Fabulous Years*, was published in 1950.

Kamenev, Lev Borisovich (1883–1936) Soviet political figure; a prominent leader of the Bolshevik movement before the revolution. Although he opposed LENIN's seizure of power in 1917 he remained prominent in the party. Initially he supported STALIN against TROTSKY and later he supported Trotsky and ZINOVIEV. He was expelled from the party several times. Finally, in 1935, he was sentenced to five years' imprisonment; at a retrial in 1936 he was again sentenced and was executed.

kamikaze Japanese for "divine wind," this term was used by the Japanese to describe the suicide air squadron that was formed toward the end of WORLD WAR II. It was an allusion to the typhoon that destroyed Kublai Khan's fleet before it could invade Japan in

1281. Kamikaze pilots attempted to crash their explosives-laden planes directly into Allied targets, mainly ships; a successful strike ensured their own deaths. The first attacks occurred at LEYTE GULF in November 1944, and they became a severe threat early in 1945. They were particularly devastating to Allied ships at OKINAWA. Largely because they came into use so late in the war, when Japanese defeat was all but assured, the kamikaze was of little importance in the outcome of the war.

Kandinsky, Wassily (1866–1944) Russian painter and art theorist. Widely considered the originator of purely ABSTRACT ART, he and his works have had enormous importance in the development of 20th-century painting. Born in Moscow, he was trained there as a lawyer, but abandoned the law to study painting in Munich in 1896. Traveling to Paris, he studied the work of the neoimpressionists, Gauguin and the Fauves. He exhibited at the Salon d'Automne (1904), at the Salon des Indépendants and with the German Expressionists of DIE BRÜCKE (1907); in 1910 he founded the New Association of Munich Artists. The following year he painted his first nonrepresentational painting and articulated his ideas about the power of pure color and the relationship between art and music in his theoretical book *Concerning the Spiritual in Art* (1912). In 1911, along with Franz MARC and other artists, he founded the BLAUE REITER group. Kandinsky returned to Moscow in 1914, teaching and organizing museums and other artistic enterprises.

He settled in Germany again in 1921, taught at the BAUHAUS (1925–33) and wrote *Point and Line* (1926), a study that concentrated on the geometric in art. His paintings of the period tend to change from the brilliantly colored improvisations of his earlier work to more linear and geometrical compositions. In 1933 the Nazis closed the Bauhaus and denounced Kandinsky's art as degenerate. He moved to Paris, where he remained until his death. Kandinsky's paintings and drawings are represented in important museums throughout the world. The Solomon R. Guggenheim Museum, N.Y.C., has an especially outstanding collection of his work.

Two kamikaze aircraft hit the USS Bunker Hill, 1945. (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

Kanellopoulos, Panayotis (1902–1986) Greek politician. Kanellopoulos was briefly prime minister of GREECE in 1945 and again in 1967, when his caretaker government was overthrown after 18 days by the military coup that ushered in a period of rule by the GREEK COLONELS.

Kanin, Garson (1912–1999) American film and stage director, actor, playwright, screenwriter and novelist. Kanin enjoyed an unusually successful and eclectic career in show business. But he is best remembered for his directorial and screenplay work in HOLLYWOOD. After working as both an actor and director on Broadway, Kanin came to Hollywood in 1938 and directed comedies including *The Great Man*

Votes (1939), *Bachelor Mother* (1939), *My Favorite Wife* (1940) and *Tom, Dick and Harry* (1941). During WORLD WAR II, Kanin directed military documentaries, including collaborations with Sir Carol REED and Jean RENOIR. His play *Born Yesterday* (1946) was adapted into a successful film (1951). With wife Ruth GORDON, Kanin wrote the ACADEMY AWARD–nominated screenplay for *A Double Life* (1948). Kanin, again with Gordon, coscripted films for Katharine HEPBURN and Spencer TRACY including *Adam's Rib* (1949) and *Pat and Mike* (1952).

Kansas City Jazz An influential style of American “Swing” jazz in the 1930s. Its major performers included Count BASIE, Pete JOHNSON, Mary Lou WILLIAMS,

“Big Joe” TURNER and Jay McSHANN. Many factors made Kansas City, Mo., an active jazz center in the late 1920s and 1930s. It was a key intersection of the routes of many of the traveling bands of the time. New Orleans jazz was spreading north from the Crescent City. Locally, the notorious Pendergast political machine had created a wide-open town with many clubs and ballrooms and a large black population. “The jam session tradition really started in Kansas City,” recalled Jay McShann. “You got cats from the north, south, east, and west; and everytime a new cat came to town, everybody would bring him down to the session and let him blow. It made for good times. . . .” Things really began to jump when Kansas City’s leading jazz figure, Bennie Moten, absorbed the nucleus of the Blue Devils, an Oklahoma City jazz band that included bassist Walter Page, vocalist Jimmy Rushing, and pianist Count Basie. After Moten’s death in 1935, the band became the Basie Band. Other groups that flourished at the time included the Andy Kirk band, Twelve Clouds of Joy. Young musicians were everywhere, at the Subway, the Reno Club, the Lone Star, the Sunset, mostly in areas around 18th and Vine. “Basie, Johnson, Williams, McShann, Turner—even the young Charlie ‘Yardbird’ Parker—all forged a distinctive, upbeat blues,” says McShann “and we’d play all night until about six o’clock in the morning when the porter would come in to clean up. We’d just move over, do a little tastin’, and then we’d start playin’ again. Fellows headin’ for work at that hour would come in with their lunch buckets and stay awhile. . . .” With the end of the decade, the departure for New York City of Basie and McShann, and the approaching war, the music scene declined in Kansas City, although that famous sound was now being heard worldwide.

Kapek, Antonín (1922–1990) Czechoslovakian political leader. Kapek was the chief of CZECHOSLOVAKIA’s Communist Party (1969–88) for the two decades following the Soviet invasion that crushed the PRAGUE SPRING reform movement. He rose to this post through the party ranks, at one point serving as a party boss in a machine factory. Kapek welcomed the Soviet invasion in 1968 and helped carry out

the purges of reformers who had taken part in the Prague Spring movement under Alexander DUBČEK. In February 1990, following the "velvet revolution" that returned Czechoslovakia to democracy, Kapek was expelled from the Czechoslovak Communist Party. He apparently committed suicide.

Kapitsa, Pyotr Leonidovich (1894–1984) Soviet physicist. Educated at Leningrad and at Cambridge (under Lord RUTHERFORD), Kapitsa was assistant director of research in magnetism at the Cavendish Laboratory (1924–32) and Messel Research Professor at the Royal Society's Mond Laboratory (1932–35). He did important work on the magnetic and electrical properties of substances at low temperatures and also designed an improved plant for the liquefaction of hydrogen and helium. Kapitsa was detained in the USSR in 1935, but later became director of the Institute for Physical Problems at the Academy of Sciences in Moscow. He was awarded the Stalin Prize for physics (1941 and 1943), and held the Order of Lenin. He was elected a Fellow of the Royal Society of Great Britain in 1929, the first foreigner in 200 years to gain membership. Kapitsa received the NOBEL PRIZE in physics (1978) in recognition of his lifetime scientific achievements. He was a strong advocate of the free exchange of scientific information.

Kaplan, Henry (1918–1984) American radiologist. Kaplan's pioneering work in research treatment was responsible for making Hodgkin's Disease one of the most curable forms of cancer. He was coinventor, with Edward Ginzton, of the **linear accelerator**, which enabled patients with cancer to receive high-dose radiation therapy. In 1969 he became the first physician to receive the Atoms for Peace prize, and in 1972 he was the first radiologist elected to the National Academy of Sciences.

Kapler, Aleksei Y. (1904–1979) Soviet screenwriter. Kapler was best known for his prewar films about LENIN, *Lenin in October* and *Lenin in 1918*. In 1943 he was sent into internal exile by Joseph STALIN, spending five of those years in Soviet prison camps (see GULAG).

Kapp Putsch Nationalist conspiracy hatched by right-wing German politician and journalist Wolfgang Kapp (1868–1922), aimed at setting Kapp up as chancellor and restoring the monarchy. Supported by Erich LUDENDORFF and backed by General von Luttwitz (1859–1942) and his troops, the putsch occurred on May 13, 1920, when Luttwitz and his men took BERLIN and proclaimed a new government with Kapp at its head. The government of the WEIMAR REPUBLIC fled and quickly called a general strike, which, along with a lack of foreign support, soon destroyed Kapp's abortive regime. The putsch revealed the discontent and nationalism that seethed beneath the republican government's surface and was to find expression in the later triumph of Adolf HITLER.

Karachi Pakistani seaport. When the independent nation of PAKISTAN was created in 1947, Karachi was its first capital; in 1959, the capital was moved to Rawalpindi (later renamed Islamabad). The city was bombed and shelled during the INDO-PAKISTANI WAR OF 1971. Muhammad Ali JINNAH, the founder of Pakistan, is buried here.

Karadžić, Radovan (1945–) Serbian politician and leader of the Bosnian Serbs. Karadžić graduated with a degree in psychiatry from the University of Sarajevo and eventually worked in local hospitals and as the sports psychiatrist for the Sarajevo soccer team.

At the end of the 1980s, Karadžić abandoned psychiatry for politics to found the Serbian Democratic Party, dedicated to defending the interests of Serbs within Bosnia and Herzegovina. Karadžić's party did well in the national elections held in November 1990, winning enough of the votes to be invited to form a coalition government under Alija IZETBEGOVIĆ, the head of a Muslim political party. But the coalition broke down in 1991 as CROATIA, SLOVENIA and Macedonia announced plans to secede from the federation and form independent states. When the Muslim community of Bosnia began to voice similar sentiments, Karadžić announced that if Bosnia and Herzegovina declared its independence, the Bosnian Serbs would secede and unite with Serbia. When a referendum held throughout the province in April 1992

avored independence from Yugoslavia, an ethnic-based civil war broke out among the Croats, Muslims and Serbs within Bosnia. By the end of that year Serb forces controlled approximately 70% of Bosnia and Herzegovina, and Karadžić became the self-appointed president of the Republika Srpska, a Serb republic within Bosnia's borders.

Karadžić's alleged maltreatment of Bosnian Muslims and Croats within the area he administered led to his indictment for war crimes in 1995 by a tribunal established by the UNITED NATIONS. Slobodan MILOŠEVIĆ, the leader of Serbia, promptly replaced Karadžić as the chief Bosnian Serb negotiator at the Dayton Conference in the U.S. that sought a negotiated settlement of the conflict in Bosnia. In July of 1996, a year after the DAYTON ACCORDS had established a power-sharing arrangement among the country's Muslim, Serb, and Croat factions, the war crimes tribunal issued an international warrant for Karadžić's arrest. Karadžić went underground to escape arrest, and has not been found.

Karajan, Herbert von (1908–1989) Austrian-born opera and symphonic conductor. Karajan's phenomenal musical gifts, flair for media exploitation, dramatic platform manner and controversial political associations made him into an international celebrity. Karajan was born in Salzburg and studied conducting under Bernhard Paumgartner.

Conductor Herbert von Karajan (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

From 1928 to 1935 he conducted at Ulm, and from 1938 to 1944 he served as music director at Aachen, the youngest appointed conductor in Germany. A member of the Nazi Party, he remained in Germany during WORLD WAR II, and his career was championed by GOEBBELS. He was "denazified" in 1947 but political opprobrium, particularly in the U.S. and in Israel, dogged him the rest of his days. His peak creative period came with the Berlin Philharmonic Orchestra from 1955 to 1989 and with his many operatic performances in Milan and Vienna. Alternating a staggering series of recordings with a globe-trotting lifestyle, he was astute in exploiting the possibilities of every available medium: stereo LP record, film, television, video, and compact disc. He brought the famous juicy string sound and the burnished brass timbres of his orchestra to many recorded sets of Beethoven and Brahms symphonies, numerous Italian operas, and the lush sonorities of Richard STRAUSS and Peter Tchaikovsky. Despite a notorious ego and driving temperament, he was totally devoted to music, molding the BPO into the front rank of world ensembles.

Karamanlis, Constantine See Constantine CARAMANLIS.

Kardiner, Abram (1891–1981) Psychoanalyst. A student-patient of Sigmund FREUD for six months in 1921, Kardiner cofounded the first psychoanalytic training school in the U.S., the New York Psychiatric Institute (1930). He was a leading proponent of the so-called environmental school of psychiatry, which stressed the importance of social conditions to human behavior. In addition to several scholarly works, he wrote a popular account of psychoanalytical apprenticeship titled *My Analysis with Freud* (1977).

Karelia (Karelian Autonomous Soviet Socialist Republic) Former autonomous republic in the USSR's RSFSR, stretching from Finland to the White Sea and from the Kola Peninsula south to the Vologdia and Leningrad oblasts. As a result of the RUSSO-FINNISH WAR OF 1939–40 the western part, which had shared Finland's history, had nearly all of its territory absorbed by the Karelo-Finnish Soviet

Socialist Republic (as it was known from 1940 to 1956). Finns and Germans occupied Karelia from 1941 to 1944 during WORLD WAR II, after which even more of the area passed to the Soviet Union. Following the Soviet Union's disintegration in December 1991, Karelia became an autonomous region of the Russian Federation.

Karjalainen, Ahti (1923–1990) Finnish politician. He was one of FINLAND's most prominent politicians in the years after World War II. Although he served as prime minister from 1962 to 1964 and again in 1970–71, he was overshadowed by the 25-year presidency of Urho KEKKONEN, who served from 1956 to 1981. Karjalainen was a leading expert on trade with the USSR. Convicted of drunk driving in 1979, he was forced out of government.

Karlfeldt, Erik Axel (1864–1931) Swedish poet. Karlfeldt's work, little known outside of Sweden, celebrates nature and the lore of the Swedish peasantry. His collections include *Vildmarks—och käleksvisor* (Songs of the wilderness and of love, 1895), *Fridolins visor* (Fridolin's songs, 1898) and *Fridolins lustgard* (Fridolin's pleasure garden, 1901). Beginning in 1907, Karlfeldt served on the Nobel Committee for literature and was subsequently offered the prize several times. He declined, becoming the first individual to do so. He was awarded the NOBEL PRIZE for literature posthumously in 1931.

Karloff, Boris (William Pratt) (1887–1969) British-born film and stage actor. One of the leading horror film actors of all time, Karloff has become indelibly identified with his role of the Monster in *FRANKENSTEIN* (1931), the film that made him a star. Karloff began his career on the Canadian stage and first came to HOLLYWOOD in 1921 where he worked as a bit actor in silent films throughout the decade. After his success in *Frankenstein*, Karloff became a ubiquitous figure in Hollywood horror films of the 1930s, including *The Mummy* (1932), *The Mask of Fu Manchu* (1932), the excellent *Bride of Frankenstein* (1935) and the disappointing *Son of Frankenstein* (1939). In the 1940s Karloff enjoyed a Broadway triumph as a killer on the run in the comedy *Arsenic and Old Lace*. His ca-

reer declined in the 1950s, but Karloff enjoyed a comeback in the 1960s through his roles in the Roger CORMAN films *The Raven* (1963) and *A Comedy of Terrors* (1964). His last film was *Targets* (1967).

Karman, Theodore von (1881–1963) Hungarian-American aeronautical engineer and physicist. The son of an educator, von Karman was educated at the Royal Polytechnic University at Budapest, at Göttingen and at the University of Paris. After viewing an airplane flight in Paris in 1908, he developed an interest in aeronautical engineering. Von Karman moved to the United States, accepting a post at the Guggenheim Aeronautical Laboratory at the California Institute of Technology in Pasadena, (GALCIT). He became director the following year, and with Frank MALINA in the late 1930s, he developed the facility into the beginnings of what is now NASA's JET PROPULSION LABORATORY. A pioneer in the theories of supersonic flight, von Karman later became chief consultant on the development of the Atlas, America's first operational intercontinental ballistic missile.

Károlyi, Count Mihály (1875–1955) Hungarian statesman. Born in Budapest, Károlyi was a member of an ancient aristocratic family. A liberal with a taste for reform, he entered parliament in 1905. During WORLD WAR I he was leader of the Independent Party, which supported the Allied cause. Appointed premier in 1918, he sought an armistice while attempting to mediate between political extremists of the left and right. When a republic was proclaimed in 1919, he was elected provisional president. Károlyi tried to initiate democratic reforms, but had little power. Finally, he was forced to cede the government to the communists and was supplanted by Béla KUN. He soon went into exile in England, returning to Hungary only after WORLD WAR II. He served as Hungarian ambassador to France from 1946 to 1949 but resigned in the face of disagreements with his increasingly totalitarian government. He spent his last six years as an exile in France.

Karpov, Anatoly (1951–) Soviet chess player. Karpov won the world individual championship for junior chess players in 1969, became an in-

ternational grandmaster, and in 1975 became world champion. He held his title until 1985, when he was defeated by Gary KASPAROV. The two players resumed their rivalry in a championship match in 1990, and Karpov failed to regain his title. In 1993 Karpov regained the International Chess Federation title when the organization stripped it from Kasparov. Karpov lost the title in 1999 when he refused to defend it in tournament play.

Karsavina, Tamara Platonovna (1885–1978) Russian-born prima ballerina and star of Serge DIAGHILEV's BALLETTS RUSSES. The sister of **Lev Karsavin**, Karsavina made her debut in 1902 and became prima ballerina of the Maryinsky Theater in St. Petersburg. She joined the Ballets Russes at its inception in 1909 and remained closely associated with Diaghilev until his death in 1929. She had leading roles in the premieres of two of Igor STRAVINSKY's works staged by Diaghilev in Paris. She was the first *Firebird* (1910) and the first ballerina-doll in *Petrouchka* (in which she danced with Vaslav NIJINSKY, 1911). She settled in London in 1918 and helped found the Royal Academy of Dance. After her retirement from the stage in 1933, she coached Margot FONTEYN and assisted the ROYAL BALLET.

Karsh, Yousuf (1908–2002) Armenian-born Canadian photographer. Karsh, who as a young boy survived the Turkish massacres of that country's Armenian population, immigrated to Canada in 1924 and established his first photographic studio in Ottawa in 1932. Karsh soon established himself as a leading portrait photographer of the great political, scientific and cultural figures of the age. In 1941, Karsh achieved popular fame for his striking portrait of a fierce-looking Winston S. CHURCHILL in *Life* magazine; Karsh elicited the expression from Churchill by snatching his cigar just before taking the picture. Karsh's photographs were collected in three volumes—*Faces of Destiny* (1946), *Portraits of Greatness* (1959), and *Karsh Portraits* (1976). *Search for Greatness* (1962) was his autobiography.

Karzai, Hamid (1957–) Leader of AFGHANISTAN (2001–). Born in KANDAHAR, Karzai was the son of Abdul Ahad Karzai, head of the Popozai, a

large Pashtun tribe, and legislator under the monarchy of Mohammed Zahir Shah. After the Soviet invasion of Afghanistan in 1979, Karzai's father moved his family to the town of Quetta in PAKISTAN. Karzai received his university education in India and returned to join the Popolzai resistance to the Soviet occupation.

After the Soviet withdrawal Karzai served as deputy foreign minister (1992–94) in the government in KABUL that attempted to unite the various MUJAHIDEEN rebel factions that had fought against the Soviet occupation. Initially, Karzai supported the TALIBAN's efforts in the mid-1990s to unite the warlords throughout Afghanistan under one centralized government. However, he and his father soon became open critics of the Taliban, which he believed was controlled by the government in Pakistan. Following his father's assassination in 1999, which many believed was ordered by the Taliban, Hamid Karzai became chief of the Popolzai. In October 2001, following the terrorist attacks on the U.S. on SEPTEMBER 11, 2001, Karzai convened a "Loya Jirga," or grand council, in an effort to establish a new Afghan government independent of the Taliban. His activities brought him to the attention of the U.S. government as its military forces toppled the Taliban in 2001. After occupying the country, the Americans appointed Karzai interim leader of Afghanistan. In July 2002 the newly constituted Loya Jirga of Afghanistan elected him president for two years. He was reelected in a nationwide popular election in 2004. As leader of Afghanistan he has attempted to solicit substantial U.S. economic and military aid to rebuild the shattered country while attempting to avoid accusations of being subservient to American foreign policy interests.

Kasavubu, Joseph (1910–1969) President (1960–65) of the Republic of the Congo (now Democratic Republic of the CONGO). Mayor of Léopoldville (Kinshasa) in 1957, when the Belgian Congo became independent in 1960, Kasavubu became the first president, with LUMUMBA as prime minister. He remained in office during the civil war over the KATANGA secession until 1965, when he was replaced by MOBUTU following a military coup.

Kasdan, Lawrence (1948–) American film director, producer and screenplay writer. Kasdan, who was educated at the University of Michigan, began his career as an advertising copywriter before selling his first screenplay in 1977. That same year, his screenplay for the film *Continental Divide* (1981) was purchased by Steven SPIELBERG, who recommended Kasdan to George LUCAS, who in turn hired Kasdan to write the screenplays for the blockbuster films *The Empire Strikes Back* (1980), *Raiders of the Lost Ark* (1981) and *The Return of the Jedi* (1983). Kasdan also emerged in the 1980s as a first-rate director with films including *Body Heat* (1981), *The Big Chill* (1983) and *The Accidental Tourist* (1988), all of which were written or cowritten by Kasdan as well. Throughout the 1990s Kasdan continued to direct dramas, such as *The Bodyguard* (1992), *Wyatt Earp* (1994) and *Mumford* (1999).

Kashmir Territory (approximately 85,800 square miles) located mainly in INDIA, bordering PAKISTAN, and whose control has long been disputed by those two states. In 1947 the region of Kashmir was partitioned between the newly created states of India (predominantly Hindu), which received about 38,800 square miles, and Pakistan (predominantly Muslim), which obtained a lesser portion of roughly 30,500 square miles. The division of this region was decided upon by the departing British colonial authorities to ensure that India would have adequate control over the Indus River, a vital waterway that flows through Kashmir. However, the separation from the Muslim state of Pakistan of the part of Kashmir assigned to India angered some fundamentalist Muslim residents, who demanded that they be allowed to secede and unite with Pakistan. Not long after the Hindu maharaja of Kashmir, Sir Hari Singh, refused their request, Pakistan attempted to take the region by force. The result was the first of many wars between India and Pakistan. While UN peace efforts secured a cease-fire by January 1949, they failed to produce a political settlement for Kashmir. The region suffered border skirmishes between the forces and supporters of both states in 1965, 1971, 1989 and 1990. A similarly violent response followed the Indian

government's efforts in 1998 to hold elections in Jammu and Kashmir (as the Indian-controlled portion of the Kashmir region is called officially), as Muslim separatists responded to the scheduled vote with bombings throughout the regional capital of Srinagar and near polling stations. In response, the Indian government dispatched troops to the region and used coercive force to prompt many citizens to cast their ballots. In the 1996 election the National Conference, a party that advocated greater autonomy for Kashmir within India, acquired a decisive majority of the contested positions at the ballot box. However, even after the 1996 elections, violence continued to break out as a result of increasing Muslim-Hindu tensions, such as the seizing of the Srinagar Hotel in Kashmir by militant members of the pro-Muslim terrorist group Lashkar-e-Tabia, which took hostages in the hotel. In an ensuing gunfight that ended on August 28, 2003, the militants were forced from the hotel by Indian security forces in an engagement that killed two civilians and four terrorists.

Kasparov, Gary (Garik Weinstein) (1963–) Russian chess master. Born in Baku, the capital of Soviet Azerbaijan, Kasparov took on a Russianized version of his maternal family's name after his father's death in 1970. A chess prodigy, he was solving complex chess problems at six and represented the USSR at chess tournaments abroad by the age of 13. He became Soviet champion at 18 and world champion at 22, beating his arch-rival, the Russian grandmaster Anatoly KARPOV. A bold, passionate player, Kasparov also brought his passion to bear as a political dissident, actively opposing Soviet communism in the late 1980s. His many championship matches with Karpov have been seen as contests between the old-style Soviet regime as represented by Karpov and the radical change sweeping the USSR as personified by Kasparov. In 1989 he and many of his family members were forced to flee the ethnic strife in Baku. Since then he has used Moscow as a home base. Traveling to various Western cities, he promotes chess in an attempt to make the game a popular international sport and continues to criticize the communist system. He again de-

feated Karpov in an international match in 1990–91. In 1993 the International Chess Federation stripped Kasparov of his title after he helped to create the rival Professional Chess Association.

Kassem, Abdul Karim (1914–1963) Iraqi general and political leader. Born in Baghdad, he was trained in military institutions and became a career officer. He distinguished himself by his bravery in warfare against the KURDS and in the Palestine war (1948). Kassem was instrumental in the coup of July 1958 that overthrew King FAISAL II, and he became prime minister of the new republic that replaced the monarchy. He put down a communist uprising the following year, but his powers steadily waned, and he was overthrown in the BA'ATH Party coup of February 1963 and subsequently executed.

Kasserine Pass (Al-Kasrayn, Al-Qasrayn) Mountain pass in Tunisia's Grand Dorsal chain, 130 miles southwest of Tunis, the scene of a decisive tank battle during the NORTH AFRICAN CAMPAIGN in WORLD WAR II. Driven westward into Tunisia after the German defeat by the British at EL ALAMEIN, German field marshal Erwin ROMMEL regrouped his forces and launched a daring counterattack. Tanks of his Afrika Korps captured the Kasserine Pass early on February 22, 1943. Four days later, however, U.S. forces under Gen. George S. PATTON dealt the Afrika Korps a mortal blow and recaptured the pass. This spelled the end of German domination of North Africa.

Katanga Revolt (1960–1963) On the granting of Congo independence by Belgium, the province of Katanga—encouraged by Union Minière, a company with exclusive mining rights in the copper- and uranium-rich province—seceded from Congo on July 11, 1960, under Moïse TSHOMBE. Using a white mercenary army to resist United Nations attempts to restore order, the Katanga rebellion lasted until January 14, 1963.

Kateyev, Valentin Petrovich (1897–1986) Soviet novelist and playwright. Among members of the older generation of Soviet writers, Kateyev was un-

usual in that he generally managed to avoid trouble with the Soviet authorities, while at the same time winning the respect of Western critics of Soviet literature. His reputation in the West rested largely on his lively satirical works dating from the 1920s, before SOCIALIST REALISM had become firmly entrenched as the dominant literary mode.

Katona, George (1901–1981) Hungarian-born economist and psychologist. Often called the dean of behavioral economists, Katona was the first to apply the study of consumer attitudes to economic forecasting. He taught at the University of Michigan (1946–72) and wrote more than a dozen books, including *The Mass Consumption Society*.

Katrina, Hurricane The costliest natural disaster in the history of the U.S., and one of the deadliest as well, the 2005 hurricane crossed southern Florida before gaining strength over the Gulf of Mexico and eventually making landfall along the coastlines of Louisiana, Mississippi and Alabama. The resulting storm surge broke the levees that separated Lake Ponchartrain from New Orleans, resulting in a massive flood that covered 80% of the city and surrounding neighborhoods. Many were caught off guard by the seriousness of the situation, which in the aftermath included more than 1,600 people dead, thousands of homes destroyed or damaged, 3 million people without electricity and an estimated \$75 billion in overall damages.

Katyn Village in west-central Russia, approximately 12 miles west of Smolensk. Katyn was captured by the Germans in August 1941, during WORLD WAR II. On April 14, 1943, they announced the discovery of a mass grave of approximately 4,250 Polish officers in the woods near the village; the officers had all been tied and shot through the head. The Germans accused the Soviets of having murdered the soldiers in 1940, when the area had been under Soviet occupation. In 1944 a Soviet commission accused the Nazis of the crime. The International Red Cross tried to investigate the incident but was denied access to the site. In 1951–52, a U.S. congressional commission concluded that the Soviets were indeed responsible; in

1990, during the era of GLASNOST, the Soviets finally admitted culpability for the Katyn massacre. The Poles had apparently been among the cream of the Polish officer corps and, as such, had been marked for liquidation by STALIN.

Kauffer, Edward McKnight (1890–1954) American artist and graphic designer best known for his posters, especially those designed while he was living in England from 1914 until 1940. Kauffer studied painting in Paris, but came to notice in the 1930s for his poster designs beginning with an assignment by Frank Pick for the London Underground (subway). His book *The Art of the Poster* appeared in 1924 and his work in the field, using strong typography along with abstracted but recognizable illustrative imagery, was widely exhibited and received a variety of awards. He also designed books and book jackets. In 1940–41 he produced several graphic designs for the New York MUSEUM OF MODERN ART. He became inactive after the early 1940s, having designed over 250 posters and 150 book jackets.

Kaufman, George S. (1889–1961) American journalist, playwright and director. A towering influence on the American theater, Kaufman is also remembered for his caustic wit evident in his writing and his participation in the legendary Algonquin Round Table. Kaufman's plays include *Jacques Duval* (1920), *The Forty-niners* (1922) and *The Butter and Egg Man* (1925). He also collaborated on many successful plays with Edna FERBER and Moss HART, among others. His collaborations include *Dinner at Eight* (1932), *The Man Who Came to Dinner* (1939) and *Ninotchka* (1955). Kaufman was responsible for the production of 45 Broadway shows, many of which were adapted for film. He also directed classics such as *The Front Page* (1928), *Guys and Dolls* (1950), which he co-wrote and *Romanoff and Juliet* (1957).

Kaunda, Kenneth (1924–) President of ZAMBIA (1964–91). Kaunda led the United Nationalist Independence Party in opposition to the Federation of Rhodesia and Nyasaland in 1960, which resulted in the end of the federation. Appointed prime minister of Northern Rhodesia in 1964 and having

supervised the constitutional arrangements that won his country independence, he became president of Zambia 10 months later. Kaunda sought to hold in check militants opposed to the Ian SMITH regime in Rhodesia, but his strong hostility to racism led to periods of tension with Britain over this and other issues. He assumed autocratic powers in 1972 to prevent total breakup but, after a new constitution in 1973, his presidency was confirmed. He remained one of the most respected leaders of Africa and the Commonwealth, although by 1990 he faced significant internal opposition. In 1991 Kaunda yielded to calls for free presidential elections, which he lost to the Movement for Multiparty Democracy's candidate, Frederick Chiluba.

Kautsky, Karl Johann (1854–1938) German socialist theorist. Born in Prague, he joined the Social Democratic Party in Vienna in 1875 and became private secretary to communist theorist Friedrich Engels in 1881. A loyal Marxist, he was founder and editor of the left-wing journal *Die neue Zeit* (1883–1917). He was largely responsible for the Erfurt program (1891), which linked the German Social Democratic Party with revolutionary Marxism, and he was a consistent opponent of Eduard Bernstein and his revisionist theories. Opposed to Germany's entry into World War I, he and Hugo Haase formed the Independent Social Democratic Party (1917–22). He bitterly denounced the BOLSHEVIKS in Russia, condemning their revolution (1917) as undemocratic and anti-Marxist. Kautsky settled in Vienna, where he rejoined the Social Democrats, living there until the eye of the Nazi occupation, when he fled (1938) to Holland. He was a prolific writer whose works include *The Economic Doctrines of Karl Marx* (tr. 1925) and *Ethics and the Materialist Conception of History* (tr. 1907). He also edited a four-volume history of the origins of World War I (1919).

Kawabata, Yasunari (1899–1972) Japanese author and playwright. Kawabata early evidenced his literary talent as a founder of an avant garde literary journal, *Bungei Jidai*, an advocate of the Neo-Sensualist movement. He experimented with surrealist techniques,

but his best-known works are more traditional in style and characterized by a nostalgic despondency tinged with eroticism. Kawabata's numerous works include the novels *Izu no odoriko* (1925, translated as *The Izu Dancer* 1964), *Yaukiguni* (1937, translated as *Snow Country* 1957) and *Sembazuru* (1959, translated as *Thousand Cranes* 1959); he has also written short stories, plays and criticism. Kawabata was awarded the NOBEL PRIZE in literature in 1968. He committed suicide in 1972.

Kay, Hershy (1919–1981) American orchestrator, composer and arranger. Kay is best known for his ballet scores, many of which were commissioned by George BALANCHINE. He also made arrangements of Leonard BERNSTEIN's musicals and orchestrated popular Broadway shows such as *Evita*, *A Chorus Line* and *Barnum*.

Kaye, Danny (David Daniel Kamin-ski) (1913–1987) American comic actor and entertainer. Kaye became famous in 1940 in the Broadway show *Lady in the Dark*. His HOLLYWOOD film career began with *Up in Arms* (1944) and peaked with his acclaimed performance as *Hans Christian Andersen* (1952). His comic gifts were best displayed in *The Secret Life of Walter Mitty* (1947), in which he played a bumbling daydreamer. Beginning with a series of sold-out appearances at the London Palladium in 1948, he became perhaps the most popular American entertainer in postwar Britain. In the 1960s he hosted *The Danny Kaye Show* on U.S. television; later, he was known largely for his comic performances that raised millions of dollars for the United Nations International Children's Emergency Fund (UNICEF), and also for his burlesque conducting of symphony orchestras to benefit musicians' pension funds.

Kaye, Nora (Nora Koreff) (1920–1987) American ballerina. Kaye was the first American dramatic ballerina to acquire an international reputation. She joined the AMERICAN BALLET THEATER (ABT) at its inception in 1939, and was primarily associated with this company. She also danced with the NEW YORK CITY BALLET. During her career some two dozen ballets were created

for her. Prominent among these were Antony TUDOR's *Pillar of Fire* (1942) and Agnes DEMILLE's *Fall River Legend* (1948). Kaye retired from the dance stage in 1961, but subsequently worked with her husband, director-choreographer **Herbert Ross**, on several dance films, including *The Turning Point* (1977).

Kaye, Sammy (1910–1987) U.S. bandleader. During the Swing Era of the 1940s, Kaye led one of the country's most popular "sweet bands." A bandleader for over 50 years, he had more than 100 hit records. His band was particularly popular during World War II, when it performed live on Kaye's long-running radio show *Sunday Serenade*.

Kaysone Phomvihane (1925–1992) Laotian communist leader, prime minister of LAOS (1975). The son of a Vietnamese civil servant and a Laotian woman, Kaysone Phomvihane attended a lycée and law school in Hanoi. He was reputedly taught by the Vietnamese revolutionary, General VO NGUYEN GIAP. In 1955 he was a cofounder of the Laotian Communist Party, which he has since led. During the American bombing of Laos (approximately 1964–73), a part of the VIETNAM WAR, and for a couple of years thereafter, he and other PATHET LAO leaders lived in caves near the Vietnamese border. In 1975 he became prime minister of the newly formed Lao People's Democratic Republic. Kaysone held the position of prime minister until his death in 1992.

Kazakhstan Predominantly Muslim territory of the Russian Empire (1880–1917), autonomous period under Bolshevik rule (1917–28), constituent member of the Union of Soviet Socialist Republics (USSR, 1928–91) and independent state (1991–). Originally acquired during the period of Russian imperial expansion in the 19th century, the area now encompassing Kazakhstan was conquered by Russia in an effort to expand its commercial influence and political control throughout Central Asia. In the early 20th century, Russian rule brought with it an influx of Slavic migrations and settlements, which soon began to constrict the nomadic lifestyle of the native Kazakhs. The friction resulting from the in-

evitable clashes of culture reached a crescendo in mid-1916 when, in an effort to improve industrial military output during WORLD WAR I, Russian authorities forced the recruitment of Kazakhs into work units. By August 1916, the Kazakhs, as well as the other peoples of Central Asia, had organized a revolt against this practice, and began to massacre nearby Russian settlers, prompting similar attacks by Russian forces against Kazakhs.

By November 1917, when the Bolsheviks seized power in Petrograd and began to create a state based on the rule of the Communist Party, the Kazakhs attempted to gain greater independence from Russian rule. The Alash Orda, a nationalist Kazakh political party formed to achieve this greater autonomy, collaborated with the "Red" Bolshevik forces in their struggle against the "White" anti-Bolshevik and anti-Communist state during the RUSSIAN CIVIL WAR (1918–20). In return the Alash Orda received promises that under Bolshevik rule, the Kazakhs would continue to enjoy the substantial autonomy they now exercised. When the war ended, the Bolsheviks drew borders for the Kazakhs similar to those now in existence, and established Kazakhstan as an Autonomous Socialist Republic. Two years later the borders were changed as Kazakhstan was amalgamated with other territories into the Kirgiz Autonomous Soviet Socialist Republic (ASSR), a founding member of the new USSR, renamed the Kazakh ASSR in 1925 and the Kazakh Soviet Socialist Republic in 1936. By 1928 the autonomy that the Kazakhs had experienced under Soviet rule began to disappear, as Soviet leader Joseph STALIN began to remove indigenous leaders from power, and later murdered many of them in the 1930s. Stalin also instituted collectivized agriculture in the region and forced the nomadic Kazakhs to settle on large combined farms. More than a million Kazakhs died of starvation because of the decline in food output under this system. Nikita KHRUSHCHEV ended the Stalinist purges and increased agrarian cultivation of land in the northern Kazakh region. But projects initiated under Khrushchev and his successor, Leonid BREZHNEV, such as the Baikonur Cosmodrome (the major Soviet space center) and the development of the re-

gion's industry, led to fresh arrivals of Russians into Kazakh society that caused a renewal of ethnic tensions.

In 1989, Soviet leader Mikhail GORBACHEV's policy of GLASNOST, or "openness," led to major changes in the Kazakh S.S.R. Gorbachev removed the Russian head of the Communist Party in Kazakhstan and replaced him with Nursultan A. Nazarbayev, an ethnic Kazakh. In December 1991 the Kazakh parliament voted to secede from the crumbling USSR, and establish Kazakhstan as an independent republic with Nazarbayev as president. In 1995 a conflict erupted between Nazarbayev and the parliament, the Supreme Kenges. When the country's Constitutional Court ruled that recent legislative elections were illegitimate, Nazarbayev dissolved the Supreme Kenges. Despite vigorous protests from the legislators, Nazarbayev eventually won the contest of wills when he gained an extension of his term in office from 1996 to 2000. He also won popular approval of his proposed new constitution, which increased the powers of the executive and created a bicameral legislature that soon came under the domination of Nazarbayev's supporters. Nazarbayev himself won reelection in 1999, despite complaints of noting irregularities in the earlier than expected election.

While Nazarbayev and his new constitution gained the support of most Kazakhs and the large Russian minority, a few extremists within both ethnic groups—those demanding Russia's annexation of northern Kazakhstan and those demanding the expulsion of all non-Muslims from the country—have caused several outbreaks of civil unrest. However, most of the country has favored cooperation with Russia, such as occurred with the transfer of Soviet-era nuclear weapons to Russian control in 1995 and with the Kazakh-Russian agreement jointly to develop and transport Kazakhstan's oil resources. Nazarbayev was reelected in a landslide victory in 2005.

Kazan, Elia (Elia Kazanjoglous) (1909–2003) American stage and film director. He was born in Istanbul, Turkey, to Greek parents. He immigrated to the U.S. in 1913, acted with New York's Group Theater in the 1930s and became a founding member

KAZAKHSTAN

1920	Kazakhstan becomes an autonomous republic within the USSR.
1936	Kazakh Autonomous Soviet Socialist Republic [ASSR] achieves status as full republic of the Soviet Union.
1930s	More than a million in Kazakhstan die in Stalin's campaign of forced collectivization.
1953–64	"Virgin Lands" policy of Khrushchev brings more Russian settlers to cultivate former grazing lands.
1955	Baikonur launch site at Turatam for Soviet rockets is selected, and construction begins.
1991	With the fall of Soviet Union, Kazakhstan achieves independence. Nursultan Nazarbayev becomes president.
1995	Constitutional crisis after Constitutional Court declares 1994 elections void, suspending parliament. Nazarbayev rules by decree, obtains referendum approval extending his term to 2000, and pushes through a new constitution giving himself greater powers and replacing Kenges with a new bicameral legislature. Last of the nuclear warheads in Kazakhstan are transferred to Russia.
1997	Capital is moved from Almaty to Akmola.
1999	Nazarbayev wins 81.7% of the votes for presidency in an election whose conduct is denounced by Organization for Security and Cooperation in Europe.
2001	The first major pipeline for transporting oil from the region to world markets connects the Tengiz oil field in western Kazakhstan to the Russian Black Sea port of Novorossiysk.
2005	Nazarbayev is reelected president by a wide margin.

of the Actors' Studio. Kazan was especially acclaimed for his powerful and realistic direction of the plays of Tennessee WILLIAMS, such as *A Streetcar Named Desire* (1947), and Arthur MILLER, such as *DEATH OF A SALESMAN* (1948). Among his many other stage successes were *The Skin of Our Teeth* (1942), *All My Sons* (1947) and *Tea and Sympathy* (1953). His films include *Gentleman's Agreement* (1947), *A Streetcar Named Desire* (1951), *On the Waterfront* (1954) and *East of Eden* (1955). Also a writer, he directed two films adapted from his own novels, *America*, *America* (1963) and *The Arrangement* (1969). More recently, he was the author of *The Anatolian* (1983), *An American Odyssey* (1989) and an autobiography, *A Life* (1988). KAZAN was criticized by some of his former friends and colleagues for naming former members of the Communist Party during a congressional investigation into subversive activities. In 1999 he received an honorary Oscar for his films from the Motion Picture Academy of America.

Kazantzakis, Nikos (1883–1957) Greek author. Considered modern Greece's greatest novelist, Kazantzakis was also one of the most controversial writers of his time. He was a philosophical writer greatly influenced by his teacher Henri BERGSON, Nietzschean theory and his birthplace of Crete. The latter became the central metaphor of his art, representing the dynamic of thesis, antithesis and final synthesis that he called the *Cretan Glance*. He gained international recognition with his novel *Zorba the Greek* (1946; tr. 1952). Other major works include the novels *Freedom or Death* (1954) and *The Last Temptation of Christ* (1960), and the epic poem *Odyssea* (1938; tr. *The Odyssey: A Modern Sequel*, 1958).

Kazin, Alfred (1915–1998) American critic. Born in Brooklyn, N.Y., he attended City College and Columbia University. His influential critical study of American prose, *On Native Grounds* (1942), established him as one of America's most important literary critics. Among his other critical works are *The Inmost Leaf* (1955), *Contemporaries* (1962), *Bright Book of Life* (1973) and *A Writer's America* (1988). A noted edi-

tor, teacher and memoirist, he is also the author of an evocative autobiographical trilogy, *Walker in the City* (1951), *Starting Out in the Thirties* (1965) and *New York Jew* (1978).

Keaton, Buster (Joseph Francis Keaton) (1895–1966) American motion picture actor and producer. Keaton is considered one of the Big Five SILENT FILM actor-comedians, with Charles CHAPLIN, Douglas FAIRBANKS, Sr., Harry LANGDON, and Harold LLOYD. He was born in Piqua, Kansas, to a family of medicine show performers. His skills at rough-and-tumble acrobatic comedy—magician Harry HOUDINI dubbed him “Buster”—led to his first series of one-reel films with rotund funnyman Roscoe “Fatty” ARBUCKLE in 1917. Two years later Keaton teamed up with producer Joseph M. Schenck and for the next decade produced his finest work, numerous shorts and feature films that rank among the greatest of all silent-screen comedies. Many of the important Keaton themes emerged at this time—the dogged determination and triumph of “the little man” (*Our Hospitality*, 1923); the world as reality, fantasy and dream (shorts like *The Playhouse*, 1921, and features like *Sherlock, Jr.*, 1924); and man's uneasy relationship with machines (*The Navigator*, 1925, and *The General*, 1927). Contrasting with the ready grin of Fairbanks and Lloyd and the eager pathos of Chaplin and Langdon, Keaton's face was a mutely expressive mask, with barely a twitch of an eyelash to betray inner thoughts and feelings. Coupled to that face was a superbly coordinated body that contributed to chases and falls and a hair-raising sense of speed and danger (see the long, concluding chase in *Seven Chances*, 1925). In 1928 Keaton relinquished his customary complete control over his work and began releasing his pictures through MGM. A long decline began, further troubled by alcoholism and emotional and marital instability. Aside from a few flashes of his comic genius—some gag writing on Red Skeleton films in the 1940s and a brief appearance with Chaplin in *Limelight* (1952)—he lapsed into obscurity. It was not until the late 1950s that a worldwide revival of interest in his work began at film festi-

vals and on college campuses. At the time of his death from cancer in 1966, he was again acclaimed one of the masters of motion picture comedy.

Keck, George Fred (1895–1980) American modernist architect who built a significant reputation in the 1930s before MODERNISM became widely accepted. Keck first won recognition as the designer of the futuristic House of Tomorrow in a village of model homes at the CENTURY OF PROGRESS EXHIBITION in Chicago in 1933. The house was a twelve-faceted, all-glass-walled circular pavilion placed on top of a base that included services, garage, and a hangar for the family airplane! At the 1934 fair Keck provided his Crystal House, also with walls of glass and a strikingly modern interior. His work thereafter for private clients was largely residential, including many midwestern houses of simple modern design. Most of his designs emphasized the concept of the solar house, which Keck developed by carefully studying patterns of the sun's path so that a maximum of winter sun aided heating and a minimum of summer sun penetrated the houses' windows. Orientation and placement of windows and overhangs for shading were planned to give maximum comfort and energy economy. It can be said that Keck is a precursor of the interest in solar heating that began in the 1970s.

Keeling Islands See COCOS ISLANDS.

Kees, Weldon (1914–1955?) American author, painter and composer. Though virtually unknown during his lifetime, Kees wrote jazz compositions, did some painting and wrote fiction and poetry. Among his best known poems are “The Beach in August,” “Early Winter” and “River Song.” His fictional satire of scholarly life, *Fall Quarter*, originally written in the 1930s, was published in 1990. He disappeared in 1955 and is presumed a suicide.

Kefauver, Carey Estes (1903–1963) American politician. A Democratic U.S. congressman from Tennessee (1939–49), he was elected to the U.S. Senate in 1948. He gained national fame with the Kefauver Crime Committee (1950–51). In 1956 Kefauver ran unsuccessfully as the Democratic

vice presidential candidate (with Adlai STEVENSON). He was the author of *Crime in America* (1951).

Kefauver investigation (1950–51)

Televised U.S. Senate hearings into organized crime, chaired by Senator Estes KEFAUVER of Tennessee. The Senate Special Committee to Investigate Crime in Interstate Commerce called hundreds of witnesses, including reputed mob bosses, corrupt policemen and politicians. The hearings, which gained wide attention because they were televised, made “taking the Fifth” part of the American vernacular after one witness refused to testify “on the grounds it might tend to incriminate me.” The highlight of the hearings was the testimony of mob leader Frank Costello, who agreed to testify only if his face was not shown. The cameras focused on Costello’s hands during his lengthy testimony. He was later sentenced to jail for contempt and tax evasion. Testimony also implicated former New York mayor William O’Dwyer in the corruption. After the hearings’ revelations, the FBI formally became involved in the fight against organized crime.

Keillor, Garrison (1942–) American author, humorist and creator and host of the popular radio show *A Prairie Home Companion*. Born in Anoka, Minn., Keillor received his B.A. from the University of Minnesota in 1966. While studying at that institution he gained radio experience as a staff announcer for the university’s radio station. Two years after graduation he began to host a classical music program on Minnesota Public Radio in which he would often create and recite farcical commercials for products and services in the fictional town of Lake Wobegon, Minn. His ability to blend music and humor seamlessly on his classical show and his careful study of Nashville’s Grand Ole Opry eventually inspired him to develop his own variety show centered around the concepts of Lake Wobegon he had already developed. Keillor’s new show, *A Prairie Home Companion*, debuted in 1974 with an audience among the Midwestern listeners of 30 radio stations. In 1979 Keillor’s program received national attention when it was broadcast coast to coast during a national radio promotion.

The formation of American Public Radio (later renamed Public Radio International) propelled Keillor and his *Prairie Home* companion show to an even wider national audience. When the nationwide network of public radio stations was created in 1982, *Prairie Home Companion* was broadcast on more than 200 stations by the time of Keillor’s brief retirement from radio in 1987, earning him a 1981 Peabody Award and a 1987 Grammy Award in the process. Two years later Keillor returned to radio with *American Radio Company of the Air*, a more cosmopolitan version of *Prairie Home* companion broadcast from New York City, until it moved to St. Paul, Minnesota, in 1993, resumed its original title and returned the focus of his show to the topics, music and venue he had pursued during his early days on Minnesota Public Radio.

In addition to his career in radio, Keillor also regularly writes short stories and books, including *Lake Wobegon Days*, *WLT: A Radio Romance*, and *We Are Still Married*.

Keitel, Wilhelm (1882–1946) German field marshal. During WORLD WAR II, Keitel was chief of staff of the supreme command of German forces. On May 8, 1945, he signed the articles of surrender on behalf of the Wehrmacht. Keitel was condemned as a war criminal at the NUREMBERG TRIALS and was hanged.

Kekkonen, Urho Kaleva (1900–1986) Finnish diplomat and politician. A dominant figure in Finnish politics for five decades, Kekkonen was first named FINLAND’S minister of justice in 1936. He later served as prime minister five times before becoming president, a post he held from 1956 to 1981. He was regarded as the chief architect of his nation’s special brand of neutrality, which evolved after World War II in response to Finland’s need to maintain cordial relations with the Soviet Union while forging ties with the West.

Keldysh, Mstislav Vsevolodovich (1911–1978) Soviet scientist and mathematician. Keldysh was president of the Soviet Academy of Sciences from 1961 to 1975. In this post, he had responsibility for development of the Soviet space program and for all national

scientific projects. His personal research was in computer science, rocketry and spacecraft.

Keller, Charles Ernest “Charlie” (1916–1990)

American baseball player. Keller joined the New York Yankees in 1939 and quickly became their starting right fielder. Together with Joe DIMAGGIO and Tommy Henrich, he formed one of the most renowned outfielders in baseball history. He later played for the Detroit Tigers. He appeared in the World Series four times, batting .306. He played 1,170 career games, with a .286 batting average. Retiring from baseball in 1952, Keller went on to a successful career as a horse breeder.

Keller, Helen Adams (1880–1968)

American author. Keller lost her hearing and sight during an illness at 19 months of age. Under the tutelage of Anne Sullivan, she learned to speak, to use sign language, to read braille and to type. She graduated with honors from Radcliffe College in 1904. She wrote books, and made lecture tours to promote interest in the handicapped, and in the process became a world-famous inspiration for others. Her works include *The Story of My Life* (1903) and *Out of the Dark* (1913).

Kellogg, Frank Billings (1856–1937)

American diplomat. A U.S. senator from Minnesota from 1917 to 1923, he became secretary of state in 1925 and served until 1929. He also served as special counsel for the United States and was a judge of the Permanent Court of International Justice from 1930 to 1935. He received the NOBEL PEACE PRIZE in 1929.

Kellogg, Will Keith (1860–1951)

American philanthropist and food products manufacturer. At the age of 14 he started selling brooms for his father. Later, he and his brother, who operated the Battle Creek Sanitarium, started experimenting with prepared cereal products of different kinds. In 1906 Will began the Kellogg business in cereals and started the prepared food era in America. He retired from active participation in the firm in 1929, and established the W.K. Kellogg Foundation in Battle Creek, Michigan. He invested most of his fortune in the

foundation and supported endeavors he judged to be helpful.

Kellogg-Briand Pact More formally known as the Pact of Paris, the agreement, signed August 27, 1928, renounced war as an instrument of national policy. The treaty, which arose out of negotiations between Aristide BRIAND, foreign minister of France, and Frank B. KELLOGG, U.S. secretary of state, called for the ratifying parties to use only peaceful means to settle disputes. By 1934 almost all the nations of the world had signed the pact, although many signed with certain limitations. Because it contained no provisions for enforcement, the pact proved ineffective. The treaty formed part of the basis for the war crime trials following World War II. (See also NUREMBERG TRIALS.)

Kelly, Charles E. (1920–1985) American World War II hero, popularly known as Commando Kelly. In 1943 he became the first enlisted man to receive the Medal of Honor in WORLD WAR II, for singlehandedly fighting off a German platoon in Italy in 1943. He wrote a book about his exploits, *One Man's War*, which was later made into a film.

Kelly, Ellsworth (1923–) American painter. Born in Newburgh, N.Y., Kelly studied at the Boston Museum School and the Académie des Beaux-Arts, Paris (1943–46), and continued to live in Paris until 1954. A leading exponent of HARDEGE PAINTING, he is known for grandly proportioned canvasses composed of large areas of vivid, flat color in abstract geometric shapes. Often named for the colors they contain, his paintings include *Blue Red Green* (1962, Walker Art Center, Minneapolis) and *Green Blue Red* (1964, Whitney Museum, New York City).

Kelly, Emmett (1898–1979) The most familiar clown in America. Kelly's forlorn and wistful characterization of a tattered hobo delighted audiences for more than 40 years. He appeared with Ringling Brothers and Barnum & Bailey Circus from 1942 to 1956, and with the Brooklyn Dodgers baseball team in 1957. He also made numerous television appearances. He was best known for a pantomime of sweeping the spotlight away.

Kelly, Gene (1912–1996) American actor, dancer, choreographer, film director. Kelly was one of the great popular dancers and innovative choreographers in motion pictures. He first gained attention in the Broadway musical *Pal Joey* (1941). He starred in several film musicals, including *On the Town* (1949) and *Singin' in the Rain* (1952). His innovations as director/choreographer are best seen in the films *An American in Paris* (1951) and *Invitation to a Dance* (1956). In the latter, unsuccessful film his dance sequences with animated characters made movie history.

Kelly, Grace See GRACE, PRINCESS OF MONACO.

Kelso (1957–1983) Thoroughbred racehorse, widely considered the best racehorse of his time and one of the top American horses of the 20th century. A gelding, Kelso captured the Gold Cup and the Horse of the Year title five times, from 1960 through 1965, a record no other racehorse has ever matched. During his career, he started 63 times, won 39 races, finished second 12 times, and third twice. He retired in 1965. His total earnings held the record for 13 years; at his death, he ranked fifth on the all-time earnings list.

Kempe, Rudolf (1910–1976) German-born opera and symphonic conductor, one of the greatest musicians of his generation. By contrast to the high-profile gloss of Herbert von KARAJAN and the mannered technique of Leonard BERNSTEIN, Kempe was a model of consistency and technique, sublimating himself to the service of the music. He was born in Niederpoyritz near Dresden, educated at the Orchestra School of the Saxon State Orchestra, and debuted as an opera conductor in 1933 with the Leipzig Opera. After a brief service as an infantryman in WORLD WAR II, he was named to several posts, including general music director of the Saxon State Theater in Dresden (1949–52), conductor of the Bavarian State Opera in Munich (1952–54), artistic director of the Royal Philharmonic Orchestra in 1964 (after the death of Sir Thomas BEECHAM), and chief conductor of the BBC Symphony Orchestra (1975). Never as well known in the U.S. as in Europe (although he occasionally con-

ducted at the Metropolitan Opera in New York City), he built an exemplary reputation for opera—particularly German and Italian works—and for the works of orchestral composers as various as Frederick DELIUS and Richard STRAUSS.

Kendall, Edward Calvin (1886–1972) American biochemist. Born in South Norwalk, Conn., Kendall earned his Ph.D. from Columbia University in 1910. From 1921 to 1951, he was a professor of physiological chemistry at the MAYO Foundation. Kendall isolated the adrenal hormone later known as cortisone, which his colleague Philip HENCH demonstrated to be effective in the treatment of rheumatoid arthritis. For this work, Kendall shared the 1950 NOBEL PRIZE for physiology or medicine with Hench and Tadeus Reichstein.

Kendrick, Pearl L. (1890–1980) American microbiologist. Kendrick helped develop a whooping cough vaccine in 1939. The vaccine led to the virtual eradication of this childhood illness. Kendrick also developed the standard DPT shot, which provided combined protection against diphtheria, whooping cough and tetanus. She later worked as a consultant for the WORLD HEALTH ORGANIZATION (WHO) and started immunization programs in Mexico, India, Germany, the USSR, and South America.

Kennan, George F. (1904–2005) U.S. official and political analyst. Kennan graduated from Princeton University in 1925 and joined the diplomatic corps. After World War II, he was placed in charge of long-range policy planning for the State Department. In 1947, Kennan introduced the concept of “containment,” the strategy of counteracting postwar Soviet expansionism with countermeasures aimed at preserving the status quo; Kennan believed that, in the face of vigilant, measured opposition from the West, the Soviet Union would eventually soften its foreign policy and liberalize its domestic controls. Many analysts believe that Kennan accurately predicted the outcome of the COLD WAR, more than 40 years later. Kennan went on to serve as U.S. ambassador to the Soviet Union and to Yugoslavia. In later years, he wrote and lectured

widely on foreign policy. In 1989 he was awarded the Medal of Freedom.

Kennedy, Anthony M. (1936–) Associate justice, U.S. Supreme Court (1989–). A native of California, Kennedy is a graduate of Stanford University, the London School of Economics and Harvard University Law School. After several years in private practice in Sacramento, California, Kennedy was appointed as a justice of the U.S. Court of Appeals for the Ninth Circuit. He was nominated to the Supreme Court by President Ronald REAGAN after Reagan's two previous nominees, Robert BORK and Douglas Ginsburg, failed to win approval. (Bork was rejected by the Senate based partly on his outspoken conservative views, while Ginsburg's nomination was withdrawn after it was revealed that he had smoked marijuana as a law student and professor.) In contrast, Justice Kennedy was confirmed without incident. On the bench Justice Kennedy was predictably conservative, generally helping to form a solid conservative bloc on the Court. However, in his first year on the Court he surprised many by siding with the liberal justices in overturning a Texas statute outlawing the desecration of the American flag on First Amendment grounds.

Kennedy, Jacqueline (Jacqueline Kennedy Onassis; née Bouvier) (1929–1994) Born into a wealthy New York family and educated at Miss Porter's School, Vassar, the Sorbonne and George Washington University, Jacqueline Bouvier was an ideal wife for politician John F. KENNEDY, whom she married in 1953. After her husband became president in 1961, the elegant First Lady, dressed in Oleg Cassini gowns, BALenciaga suits and the "Pillbox" hats, designed by HALSTON, was emulated by women all over the world. Utilizing her knowledge of art and antiques, she undertook a renovation of the White House that was televised in the famous "A Tour of the White House with Mrs. John F. Kennedy" in 1962. During her tenure, Mrs. Kennedy was also an able ambassador for the U.S. and traveled widely, winning support for the Kennedy administration with her youthful beauty and finishing school charm. In 1963 she was voted the most admired

woman in America, suffered the death of a newborn child and the terrible assassination of her husband, shot before her eyes in Dallas, Tex. Her stoicism as a young widow with two small children, Caroline and John, further endeared her to the American public. Her subsequent marriage to the Greek shipping magnate Aristotle ONASSIS in 1968 surprised her loyal fans. After his death in 1975, she established herself as an editor at the Doubleday publishing house in New York City and then led a quiet life out of the public spotlight. She remained, however, a mysterious and fascinating figure to many and an enduring symbol of style and sophistication. She died of cancer in 1994.

Kennedy, John Fitzgerald (1917–1963) Thirty-fifth president of the UNITED STATES (1961–63). Born in Brookline, Mass., of Irish Catholic background, he was part of a well-known business and political family, the son of Joseph P. KENNEDY (1888–1969), a successful businessman and movie industry executive who had been ambassador to Great Britain, and the brother of Robert F. KENNEDY and Edward M. Kennedy. He attended Harvard University (1936–40) and enlisted in the navy in 1941, distinguishing himself during WORLD WAR II as the commander of a PT boat in the Pacific. Kennedy entered politics as a congressman from Massachusetts (1947–53) and was a supporter of President TRUMAN's domestic policies but a critic of his relationship with China. He was elected to the Sen-

ate in 1952, and the following year he married Jacqueline Bouvier. He suffered from severe, war-related back problems in 1954–55 that to some degree hindered his active role in the Senate. During this period he wrote *Profiles in Courage* (1956), a series of biographical sketches of courageous American leaders that won him a 1957 PULITZER PRIZE. Kennedy was narrowly defeated for the vice presidential nomination in 1956 but won reelection to the Senate by a landslide in 1958.

An anticommunist in foreign policy and a liberal in domestic affairs, the charismatic and popular senator became the Democratic nominee for president in 1960. With Texan Lyndon B. JOHNSON as his running mate, he narrowly defeated his Republican opponent, Richard M. NIXON, to become the first Roman Catholic to be elected president and the youngest man ever to hold the office. He quickly initiated a domestic program (the New Frontier) that included tax reform, federal aid to education, increased civil rights and medical care for the elderly. He barely had time to fight for these programs when he was embroiled in crises abroad. His support of the failed Cuban BAY OF PIGS INVASION (1961) was largely criticized, but he was widely lauded for his resolute stand against the Soviets in the CUBAN MISSILE CRISIS (1962). In 1963 Kennedy was successful in working out a limited NUCLEAR TEST BAN TREATY with the USSR. In other foreign policy decisions, he established the PEACE CORPS to help the needy in developing countries and the

President John F. Kennedy conferring with his brother, attorney general Robert Kennedy, 1962
(NEW YORK WORLD TELEGRAM & SUN NEWSPAPER COLLECTION, LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

ALLIANCE FOR PROGRESS to aid Latin America. He also increased the number of American advisers in South Vietnam from some 700 to about 16,000, thus adding to a U.S. presence that would soon escalate into the VIETNAM WAR. He continued to press for his domestic programs, proposing (1963) extensive civil rights legislation, but met with a good deal of resistance from Congress. Most of these programs were not acted upon until the Johnson administration.

Kennedy was shot to death in Dallas, Tex., on November 22, 1963. The apparent assassin was Lee Harvey OSWALD. While the Warren Commission concluded that Oswald had been the killer and had acted alone, conspiracy theories about Kennedy's death abounded and flourish to this day. The death of the vital and eloquent young president, who had yet to fulfill his promise, caused shock and grief throughout the U.S. and the world.

Kennedy, Joseph Patrick (1888–1969) U.S. ambassador to Great Britain. A successful businessman and movie industry executive, Kennedy served as chairman of the Securities and Exchange Commission (1934–35) and head of the U.S. Maritime Commission (1936–37) before his appointment as ambassador (1937–40). An opponent of U.S. intervention in European affairs, Kennedy supported Neville CHAMBERLAIN's negotiations with HITLER. He resigned in 1940 to return to business. Kennedy encouraged his sons to pursue political careers and was important in the election of John F. KENNEDY to the presidency in 1960.

Kennedy, Robert “Bobby” F(rancis) (1925–1968) American political figure. Born in Brookline, Mass., he was a younger brother of John F. KENNEDY. He attended Harvard University and the University of Virginia Law School. After graduation in 1951, he worked as a lawyer for the Justice Department before becoming campaign manager for his brother's successful congressional bid. He was an assistant counsel for Sen. Joseph MCCARTHY's communist-hunting subcommittee from 1953 to 1956 and gained wide recognition as chief counsel for the Senate Rackets Committee, where he was instrumental in bringing to light the corruption in the Teamsters Union and of its leaders, James HOFFA

and Dave BECK. He went to work for his brother again in 1960, this time managing the elder Kennedy's successful presidential campaign. A close adviser during his brother's administration, he was also appointed attorney general and won praise for his pursuit of organized crime and his enforcement of CIVIL RIGHTS legislation. After the president's assassination, he continued to serve in the cabinet but resigned to run for the Senate from New York in 1964. Elected, he was an outspoken advocate of social change and of the rights of the poor. From 1966 on, he also became a powerful critic of the VIETNAM WAR. He became a candidate for the Democratic nomination for president in 1968, winning a string of primary victories that culminated in the California primary of June 4. After a victory speech that evening, he was leaving a Los Angeles hotel when he was shot to death by a disaffected Jordanian immigrant named Sirhan Bishara Sirhan.

Kennedy Round Long, complex negotiations to encourage world trade through reduction of tariffs on industrial and agricultural imports, particularly in the U.S. and Europe. These negotiations were prompted by President John F. KENNEDY's message to Congress on January 25, 1963. A final compromise was reached in Geneva on May 15, 1967.

Kenton, Stan (1911–1979) American bandleader-pianist-composer. Kenton began his career playing and writing for various West Coast theater and dance bands. He formed his first band in 1941, the Artistry in Rhythm Orchestra, which gained prominence with its large orchestral sound and precise ensemble playing. With the addition of arrangers like Pete Ruggolo and outstanding soloists such as alto saxophonist Art Pepper, Kenton's band dominated the jazz polls of the mid-1940s organized by such publications as *Down Beat* and *Metronome*. In 1949 Kenton appeared with the 20-piece Progressive Jazz Orchestra, which gave its name to the modern big band approach it represented. Kenton's most ambitious undertaking came in 1950–51 with the 43-piece Innovations in Modern Music Orchestra, with strings and an expanded wind section; though scoring successes with such large-scale compo-

sitions as Bob Graettinger's “City of Glass,” the venture proved too costly to sustain. Thereafter, Kenton led a series of highly competent but more conventionally sized big bands.

Kenton's place in jazz history is somewhat ambiguous: On the one hand, he attracted a large and faithful following; on the other, he was often dismissed by the critics, especially in his more epic endeavors, as pompous and vacuous. What is indisputable is the large number of highly talented jazzmen he helped nurture, such as Stan GETZ and Maynard Ferguson. Kenton is similarly secure in his justly earned reputation as a pioneering jazz educator whose summer jazz camps introduced a new generation to the improvisational muse.

Kent State shootings Shooting of student demonstrators protesting the VIETNAM WAR on the campus of Kent State University in Kent, Ohio, on May 4, 1970. Students had gathered to protest the U.S. invasion of CAMBODIA on May 1, holding rallies on the Kent State campus and in town. On May 2, a state of civil emergency was declared by the mayor, who called for Ohio National Guard troops. The troops arrived that night as the ROTC building was burned. Tensions between students and troops escalated until the morning of May 4, when some 1,000 students gathered on campus. Refusing to disperse, the students taunted the guardsmen and hurled stones at them while the troops lobbed tear gas canisters at the students. Apparently believing that they were being shot at by a sniper, some of the guardsmen opened fire at 12:25 P.M., killing four students (two men and two women) and wounding 11. The shootings shocked the nation and set off a wave of demonstrations on campuses throughout the U.S. and abroad.

Kenya (Republic of Kenya) Kenya, on the east coast of Africa, covers an area of 150,943 square miles. It became a British colony, but nationalist sentiment led to the formation of the Kikuyu Central Association (1928) with Jomo KENYATTA as leader. Pressure to restore land and political control to Africans brought about the violent MAU MAU uprisings from 1952 to 1960, during which the country was under a state of emergency. Kenya

achieved independence in 1962, establishing a republic with Kenyatta as president (1963). Kenyatta's death brought Daniel arap Moi to the presidency in 1979. He maintained tribal balance in government and established close relations with the West. However, increased opposition to his policies led to an attempted coup (1982), student riots (1985, 1987), Muslim riots (1987) and detention of suspected rebels. Though Moi was reelected in 1988, the stability of the country continued to deteriorate, with the murder of a government minister in 1990 igniting antigovernment riots. Moi was reelected in 1992 and 1997, but his government was accused of human rights violations. In December 2002 Moi's rule of Kenya came to an end when opposition candidate Mwai Kibaki was elected to the office in a landslide. In 2004 Kenyan ecologist Wangari Maathai was the first African woman to be awarded the Nobel Peace Prize. Severe drought has plagued Kenya in 2006, as it has other nations in the African Horn.

Kenyatta, Jomo (1895?–1978) Kenyan nationalist leader, first president of KENYA (1964–78). A member of the minority Kikuyu tribe, Kenyatta was educated in a Christian mission school and began his public career in 1922 when he joined the Kikuyu Youth Association in Nairobi, the capital of Kenya, which was then a colony of Great Britain. As

KENYA	
1920	Kenya becomes a British colony.
1952	Formation of Mau Mau anticolonial terrorist movement; colonial government declares state of emergency, arrests nationalist leader Jomo Kenyatta.
1956	Mau Mau activity subsides; state of emergency lifted.
1960	Tom Mboya and Oginga Odinga form Kenya African National Union (KANU); British begin to prepare for Kenyan independence.
1961	Kenyatta released from detention.
1963	(June 1) Kenya gains self-government, with Kenyatta as prime minister.
1964	(Dec. 12) Kenya gains full independence, declared a republic with Kenyatta as president.
1969	Assassination of Tom Mboya.

(Table continues)

KENYA (CONTINUED)

1978	Death of Kenyatta; Daniel arap Moi becomes president.
1982	Attempted air force coup against Moi is foiled.
1990	Kenya's foreign affairs minister, a top government official, is found murdered; government bans demonstrations.
1992	Moi reelected in multiparty elections.
1998	Bomb explodes at the U.S. embassy in Nairobi, killing 224 people.
2002	Mwai Kibaki replaces Moi as president.
2004	Kenyan ecologist Wangari Maathai wins the Nobel Peace Prize.
2006	Drought threatens millions with starvation in what the president calls a "national disaster."

he rose in Kikuyu politics, he traveled to Europe in 1929 to protest British encroachment upon Kikuyu land. He returned to Europe in 1931 for a 15-year stay that included study at the London School of Economics. Upon his return to Kenya in 1946, Kenyatta became head of the New Kenya African Union, a nationalist group seeking political rights for blacks. Although he favored reform by legal means, he was connected in many people's minds with the underground MAU MAU movement, which was responsible for acts of terror against whites and blacks from 1952 to 1955. He was jailed by the British during the 1952 emergency in Kenya and he subsequently was sentenced to seven years imprisonment. At the end of his term, Kenyatta was confined to his tribal village. After his release, Kenyatta headed the Kenya African National Union (KANU), which won a majority in elections in 1962 for an independent Kenyan parliament. Kenyatta became prime minister upon Kenya's independence in December 1963. The following year he proclaimed Kenya a republic and became its president. Under Kenyatta's administration, KANU became the sole legal political party, and few figures rose to challenge the president's leadership. He outlawed the Kenya People's Union in 1969 and detained those members who did not join KANU. After the assassination in that year of Tom MBOYA, widely regarded as Kenyatta's successor, talk of the president's replacement was discouraged and finally declared illegal in 1976. Under Kenyatta's

leadership, the country followed a moderate, pro-West course, encouraging free enterprise and making Kenya one of the most prosperous countries in black Africa. While promoting foreign investment, Kenyatta also required that companies train and hire Africans, thus building up a native labor force capable of running the country's affairs. Despite great income disparity, urban unemployment and substantial corruption, Kenya's economic future was considered relatively promising compared with other African nations.

Kepes, György (1906–2001) Hungarian-American painter, designer and art theorist. Born in Hungary, Kepes studied at Budapest's Academy of Fine Arts from 1924 to 1928. During his student days, Kepes began his photogram experiments, creating abstract images on photographic paper without benefit of camera. Emigrating to the U.S., he and László MOHOLY-NAGY cofounded the New Bauhaus in Chicago in 1937. In 1946 he went to the Massachusetts Institute of Technology where he became professor of visual design and director of the Center for Advanced Visual Studies. His works of art and his studies explored the emotional role of light and color in art, particularly in abstract images. His many books of art theory include *The Language of Vision* (1944) and *Structure in Art and Science* (1965).

Keppel, Francis (1916–1990) American educator. As U.S. commissioner of education from 1962 to 1966, he was a

strong supporter of programs to improve the education of children from poor families and encouraged rigorous enforcement of the CIVIL RIGHTS ACT OF 1964 as it applied to education. He also played a major role in the creation of the National Assessment of Educational Progress, which measured the effectiveness of education across the country. He later served as director of the education policy program of the Aspen Institute, and as an adviser to libraries, art centers, the WORLD BANK and developing nations.

Kerensky, Alexander Fedorovich (1881–1970) Russian statesman. A moderate socialist, Kerensky was elected to the fourth DUMA in 1912 and there led the Labor group of socialist peasant members. A brave opponent of the czarist government, he later joined the Socialist Revolutionary Party (see SOCIALIST REVOLUTIONARIES). He was a leading figure in the FEBRUARY REVOLUTION of 1917. During 1917 he held many government posts: minister of justice (February), minister of war and navy (May) and in July became prime minister. As prime minister he aimed to continue the war against Germany, but this undermined his popularity and in November he was ousted by the BOLSHEVIKS (see OCTOBER REVOLUTION). He lived the rest of his life in exile, first in France and then in Australia, and finally, from 1946, in the U.S.

Kern, Jerome David (1885–1945) One of the prime architects of American

Russian revolutionary and émigré Alexander Kerensky (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

popular song in the 20th century. As a boy in New York he preferred music studies at the New York College of Music to working in his father's business. Dividing his time between New York and London, he studied, worked for impresarios Charles Frohman and Florenz ZIEGFELD and finally had the chance to write his first musical score to a show, *The Red Petticoat* (1912). At a time when the American stage was dominated by European songs and shows, Kern wrote a series of small musicals for Broadway's Princess Theater, including *Very Good Eddie* (1915) and *Oh, Boy* (1917). He was soon an established figure in American musical theater, composing the songs and music for the landmark *SHOW BOAT* (1927). He moved to HOLLYWOOD in 1934 and wrote several original film scores, including *Swing Time* (1936), *High, Wide and Handsome* (1937) and *Cover Girl* (1944). His many collaborators were major figures in the business: Dorothy Fields, Johnny MERCER, E. Y. HARBURG, Ira GERSHWIN and Oscar HAMMERSTEIN II. Among his most distinguished melodies are "Look for the Silver Lining," "Make Believe," "Ol' Man River," "Smoke Gets in Your Eyes," "All the Things You Are" and "The Last Time I Saw Paris" (included in the score for the 1941 movie *Lady Be Good*, it won him an ACADEMY AWARD). Despite his classical training, Kern seldom strayed from song writing into the more traditional forms of "serious" music.

Kerner scandal In 1973 Otto Kerner, a U.S. Federal Circuit Court judge and former governor of Illinois (1961–69), was convicted on 17 counts of conspiracy, fraud, perjury, bribery and income tax evasion committed when he was governor. He was sentenced to three years in prison and fined \$50,000.

Kerouac, Jack (1922–1969) American novelist. Born Jean Louis Kerouac in Lowell, Mass., he briefly attended Columbia University. A leader of the rebellious BEAT GENERATION of the 1950s, he is best known for the novel *On the Road* (1957), an autobiographical account of his travels throughout the U.S. in search of new sensation and a kind of drugged enlightenment. Similar in theme, his later works include *The Subterraneans* and *The Dharma Bums* (both 1958), *Big Sur* (1962) and *Desolation Angels* (1965). Kerouac also wrote poems and essays.

Kerr, Deborah (1921–) A veteran of 44 films between 1943 and 1969, Kerr was nominated for six ACADEMY AWARDS for Best Actress but never won. Born in Scotland, she achieved success in British films such as *Black Narcissus* (1947) before signing with METRO-GOLDWYN-MAYER in HOLLYWOOD. Although well known for her portrayal of poised, well-bred women, steamy love scenes such as the one on the beach with Burt LANCASTER in *From Here to Eternity* proved her ver-

Beat novelist and poet Jack Kerouac (right), with Neal Cassady, the inspiration for *On the Road* protagonist Dean Moriarty (PHOTOFEST)

satility. Other films include *The King and I* and *Tea and Sympathy* (1956), *Separate Tables* (1958), *The Sundowners* (1960) and *The Night of the Iguana* (1964). In 1994 Kerr received an honorary Academy Award for her contributions to the film industry.

Kerr, Walter (1913–1996) American drama critic and playwright. Kerr was a professor of theater at Catholic University in Washington before turning to criticism. He joined the *New York Herald Tribune* in 1951 and moved to the *New York Times* in 1966. His Broadway reviews influenced a generation of theatergoers. Other works include *How Not to Write a Play* (1956) and *Tragedy and Comedy* (1967). He also collaborated on the musical *Goldilocks* with his playwright-wife Jean Kerr.

Kerry, John F(orbes) (1943–) American politician. The son of a foreign service officer, Kerry was educated in private schools in the United States and Europe. He graduated from Yale University in 1966 and entered the U.S. Navy. Sent to Vietnam during the VIETNAM WAR, Kerry served as an officer on a gunboat that operated in the Mekong Delta. He won a Silver Star, a Bronze Star with Combat V, and three Purple Hearts for his performance in battle. On returning from Vietnam, Kerry co-founded Vietnam Veterans of America and became a leading member of the Vietnam Veterans against the War, testifying before the Senate Foreign Relations Committee in 1971 in opposition to the U.S. war effort in Southeast Asia. After obtaining a law degree from Boston College Law School in 1976, Kerry served as prosecutor in the Middlesex County District Attorney's Office in Boston. He was elected lieutenant governor in 1982, and two years later was elected United States senator despite Ronald REAGAN's landslide victory in the national presidential election. Kerry was an active and outspoken member of the Senate Foreign Relations Committee and worked with Senator John McCain of Arizona, a fellow Vietnam veteran, to promote the interests of veterans and campaign finance reform. Kerry was reelected in 1990, 1996 (in a closely watched race against the popular Republican governor, William Weld) and 2002. After a slow start in the Democratic presidential primary campaign

of 2004, Kerry became the party's candidate against Republican president George W. BUSH in the November 2004 election. He was defeated by Bush and returned to the Senate.

Kesey, Ken (1935–2001) American writer. Born in La Junta, Colo., Kesey became a COUNTERCULTURE hero in the 1960s with the publication of his uproarious and iconoclastic novel *One Flew Over the Cuckoo's Nest* (1962, filmed 1975). His reputation was enhanced by his advocacy of psychedelic drugs and by the antics of his "Merry Pranksters," a group of likeminded rebels who toured the U.S. and Mexico in a converted school bus. Their activities were described by Kesey in the novel *Ken Kesey's Garage Sale* (1973) and chronicled in Tom WOLFE's *The Electric Kool-Aid Acid Test* (1968). Kesey was also the author of *Sometimes a Great Notion* (1964) and *Demon Box* (1987).

Kesselring, Albert (1885–1960) German field marshal. Kesselring served as an artillery officer in WORLD WAR I. In WORLD WAR II, he was an important Luftwaffe commander, at one time or another in charge of air operations in Poland, the Western Front, central Russia and the Mediterranean. In 1943 he became supreme commander of German forces in Italy, and later that year, commander in chief of the West. In 1947 Kesselring was convicted of war crimes and sentenced to death, but his punishment was commuted to life in prison. He was released in 1952.

Keyes, Sidney Arthur Killworth (1922–1943) English poet. Keyes was a shy and frail child, and his early education took place mostly at home. At Queens College, Oxford, he displayed great brilliance and promise and was associated with the poet John Heath-Stubbs. He edited a literary magazine and founded a theater group that performed his play "Hosea." Following the publication of *The Iron Laurel* (1942), Keyes was mobilized and stationed in Tunisia. Shortly before his 21st birthday, he was killed on a reconnaissance patrol. *The Cruel Solstice* was issued posthumously in 1943, *Collected Poems* appeared in 1945; Its introduction by Robert Penn WARREN praised Keyes for being the first English poet "to marry

Continental symbolism to the English romantic tradition." His major influences were W. B. YEATS and Rainer Maria RILKE. He was one of three important English poets killed in WORLD WAR II, the others being Keith DOUGLAS and Alun LEWIS.

Keynes, John Maynard (first Baron Keynes) (1883–1946) English economist. One of the most influential economic thinkers of the 20th century, he was born and educated at Cambridge. A member of the BLOOMSBURY GROUP, Keynes was a man of wide interests and great intelligence. He was a currency specialist in the India Office (1906–08) and served in the treasury (1915–19) before becoming the principal British financial representative to the PARIS PEACE CONFERENCE after World War I. He resigned in protest against the harshness of the terms imposed upon Germany, outlining his views in *Economic Consequences of the Peace* (1919), a book that won him international acclaim. While continuing to support a capitalist system, Keynes began to deviate from classical free economy concepts in 1929, supporting efforts by LLOYD GEORGE to create a program of government-sponsored public works and public employment. Keynes stressed full employment through cheap money, lowered interest rates and increased public and private investment.

His advocacy of active government intervention into the free play of the market and his belief that the unrestrained workings of that market would ultimately result in a depression were spelled out in his classic work *General Theory of Employment, Interest and Money* (1936). His economic and fiscal theories became generally accepted and were incorporated into such national policies as the American NEW DEAL. Keynes served as a consultant to the chancellor of the exchequer and was a director of the Bank of England during World War II. He was an important figure in the BRETTON WOODS CONFERENCE of 1944, establishing postwar monetary policies and creating a WORLD BANK (the INTERNATIONAL MONETARY FUND) to help developing countries. His many works include *Tract on Monetary Reform* (1923), *The End of Laissez Faire* (1926) and *Treatise on Money* (2 vols., 1930).

Keyserling, Leon H. (1908–1987) U.S. government consultant. Keyserling helped draft major NEW DEAL legislation and served as a high-ranking official in federal housing programs. In 1949 he was named chairman of President Harry S. TRUMAN's Council of Economic Advisers, a post he held until the end of Truman's presidency. After leaving government in 1953, he worked as a private consultant and lawyer and founded the Conference on Economic Progress, a nonprofit group devoted to public interest projects.

KGB Acronym for Komitet Gosudarstvennoy Bezopasnosti (Committee for State Security). The KGB was the Soviet security service since 1953. It both enforced Communist Party rule at home and conducted espionage abroad. Despite the reforms of GLASNOST and PERESTROIKA under Mikhail GORBACHEV in the late 1980s, the KGB remained a powerful force in the USSR. Following the disintegration of the Soviet Union in December 1991, the KGB became the Federal Security Service (FSB), the intelligence agency of the Russian Federation. In 2000 a former KGB agent, Vladimir PUTIN, became president of Russia. (See also SOVIET SECRET POLICE.)

Khachaturian, Aram Ilyich (1903–1978) Soviet composer. Born in Georgia, he studied at the Moscow Conservatory (1923–34). His compositions were influenced by Armenian, Georgian and other folk tunes that he collected. His first symphony (1934) drew attention to his talent, and this was followed by a piano concerto (1936) and a violin concerto (1940). His best-known works are two ballets, *Gayane*, which includes the saber dance (1942), and *Spartacus* (1954, revised 1958). He also composed music for films and plays. For a short period he was under censure during the worst of the ZHDANOV "formalist" pressures. He received many awards, including the Order of Lenin.

Khamenei, Ayatollah Seyed Ali (1939–) Shi'ite Muslim cleric, ayatollah (1989–) and president of IRAN (1981–89). Born in Mashhad to a Shi'ite cleric, Khamenei studied Islamic theology in the city of Qom under Ayatollah Ruhollah KHOMEINI.

Khomeini's teachings and interpretation of the Koran promoted an Iranian version of ISLAMISM, a strict application of Islamic law to everyday life, economics, society and national politics. Khamenei soon came to accept Khomeini's pronouncements, and in 1962 joined his instructor's fundamentalist Shi'ite movement against the ruler of Iran, Shah Mohammad Reza PAHLAVI. He was arrested by the Savak, the shah's secret police, in 1963.

In 1979 massive protests against the shah's rule led to a revolution that overthrew the Iranian monarchy and installed a theocracy directed by Khomeini. Khamenei helped found the Islamic Republican Party (IRP), the political organization that would ensure the application of Khomeini's teachings throughout the Iranian government, including the Majlis (the Iranian parliament). Khamenei later served in the Majlis as a representative of the IRP, a member of the Council of the Islamic Revolution, a commander of the Revolutionary Guard (the Iranian paramilitary group devoted to Khomeini), a deputy minister of defense and a member of the Supreme Council of Defense. In 1981 he was elected president of Iran, he won reelection in 1985. He retired from the presidency in 1989, as required by the Iranian constitution.

Following the death of his longtime mentor Khomeini in the same year, Khamenei assumed the Shi'ite title of ayatollah, a Persian word that means "gift of God" that designates the supreme spiritual leader of Iran under the Islamic state. As "Guide of the Islamic Republic," he continued to support the strict application of Islamic law throughout Iran. He and his clerical colleagues cracked down on the press that had supported reformist president Mohammed KHATAMI in the 1997 and 2001 elections, suspending more than 100 newspapers and arresting dozens of journalists.

In 2004 the Iranian Guard Council, dominated by Khamenei and his clerical allies, disqualified some 2,500 reformist candidates for election to the Majlis. The result was a victory for the hard-line supporters of Khamenei. In the following year they disqualified hundreds of candidates in the presidential election, which was won by the hard-line mayor of Tehran, Mahmoud Ahmadinejad.

Khan, Ishmael (?–) Warlord in control of the western region of AFGHANISTAN, operating from the city of Herat (2001–). During the 1979–88 campaign of the MUJAHIDEEN, a loosely organized group of Muslim rebels, to expel Soviet forces from Afghanistan and overthrow the pro-Soviet government, Khan served as a member of the Islamic guerrilla forces. After the departure of Soviet forces in 1989 Khan was jailed by the fundamentalist regime run by the TALIBAN from 1995 to 1999. In 1999 he was released from prison and sent into exile in Iran. Khan came to international attention following the overthrow of the Taliban government in Afghanistan by American forces. Following the Taliban's defeat Khan reentered the Afghan city of Herat, where he established himself as the military ruler of the western region.

Since the creation of a national Afghan government under President Hamid KARZAI, Khan's relationship with the president has been unusual. While he has acknowledged Karzai to be the official ruler of Afghanistan, Khan has continued to run his territory virtually as an independent country, collecting \$800,000 per day in import duties from Iran, fielding a 50,000-man army and funding his own schools and hospitals. In his administration of the western region of Afghanistan, Khan has drawn criticism from HUMAN RIGHTS WATCH, an international group dedicated to drawing world attention to violations of international human rights.

Khatami, Mohammed (1943–) Iranian Shi'ite cleric and politician, president of IRAN (1997–2005). Born in Ardakan as the son of Ayatollah (a Shi'ite term that means "gift of God") Ruhollah Khatami, Khatami enrolled at the Iranian theological seminary at Qom in 1961, the same institution where Ayatollah KHOMEINI (a high-ranking Islamic cleric and long-time friend of Khatami's father) taught a version of ISLAMISM, a philosophy that calls for the strict application of Koranic and Islamic law within a society. Khatami supported Khomeini's efforts to overthrow Mohammed Reza Shah PAHLAVI, disseminating Islamist propaganda and organizing mass meetings while attending the University of Esfahan. After obtaining his B.A. at Esfahan

and a masters degree in education from the University of Tehran, Khatami returned to the Qom seminary, which eventually awarded him the midlevel rank of *hojatolislam*.

In 1979, when the shah was swept from power and Khomeini became the leader of the Islamic state, Khatami returned from West Germany (where he had organized Iranian emigrés against the shah's rule). After his election to the Iranian parliament in 1980, Khatami served as the minister of culture and Islamic guidance. In this he acquired a reputation as a liberal by allowing artists and authors more freedom of expression. When the real conservative clerics forced Khatami to resign as cultural minister in 1992, Khatami became director of the Iranian National Library, and served as a cultural adviser to moderate president Ali Akbar Hashemi Rafsanjani. When Rafsanjani left the presidency in 1997, reformists in Iran persuaded Khatami to run against the conservative candidate to succeed Rafsanjani. Khatami received nearly 70% of the popular vote in the 1997 elections. He was reelected president in 2001 with 77% of all ballots cast. As president, Khatami installed a moderate cabinet that included Iran's first postrevolution female minister and permitted the national press greater freedom. He also sought to improve Iranian relations with the U.S., but after President George W. BUSH declared Iran a member of the "Axis of Evil" in 2002, Khatami's efforts at rapprochement with the U.S. were blocked by the hard-line clerics. U.S. pressure to force Iran to abandon its nuclear program also strengthened the hand of the conservatives, weakening Khatami's position. He retired from the presidency in 2005 and was succeeded by the hard-line mayor of Tehran, Mahmoud Ahmadinejad.

Khe Sanh Site of U.S. Marine base in the extreme northern corner of South Vietnam, near the Demilitarized Zone and the Laos border. On January 21, 1968, the North Vietnamese army attacked the strategically located base and held it under siege, raising fears that Khe Sanh would become the military and public relations disaster for the Americans that DIEN BIEN PHU had been for the French. The siege was finally lifted on April 7, as the TET OFFENSIVE drew to a close, but the base

was abandoned in June of that year as U.S. military plans changed. In the siege, 205 Americans had been killed, with official U.S. estimates of North Vietnamese dead placed at more than 10,000 men.

Khlebnikov, Velemir Vladimirovich (1885–1922) Russian poet and Slavophile. He was the founder of Russian FUTURISM, which aimed at shocking the reader and made an attempt at breaking with past conceptions of the use of words by creating a “trans-sense” language.

Khmer Rouge Radical and fanatical Cambodian Marxist revolutionary political organization. Under the leadership of POL POT, the Khmer Rouge ruled CAMBODIA from 1975 to 1979 and conducted a bloody reign of terror. Pursuing a policy of radical social change, the Khmer Rouge tried to destroy Cambodia's old way of life and dealt ruthlessly with any and all potential opponents. The entire population of the capital, PHNOM PENH, was taken from the city and forced to work in the countryside; tens of thousands were executed, and as many as a million died from starvation and mistreatment. Khmer Rouge guerrillas continued to terrorize thousands of refugees in western Cambodia and Thailand while seeking to overthrow the Vietnam-backed government in Phnom Penh. After the withdrawal of Vietnamese forces, the Khmer Rouge attempted to retain its political power in the face of UN-supervised elections. However, its membership continually declined throughout the second half of the 1990s, and its leader, POL POT, died in 1998.

Khomeini, Ayatollah Ruhollah (Sayyid Ruhollah Moussavi) (1900 or 1902–1989) Imam (spiritual leader) of IRAN (1979–89). Khomeini studied Islamic theology and law at the provincial center of Arak and moved in the early 1920s to the holy city of Qom. He became a teacher, wrote poetry and over 20 religious books, and delved into Islamic mysticism and even Western philosophy. Khomeini became known as a leading scholar in the 1930s and earned the title of ayatollah in the late 1950s. But it was not until the early 1960s that he emerged as the leader of the Shi'ite clergy's opposition to the shah's regime

(see Reza PAHLAVI). He organized general strikes, boycotts and demonstrations to protest elements of the Shah's “White Revolution,” or modernization programs, that the mullahs (clergy) deemed un-Islamic. Khomeini also led a campaign against diplomatic immunity for U.S. military personnel in Iran. Khomeini spent months in jail and almost a year under house arrest after calling in 1963 for the shah's overthrow. After a brief stay in Turkey, Khomeini settled in the Shi'ite holy city of Najaf in Iraq. Over the next 13 years he issued periodic proclamations against the shah that were widely circulated clandestinely in Iran. By 1970 he had broadened his attacks, speaking out against both the institution of the monarchy and constitutional republicanism and calling instead for an Islamic state ruled by religious authorities.

In early 1978 a government-controlled newspaper published an article attacking Khomeini's character and implying he was a tool of foreigners and communists. The tactic backfired, leading to Muslim riots that spread across the country. After Khomeini refused an offer of amnesty from the shah, Iran prevailed upon Iraq first to place the ayatollah under house arrest and then to expel him. The move was a further miscalculation by Tehran: Khomeini set up new headquarters in a Paris suburb, where he had access to the international news media and could coordinate activities with his followers in Iran by telephone. After the shah fled into exile on January 16, 1979, Khomeini returned to a tumultuous welcome in Tehran on February 1. Under Khomeini, “modernists” were gradually shunted aside as an Islamic republic was declared and a constitution was approved by national referendum that consolidated the power of the clergy and made Khomeini Iran's supreme religious and political leader for life. Western music was banned, women's rights were curtailed, religious minorities were persecuted and uncoun- ted thousands of people were executed.

Two of Khomeini's most widely touted slogans were “Death to America” and “Neither East nor West.” Although revolutionary Iran steered a nonaligned course in world affairs, Khomeini reserved his special venom for what he called the “Great Satan”—

the U.S. Khomeini's Iran provided the basis for the political humiliation of two successive American presidents. It was unclear if Khomeini gave prior approval to the militants who seized the U.S. embassy in Tehran and held its staff hostage for 444 days from November 4, 1979 to January 20, 1981 (see IRAN HOSTAGE CRISIS). But he refused to disavow the takeover, and did not consent to have the hostages go free until President Jimmy CARTER was leaving office. The seminal event of Iran under Khomeini was the IRAN-IRAQ WAR (1980–88), which helped rally mass popular support around the revolutionary regime. In July 1988 after suffering hundreds of thousands of dead, and its economy a wreck, Iran accepted a United Nations-sponsored cease-fire. In early 1989, Khomeini denounced British author Salman RUSHDIE and his allegedly anti-Muslim book *The Satanic Verses* and called for Rushdie's assassination.

Khrennikov, Tikhon Nikolayevich (1913–) Soviet composer. He was a pupil of Shebalin at the Moscow Conservatory from 1932. His works include an opera, *The Brothers*, two symphonies, a piano concerto, piano works, music for plays and films, including incidental music for *Much Ado About Nothing*, and many songs, including some to words by Robert Burns. In 1948, acting in his capacity as secretary of the Union of Soviet Composers, he condemned many of his colleagues, including PROKOFIEV and SHOSTAKOVICH, for “formalism.” In 2003 Khrennikov received the Mozart Medal from the United Nations Educational, Scientific and Cultural Organization.

Khrushchev, Nikita Sergeyevich (1894–1971) Soviet politician, first secretary of the Central Committee of the Communist Party of the USSR (1953–64). Khrushchev joined the party in 1918 while working as a locksmith in the Donets Basin. He became second secretary of the Moscow Party Organization in 1934, its first secretary in 1935 and first secretary of the Ukrainian Party Organization in 1938. Khrushchev took a prominent part in the GREAT PURGE. In 1939 he became a member of the Politburo and during World War II was an important political officer in the army. Toward the end of

Soviet premier Nikita Khrushchev addressing the United Nations. 1959 (UNATIONS)

STALIN's rule Khrushchev was the party's chief agricultural expert, but his policy of "rural cities" was a disaster. After Stalin's death and Malenkov's brief tenure, Khrushchev became first secretary of the central committee, proving to be the most powerful member of the "collective leadership." After denouncing Stalin in a four-hour secret speech at the 20TH PARTY CONGRESS of the CPSU in 1956, he pursued a policy of DESTALINIZATION with a degree of inconsistency. His plans for greater industrialized state farming eventually resulted in lower agricultural production. While Khrushchev's reforms improved the standard and quality of life in the USSR, they did not win him much popularity. In his dealings with the West, Khrushchev alternated peaceful gestures with threats, and his decisions led to the CUBAN MISSILE CRISIS with the United States in 1962. Khrushchev was forced out of office in 1964.

Kielce (Keltsy, Kel'tsy) Polish city 85 miles north-northeast of KRAKÓW; a part of Russia from 1818, it was given to the new state of Poland in 1919. Kielce was a German-Russian battle site in 1914–15; during WORLD WAR II four German CONCENTRATION CAMPS were sited here.

Kiel Mutiny (1918) GERMANY began to discuss a possible armistice with the Allies near the end of WORLD WAR I. At that time, the German navy was in a

mutinous state. When the German High Seas Fleet was ordered to sail to the North Sea for a major battle against the British, the German sailors in Kiel refused to go and took up arms, setting off an open revolution throughout Germany (Oct. 29–Nov. 3, 1918). Only the U-boat crews remained loyal to Kaiser WILHELM II. Major revolts occurred in Hamburg, Bremen and Lübeck (Nov. 4–5) and spread to Munich (Nov. 7–8). Bavaria declared itself a democratic and socialist republic. The kaiser was forced to abdicate, and on Nov. 11, 1918, the armistice was signed and World War I ended.

Kiesinger, Kurt Georg (1904–1988) German politician, chancellor of WEST GERMANY from 1966 to 1969. As a Christian Democrat, Kiesinger led a government formed by a GRAND COALITION of Christian Democrats and Social Democrats. His past as a minor Nazi brought him much negative attention when he became a candidate for chancellor. He was slapped in the face by Nazi hunter Beate Klarsfeld at a conference in West Berlin in November 1968. After losing to Willy BRANDT in the 1969 election, he played only a minor role in West German politics, remaining a member of the Bundestag (Parliament) until 1980.

Kiesler, Frederick (1890–1965) Austrian theatrical designer who became part of the de STIJL movement in

Holland in 1923. Kiesler's *Cité dans l'Espace*, a de Stijl utopian city of the future, was part of the Austrian exhibit at the 1925 Paris exhibition. From 1923 to 1960 he worked on the concept of a futuristic "Endless House" with curving, biomorphic forms. The house was never built but often published and exhibited. After coming to the U.S. in 1926, he designed the Film Guild Cinema in New York in a style closely related to de Stijl thinking and established a reputation as both a sculptor and a designer of visionary and futuristic architectural projects. His *Art of this Century* gallery of 1942 was a strong expression of his personal aesthetic. From the 1940s until his death, Kiesler produced and regularly exhibited "Galaxies," sculptural works made by grouping flat, painted panels to form spatial environments. Lisa Phillip's 1989 book *Frederick Kiesler* is an inclusive survey of his achievements.

Killebrew, Harmon Clayton (1936–) American baseball player. Killebrew was one of the most dominant players of the 1960s, but his chance to break Babe RUTH's home run record was spoiled by injuries. His steady defensive play with the Washington Senators—later the Minnesota Twins—allowed his managers to use him at virtually any position. His hitting power was legendary, as his home run shots hit upper decks and sailed out of even the largest stadiums. An All-Star throughout his career, he had his best season in 1969, with 49 home runs and 140 runs batted in. Killebrew spent 1975, his last season, with the Kansas City Royals, and was inducted into the Baseball Hall of Fame in 1984. He had 573 lifetime home runs.

Killy, Jean-Claude (1943–) French skier. An Alpine racer with matinee-idol good looks and charm, Killy dominated international skiing during the late 1960s. He first came to prominence in 1964, when he won all three French Alpine championships—slalom, giant slalom and downhill—and led the French team to the world championship. During the 1968 Grenoble OLYMPIC GAMES in his native France, Killy became the focus of international media attention as he took all three Alpine gold medals. He retired from skiing after

the games and turned to acting. Four years later, he began a career as a professional skier; he took the world professional championship in 1972. In 1992 he co-chaired the Albertville Olympics and in 1994 was named President of the Société du Tour de France.

Kilmer, (Alfred) Joyce (1886–1918)

American poet. Born in New Brunswick, N.J., he worked on the *Standard Dictionary* before joining the U.S. Army at the outbreak of World War I. He is famous for the cloyingly sentimental poem “Trees” in *Trees and Other Poems* (1914). His other verse collections are *Summer of Love* (1911) and *Main Street and Other Poems* (1917). Kilmer wrote some powerful war poetry before being killed in action in France.

Kim Dae Jung (1925–) South Korean politician, president of South Korea (1998–2002), and recipient of the 2000 Nobel Peace Prize. Born into an agrarian family in the southwestern region of the Korean Peninsula, he joined opposition to South Korea’s authoritarian president SYNGMAN RHEE during the 1950s. At rallies and marches against Rhee, Kim established his reputation as an orator who articulated the progressive and democratic cause in South Korea.

In 1961 Kim was elected to the National Assembly, in parliament where he led the opposition to the strongman president PARK CHUNG HEE during the 1960s. After failing to defeat Park in the presidential elections of 1971, Kim was imprisoned in 1975 and was sentenced to death in 1980 for allegedly inciting an uprising in the town of Kwangju. Pressure from the U.S. government resulted in the 1982 release of Kim for three years of temporary exile in America, where he served as a visiting fellow at Harvard University.

On his return to South Korea in 1985, Kim resumed his political activism and was elected to the National Assembly in 1988. After two more failed bids for South Korean presidency, Kim finally won the office by a narrow margin in 1997, amid a severe financial crisis that caused a sharp drop of the South Korean currency, the won. After negotiating a massive loan from the INTERNATIONAL MONETARY

FUND to stabilize the won, Kim Dae Jung launched a rapprochement with North Korea in 1998. He offered the Communist state humanitarian aid in an attempt to improve relations between the two states. Two years later, Kim Dae Jung held a historic meeting with his North Korean counterpart, KIM JONG IL in the northern capital of Pyongyang. The two leaders pledged to promote détente, particularly in the field of economic cooperation. Kim Dae Jung also participated in multilateral negotiations to thwart North Korea’s efforts to develop a nuclear bomb, after acting as an intermediary between Kim Jong Il and American president GEORGE W. BUSH. Kim Dae Jung retired in December 2002 from the presidency and was succeeded by Roh Moo-Hyun.

Kim Il (1910–1984) Korean communist leader. A member of the inner circle of early Korean revolutionaries, Kim Il joined the then-underground Communist Party in 1932 and fought Japanese colonial occupation. He was appointed first deputy premier of NORTH KOREA in 1959, premier in 1972 and vice president in 1976. He was also a member of the Central Committee of the Communist Party and of the National Administration Council.

Kim Il Sung (1912–1994) Communist leader of NORTH KOREA (1948–94). Kim Il Sung joined the Communist Party in 1927. During World War II he was a guerrilla leader in Manchuria. After the war—and with Soviet support—he prevailed over opponents from other factions of the party and gradually became a supreme leader, the center of an extreme personality cult. He is extravagantly praised and

called the “great leader,” the “heaven-sent and talented leader” and so on. He also awarded himself a number of high orders and decorations, such as Hero of the Democratic People’s Republic of Korea (two times) and the Order of National Flag First Class (three times). Kim Il Sung died on the eve of talks with the U.S. to end North Korea’s diplomatic isolation. He was succeeded by his son, Kim Jong Il.

Kim Jong Il (1942–) Ruler of the Communist state of NORTH KOREA (1994–). Born in Watsukoye, a military camp in the Soviet territory of Siberia, Kim Jong Il was the son of KIM IL SUNG. Kim Jong Il was carefully prepared to succeed his father. In 1990 Kim Jong Il was appointed as vice chairman of the North Korean National Defense Commission and succeeded his father as supreme commander of the Korean People’s Army. Two years later he received the title of marshal of the Korean People’s Army, the second-highest military rank behind the rank of grand marshal held by his father.

Just before his death on July 8, 1994, Kim Il Sung publicly declared that his son would succeed him as head of North Korea and assume all of his duties and offices. Once in power Kim Jong Il made symbolic efforts to reconcile with South Korea. In 2000 he met with his South Korean counterpart, KIM DAE JUNG, and accepted food aid from South Korea, to combat the problem of malnutrition that has regularly plagued his country. On the issue of nuclear energy and nuclear weapons, Kim Jong Il has proven less accommodating to international opinion. In 2001 North Korea violated an agreement with the U.S. to cease construction and operation of nuclear reactors capable of pro-

North Korean president Kim Il-Sung with Chinese president Li Xiannian, 1987 (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

ducing weapons-grade plutonium in exchange for shipments of oil to fuel North Korean power plants. Two years later North Korea formally acknowledged that it had developed the proscribed weapons and withdrew from the NUCLEAR NON-PROLIFERATION TREATY (NPT). Kim Jong Il continued to deny international inspectors access to his nuclear facilities and failed to reach a settlement with the U.S., despite repeated entreaties by South Korea and China to come to an understanding with Washington.

Kiner, Ralph (Ralph McPherran) (1922–) American baseball player. One of the great sluggers of the postwar years, Kiner led the National League in home runs from 1946 through 1952. The Pittsburgh Pirates tailored their left field line at Forbes Field to suit his (and Hank GREENBERG's) home run power, and that area of the park became known as "Kiner's Korner." The end of his career was hastened by back troubles, but he finished with 369 home runs, giving him a lifetime home run to at-bat ratio second only to Babe RUTH's. Kiner took the name "Kiner's Korner" for his talk and interview program when he began his successful broadcasting career with the expansion New York Mets in 1962. He was named to the Hall of Fame in 1975.

King, Billie Jean (1943–) U.S. tennis player. King's influence on and off the court is still felt in the world of tennis. A tireless fighter for the rights of women players, she brought the women's game to a wider audience and eventually helped to establish a separate women's tour. Winner of a record 20 Wimbledon titles, she won four U.S. Open singles titles, as well as an Australian and a French Open. Perhaps her best remembered match, however, was the super-hyped "Battle of the Sexes" in which she defeated the middle-aged tennis great and self-proclaimed "male chauvinist pig" Bobby RIGGS. King was active in AIDS charities and in organizations dedicated to raising awareness and education about homosexuality. The Gay and Lesbian Alliance Against Defamation (GLAAD) honored King for her work in these fields.

King, Carole (Carole Klein) (1942–) American singer-songwriter. With hus-

band Gerry Goffin, King was one of the most important pop/rock composers of the 1960s. Together they penned such hits as "Will You Love Me Tomorrow," "Locomotion," "Some Kind of Wonderful" and "A Natural Woman." After the dissolution of their marriage and their professional partnership, King turned to performing. Her second album release, *Tapestry*, sold more than 14 million copies and was named album of the year. Hit singles from the album included "It's Too Late" and "I Feel the Earth Move." King has rarely performed live, and although she continues to release records, none of her later releases have approached the success of *Tapestry*.

King, Charles Glen (1896–1988) American chemist and nutritionist. In 1932, while on the faculty of the University of Pittsburgh, King isolated vitamin C from the juice of lemons. He was a professor of chemistry at Columbia University from 1941 to 1947.

King, Ernest (1878–1956) U.S. military officer. King was born in Lorain, Ohio, and graduated from the U.S. Naval Academy at Annapolis in 1901. He became a rear admiral in 1933. In 1941 King became commander of U.S. naval forces and was appointed chief of naval operations the following year. He was the only officer in U.S. history to occupy both posts. As commander of the greatest naval fleet in history, he directed the strategy that led to the defeat of the Japanese navy. He was made admiral of the fleet in 1944.

King, Larry (Lawrence Harvey Zeiger) (1933–) American radio and television personality and talk-show host. Born Lawrence Harvey Zeiger in Brooklyn, N.Y., he adopted the name Larry King in 1957, when he disk-jockeyed in Miami, Florida. In the next year he began hosting a four-hour morning show. Set in a Miami restaurant, King would mix question-and-answer sessions with roaming conversations with restaurant patrons. In 1963 he began a weekend television interview show and later began writing a syndicated newspaper column. In 1978 King reached a national audience with a nationally syndicated four-hour radio talk-show. After moving his broadcasting headquarters to Washington, D.C., and focussing on political subjects, he launched, in 1985,

the hour-long *Larry King Live* on then relatively new CABLE NEWS NETWORK (CNN). Larry King's national audience and broad appeal turned his shows into a popular venue for individual politicians across the American political spectrum. By the early 21st century the rise of Fox News and other cable outlets caused a decline in King's ratings, as his competitors hosted commentators on contemporary political and social issues.

King, Martin Luther, Jr. (1929–1968) American CIVIL RIGHTS leader. The son and grandson of black Baptist ministers in the Deep South, King was born in Atlanta, Georgia. He graduated from Morehouse College in 1948, then received a divinity degree from Crozer Theological Seminary in 1951 and a doctorate in 1955 from Boston University, where he met Coretta Scott, who became his wife. In 1954 King accepted a ministry at the Dexter Avenue Baptist Church in MONTGOMERY, Ala. By December 1955, racial tensions there, which had focused on segregated bus seating, led him to form the Montgomery Improvement Association, the first of many organizations he formed to pursue a nonviolent resistance modeled on that led by Mohandas GANDHI in India. His leadership and his methods brought about integration of the Montgomery buses in 1956.

Civil rights leader Martin Luther King, Jr. (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

To broaden his civil rights activities King formed the SOUTHERN CHRISTIAN LEADERSHIP CONFERENCE in 1957. In 1959 he moved to Atlanta, where he became assistant pastor to his father at the Ebenezer Baptist Church. King first gained national fame for his civil rights demonstrations in BIRMINGHAM, Ala., in 1963. There his followers were abused by police and King was arrested, leading to his *Letter from Birmingham Jail*. His most important demonstration was the MARCH ON WASHINGTON by 250,000 civil rights supporters on August 28, 1963, when he delivered his "I Have a Dream" speech. For his nonviolent activities on behalf of civil rights, he was awarded the NOBEL PEACE PRIZE for in 1964.

In 1965 he led the Freedom March to SELMA, Alabama, for the cause of voting rights. The following year he brought his campaign to the North. During the later stages of his struggle, King opposed the VIETNAM WAR, arguing that it drained resources from the war on hunger and poverty. On the evening of April 4, 1968, King was assassinated in Memphis, Tennessee, where he had gone to lead a strike of sanitation workers. James Earl Ray, a white man, was later arrested and found guilty of the crime, although he has since claimed that a wider conspiracy was involved in the shooting. Despite later revelations of improprieties in King's personal life, for many people King remains one of the most revered Americans of the 20th century. His birthday, January 15, is celebrated as a legal holiday in most U.S. states.

King, Riley B. "B. B." (1925–) American blues singer. Like so many blues singers of his era, King developed his style in childhood as a gospel singer. King and his guitar, Lucille, toured blues clubs throughout the 1950s and 1960s, without being able to cross over to a mainstream audience. In the late Sixties, younger audiences who were ready to discover the roots of rock music "discovered" B. B. King, and he began to achieve popular success with such albums as *Confessin' the Blues* (1966), *Blues Is King* (1967) and his biggest hit, *Live in Cook County Jail* (1971). Throughout the 1990s King continued to win acclaim for his work, including four Grammy Awards—Best Traditional Blues Recording for *Live at*

the Apollo (1991); Best Traditional Blues Recording for *Blues Summit* (1993); Best Rock Instrumental Performance for *SRV Shuffle* (1996), with collaboration by renowned guitarists ERIC CLAPTON and Bonnie Raitt; and Best Traditional Blues Album for *Blues on the Bayou* (1999). In 2000 King and Clapton recorded *Riding with the King*, an album containing both blues and rock music.

King, Stephen Edwin (1947–) American writer of the weird and the macabre, the most successful horror writer in the world. King was a struggling high school teacher in Maine living in a trailer when he published his first novel, *Carrie* (1974), a tale of a girl with telekinetic powers. Its modest success (13,000 copies sold in hardcover), coupled with the popular film adaptation by Brian DE PALMA in 1976 and the breakthrough publication of *Salem's Lot* in paperback that year (3,000,000 copies sold) quickly established King's preeminence in horror fiction. King is frankly derivative of the traditions in 19th-century gothic horror; and he peppers them with references to contemporary rock music and consumer culture. His dialogue is vulgarly realistic and his imagery is intentionally visceral and repellent, a modern extension of *grand guignol*. Some of his works, like *The Stand* (1978) and *It* (1986), are preoccupied with the cinematic effects of rapid crosscutting of scenes, shifts in points of view, alteration of time sequence, and so on; others like *The Shining* (1977) are authentic masterworks in the sheer excitation of terror; whereas others, like his best books, *The Dead Zone* (1979) and

Misery (1987), are brooding psychological studies of psychotic states. In *Danse Macabre* (1981), a collection of essays on horror fiction, King described the writing process as a kind of "dance" in which the author searches out the private "phobic pressure points" of each reader. "We have emotional musculature just like we have physical musculature," he told an interviewer. "And our dark emotions need exercising, but society doesn't allow that. So, somebody has to take them for a walk and exercise them for you. And I guess I'm one of the guys who does that." Many of King's books have been adapted as motion pictures. In 1999 King suffered severe injuries when he was hit by a van near his home. After a lengthy period of recovery he returned to his work as a writer of fiction and nonfiction. King attempted, with limited success, to sell his fiction for download on the Internet.

King, William Lyon Mackenzie (1874–1950) Canadian statesman, prime minister of CANADA (1921–30; 1935–48). Born in Kitchener, Ontario, he was the grandson of the 19th-century Canadian rebel leader William Lyon Mackenzie. King studied at the universities of Toronto and Chicago and at Harvard, becoming an expert in political economy and labor affairs. He helped to establish the Department of Labour during the Liberal administration of Wilfrid LAURIER and served as its deputy minister (1909–11) and minister (1909–11). In 1909 he also became a Liberal member of Parliament. During World War I, he did research on industrial relations for the American Rockefeller Foundation. In

Canadian prime minister William Mackenzie King with Franklin Roosevelt and Winston Churchill (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

1919 he succeeded Laurier as leader of the LIBERAL PARTY and became prime minister in 1921 after his party's victory in the national elections. Except for a two-month period, King served until 1930. He was the leader of the opposition during the Conservative administration of Richard Bedford BENNETT (1930–35) and was prime minister again after the Liberal victory of 1935, serving until he retired in 1948. Between the wars, King maintained an essentially isolationist position and pressed for Canadian autonomy within the BRITISH EMPIRE, while mediating between the English- and French-speaking communities at home. He brought Canada into WORLD WAR II, forming a war cabinet, mobilizing public opinion in favor of the war and finally instituting conscription in 1944. Insisting upon the recognition of Canada's importance, he also maintained cooperation with Great Britain and signed joint defense agreements with the U.S. After the war, King was the head of the Canadian delegation at the 1945 San Francisco Conference that drafted the United Nations charter and at the 1946 Paris Conference.

King David Hotel attack (July 22, 1946) Jewish guerrillas of the IRGUN ZVAI LEUMI organization blew up the King David Hotel, which housed the British administrative headquarters in JERUSALEM. The explosion caused 91 deaths.

King Kong The giant ape King Kong made his first appearance in 1932, in a book of that title by Delos W. Lovelace, "novelized" from the screenplay of the forthcoming film *King Kong*, which was released in 1933. Directed by Merian C. Cooper and Ernest B. Schoedsack, the film starred Fay Wray as Ann, the woman Kong kidnaps in a variation on the beauty-and-the-beast theme. Featuring spectacular stop-motion special effects, the film was an instant sensation and is credited with saving the RKO studios from bankruptcy during the GREAT DEPRESSION. A remake of the film was made by Dino de Laurentiis in 1976, and a sequel, *King Kong Lives*, was released in 1986. In 2005 Peter Jackson directed another remake. Kong was also the star of two Japanese films, *King Kong vs. Godzilla* (1963) and *King Kong Escapes* (1967). An icon of popular cul-

ture, he has also been featured in a television cartoon show (1966–69), comic books and a variety of merchandise.

Kingsley, Sir Ben (1943–) British stage and film actor. Born Krishna Bhanji in Scarborough, North Yorkshire, England, his father was a physician of Indian descent and his mother was of English-Russian origin. Kingsley developed a passion for the theater soon after he saw a performance of Great Britain's prestigious ROYAL SHAKESPEARE COMPANY (RSC). After several stints in regional and touring theaters in Britain, he gained admission to the RSC, for which he performed in *A Midsummer Night's Dream* (1970), *Nicholas Nickleby* (1980) and *Othello* (1985). He participated in performances in the King's Head Theatre (1973's *Hello and Goodbye*) and the National Theatre (*Volpone* in 1975), in London.

During Kingsley's tenure on the RSC he also made his debut as a motion-picture actor in *Fear Is the Key*, a 1972 drama. However, it was not until 10 years later that he achieved international fame and recognition for his film performance of MAHATMA GANDHI in the film *Gandhi*, for which he won an Academy Award for Best Actor that year. He received universal acclaim for his 1993 role of Itzhak Stern in Steven Spielberg's *Schindler's List*. After many other successful performances on the stage and in films, he was knighted in 2001.

Kinnock, Neil (1942–) British politician. Born and educated in Wales, Kinnock worked for the Workers' Educational Association and was elected to Parliament as a Labour member in 1970 by a Welsh constituency. He served as shadow minister for education from 1979 to 1983. Despite his lack of government experience, Kinnock succeeded veteran Michael FOOT as leader of the LABOUR PARTY following the party's defeat in the 1983 general election. Originally in the left wing of the Labour Party, Kinnock was viewed as a compromise choice between the party's opposing factions and promised to follow a more moderate course. He instigated the ejection of the extreme left-wing Militant Tendency faction from parliament in 1986. Although a gifted orator, as leader of the Opposition, Kinnock proved an unequal opponent to Conservative

prime minister Margaret THATCHER, and there was doubt both in and out of the party that he could lead Labour to a general election victory. Kinnock received attention in the U.S. in 1988 when Democratic presidential hopeful Joseph Biden was found to have plagiarized one of his speeches and was forced to withdraw from the campaign. In 1992 Kinnock was replaced as Labour Party leader by John Smith. Since 1995 he has served on the EUROPEAN UNION's European Commission, becoming its vice president in 1999.

Kinsey Reports Research on human sexual behavior conducted by Professor Alfred Kinsey of Indiana University. Kinsey was a zoology professor who, in 1938, commenced what is regarded as the first major scientific study of the nature of human sexual preferences and patterns. The "Kinsey Reports" refers to the two publications that summarized the findings of Kinsey and his researchers—*Sexual Behavior in the Human Male* (1948) and *Sexual Behavior in the Human Female* (1953). These books were deemed as degenerate and even as communist by MCCARTHY-era conservatives and religious fundamentalists. The basis for this furor, which led to cessation of funding for Kinsey's work by the Rockefeller Foundation and other agencies, was the statistical evidence put forward in the Kinsey Reports that indicated that human sexual behavior differed greatly from supposed established norms. For example, 37% of males were said to have had at some point a homosexual contact leading to orgasm. In addition, Kinsey pointed to partner insensitivity rather than biological incapability as the most frequent cause of female frigidity. At the time of his death, Kinsey was working on a book that was critical of sex laws in the U.S. The Kinsey Reports are widely regarded as a pioneering effort toward an objective view of human sexuality. However, such notable public figures as anthropologist Margaret MEAD, theologian Reinhold NIEBUHR and critic Lionel TRILLING criticized the reports for ignoring the spiritual implications of sex.

Kipling, Rudyard (1865–1936) British poet and author. Born in Bombay, India, Kipling was sent to England to be educated. He chronicled his unhappy childhood spent in a series of foster

British author Rudyard Kipling (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

homes in the short story “Baa Baa, Black Sheep” (1888) and the novel *The Light That Failed* (1937). He completed his education at the United Services College in Devon. Unfit for military service because of poor eyesight, he returned to India to work as a journalist. His popular first collection of poems, *Departmental Ditties* was published in 1886; his first volume of short stories, *Plain Tales from the Hills* in 1888. Kipling continued writing prolifically and was received as a celebrity when he traveled to London in 1889. He married Caroline Balestier, with whose brother Kipling wrote the novel *The Naulahka* (1892). The Kiplings moved to Vermont where the Balestiers had property but returned to settle in England in 1896, though Kipling continued to travel throughout his life. Kipling’s varied works depicted life in colonial India and reflected his conservative patriotism. *Barrack Room Ballads* (1892) includes the notable poems “Gunga Din” and “Mandalay.” The poem “Recessional” celebrated Jubilee Day in 1897. *Kim* (1901), the novel considered to be his masterpiece, is an account of a boy and a Buddhist monk traveling in India. Kipling was the first English writer to receive the NOBEL PRIZE in literature, in 1907. He carried on a long correspondence with U.S. president Theodore ROOSEVELT and

was influential in shaping Roosevelt’s outlook in foreign policy. Kipling’s reputation went into decline, partly due to its nationalistic jingoism—he coined the term “white man’s burden”—and also because of what many considered to be its lowbrow appeal. A resurgence in appreciation for his craftsmanship occurred when T. S. ELIOT edited a collection of his poetry for FABER & FABER in 1943. Later critics have also reevaluated Kipling’s work and found more subtlety than he was earlier given credit for. Always popular were his works for children such as *The Jungle Book* (1894) and *Just So Stories* (1902). Other works include *Soldiers Three* (1890), *Captains Courageous* (1897) and an unfinished autobiography, *Something of Myself* (1937).

Kipnis, Alexander (1891–1978) Ukrainian-born operatic bass. Alexander Kipnis was best known for his Wagnerian roles and for his performances in Russian operas, particularly the title role in *Boris Godunov*. He was with the Chicago Civic Opera from 1923 to 1933, and sang over 100 performances at the Metropolitan Opera in New York from 1940 to 1945. He was a familiar figure in the great opera world of Europe and was also featured in numerous operatic and lieder recital recordings. His son **Igor Kipnis** (1930–2002) was a renowned harpsichordist and musicologist.

Kirchner, Ernst Ludwig (1880–1938) German painter and graphic artist, a leading exponent of German EXPRESSIONISM. At first a student of architecture, Kirchner began painting in Munich (1903–04) and Dresden (1905) and made a particular study of primitive art at the Dresden Museum of Ethnology. In 1905 he, Erich HECKEL and Karl SCHMIDT-ROTLUFF co-founded DIE BRÜCKE. Influenced by the intensity of feeling and line in the paintings of Vincent Van Gogh and the intensity of color in FAUVISM, Kirchner was also shaped by Dürer, Gothic woodcuts and Edvard MUNCH. His art exploits strong color contrasts and angular forms in the expressive portrayal of figures and landscapes. Moving from Dresden to Berlin in 1911, he captured the life of that city in acid-tinged portraits and street scenes. His paintings became increasingly bitter

and tortured in colors that went from bright and pure in the early 1900s to dark and shadowy in works painted into the 1920s. Kirchner was also a master printmaker, producing some 2,000 powerful and often savage etchings, lithographs and, most notably, woodcuts. Drafted into the German army, he suffered an emotional breakdown in 1914 and moved to a sanatorium in Davos, Switzerland, remaining in the area for the rest of his life. Condemned by the Nazis for his “degenerate” art and in failing health, Kirchner committed suicide in 1938.

Kiribati Republic in the western Pacific Ocean, on the equator and north-east of the Solomon Islands (see map page 957). Formerly known as the Gilbert Islands, the nation consists of the 16 former Gilbert islands, Ocean Island, some of the Line islands and some of the Phoenix islands. Great Britain proclaimed a protectorate over the Gilberts in 1892 and in 1915 combined them with the Ellice Islands into the Gilbert and Ellice Islands Colony. Ocean Island and some of the Line and Phoenix islands were then also included. In WORLD WAR II Japan occupied the Gilberts from 1941 to 1943. The U.S. Marines retook Tarawa atoll in a bloody battle in November 1943, while the army regained Makin Island the same month. In 1971 the colony was given self-government, and at the start of 1976 the Ellice Islands (now TUVALU) were separated from the colony. On July 12, 1979, the Gilbert Islands and the others named above became independent as Kiribati, a member of the Commonwealth of Nations. Its inhabitants are Micronesian, and its chief exports are copra and phosphates.

Kirilenko, Andrei Pavlovich (1906–1990) Soviet politician. A long-time associate of Leonid BREZHNEV, in the 1970s Kirilenko was widely thought to be a leading candidate to succeed the Soviet leader. A member of the Politburo, he retired from the body in 1982 and dropped from sight. Although the official explanation for his retirement was ill health, unofficial reports said that he had been disgraced by the defection of his son to the West.

Kirillin, Vladimir Alekseyevich (1913–1999) Soviet government offi-

KIRIBATI

1892	The Gilbert (Kiribati) and Ellice (Tuvalu) Islands are proclaimed a British protectorate.
1916–39	The uninhabited Phoenix Islands, Christmas Island, Ocean Island, and Line Island (Banaba) are added to the colony.
1942–43	While occupied by the Japanese, the island is the scene of fierce fighting with U.S. troops.
1971	The island group becomes autonomous.
1976	The mainly Melanesian-populated Ellice Islands separate to become Tuvalu.
1979	Kiribati becomes an independent republic within the Commonwealth of Great Britain. Kiribati and the United States sign an agreement under which the U.S. relinquishes all claims to territory in the Phoenix and Line Island groups, including Canton, Enderbury and Hull.
1999	Two of Kiribati's uninhabited islands, Tebua Tarawa and Abanuea, disappear beneath the waves, as global climate changes raise sea levels to new heights.
2003	Anote Tong wins presidential election against his elder brother, Harry.

cial. A graduate of the power engineering institute, Kirillin gained membership in the COMMUNIST PARTY in 1937 and served in the Soviet army from 1941 to 1943. Kirillin's numerous posts include head of the department of science, high schools and schools (1954–55) and head of the ideologies department of the central committee (1955–63). From 1961 to 1966 Kirillin was a member of the central committee, and from 1963 to 1966 the chairman of the all-union society for the dissemination of political and scientific knowledge. In 1965 he became chairman of the Comecon committee for scientific-technological cooperation. Kirillin was decorated with various orders, medals and prizes.

Kirk, Alan Goodrich (1888–1963) U.S. Navy officer and diplomat. A graduate of the Naval Academy, Kirk served as gunnery officer aboard several ships, and was promoted to chief of staff for the commander of naval forces in Europe early in WORLD WAR II. He commanded the 1,000 ships in the INVASION OF NORMANDY, France. Admiral Kirk retired from the Navy in 1946, and served as U.S. ambassador to Belgium (1946–49), the USSR (1949–52) and the Republic of China (1963).

Kirk, Russell Amos (1918–1994) American political writer. Kirk was one of the most eloquent writers in defense of the conservative tradition to emerge

in postwar America. His first book, *The Conservative Mind* (1953), was his doctoral dissertation, but it won a wide readership by tracing a glowing intellectual tradition for CONSERVATISM that dated back to the 18th century and the English statesman Edmund Burke. Further, Kirk argued that the true basis of conservatism lay in defense of family, tradition and community, and not in the support of big business and the free market. This latter view made Kirk a controversial figure within conservative circles. Kirk taught at Michigan State and other universities and lectured frequently throughout the country. His other books include *A Program for Conservatives* (1954) and *Confessions of a Bohemian Tory* (1963).

Kirkpatrick, Jeanne J. (1926–) U.S. public official. Originally a liberal Democrat, in the 1970s Kirkpatrick became a leading neoconservative and anticommunist. Her views attracted the attention of Ronald REAGAN, who appointed her U.S. ambassador to the UN (1981–85) when he took office. She criticized many UN programs as contrary to U.S. interests. She helped develop the Reagan administration's policies toward Latin America, condemning the Sandinista government in NICARAGUA and urging support for the CONTRAS. In the late 1980s Kirkpatrick was mentioned as a possible candidate for high office, but her support was limited.

Kirov, Sergei Mironovich Kostri-nov (1886–1934) Soviet politician. He became a Bolshevik in 1905. His first task after the revolution was to establish soviet power in the Caucasus. From 1926 he was party secretary in the Leningrad area, and he became a Politburo member in 1930. Kirov gave support to STALIN but opposed Stalin's personal rule after the 17th party congress in 1934. His assassination in December 1934 began the witch-hunt that developed into the GREAT PURGE, which resulted in the judicial execution of over 100 suspected opponents of Stalin's regime.

Kirst, Hans Helmut (1914–1989) German author. One of West Germany's most popular novelists, Kirst wrote a total of 46 books, many of which dealt with the experiences of soldiers in WORLD WAR II. (He himself had served in the German army throughout the war.) The English translations of his novels *The Lieutenant Must Be Mad* (1951), *Night of the Generals* (1962, filmed 1967), and the trilogy *08/15* (published in the mid-1950s) were highly popular in the U.S. and Great Britain. Critics argued, however, over whether his works were criticisms of Nazi Germany or merely adventure-thrillers with a wartime setting.

Kirstein, Lincoln (1907–1996) American writer and ballet director

who was influential on the American and international ballet scene for over 50 years. Kirstein was responsible for bringing George BALANCHINE to the U.S. and for forming the School of American Ballet with Balanchine and E.M.M. Warburg (1934). He established the Ballet Society in 1946, from which the NEW YORK CITY BALLET (NYCB) evolved. Kirstein served as general director for NYCB from 1948 to 1991; he wrote many acclaimed ballet books, including *The New York City Ballet* (1974) and *Nijinsky Dancing* (1975). He was awarded the Medal of Freedom in 1984.

Kishi, Nobosuke (1896–1987) Japanese politician. Kishi was the dominant figure in pre–World War II Japanese industrial planning. During much of the war, he served as minister of commerce and industry and was responsible for economic mobilization. After the war he was arrested as a war criminal and imprisoned without trial until 1948. He began his political comeback in December 1956 and two months later became prime minister. He was forced to resign in 1960 after the passage of a revised version of the U.S.-Japan Mutual Security Treaty triggered mass protests. In retirement he continued to exercise considerable influence over the ruling Liberal Democratic Party. He was the brother of another prime minister, Eisakyu SATO,

and the father-in-law of a leading prime ministerial contender, Shintaro Abe.

Kissinger, Henry Alfred (1923–) U.S. diplomat, foreign policy adviser and analyst and secretary of state (1973–77). Kissinger was arguably the most influential, and controversial, diplomat of his time. Born in Germany, he fled that country with his family and came to the U.S. when the Nazis came to power. Professor of government at Harvard from 1958 to 1971, he formed close ties with prominent U.S. politicians, including Nelson ROCKEFELLER, and was adviser to Richard M. NIXON during the 1968 presidential campaign. As White House national security adviser from 1969 to 1973, Kissinger played a more prominent role than the secretary of state, traveling on peace missions to the Middle East, Vietnam and southern Africa and negotiating with the USSR in the Strategic Arms Limitation Talks (SALT). In 1971 he made a secret trip to the People's Republic of CHINA, paving the way for President Nixon's visit the following year and the normalization of relations between the two countries. Kissinger was also involved in negotiations to end the VIETNAM WAR. His statement just before the 1972 presidential election that "peace is at hand" helped build support for Nixon's candidacy, but Kissinger's credibility was questioned as talks—

and the war—dragged on for another half-year. Kissinger was awarded the 1973 NOBEL PEACE PRIZE with LE DUC THO (who refused to accept it) for concluding the PARIS PEACE ACCORD that ended the Vietnam War; the award caused much controversy.

He was appointed secretary of state in 1973, holding that office for the remainder of Nixon's presidency and throughout President Gerald FORD's administration. Kissinger practiced a conservative but pragmatic brand of diplomacy, concentrating on relations between the superpowers in terms of realpolitik. Although U.S. foreign policy took a different turn during the CARTER presidency, Kissinger was an influential if background figure during the REAGAN administration, in which several of his protégés served. He was later accused of complicity in the military coup that overthrew Chile's Marxist president Salvador ALLENDE in 1973.

Kistiakowski, George Bogdan (1900–1982) Russian-born U.S. chemist. Kistiakowski emigrated to the U.S. in 1926 and worked briefly at Princeton before going to Harvard. He was named professor of chemistry at Harvard in 1937. During World War II he worked on the MANHATTAN PROJECT. As head of the Explosives Division at Los Alamos (1944–45), he developed the complicated trigger device used to detonate the first ATOMIC BOMB. After the war he was a leading member of the U.S. scientific establishment. He served as science adviser to President EISENHOWER from 1959 to 1961. Active in the movement for nuclear disarmament, he was later chairman of the Council for a Livable World and adviser to the U.S. Arms Control and Disarmament Agency.

Kitchen Debate See Richard M. NIXON.

kitsch Term used in design criticism to describe work of a deliberately tasteless, gross and foolish sort. The Gillo Dorfles book of 1969, *Kitsch*, is the definitive study of the subject. It explains the obvious, popular attraction of objects and design elements that are silly, ugly and insulting to both concepts of "high style" and serious theories of modernism. Gift and novelty shops thrive on the commercial distribution

U.S. secretary of state Henry Kissinger with Indira Gandhi, 1974
(LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

of kitsch trinkets, while kitsch themes often appear in housing, furniture and accessories intended for the mass market. Postmodern theory continues to struggle with pop or kitsch elements in an attempt to bring about an accommodation between popular taste and serious design theory.

Kitt, Eartha (1928–) American singer. Born in Columbia, South Carolina, Kitt sang in New York and Paris before attracting widespread attention for her appearance in the 1952 Broadway revue *New Faces*. Known for the sultry sexuality of her renditions, which was considered somewhat shocking early in her career, Kitt's best-known songs include "C'est Si Bon," "Santa Baby" and "An Old-Fashioned Girl."

Kitty Hawk Village in North Carolina, near Cape Hatteras. This otherwise obscure village became part of 20th-century history on Dec. 17, 1903, when the WRIGHT BROTHERS made the world's first successful flight in a powered heavier-than-air machine—the airplane. The Wright Brothers chose this part of the world for their glider and powered aircraft experiments because of the constant winds from the ocean; the deserted beaches and dunes were also ideal for such early aviation experiments.

Klammer, Franz (1953–) Austrian skier. Klammer is arguably the greatest downhill racer of all time. He won 22 races from 1974 to 1978, including six consecutive triumphs to best the old record held by Jean-Claude KILLY. His flying, wild run to win the downhill OLYMPIC gold in 1976 at Innsbruck in his native Austria may rank as one of the most thrilling moments in the history of any sport. Although Klammer was World Cup champion in 1977 and 1978, he was not selected to represent Austria in the 1980 Olympic games. He made a comeback in 1982–83, winning the World Cup championship once more.

Klee, Paul (1879–1940) Swiss painter. Combining sophisticated abstraction with an aura of childlike innocence, his delicate and dreamlike works are gentle monuments of 20th-century art. From a

musical family, Klee was a violinist but finally decided to study art, entering the Munich Academy in 1900. He settled in Munich in 1906, became friendly with Wassily KANDINSKY and Franz MARC, and exhibited with the BLAUE REITER group. A trip to Tunisia in 1914 awakened the young artist to the possibilities of color and gave his work a new radiance. He taught at the BAUHAUS from 1922 to 1931 and at the Dusseldorf Academy from 1931 to 1933, when he was dismissed by the Nazis who considered his work degenerate. Klee defined his approach to art in his *Pedagogical Sketchbook* (1925, tr. 1964). He left Germany in 1933, returning to Switzerland where he spent the rest of his life. An extremely prolific artist, Klee created over 9,000 works—paintings, drawings and graphics—that are included in virtually all of the world's great museums. Some of his best known paintings are *The Twittering Machine* (1922, Museum of Modern Art, N.Y.C.), *Fish Magic* (1925, Philadelphia Museum of Art) and *Revolutions of the Viaducts* (1937, Kunsthall, Hamburg). Klee's works display a whimsy and fantasy, a witty personal language of signs and a poetic sense of mystery that are unique in all of modern art.

Kleiber, Erich (1890–1956) Austrian-born opera and symphonic conductor. A fierce individualist, on several occasions he clashed with repressive political regimes. He was born in Vienna. After hearing Gustav MAHLER conduct, he decided to pursue that career, and he made his debut at the German Theater in Prague in 1911. A quick succession of appointments followed—at Barmen-Elberfeld (1919–21), Düsseldorf (1921–22), Mannheim (1922–23), and the Berlin State Opera (1923). His service to the cause of new music reached its peak in these years; and he presented premieres of new works by Darius MILHAUD, Max Reger, Igor STRAVINSKY, Arnold SCHOENBERG and Alban BERG.

His world premiere of Berg's *WOZZECK* in 1925 was a landmark event in the history of SERIAL MUSIC. Although not a Jew, he left Germany in 1935 protesting Nazi persecutions. He did not return until after the war and a number of guest posts in London, Prague, Amsterdam and Buenos Aires (becoming an Argentinian citizen in 1939). Dissatisfaction with the mix of

art and propaganda in East Berlin led him to resign his post at the Berlin State Opera. He spent his last years conducting in London, Vienna, Cologne and Stuttgart. In his last decade he made many recordings for the Decca label, including a magnificent set of the complete symphonies of Beethoven, a composer whom he revered. Kleiber could be a difficult and tough disciplinarian. "A conductor must live in his house like a lion," he said, "with its claws deep in its prey." His son **Carlos Kleiber** (b. 1930) is also a highly acclaimed conductor.

Klein, Calvin (1942–) American fashion designer, a graduate of the Fashion Institute of Technology in New York, who has built a major national and international "name" reputation. The Calvin Klein stylistic direction shows the influence of Yves Saint Laurent but tends to have a more colorful, less subtle character. After five years as an apprentice designer with several large firms, Klein founded his own business in 1968 and built a name for apparel design that is simple, functional and classic while at the same time recognizable and stylish. Klein designer jeans quickly became an international fad, and his name continues to make anything associated with it, such as Obsession perfume, a commercial success. He won a Coty design award in each of five consecutive years beginning in 1973. In 1995 one of Klein's ad campaigns was denounced by President Bill Clinton for depicting teenagers in sexually suggestive poses, which caused him to pull the ads. In 2003 he sold his company to Phillips-Van Heusen.

Klemperer, Otto (1885–1973) German-born orchestra conductor, one of the last titans in the Austro-German tradition; born in Breslau and later studied in Hamburg, Frankfurt am Main and Berlin with Hans Pfitzner. The young Klemperer was encouraged in his conducting ambitions by Gustav MAHLER. After numerous conducting assignments, he settled into his first important post as director of the Kroll Opera in Berlin in the late 1920s. In addition to many standard works he also performed new operas by STRAVINSKY, SCHOENBERG and HINDEMITH. Because of his Jewish heritage, he was

dismissed from the Berlin State Opera in 1933. In his subsequent travels through Austria, Switzerland and the U.S., he incurred a skull injury during a fall; and in 1939 an operation for a brain tumor left him partially paralyzed. Psychological affective disorders further impaired him at periodic intervals. And he was severely burned in a fire in 1959. But Klemperer always fought back from misfortune. He conducted the Los Angeles Philharmonic from 1935 to 1939, organized the Pittsburgh Symphony Orchestra in 1939 and became principal conductor of the Philharmonia Orchestra (later the New Philharmonia Orchestra) of London in 1959. His reputation with the Austro-German symphonic tradition of Beethoven, Brahms, Bruckner and Mahler grew. His seriousness, his imposing, monumental appearance, his big orchestral sound, his majestic (to some, laborious) tempi and his utter lack of flamboyance made him the venerated heir to musical traditions rooted in the 19th century. His recordings after 1954 on the EMI label have preserved that style and that sound for new generations.

Klimt, Gustav (1862–1918) Austrian painter. A lifelong Viennese, he studied at Vienna's School of Decorative Art. He opened a mural studio with his brother in 1883, executing decorations at Vienna's Burgtheater and Kunsthistorisches Museum. Klimt was a cofounder of the Vienna secession, a group that rebelled against the academic art of the late 19th century, and served as its president from 1898 to 1903. The foremost exponent of *Secessionstil*, the Viennese version of ART NOUVEAU, he created works that were symbolic in theme, jewel-like in color, flatly decorative, richly patterned and rhythmically erotic. He continued to create works for public buildings, such as the ceiling murals at the University of Vienna, *Philosophy, Medicine and Jurisprudence* (1900–02)—whose sensual imagery caused a furor of criticism—and the mosaics for Josef HOFMANN's Palais Stoclet in Brussels (1905–09). However, his most celebrated works are his portraits and landscapes. Among his best known paintings are *The Kiss* (1907–08, Oesterreichische Galerie, Vienna, and 1909, Musée

d'Art Moderne, Strasbourg) and *Hope I* (1903, National Gallery, Ottawa).

Kline, Franz (1910–1962) American painter, one of the chief figures in ABSTRACT EXPRESSIONISM. Born in Wilkes-Barre, Pa., Kline studied at Boston University (1931–35) and the Heatherley School of Fine Art in London (1937–38) before settling in New York City in 1938. A struggling painter during the 1940s, his early works were humorous sketches and realistic still lifes and city scenes. In the 1950s Kline developed the style that was to make him world famous. In paintings such as *High Street* (1950), *Mahoning* (1956, Whitney Museum of American Art, New York City) and *Kupola* (1958) he filled huge canvases with heavy streaking black lines on a white field, developing a powerfully spare visual calligraphy that spoke of action, impulse, violence and disciplined gesture. Kline also taught at Black Mountain College (1952), Pratt Institute (1953) and the Philadelphia Museum School (1954). In the late 1950s he returned to color in large abstract works such as *Green Vertical* (1958) and *Copper and Red* (1959) that maintained much of the boldness and force of his earlier monochromatic compositions.

Klint, Kaare (1888–1954) Danish furniture designer and architect who had, as both teacher and designer, a broad influence on the development of the type of modern furniture called “Danish modern.” Klint studied painting and architecture at the Copenhagen Academy. With his father P. V. Jensen Klint (1853–1930), Klint did extensive studies on human dimensions and developed storage furniture based on these studies. Beginning in 1924 he became a teacher of furniture design and craftsmanship at the Copenhagen Academy where he was also later a teacher of architecture. His teaching influenced a whole generation of Danish designers. His own work won many awards and appeared in a number of exhibitions. Klint's style was clearly modern but retained a respect for traditional values in structure and craftsmanship. His 1933 folding deck chair and knock-down Safari chair, both based on traditional models, are among his best-known works.

Klyun, Ivan (1870–1942) Russian artist. He was a minor suprematist and a close friend of Kazimir MALEVICH (see SUPREMATISM). His work is considered to show how the concern for ornamentation and beauty deteriorated into standard formulas after the Russian Revolution.

Knave of Diamonds Society of painters, founded in Moscow in 1909 for exhibition purposes, by Michael LARIONOV and others. For two years the Knave of Diamonds was the leading movement of the Soviet avant-garde.

Knight, John S. (1895–1981) American publisher, founder of the Knight newspaper publishing empire. Starting with one local newspaper inherited from his father in Akron, Ohio, in 1933, Knight went on to preside over Knight-Ridder Newspapers, which owned 33 daily newspapers nationwide, as well as three television stations and other subsidiaries. A fierce advocate of economic and editorial independence in journalism, he won the 1968 PULITZER PRIZE for distinguished editorial writing in his weekly “Editor's Notebook” columns.

Knipper-Chekhova, Olga Leonardovna (1870–1959) One of the most outstanding actresses of the first generation of the Moscow Art Theater. In 1901 she married Anton CHEKHOV. Knipper-Chekhova is especially remembered for her interpretation of the leading female roles of the plays of Chekhov, GORKY and Turgenev, as well as for her performance in plays by Molière, Gogol and Griboyedov. She was awarded the Order of Lenin and twice received the Order of the Red Banner of Labor.

Knopf, Alfred Abraham (1892–1984) American publisher, a pioneer in publishing translations of outstanding foreign authors, such as Knut HAM-SUN, Franz KAFKA and Jean-Paul SARTRE, as well as in the publication of such influential American authors as Willa CATHER, John UPDIKE and H. L. MENCKEN. He founded Alfred A. Knopf, Inc., in 1915 and collaborated with assistant Blanche Wolf (who became his wife in 1916) to create a publishing house noted for high standards in the selection of titles, book design

and printing quality. In 1924 he co-founded the *American Mercury* magazine with H. L. Mencken and George Jean Nathan. Though the Knopf company was sold to Random House in 1960, it has survived as a separate imprint. Knopf served as president of the company from 1918 to 1957 and as chairman of the board from 1957 to 1972. From 1972 until his death, he was chairman emeritus.

Koch, Frederick Henry (1877–1944) American dramatist and educator. A graduate of Harvard University, he joined the staff of the University of North Carolina in 1918. Considered the father of American folk drama, he founded the Carolina Playmakers. This group's playhouse became the first state-subsidized theater in America. Eleven volumes of folk plays appeared under his editorship.

Kodak Coined brand name for the cameras developed by George EASTMAN that made photography a popular hobby through the use of his invention of roll film. With the slogan "You push the button, we do the rest," Eastman relieved the average camera user of the complexities of darkroom work. With the introduction of inexpensive box and folding cameras, Kodak quickly became synonymous with camera. On this basis the Eastman Kodak Company became a major American and international corporation producing a vast variety of photographic and related and unrelated products.

Kodály, Zoltán (1882–1967) Hungarian composer. Educated at the Budapest Hochschule, Kodály later taught composition there and became its assistant director in 1919. As a lecturer at the University of Budapest (1931–33), a private music teacher and the author of books on musical pedagogy, he did much to improve the teaching of music in Hungary and introduced the "Kodály Method" to the world. Second only to Béla BARTÓK as Hungary's preeminent modern composer, like Bartók he was an avid collector of folk music and collaborated with his fellow-composer in its study. The melodies, rhythms and formal structure of this music is evident in his music, which is also strongly romantic in style. In addition to his most

popular work, the opera (1926) and orchestral suite (1927) *Hary János*, Kodály composed a symphony, an orchestral concerto, piano works, chamber music, songs, *Missa Brevis* (1945) and other choral works, theatrical music and many other works.

Kodama, Yoshio (1911–1984) Wealthy right-wing Japanese powerbroker who influenced major Japanese political figures. Kodama was the first person indicted by Japanese authorities in the LOCKHEED SCANDAL (1976). His conviction and prison sentence were being appealed at the time of his death.

Koestler, Arthur (1905–1983) Anglo-German author and journalist. Born in Budapest, Koestler was educated at the University of Vienna. He was a member of the German Communist Party from 1932 to 1938 and worked as a foreign correspondent. While reporting the SPANISH CIVIL WAR, Koestler was arrested and imprisoned under FRANCO, and in 1940 was arrested and interned under the VICHY government. After his release he moved to England and wrote his first book in English, *The Scum of the Earth* (1941), an autobiography. His best known work, *DARKNESS AT NOON* (1940), is a novel evidencing his rejection of COMMUNISM and TOTALITARIANISM, themes he elaborated on in his contributions to *The God That Failed: Six Studies in Communism* (1950). Koestler's later works, which include *The Roots of Coincidence* (1972), evidence his interest in philosophy and parapsychology. A lifelong advocate of euthanasia, Koestler, ill with leukemia and Parkinson's Disease, took his own life with a drug overdose. Other works include the political novels *Arrival and Departure* (1943) and *Thieves in the Night* (1946), and the nonfiction *The Trail of the Dinosaur and Other Essays* (1955) and *The Act of Creation* (1964).

Koffka, Kurt (1886–1941) German psychologist. Koffka, along with Wolfgang KOHLER and Max WERTHEIMER, was one of the key founders, in 1912, of GESTALT PSYCHOLOGY. The Gestalt school emphasized that human learning and perception was based upon the relatively rapid recognition and integration of structured wholes, as op-

posed to an instance-by-instance slow assemblage of isolated data. Gestalt psychology had a major influence on subsequent thinking in such diverse fields as psychotherapy, art criticism and aesthetics, and educational theory. Koffka taught at the University of Giessen from 1911 to 1924 before coming to America, where he served as a professor at Smith College from 1927 to 1941. His major works are *The Growth of the Mind* (1921) and *Principles of Gestalt Psychology* (1935).

Kogan, Leonid Borisovich (1924–1982) Soviet violinist. A graduate of the Moscow State Conservatory (1948), Kogan won first prize at the prestigious Queen Elizabeth International Competition in Brussels in 1951. He was acclaimed for his technical mastery and classical precision. He was a professor at the Moscow State Conservatory and performed frequently in the USSR as well as Western Europe and the U.S.

Kohima Battle site and capital of India's Nagaland state, 139 mi E of Shillong. In March–June 1944 the Japanese took it, but the victory of Anglo-Indian forces here on June 30, 1944, stemmed the Japanese advance into India.

Kohl, Helmut (1930–) Chancellor of WEST GERMANY (1982–90) and of reunited GERMANY (1990–98). Born in Ludwigshafen in the German Rhineland, Kohl attended the University of Frankfurt and earned his doctorate in political science from the University of Heidelberg. He joined the conservative CHRISTIAN DEMOCRATIC UNION and was elected to the Ludwigshafen city council. He went on to win a series of political posts

West German chancellor Helmut Kohl, 1987 (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

that he was the youngest person ever to hold. Elected to the state parliament of the Rhineland-Palatinate in 1959, he became minister-president of that state in 1969, and in 1973 was chosen as national chairman of the CDU. Elected to the Bundestag (national parliament) in 1976, Kohl served as leader of the opposition (1976–82) during the government of Helmut SCHMIDT.

Kohl was elected prime minister in 1982, forming a coalition government with the support of the Free Democrats. In his foreign policy, he was both pro-European and pro-American, keeping West Germany in the forefront of the EUROPEAN ECONOMIC COMMUNITY and NATO. Domestically, he followed a conservative economic policy favoring free enterprise, in contrast to the Social Democrats' emphasis on social programs. With the fall of the communist government of EAST GERMANY (1989–90), Kohl pushed for a quick reunification of the two Germanys under the existing West German constitution. In the first nationwide elections in the new, unified Germany (Dec. 2, 1990), he won an easy victory over his Social Democratic opponent, thus becoming the first chancellor of all Germany in more than 45 years. Kohl's critics have charged that he is unintellectual and unimaginative, but he has proven an astute, pragmatic and popular politician and a leading figure in the Western alliance. Because of the stagnant national economy during the 1990s, Kohl's CDU fared poorly in the 1998 national elections, and he was replaced as chancellor by the Social Democrats and GERHARD SCHROEDER. A year after leaving office, Kohl became implicated in a financial scandal involving illegal campaign contributions to CDU members. Criminal proceedings against him were dropped in exchange for a payment of 300,000 marks.

Kohler, Wolfgang (1887–1967) German psychologist. Kohler, along with Kurt KOFFKA and Max WERTHEIMER, was one of the key founders, in 1912, of GESTALT PSYCHOLOGY. The Gestalt school emphasized that human learning and perception was based upon the relatively rapid recognition and integration of structured wholes, as opposed to an instance-by-instance slow assemblage of isolated data. Gestalt psychology had a major influence on subsequent thinking in such diverse fields as psychother-

apy, art criticism and aesthetics, and educational theory. Kohler was the director of the Prussian Academy of Sciences in the Canary Islands from 1913 to 1920. His research on the learning capabilities of chimpanzees during this period was summarized in *The Mentality of Apes* (1917). Kohler fled Nazi GERMANY shortly after the rise of HITLER and came to the U.S. where he taught at Swarthmore College from 1935 to 1955. Other major works by Kohler include *Gestalt Psychology* (1929), *Dynamics in Psychology* (1940), and *The Task of Gestalt Psychology* (1969).

Koizumi, Junichiro (1942–) Japanese statesman and leader of the Liberal Democratic Party (LDP) (2001–06). Born in Yokosuka, Koizumi graduated from Keio University in 1967 with a B.A. in Economics. He began his political career in 1972 as a delegate of the LDP, the dominant political party in Japan, representing the cities of Yokosuka and Miura in Japan's House of Representatives. In 1979 he was appointed the state secretary for finance, chairman of the LDP's Finance Committee (1980–86), chairman of the House of Representatives Finance Committee (1986), and chief deputy chairman of LDP's Diet Affairs Committee. In 1988 he was appointed to his first ministerial position in the national government, as minister of health and welfare. He held cabinet posts again in 1992 and 1996–98. In 2001 he was elected president of the LDP on a platform that championed greater regulation of commercial banks and greater privatization of government to end Japan's 10-year economic decline. He became prime minister that year. In addition to his efforts to improve Japan's economy, Koizumi increased Japan's involvement in negotiations aimed at convincing North Korea to terminate its nuclear program. He drew criticism from China and South Korea by refusing to cancel visits to Japanese shrines that honored, among others, convicted war criminals. He stepped down from office in 2006.

Kokkinaki, Vladimir (1904–1985) Soviet aviator. During the pre-jet era Kokkinaki held a number of aviation records, including the world altitude record. He made world headlines in 1939 when, on what was supposed to be the first nonstop flight from Moscow to New York, he ended up on

Miscou Island in New Brunswick, Canada. The flight came to be known as "Moscow-Miscou."

Kokoschka, Oskar (1886–1980) Austrian painter, art theorist and dramatist. Kokoschka was a major figure in the Expressionist art movement. He became known for his psychologically intense canvases that evoked emotional depth through the use of uneven, nervous lines, formal distortion and jarring color contrasts. Kokoschka articulated his Expressionistic art theories in an influential essay, *On the Nature of Visions* (1912). He was influenced by the abstract art theories of Wassily KANDINSKY but continued to maintain that the objects and appearances of the real world were fundamental to painting. *Schriften 1907–1955* (1956) is a major collection of his writings on art.

Kolbe, Georg (1877–1947) German sculptor. Beginning as a painter, Kolbe met Auguste Rodin and turned to sculpture, continuing to be influenced by Rodin's style throughout his career. His impressionist nudes, mostly executed in bronze during the 1920s, are his most highly regarded works. Many of them, such as *Standing Nude* (1926, Walker Art Center, Minneapolis), can be found in American collections. During the Nazi period, Kolbe turned to the creation of monumental figures of soldiers and athletes that correspond to Aryan ideals of masculinity.

Kolbe, Maksymilian Maria (1894–1941) Polish priest and saint. Kolbe was ordained in 1918. During the early 1930s he was a missionary in India and Japan, then returned to Poland where he founded a religious community near Warsaw. Early in WORLD WAR II, after the German invasion of POLAND (1939), Kolbe was arrested by the Nazis and eventually sent to AUSCHWITZ. There, in 1941, Kolbe sacrificed his life by taking the place of a fellow prisoner, Franciszek Gajowniczek, who was one of 10 persons randomly chosen to die of starvation; Gajowniczek survived the war and lived into his 80s. In 1982 Pope JOHN PAUL II elevated Kolbe to sainthood.

Kolchak, Admiral Alexander Vasilyevich (1873–1920) Russian naval commander and explorer; served with distinction in the RUSSO-JAPANESE

WAR and with the Black Sea fleet during WORLD WAR I. Kolchak was leader of the anti-Bolshevik troops in Siberia (1918–20). He overthrew the Ufa Directory and was recognized by anti-Bolshevik organizations as representing a provisional government. Kolchak's early successes were followed by withdrawals; after the fall of Omsk in 1919 he retreated to Irkutsk and was taken prisoner, tried and executed.

Kollek, Teddy (1911–) Israeli politician, mayor of JERUSALEM (1965–93). Kollek was born near Budapest, was raised in Vienna and immigrated to Palestine in 1936. He worked as intelligence liaison officer for the HAGANAH until 1945 and headed Haganah's New York office from 1947 to 1948 as chief arms buyer. He served as Israeli minister plenipotentiary in Washington (1951–52) and as director-general of the prime minister's office (1952–64). Kollek was chairman of the Israeli Tourist Board from 1956 to 1965 and is a founder and chairman of Jerusalem's Israel Museum. He was elected mayor of West Jerusalem in 1965 as the candidate of the Rafi Party with the support of Herut and the religious parties—defeating the Labor Party incumbent. Since 1967 Kollek also administered East Jerusalem in place of Jordanian mayor Rouhi al-Khatib. Kollek is renowned for his ability to reach compromises that enable the Israeli government to carry out its plans for the city without exacerbating Israeli-Palestinian tensions. Thus, in 1968, he ordered the erection of a memorial to the Arab war dead in East Jerusalem, in exchange for the Muslim authorities' unofficial consent to shifting all the Muslim graves in the city, which obstructed Israel's construction projects. Kollek clashed with Jerusalem's Orthodox Jews, who held mass demonstrations against him for extending secular leisure facilities and allowing a Mormon university to be built in the city. Kollek ran for reelection in the 1993 Jerusalem municipal elections but was defeated by the Likud candidate, Ehud Olmert.

Kollontay, Alexandra Mikhailovna (1872–1952) Russian politician and propagator of “free love.” A BOLSHEVIK in the 1890s, Kollontay subsequently became a MENSHEVIK “liquidationist.” After 1903, she lived in exile and joined the

International Bureau of Women Socialists. From 1915 Kollontay assisted LENIN, and after her return to Russia in February 1917 she became a member of the Bolshevik central committee. Her interest in women's affairs found its outlet in 1920–21 when she was head of the women's department of the central committee. In 1921–22 she was secretary of the International Women's Secretariat of the COMINTERN. She continued her political career as a diplomat in Norway (1923–26 and 1927–30), Mexico (1926–27) and Sweden (1930–45). She developed the Bogdanovist approach to the question of relations between the sexes, and advanced the “winged eros theory,” in which individuals in a socialist society should be free to associate with different persons of the opposite sex. Although Lenin disapproved, this theory was popular with others, since by making the family appear an outmoded institution, family ties were weakened. Her works include *The Workers' Opposition in Russia* (1923) and *Free Love* (1932).

Kollsman, Paul (1900–1982) American aeronautical engineer. Kollsman revolutionized AVIATION in the late 1920s when he invented the altimeter, which measures a plane's altitude while in flight.

Kollwitz, Kathe Schmidt (1867–1945) German graphic artist and sculptor. A resident of BERLIN, she was a socialist and pacifist whose themes were strongly political and social: poverty, war, human suffering and death. Her powerfully compassionate images were first recognized in her etching and lithograph illustrations based on Gerhardt HAUPTMANN's *The Weavers' Uprising* (1895–98). Kollwitz's other print series include the woodcuts in *War* (1902–08) and *Proletariat* (1925). She also is recognized for her portrayals of mothers and children and for her self-portraits. As a sculptor, she is particularly noted for her war memorial in the Rogevelt Military Cemetery in Belgium. Kollwitz was the director of the graphic arts department at the Berlin Academy in the early 1930s, but was dismissed when the Nazis came to power. Evacuated from Berlin in 1943, she settled in a German mountain village, where she died.

Kolmogorov, Andrei Nikolayevich (1903–1987) Soviet mathematician. From 1931 he was a professor at Moscow University and, from 1939, a member of the Academy of Sciences. Kolmogorov was a leading international authority on the theory of probability, having put forward the widely accepted axiomatic theory, and was an authority on mathematical logic. He was also interested in cybernetics.

Komarov, Vladimir M. (1927–1967) Soviet cosmonaut. The first person to die during a space mission, Komarov plunged to his death on April 24, 1967, when the reentry parachute of his *Soyuz 1* space capsule failed to deploy properly. Chosen for his skill to pilot the first manned flight of the new spacecraft, the Soviet cosmonaut had previously piloted *Voshkod 1* on October 12–13, 1964, with design engineer Konstantin Feoktistov and aerospace physician Boris Yegorov aboard. His tragic death caused a delay in further SOYUZ flights for more than a year while an investigation ensued. Komarov graduated with honors from the Soviet Air Force secondary school in 1942 and was selected for cosmonaut training in 1960. A skilled parachutist who had made over 77 jumps, Komarov had once said “whoever has flown once, whoever has piloted an airplane once, will never want to part with either an aircraft or the sky.”

Komenda, Erwin (1904–1966) German automotive engineer responsible for the body design of a number of famous, classic cars. Komenda worked for Daimler-Benz before joining PORSCHE in Stuttgart in the 1930s. He was the designer of the original VOLKSWAGEN Beetle, probably one of the most widely recognized automotive designs ever developed—however controversial. His design for the 1949 Porsche, a somewhat plump and bulging streamlined form, was developed through study of aerodynamics rather than through aesthetic concerns. Komenda continued to develop Porsche body designs through the model 911 of 1963. Many critics would argue that the Porsche design has not been of equal quality since that time.

Komsomol (All-Union Leninist Communist Union of Youth) A Soviet youth organization attached to and

founded by the COMMUNIST PARTY in 1918, it catered to the 14–28 age range. The Komsomol worked closely with the party; Komsomol members participated in the RUSSIAN CIVIL WAR, collectivization and industrialization, and by the 1980s more than 70% of party recruits came from the Komsomol. Komsomol members were encouraged to play a full part in sociopolitical life; membership and service also enhanced employment and further education prospects. The Komsomol program ended with the collapse of the Soviet Union in December 1991.

Konchalovsky, Peter (1876–1956) Russian painter. Expelled from Moscow College in 1909 for leftism, Konchalovsky exhibited paintings in the first KNAVE OF DIAMONDS exhibition. His *Portrait of Georgy Yakulov* is reminiscent of MATISSE's style, although later Konchalovsky was to be more influenced by Cézanne, in that his former predilection for color was replaced by a monochromatic palette.

Kondrashin, Kiril (1914–1981) Soviet-born symphony conductor. Kondrashin studied at the Moscow Conservatory (1931–36) and was later permanent conductor at the Bolshoi Theater (1943–56). He conducted for the American pianist Van CLIBURN at the 1958 Tchaikovsky Piano Competition in Moscow, and subsequently won acclaim in the West when he accompanied Cliburn on his triumphant return to America. In 1960 he was appointed music director of the Moscow Philharmonic and helped revitalize it. Feeling that his artistic freedom was being restricted, he defected to the West in 1978 and settled in Amsterdam.

Kondratenko, Roman Isidorovich (1857–1904) General in the Russian army who fought heroically in the defense of Port Arthur in 1904. Prior to Port Arthur, Kondratenko commanded the Seventh East-Siberian Infantry. Once at Port Arthur, he greatly increased its fortifications. (See also RUSSO-JAPANESE WAR.)

Koo, V(i) K(yun) Wellington (1887–1985) Chinese diplomat. Koo's career in international relations spanned more than 50 years. He was chairman of CHINA's delegation to the 1919 PARIS PEACE CONFERENCE and delegate to the

LEAGUE OF NATIONS. During the 1920s he was briefly China's foreign minister and prime minister. During WORLD WAR II he was China's ambassador to the U.K. and afterward was Nationalist China's ambassador in Washington. In 1945 he was acting chairman of the Chinese delegation at the San Francisco conference that created the UNITED NATIONS. A judge at the International Court of Justice at the Hague from 1957 to 1967, he was also the court's vice president (1964–67). For many years a senior adviser to CHIANG KAI-SHEK, he continued as senior adviser to the president of the Republic of China in the U.S. after Chiang's death in 1975.

Kopelev, Lev Zinovyevich (1912–1997) Soviet author, critic, translator and literary historian. Graduating from the Moscow Foreign Language Institute in 1938, Kopelev pursued his studies before serving in World War II. He was expelled from the party in 1945 and sentenced to 10 years' imprisonment and five years' exile, but was released prematurely and rehabilitated. However, Kopelev was criticized for his role in the Human Rights movement and expelled from the Writer's Union in 1965. His publications include *The Heart Is Always on the Left* (1960), *Myths and Truths of the American South* (1958) and *To Be Preserved Forever* (1976).

Koppel, Edward James (Ted) (1940–) American television journalist and host of the American Broadcasting Corporation (ABC) weeknight news show, *Nightline* (1979–2005). Born Edward James Koppel in Lancashire, England, Koppel arrived in New York when his family relocated to the U.S. in 1953. After completing his undergraduate and graduate education at Syracuse and Stanford universities, Koppel was employed as a news-writer at WMCA and WABC, radio stations located in New York City. In 1967 ABC hired him as a television journalist, and stationed him at their news bureau in South Vietnam to cover the VIETNAM WAR. As a result of his distinguished coverage of that conflict, ABC promoted Koppel as its bureau chief in Hong Kong in 1969, and subsequently as its chief diplomatic correspondent in 1971. In 1979, soon after Iranian extremists took hostages in the American Embassy in Tehran, Koppel began

hosting a series of late-night news reports on the ongoing hostage situation. These programs were the origin of *Nightline*, a news program on ABC that summarized news developments and included commentary by Koppel, as well as debates between prominent spokespersons for various positions on national and international issues. Koppel later experimented with a "town meeting" format in auditoriums at varied locations, featuring a panel of experts on a particular topic who answered questions from Koppel and the audience. Koppel retired from *Nightline* in 2005.

Korbut, Olga Valentinovna (1956–) Soviet gymnast. Korbut captivated the sports world with her Olympic performances. In the 1972 Munich games, she won three gold medals and a silver, and became the first person ever to do a backwards somersault on the uneven parallel bars. She is perhaps best remembered for her charm as well as her athleticism, as she broke free of the stereotype of the stolid, unemotional Soviet athlete, working the crowd and the camera with her petite charm, dazzling smile and innovative choreography. In 1976 a more grown-up Olga was able to capture only one individual medal, a silver on the balance beam, as gymnastics' next doll-like star, the unsmiling Nadia COMANECI, had already taken center stage. Korbut lives in the U.S., where she teaches gymnastics and devotes much of her time to raising funds for victims of the CHERNOBYL nuclear disaster.

Korchnoi, Victor (1931–) Soviet chess player. He was Soviet champion in 1960, 1962 and 1964 and is an international grandmaster. He left the USSR in 1976. Korchnoi remains an impressive force on the world chess scene, winning events such as the 2004 Gyorgy Marx Memorial Tournament, and regularly representing Switzerland, his adopted country, at the World Chess Olympiad.

Korda, Sir Alexander (1893–1956) Hungarian-born film director and producer. Korda made films in Bonn, Vienna and HOLLYWOOD in the 1920s but achieved his greatest fame—as well as knighthood—for his work in Britain in the 1930s and 1940s. Korda was a major factor in bringing worldwide

recognition to the British film industry through his direction of lushly produced and vividly acted historical epics such as *The Private Life of Henry VIII* (1933) and *Rembrandt* (1936), both of which starred Charles LAUGHTON in the title role. In subsequent decades, Korda

turned his primary attention to producing films such as *Sinbad the Sailor* (1947), featuring Douglas Fairbanks, Jr., *The Third Man* (1949), directed by Sir Carol REED, and *Richard III* (1955), the Shakespearean adaptation by Sir Laurence OLIVIER.

Korea (pre-1953) Korea, a peninsula in Northeast Asia, covers an area of 84,543 square miles. In 1904 it was conquered by Japan and in 1910 became a Japanese colony. After World War II the Allies partitioned Korea, with territory north of the 38th parallel

NORTH KOREA

1905	Russo-Japanese War ends; at peace conference Theodore Roosevelt OK's Japanese takeover of Korea.
1910	Japanese annexation completed; emperor's abdication ends 518-year dynasty; use of Korean language banned; place names and surnames changed to Japanese; workers conscripted and property given away to Japanese citizens.
1945	Japanese driven out; land north of 38th parallel occupied by Soviets.
1948	Democratic People's Republic of Korea formed; division from South Korea formalized.
1950	North Korea invades South, overruns the country; American-led counterattack sweeps to Chinese border; Chinese enter war and driven UN forces back to 38th parallel.
1953	Cease-fire leaves heavily fortified border at 38th parallel; no North-South treaty signed.
1958	Kim Il Sung consolidates power within Communist Party; promotes "Juche" self-reliance for nation, begins creation of intense personality cult around himself, which approaches deification.
1959	Last land removed from private ownership.
1965	Kim Il Sung successfully avoids taking sides in Sino-Soviet rift; maintains ties but also independence.
1967	Kim Il Sung criticized during Cultural Revolution; relations with China cool.
1968	Seizure of U.S.S. <i>Pueblo</i> ; crew imprisoned.
1971	Purchase of Western technology leads to heavy foreign debt.
1975	Fall of Saigon ends period of eased tension with South Korea.
1976	Default on foreign debt; two U.S. soldiers killed at border.
1979	Reunification talks deadlock.
1984	Kim Jong Il groomed to succeed his father as president.
1990	Japan apologizes for crimes of colonial period; signs agreement covering already active trade with North Korea.
1994	North Korea pledges to halt production of weapons-grade plutonium in exchange for deliveries of oil from the U.S. Kim Il Sung dies and is replaced by son Kim Jong Il.
2003	North Korea reveals that it had resumed production of weapons-grade plutonium.
2003	International Atomic Energy Agency passes a resolution demanding North Korea readmit UN nuclear weapons inspectors. Six-nation talks in Beijing on North Korea's nuclear program begin. North Korea withdraws from the nuclear Non-Proliferation Treaty.
2005	North Korea agrees to give up its nuclear activities and rejoin the nuclear Non-Proliferation Treaty. The U.S. affirms that it has no intention of attacking the country. Negotiations continue.

occupied by the Soviet Union and territory south of the line occupied by American forces. By 1948 the COLD WAR had destroyed prospects for reunification of Korea, and the division of the country into the Democratic People's Republic in the north and the Republic of Korea in the south was formalized. Withdrawal of foreign troops brought armed conflict between the two states in 1948–49, which led to war in July 1950 when North Korean forces began a massive invasion of South Korea. UNITED NATIONS armies, predominantly composed of U.S. personnel, pushed the North Koreans back. Eventually, following a massive intervention by Chinese troops, the frontline was stabilized near the 38th parallel, and an armistice was signed on July 27, 1953. (For history after 1953, see KOREA, NORTH and KOREA, SOUTH.)

Korea, North (Democratic People's Republic of Korea) North Korea, covering an area of 46,528 square miles, is located in the northern half of the Korean Peninsula in northeast Asia. The Communist Korean Worker's Party (KWP) established the Democratic People's Republic of Korea in 1953 after the signing of the armistice ending the KOREAN WAR. The country has been ruled since 1958 by KIM IL SUNG, who has kept control through a strong personality cult and a personally constructed communist

Panmunjom cease-fire talks, 1951 (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

ideology known as Juche. During the first two seven-year plans, dependence on imports from the West for rapid development of heavy industry led to huge foreign debts by 1976. The third seven-year plan (1987–93) involved more realistic growth expectations. Good relations were maintained with China and the Soviet Union, but relations with South Korea remained tense.

In 1994 Kim Il Sung died and was succeeded by his son, KIM JONG IL. The new North Korean dictator has created intense international controversy with his repeated efforts to acquire atomic weapons and a ballistic missile system, confirming U.S. president GEORGE W. BUSH's determination to create a NATIONAL MISSILE DEFENSE system to defend against missiles launched from

“rogue states” such as North Korea. In the meantime, South Korea sought to improve relations with the North, engaging in negotiations and providing food aid during famine in North Korea during the early 21st century.

Korea, South (Republic of Korea)

Covering an area of 38,015 square miles, the Republic of KOREA is located

SOUTH KOREA

1904	Japan annexes Korea.
1910	Formally made a colony of Japan.
1945	Following the defeat of Japan, Korean territory north of the 38th parallel is occupied by Soviet troops and southward by American forces.
1948	The country's division is formalized by formation of the Republic of Korea in the south and the Democratic People's Republic in the north with both governments claiming sovereignty over the entire peninsula; Syngman Rhee is elected president.
1949	Soviet and U.S. troops begin withdrawal.
1950	(July 25) North Korea invades South Korea; (September) UN forces land amphibious forces at Inchon, outflanking the North Koreans; (November) Chinese volunteers enter the war, driving UN forces back.
1953	(July 27) Armistice signed.
1960	(April) Rhee overthrown by popular revolt.
1961	(May 16) General Park Chung Hee emerges as leader.
1963	Park, as member of the Democratic Republican Party, is elected president.
1972	Park proclaims martial law and is elected to a six-year term by the new electoral body, the National Conference for Unification.
1979	(October 26) Park is assassinated by the head of his secret police; (Dec. 12) Military coup takes over government.
1980	(August) Presidency assumed by Chun Doo Hwan.
1981	(January) Martial law is lifted.
1987	(October) New democratic constitution is approved; (November) South Korean jetliner destroyed by agents of North Korea; (December 16) Roh Tae Woo is elected president.
1988	Summer Olympic Games held in Seoul.
1991	Soviet President Mikhail Gorbachev becomes first Soviet leader to visit South Korea.
1998	Kim Dae Jung becomes president, seeks better relations with North Korea.
2000	Kim Dae Jung wins the Nobel Peace Prize for efforts in improving the relationship between North and South Korea.
2002	Roh Moo-hyun is elected president.
2004	Roh is impeached by the National Assembly; several weeks later the impeachment is overturned

on the southern half of the Korean Peninsula in northeast Asia. The corrupt government of South Korea's first president, Syngman Rhee (1948–60), was overthrown in 1960, but the unstable Second Republic that replaced it fell victim to a military coup in 1961, bringing to power General PARK CHUNG HEE (1962–79). Though his regime brought economic success, it also introduced an authoritarian constitution (1972) and practiced coercion. After Park's assassination in 1979, subsequent popular uprisings led to a declaration of martial law. Chun Doo Hwan became president in 1980, lifting martial law (1981) and improving human rights in response to foreign pressure. His successor, ROH TAE WOO (1987–), undertook reforms and es-

tablished a new democratic constitution in 1987 in response to proposals to move the coming OLYMPIC GAMES (held in Seoul in 1988) because of unrest in Korea. In 1998 Kim Dae jung became president and initiated a "sunshine policy" toward North Korea, in which South Korea unconditionally offered North Korea economic and humanitarian aid, in the hopes of improving relations between the two states. In recognition of his efforts to restore peaceful relations between the two Kim Dae Jung received the Nobel Prize in 2000. Roh Moo Hyun won the presidency in 2002 but suffered a setback when he was impeached by the National Assembly in 2004. The country's Constitutional Court overturned the impeachment, and Roh was restored to

power. In the early years of the 21st century, North Korea's determination to develop nuclear weapons caused increased anxiety in South Korea and inhibited the earlier movement toward reconciliation.

Koreagate (1977) Political scandal involving illegal South Korean influence peddling and bribery on Capitol Hill. House and Senate Ethics Committee investigations revealed that a number of congressmen had accepted gifts and contributions from Tongsun Park, a South Korean rice trader and influence peddler. The funds allegedly were paid in return for votes in favor of U.S. aid and the continuing presence of U.S. troops in South Korea. The investigations led to the indictment of Congressmen Hanna (California) and Passman (Louisiana), although only Hanna was convicted of taking bribes. A number of other congressmen were censured, and all charges were dropped against Tongsun Park, who testified at the hearings and cooperated with investigators.

Korean War (1950–53) In order to disarm Japanese forces that had occupied KOREA since 1904, the victorious Allies at the end of WORLD WAR II established the 38th parallel as a "temporary" dividing line between Soviet-occupied NORTH KOREA and U.S.-occupied SOUTH KOREA; later efforts by the UNITED NATIONS to reunite the country failed. On June 25, 1950, North Korean troops suddenly and without warning invaded South Korea; within two months they had pushed south almost to the tip of the Korean Peninsula, where South Korean defenses were thrown up in a perimeter around Pusan. Two days after the invasion, the UN had called on its members to help South Korea, and 15 did so. The international force was under the command of U.S. general Douglas MACARTHUR, who planned and executed a successful amphibious landing behind the lines at the Yellow Sea port of INCHON (September 15, 1950) and cut enemy supply routes. The North Koreans were driven northward and eventually back to the Yalu River (November 24, 1950), the boundary between CHINA and North Korea. UN forces, in two columns on each side of Korea's central mountain spine, planned

Members of an American convoy in Korea (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

to reunite Korea under southern control. But the plan was never realized because, on November 26, 1950, a large Communist Chinese army invaded the north in support of the North Koreans and helped them drive the UN forces south after much bitter fighting.

By January 1, 1951, a North Korean–Chinese army of about 485,000 men had forced MacArthur’s 365,000 UN troops back to the 38th parallel. The South Korean capital of SEOUL fell into enemy hands, but a counteroffensive by UN forces retook the city on March

14, 1951. Both sides began a “talking war” to reach an accord; negotiations dragged on while fighting continued intermittently around the dividing line. MacArthur publicly advocated attacking and bombing Chinese bases in Manchuria, contrary to UN and American orders. On April 11, 1951, U.S. president Harry S. TRUMAN summarily dismissed MacArthur from command of UN and American forces in the Far East and appointed General Matthew B. RIDGWAY in his place. Offensives and counteroffensives were launched by both sides, which suffered heavy casualties.

Ridgway’s truce negotiations, which hinged largely on the repatriation of prisoners, sick and wounded, broke down in October 1952; the UN forces had taken over 70,000 prisoners, and UN negotiators insisted that they be allowed to choose whether to return to the north or to stay in the south. The latter view ultimately prevailed, and three out of four prisoners remained in South Korea (21 American prisoners elected to stay with the communists). In April 1953, peace talks resumed

The 38th parallel, which divides North and South Korea, 1950 (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

and led to the signing of an armistice at PANMUNJOM on July 27, 1953; but no formal peace treaty has ever been concluded.

Korngold, Erich Wolfgang (1897–1957) Celebrated symphonic, opera and motion picture composer. When Austrian-born Korngold arrived in HOLLYWOOD in 1934, he had already written operas and ballets as a teenager, collaborated with impresario Max REINHARDT on several Johann Strauss vehicles, and been acclaimed a “genius” and a “second Mozart” by Gustav MAHLER and Richard STRAUSS. It was at Reinhardt’s invitation in 1935 that Korngold scored his first film for WARNER BROS., *A Midsummer Night’s Dream*. In his subsequent 12 years in Hollywood he wrote 18 scores of a consistently high quality and achieved the enviable status of highest paid composer in the business. His greatest wish, however, was to return to the classical music world in Europe after World War II. Sadly, productions in his beloved Vienna of his most famous operas, *The Dead City* and *Die Kathrin*, were unsuccessful, and he had to return to Hollywood. His lasting legacy must surely be his film music. Particularly memorable is the brassy splendor of *King’s Row* (1942), the dashing bravado of *The Adventures of Robin Hood* (1938) and *The Sea Hawk* (1940) and the lush sentiment of *The Constant Nymph* (1943). When accused by a film producer that his music had degenerated in quality over the years, Korngold snapped, “When I first came here, I couldn’t understand the dialogue—now I can.” Upon his death in Hollywood of a heart attack, a black flag—the traditional Austrian mark of mourning—appeared over the Vienna Opera House.

Kornilov, General Lavr Georgevich (1870–1918) Russian soldier. Kornilov served in the RUSSO-JAPANESE WAR (1904–05) and in WORLD WAR I. He was captured by the Germans but made a spectacular escape. He was Petrograd military district commander in 1917 and was responsible for the arrest of NICHOLAS II and his family. As commander in chief of all Russian forces in August 1917, he believed that the provisional government was incapable of dealing with any threat from the BOLSHEVIKS. Mistakenly be-

lieving that Alexander KERENSKY was in agreement, he organized his troops to march on Petrograd but was arrested on Kerensky’s orders. This action strengthened the Bolsheviks, and after the fall of Kerensky, Kornilov escaped to join the anti-Bolshevik forces of Anton DENIKIN on the Don, where he was killed in action.

Kornilov’s Revolt (1917) Conservative Russian generals, backed by Alexander F. KERENSKY who had replaced Prince LVOV as premier in the provisional government, decided to form a military dictatorship to end the increasing anarchy and lack of army discipline after the FEBRUARY REVOLUTION. When Kerensky realized that General Lavr G. KORNILOV, whom he had appointed army commander in chief, aspired to become sole dictator, he declared him a traitor and dismissed him. In response, Kornilov dispatched his Cossack troops to Petrograd (now St. Petersburg), hoping to reform the soviet (revolutionary council) and the provisional government along more conservative lines. Kerensky withdrew his support for a rightist military takeover and sought help from the soviets’ central committee and leftist forces. Workers, armed by the Bolsheviks and urged to resist Kornilov’s threat to their revolution, persuaded the Cossacks to defect, and the counterrevolution collapsed after five days (September 9–14, 1917). Kornilov was arrested and jailed; he escaped from Petrograd after the BOLSHEVIK REVOLUTION, also called the October Revolution. (See also RUSSIAN REVOLUTION.)

Korovin, Konstant (1861–1939) Russian painter. Korovin is considered by many to be the first Russian artist to be influenced strongly by the impressionists, whose work he saw in Paris in 1885. Korovin’s transposition of French Impressionist ideas brought about a complete change in theatrical design in Russia. Appointed professor of the Moscow College in 1901, he supervised the work of almost all the avant-garde of the first decade of the 20th century.

Kosinski, Jerzy Nikodem (1933–1991) Polish-American novelist. Kosinski’s impactful first novel, *Painted Bird*

(1965), is a semiautobiographical account of his childhood in wartime Poland, when orphaned and homeless, he survived as he could. The book was published just eight years after he arrived in the U.S. having tricked the Polish authorities to emigrate. His next novel, *Steps* (1968), won the National Book Award in 1969. His work is often graphically brutal and violent. In 1982 Kosinski found himself at the center of controversy when *The Village Voice* published an article claiming that his books were written largely by assistants and secretaries. Kosinski denied the charges, and various members of the publishing community lined up on both sides. Other novels include *Being There* (1971, filmed 1979), *Pinball* (1982) and *The Hermit of 69th Street* (1988). Early in his career Kosinski also wrote anticommunist nonfiction under the pseudonym Joseph Novak.

Kosovo Autonomous region of SERBIA in the Federal Republic of Yugoslavia. Approximately 4,200 square miles, this forested and mountainous region briefly functioned as a district of ALBANIA in 1912, when the Muslim Albanians in Kosovo—who composed more than 90% of the region’s population—united Albania to expel the forces of the Ottoman Empire from their domain. A conference of the major European powers, however, imposed a settlement that transferred control of Kosovo to the Kingdom of Serbia. Following the end of the WORLD WAR I, Kosovo became part of the newly formed Kingdom of the Serbs, Croats, and Slovenes, a multiethnic state ruled by the Serbian monarch that was later renamed YUGOSLAVIA. At the end of WORLD WAR II (1939–45), the Yugoslav government of Marshal TITO granted Kosovo a substantial degree of autonomy to the Kosovars, as the majority ethnic Albanians were called. After Tito’s death in 1980, ethnic tensions broke out between the Muslim Albanian majority and the Serb minority in Kosovo. In 1989 the leader of the Serbian Communist Party, SLOBODAN Milošević, ended Kosovo’s political autonomy within the federated Yugoslav state in response to efforts by the Kosovars to obtain even greater autonomy. Milošević placed the region under military control, suppressed all provincial media outlets and prohibited the use of

the Albanian language in Kosovo's schools. The following year, Milošević disbanded the Kosovo parliament, which prompted the provincial leadership to flee to Macedonia, another autonomous region within Yugoslavia, to continue the struggle against the Yugoslav government. The dispute between Yugoslavia and Kosovo was transformed as a result of the fragmentation of the multiethnic state in 1992, when Croatia, Bosnia and Herzegovina, Macedonia and Slovenia all seceded from Yugoslavia. The breakup of Yugoslavia resulted in a civil war among Serbia, BOSNIA AND HERZEGOVINA and Croatia that ended with the 1995 DAYTON ACCORDS. When Croatia deported thousands of ethnic Serbs from the Krajina region it had recently wrested from Serb control, Milošević decided to settle these refugees in Kosovo. The influx of Serbs to Kosovo and the martial law imposed by the truncated Yugoslav state led to the formation of the KOSOVO LIBERATION ARMY (KLA), a paramilitary group that fought for the province's independence. Originally staging attacks on Serb forces in the region, the KLA began to defend Kosovars against Serb police and troops in March 1998. When Serb forces in Kosovo initiated attacks against Kosovars, forcing many of them to flee their homes, the NORTH ATLANTIC TREATY ORGANIZATION (NATO) launched a sustained air campaign against Serbia in March 1999. Serbia retaliated by increasing its assaults on Kosovar villages, leading to a massive exodus of approximately 640,000 Albanian Kosovars into Albania. The fighting and air strikes ended on June 3, 1999, when Milošević accepted the NATO-sponsored peace plan. After Yugoslavia finally began withdrawing its troops from Kosovo seven days later, the UN approved the dispatch of a 50,000 strong peacekeeping force, primarily to ensure that refugees in Albania could return to their homes if they so desired. As these Kosovars returned, the KLA and other pro-Kosovar paramilitary groups began reprisals against Serbs residing in the province, forcing many of them to flee. The continued tension between ethnic Albanians demanding independence for Kosovo and Serbian attempts to retain control of the region have complicated efforts to reach a formal settlement of the dispute.

Kosovo Liberation Army (KLA) A paramilitary group composed of ethnic Albanians, which account for more than 90% of the population in the Yugoslav province of KOSOVO. The KLA engaged in guerrilla fighting against the military and paramilitary forces of Yugoslavia for control of Kosovo since 1995. Although the Serb-dominated Yugoslav army left the province in October 1999 after the NATO bombing campaign against SERBIA, the KLA continued to mount a series of raids on ethnic Serbs within Kosovo in retaliation for Serb attacks on Albanians between 1995 and 1999.

Koštunica, Vojislav (1944–) Yugoslav author, professor, politician, president of the Federal Republic of Yugoslavia (2000–03) and prime minister of SERBIA AND MONTENEGRO (2004–). Born in 1944 in the Yugoslav capital of Belgrade, Koštunica soon developed a reputation as a political and constitutional liberal and critic of the repressive rule of Marshal TITO.

In 1989 Koštunica began his political career by forming the Democratic Party and was elected to the Serbian provincial parliament in 1990. The following year, Koštunica left the organization to found the Democratic Party of Serbia, convinced that the Democratic Party had failed to recognize the dire consequences of the secession of Croatia and Bosnia and Herzegovina from Yugoslavia. Koštunica further defended Serbian sovereignty and policies in 1999 when he denounced NORTH ATLANTIC TREATY ORGANIZATION (NATO) air campaigns against Serbian cities to force an end to the Serb-led military and paramilitary actions in Kosovo. As a result of popular dissatisfaction with the authoritarian aspects of Serbian president Slobodan Milošević's rule, Koštunica won the five-candidate contest for president in 1999 with more than 52% of the vote. When Milošević attempted to alter the outcome by tampering with the ballots cast, massive protests and general strikes forced him to step down in favor of Koštunica.

As president of Yugoslavia, Koštunica developed a reputation as a liberal committed to democratic and constitutional government, although some foreign commentators criticized his strident Serbian nationalism and his ef-

orts to block full autonomy for Kosovo, increasing ethnic tensions between the majority ethnic Albanians and its Serb and Montenegrin minorities in the province. Yet, Koštunica seemed committed to the rule of law, as revealed in his willingness to allow the transfer of Milošević to the international war crimes tribunal at The Hague and in his refusal to resort to extraconstitutional methods to rule his country.

Kosygin, Alexei (1904–1980) Soviet politician, chairman (prime minister) of the Council of Ministers of the USSR (1964–80). A member of the Central Committee of the COMMUNIST PARTY of the Soviet Union in 1939, Kosygin was minister for economic planning in 1956–57, rising to chairman of the state economic planning commission and first deputy prime minister in 1960. A leading figure in the ouster of Soviet leader Nikita KHRUSHCHEV in 1964, he succeeded Khrushchev as prime minister. He collaborated closely with Leonid BREZHNEV, but the latter became increasingly dominant. Kosygin partially attained his objective of decentralizing the control of industry and agriculture, but his hopes of producing more consumer goods remained largely unfulfilled. Ill health forced his resignation in 1980, and he died a few weeks later.

Koufax, Sandy (1935–) American baseball player. Widely considered one of the greatest pitchers in the history of baseball, Koufax pitched in 397 games from 1955 to 1966, all with the Brooklyn and Los Angeles Dodgers. A left-hander, in his early years in the game his pitching was often wild, but in the 1960s he mastered his overpowering fastball and virtually unhittable curve. During his career he pitched four no-hitters, including a perfect game. He struck out 2,396 batters in 2,325 innings. In 1963, when he led the Dodgers to a memorable World Series victory over the New York Yankees, he was named the National League's Most Valuable Player. His career record was 165 wins and 87 losses with an earned run average of 2.76. Koufax's career was cut short by arthritis in 1996. In 1972, at the age of 36, Koufax became the youngest person ever elected to the Baseball Hall of Fame.

Koussevitzky, Serge (1874–1951) Russian-born orchestra conductor and leader of the Boston Symphony Orchestra. In his time he was the most important and arguably the greatest of all Russian conductors. Born at Tver, near Moscow, in his youth he became a widely known double bass performer at the Moscow Philharmonic Society. He studied conducting at the Berlin School of Music, traveled extensively through Russia with his own orchestra and founded a Moscow publishing house, Editions Russes de Musique, to promote new music by STRAVINSKY, SCRIBIN, and PROKOFIEV. In 1920 he and his wife left Russia after the revolution. After a notable series of “Concerts Koussevitzky” in Paris, he replaced Pierre MONTEUX as conductor of the Boston Symphony Orchestra. There, despite poor relations with some of the players, notoriety as a bad score reader, reluctance to perform operas and other problems, Koussevitzky elevated the Boston Symphony to unquestioned stature as one of the greatest orchestras in the world. For 25 years he was one of the “Big Three” American conductors, along with Arturo TOSCANINI and Leopold STOKOWSKI. Certainly no conductor of his time meant more to American musical development. He sponsored new music by Aaron COPLAND, Walter PISTON, William SCHUMAN, and Roy HARRIS, for example; he took over the Berkshire Music Festival in Tanglewood, Mass., in 1937 and created a music school there in 1940. He led an acclaimed conducting class from which emerged such figures as Leonard BERNSTEIN. His notable series of RCA recordings still convey his unique nervous energy and glow, the unique lyric sheen of his RAVEL and DEBUSSY scores and—above all—unparalleled interpretations of the Russian masters.

Kovacs, Ernie (1919–1962) Zany American television personality, program host, writer, and movie actor, credited with many innovations in video programming. Kovacs was born in Trenton, N.J., of Hungarian immigrant parents. His professional career, which spanned little more than the decade of the 1950s, began with local television shows in Philadelphia in 1950, continued nationally on the CBS, NBC, Dumont, and ABC networks, and extended briefly into movie

acting in HOLLYWOOD. He is best remembered for the series of Kovacs Specials, on ABC in 1961. By contrast with such other early television performers as Steve ALLEN and Sid CAESAR, who were still working essentially in a vaudeville tradition, Kovacs was defining the video medium itself, anticipating later video artists like Nam June Paix. He devised all manner of video chicanery from the very effects of the medium—the line-scan pattern, the “key” effects of camera switching and mats, picture compression and polarity reversals. He changed the nature of the television event as well. His first program, *3 to Get Ready* (1950), was the first morning talk show of its kind, defining television as an *audience-bound* event. He broke the medium’s “fourth wall” for the first time, plunging beyond the studio set to the control room, outside corridors, the firescapes, and into the audience. His quick, pungent sketches, sudden noises, and satiric blackouts predated the formats of *SATURDAY NIGHT LIVE* and *LAUGH-IN* by a generation. An innovator, yes, but according to critic Jeff Greenfield, television’s great subversive at the same time. Since his untimely death in a car crash in 1962, his work has been revived in tributes on public television in 1977 and at the Museum of Broadcasting in 1986. *Erratic*, is the word he used to describe himself in his autobiographical novel, *Zoomar* (1957). “His comedy is too extreme and too frequently he gets his punch line from the grisly side of life.”

Kozintsev, Grigory Mikhailovich (1905–1973) Soviet film director and script writer. Kozintsev began his career in film in 1920 in Kiev. In 1924 he was the director of the Lenfilm Studio in Leningrad. One of his best-known works is the *Maksim Trilogy*, which he produced at Trauberg. During World War II Kozintsev worked in the theater and produced *King Lear* (1941) and *Othello* (1943).

Kraft, Christopher C., Jr. (1924–) U.S. flight director. The most frequently heard voice during the early years of the U.S. space program, Chris Kraft was flight director on all the Project MERCURY flights and most of the GEMINI missions. His was the responsibility for controlling each mission from

the ground, and he decided ultimately whether to launch or not and what to do if things went awry. Kraft began working for NACA in 1945, and in 1958 he became one of the original members of the space task group charged with developing the Mercury program. He was responsible for much of the mission and flight-control development and the design of the Mission Control Center at what is now the JOHNSON SPACE CENTER. Kraft also served as director of flight operations and became director of JSC in 1972, retiring in August 1982. (See also NASA.)

Krag, Jens Otto (1914–1978) Prime minister of DENMARK (1962–68; 1971–72). A Social Democrat, Krag led his country into the EUROPEAN ECONOMIC COMMUNITY (EEC) and resigned from office immediately after a referendum approved the step.

Kramer, Jack (1921–) American tennis player. Kramer won the U.S. National Doubles title while still a teenager (1940); he won again in 1941 and 1943. In 1946–47 he lead the U.S. Davis Cup team to victory. He won both the U.S. singles and doubles and the British singles and doubles that same year. In 1947 he turned professional and continued to win national and world titles until retiring as a player in 1954. Kramer then spent many years promoting the growth of professional tennis around the world.

Kramer, Stanley (1913–2001) American film director and producer. Kramer is best known as a creator of “message” films that take strong liberal stands on a range of social and political issues from racism to nuclear war. Born in New York City, Kramer worked as a B-movie screenwriter for METRO-GOLDWYN-MAYER studios before WORLD WAR II, during which he served in the armed forces. In 1948 he started Screen Plays, Inc., an independent production house that fostered memorable films including *Champion* (1949), *Cyrano de Bergerac* (1950) and *The Caine Mutiny* (1954). Kramer began directing his own films in 1955 and enjoyed a number of critical and popular successes including *On the Beach* (1959), a portrayal of a dying world after a nuclear war, and *Guess Who’s Coming to Dinner* (1967), the

story of an interracial marriage that featured Spencer TRACY's last film appearance. Kramer was less successful in the 1970s and ceased filmmaking.

Krasin, Leonid Borisovich (1870–1926) Russian communist. Having become a member in 1890 of one of the earliest social democratic organizations in Russia, from 1900 to 1903 Krasin was a leading member of *Iskra*. From 1904 to 1905, Krasin opposed LENIN's methods in the party and had him expelled from the central committee. In 1905, however, with Lenin reinstated in favor, Lenin, Krasin and Bogdanov led the Bolshevik faction of the revolution. In 1909 he broke with Lenin. Krasin's important political positions include membership in the presidium of the supreme council of national economy, commissar for foreign trade, and ambassador to Britain twice and to France once. His technical skills and business acumen helped him to play a leading part in reorganizing the Soviet economy.

Krasner, Lee (1908–1984) American painter. Krasner was a leading figure in the so-called New York school of ABSTRACT EXPRESSIONISM. Her use of draftsmanship and color to celebrate the natural world showed the influence of MATISSE and Pablo PICASSO, as well as of her husband, Jackson POLLOCK. After Pollock's death (1956) she was slow to gain recognition in her own right; however, by the 1970s her work had won much international acclaim.

Krasnoye Selo Formerly a town outside St. Petersburg; now part of the city. It was the summer residence of Czar NICHOLAS II and has two former palaces. The Germans occupied it from 1941 to 1944, while they had LENINGRAD under siege.

Kraus, Lili (1905–1986) Hungarian-born concert pianist renowned for her interpretations of the music of Mozart. Kraus had two careers, divided by three years during WORLD WAR II when she was held captive in a Japanese prison camp in the Dutch East Indies. A U.S. resident since the late 1960s, she retired from the concert stage in 1982.

Krebs, Sir Hans Adolf (1900–1981) German-British biochemist. Born in Germany, Krebs studied at the universi-

ties of Göttingen, Freiburg, Munich, Berlin and Hamburg, where he obtained an M.D. in 1925. He taught at Berlin's Kaiser Wilhelm Institute and the University of Freiburg, where he researched the production of urea in the liver, until the rise of NAZISM caused him to immigrate to England in 1933. While serving as a professor at Sheffield University (1935–54), he discovered in 1937 the Krebs cycle (or citric acid cycle), the chemical reactions in the later stages of the metabolism of food that provide much of the energy for living organisms. For this discovery, he was awarded the 1953 NOBEL PRIZE in physiology or medicine (with F. A. Lipmann). Krebs became a professor at Oxford in 1954, was knighted in 1958 and retired in 1967.

Kreisky, Bruno (1911–1990) Austrian politician. Born to a Jewish family, he was a lifelong socialist who was jailed for his activities in the 1930s. After the takeover of AUSTRIA by Nazi GERMANY in 1938, he fled to Sweden, where he remained until after World War II. He returned to Austria, entered the diplomatic service and was named foreign minister in 1959. In 1970 he became chancellor, a post he held until 1983. His tenure was marked by strong economic growth and prosperity. He pursued an active role for Austria in international affairs, but was criticized by ISRAEL for his evenhanded approach to Israel's Arab neighbors.

Kreisler, Fritz (1875–1962) Austrian violinist and composer. Kreisler is one of the legendary violin performers not only of the 20th century, but in the history of classical music. Born in Vienna, he was a musical prodigy, becoming the youngest student at the esteemed Vienna Conservatory at the age of seven. Among his teachers was the famed composer Anton Bruckner. By his teens Kreisler was an international star of the concert stage, on which he reigned for over six decades. Kreisler was also one of the great composers for the violin, although he sparked controversy by passing off his own compositions—in the early decades of his career—as “transcriptions” from earlier masters, in the hopes of thereby gaining for them a more respectful hearing. Kreisler's most famous compositions

Violinist and composer Fritz Kreisler (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

include *Liebessfreud*, *Caprice Viennois* and *La Gitana*.

kremlinology Name derived from the Moscow Kremlin, where the Supreme Soviet of the USSR held its sessions. Kremlinology was the study of the policies of the Soviet government. It also implies gleaning information or clues about the conduct of Soviet politics, getting an indication of what goes on behind the facade of “monolithic unity” among the leaders. It lost its relevance with the dissolution of the Soviet Union in December 1991.

Krenz, Egon (1937–) East German politician. Krenz was the communist leader who, on November 17, 1989, opened the BERLIN WALL and allowed East Germans free access to the West. Trained as a teacher, he spent most of his career as an administrator in the East German (GDR) Communist Party's youth movement. He was at the Soviet Communist Party's Central Committee College from 1964 to 1967. In November 1983 he was promoted to the East German Central Committee Secretariat and also became a full member of the Politburo. Upon the resignation of Erich HONECKER (October 18, 1989), he became secretary general of the party and president of the GDR, promising reforms, but resigned (along with the entire Politburo) on December 3, 1989, as a result

of continuing protests by the East German people against communist rule. In 1990 Krenz's Party—in an attempt to improve its image—stripped Krenz of his membership. Krenz was sentenced in 1997 to six years in prison for crimes during the cold war, specifically the murder of people who tried to escape EAST GERMANY, election fraud and other crimes. He appealed the ruling in 1999 but lost and was confined to Spandau prison in Berlin. Krenz was released in 2003, having served only three years of his sentence.

Kripalani, Jiwatram Bhagwandas (1888–1982) Indian political leader. In 1919 Kripalani became a disciple of Mohandas K. GANDHI. Kripalani worked closely with Gandhi over the next 28 years in the nonviolent struggle for INDIA's independence from Britain. He was president of the CONGRESS PARTY when India achieved independence (1947), but later broke with the party over differences with Jawaharlal NEHRU. He became an independent in 1957 and helped form the Janata Party, which came to power in 1977, temporarily ousting Indira GANDHI.

Krips, Josef (1902–1974) Austrian conductor. Born in Vienna, Krips studied at the Vienna Academy of Music with Felix WEINGARTNER. He began his musical career as a violinist, making his conducting debut in 1921. He served as the conductor of the Dortmund Municipal Theater (1925–26), music director at Karlsruhe (1926–33) and conductor of the Vienna State Opera (1933–38), and was a professor at the Vienna Academy of Music (1935–38). Because Krips had Jewish grandparents, he was forced to abandon his musical career after the German occupation in 1938. After World War II, Soviet authorities chose him to reconstruct Vienna's musical structure, a task he accomplished from 1945 to 1950. He was later the conductor of the London Symphony (1950–54), the Buffalo Philharmonic (1954–63) and the San Francisco Symphony (1963–70). Noted for the warmth and lyricism of his performances, he had a large repertoire that included the great Viennese and German classics as well as works by such modern composers as BARTÓK, HINDEMITH and STRAVINSKY.

Krishnamurti, Jiddu (1895–1986) Indian philosopher and teacher. In 1929 Krishnamurti renounced all organized religions and ideologies, claiming that these tended to retard rather than advance self-awareness. With the aid of his supporters, he set up non-profit foundations in California, England and India. He traveled around the world to deliver lectures stressing the importance of maximum self-awareness. Many of his 40-odd books were drawn from these lectures. He came to be regarded by many as an outstanding spiritual leader.

Kristallnacht Nazi-directed anti-Jewish violence throughout Germany on the night of November 9, 1938. On that day, Ernst von Rath, a German official in Paris, died after being shot by a young Polish Jew. Using the incident as an excuse, Josef GOEBBELS, Nazi propaganda minister, ordered Nazis to commit acts of violence against German JEWS. Over the following 24 hours, more than 30,000 Jews were arrested, nearly 100 were killed and 36 were seriously injured. Seven thousand Jewish businesses were destroyed, and nearly 300 synagogues were burned. The name Kristallnacht, or "Night of the Broken Glass," is a reference to the windows of the Jewish-owned buildings.

Kroc, Ray A. (1902–1984) Founder and chairman of McDonald's Corp. Kroc opened his first McDonald's hamburger stand in Chicago in 1955. By 1983 more than 7,500 McDonald's franchise restaurants in 32 countries displayed the famous golden arches. Kroc's automating and standardizing techniques revolutionized the fast-food business and the American way of eating. Kroc also owned the San Diego Padres baseball team.

Kroeber, Louis and Theodora American anthropologists. Alfred Louis (1876–1960) and Theodora Brown (1897–1979) Kroeber both wrote major works in the field of anthropology. Alfred exercised the broader influence, establishing the department of anthropology at the University of California in Berkeley in the early 1900s and teaching there until 1946. He wrote a widely used introductory text, *Anthropology* (1923), and did field work in Mexico and Peru. His later works include *The*

Nature of Culture (1952) and *Style and Civilization* (1957). Theodora wrote two stylish and influential works, *The Inland Whale* (1959) and *Ishi in Two Worlds* (1961). Their daughter is science fiction writer Ursula K. LE GUIN.

Kronstadt Rebellion An uprising among Soviet sailors in Kronstadt on the Gulf of Finland, March 7–18, 1921. The sailors, who had supported the BOLSHEVIKS in the OCTOBER REVOLUTION, demanded economic reforms and an end to Bolshevik political domination. The Red Army, led by Leon TROTSKY and Michael TUKHACHEVSKY, crushed the rebels, and Lenin's NEW ECONOMIC POLICY (1921) was introduced to relieve the privations that had given rise to the revolt.

Kruchenykh, Alexei Yeliseyevich (1886–1970) Futurist poet who began his career as a painter. Together with Velemir KHLBNIKOV, Kruchenykh was the originator of "trans-sense" (or *zaumney*) verse. Although somewhat an outsider among postrevolutionary Futurists (see FUTURISM), he developed the Cubo-Futurist theory. His artistic output includes a "nonsense" play *Gli-Gli*, in which the senses of the audience were bombarded from all sides, and the opera *Victory Over the Sun* (1913), which—with its songs in Kruchenykh's language of the future, Kazimir MALEVICH's costumes and scenery representing partial objects and individual letters, and Matushin's quarter-tone music—constituted a landmark in theater.

Krupa, Gene (1909–1973) American JAZZ drummer and big band leader. Krupa is regarded as perhaps the greatest drum virtuoso in the history of jazz. His uniquely flamboyant style of playing emphasized his technical brilliance and unerring sense of rhythm. Krupa first gained national fame through his appearances in the 1930s with the Benny GOODMAN big band and trio. In 1938 Krupa formed his own big band, which continued—after a hiatus for World War II—through 1951. A Hollywood biographical film, *The Gene Krupa Story* (1959), featured actor Sal Mineo as Krupa.

Krupskaya, Nadezhda Konstantinovna (1869–1939) Russian communist educator and wife of LENIN.

Jazz drummer Gene Krupa (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

Educated at the Women's College in St. Petersburg, she aided Lenin in his revolutionary work and married him in 1898, accompanying him in his exile. After their return to Russia, Krupskaya was a member of the commissariat of education and developed and expounded the party's plans for education. She was later to become vice commissar of education and a member of the Central Committee of the Communist Party and the Presidium of the USSR. She died in the Kremlin on February 27, 1939.

Krutch, Joseph Wood (1893–1970) American author. After receiving his doctorate from Columbia University (1923), he became an editor of *The Nation* (1924–52). A noted literary critic, his works include *Comedy and Conscience After the Restoration* (1924), *The Desert Year* (1952) and *The Voice of the Desert* (1955). His *Measure of Man* (1954) won him a National Book Award.

Kubelík, Jan (1880–1940) Czechoslovakian violinist. A prodigy, Kubelík entered the Prague Conservatory at the age of 12. He debuted in Vienna in 1898, and soon became a virtuoso performer throughout Europe. Beginning in 1901, he also made frequent tours of the U.S. Known for his brilliant, fiery style, he was acclaimed for his performances of the major violin concerto repertoire and for his superb interpretations of Paganini's compositions. Kubelík

was also a composer, whose works include several violin concertos, a symphony and chamber music. He was the father of conductor Rafael KUBELÍK.

Kubelík, Rafael (1914–1996) Czechoslovakian conductor. The son of violinist Jan KUBELÍK, Rafael Kubelík studied at the Prague Conservatory (1928) and made his conducting debut in 1934. He was artistic director of the Czech Philharmonic Orchestra from 1942 to 1948. Immigrating to the U.S. in 1949 following the Communist takeover of CZECHOSLOVAKIA, he directed the Chicago Symphony Orchestra (1950–53) and became well known for his controversial introduction of new music to the orchestra's repertoire. He subsequently conducted the New York Philharmonic (1957–58) and the Royal Opera House orchestras, Covent Garden (1955–58). Chief conductor of the Bavarian Radio Symphony Orchestra from 1961 to 1979, he was briefly (1973) music director of New York's Metropolitan Opera. Kubelík is particularly known for his sensitive and lyrical performances of such Czech composers as Dvořák, Smetana and JANACEK, as well as for his performances of German orchestral classics and the works of MAHLER and BARTÓK. He made numerous recordings. Kubelík returned to Czechoslovakia for the first time in 1990, at the invitation of President Václav HAVEL.

Kubrick, Stanley (1928–1999) American film director. Kubrick is one of the most critically acclaimed film directors of the modern era, although his films have had a hit-and-miss record with film-going audiences. Born and raised in the Bronx, Kubrick was encouraged by his father to learn photography and became so skilled at it that he won a job with *Look* magazine upon graduating from high school. In the 1950s Kubrick made a series of self-funded small films before winning acclaim with the antiwar film *Paths of Glory* (1957), which starred Kirk DOUGLAS. Kubrick replaced director Anthony Mann to complete the filming of *Spartacus* (1962), which also starred Douglas. He then enjoyed a box office hit with *Lolita* (1962), based on the controversial novel by Vladimir NABOKOV. Kubrick's next project, *Dr. Strangelove or: How I Learned to Stop Worrying and Love the Bomb* (1964), re-

mains a classic black comedy. *2001: A Space Odyssey* (1968) was alternately praised and reviled by critics, but most agreed that it set a new standard for visual splendor in filmmaking. Subsequent films by Kubrick include the darkly futuristic *A Clockwork Orange* (1971), *Barry Lyndon* (1975), *The Shining* (1980) and *Full Metal Jacket* (1986). In 1999 Kubrick's last film, *Eyes Wide Shut*, was released shortly after his death.

Kuiper, Gerard (1905–1973) Dutch-American astronomer. Born in the Netherlands, Kuiper earned his Ph.D. at the University of Leiden. After moving to the United States in 1933, he became an American citizen in 1937. Best known for his studies of our solar system, he had a long association with Yerkes Observatory, twice holding the position of director (1947–49, 1957–60). From 1960 until his death in 1973, Kuiper worked in a similar capacity at the Lunar and Planetary Laboratory at the University of Arizona. His theories of the origins of the planets, including the idea that stars and planets are products of condensation from interstellar gas clouds, helped to spark a renewed interest in our solar system. During the 1960s and early 1970s, he was closely linked with the American space program, instigating many planetary research projects.

Ku Klux Klan American secret organization based on the idea of white supremacy. Organized in Pulaski, Tenn., in 1866 by Confederate veterans, its purpose was to oppose the former slaves. The organization spread throughout the South. Clad in long, hooded white robes, masked Klan members rode the countryside and employed violent measures in their suppression of blacks. In 1869 the KKK was disbanded, but local organizations continued, largely in rural areas. The Klan's violent and overzealous activities prompted congressional legislation in 1870 and 1871. In 1915 a new organization, largely anti-Catholic and anti-Semitic, was founded—with the name Ku Klux Klan—in Stone Mountain, Ga. This movement, active North as well South, used as its symbol a burning cross. It is estimated that the Klan's membership in the 1920s was between 2 to 3 million, but during the

A gathering of the Ku Klux Klan (LIBRARY OF CONGRESS, PRINTS AND PHOTOGRAPHS DIVISION)

depression of the 1930s, it lost most of its dues-paying members; by the early 1940s the organization disbanded. In 1964, as a result of the CIVIL RIGHTS ACT, there was a resurgence of the Klan. There have been sporadic KKK rallies in both North and South, but Klan support is minimal.

Kulakov, Fyodor D. (1918–1978) Soviet communist politician. Kulakov was a member of the Politburo and an apparent protégé of Soviet leader Leonid BREZHNEV. Western Kremlinologists considered him a potential successor to Brezhnev, but he died before Brezhnev, at the relatively youthful age of 60.

kulaks Term for wealthy peasants in Russia around the turn of the 20th century and into the Stalinist era. Before the RUSSIAN REVOLUTION (1917) they were prominent in village affairs. After the revolution, they benefited from LENIN'S NEW ECONOMIC POLICY (NEP) until 1927, when STALIN raised their taxes and transformed their lands into collective farms. Stalin's collectivization program and his campaign against the kulaks resulted in the execution, starvation or exile of as many as 12 million of them.

Kuleshov, Lev Vladimirovich (1899–1970) Russian filmmaker and pioneering theoretician who founded the State Film School. Kuleshov was born in Tambov, Russia, and received early training as a painter at the Fine Arts School in Moscow. A growing fascination with the motion picture—especially the work of the Americans D. W. GRIFFITH and Mack SENNETT—turned his interests toward that medium, and in 1918 he began writing the first sub-

stantial body of criticism and theory in Russia. After making a film, *Proyekt inzhenera Prita* (Engineer Prite's project) in 1918, he began the formation of the First State Film School and in 1920 established the famous Kuleshov Workshop. Vsevolod PUDOVKIN and Sergei EISENSTEIN, among other important Soviet filmmakers, attended classes. Pudovkin conducted a series of "experiments" in montage theory and practice—the synthetic creation of events and ideas through the assemblage and alteration of film (scenes) Thus, his concepts of "creative geography," "creative anatomy," and "creative acting" (the "Mozhukin Experiment") were born. His most important films of the 1920s were *Nebychinye priklucheniya Mistera Vesta v strane bolshevikov* (The Extraordinary adventures of Mr. West in the land of the Bolsheviks, 1924), a satire on detective stories in the Sennett style, and *Pozakon* (By the law, 1926), an emotional tale of murder adapted from novelist Jack LONDON. Although Kuleshov fell out of favor due to his supposed "formalism" with the STALIN regime in 1935, he continued to direct the State Institute of Cinematography in Moscow after 1944. Before his death in 1970 he was "rediscovered" in several major retrospectives in the West. "The shot is a sign, a letter for montage," wrote Kuleshov in his treatise, *The Art of the Cinema* (1929). With him began the consideration of film as an expressive language.

Kulikov, Viktor Georgyevich (1921–) Soviet military official, and from 1942 a member of the COMMUNIST PARTY. Having served at the front during WORLD WAR II, Kulikov rose

through various positions and responsibilities, and was made a member of the central committee in 1971. In 1977 he was appointed commander in chief of WARSAW PACT forces and marshal of the Soviet Union.

Kunayev, Dinmukhamed Akhmedovich (1912–1993) Soviet official. Kunayev joined the party in 1939 after graduating from the Institute of Non-Ferrous and Fine Metallurgy in Moscow in 1936. He pursued his career in science, rising to the position of chief engineer at Altaypolymetall combine, and was director of Leninogorsk Ore Board from 1936 to 1942. In 1949, Kunayev was made a member of the central committee of the Kazakh Communist Party. He was then elected to various governmental posts and in 1971 was made a member of the Politburo central committee. In 1986 Soviet leader Mikhail Gorbachev forced Kunayev's resignation as first secretary of the Communist Party of the Kazakh SSR.

Kundera, Milan (1929–) Czechoslovakian novelist. Kundera, who is one of the leading European writers of his generation, was a university student when the USSR established its Communist regime in CZECHOSLOVAKIA in 1948. After working as a manual laborer and as a jazz musician, Kundera studied film and became a professor at the Institute for Advanced Cinematographic Studies in Prague. The publication of his first novel, *The Joke* (1968), coincided with the brief period of liberalization in 1968 known as PRAGUE SPRING. Shortly thereafter, the SOVIET INVASION OF CZECHOSLOVAKIA took place and Kundera lost both his teaching post and the right to pub-

lish his works. He immigrated to France in 1975. His major works of fiction include *Laughable Loves* (1974), *Life Is Elsewhere* (1974), *The Farewell Party* (1976), *The Book of Laughter and Forgetting* (1980), *The Unbearable Lightness of Being* (1984, filmed 1988) and *Immortality* (1991). Kundera has continued to publish throughout the 1990s with such books as *Slowness* (1994) and *Identity* (1998). In 2000 he received the Herder Prize from the University of Vienna.

Küng, Hans (1928–) Swiss theologian. Küng, a Roman Catholic, emerged as one of the most brilliant and controversial theologians of the second half of the 20th century. Ordained a Roman Catholic priest in 1954, he became a professor of theology at the University of Tübingen. In the 1960s, Küng was appointed by Pope JOHN XXIII as an official theologian of the SECOND VATICAN COUNCIL and produced numerous tracts in favor of increased ecumenism on the part of the church. But Küng subsequently issued a challenge to papal authority with his book *Infalible? An Inquiry* (1970). In *On Being a Christian* (1974), Küng spoke out in favor of increased dissent within the church. He followed this with a similarly challenging work, *Does God Exist?* (1978). In 1979 Küng was censured by the Vatican and forbidden to teach under church auspices. He was an outspoken critic of the traditionalist policies of Pope JOHN PAUL II.

Kuniyoshi, Yasuo (1893–1953) Japanese-American painter. Born in Okayama, Japan, Kuniyoshi emigrated to the U.S. in 1906, studying at the Los Angeles School of Art and the Art Students League in New York City, where he later taught from 1933 to 1953. He also taught at the New School and the Brooklyn Museum School. His richly figurative paintings, drawings and prints portray cityscapes, nudes and other human subjects in subdued tones and a style touched with SURREALISM and fantasy. His later works are brighter in color, but harsher in subject matter, concentrating on often grotesque figures in circus or carnival settings.

Kun's Red Republic (1919) Béla Kun established the Hungarian Communist Party December 20, 1918. When president Count Mihály KÁROLYI (1875–1955) resigned (March 21,

1919), Kun formed a coalition government, soon establishing a Communist dictatorship. Kun appealed to Hungarian nationalism, formed a Red Army and reconquered Slovakia from the Czechs. However, promised Soviet aid never materialized, nationalization of landed estates alienated the peasantry, while terror estranged the bourgeoisie. The Allies forced relinquishment of Slovakia, counterrevolutionaries attempted Kun's overthrow, and Romania, invading HUNGARY to protect newly acquired Transylvania, advanced on Budapest, the Hungarian capital. When his army refused to fight, Kun fled to Vienna, August 1, 1918. The Romanians occupied and pillaged Budapest August 5–November 14. Admiral Miklós HORTHY DE NAGYBÁNYAI, leader of the counterrevolutionaries, entered Budapest and was appointed head of state, March 1920.

Kuomintang Chinese Nationalist Party, also known as the KMT, organized in 1912 by Song Jiaoren (Sung Chiao-ren) and led by SUN YAT SEN. A successor to the earlier revolutionary group, the Tongmeng Hui, its purpose was to promote democratic parliamentary government and social reforms. The KMT was suppressed by China's president, Yuan Shikai, and was returned to power on Yuan's death in 1916. As China's ruling party under Sun's leadership, the KMT accepted aid from the USSR, whose advisers exercised a great deal of control over the party's reorganization in the early 1920s. In a party congress held in Canton in 1924, the KMT officially adopted Sun's Three People's Principles: nationalism, democracy and a guaranteed livelihood. On Sun's death in 1925, leadership of the KMT was assumed by CHIANG KAI-SHEK (Jiang Jieshi), who led the NORTHERN EXPEDITION (1926) against the warlords in Beijing. He expelled Russian advisers and Chinese communists from the party in 1927, beginning the struggle that ended in China's civil war. KMT troops captured Beijing in 1928, and the party became the effective government of China during WORLD WAR II. By 1946 the KMT had betrayed its original democratic principles and had become a corrupt institution controlled by Chiang and his military oligarchy. It was defeated in the civil war, after which (1949) MAO ZEDONG and his Communist Party controlled China. When Chiang fled the mainland he

brought his party with him, and the Kuomintang became the ruling party of TAIWAN. In March 2000 opposition candidate Chen Shui-bian defeated the Kuomintang candidate, ending the party's 50-year dominance of Taiwanese elections. Chen subsequently defeated the Kuomintang candidate in the 2004 elections. (See also CHINA.)

Kuprin, Alexander Ivanovich (1870–1939) Russian writer. Having served in the army for four years, he engaged in various professions before deciding to devote his life to literary pursuits. His first story, *Moloch*, was published in 1896, but *The Duel* (1916) was to bring him fame. Kuprin's novels include *Yama* (The Pit) (1927) and *Yunkera* (1933), although he is chiefly remembered for his collections of short stories, such as *The River of Life* (1916) and *Sasha* (1920). He was associated with GORKY's publishing enterprise, *Znanye*, and the Realist writers. Following the 1917 Revolution Kuprin lived in Paris, but he returned to the USSR in 1938.

Kurds Western Asian people who, with their neighboring Armenians, have suffered much throughout the 20th century. The Kurds are centered in Kurdistan, a region of mountains and plateau mainly in southeastern TURKEY, northwestern IRAN, northeastern IRAQ and northeastern SYRIA. The tribal Kurds were subjects of the OTTOMAN EMPIRE until WORLD WAR I. After the war they were promised autonomy, but that promise was never carried out. Since then various Kurdish rebellions have occurred but have been forcefully put down in Turkey, Iran and Iraq. In the 1980s Iraq's dictator Saddam HUSSEIN pursued a particularly brutal policy against the Kurds, killing perhaps tens of thousands, many with poison gas. After the PERSIAN GULF WAR, there was another Kurdish rebellion in northern Iraq. The Turkish president, Turgut OZAL, expressed support for the Iraqi Kurds in 1991, and France urged UN action to stop their slaughter. The U.S. military subsequently provided shelter, food and protection for close to one million Kurdish refugees who had fled to the mountainous Iraq-Turkey border. Following the overthrow of Saddam Hussein in March 2003, Kurdish leaders were included by the U.S. in the Interim Iraqi Governing Council and in

the official Iraqi government that was later created.

Kurile Islands Island chain approximately 775 miles long, from the south Kamchatka Peninsula to northeast Hokkaido, Japan; the Kuriles are under the jurisdiction of the USSR. There are some 30 large islands and many smaller ones. In 1875 Japan exchanged SAKHALIN ISLAND (previously under joint Russo-Japanese control), for the Russian Kuriles. Shortly before the end of WORLD WAR II the Soviets occupied the islands. The Kuriles were granted to the USSR at the YALTA CONFERENCE, but Japan has disputed the Soviet claim. In 2002 Russia announced it would recognize the Soviet-era decision to return Shikotan and Habomai to Japan with the conclusion of a formal peace between both countries.

Kuropatkin, Alexei Nikolayevich (1848–1925) Russian general. Kuropatkin served in the Russo-Turkish War of 1877; following service in the Caucasus, he became minister of war in 1898. His campaigns in the early stages of the RUSSO-JAPANESE WAR were disastrous and brought about his resignation. He served in the first years of World War I, but in 1916 was appointed governor of Turkestan. He wrote *The Russian Army and the Japanese War* (1909).

Kurosawa, Akira (1910–1998) Japanese film director considered, with Kenji MIZOGUCHI and Yasujiro OZU, the greatest of that country's modern filmmakers. Kurosawa's work in the early 1950s helped "open up" Japanese cinema to the West. *Rashomon*, a tale of violence and rape told through multiple narrators, won the Grand Prix at the Venice International Film Festival in 1951. The most eclectic of the Japanese masters, Kurosawa has paid tribute to American western and gangster genres—*Shichinin no samurai* (*Seven Samurai*, 1954), *Yojimbo* (*The Body Guard*, 1960), and *Tengoku to jigoku* (*High and Low*, 1963; adapted Shakespeare's *Macbeth* (*Kumonosu-jo*, *Throne of Blood*, 1957) and *King Lear* (*Ran*, 1985); and ranged among subjects as diverse as martial arts (*Sugata Sanshiro*, 1943), nuclear war (*Ikimono no kiroku* [*I Live in Fear*], 1957) and police detectives (*Nora inu*—*Stray Dog*, 1949). He

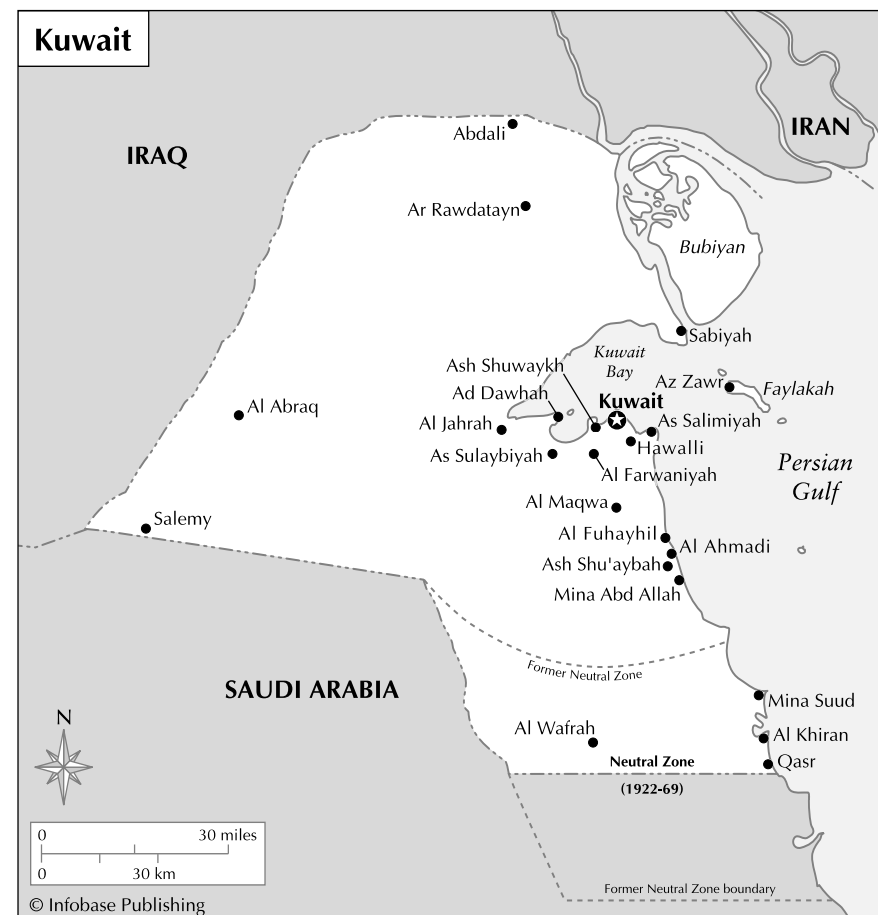

shaped the early career of Japanese superstar Toshiro MIFUNE. Scorning the traditional Japanese *enryo* (ceremonial reserve), his films are dynamically edited and dramatically composed. His mastery of widescreen, as in *High and Low* and *Akahiga* (*Red Beard*) is unrivaled. The recipient of an American ACADEMY AWARD for lifetime achievement (1989), Kurosawa is reverently addressed by his colleagues at Toho Studios as "Tenno"—"Emperor."

Kushner, Rose (1929–1990) American journalist and psychologist. Kushner became a champion of the rights of breast cancer patients after discovering a lump in her own breast in 1974. She refused to undergo the then-standard procedure in which a cancerous breast was removed under general anesthesia before the patient was informed of the biopsy result. Her 1976 book *Why Me? What Every Woman Should Know about Breast Cancer to Save Her Life* described her experiences. Many of the controversial treatments she sought to imple-

ment, including less radical surgery and the use of hormonal therapy, later became common practice.

Kuskova, Ekaterina Dmitryevna (1869–1959) Russian journalist. She was the author of *Credo*, which advocated raising the living standards of the working people rather than following the main aim of orthodox Marxists, which was to overthrow the autocracy. In 1921 she was active in GORKY's famine relief committee, whose appeals to the world public resulted in the NANSEN and HOOVER relief missions. She was expelled from Russia in 1922, together with many leading intellectuals; she lived first in Prague and later in Geneva.

Kuwait Located in western Asia at the head of the Persian Gulf, Kuwait covers an area of 6,879 square miles, including nine Gulf islands. Ruled by an emir of the Al Sabah royal family, Kuwait began the 20th century as a protected state of Britain under the

KUWAIT

1899	Britain signs a treaty with Kuwait, establishing a self-governing protectorate.
1914	Britain recognizes Kuwait as an "independent government under British protection."
1938	Oil is discovered; large-scale exploitation after World War II transforms the economy.
1961	Kuwait becomes a fully independent state.
1962	New constitution is promulgated.
1963	Kuwait is admitted to the United Nations.
1973	Iraqi troops occupy the Kuwaiti outpost at Samtah.
1990	Iraq invades and overruns the emirate, forcing the emir and most of the royal family to flee to Saudi Arabia.
1991	From mid-January to the end of February, Allied forces stage air, sea, and ground campaign that defeats Iraqi forces and liberates Kuwait. Al-Sabah family rulers return and retain firm hold on power. New cabinet in April retains Crown Prince Saad as premier. Emir promises parliamentary elections for 1992.
1999	Parliamentary elections are held in July. In May, Sheikh al-Sabah decrees that women can vote in the next elections, to be held in 2003. Parliament rejects this proposal in November.
2006	Sheikh Jaber dies and is succeeded by Crown Prince Sheikh Saad al-Abdullah al-Sabah. The parliament removes Sheikh Saad al-Abdullah due to his ill health, and replace him with Sheikh Sabah al-Ahmad al-Sabah.
